Now, a standard limit control is mentioned. Now, what do you mean by that?

A. The standard limit control is either a warm air switch or Strap-On-Aquastat or a steam pressure control of 15 pounds or more.

Q. Of any particular make?

A. Of any particular make, without an adjustable differential. If it has an adjustable differential we always add an extra charge.

Q. Then these various items that you have added, where it says, "Add the following where a control listed below is substituted for a control listed in the price of burner", you have there, down a little ways, "Where burner is purchased with an extra standard limit control", is your definition of a standard limit control the same there?

A. Yes, sir, it is in the industry throughout.

Q. Do you remember whether or not the contract that you signed with the Minneapolis-Honeywell Company had this language in it:

1853 "It is specifically agreed that other control equipment is not to be considered as a part of a set within the terms of this contract. Because the company's costs are figured to cover a complete set of controls, the following break-down prices are purely for invoicing purposes, it is agreed that the purchaser's yearly purchases will consist of at least 90 percent as many room thermostats and 100 percent (but at the company's option not more than 125 percent) as many limit controls as primary controls"?

A. I think that is in all control contracts.

Q. It is in all set control contracts of the Minneapolis-Honeywell. It is not in the unit. The reason I am asking you whether or not your contract had that clause in it is because it is not for the unit.

A. I don't know whether it had it or not, but it wouldn't have made a bit of difference if it had, because I think all makers have tried to get you to buy their controls in sets as much as possible; but, irrespective of that, the entire industry, if they handled more than one make of

controls, sell the customer whatever they want, otherwise they lose the customer.

Q. You don't have your contract with you to know whether or not that is in it?

A. No, I think probably they have a copy of our 1854 contract over there. Haven't you?

Mr. Gilpatric: It had that language in it, Mr. Lockrae will state for the record, I think.

The Witness: I think it had that language in it because it is standard practice.

Trial Examiner Sheppard: All right, I will take it, coming from you.

By Mr. Haycraft:

Q. Do you know of any other contract that has that in it? You say it is a standard practice. It may be a standard practice of Minneapolis-Honeywell. Is there such a clause in other contracts, is it standard practice of any other contract?

A. Well, I am not prepared to state.

Trial Examiner Sheppard: All right, Mr. Aldrich, if you go home look at it and if you find that it differs you can write to me; otherwise, I will take what you said there.

The Witness: You know, we never looked at those contracts after we get them. I don't know whether we burn them up or put them in the fire or not.

By Mr. Haycraft:

Q. Referring now to 133-B, this 1938 prices for controls and accessories, you were asked about the first two items on this page, that is, stack relays and power 1855 relays, and also, I think, as to thermostats.

I will ask you whether or not under your Pressuretrols there there were any comparable items, that is, did either the Mercoid or the Perfex Pressuretrol, were they comparable to the Minneapolis-Honeywell L-404-2?

A. This is the 1938 sheet in front?

Q. Yes, 1938 sheet, that Pressuretrols column there. You have got some Mercoid and some Perfex and one Minneapolis-Honeywell. I was wondering whether or not they were comparable.

A. Well, under DA-31 control, ours cost us 25 cents more than the comparable Minneapolis, and it has been worth a dollar more, at least, by rights.

Q. What do you mean by that?

A. It is a better instrument.

Q. That is, the DA-31 Mercoid compared with the Minneapolis-Honeywell L-404-2, is that correct?

A. That is right. They sell for 25 cents more and we have always paid that much more and we have always considered it worth more than that. It is a better instrument.

Q. Now, the Aquastats, what comparison is there there between the Mercoid and the Perfex and the Minneapolis-Honeywell?

A. I wouldn't consider them any different in quality, and the price has always been substantially the same.

1856 Q. You have got here in the Surface type, the Mercoid and Perfex selling for 20 cents less than Minneapolis-Honeywell's L-409-1?

A. That is right.

Q. On the others, the immersion type, you have the Minneapolis-Honeywell selling for less than the Mercoid. What is the difference between those?

A. The Mercoid costs us more money in that case.

Q. They sold for $7.80, whereas Minneapolis-Honeywell sold for $6.80, is that right?

A. Mercoid at that time was not building a competitive price Immersion type Aquastat.

Q. Now, then, the Airstats, you have the Mercoid, Minneapolis-Honeywell and Perfex items. Which one of those is comparable?

A. Well, the M-51 Mercoid always cost us $1 more than we paid for the Minneapolis.

Q. You sold them for the same, is that it?

A. No.

Q. I see Minneapolis is the 419, for $4.80. Is that the same one?

A. Yes, sir, the Mercoid has an adjustable differential. Minneapolis has an Airstat with an adjustable differential, but they get the same price as the Mercoid do for it.

1857 Q. Now, then, you will notice you have got your Mercoid M-80 combined fan and furnace control, $10.20, and the furnace control, $9—rather the Minneapolis combined fan and furnace control, $9. Are those comparable, that is Minneapolis L-401-3?

A. The Mercoid is a superior differential. It has an adjustable differential on both circuits.

Q. Does it cost more?

A. Yes. Despite the fact that there was a royalty that Mercoid didn't pay.

Q. At that time?

A. Yes.

Your Honor, I venture to suggest that whenever one of these companies would come out to contract, that I would see one of the others within three days, and they had talked the prices over together, and the prices were identical in the same quality merchandise. I think they all had agreed what they were going to do in advance. I could always tell what the trend of prices was going to be by the first one that called on me.

If one firm had an adjustable differential on the switch, he was sure to come up with exactly the same differential that the other company made.

Trial Examiner Sheppard: All right.

By Mr. Haycraft:

Q. The next page here, it is C, Respondent's Ex-1858 hibit 133-C. It is the January, 1939, list. Down here, your extras and deductions for optional equipment, it says, "Combination furnace and fan control place of limit control." What combination control did you refer to there, where you charged $6?

A. That would be the warm air control.

Q. Would that be Mercoid or Minneapolis?

A. It would be either way, I think.

Q. Either one?

A. Where is it?

Q. Right down in the middle. "The combination furnace and fan control place of limit control", and you add $6.

A. Yes, we would add that regardless of the man that was buying. If they ordered Mercoid combination, he would pay $6 more. If he ordered the Minneapolis combination in place of the Minneapolis limit control, he would have to pay $6 more.

Q. That applied to either company?

A. That is right. If there was any difference in the price of the make, it would carry right through.

Q. Now, was this the same burner in 1941, this Heat-Pak, as your Compact X in 1940?

A. No, the burners were slightly different, different capacity.

Q. You were getting more money for your burner in 1941?

1859 A. We constantly reduced the prices every year. If we made too much money, we gave it to the customer next year.

Q. You advanced your price in 1941 as compared with 1940, didn't you?

A. No, I don't think so. That is list price.

Q. I know, but your list price—

A. We changed our list prices about twice during the entire period and rearranged our discounts. We had to do it on account of adding to our line.

Q. What were your trade discounts during those years?

A. We started out with around 50 percent and when we got through the last of our civilian business we were selling at 70 percent, with the new list.

Q. I see. 70 percent, that would make your difference in price?

A. Yes.

Q. Would that same discount apply on your parts and accessories?

A. Well, we usually give a dealer 50 percent discount on the parts.

Q. For instance, on page 133-B, where you have 1938 prices, you said these were list prices?

A. Yes.

Q. And they were subject to a trade discount. What was the trade discount?

1860 A. At that time I think the trade discount was 66 2/3 percent. The extras, however, are net. You will notice it is marked net, extras.

Q. Where is that?

A. Net extras for optional equipment; and you notice above the burner it says, "1940 list prices."

Q. What page are you on?

A. 1940.

Q. This is 1938. Are those prices all subject to a discount and, if so, to what discount?

A. I believe we gave 25 percent at that time.

Q. 25 percent on these—

A. (Interposing) On the controls. That is, to the jobber.

Q. To the jobber?

A. Net to the dealer.

Q. How about the dealer?

A. Net to the dealer.

Q. These price lists on the next page, 133-C, 1939 list prices, this is a Heat-Pak standard line number, and different types of burners you had there, they were all subject to what, 66 2/3 percent discount?

A. No, sir, that year on that list we had a 50-percent discount to the jobber.

Q. To the jobber?

1861 A. Yes.

Q. And net to the dealer?

A. No, the dealer is about 33 1/3 percent?

Q. 33 1/3 percent to the dealer and 50 percent to the jobbers?

A. That is right. The extras and deductions, however, have always been net with us.

Q. For optional equipment?

A. Yes.

Mr. Haycraft: That is all.

Redirect Examination by Mr. Freeman.

Q. One question, Mr. Aldrich. On the last page of Respondent's Exhibit 133, which of those items did you send out as standard with your burner when someone wanted a Minneapolis-Honeywell set of controls?

A. If they wanted a Minneapolis-Honeywell set of controls, they got a Minneapolis-Honeywell set.

Q. What three items to make up the set?

A. That would be a standard limit control, a constant ignition relay, and a room thermostat, low voltage room thermostat.

Q. You wouldn't send out a line voltage thermostat, would you?

A. No, never.

1862 Q. Isn't it a fact that a line voltage thermostat is an extra used on something other than your oil burners?

A. No. It is used where you have a summer-winter hook-up.

Q. That is, on a circulator?

A. That is right.

Q. Isn't it true that all the controls except the stack relay and the ordinary limit controls and the ordinary

thermostats are extras used in connection with special applications on oil burners?

A. Your three limit controls, you have to have three types of limit controls.

Q. That is where steam—

A. (Interposing.) —and water.

Q. And water.

A. And in some cases vapor, although recently we use hot water control on vapor jobs.

Q. Those three are comparable in function?

A. Yes.

Q. And then you had to have one thermostat in association with the primary?

A. That is right.

Q. And that was usually a low voltage thermostat?

A. Yes.

Q. These other items appearing here, such as clock thermostat, line voltage thermostat, and the fan con-
1863 trol and the combination fan and furnace control, those are extras over and above the standard controls which function in connection with the operation of an oil burner, is that correct?

A. That is true, with the exception of the combination fan and furnace control. A warm air furnace has a fan and they buy a combination control.

Q. Then that serves an additional function over and above the limit control?

A. That is right.

Mr. Freeman: That is all.

Mr. Haycraft: I move to strike that. I object to that question as leading. Isn't it the limit control, the fan and furnace control?

The Witness: One part of it is a limit control.

Mr. Haycraft: And the control is a part of it, isn't it?

The Witness: Yes.

Mr. Freeman: That is all.

Mr. Haycraft: That is all.

Trial Examiner Sheppard: Thank you very much, Mr. Aldrich. You are excused.

(Witness excused.)

Trial Examiner Sheppard: Take a little recess, gentlemen, of five or six minutes.

1864 (A short recess was taken.)

Trial Examiner Sheppard: We will be on the record.

Mr. Gilpatric: We will call Mr. Berghoff.

ROBERT G. BERGHOFF, was thereupon called as a witness for the respondent and, having been first duly sworn, testified as follows:

Direct Examination.

Trial Examiner Sheppard: Give us your name, Mr. Witness.

The Witness: Norbert G. Berghoff, B-e-r-g-h-o-f-f.

Trial Examiner Sheppard: Give us your address.

The Witness: Wayne Oil Burner Company.

Trial Examiner Sheppard: Located where?

The Witness: Fort Wayne, Indiana.

By Mr. Gilpatric:

Q. Mr. Berghoff, what position do you hold with Wayne Oil Burner Corporation?

A. Up until July of 1942 we were a corporation. However, we changed over to a company, which is now a partnership.

Prior to that time I was treasurer of the company.

Q. Was that true during the years of, say, 1937 to 1941?

A. That is right.

Q. Did your duties have anything to do with pur-
1865 chasing as well?

A. Yes, I handled the purchasing.

Q. What type of burner did your company manufacture?

A. We started out manufacturing the pressure atomizing type, but back about three years ago or four years ago we introduced a vaporizing type of burner.

Q. Is that latter type of burner sold for the same users that a pressure type burner is?

A. To a certain extent we use it for smaller installations, and it is more of a competitive type burner, but—

Q. (Interposing.) Lower priced?

A. Lower priced, and does the same function, except that they don't normally use the vaporizing type burner for large gallonages.

Q. Will you give us generally the date when your company began to make oil burners?

A. It was before my connection with the company, but I think it was around 1929 or 1930, and I got into it just about that time.

Q. What types of automatic temperature controls has your company sold to burners equipped with—

A. (Interposing.) Well, we used Minneapolis-Honeywell, Perfex, Mercoid, and I think some Penns, and probably one or two others back through the history.

Q. Did you have contracts with Minneapolis-Honeywell?

1866 A. Yes, sir.

Q. How about with the other control manufacturers you have named?

A. We had contracts with three of them, that I know of.

Q. Will you name the other two companies?

A. Perfex and Penn.

Q. What about Mercoid?

A. And Mercoid.

Mr. Gilpatric: Will you mark these, please,—

The Witness: (Interposing.) As a matter of fact, I meant Mercoid instead of Penn.

Mr. Gilpatric: Will you mark these as Respondent's Exhibits 134-A and B, 135-A and B, and 136-A and B?

(The documents referred to were marked Respondent's Exhibits 134-A, 134-B; 135-A, 135-B; 136-A, and 136-B for identification.)

By Mr. Gilpatric:

Q. Mr. Berghoff, I show you Respondent's Exhibits for identification 134-A and B, 135-A and B, and 136-A and B, and ask you whether those are contracts between your corporation and the Mercoid Corporation for the years 1938, 1939, and 1940?

A. Yes, they are.

Mr. Gilpatric: Respondent offers them in evidence with the request that it be permitted to substitute photo-

1867 static copies for the originals.

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let RESPONDENT'S EXHIBITS 134, 135, and 136 be accepted.

(The documents referred to, heretofore marked for identification 134-A, 134-B; 135-A, 135-B; 136-A, and 136-B, were received in evidence.)

By Mr. Gilpatric:

Q. Commission's Exhibit 1 in this case states that your company had a contract with Minneapolis-Honeywell in 1938 in which the quantity of sets was specified as an estimated amount.

Do you recall that?

A. Yes, I do.

Q. Did you consider that that contract prevented you from purchasing controls from other manufacturers?

A. No, I didn't.

Q. Did you, in fact, during that year purchase controls from other sources than Minneapolis-Honeywell?

A. Yes, I did.

Q. Have you with you any figures which would indicate your control purchases during the period that I have referred to?

A. Yes, I have them here.

1868 Q. Will you give us the figures for the years 1938, 1939 and 1940.

A. I am not too sure that these figures are accurate. However, I had the girl take them off of the records of the company before I left, and I have every reason to believe they are somewhere within reasonable accuracy.

1938, purchases from Minneapolis-Honeywell were $15,560.83; from the Perfex Corporation in the same year, $16,687.61; Mercoid in the same year $1,695.81.

1939, Minneapolis-Honeywell, $9,932.30; Perfex Corporation, $17,567.46; Mercoid Corporation, $1,446.99.

1940, Minneapolis-Honeywell, $8,386.66; 1940, Perfex Corporation, $14,254.95; and Mercoid, in the same year, $280.52.

Q. Do you recall whether, during those years, the prices which your company paid for Minneapolis-Honeywell controls ran higher or lower than the other two competitive makes you have mentioned?

A. For the principal controls, the prices of Minneapolis-Honeywell were somewhat higher than the other two.

Q. By "principal controls" you mean primary, room thermostat and—

A. (Interposing.) And limit control, that is right.

Q. Did you charge any more for your burners equipped with Minneapolis-Honeywell controls than those 1869 equipped with other makes?

A. No, we didn't, as a general rule, between Minneapolis-Honeywell and Perfex, but in one or two cases, we had dealers where—I think they were probably furnace manufacturers—that we had a lesser price when we furnished Mercoid controls.

Q. In those instances you passed along the slight differential?

A. That is right.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Gilpatric:

Q. What was your price to dealers, that is, your burner with controls, during 1941?

A. It ran somewhere in the neighborhood of $75.00.

Q. And what, if you know, was the installed price of your burners, including tank and other equipment?

A. When we installed them locally, our regular price was $275.00 complete, installed with tanks and controls; and throughout the territory, the price varied, depending upon competition in the different areas and also whether or not the burners were installed by oil companies who didn't try to make anything out of the installation of the burner, 1870 but rather increased their oil deliveries, and so forth.

Q. Do you recall the particular price brackets of Minneapolis-Honeywell that your contract brought you in the particular years?

A. I don't recall what brackets we were in at all.

Mr. Gilpatric: Mr. Examiner, may I ask Mr. Lockrae to give us that information.

Trial Examiner Sheppard: Yes.

The Witness: I don't think our contract discloses any brackets.

Mr. Gilpatric: If you have that, will you give it, for the record?

Mr. Lockrae: What years?

Mr. Gilpatric: Beginning with 1937, through 1941.

Trial Examiner Sheppard: Show Mr. Lockrae is giving the information for the record.

Mr. Lockrae: They were in bracket 3 in 1937, 3,000 units, the price $21.30 a set for intermittent ignition control. In 1938, they were in bracket 2. Their quantity was 2250 units and their price was $19.35 on the intermittent ignition control. In 1939, bracket 3, 3,000 units. Their price was $16.65 for the intermittent ignition controls. In 1940, they were in our 15,000 unit bracket. The price of the controls for intermittent ignition was $15.85. In 1941, they were in our 15,000 bracket, and the price was for a 1871 set of the intermittent ignition controls, $14.90.

Mr. Haycraft: In what bracket, 4?

Mr. Lockrae: 4 in 1940 and bracket 4 in 1941.

By Mr. Gilpatric:

Q. Mr. Berghoff, are you aware that during some of the years that Mr. Lockrae has referred to, certain of your oil burner manufacturing competitors received better bracket prices than your company from the Minneapolis-Honeywell?

A. Yes, I believe I can say I was aware of it, due to the fact that as time went on, we knew that as we picked up we got into different brackets, and we took it for granted that somebody else would, too.

Q. To your knowledge, did the fact that your competitors, the ones I mentioned, received better control prices hurt your sale of oil burners or affect your competition?

A. I don't believe so much, in our particular field, and there were a great many other things that went into the cost of our burner, such as engineering service, advertising campaigns, dealer helps, salesmen; and, for that reason we were getting around $75.00 for a burner, where our competitors were away under that.

Q. Was your sales territory very broad?

A. Well, we had about 60 percent of the extent of our business in the eastern market and through this particular period, we did about 10 per cent export business, and 1872 we covered the United States coast to coast.

Q. What was the trend of your sales during the period from 1937 to 1941?

A. They were pretty constant. We didn't seem to move much one way or another.

Mr. Gilpatric: That is all.

Cross-Examination by Mr. Haycraft.

Q. Well, according to your purchase of these controls, it would indicate your sales went down, declined, during those years. How about that?

Trial Examiner Sheppard: Declined? I remember Mr. Lockrae's figures. They went into a different bracket and then went up again.

Mr. Lockrae: I am looking at his volume, dollars and cents.

Trial Examiner Sheppard: Oh, I see.

Mr. Gilpatric: Mr. Examiner, again we must bear in mind the control prices went down. You can't tell the units from the dollar figures.

Mr. Haycraft: They didn't go down that much.

Mr. Freeman: Well, why don't you tell him how much they went down.

Mr. Haycraft: Well, good grief, he is the witness. He ought to know. I am asking him to testify.

1873 Mr. Freeman: You can be fair in asking your questions of the witness.

Mr. Haycraft: I don't know myself. Why don't you ask him?

Mr. Freeman: Same old story, we will put in our case our way. I am objecting to your form of question. It is unfair.

Mr. Haycraft: No, it isn't unfair.

Trial Examiner Sheppard: Well, we will let the witness settle it, if he has it.

The Witness: Well, my particular reason for that, our business was pretty constant. Of course, no business stands still. My particular end of the business was purchasing and I am not too familiar with the sales figures, although I do know that we did stay in a pretty close range. That is, there are certain facts in there that might make a differential between the number of actual units sold and the dollar and cents gross, due to the fact that the prices have varied some. We did have a few accounts where we sold direct to furnace manufacturers, where we didn't furnish controls. We would eliminate, perhaps, the limit control. As I recall, it hasn't been up until very long ago when the underwriters would not permit an oil burner manufacturer to sell a burner without the primary, I think, control—being a part of the unit—and I think—I am not

1874 too clear on that—but I think that restriction was lifted and we sold burners to furnace manufacturers that purchased their own controls, because they also sent out furnaces with certain controls on them without burners, and that had some bearing on our control volume.

By Mr. Haycraft:

Q. Well, do you have figures there showing the exact number of controls you bought in 1938?

A. No, I don't. I just have the figures, the dollars and cents.

Mr. Haycraft: Do you have that, Mr. Lockrae?

Mr. Lockrae: Yes, I have.

Mr. Haycraft: He gave the brackets on direct examination, and now I would like to have the exact number of controls.

Mr. Lockrae: 1937, 4,820 units. 1938, 1,872 units, 1939, 1726 units. 1940, 1428 units. 1941, 1271 units.

Mr. Haycraft: Purchases were declining.

By Mr. Haycraft:

Q. Do you know whether or not there was any arrangement there on burners you manufactured for other manufacturers? Did they buy direct from the manufacturer?

A. Yes, sir.

Q. Do you know what furnaces they were, what companies?

Q. What companies?

1875 A. Yes, I do.

Q. What were they?

A. The Bard Manufacturing Company.

Q. Pardon?

A. Bard. And Ruddy Furnace Company. And I think there may have been one or two more, smaller ones.

Q. These two, when did you sell to them?

A. Well, we were selling to them when the prices came up.

Q. For how long?

A. Oh, for the last four or five years.

Q. Can you remember the year you first sold?

A. No, I can't.

Q. Or the quantities?

A. No, I couldn't be sure about that.

Q. You are not familiar with the sales end of it?

A. No, I am not.

Mr. Haycraft: That is all.

Trial Examiner Sheppard: Thank you.

Mr. Gilpatric: One question.

Redirect Examination by Mr. Gilpatric.

Q. Do you know whether controls which your company purchased from Perfex Corporation were used with this distillate or vaporizing type of burner?

Mr. Haycraft: He didn't speak of it by that name.

1876 He didn't call it the distillate.

The Witness: The vaporizing type.

Mr. Haycraft: The vaporizing type.

Mr. Freeman: That is the same type.

Mr. Haycraft: I thought it was, but I wasn't sure enough for the ground of my objection.

Mr. Freeman: Why don't you withdraw your objection?
Mr. Haycraft: I object to the question, Mr. Examiner.
Trial Examiner Sheppard: Well, it seems to me it is funny. Off the record.
(Discussion off the record.)
Trial Examiner Sheppard: On the record.
The Witness: Now, will you read the question.
(The question above referred to was read by the reporter.)
A. Yes, they were.
Mr. Freeman: Is a vaporizing type burner ever known as distillate or pot type burner?
The Witness: Yes, it is.
Mr. Freeman: That is all.
Mr. Haycraft: When did you begin to manufacture them?
The Witness: I believe we started development work on that in about 1938 and got a few into the field in that year and manufactured from then on until we were asked to discontinue the manufacture of all burners.
Mr. Haycraft: What proportion of your business was that particular type as compared with the other?
The Witness: Oh, less than ten per cent.
Mr. Haycraft: Do you use Minneapolis-Honeywell primary controls on that type of burner?
The Witness: No, it operates differently. We use a float valve, which is not purchased from any of the companies that we discussed today and, as I recall it, the only other control used in connection with that installation which was manufactured by the companies under discussion is the thermostat.
Mr. Haycraft: And that is the one you bought from Perfex?
The Witness: Yes.
Mr. Haycraft: And that would be about ten per cent, you say, of your business during that time?
The Witness: I think it ran somewhere around there.
Mr. Haycraft: I think that covers it.
Trial Examiner Sheppard: Okay. That will be all sir. Thank you very much.
The Witness: Yes, sir.
(Witness excused.)

A. H. LOCKRAE resumed the stand and having been previously duly sworn, testified as follows:

Cross-Examination (Resumed) by Mr. Haycraft.

Q. I think at the last session we had just identified the exhibits 124 and 125. Do you have copies of those before you, Mr. Lockrae, 124—

Trial Examiner Sheppard: And 125.

By Mr. Haycraft:

Q. First, I will ask you what Exhibit 124 is. What if anything you had to do in the preparation of it.

A. Exhibit 124 is a cost summary that was made in 1938, based on 1937 figures, from company records, and this study was to give to us the varying costs, including business at the various price brackets which we had at that time.

Q. Did you have anything to do with the preparation of it?

A. I did.

Q. What did you have to do with it?

A. Well, I segregated all of our sales reports covering the men whose names appear in the report. I also determined, from our accounting records, the salaries and expenses of those men for 1937. I also took, from our standard company records, our costs per set of controls and 1879 determined from our records the profit or the factory cost for 1937, and then, again from our company records, I determined the indirect and direct selling expenses for the New York office—which is involved in the study—and also our home office; the general overhead and selling and administrative expenses.

Q. Are you an accountant?

A. I am not a C. P. A., no.

Q. When did you begin the study?

A. Well, I couldn't tell you the exact time. I worked on it intermittently, because I also had other things to do.

Q. Do you remember having an interview with Mr. Royal on October 5, 1938?

A. I remember having an interview with Mr. Royal, but I don't recall the date.

Q. At which time you stated that you would like to have an opportunity to assemble some figures showing the differences in cost in selling the customers at various price

brackets, which would tend to justify the point of variation in price; and that he agreed he would include such a study in his report to the Commission.

Mr. Freeman: What are you reading from?

Mr. Haycraft: And that later on in November, November 11, 1938, you did submit such a report to him, which is Commission's Exhibit 124.

1880 The Witness: I recall submitting the report. I may have mentioned to Mr. Royal, prior to that time, that I was working on the figures.

Mr. Gilpatric: You mean to say Respondent's Exhibit 124, instead of Commission's Exhibit.

Mr. Haycraft: Respondent's.

By Mr. Haycraft:

Q. And does that refresh your recollection as to the time that you prepared and submitted that report to Mr. Royal?

A. Well, I can tell you that I gave Mr. Royal the report shortly after, or it might have been shortly prior to my letter of February 25, of 1939.

Q. Well, if he mentioned November, do you have a letter of transmittal, copy of a letter of transmittal in November, 1938, to Mr. Royal, letter of transmittal in connection with the report, Exhibit 124?

A. No, the only report I have here is—the only letter I have here is the letter of February 25, 1939.

Q. Do you recall going to the Commission's office in Chicago, that is to this office here, on the 11th floor?

A. Yes, I do.

Q. And giving to Mr. Royal on that occasion the report which is Respondent's Exhibit 124?

A. I don't remember whether I gave that report to him then or not, Mr. Haycraft.

1881 Q. On November 11, 1938?

A. I remember of meeting with him here.

Q. And along with that, was a price sheet, price list, dated August 15, 1938, is that right?

A. Yes, I recall there were several pieces of data that he wanted me to get for him, and I was coming to Chicago and I brought them down.

Q. Now, in reference to Respondent's Exhibit 115, I notice that, in comparing that item, Respondent's Exhibit 124-B, that there is one column left off, the discount column.

A. That is right.

Q. What was the purpose of not including the first column, the discount column?

A. That column covered miscellaneous small manufacturers whose volume was almost negligible. As a matter of fact, in the report, it shows in the New York area, only $5,600.00 of sales, or 227 sets of controls sold in the entire year of 1937.

As I have explained previously, I think, Mr. Haycraft, that does cover the small accounts that were just getting into business or those that were going out of business, and it was a price structure that we established in order to have some resale price set up for that class of manufacturer or dealer, or whoever was assembling the burner.

1882 Q. Now, Respondent's Exhibit 125, the letter of February 25, 1939, that is your letter, is it not, explaining the method of preparation of Respondent's Exhibit 124?

A. That is correct.

Q. And also, in this letter, there is a comparison similar to the one which has been received in evidence as Respondent's exhibit 115, except that it carries this earlier column, this first column?

A. That is correct.

Q. Now, in the study that was made—going into Exhibit 124, Respondent's Exhibit 124—did you make a study of all of the branches of the Minneapolis-Honeywell Company?

A. No, I did not.

Q. What branches did you use for the purpose of making this study?

A. Well, I took the largest branch which we had, because most of the oil burners—that is the largest percentage of our oil burner business, anyway—was done there and I figured that was a fair criterion to go by, and I also included in this study accounts in some of the other branches or accounts, I should say, that filled in our lower price brackets.

Q. Where is that set forth in the exhibit?

A. Well, it is mentioned, Mr. Haycraft, in several of them. On Schedule F, you will note the break-down
1883 there of Bracket 4, 5 and 6; also the salesmen's calls on analysis No. 3.

Q. That shows the home office and New York.

A. Pardon me?

Q. That shows the home office and the New York branch office, doesn't it?

A. Well, Schedule F that I am looking at—are we looking at the same one? Here we mention the brackets 4, 5, and 6 accounts and, again, on analysis 3, we mention the same, 4, 5 and 6.

Q. Where were those records taken from, the New York office?

A. Well, the manufacturer—for example, Mr. Hoyt is in our Boston office and one or more of the accounts are in that office. In other words, I not only include New York, the New York office, but, in some of the larger accounts, went beyond the New York area. For instance, here is Baltimore (indicating) and so forth, you see.

Q. And for what purpose was that put in?

A. Well, we were trying to establish the difference in the bracket, various bracket accounts.

Q. Those were just the expenses of sales and calls?

A. We were figuring out there the cost per salesman and the salesman's cost per call.

1884 Q. But when you figure overhead and office expense and so forth, you figured that in the New York office, didn't you, and the home office?

A. Well, we figured it in the New York office and also in the home office.

Q. Now, in determining the amount of your selling expense, what was the total volume of sales that you made the study of in those brackets 1, 2, 3 and so forth—such as you have in Schedule D you have got there? You have here "cost of calls on 88 manufacturers". And how much is the total sales to those manufacturers during that period of time, compared with the figures that you have in the exhibit? In other words, how much of a section do they cover?

A. Let me see. Pardon me. Off the record, please.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

The Witness: Well, I find that all of those manufacturers were located partially in the east and there were some in the west.

By Mr. Haycraft:

Q. Where are you getting that information?

A. Analysis No. 2. That is the last one in the book, Mr. Haycraft.

Q. Now, the figures that you have for volume of 1885 sales there amount to—I mean the amount of expense—amounts to $5,686.20, and the amount of sales was—do you have any idea as to the volume of sales to those companies that—

A. Where are you getting those figures, what page?

Q. That is in Schedule "C", "Cost of calls on 88 manufacturers".

A. Well, in accordance with Schedule D and C, which will have to be looked at together—if you start with your discount or bracket 1—perhaps this will give you the information you want—we sold to discount manufacturers a total of $5,684.00 of materials during 1937; in bracket 3, $73,323.00 and then the sales are enumerated in the other brackets.

Q. What is your total then for all those?

A. The total New York sales were $1,565,771.18.

Q. What is the total of the sales on which you made your allocation?

A. The total—pardon me just a minute. On analysis 1, that is the fifth page from the back, if you want to find it—

Q. (Interposing) I have got it.

A. We outlined there the names of the various manufacturers and classified them by the various brackets, and, in that manner, determined the sales that were made to those various classes of manufacturers.

1886 Q. What percentage was that of your total business done through that office?

A. The companies that you picked?

Q. Was that about one-third, would you say?

A. I was trying to get that more accurate, and I thought I could do it here, Mr. Haycraft. I think I can give you that a little more accurately; the discount, the bracket 1, and the bracket 2 and bracket 3 sales totaled approximately $500,000.00. Our New York branch, total sales, $1,565,771.18. Those three brackets represent approximately one-third of the New York figures.

Q. Didn't you use this discount bracket first, as a basis to work on?

A. That was included in those figures I just gave you.

Q. What was your basis on which you used, you figured the discount? Didn't you use that figure, the discount bracket sale, as your basis on which you figured Bracket 1, Bracket 2 and Bracket 3 sales?

A. Well, you remember that the discount bracket prices were the same as we gave to a jobber under contract.

Q. Yes.

A. And then, from the jobber price, we determined our first bracket prices.

Q. In other words, it was the base for the first bracket price?

1887 A. Well, the discount manufacturer sales is nothing but a drop in the bucket compared to the jobber sales. They just happened to have and were extended the same prices as the jobber.

Q. And in the study that you made, you just used bracket 1, 2 and 3; you didn't use 4, 5 and 6?

A. I figured 4, 5 and 6, but did not confine it to the New York area.

Q. Well, what did you base that on? What sort of comparison did you make of your total sales that were taken into consideration and with those total sales that you—for, instance, was it a home office figure that you compared with the total sales, or what?

A. Schedule F, if you will refer to it, please.

Q. Yes, I have it.

A. You have it?

Q. You used a different comparison, didn't you?

A. Yes, as I recall, we determined the direct selling cost to this class of account the same as we did for the first three brackets. In other words, it was based on the actual salesman's salaries and expenses.

Q. And how many accounts did you take into consideration to make that study?

A. If you will refer to the analysis, analysis 3—if you want me to, I will count them, but they are all listed

1888 there, that is the next page.

Q. About twenty accounts, that is all?

A. That is all the accounts here.

Q. Now, your total sales to those twenty accounts was approximately $2,700,000.00, is that right?

A. That is right.

Q. The total sales were $9,774,000.00.

The Witness: Pardon me. This is off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Haycraft:

Q. What I am trying to get is the cross section or percentage of sales of the total accounts. You referred to your total sales, your home office and branch.

A. Just a second.

Q. Isn't that obtained by comparing that $2,749,000.00 figure with the $9,774,000.00 on Schedule F?

A. Just a minute. (To reporter.) What was that now again.

(The question referred to was read by the reporter.)

A. I would like to answer that question in this way. The twenty accounts involved in the study, which included Brackets 4, 5 and 6, amounted—

1889 Trial Examiner Sheppard: That is Exhibit what?

Mr. Haycraft: 124.

Trial Examiner Sheppard: 124.

The Witness: Amounted to $2,749,008.00. Now, all of our sales from the combined branches and the home office to all classes that we termed wholesale, which would include manufacturers of all descriptions, dealers, jobbers, and the heating trade generally, was $8,250,787.00. Therefore, your percentage would be approximately 34. Just off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

The Witness: It is thirty-three plus per cent. That is what it amounts to.

By Mr. Haycraft:

Q. Now, then, on your direct selling expense that you took into account, both in your New York office study and in this bracket 4, 5 and 6, what was the total amount of that? I will refer you to the first column of Schedule C, which is $5,686.20.

A. Just a second.

Q. Well, on Schedule F, at the bottom of the schedule, you will notice the direct sales expense item, analysis No.

3, bracket 4, $3,380.96; under bracket 5, it is $1,885.90;
1890 bracket 6, $3,318.95; or a total of $8,543.81; in your home office, brackets 4, 5 and 6. The total of those two figures is $14,230.01, which is the total amount of the direct selling expense, which you took into consideration in the preparation of this exhibit.

Now, what proportion does that bear to the total amount of direct selling expense of all of your business, or wholesale business, as indicated in your page C of Exhibit 124, Respondent's Exhibit 124-C—the total of your home office and branch office selling expense?

A. Well, Mr. Haycraft, we have direct selling expense, according to analysis 3, on those three accounts—

Q. Totalling $8,543.81?

A. That is right.

Q. And your total for the other, the 1, 2 and 3, and your discount was $5,686.20?

A. Yes.

Q. A total of both studies apportioned to both analyses is $14,230.01.

A. $14,000. Well, the way we established that home office administrative expense was taken right from our total sales of the home office, less the figures that we had deducted, applicable to the branches, and we established a percentage that applied.

Q. You mean those figures under $3,380.93?

1891 A. Yes.

Q. What was the actual sales expense to those twenty accounts?

A. Well, that was direct sales account.

Q. That is what I mean.

A. Yes, that was the actual salesmen's salary and expense.

Q. Now, where would that $14,000 be found in this exhibit, page C in this exhibit, where you have selling expense as an item, where you determine the profit and loss in 1937—124-C—it is about the third page or second page of your exhibit, your report.

A. Well, those figures and the cost were computed on analysis No. 3, showing the various salesmen who called on the various accounts.

Q. That is all right, but I am just asking what proportion as a cross section proportion, is that of your total direct selling expense? It is pretty small, isn't it?

A. Well, I don't know how I would figure that offhand.

Q. Well, what was your total direct selling expense, as shown on your profit and loss statement, 124-C of the exhibit?

A. Well, our direct selling expense on all of our business was $619,077.97.

Q. And then you take the wholesale?

A. And on the wholesale it was $311,889.26.

Q. Now, would you say the $14,000 would be included in that?

1892 A. The $14,000 would be included in the $311,889.26.

Q. What percentage would you get out of that?

A. Well, it would run—what was that, roughly, 8,000 or 14,000?

Q. 14,000 compared to $311,000.00.

A. Roughly four and one-half per cent.

Q. Now, I notice on page 1,447 of the transcript, you were referring to Respondent's Exhibit 115 directly, but indirectly to Respondent's Exhibit 124, cost study, and you testified that you allocated expense over the sales volume in the various brackets, which you were studying on a percentage basis of cost to sales.

A. That is right.

Q. The question was asked:

"In other words, you allocated your direct selling expenses in accordance with the number of calls, as shown by the manufacturers' response."

A. That is right.

Q. And in that testimony, you were referring to this set up you are now just describing?

A. That is right.

Q. Is that right?

A. That is right.

Q. And then they said:

"But your indirect selling cost and overhead that
1893 is in both branch and home office, were allocated on the basis of sales?

"A. That is right."

A. That is right.

Q. Well, now, is it true that the application of the classes of expenses to the separate price brackets went indirectly on the basis of dollar sales?

A. Well, your brackets 1, 2 and 3 and your discount

as it is figured there in Schedule D, that is exactly as it worked out.

Mr. Gilpatric: May I interrupt, just off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Mr. Freeman: I have an exhibit I want to offer.

We offer in evidence on behalf of the respondent as Respondent's Exhibit 137, a bound volume of soft United States patent copies directed to primary controls, such patents being owned by General Electric, Delco, Williams Oil-O-Matic and others; and we are excluding from the group of primary control patents in Respondent's Exhibit 137, those patents owned by the respondent, owned by Perfex Corporation, by Mercoid Corporation and Penn Electric Switch Company; the Penn Electric Switch
1894 Company patents and the Perfex patents having been already introduced as separate exhibits; and we hope to get the Mercoid patents in when and if we get J. W. Owens on the stand.

Mr. Haycraft: I object to it. There is no value to it without a witness to explain it.

Trial Examiner Sheppard: What about that, Mr. Freeman? Are they highly important?

Mr. Freeman: Well, they are important first because the Commission in its complaint, under Count 1, Paragraph 2, charges the respondent with, and I now quote:

"The respondent owns or controls most of the existing patents on said primary control (Protectorelay) but there are many thermostats and limit controls being manufactured and sold by said competitors of respondent."

And we want to show that exclusive of Mercoid patents on prime controls, we have here a list of patents, taken together with those owned by Penn and Perfex, running up to approximately 88 patents, and we are putting this in to show that the respondent doesn't own most of the prime control patents, as alleged by the Commission.

Mr. Haycraft: And my answer to that is that to put in evidence a bunch of patents like this, without any showing of how they function, doesn't mean a thing. Even admitting, for the sake of argument, that these pat-
1895 ents are relevant and material to the allegation in the complaint, they are certainly incompetent, because there is no one to show, no testimony, of what use was made thereof.

Mr. Freeman: This is the first case I have ever had where a patent copy couldn't be introduced. In all courts where patent cases are ever heard, all you have to do is offer them.

I understand, Mr. Haycraft, that you are not objecting to them because they are not certified?

Mr. Haycraft: Oh, no.

Mr. Freeman: Then they are admissible and they have been accepted in every court in the land and the Federal Trade Commission should be no exception, but I will subject myself to any questions Mr. Haycraft want to put with regard to the patents.

Mr. Haycraft: I don't want to examine you, but I want to examine the man that is supposed to be using the patents on price controls. That is what I want to do.

Trial Examiner Sheppard: I want to know if there is anything mentioned here in reference to this patent matter in Commission's Exhibit 1 in this case.

Mr. Haycraft: The respondent's patents are listed.

Mr. Freeman: The respondent's patents are listed but they don't prove the case one way or the other.

1896 Trial Examiner Sheppard: The respondent's patents are listed?

Mr. Freeman: Oh, yes, and this is pertinent, very pertinent.

Mr. Haycraft: I didn't say it wasn't pertinent.

Trial Examiner Sheppard: Mr. Freeman, if you consider these important to your side of the case, I will accept them in evidence.

Mr. Freeman: We do.

(The document referred to was marked RESPONDENT'S EXHIBIT 137 and received in evidence.)

Trial Examiner Sheppard: Respondent's Exhibit 137 we will take for whatever connection they may have in the case.

Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record. Now, this is all the testimony you gentlemen want to offer at this time here, is it?

Mr. Freeman: That is all we had here in Chicago and Mr. Lockrae will be present in New York, when we resume on Monday, December 13th, for further cross-examination.

Mr. Haycraft: You are not going to be back tomorrow?

1897 Mr. Freeman: No, he wants to go to Minneapolis tonight.

Trial Examiner Sheppard: Now, Miss Reporter, in view of what Mr. Freeman has said we will take an adjournment in this case.

Mr. Haycraft: I would like to have it shown that the adjournment, of course, is taken at the request of the respondent, so that I won't be put in the hole. I expected to run tomorrow—you said you were going to work on Saturday morning—and I made my plans accordingly.

Trial Examiner Sheppard: Well, my understanding is that these gentlemen have got to get away. Mr. Lockrae already has his transportation back home.

Mr. Freeman: And I am leaving for Washington tomorrow afternoon.

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: Let the record show an adjournment to New York City, to convene at 10 o'clock A. M., at Room 500, 45 Broadway, on the 13th day of December, 1943.

We stand adjourned in Chicago.

(Whereupon at 4:30 P. M., December 3, 1943, the hearing in the above entitled matter was adjourned.)

1898

Room 500,
45 Broadway,
New York, New York,
Monday, December 13, 1943.

Met, pursuant to agreement of Counsel at 10:00 a. m., E. W. T.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission,

Cravath de Gersdorff, Swaine & Wood, by R. L. Gilpatric, Esq., and Paul Chase, Esq., 15 Broad Street, New York, New York, and Bair & Freeman, by Will Freeman, Esq., 135 South LaSalle Street, Chicago, Illinois, Attorneys for the Respondent.

1899

Proceedings.

Trial Examiner Sheppard: Come to order.

Mr. Reporter, you can convene the hearing in the Minneapolis-Honeywell case, Docket 4920, pursuant to agreement to reconvene in New York City on December 13, 1943.

Everett F. Haycraft, Esq., is appearing for the Federal Trade Commission, and Cravath de Gersdorff, Swaine & Wood, and Bair & Freeman, Esqs., are appearing for the Respondent.

Mr. Gilpatric: I will call Mr. Shields.

C. E. SHIELDS was thereupon called as a witness for the Respondent and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Gilpatric.

Q. Will you please state your name and address for the record?

A. C. E. Shields, 47 Lafayette Place, Greenwich, Connecticut.

Q. With what oil burner company have you been associated in the past, Mr. Shields?

A. I was with the American Nokol in the past in Chicago and until 1929 when they were merged with Petroleum Heat & Power Company, and I became a mem-
1900 ber then of the merged companies.

Q. What position do you hold with the Petroleum Heat & Power Company?

A. I was Vice President in charge of manufacturing and merchandising of the equipment division, that is, the manufacturing division.

Q. How long did you stay with Petro?

A. I was there about 14 years.

Q. Until about what date?

A. Until about April 1, 1943.

Q. Can you recall roughly when Petro first began to manufacture oil burners for domestic use?

A. I think, well it was about 1922 or '23. They made industrial burners prior to that time. In fact they started about 1903.

Trial Examiner Sheppard: It is a pretty old concern?

The Witness: Yes. They made industrial burners in a small way for a number of years.

In 1920 they moved to this Stamford factory. They had been running 6, 7 or 8 years when I went there in 1929.

By Mr. Gilpatric:

Q. The American Nokol was a manufacturer, was it not, of domestic burners?

A. It was a manufacturer of the domestic for
1901 homes. It was the first automatic oil burner on the market as you may recall. I had charge of the manufacturing of that burner for them until from 1925 and '6 until the merger.

Q. Coming down to the period say from 1936 on down to the War period, what type of oil burner did Petro manufacture during those years?

A. Well, they manufactured several of the different domestic types.

Q. Did they manufacture a gun or pressure type of burner?

A. Yes, and they manufactured of course industrial, what we call industrial commercial burners.

Q. Yes, what about a Rotary type of burner?

A. We made two rotary burners for the home, that is in the automatic operation; one was the horizontal rotary

type and the other was the vertical. The vertical rotary type was discontinued I think around '31 or '32, along in there somewhere.

Q. They just make one type now?

A. No, they make a complete line at this time but not exactly the same as they were because there have been changes as we came down through the years.

Q. Meaning they make both horizontal rotary and pressure type now?

A. They are manufacturing no horizontal rotary type excepting for commercial industrial purposes.

1902 Q. What has been the sales territories speaking generally of Petro?

A. Well, we have always done a national business, the entire United States and some small amount of export.

Q. What makes of automatic temperature controls has Petro used on its domestic burners?

A. Well, from the start of course the old Nokol burner was set up with the Honeywell Control. That was prior to the merger of Honeywell and Minneapolis Regulator and then as the development came along we used Mercoid, Minneapolis-Honeywell, Penn and then Perfex when they came in and for industrial burners we used Wheelco.

Q. We are not concerned with industrial burners here so much?

A. That was strictly an industrial application.

Q. What manufacturers' controls have your purchases predominated, if any?

A. Well, the largest majority dollars and cents unit volume was Minneapolis-Honeywell.

Q. Did you also offer your trade other makes of controls?

A. Yes.

Q. What was your policy on that, Mr. Shields?

A. We had a standard policy giving the dealers what they wanted. If they preferred other controls, why we gave it to them.

1903 Mr. Gilpatric: Mark these for identification.

(The papers referred to were marked Respondent's Exhibits 138-A and 138-B; 139-A, 139-B, 139-C and 139-D for identification.)

By Mr. Gilpatric:

Q. Mr. Shields, will you identify for us Respondent's Exhibit 139-A and B, and 139-A to D, and tell us what those documents are?

A. 138-A and B, are pages 4 and 5 from a manual of instructions for models P11, 12 and 13 burners.

Q. Petro Burners?

A. Petro Burners, yes.

Exhibit 139-A is the wiring diagram covering R116-2 Protector Relay, a wiring diagram for the Penn Safety Type 607 Primary Control.

Q. 139-B?

A. 139-C is a wiring diagram showing a hook-up for the Protector Relay, Minneapolis-Honeywell R116-2 for these types of burners.

The 139-B is an electrical hook-up for the Penn Saftrol Type 607.

Mr. Gilpatric: I will offer these in evidence.

Trial Examiner Sheppard: Any objection, Mr. Haycraft?

Mr. Haycraft: No objection.

1904 Trial Examiner Sheppard: Let them be admitted.

(The papers referred to, heretofore marked for identification RESPONDENT'S EXHIBITS 138-A, 138-B, 139-A, 139-B, 139-C and 139-D, were received in evidence.)

By Mr. Gilpatric:

Q. For what period, Mr. Shields, was that manual to which you referred in effect?

A. This manual was in effect during the course of life of those models. They started in the last, the very last part of 1933 but became more widely used in 1934, the first part of 1934, and are in effect up to this time so far as these burners, these particular burners are concerned, but the principal production of those burners discontinued along 1937 or 1938.

Q. During the period they were offered I take it that both Minneapolis-Honeywell and Penn Controls were available for those burners?

A. They were available for those burners at that time.

Mr. Gilpatric: Mark this for identification.

(The papers referred to were marked Respondent's Exhibit 140-A and 140-B for identification.)

By Mr. Gilpatric:

Q. Mr. Shields, will you tell us what comprises Respondent's Exhibit 140-A and B which I hand you?

A. They are photostatic copies of pages 26 and

1905 27 of the manual of instructions for Petro Domestic Oil Burners.

Q. Is that manual the one which was in effect for your company up through say the War period for the type of burner that you were offering?

A. Yes, it was in effect up until the time I left on April 1st.

Q. Of the current year?

A. That is right.

Mr. Gilpatric: The Respondent offers in evidence Exhibit 140-A and B.

Trial Examiner Sheppard: Is there any objection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let them be accepted.

(The papers referred to, heretofore marked for identification RESPONDENT'S EXHIBITS 140-A and 140-B, were received in evidence.)

By Mr. Gilpatric:

Q. With respect to the models of oil burners referred to in that manual it is a fact, is it not, that both the Perfex and Minneapolis controls were available?

A. Yes.

Mr. Gilpatric: Please mark these.

(The paper referred to was marked Respondent's Exhibit 141 for identification.)

By Mr. Gilpatric:

1906 Q. Mr. Shields, will you describe for us Respondent's Exhibit 141 for identification?

A. This exhibit is a photostatic copy of a service department memorandum, their number 342. The signer of this was the manager of the National Service Department.

Q. It relates to a Perfex Control, does it not?

A. That is right.

Mr. Gilpatric: The Respondent offers in evidence Exhibit 141.

Trial Examiner Sheppard: Is there any objection?

Mr. Haycraft: No.

Trial Examiner Sheppard: It may be accepted.

(The paper referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 141, was received in evidence.)

By Mr. Gilpatric:

Q. Mr. Shields, you testified that the majority of controls purchased by your company were Minneapolis-Honeywell. How do you account for that?

A. Well, it was because of the general public demand. That is it.

Trial Examiner Sheppard: You mean dealer demand?

The Witness: Dealer demand, as well as the consumer demand. It was the public acceptance that had been accorded Minneapolis-Honeywell Controls which
1907 brought about the condition which whereby the dealers had confidence in them. The owners knew of them because of the National Advertising and they thought that the equipment was more easily sold with accessories of the kind that were well-known.

It was in fact a merchandising proposition all the way through.

By Mr. Gilpatric:

Q. How did the price of Minneapolis-Honeywell Controls compare with prices for other makes that you purchased?

A. They were about the same, probably a little bit more, not enough to make any particular difference.

Q. Did you ever charge your customers more for burners equipped with Minneapolis-Honeywell Controls than for those equipped with those of other controls?

A. Yes, slightly higher prices except with an ordered complete burner, then we only had one price.

Q. In other words your price differential was only charged in case of spare controls or replacements?

A. That is right.

Q. Has the Petro Company always made it a practice to equip its burners with the three standard controls of the same make or do you use different makes of controls on the same burner?

A. Well, there were times when they might be mixed. We never would of course mix the primaries with the thermostat. There has been a time perhaps when the
1908 limiting control might be different. It depends somewhat on the stock and things.

Q. When did your company start including as part of its original equipment limit controls as well as primaries and thermostats?

A. The inclusion of limit controls I think was my own undertaking way back in 1926.

At that time limiting controls were not required by the Underwriters and most manufacturers did not include them.

It looked to me like it would be a good thing for us in Nokol to include them, so that we knew that they would be used at least if we included them. We had every reason to believe that they would be installed. That would tend to cut down service and make the burners more safe because they would be limiting devices.

Q. You mean that your company, the Nokol Company, started that practice and not the control manufacturers?

A. Right, the control manufacturers did not. They had been selling their limiting controls as they were required, to distributors and dealers, and manufacturers did buy some, but they did not give them as standard equipment.

When we started of course that also had a little selfish motive. We wanted the markups on those controls that the dealers were buying elsewhere, and after we started, why of course the competition followed.

1909 Q. And it became a general practice?

A. They found it was required and it became a general practice and I think it was about that time that the Underwriters required a limiting device as part of the installations. The Underwriters never required that they should be part of the set of controls.

Q. Now referring to the period again from 1936 through 1941, did your company have contracts with Minneapolis-Honeywell for the purchase of controls during those years?

A. Yes, I cannot tell you just exactly what years we had them, but we had contracts. I would have to check back to see if we had one for each one of those years, but I know we did have contracts for several years.

I believe from that time we always had some agreement on prices or things of that kind.

Q. With Minneapolis-Honeywell?

A. Yes.

Q. Did you actually buy controls from other controls manufacturers during the same years that you had contracts with Minneapolis-Honeywell?

A. Oh, yes.

Q. Did you consider that Minneapolis-Honeywell con-

tracts prevented you from purchasing from other control manufacturers?

A. No, there was nothing in the contract that said it was exclusive.

1910 Q. Well, did you feel obligated to buy the quantity of controls that were specified in the Minneapolis-Honeywell contract?

A. Not particularly. I considered that the contract was a price agreement and that the manufacturers, we as a manufacturer, were making a statement as to about the quantity of controls we expected to use, in order to get into the proper price bracket.

Q. During this period were you solicited by other control manufacturers for the purchase of their makes?

A. Oh, yes.

Trial Examiner Sheppard: Mr. Shields, you speak of price brackets. I wish you would tell me what was your understanding, just your individual understanding, in reference to price brackets that you speak of.

The Witness: Well, there is nothing new in the having price schedules and set-up based on quantity purchases. Therefore in this set-up it was just another one of those circumstances where anyone who was using larger quantities would enjoy a lower price because of the quantity involved.

Trial Examiner Sheppard: In other words, the greater number let you have a lesser price?

The Witness: That is right. The reason for it all is because the greater quantity you make the lower your cost, your selling cost, all those ramifications of merchan-

1911 dising.

Trial Examiner Sheppard: All right, that answers the question.

By Mr. Gilpatric:

Q. Were you familiar, Mr. Shields, with what I might call the bracket set-up of Minneapolis-Honeywell on control prices?

A. Yes.

Q. Did you know that other oil burner manufacturers had to pay more for their controls than your company did in certain instances?

A. Yes, I knew that.

Q. And were those companies engaged in competition with you in the sale of their burners?

A. Yes.

Q. Did that price advantage to you in the cost of your controls help you in competing with those other manufacturers?

Mr. Haycraft: That is leading.

Trial Examiner Sheppard: It is a little suggestive. Just change that around.

By Mr. Gilpatric:

Q. Did it or did it not?

Mr. Haycraft: The same objection.

Trial Examiner Sheppard: Well, do you understand what he wants, Mr. Shields?

The Witness: I don't think that alone gave us any
1912 advantage because of the fact that even with their higher prices they were underselling us all the time.

By Mr. Gilpatric:

Q. You mean oil burner manufacturers who received better control prices as manufacturers than you were, were underselling you?

A. No, it was the opposite. Those who were paying higher prices were underselling us all the time.

Mr. Gilpatric: That is right I have that reversed, I mean those that were paying higher prices were underselling you?

By Mr. Gilpatric:

Q. Can you give us some examples and companies paying more for controls and underselling you all the time?

Mr. Haycraft: I object to that as immaterial and irrelevant.

Trial Examiner Sheppard: I don't know. It may be something to consider in this man's testimony, if you have some particular incident, Mr. Shields, to illustrate that, I think I will let you tell us about it.

The Witness: That would be very difficult to name specific instances this late but they came up from day to day. Many of the smaller companies who were doing business on smaller overheads and had less other costs were able to undersell us. They were not doing a complete job
1913 such as we and other larger companies were doing, as when we sold an oil burner we lived with that oil burner for as long as it was installed in a man's home. We assumed that responsibility of giving a complete service

whereas the smaller, lower-priced or localized manufacturer didn't have that expense and when the burner left their warehouse they were through.

Well, with us we maintained a large national service organization and a large sales department who helped the dealers sell their merchandise, had meetings all over the country. We had expenses that otherwise they did not have.

Q. Do you recall whether Gold Star Oil Burner Company is one of the companies that you had in mind?

Mr. Haycraft: That is objected to as leading.

Trial Examiner Sheppard: What is your answer if you know?

The Witness: Gold Star in the local territory, I cannot say definitely because I don't know what their prices were. It was just general information.

Mr. Haycraft: I am going to object and move to strike the witness's statement that it has no probative value.

Mr. Gilpatric: If he knows they were selling lower?

Mr. Haycraft: He does not know what they paid for controls. This is hearsay on his part.

Trial Examiner Sheppard: I think this is a matter of weight. The more detailed the testimony is on that
1914 line, the better, so, Mr. Shields, if you have got nothing definite about it I will have to give weight to the answer.

Mr. Haycraft: I object to weight being given to the answer. I do not think it deserves any.

By Mr. Gilpatric:

Q. Mr. Shields, how did the prices for your burners, that is the Petro Burners, compare with other oil burners on the market?

A. Our prices were generally higher than the majority. Our sales merchandising policy was that they cost more, that they give more. That was a sort of theme and was the system on which we operated and we did get higher prices generally.

Trial Examiner Sheppard: Does that mean that your burners equipped with controls, that were not manufactured by the Respondent, were higher than those that were so equipped?

The Witness: It made no difference which controls we furnished.

Trial Examiner Sheppard: I see.

By Mr. Gilpatric:

Q. But you included in your burner price the price of this service which you state your company gave?

A. That is right.

Q. What was the general price range of your burner when sold, say to dealers, selling the period 1937 on?

1915 A. Well, from '37 on through to '41 we changed our selling somewhat and our method of pricing them but the ultimate from the distributor to the dealer did not change very much. For instance, we started selling to the heating jobbing trade. We liked to have a trade discount and they can have a discount applicable to practically the entire line.

Q. I want to get some idea of your net prices to dealers and to the trade, to wholesalers?

A. Our average in 1941 was $78.08.

If you will permit me look at a memorandum which I have, I can give you what they are over the term.

Trial Examiner Sheppard: You can look at the memorandum and testify.

The Witness: This is a record taken from the Petro Annual Statements which I was familiar with and had copies of.

Trial Examiner Sheppard: Give it to us by the years.

The Witness: What year would you like to start with?

By Mr. Gilpatric:

Q. Start with '37?

A. '37, the selling price to the distributor and/or jobber was $99.67; 1938 it was $93.21; 1939 it was $88.99; 1940 it was $84.54; in 1941 it was $79.48; in 1942 it was $78.08.

Trial Examiner Sheppard: There was a decline there?

The Witness: The market declined, yes, sir.

Mr. Haycraft: Those are average or actual?

1916 The Witness: Those are average. Taking that average, it covered the domestic burner only.

Mr. Gilpatric: That is all we are interested in.

Trial Examiner Sheppard: Yes, we do not care about the others.

The Witness: This is the domestic burners and it covers the four or five sizes that were in that line of domestic burners.

Trial Examiner Sheppard: To what do you attribute that gradual decline?

The Witness: The change in design and more efficiency

in production and a reduction in the price of accessories and materials.

Trial Examiner Sheppard: Did competition figure in that?

The Witness: It may have but the difference, that is the cost between those, the cost price and the selling price are about the same mark-up all the way through.

By Mr. Gilpatric:

Q. How did your volume of oil burner sales run during those years, have you got some figures for us on that?

A. Yes, I can give you the volume, the quantity of domestic burners during those same years if you will let me read this.

Trial Examiner Sheppard: For the same years?

Mr. Gilpatric: Proceed.

1917 The Witness: The same years, yes, sir; 1937, the quantity of burners that made up the average cost prices was 9406. 1938 it was 6987; 1939 it was 6247; in 1940 it was 5896; in 1941 it was 6387; in 1942 it was 5425.

By Mr. Gilpatric:

Q. Mr. Shields, do you recall having any conversations with the representatives of the Perfex Company, I believe with Mr. Sheppard Barnes, regarding purchases by your company of Perfex Controls?

A. Well, over a term of years I had a large number of conversations with Mr. Barnes while he was a member of the Perfex Company.

Q. As a result of those conversations did you or did you not buy more Perfex Controls?

A. Well, we sold some more because of a greater activity on his part in promoting the sale of his controls to the dealers.

Q. What did you tell him, if anything, with regard to purchasing more Perfex Controls?

A. I told him the same as I did all the others, to go out and create a demand for his controls and we would have to use them whether we wanted to or not.

I recall particularly advising him to call on the dealers and get them to specify on their orders that they would like to have Perfex Controls and if they did that that

1918 is what we would ship.

Q. Mr. Shields, going back to your testimony about the manual from which Respondent's Exhibit 140-A and B

was taken, did that manual also show installation layouts for primary controls for Perfex and Minneapolis Controls?

A. Yes, page 101 shows a wiring diagram for Perfex, 52HD3 Primary Control. On the same page is the wiring diagram for Minneapolis RH6A Protectorelay.

Q. Were those comparable controls?

A. For the same purpose, yes.

Q. Turn to page 102 of the same manual and tell us what that shows, if you will?

A. That is a wiring diagram.

Mr. Haycraft: Will you offer that in evidence?

Mr. Gilpatric: Yes, I will offer that in evidence.

The Witness: For the Perfex 52HD3 Master Control.

By Mr. Gilpatric:

Q. The Master being sometimes referred to as the Primary Control?

A. The Primary Control, yes, sir.

Mr. Gilpatric: The Respondent offers in evidence as Respondent's Exhibit 142-A and B the pages to which Mr. Shields referred and asks leave to substitute a photostatic copy for the pages.

Trial Examiner Sheppard: Is there any objection?

1919 Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let the exhibits be received, it being understood that the photostats will be substituted.

(The papers referred to were marked RESPONDENT'S EXHIBIT 142-A AND 142-B and were received in evidence.)

By Mr. Gilpatric:

Q. Mr. Shields, did Mr. Haycraft call you by telephone about testifying in this case?

A. Yes, he did.

Q. Were you willing to testify?

A. I won't say that he did not call me about testifying. As I recall it, he called me relative to it I think or something like that, or there were a few conversations that led along those lines. I don't think that he requested me to testify. I don't recall that.

Q. You did not refuse to do so, to testify, did you?

A. Oh, no.

Mr. Gilpatric: That is all.

Trial Examiner Sheppard: Cross-examine.

1920 *Cross-Examination by Mr. Haycraft.*

Q. When was it that you had your conversation with Mr. Barnes, of the Perfex Company, that you referred to in your direct examination?

A. That was along in 1936 or 1937. I had so many conversations with him that to remember the exact date it would be impossible for me to do that.

Q. Do you remember what years it was that you bought any Perfex Controls?

A. That was during that time. Again, the exact dates I cannot give you, but the fact that it is in that manual, which became effective about 1937 or 1938—it may have been even that late—that would show that they were being bought during that time.

Q. Do you have anything in your possession by way of a memorandum that will refresh your recollection as to the quantity of controls that you purchased from Perfex during that time of 1936 to 1941?

A. No, I don't.

Q. As a matter of fact, do you remember whether you bought any devices, any controls, from the Perfex Corporation since 1937?

Mr. Gilpatric: May the record show that the document, the manual which the witness referred to, is the one
1921 from which is taken Respondent's Exhibits 140, 141 and 1942.

Mr. Haycraft: Will you read the question to the witness?

(Pending question read by the reporter.)

The Witness: Time has gone so fast. Yes, there were controls bought since 1937, I am sure.

By Mr. Haycraft:

Q. How sure are you of that?

A. Just of my own memory, that is all. If there had been any demand for their controls at all they would have to buy them; that is, if there was any call for them.

Q. Are you as sure of your recollection of that fact as you are of the other facts that you have testified to?

A. The other facts are more prominent in my mind. I am sure of those because that is general enough that I am supposed to know it. Some few details that did not have to do with policy I may not have at the tip of my tongue.

Q. Would you be positive that you bought any controls from the Perfex Company in 1938?

A. No, I could not say without looking up the records.

Q. How about 1939?

A. I could not say, say that.

Q. How about 1940?

A. I could not say that. That is a detail that I 1922 would not know.

Q. How about 1941?

A. I would not know that.

Q. How about 1941? That is not so long ago. Did you buy controls from Perfex in 1941?

A. We did not buy very many controls in the last three years I would say.

Trial Examiner Sheppard: Mr. Shields, in fairness to you, if you want to look up the records after you get home and give us more detailed information about your purchases of Perfex during 1938, 1939, 1940 and 1941, I will let you do it; that is, if you want to.

The Witness: Well, that would be a job for someone, for instance, the purchasing agent of the Petro Company.

Trial Examiner Sheppard: I just leave it to you.

Mr. Freeman: I don't think that the issue is whether they purchased any. They were offering controls in 1938, and we have the evidence right here, and the drawings are dated 1938. If Mr. Shields just wants to refer to the date on the drawings, he knows at least that at that time they were offering them for sale. You cannot make people buy them.

Mr. Haycraft: The question was whether he bought 1923 any.

Mr. Freeman: That is immaterial.

Mr. Haycraft: That is not immaterial.

Trial Examiner Sheppard: All right. We will continue.

The Witness: That is a question that should be answered from the records in detail, if they bought any. Whether they did or not, we may have had enough on hand because in some cases we did. There were prior years that we had controls on hand for several years due to the fact that there was no real demand for them.

By Mr. Haycraft:

Q. Would you say that the records of the Perfex Company showing the sales would be the best evidence of how many they sold to your firm?

A. I imagine it would be. They must have them.

Q. And if the records of the Perfex Company show, as they do in this case, in Respondents' Exhibits 23, 43, 70 and 71, and the testimony of witness, Tate, who identified those exhibits, that the only year they sold to your firm was 1937, and the amount was $976, would you say that that testimony was wrong?

A. I am not in a position now to say that it is. We never did buy many Perfex controls, I know that; that is, the quantity we bought was very limited.

1924 Q. Do you know what bracket you were in when you bought from the Minneapolis Honeywell Company, and the prices that you paid?

A. We were in the number five bracket, that is, the lowest bracket. I don't know the prices that we paid.

Q. What did you have to do with the purchasing end of the business?

A. I set the policy, and the purchasing records were all kept by the Purchasing Department. The orders were placed by them, but the policy in regard to what controls were to be used and the general merchandising policy I set that.

Q. When were you in the number five bracket, what year?

A. We were in the higher bracket—I don't know whether it was number five in all those years, but we were in the highest bracket during all that time.

Q. During the entire time?

A. Yes.

Q. In other words, you understood you were getting their best price?

A. That is right.

Q. Was that regardless of whether you bought the full amounts that you were required to buy that you were getting that bracket?

A. Yes. We made the statement each time that
1925 we was entitled to that bracket.

Q. They did not do any checking up to see whether or not you bought the quantity required?

A. No, there was no penalty at that time for nonperformance.

Q. Did you, as a matter of fact, ever see or study the language of those contracts that you entered into with Minneapolis Honeywell?

A. Yes.

Q. Do you remember the language in this contract that you entered into in the year 1936 for 1937 business, or the early part of 1937?

A. No, I could not quote at this time anything from that contract.

Q. Well, you stated that it was not an exclusive contract, that you were not required to buy from Minneapolis Honeywell exclusively. In making that statement just to what extent are you familiar with the language of the contract?

A. Each time I signed it I was acquainted with it, otherwise I would not have signed it.

Q. Your testimony is now that you would not recall any such terms in the contract?

Mr. Freeman: He said he could not quote the contract. He did not say terms.

1926 Mr. Haycraft: I object to counsel for the respondent prompting the witness.

Mr. Freeman: I am not prompting him. I am just calling your attention to the term the witness used.

Mr. Haycraft: May I be allowed to continue the examination of this witness without being interrupted?

Trial Examiner Sheppard: Yes.

Mr. Freeman: I object to the question as an unfair question and a misstatement of fact.

Trial Examiner Sheppard: Go ahead, gentlemen.

Mr. Haycraft: You are just taking in a little too much territory.

Read the last question.

Trial Examiner Sheppard: Read the last question.

(The pending question was read.)

Mr. Freeman: Did he answer that one?

Mr. Haycraft: No.

Trial Examiner Sheppard: Do you have anything to add to the last answer you made, Mr. Shields?

The Witness: Does that pertain to an exclusive feature of the contract?

Mr. Haycraft: Yes.

The Witness: Or just in a general way?

By Mr. Haycraft:

Q. I am asking you do you recall any phrase ever

1927 in the contract that could be termed, as you term it, an exclusive phrase or an exclusive clause?

A. I answered that if I thought at any time that it was exclusive and a firm commitment I never would have signed it. Now if there is a copy of the contract here, and I am wrong, it is all right. I never intended to sign any firm commitment for a year's business that had not happened yet. I would be crazy. It is an estimated quantity because it was in anticipation of something that had not happened yet.

Q. Did you ever see this clause in any contracts submitted to you by the Minneapolis Honeywell Corporation, "The purchaser agrees that at least 95 per cent of his control requirements, consisting of thermostat primary controls and limiting devices, will be purchased from the company"?

Mr. Freeman: Why don't you show it to him? You said do you recall seeing.

The Witness: That pertained to complete sets, didn't it, that 95 per cent were to be complete sets?

By Mr. Haycraft:

Q. That is another one. I will get to that in a moment. This was separate from that.

Mr. Freeman: I think the witness is entitled to have these contracts presented to him. This is not a guessing contest, and if Mr. Haycraft has any records, and 1928 has asked questions with respect to the records, I think the witness is entitled to see them, especially as to events that happened seven or eight years ago.

Trial Examiner Sheppard: Do you want to see them, Mr. Shields? If so, Mr. Haycraft will show them to you. I thought probably you are familiar enough with them to remember.

The Witness: No. Of course, they have not been available to me. I have seen one or two of the latest. I suppose I could go back and get the copies that the Petro had on file, but I did not do that. My idea on the contracts has not changed from the first one up to the present time.

By Mr. Haycraft:

Q. During that entire period of time from 1937 to 1941 what controls were you putting on your burners if there were no requirements on the part of the dealer?

A. Unless otherwise specified we gave them Minneapolis Honeywell Controls. That was the general understanding with the dealers.

Q. And would you call that a standardization, you standardized on the Minneapolis Honeywell Control?

A. I would say so, yes.

Q. Was there any understanding to that effect with the Minneapolis Honeywell Company?

1929 A. Nothing, only a general idea. I suppose they could assume that we were when we were using them principally.

Q. Now, then, I will ask you about this clause. I have it here, and you can see the printed language. See whether you are familiar with that third or fourth paragraph there where it begins "The Company agrees to sell"?

Trial Examiner Sheppard: What exhibit is that?

Mr. Haycraft: Commission's Exhibit 2.

Mr. Gilpatric: Commission's Exhibit 2.

By Mr. Haycraft:

Q. The printed form with respect to the percentage?

A. That is 90 per cent as many room thermostats as we bought primary controls. That does not mean exclusive.

Q. What about 125 per cent limit controls?

A. We cannot buy more than 125 per cent limit controls.

Q. Is that what it says?

A. That is what it says there.

Q. You read it.

A. That is the way I take it.

Q. You read it again. Read it out loud. Read it into the record.

A. Where do you want me to start?

Q. "It is specifically agreed."

A. "It is specifically agreed that other control equipment is not to be considered as a part of a set within

1930 the terms of this contract period because the Company's costs are figured to cover a complete set of controls, and the following breakdown of prices are purely for invoicing purposes.

"It is agreed that the purchaser's yearly purchases will consist of at least 90 per cent as many room thermostats and 100 per cent as many limit controls as primary controls (at the company's option not more than 125 per cent)."

Q. What does that mean?

A. I would say that that means that you are not to buy more than 125 per cent of your limit controls. I say

that knowing that sometimes two limit controls are required on one job.

Q. Does it not also require 100 per cent limit controls as primary controls?

A. I would not say so.

Q. Read it again. You did not finish it.

A. "90 per cent as many room thermostats"—

Q. All right, go ahead.

A. "And 100 per cent as many limit controls." All right, when you read it through that way that 125 throws you off a little bit.

Q. 100 per cent limit controls is that what you mean?

A. Yes.

Q. Did you follow that contract? Did you ob-
1931 serve it through these years?

A. No.

Q. You don't know how many limit controls you did buy?

A. No.

Q. Again, their records would be the best evidence of that?

A. That is right, that Minneapolis-Honeywell's records.

Q. Yes, Minneapolis-Honeywell's?

A. Yes, and the other control manufacturers would all know how many they shipped. That necessarily would not be the quantity that was used because they may have been an inventory at the beginning or at the end of the period.

Q. You knew when you signed that contract though that that clause was in there, did you not?

A. I certainly did.

Q. Is it usually your intention to carry out an agreement that you have signed?

A. If I signed that contract, and that is a copy of it I signed.

Q. Is it usually your desire to carry out an agreement with the Minneapolis-Honeywell?

A. To the best of my ability it was an estimate based on the next year's quantity of controls to be used.

Q. But this printed language which you just got
1932 through reading was not any estimate, was it? It was an agreement that you were to buy 100 per cent?

A. Of the quantity that was specified in the memorandum.

Q. In other words, 100 per cent as many limit controls as you did primary controls?

A. Yes.

Mr. Gilpatric: I object. The contract said what the provision was. Why go on with this?

Mr. Haycraft: That is all right. I am entitled to do that on cross-examination.

Trial Examiner Sheppard: Go ahead.

By Mr. Haycraft:

Q. In other words, you attempted to live up to the contract, did you not?

A. I answer that broadly. Naturally we would like to have sold 10,000 instead of 5,000. Always when you set up for your year's business you hope to do better than your budget or better than you think you are going to do. We always signed for what we thought we were going to use. It did not always work out that way. Sometimes it did in dollars and cents volume.

Q. You did not agree to buy a certain number of sets, did you?

A. No, never considered it as a firm commitment.

Q. But you did agree that as many primaries as 1933 you bought you would buy an equal number of limit controls?

A. According to that contract, yes.

Q. And you tried to do that, did you not?

A. Yes, we tried to, yes, and as far as I know we probably did because you buy more limit controls normally than you do other controls because of the fact there is a big service quantity used.

Q. There were other limit controls that you could use with the Minneapolis Honeywell primary and thermostats, were there not?

A. Yes.

Q. Now as to the prices you received for your burners equipped with thermostats, as I understand you to testify there was a decline in prices but it was due to improvements in your manufacturing operations and more efficient production costs?

A. And during those periods there had been a change in designs.

Q. To what extent do you think your competition had effect on your price?

Mr. Gilpatric: Mr. Examiner, I object to this question because Mr. Haycraft fails to state as to the third element. He is not fair to the witness.

Mr. Haycraft: I don't have—

Mr. Freeman: Tell the truth.

1934 Mr. Haycraft: I heard what you said, and I want you to quit it.

Mr. Freeman: Mr. Examiner, I ask that when he asks this witness a question and repeats what this witness testifies to, that he present the facts correctly—either that or let us have this record re-read.

Trial Examiner Sheppard: Go ahead and re-read the record then. Let us get him straight.

By the way, Mr. Shields, do you understand what Mr. Haycraft wants you to answer?

The Witness: His last question?

Trial Examiner Sheppard: Yes.

The Witness: I understand the substance of it. I don't know.

Trial Examiner Sheppard: I think I asked you the same question myself when you were on direct examination. I asked you did competition have anything to do with that. If you understand what he wants, I will let you go on and answer.

Mr. Freeman: Then I think we have the right to call the witness' attention to a material fact which Mr. Haycraft refuses to tell this witness about, and which in fairness to this witness I think Mr. Haycraft ought to tell.

Trial Examiner Sheppard: I will let you tell

1935 him.

Mr. Freeman: We will, and in so doing—

Trial Examiner Sheppard: If there is anything to remind this witness before he answers this question I will let you do it.

Mr. Freeman: We will only stick to the record, which it would be helpful if Mr. Haycraft would.

Trial Examiner Sheppard: Just tell him any other element that you want him to consider in answering that question.

Mr. Freeman: I don't want him to consider any element except to refer back to his own testimony. Mr. Haycraft tells him what he heretofore testified to. You know you can tell the truth by telling the whole truth.

Mr. Haycraft: Wait a minute. I am getting sick and tired of this truth proposition.

Mr. Freeman: That is all I am interested in. If you get sick and tired of it, I don't care.

Trial Examiner Sheppard: There is nothing to argue about or fight about. It is just a question of misunderstanding.

Mr. Haycraft: It is just a question—

Trial Examiner Sheppard: Of getting these things from the witness.

Mr. Freeman: Mr. Haycraft just said in so many
1936 words that he does not have to tell the witness the whole truth.

Mr. Haycraft: I did not say anything of the kind. I move we have a recess until this man gets cooled off and conducts himself like a gentleman.

Mr. Freeman: You learn to be a gentleman, and then we will try law suits as you should.

Trial Examiner Sheppard: All right, don't get excited. If all the elements are before you that you want to answer this question on, go ahead; otherwise go back and read the record. I want to be perfectly fair and to make sure the witness understands the question that is being asked of him before he attempts to answer it.

The Witness: Well, as I understand the question it was in reference to these selling prices and these reductions over this term which was asked about, and what they were caused by.

By Mr. Haycraft:

Q. My question was whether competition had anything to do with it, and that is all my question is.

Trial Examiner Sheppard: All right, answer it on that basis.

The Witness: I answered before that it had something to do of course with it.

By Mr. Haycraft:

1937 Q. To what extent?

A. I don't recall.

Q. I notice that during that same period of time that your volume of sales declined quite substantially from the figures that you gave. I will ask you whether or not your competition, the prices of competitors, had anything to do with that?

A. No doubt about it because at one time talking about volume decreasing we enjoyed one hundred per cent: We

made the only domestic oil burner made. We had to divide it and got down over a term of years where we were only doing ten per cent of the total volume, and then less. During the time that I had, the last few years, I was not interested in large volume as I was in some profit, and to sell the most oil burners that were being sold did not interest me as much as doing a good job and making some money; and I set up the selling prices on a basis where I thought we could do a reasonable business and make some money. Naturally, I would take into consideration as a merchandise man costs, competition and other elements of sound merchandising. Now you can figure it out any way you want to.

Q. Did you ever hear of the Quiet-Heet Manufacturing Company?

A. Yes.

1938 Q. Did they sell in your territory?

A. Yes.

Q. Do you know anything about the prices they obtained for their burners?

A. I used to get a postcard on my desk every few days that they were sending out direct to dealers. From $53 I guess under $50. And here is one thing may save you some time: I did not pay a lot of attention to competitors. I meet them in meetings, and have talked things over, but competition never worried me a lot because I went out and tried to do my own job. I was too busy doing my own job to keep worrying about what Quiet-Heet was doing or someone else was doing.

Q. Is it your testimony that Quiet-Heet did not get any business away from you?

A. Yes, they did, naturally. Others did. A lot of people buy on price only.

Q. I understood you to say a while ago that you got the best price that Minneapolis Honeywell had on its controls. Now I have understood you to say on direct examination that you knew that other companies had to pay less than your company paid.

Mr. Gilpatric: I made the misstatement. I asked whether he knew that other companies paid more. He said he did.

1939 The Witness: He corrected himself on that, I recall that.

By Mr. Haycraft:

Q. I am asking you what the situation is. Is it still your understanding that you got the lowest price?

A. Yes, I always understood that.

Q. As to the brackets, these different brackets, did they mean much to you that you could always get the lowest price?

A. Well, that was the generally accepted practice in many lines, and I don't suppose I thought very much about it so long as my company was in the way I considered was the lowest bracket.

Q. How did they tell you about those brackets? Did they give you a sheet of paper showing what the volume was that was required to get into a certain bracket?

A. I don't recall what the approach was on it. I believe I have seen what the differentials were as a matter of courtesy. I don't know whether they ever published it or not. I don't think they did.

Q. Did the use of these brackets in your judgment have a tendency to influence or induce a purchasing agent or a firm such as yours was to buy exclusively or the majority of the purchases from the manufacturer to get such bracket prices?

1940 Mr. Gilpatric: I object to that question.

Mr. Haycraft: You have got plenty of opinion. I want a little too. He is a good witness.

Mr. Gilpatric: I limited my examination to the facts, but you are going beyond the facts of the direct examination, and you are calling for opinion.

Mr. Haycraft: I want his opinion.

Mr. Freeman: That is for the Court to find out.

Trial Examiner Sheppard: Read that question, please.

(Pending question read by the reporter.)

Trial Examiner Sheppard: I will let you answer that.

Mr. Gilpatric: Mr. Examiner, that is what the Commission is to decide in this case. That is a conclusion of law.

Mr. Haycraft: It is a conclusion of fact.

Mr. Gilpatric: This man is not here as an expert in the control industry.

Mr. Haycraft: I am not asking that. I am only asking him in regard to his own business. I don't want any broad answer, only in regard to his own business.

The Witness: I can only answer that, in that way. My personal viewpoint is that it would make no difference to me personally.

1941 By Mr. Haycraft:

Q. In other words, you don't make any attempt to increase your purchases from Minneapolis Honeywell in order to get the lowest bracket?

A. I would not do that as for myself personally; now other men may be different.

Mr. Haycraft: That is all.

Trial Examiner Sheppard: Is there anything else?

Mr. Gilpatric: One question.

Redirect Examination by Mr. Gilpatric.

Q. Referring back to the manual from which Respondent's Exhibits 141 and 142 were taken, I just want the record to be clear that this manual was in effect from 1936-37 on down until Petro stopped making burners for domestic sales, is that correct?

A. That is right. They never did actually stop.

Q. It is in effect today in other words?

A. It is in effect today; that is right; that is, I can only answer from April. I have not been there since April 1st.

Q. Up to April 1, 1943?

A. Up to April 1, 1943, that was in effect.

Trial Examiner Sheppard: That was my under-
1942 standing.

By Mr. Gilpatric:

Q. Up to that time Petro was offering Perfex Primary and Limit Control?

A. As published in there.

Q. And Petro was willing to sell to anybody that wanted them?

A. Up to April 1 they were.

Mr. Haycraft: I want the record to show that wherever the word "Petro" is used it refers to Petroleum Heat & Power Company, or whatever it is. I know it has been used a number of times.

Mr. Gilpatric: Yes, I used that.

The Witness: It is an abbreviation of that. It is our trade-name. We always speak of it as Petro.

Trial Examiner Sheppard: All right, let the record so show.

Mr. Gilpatric: That is all.

Trial Examiner Sheppard: Any recross?

Mr. Haycraft: Just one question.

Recross Examination by Mr. Haycraft.

Q. When did you ever meet me, Mr. Shields, before?

A. I never met you that I recall. You probably recall that you called me over the telephone at Greenwich,
1943 Connecticut, relative to this case.

Q. Do you remember when it was that I called?

A. I can find out. I made a little note of it because I was a little cagey as you remember in talking over the telephone to a stranger about this case.

Q. I just want to clear up the record. This point was brought up on direct.

A. I told you that time substantially what I said here today, a lot of it. I told you I would be available at any time you wanted to see me further. I think I told you that.

Trial Examiner Sheppard: All right, Mr. Shields. If they wanted you bad enough, they would have sent you a subpoena.

We will have a five-minute recess.

(Witness excused.)

(There was a five-minute recess.)

Mr. Gilpatric: Will you please mark these for identification Respondent's Exhibits 143 and 144-A and -B?

(The documents referred to were marked Respondent's Exhibits 143 and 144-A and -B for identification.)

Mr. Gilpatric: I am recalling Mr. Lockrae.

A. H. LOCKRAE, was thereupon recalled as a witness for the Respondent, and having been first duly sworn, testified further as follows:

1944 *Direct Examination by Mr. Gilpatric.*

Q. Mr. Lockrae, I show you Respondent's Exhibit for Identification 143, and ask you to identify that for the record?

A. This is a table showing certain oil burner manufacturers and the price brackets that were extended them by Minneapolis Honeywell Regulator Company from 1937 to 1941 inclusive.

Mr. Haycraft: What is the number on that?

The Witness: 143.

By Mr. Gilpatric:

Q. Were those statistics taken from your records under your supervision?

A. They were.

Q. They are correct?

A. As far as I know they are right, they are correct.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Mr. Gilpatric: I offer that in evidence.

Trial Examiner Sheppard: Is there any objection?

Mr. Haycraft: No.

Trial Examiner Sheppard: Let it be accepted as Respondent's Exhibit 143.

(The document referred to, heretofore marked for
1945 identification as RESPONDENT'S EXHIBIT 143, was received in evidence.)

By Mr. Gilpatric:

Q. Mr. Lockrae, will you also state on the record just what is shown by Respondent's Exhibit 144-A and -B?

A. This is a tabulation of prices from the years 1937 to 1941 inclusive that were extended over our various brackets for the same years.

Q. Are those the same prices shown in the schedule to Commission's Exhibit 1, the stipulation, with the exception of the fact that Respondent's Exhibit 144-A and -B for identification shows unit prices instead of set prices?

A. That is correct. This tabulation also shows the set price for the constant ignition as well as the intermittent ignition.

Mr. Gilpatric: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Gilpatric:

Q. Mr. Lockrae, in the set prices shown in Commission's Exhibit 1 are they for constant or intermittent type ignition primaries?

A. The intermittent ignition primaries are included.

Q. And the paper I have just handed you, Re-
1946 spondent's Exhibit 144-A and -B, shows both constant and intermittent types?

A. Correct.

Mr. Gilpatric: The respondent offers that in evidence.

Trial Examiner Sheppard: Is there any objection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Accepted. That will be considered in connection with Commission's Exhibit 1.

(The document referred to, heretofore marked RESPONDENT'S EXHIBIT 144-A and 144-B for identification, was received in evidence.)

By Mr. Gilpatric:

Q. During your examination in Chicago, Mr. Lockrae, you testified as to the purchases of controls by Automatic Burner Corporation, and you stated that you would supply at a later date the sales of controls to the Holland Furnace Company for use on oil burners purchased by that company from Automatic Burner Corporation. Do you have with you those sales, and if so, give them for the record please?

A. Yes. In 1937 we sold the Holland Furnace Company controls to be used with the Automatic Burner Corporation's burners totaling 3207 units; in 1938 it was 3717 units; in 1939 it was 10,224 units; in 1940 it was 15,129 units; 1947 in 1941 it was 21,315 units.

Q. Will you give the totals then of the sales of controls on the basis of which your company extended prices to the Automatic Burner Corporation during that period, in other words, add the total sales of controls to Automatic Burner Corporation to the total sales of controls to Holland Furnace?

A. In 1937 it was 20,863 units; in 1938 it was 10,286 units; in 1939 it was 21,753 units; in 1940 it was 30,868 units; in 1941 it was 41,166 units.

Q. Mr. Lockrae you testified in Chicago, page 1661 of the record, that the Williams Oilomatic Company never signed a contract with Minneapolis-Honeywell for the purchase of controls. Have you any comment to make about that testimony?

A. Well, there was one year that we gave Williams a season's requirement contract which they did sign.

Trial Examiner Sheppard: Was that the only one?

The Witness: Yes.

By Mr. Gilpatric:

Q. I show you Commission's Exhibit 6, and ask you if that is the contract to which you refer?

A. Yes, this was signed by Mr. Ellerbrock on February

16, 1938, and covered their 1938 season's requirements
1948 of Minneapolis-Honeywell controls.

Q. Do you want to correct your testimony?

A. I would like to do that.

Trial Examiner Sheppard: I don't remember. What was your former testimony?

The Witness: I think I said broadly that I did not recall that they ever signed that contract.

Trial Examiner Sheppard: And there was that one exhibit, Commission's Exhibit 6?

The Witness: The season's requirements.

By Mr. Gilpatric:

Q. Mr. Lockrae, could you give us an idea of the number of oil burner manufacturers whom your company sold controls to during the period 1937 to 1941?

Mr. Haycraft: That is restricted to the type of controls we had up to this time under discussion; that is to say, the controls used on domestic burners of the rotary or pressure type.

Mr. Gilpatric: I will limit my question to that extent.

The Witness: In view of the way the question is worded I would answer it this way: that throughout those years of 1937 to 1941 we did business with roughly 150 to 200 different oil burner manufacturers.

1949 Mr. Gilpatric: That is all I will ask Mr. Lockrae at this time.

Mr. Haycraft: I have no questions to ask this witness at this time.

Trial Examiner Sheppard: You are excused, Mr. Lockrae.

(Witness excused.)

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Under the circumstances then, we will take an adjournment now until 2:30 o'clock this afternoon.

(Whereupon, at 11:50 o'clock, a. m., a recess was taken until 2:30 p. m., this day.)

1950 Afternoon Session.

2:30 p. m.

Trial Examiner Sheppard: Come to order, Gentlemen.

Mr. Gilpatric: I want to call Mr. Toker. He testified previously in this proceeding for the Commission.

Trial Examiner Sheppard: Show Mr. Toker, previously called as a witness for the Commission, now called as a witness for the Respondent.

HARRY A. TOKER, was thereupon called as a witness for the Respondent and, having been previously duly sworn, testified as follows:

Direct Examination by Mr. Gilpatric.

Q. I believe you testified before that you were president of the Joseph Toker Company?

A. That is right.

Q. And that that company has been engaged in manufacturing the Mohawk burner since 1939?

A. That is correct.

Q. And prior to that date you had been an oil burner dealer, had you not?

A. That is right.

Q. What type of burner is the Mohawk, pressure type or rotary?

1951 A. Pressure type burner.

Q. Where do you market your burners? Where have you in the days when you were free to sell them?

A. My burner was marketed all over the country.

Q. Do you sell through dealers or agents?

A. Through dealers, agents and direct.

Q. What makes of controls have you used on the Mohawk burner?

A. We bought from two companies, from the very inception, from the very inception of our business, Minneapolis-Honeywell Control Company and the Mercoid Control Company.

Mr. Gilpatric: Will you mark this Respondent's Exhibit 145 for identification.

(The paper referred to was marked Respondent's Exhibit 145 for identification.)

By Mr. Gilpatric:

Q. I show you Respondent's Exhibit 145 for identification and ask you to tell us what that is please?

A. That is a price list and specification of the Mohawk Oil Burner effective January 2, 1941.

Mr. Gilpatric: The Respondent offers in evidence Respondent's Exhibit 145 for identification.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: The same will be accepted.

1952 (The paper referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 145, was received in evidence.)

By Mr. Gilpatric:

Q. Did you make it a practice to equip your burners with a set of three controls of the same make or with different makes of controls used on the same burner?

A. Do you mean mix the controls when we sell the burner?

Q. Yes.

A. Generally no. It is a rare, a very rare instance when there is a call for a mixed control. I don't recall any of them to be very candid with you.

Q. Did you purchase controls in sets from Minneapolis-Honeywell?

A. Yes.

Q. How about the Mercoid?

A. The same way.

Q. Did you have a contract with Minneapolis-Honeywell for the purchase of controls during the years '39 and '40 and '41?

A. Yes, sir.

Q. Did you have a contract with any other control manufacturers during those years?

A. With the Mercoid Corporation the same years.

Q. Did your contract with Minneapolis-Honey-
1953 well impede you, in purchasing controls from the Mercoid during those years?

A. Not in any way.

Q. Were Minneapolis-Honeywell controls higher or lower in price than Mercoid controls?

A. Higher.

Q. Did you charge more for your burners when equipped with Minneapolis-Honeywell than when equipped with Mercoid?

A. Yes, sir.

Q. Do you recall generally what that differential was?

A. The differential was approximately $1.50 which we charged when Minneapolis controls were purchased.

Trial Examiner Sheppard: And of course gave the rebate when Mercoid controls were purchased?

The Witness: That is right.

Trial Examiner Sheppard: There were all three units in the set?

The Witness: The relay, the pressuretrol and the thermostat. There was approximately $1.50 difference.

Trial Examiner Sheppard: And that was the difference in your cost?

The Witness: That is right.

By Mr. Gilpatric:

Q. Did your company increase its sale of oil burners during the period 1939 to 1941?

A. Our company increased the sale of oil burners 1954 every year we have been in business with the exception of the last year when the war took us out of the burner business.

Q. Up until that time you were increasing every year?

A. That is right.

Q. How did your prices to the wholesale trade range during the years '39 through '41, do you remember, or does this exhibit show?

A. Our prices, if I gather what you mean, were competitive.

Q. The best prices?

A. They were very competitive. They necessarily had to be and while this price list shows the price of single burners, in larger lots these prices were naturally shaded.

Q. Did you consider yourself in the low price field in the oil burner industry?

Mr. Haycraft: That is objected to as leading.

Trial Examiner Sheppard: What is that?

Mr. Haycraft: That is objected to as leading, as a leading question.

Mr. Gilpatric: I am just trying to save this witness's time.

Trial Examiner Sheppard: I will let you answer. Go ahead.

The Witness: Ours was entirely in the low price field. It was a strictly competitive proposition.

By Mr. Gilpatric:

1955 Q. What companies furnished your principal competition in this area?

A. Quiet-Heet Oil Burner Company and Radiant Oil Burner Corporation of Brooklyn. What is the name—I don't recall the name of the company from Chicago. They came into this territory. Michaelson would probably know that.

Q. Aldrich?

A. Aldrich.

Trial Examiner Sheppard: Did you do a local business?

The Witness: No, our business was throughout the entire country.

Trial Examiner Sheppard: Then you came in competition with many throughout the country?

The Witness: That is correct, but the principal factors were the ones I named.

By Mr. Gilpatric:

Q. They all being low-priced?

A. That is right.

Q. Did your purchases of Minneapolis-Honeywell controls predominate, that is, did you buy more from Minneapolis-Honeywell than you did Mercoid?

A. Yes.

Q. Why was that?

A. Our demand was more Minneapolis-Honeywell controls.

1956 Trial Examiner Sheppard: You mean by that, Mr. Toker, your demand from whom?

The Witness: From the dealers?

Trial Examiner Sheppard: Yes, your own dealers.

The Witness: That is right. In other words, we made no attempt to persuade the dealer what to take. We had to give him just what he wanted.

By Mr. Gilpatric:

Q. If the dealer asked for Mercoid controls, for example, he could always get your oil burner equipped with those controls, could he?

A. Yes, sir.

Trial Examiner Sheppard: In the event that your dealer did not specify, what would you use or what was your practice of using?

The Witness: We always had the dealer specify what controls he wanted.

Trial Examiner Sheppard: You did?

The Witness: Entirely.

Trial Examiner Sheppard: So you did not standardize on any?

The Witness: No, the custom in our business when a new dealer is set up he immediately tells us what controls he wants. He may want a steam control. He may want a pressure control or he may want a hot air control,
1957 and they immediately set up the brackets the way they want them and the name of the company that manufactures the controls and his price is based of course upon that setup.

Trial Examiner Sheppard: All right, I see.

By Mr. Gilpatric:

Q. Did your dealers know when they were called upon to specify and name the controls they desired, there was this price differential in favor of Mercoid controls?

A. They were always shown our price list.

Mr. Gilpatric: That is all.

Trial Examiner Sheppard: Cross-examine.

Mr. Haycraft: Nothing further.

Trial Examiner Sheppard: Thank you, Mr. Toker, you are excused.

(Witness excused.)

Mr. Gilpatric: Mr. Examiner, we have a message here that the witness we called from Philadelphia is sick in bed with the flu. He offered to send his son over but we said we would excuse him for today, and our next witness, who is also from Pennsylvania, won't be available until the morning. We are sort of caught short here.

Trial Examiner Sheppard: All right, then we will take an adjournment until the morning.

Mr. Gilpatric: We expect to conclude with our witnesses here tomorrow.

1958 Trial Examiner Sheppard: Then you will not want the third day?

Mr. Gilpatric: I believe we shall be able to finish up tomorrow afternoon.

Mr. Haycraft: May we go off the record?
Trial Examiner Sheppard: Off the record.
(Discussion off the record.)
Trial Examiner Sheppard: On the record.
If there is nothing further this afternoon, we will take an adjournment in this proceeding until tomorrow morning at this same place at ten o'clock.

(Whereupon, at 2:40 p. m., December 13, 1943, the hearing in the above-entitled matter was adjourned.)

1959

Room 500,
45 Broadway,
New York, New York,
Tuesday, December 14, 1943.

Met, pursuant to adjournment at 10 a. m., E. W. T.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Esq., Attorney for the Federal Trade Commission,

Cravath de Gersdorff, Swaine & Wood, by R. L. Gilpatric, Esq., and Paul Chase, Esq., 15 Broad Street, New York, New York, and

Bair & Freeman, by Will Freeman, Esq., 135 South La Salle Street, Chicago, Illinois, Attorneys for the Respondent.

1960

Proceedings.

Trial Examiner Sheppard: Mr. Reporter, you can convene the hearing pursuant to adjournment.
Mr. Chase: I would like to call Mr. Charles Bendix.
Trial Examiner Sheppard: Give the reporter your full name and address.
The Witness: Charles B. Bendix, 303 Grant Avenue, Highland Park, New Jersey.

CHARLES B. BENDIX was thereupon called as a witness for the Respondent and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Chase.

Q. Mr. Bendix, with what oil burner company are you or were you connected?

A. Electrol, Incorporated.

Q. Can you state during what period?

A. With Electrol from 1931 to 1936; with Delco from '36 to '39, at which time I returned to Electrol. Prior to that with May Oil Burner Corporation and in business for myself from 1924.

Q. And you have been in the oil burner business since 1924?

A. That is right.

Q. What type of burner did Electrol manufacture?

1961 A. Gun type burners.

Q. When did Electrol commence the manufacture of oil burners?

A. 1919, under the name Newcomb. In 1923 it became known as Electrol.

Q. That was the trade name?

A. That was the trade name.

Q. And also the corporate name?

A. That is right.

Q. What was the principal sales territory of Electrol Burner?

A. The United States, Canada, South America and England. We made shipments to foreign countries as well.

Q. What type of controls did you use on the Electrol Burner?

A. We used on the Electrol originally Electrol Controls. We used Mercoid, Minneapolis-Honeywell and Perfex, and Penn for a short time, Penn Controls as well.

Q. That is, then Electrol made their own controls?

A. Originally and we always made for one type our own master control, the Primary Control.

Q. What type of burner was that?

A. That was the Electrol Ball Flame Burner.

Q. Did Electrol have contracts with Minneapolis-Honeywell during the years 1936 to '41?

1962 A. Yes, in 1939, '40, '41, I was with them and they had them, and during the years 1936 to '39 I know they did because I still kept contact with them while I was with Delco. They always had contracts with every manufacturer of controls.

Q. What other manufacturers?

A. Perfex and Penn, Mercoid and Minneapolis-Honeywell.

Trial Examiner Sheppard: Those were during the same years, Mr. Bendix?

The Witness: That is right.

By Mr. Chase:

Q. That is, they bought controls from all those other control manufacturers during that period?

A. They did, yes.

Q. Was that true during the period you were connected with them?

A. Yes.

Q. Can you state why Electrol used Perfex Controls principally?

A. For probably three reasons: first, because of the price condition. We could buy them cheaper than any other controls. Secondly, because through Perfex we were allowed to put our own name, the Electrol name, on the thermostat and our Primary Controls used for that particular type of burner; and third, because there was a close affiliation between the officers of Perfex and the officers of Electrol Corporation.

1963 Q. Did Electrol Burners equipped with Minneapolis-Honeywell Controls cost more than burners equipped with other makes of controls?

Mr. Haycraft: I object. They cost more to whom, the manufacturer themselves, the man who bought it or how?

Trial Examiner Sheppard: You can indicate.

Mr. Freeman: We will eliminate that question. They cost more to the Electrol Company.

The Witness: Yes, they did.

By Mr. Chase:

Q. That is, you paid more for Minneapolis-Honeywell Controls?

A. Certainly.

Q. Did the Minneapolis-Honeywell contract prevent you from purchasing from other control manufacturers?

A. No.

Q. Did you freely purchase from other control manufacturers during the time you had Minneapolis-Honeywell contracts?

A. Yes.

Q. Was the Electrol Burner always shipped with a set of three controls of the same make or with different makes of controls, sometimes used on the same burner?

A. Ninety per cent of the cases were shipped with three controls from one manufacturer. Occasionally we used some Minneapolis-Honeywell Clock Thermostats with 1964 other controls shipped with the burner.

Q. But not the regular thermostat?

A. No.

Q. When you used the clock thermostat you used a relay along with it?

A. Yes, that is right.

Q. And that relay was for adapting the clock to the rest of the oil burner?

A. That is right.

Q. Did you find more or less dealer demand for Minneapolis-Honeywell Controls that for other makes of controls?

A. Well, I did. The demand for Minneapolis-Honeywell Controls was great with dealers that we tried to appoint, new dealers, but with the Electrol Dealers it was about fifty, fifty.

Q. What was the range at which you sold your burners wholesale duirng the years 1936 to '41?

A. $115.00 to $62.50.

Q. Did you then know what the installed price was?

A. From $395.00 to $265.00.

Q. Can you state the difference in price of burners equipped with Minneapolis-Honeywell Controls and those equipped with other makes of controls, that is, the difference in price?

A. Of other burners?

Q. That is, at which you sold your burners to the dealer?

1965 A. The cost price?

Q. Your selling price?

A. We had a price list issued after much deliberation in 1939 and carried that through the years of '39, '40, '41 and '42 where we put a standard, the Perfex Controls, and

noted on the price list that if Minneapolis-Honeywell Controls were desired there was an extra charge of $2.50.

Q. Why did you charge $2.50 more for Minneapolis-Honeywell?

A. We paid more for the Minneapolis-Honeywell Controls. I answered that question before.

Q. Were you aware of the fact, Mr. Bendix, that some of the Minneapolis-Honeywell's customers who purchased controls in larger volume got a somewhat better price than Electrol received?

A. Yes.

Q. And did that fact hurt the sale of Electrol Burners?

A. No.

Q. Did you service your burners?

A. In particular territories, yes. In other words, the surrounding territories—I have to elaborate a little bit, if you don't mind—we operated out of Clifton, New Jersey, that was our manufacturing center and we covered all of the New Jersey Counties and New York City pretty nearly direct from the factory.

In other words, the dealers that were appointed 1966 were more or less operating as a selling dealer. A lot of installations were made by the factory hired installation men.

Q. Can you state generally who were your competitors, what type of burners?

A. All oil burner manufacturers and dealers and distributors were our competitors. Are there any particular trade names? Is that what you want?

Q. Yes.

A. The Quiet May, Quiet-Heet, Petro, Timken, Gilbert and Barker, Esso, Aldrich.

Q. Aldrich?

A. Yes, all makes. I could sit here for an hour and repeat about four hundred different makes.

Q. Then you were in competition with everybody who sold oil burners?

A. The entire field, General Electric, Westinghouse and all the big ones, Delco.

Mr. Chase: That is all.

Trial Examiner Sheppard: Mr. Bendix, I want to ask you one question before the cross-examination. I think that you have had a good long experience in this line and can explain to me something that I do not quite understand.

Is it preferable or not to have all make of the controls made by one manufacturer?

1967 The Witness: I say no.

Trial Examiner Sheppard: Why is it not practical to use some portion of the control by one manufacturer and other portions by another?

The Witness: Because of the electrical set-up, the system of the different types of controls. In other words, one type of control may be high voltage and another one may be low voltage. If low voltage, it may be two-wire and three-wire and primary controls, and all those things influence the set-up, the hook-up of the controls.

If you have to use one thermostat of one make of control it is entirely possible that you have to put a relay in-in between those to operate the primary control of the burner and the more relays and the more things you have to put on, the greater, the higher your expense and price goes.

It, of course—

Trial Examiner Sheppard: It is better then from a price basis and also from a practical basis to use all the controls made by one manufacturer?

Mr. Freeman: On one burner?

The Witness: On one burner, but not one manufacturer's.

Trial Examiner Sheppard: I mean for one burner?

The Witness: Yes, for one burner.

Trial Examiner Sheppard: All my questions which I have asked are for one burner.

1968 The Witness: I would certainly say that that is so, that the system set up with one type of controls is the preferable system to that which have different makes of controls.

Cross-Examination by Mr. Haycraft.

Q. Is that true with Limit Controls as well as thermostat and primary controls?

A. To a certain degree, not as much degree as the thermostat but the Limit Control manufactured by the majority of control manufacturers are of one type. It is either low voltage or high voltage. I mean they can be used with both. It is just a breaker. It is just a switch in the line between the thermostat and the primary control,

so the type of breaker that is put in there does not make much difference.

Q. As a matter of fact, there was quite a considerable time that you bought, that you used your own primary control and bought your other controls from one manufacturer, and your thermostats from another?

A. That is exactly right.

Trial Examiner Sheppard: That is the reason I asked you those questions, Mr. Bendix. I noticed that when you first began you used your own controls.

The Witness: That is right. On a certain make of burner, on the ball flame burner, that is right.

1969 Trial Examiner Sheppard: I see.

The Witness: You see, we manufactured two distinct different types burner. The Electrol Ball Flame Burner, which was the original Electrol Burner, which was our pride and prize class, in other words, that was quality throughout, and we made for competition sake a straight shotgun burner in 1936, we started in 1936, and through 1937, and that became our volume in 1939, '40 and '41. That is when it went into volume.

That straight shotgun type burner was comparable as to how it burned its oil and operation with any other straight shotgun type of burner.

Trial Examiner Sheppard: I understand.

By Mr. Haycraft:

Q. When you came out with the straight shotgun type burner, you did not use your own primary?

A. No, sir.

Q. You bought—

A. We bought sets of controls, sets of three controls.

Q. Was there ever a time in your experience when the set controls were sold in sets of primary and thermostat, and the oil burner manufacturer bought his Limit Control where he pleased?

A. If I recall back in 1926 or '27, '28, with May Oil Burner, I believe so, but they preferred to buy it
1970 from one, three sets of controls. There was a short while there when we got through some different type of Limit Controls for our burners from the manufacturer.

Q. You still manufacture your own ball type burner?

A. That is right.

Q. And use your own primary on it?

A. That is right.

Q. And what Limit Control do you use on it now?
A. Perfex.
Q. And also the thermostat?
A. Either Perfex, Minneapolis-Honeywell or Mercoid.
Q. I see, any of the three?
A. Any of the three.
Q. What proportion of your business from 1937 on to 1941 was the ball type and what percentage of your business was the gun type?
A. Fifty, fifty.
Q. About fifty, fifty?
A. Yes.
Q. After you got started?
A. It may have been 52-48, it is so negligible the difference.
Q. What position do you hold in the firm?
A. I was District Sales Manager of the company as well as Field Engineer and Field Serviceman and 1971 General Office Boy, Director, Assistant to Directors and all the people that were connected at one time or another who had either been working with me or for me in the past 10 to 12 years, and I knew everything that transpired in the corporation.
Q. In 1939 what was your position?
A. That is what I meant. Pardon me—did you ask prior to that?
Q. I meant from '39 on?
A. That is what I am talking about. In other words, it was a very close affiliation with the President of the company, the Vice President and the Treasurer and myself. There were four men and we lived together pretty nearly.
Q. Who were the others?
A. Stanley H. Brown, Theodore H. Cox, he was Vice President, and Edward LaBahn was Factory Manager and Vice President of the company.
Q. Do you know Harry Brown?
A. Very well.
Q. He was with you?
A. Service Manager.
Mr. Haycraft: That is all.
Trial Examiner Sheppard: Is there anything else?
Mr. Chase: Yes, sir.

Redirect Examination by Mr. Chase.

1972 Q. Did your sales increase or decrease during the period 1936 to '41?

A. Increase.

Q. That is every year there was a steady increase?

A. 1937 I won't vouch for but I know in 1938, '40 and '41 they increased.

Recross Examination by Mr. Haycraft.

Q. You say the highest percentage of your burners were shipped out with three controls purchased from one manufacturer, you are referring to your gun type burner when you say that?

A. That is right.

Q. You made your own primary for the Electrol?

A. The primary.

Redirect Examination by Mr. Chase.

Q. You made your Electrol Primary Control for the ball type burner, to fit the electrical characteristics of the thermostat you bought, is that true?

A. That is right.

Q. There had to be electrical cooperation between the two?

A. Very definitely and the primary control was made in such a fashion with the high voltage thermostat necessary to control it. It was not necessary but without
1973 the relay if you only wanted to buy a thermostat and not use a relay in between you would have to buy a high voltage thermostat, whereas if you wanted to buy a low voltage thermostat you would have to put the relay between that and the primary control.

Recross Examination by Mr. Haycraft.

Q. Where did you buy your thermostats that you used with your primary controls that you used during that period of time?

A. We bought from Perfex. We bought from Minneapolis-Honeywell. We bought from Mercoid and we bought some from Penn.

Q. And you used them with your primary control?

A. That is right.

Redirect Examination by Mr. Chase.

Q. The thermostats you bought from Minneapolis-Honeywell for the ball type burner was not the series 10, was it, the series 10 thermostat?

A. Yes, in years gone by it was. We could use either one with the relay in between. We could use that series 10 with the relay. We used to use the old series 20, way, way back with the relay in between that and the primary control.

Mr. Chase: That is all.

1974 Mr. Haycraft: That is all.

Trial Examiner Sheppard: Thank you, Mr. Bendix.

(Witness excused.)

Mr. Gilpatric: Can we have a short recess?

Trial Examiner Sheppard: Yes, we will have a five minute recess.

(A short recess was taken.)

Trial Examiner Sheppard: Gentlemen, come to order.

Mr. Chase: Mr. Examiner, I would like to recall Mr. Bendix for a few questions.

Trial Examiner Sheppard: Show Mr. Bendix previously sworn recalled for further examination by the Respondent.

CHARLES B. BENDIX was thereupon recalled as a witness for the Respondent and, having been previously duly sworn, testified further as follows:

Direct Examination by Mr. Chase (Resumed).

Q. Mr. Bendix, you referred in your previous testimony to some of your competitors. Did you ever make a comparative study of the prices at which your competitors were selling their burners and the price at which you sold your burners?

A. Yes. In 1940, I had rejoined the Electrol, in the latter part of 1939, it was my job to really promote the sale of Electrol and having started in the industry in the

1975 form of a laborer, digging holes for thousand gallon tanks with a couple of colored fellows and making oil burners, and having made pumps and controls and installed burners for a lengthy period, I was familiar with the break-

down of oil burners, and we made a complete study and broke down the cost of the construction of an Electrol Oil Burner as compared to six or seven or eight different makes of oil burners, that is, as to those that we felt we wanted to reach down to and compete with them, if we could. The net result was that after much study we found that the construction cost of the Electrol Oil Burner in a crate without controls was greater than that of the price for instance, like Gold Star and Quiet-Heet, Mohawk, Citro Oil Burner, which was made up in New Jersey for a short while, and several other makes; Paragon was one that was less than ours with controls, in other words, less with controls than ours were without controls. We right there made a decision to continue our practice of selling quality, installation, etc., and so on.

In other words, the comparison showed us that we could not even compete with them on the basis of price ever at any time.

Why? The answer to that was—I have yet to have an answer inasmuch as I know that Electrol had all the machinery, the proof of which is what they turned over to the War manufacturing plant in a very short time because
1976 of the good and efficient equipment that they had out there at that time. But I have yet to find the answer how they could sell the burner for say as low as $36.50, $37.50 with controls when our cost of manufacturing the burner alone put in a crate was, disregarding overhead, more than that.

Q. That was your cost without controls?

A. That is right, our cost without controls. It ran so close to where we could not even think of adding the controls to it and competing with them.

Mr. Chase: That is all.

Trial Examiner Sheppard: Is there anything further, Mr. Haycraft?

Mr. Haycraft: No.

(Witness excused.)

Mr. Chase: Mr. Examiner, I would like to call Mr. Edward Kraber.

Trial Examiner Sheppard: Come around, Mr. Kraber, and give your full name to the reporter, please.

The Witness: Edwin I. Kraber.

Trial Examiner Sheppard: And your address.

The Witness: 30 North Penn Street, York, Pennsylvania.

EDWIN KRABER was thereupon called as a wit-
1977 ness for the Respondent and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Chase.

Q. Mr. Kraber, with what oil burner company are you or were you connected?

A. York Oil Burner Company.

Q. What position did you hold?

A. I was the Treasurer.

Q. Then you are not at present connected with the oil burner company, the York Oil Burner Company?

A. Financially I am but not officially.

Q. Where is the York Oil Burner Company located?

A. York, Pennsylvania.

Q. And how long were you Treasurer of the York Oil Burner?

A. From 1928.

Q. And how long have you been in the oil burner industry?

A. Since 1914.

Q. What type of burner did the York Oil Burner Company manufacture?

A. The gun type.

Q. When did they commence the manufacture of it?

A. 1928.

Q. That was under the trade name of York?

A. That is right. York Heat was the trade name.

1978 Q. What was the principal sales territory of the York Burner?

A. Well, we had an international set-up. We sold in the United States and in all foreign countries.

Q. What make of controls did you use on the York Burner?

A. Minneapolis-Honeywell, Penn, Mercoid and Perfex.

Q. Do you use more or less Perfex Controls?

A. We used more Minneapolis-Honeywell Controls, that is during a certain period.

Q. What period?

A. When I was with the company up until the time that I was with the company, why we used more Minneapolis-Honeywell Controls than we did the others but after I left the company then they changed to Perfex.

Q. Do you know if they did standardize on Perfex?
A. Yes, they standardized on Perfex.
Q. Do you in your own knowledge know why they made this change?
A. Well, in the first place they were allowed to put the name of York on the controls. They called them York Controls and there was a price differential. In other words, they cost less.
Q. What period was that?
A. That was about 1940.
Q. Was it or was it not optional with the pur-
1979 chaser of the York Burner whether his burner would come equipped with one or the other make of control?
A. They were allowed, the burner would be furnished with whatever control the dealer wanted, whatever set of controls the dealer wanted.
Q. Did you have any price sheet?
A. Oh, yes, there was a differential in the price too. In other words, Minneapolis Controls cost more money than any other.
Q. That is, you sold oil burners equipped with Minneapolis-Honeywell Controls at a higher price?
A. A higher price, $2.00.
Q. Did you have yearly contracts with Minneapolis-Honeywell during the period 1936 to 1941?
A. Yes, we had a contract with all companies that we dealt with, all control companies.
Q. Will you name the other control companies?
A. Mercoid, Penn, Perfex and Minneapolis-Honeywell.
Q. Did your Minneapolis-Honeywell contract prevent you from purchasing from other control manufacturers?
A. No.
Q. As a matter of fact, you did purchase from other companies?
A. We purchased all makes of controls.
Q. Did you ever sign a contract with Minneapolis-
1980 Honeywell which provided in part that you would buy 95 percent of your control requirements from them?
A. No, at no time.
Q. Then did you ever sign a contract with Minneapolis-Honeywell calling for season's requirements rather than a specific amount?
A. That's right, correct.
Q. What did that language "season's requirements" mean to you?

A. Whatever controls we felt we needed, why we bought from Minneapolis-Honeywell.

Q. That is of Minneapolis-Honeywell?

A. Yes.

Mr. Haycraft: I object, it is leading.

Trial Examiner Sheppard: Just be careful.

Mr. Chase: I will withdraw the question.

By Mr. Chase:

Q. Did that contract mean that you had to buy only from Minneapolis-Honeywell?

A. No, at no time did we buy exclusive from Minneapolis-Honeywell.

Q. Did you ever receive a retroactive credit from Minneapolis-Honeywell?

A. Yes, on two different years.

Q. Do you recall what years?

1981 A. It was for the years 1937 and '38.

Q. Have you been aware of the fact, Mr. Kraber, that some of the Minneapolis-Honeywell's customers purchased controls in larger volume and got a somewhat better price than your company?

A. Yes, sir.

Q. Did that fact hurt the sale of your oil burners?

A. No.

Trial Examiner Sheppard: What bracket were you in, Mr. Kraber?

The Witness: Next to the highest bracket as far as I know.

By Mr. Chase:

Q. Just so the record is clear, did you charge more or less for your burner equipped with Perfex Controls?

A. Less.

Q. And Mercoid Controls?

A. Well, the Mercoid and Perfex and Penn were all the same price and the Minneapolis was $2.00 higher.

Q. Was the York Burner always shipped with a set of three controls of the same make or were different makes of controls some times used on the same burner?

A. I don't know of any case where we would use different controls, I mean on a burner. In other words, it was our policy that we did not want to divide the re-

1982 sponsibility when it got out to a dealer because with the set-up which the companies had around, the

servicing of controls, if you had different make controls on the burner, why of course it would be divided responsibility and you would not know whose responsibility it was.

Q. Did you or did you not find more dealer demand for Minneapolis-Honeywell Controls?

A. In our case it was more Minneapolis-Honeywell dealer demand, there was more dealer demand for the Minneapolis-Honeywell Controls because of the set-up all around all over the country, the service set up, the advertising and dealer contact.

Q. What was the price range at which you sold your burners wholesale during the years 1936 to '41?

A. The prices were $187.50 and they got down to $59.75 in the latter years.

Q. How did your prices compare with the average in the industry during this period?

A. Well, at the start we were in the low priced field and of course toward the last we were up with the higher priced burners.

Q. What do you mean by "at the start"?

A. Well, when we started in the burner business we were the cut-price burner manufacturer. In other words, I guess you would call it, in fact some of them called us the 1983 bastards of the oil burner business. That is the way it was.

Q. What time was that?

A. 1928, '29 and '30.

Q. Then what happened?

A. Well, then of course the other people followed in suit with us and came down in price and some of them started to go lower than we were, so finally we came to the point where we were or had gotten to be among the high priced burners.

Q. Did you ever give service with your burners?

A. At first we did not give service with the burners. We sold it to a dealer as is and he assumed the responsibility but in later years we had to change that policy and then we had a Service Department.

Trial Examiner Sheppard: I don't think I know exactly what you mean by giving service on a burner. Tell me about it. What do you mean by that? After a burner is installed?

The Witness: A dealer might need help and of course

if you did not have a set-up you forgot about it. You just sold the burner. In fact, we sold a lot of them by mail and of course we sold a lot of them throughout the West. We had no means in fact if they ever got in trouble we had no means to go out and do anything because of the cost of sending a man out there would cost more than the price of a burner.

Trial Examiner Sheppard: Therefore, what do you
1984 mean when you state you serviced a burner?

The Witness: In later years we had service engineers. When a dealer got in trouble we would send a man out to help him out.

Trial Examiner Sheppard: In other states?

The Witness: That is right, in other words, to make a better public acceptance.

Trial Examiner Sheppard: You had traveling men to do that?

The Witness: On, yes, sure, at first we didn't.

Trial Examiner Sheppard: At first you didn't?

The Witness: Towards the last we had a big service force. We traveled around. That was expensive and we had to maintain that service, and the traveling expenses in a lot of cases would cost a lot more than the price of the burner.

Trial Examiner Sheppard: A good many people testified that they serviced things here and some have testified that they have not.

The Witness: At first we did not but towards the last when our name got to be accepted by the public, why we had to do that in order to maintain that name.

Trial Examiner Sheppard: Well, when you did that it made your burner sell at a high price?

The Witness: That is right.

Trial Examiner Sheppard: That is when you went
1985 into the high class field?

The Witness: We did not raise the price of the burner but held it at a certain price. Instead of going lower we held it. We just could not go any lower.

Trial Examiner Sheppard: All right, that answers my question.

By Mr. Chase:

Q. Who was some of your low priced competitors?

A. Well, we had Gold Star, The Mohawk. I just can't think. There is a peculiar name—

Trial Examiner Sheppard: Quiet-Heet?
Mr. Chase: Quiet-Heet.
The Witness: Yes.

By Mr. Chase:

Q. Aldrich?
A. There was Paragon and Aldrich.
Q. In contrast then, who were your high priced competitors?
A. May Oil Burner, Timken, Petroleum Heat & Power, Electrol.
Q. Do you consider as competition high priced burners as well as low priced burners?
A. What do you mean by that?
Q. Do you compete with everybody in the oil burner industry?
A. Oh, sure, we would have to compete with them in order to sell the burners, but we figure that the
1986 service we give them had some sales value and therefore we could get a higher price.

Trial Examiner Sheppard: As a rule in the case of the low priced oil burners, who do not have service, that is one reason for the low price, isn't it?

The Witness: That is right. You are absolutely correct in that.

In other words, I know in several cases that Quiet-Heet in particular they sold their burner and made no bones about it that you bought as is; after it left the platform it was your burner and you either took it or left it. That was all there was to it.

Trial Examiner Sheppard: And a whole lot of concerns who manufactured high price burners, serviced them, is that the fact? Do most of the high priced manufacturers service them?

The Witness: They all maintain good service departments and they have advertising. That makes their price higher. Some of them advertise nationally and things like that you know, so that all raised the price of the burner.

Trial Examiner Sheppard: And a good many of the low price manufacturers do not?

The Witness: They do not.

Trial Examiner Sheppard: There is where the
1987 competition comes in?

The Witness: That is right. In other words,

I would not say they were nationally accepted burners. They did in a small territory. They did not cover over a big space.

As I said before, the cost in lots of cases going out to service burners cost more than the burner, but we did that for public acceptance. Of course the average price of the burner that we had we tacked that on to every burner and so eventually paid for that service.

Trial Examiner Sheppard: All right.

By Mr. Chase:

Q. Did your oil burner sales increase or decrease during the years 1936 to '41?

A. There was in 1938 a slight dip in the sales but during the other period why they increased.

Q. Then you showed a profit every year?

A. We showed a profit understand but the sales, the amount of the sales dipped; there was a dip in the amount of sales during the year of 1938. I think that was general.

Mr. Chase: That is all.

Trial Examiner Sheppard: Cross-examine.

Cross-Examination by Mr. Haycraft.

Q. When did you first notice the competition of 1988 Quiet-Heet? Was that about 1938?

A. I believe it was '37, in that neighborhood.

Q. And did you lose any business to Quiet-Heet?

A. No, I would not say we did because during 1937 our sales increased.

Q. How about '38?

A. 1938, the dip was general. I think you will find that the chart will show that the dip in the sales of all manufacturers was down in 1938.

Q. Would it surprise you to know that Lapidus of Quiet-Heet went up in 1938?

A. What do you mean?

Q. The volume of sales?

A. That might be very true.

Q. Do you know whether or not as a matter of fact you did lose any business to Quiet-Heet at any time?

A. Well, there was, I know of one case that we did. We lost a dealer in Atlantic City because of the price, but I know the price. Our dealers were busy understand. We did not lose so many dealers but the dealers might have

lost sales. I don't think there was any doubt about that but we sold more burners during those years.

Q. The general business of the oil industry went up, in other words, the total volume of sales increased?

A. That is right. We got our share of business.

1989 We were always among the top.

Q. When you say you got your share of the business, you don't mean that Quiet-Heet and others of that type did not increase their sales more than you did during those years with that low price?

A. No, I would not say that because I remember we started back in 1929 and we were satisfied with a certain sales volume that we could take care of where Lapidus he started in—

Q. '37?

A. (Continued.) in '37, along in there and he got to be one of the largest manufacturers of burners in quantity possibly, not in dollar volume, but in quantity.

Q. You said you knew that some of your competitors had a better price on controls from Minneapolis-Honeywell than you did but that did not hurt the sale of your burners. What bracket were you in? What was the price you were paying?

A. We were in the next to the highest bracket as far as I know.

Q. You don't know what price the others were paying?

A. No, I don't, but there was possibly, there could not be more than 50 cents a set, in that neighborhood, so it could not make much difference.

Q. Would it make any difference—you say 50 cents would not make much difference. How much would

1990 you think would make a difference, how much would you think would hurt?

A. Well, I don't know what to say about that. I think it would be $4.00 or $5.00. That would be something different.

Q. When was it you started charging your dealers $2.00 more for the Minneapolis-Honeywell?

A. We always did that. There was always a differential between Minneapolis-Honeywell and other makes of controls because we bought the other makes of controls for less.

Q. You say "always". What years were you with the firm, from 1928 until when?

A. I was one of the owners of the company.

Q. From 1928 until when?
A. Till?
Q. When did you leave it?
A. 1938, when I sold out my interest but I remained with the company until last year.
Q. In what capacity were you with them from 1938 until last year?
A. Vice President.
Q. What do you mean "you sold out"? You still remained a Vice President. I don't quite understand that.
A. I left the business. I sold my interest out. I owned two-thirds of the company.
Q. You sold in 1938?
A. I sold to Thomas Shipley, Inc.
1991 Q. Then you stayed on?
A. Yes, I worked for five years.
Q. After you sold out?
A. Yes.
Q. So you really did not leave the firm until last year?
A. Last June.
Q. June 1942?
A. No.
Q. June 1943?
A. Yes.
Q. This year, then?
A. Yes, June 1943. I am still financially interested in the company.
Q. Let us get this straight about that. When was it that you bought more Minneapolis-Honeywell Controls for your burners than you did any other make?
A. 1937 and '38 and '39.
Q. Are you sure about '39?
A. Yes, I am pretty positive about this because 1939, the fall time, the winter of that year, is when they changed over to Perfex. It was the start of the change-over.
Q. How about 1938?
A. Well, that was in 1939. I am pretty near correct. I think until 1939 there was a lot of Minneapolis-Honeywell Controls sold. In fact I believe there was more.
1992 Q. Have you got any figures on that?
A. No, I don't.
Q. Is there any way of refreshing your recollection? Will this refresh your recollection: in 1936 you bought $25.00 worth of Perfex; in 1937, $899.00; in 1938, $2447.00; in 1939 $20,197.00; in 1940, $27,862.00; in 1941—

A. In 1939, you say about $27,000? Then I imagine there was Perfex Controls sold in 1939. I will change that. I did not have anything to do with the books. I was just in the Engineering Department.

Q. What was the price that you paid for your controls to Minneapolis-Honeywell during the years that you bought most of your controls from them as compared with the price of Perfex and Mercoid Controls?

A. About $1.50 a set more.

Q. Do you remember what they paid Perfex when you standardized on them in 1939?

A. No, I don't know what to state on that at all. I would say around—if you want near—it was around $15.50, $16.50.

Q. And you cannot tell us how much you paid Minneapolis-Honeywell?

A. No, because as I say there was about $1.50, because we had a 30 per cent mark-up on controls and that would make the $2.00 differential in the selling price of the burner.

1993 Q. How do you account for the jump there, the difference there, in the volume of purchases of controls from Minneapolis-Honeywell and Perfex, that change-over there?

A. When are you talking about?

Q. 1938 and 1939?

A. You mean the change-over from Perfex to what?

Q. Minneapolis-Honeywell to Perfex. Up until 1938 you were buying most of your controls from Minneapolis-Honeywell?

A. Well, as I stated—I stated that. The company that I sold out to then, they decided they wanted to put their own trade name on the control and called it York Heat Control and that is the reason that they standardized on Perfex.

Q. Minneapolis-Honeywell would not allow you to do that?

A. No, we had no arrangement with Minneapolis-Honeywell where we could do that.

Q. Did you try to do that?

A. As I say, I had no control in 1939 as far as purchasing was concerned, so I don't know. I think that really would be an unfair question to ask me because I had nothing to do with the policy of the company. I was only in an advisory capacity.

Q. You say you were a Vice President?
A. I was only Vice President.
Q. You did not control the company?
A. I sold out my interest.
1994 Q. What did you do as Vice President?
A. I was Consulting Engineer.
Q. How often did they consult you?
A. I was right there at the plant all the time.
Q. You did not have anything to do with that?
A. That is right. If you know the Shipleys you know that outsiders can have nothing to say about their outfit.
Q. At the time that you state that you had something to do, did you standardize on Minneapolis-Honeywell?
A. Yes, up to the time I left, when I sold out, Minneapolis-Honeywell, we sold more Minneapolis-Honeywell Controls.
Q. Well, now suppose the dealer should send in an order during the time that you were in charge there and did not indicate or designate what control he wanted, what control would you put on it?
A. Minneapolis-Honeywell.
Q. That was in 1938, '37, '36?
A. 1938, '37, '36.
Q. What other controls were you putting on burners in those three years, '36, '37 and '38?
A. Mercoid, we sold some Mercoid and we sold some Penn and Perfex.
Q. But in order to get a Mercoid, or Penn or Perfex the dealer had to indicate that that is what he wanted?
A. That's right.
1995 Q. Did you give him when you sold him a burner with a Minneapolis-Honeywell Control on it, was that your list price and then you gave him a $2.00 reduction if he took another control?
A. Our Sales Department tried out different ways, in other words, during the year we would have different mark-ups, new price sheets and just to see how it would work in some cases we would specify that the price was with Minneapolis-Honeywell Controls, and if you wanted another control there would be a deduction. Then in other cases, we would make the lower price and put it where the Minneapolis-Honeywell would be $2.00 higher.
It was just an experiment to see what would happen as far as the sales went along.
Do you understand what I am talking about?

Q. Yes, I understand. Do you know what years it was that you made the experiment?

A. That was as long as I was with the company we did that. We never had any set rule. It was entirely up to the Sales Department; if they felt like getting out a price list of that type they got it out and sent it out.

Q. In 1939 and '40 you say you did not have anything to do with the business policy of the company?

A. That is right.

Q. Do you know then the reason for the shift over?

1996 A. Well, I know the reason because of the fact—

Q. (Continued) from Minneapolis-Honeywell to Perfex?

A. (Continued) because I was at the meeting that it was done. We had engineering meetings and I was always in those meetings, and of course my vote did not amount to very much. I did not have much to do about it. As I told you, the Shipley organization controlled the thing and I had nothing to say about it.

Q. Did you oppose the change-over?

A. I did not think it was a good policy at the time.

Q. You voted no?

A. That is right.

Q. You were overruled?

A. That is right.

Q. Were you a director, a member of the Board of Directors?

A. No. At those committee meetings my vote counted.

Q. What committee meetings?

A. Well, it was the committee meeting that formed the sales policy of the company. We had meetings once a week.

Q. Executive Committee Meetings?

A. Every Monday morning we head a meeting, nearly every Monday morning. At those meetings everything was brought up and it was either carried to the next meeting or finally decided at those meetings.

Of course, I don't know what went on in the back

1997 room or anything like that, because sometimes those things would come in and be all cut and dried. As I say, I had nothing to do about it.

Trial Examiner Sheppard: Give me some idea about the size of your concern. How many burners would you manufacture in a year during the time you were there?

The Witness: Between 3000 and 4000.

By Mr. Haycraft:

Q. Was that true all through the years or did that increase? About how many did you manufacture in 1937, if you remember?

A. In 1937 about 3000.

Q. Was 1936 about the same?

A. A little bit less.

Q. 1938?

A. '38, it went down, dropped slightly.

Q. How much?

A. Oh, I would say about 2600 or 2700.

Q. And '39, what was it?

A. In 1939 it went up; we possibly sold about 4000.

Q. And '40?

A. That is '39 and '40 would be about 500 more, something like that.

Q. '41—

Trial Examiner Sheppard: Is that a small company or a big company?

1998 The Witness: Well, I consider that a big company.

Trial Examiner Sheppard: Did you?

The Witness: That is right.

Trial Examiner Sheppard: One follow told me in Chicago last week, I believe it was Mr. Aldrich, that his went up to 20,000 in one year. Now that is a big company, bigger than yours?

The Witness: It is.

Trial Examiner Sheppard: Do you know Mr. Aldrich?

The Witness: Oh, yes, I am one of the oldest oil burner manufacturers. I started in 1914.

Trial Examiner Sheppard: Yes, I noticed that in your testimony.

Is there anything else, Mr. Haycraft?

Mr. Haycraft: That is all.

Redirect Examination by Mr. Chase.

Q. Is it not true that with the York name on the controls it did not make any difference who made the controls?

Mr. Haycraft: I object to that as a leading question.

Trial Examiner Sheppard: Turn it upside down.

By Mr. Chase:

Q. Who made the control with the York name on it?

A. Perfex.

1999 Q. And that was a cheaper control than the Minneapolis-Honeywell?

A. It cost less.

Q. How did you rate yourself as to the total oil burner industry in relation to volume? Were you at the top or the bottom of the list?

A. We were always among the first ten during that period, from say 1932 on, we were always among the first ten in the oil burner industry.

Q. Did you make boiler units along with your oil burners?

A. We made a complete line of burners.

Q. So your dollar volume in the heating industry was rather large?

A. Oh, yes, we made industrial type burners as well. We made from the smallest to the largest type of burner. It was up to burning 700 gallons of oil an hour.

Q. Can you give us in round figures your over-all volume in dollars?

Mr. Haycraft: That is objected as irrelevant and immaterial. If it is not domestic oil burners I object to it, or if they are not using the controls.

Trial Examiner Sheppard: Limit it to the oil burners. I will let him testify on that. I am not interested on something else.

By Mr. Chase:

2000 Q. Limit it?

A. That would be hard for me to tell. I could not remember those figures.

Mr. Chase: That is all.

Trial Examiner Sheppard: Is there anything else, Mr. Haycraft?

Mr. Haycraft: No.

Trial Examiner Sheppard: Thank you, Mr. Kraber.

(Witness excused.)

Mr. Gilpatric: Mr. Examiner, the next witness we have scheduled is coming in from New Jersey. He will not be here until after lunch.

Can we have an adjournment until 2 o'clock?

Trial Examiner Sheppard: We will adjourn until 2 o'clock this afternoon.

(Whereupon, at 11:25 a. m., an adjournment was taken until 2 p. m., this day.)

2001 Afternoon Session.

2 p. m.

Trial Examiner Sheppard: Come to order, gentlemen.

Mr. Gilpatric: I will call Mr. Eckhart.

Trial Examiner Sheppard: Will you give us your full name and address?

The Witness: Arnold Eckhart.

Trial Examiner Sheppard: And your address?

The Witness: Business address?

Trial Examiner Sheppard: Your business address?

The Witness: 123 Hawthorne Street, Roselle Park, New Jersey.

ARNOLD ECKHART was thereupon called as a witness for the Respondent and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Gilpatric.

Q. Mr. Eckhart, will you state your business connection?

A. I am President and Treasurer of Korth Oil Burner Corporation.

Q. How long have you been associated with that company?

A. Since 1934, approximately August I would say.

Q. What was the company known as at that time?

A. Carter-Korth Oil Burner Corporation.

2002 Q. When did the name change take place?

A. 1937, July.

Q. Had the company been engaged in the manufacture of oil burners prior to the time you came with them in 1934?

A. Yes, they had then.

Q. What types of burners has the company manufactured in the course of its business existence?

A. Originally the Rotary Type, the Wall Flame Type, the Rotary Flame Type Burner, and then branched into the gun type or pressure atomizing type.

Q. Was that before you came with them, that change?

A. Yes, in fact they had both types when I did join them.

Q. In what areas has the company offered for sale and marketed its burners since your connection with it?

A. We had operated all through the New England States, Atlantic States, part of the Midwest and Far West, that is the Northwestern States, some of the Southern but not too far down because of climatic conditions.

We have exported very little.

Q. What make of automatic temperature controls does your company use on its burners?

A. Now?

Q. Go back to the time when you came in there, or before, if you know?

A. When I first joined the company in 1934 they
2003 were using Penn Electric Controls.

Q. On what type burner?

A. On the gun type burner and previously on the Rotary Burner they had used Mercoid Controls.

Q. Did you make any change?

A. Yes.

Q. What was that?

A. Just what year I don't know, if it was the first year. It may have been 1935 when we first put on Minneapolis-Controls.

Q. What has been your policy with regard to controls since then, 1935?

A. Our policy in purchasing controls is that we limited our purchasing to Minneapolis and Mercoid Controls for more than one reason. One was that we could not afford to carry too many varied types of controls due to our lack of financial capital and the other was that we felt that in purchasing these two types of controls it would help us in the sale of our equipment, not having any national advertising and national acceptance.

We took on equipment in addition to controls. We took General Electric Motors and transformers to help in the sale of our equipment because they were known by the general public.

Q. Is that the reason that you switched from Penn
2004 to Minneapolis-Honeywell Controls?

A. Well, it was, that was the main reason, and the other was that there was a personal preference, knowing the background of Minneapolis and Mercoid, personally feeling that they could both help us better in not only the sale of the burner but in any service that might be required in connection with the operation of the burner be-

cause the controls in my estimation were the main function of the proper operating of the burner.

Not having a field organization of our own, we felt that while we were standing back of our equipment which we placed on the burner, we were not in a position to render proper service to the ultimate consumer if something went wrong with the controls.

Trial Examiner Sheppard: You don't have service?

The Witness: No, sir. I say that "no" in this way: We guarantee our equipment for a period of one year and if there is any serious difficulty we do take it back and replace it, but for service in the field, no, we felt it was not necessary.

Trial Examiner Sheppard: All right.

By Mr. Gilpatric:

Q. When you came to offer your burner to the trade, the dealers, what was your policy in that regard as to the type of control or make of control rather?

2005 A. We gave our dealers a choice of the controls which we furnished with our equipment. In other words, we listed Minneapolis Controls at a basic price and included in our price sheet a deduction if Mercoid Controls be required. If a dealer would request a different type than those two, we just did not have it because we could not afford to carry so many different controls in stock due to our limited capital.

Q. On that point, just to give us some idea of the size of your company at the time you started in with it, what was the number of burners that your company sold say in 1934 and '35?

A. In 1934 they sold less than 400 burners according to their book record which I checked.

Mr. Gilpatric: Mark this Respondent's Exhibit 146 for identification.

(The paper referred to was marked Respondent's Exhibit 146 for identification.)

By Mr. Gilpatric:

Q. Mr. Eckhart, will you tell us what this piece of paper is I am handing you, marked Respondent's Exhibit 146 for identification?

A. It is what we issued as our dealer price sheet which was effective according to this sheet March 1941. We

changed this price sheet periodically depending upon general conditions in the industry.

Q. That is 1941?

2006 A. This is 1941, sir.

Trial Examiner Sheppard: Does that represent your prices in 1940, did you say?

The Witness: 1941.

Mr. Gilpatric: The Respondent offers in evidence Respondent's Exhibit 146 for identification.

Trial Examiner Sheppard: Is there any objection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be admitted.

(The paper referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 146, was received in evidence.)

By Mr. Gilpatric:

Q. Prior to the date on this exhibit, March 1941, did you have a similar price sheet?

A. We issued a price sheet regularly.

Q. Mr. Eckhart, if one of your dealers did not in a particular purchase of burners specify the name of controls desired, what would you ship him with the order?

A. Well, that would depend if he was a new dealer we would definitely determine what his requirements would be, what his choice would be rather.

Q. You would go back at him and make him specify?

A. We would ask him because we had both on our sheets and we would want to know what his requirements were.

2007 Some had preference for one and others had preference for the other, and in order to get started on the right foot we used to try to determine what controls he required and we would ship that type of control.

Q. Suppose he was not a new dealer, then what?

A. If he was a dealer that we had and sent in an order, if we didn't know from memory we would check our previous invoices and ship him the type of control which he used previously.

Q. Is it a fair statement to say that you standardized on both Minneapolis and Mercoid Controls?

A. Those were the only two types of controls offered to our dealers for since we will say I think the ar 1935. In other words, when we did take on Minneapolis-Honey-

well Controls we continued with the Mercoid, the two types and we never offered a third or fourth type.

That is with the exception, I may correct one year, I think we offered Perfex Control in between Minneapolis and Mercoid. I just don't know what that year was. I think it was the first year that Perfex came out and they asked us to squeeze it in there, but I was not interested in it for the reason that they did not have a dealer set-up or the help, nor was I sold on their particular type of primary control. Regardless of the fact that they were an excellent control I was afraid of service, bearing
2008 in mind that we guaranteed for a year and would be unable to back up that guarantee on controls if Perfex were unable to do so, and they were not able to assure me that they were in a position to take care of dealers' requirements should a user call up and ask for help and the dealer was unfamiliar with the particular operation of the primary control or the thermostats, or the other controls.

Trial Examiner Sheppard: You were standardizing on the two that you mentioned?

The Witness: Yes, we did but I wanted to be sure. We had Perfex in there. We did not sell any. We did not buy any. We had no calls for them, so we did not buy any. We did not sell any.

By Mr. Gilpatric:

Q. Were you solicited by Perfex in other years than the year that you mentioned?

A. Oh, yes, we had been solicited by Perfex up to I don't recall the year, but I am hazarding a guess. I don't know when that Philadelphia Show was. I think it was in '40. We were solicited up to a year previous to that Philadelphia Show and we were solicited at the Show at that time. I think that was in March 1940 in Philadelphia. I am not sure of the date.

Q. How about Penn, did they try to sell you controls also?

A. Penn came in spasmodically. They did not
2009 attempt a good selling job so far as I was concerned. However, I doubt—perhaps they felt they would not have gotten very far because we were pretty well standardized on what we were selling and we had no calls for Penn Controls. They did not create the field for us which was our volume which created our volume of burners.

Q. What, if any, difference in price to you was there between Mercoid and Minneapolis Controls?

A. Well, of course, it depended upon I don't think the price differential always remained alike. It depended upon what bracket we were in and I would say that Mercoid prices were always lower regardless of what bracket we were in in either company.

Q. Did you also charge your customers a differential or allow a deduction as between the two makes of controls?

A. Always, yes, because there was a differential on price and on our price sheet most times we indicated such as I said.

Our basic price was based on Minneapolis Controls, consisting of thermostat, relay and plain limit controls and you could deduct in this particular price sheet $1.00 if Mercoid Controls were furnished. We did that in most of our price sheets. We gave the dealer the option.

Q. Did you ever have any greater differential than $1.00 that you recall?

2010 A. I believe that was one time we had a $2.00 differential. I don't recall just when that was. I don't know whether we have a price sheet available indicating that. I think we did have a $2.00 price at one time.

Q. Now confining my question to the three types of controls making up the standard set of three, did you make it a practice to put a Mercoid Control with a Minneapolis Control, or did you use three of the same make when you shipped out your burners?

A. Our general practice was if the man ordered Mercoid Controls we would ship him Mercoid Controls, or if he ordered Minneapolis Controls we would ship him Minneapolis Controls, the three of them, providing we always had three in stock.

We would substitute only a Limit Control which was line voltage, the type which we used, because it made little difference between the two and the dealer did not complain so much and the costs were the same, and there were no allowances or differential in connection with it. But we tried to if they asked for Minneapolis or Mercoid to give them Minneapolis or Mercoid.

Our records would indicate such was our procedure in the billing of our invoices because if we billed a burner we billed what thermostat, what relay and what type Limit Control, whether constant ignition or intermittent relay

or pressuretrol or line voltage aquastat, or immersion aquastat or hot air control went with that.

2011 Q. Did you have contracts with each of these companies, Minneapolis-Honeywell and Mercoid?

A. Yes, we did.

Q. Every year?

A. I would not say every year. I think it was practically every year. I would think every year but I am not too sure.

Q. Did your contracts with Minneapolis prevent you from buying controls from other companies?

A. They did not to my knowledge. We bought controls from other companies.

Q. In other words, you had contracts with both companies at the same time?

A. Yes.

Q. Would you state the range in the wholesale prices of your burners from the year 1936 down to 1941, if you have that?

A. The range would be due to the circumstances in the industry and the greater volume of burners being sold; our range was predominantly down.

Q. Where did you start from roughly?

A. When?

Q. Where, what figure?

A. Well, I would say it was about $80, perhaps in 1935 or '36, somewhere in there. It might have been the latter '35 or '36, because previously they were way up in

2012 the hundreds due to the condition of the industry.

Q. What did it come down to by 1940 or '41?

A. '41, according to our price sheet I think was about $52.50 with plain thermostat, Minneapolis plain thermostat, relay, that is, the intermittent relay and plain limit control, and a dollar less for Mercoid. I think that is on that price sheet.

Trial Examiner Sheppard: 1941?

The Witness: Yes, sir.

By Mr. Gilpatric:

Q. What happened to your volume of oil burner sales during those years, '36 through '41?

A. With the exception of one year—

Q. What year was that?

A. (Continued.) 1936, we continually made progress from, as I say, about 400 burners in 1934 when Mr. Korth

was still alive and operating until 1941 when we sold close to 9000 burners.

Trial Examiner Sheppard: 90,000?

The Witness: 9000.

By Mr. Gilpatric:

Q. Was that your best year?

A. Yes.

Q. Did you make more or less money in 1941 at the lower price than you made in '36 at the higher price?

2013 Mr. Haycraft: I object. It is irrelevant and immaterial.

Trial Examiner Sheppard: If you want that information, I will let him give it to you.

Mr. Gilpatric: I don't want any figures. I just want a general idea.

The Witness: If we sold more burners we made more money, not much, but we made more money naturally.

By Mr. Gilpatric:

Q. Even at a lower price?

A. Naturally because our costs were greatly reduced, our machining cost. We bought our iron from the foundries. We bought from a foundry that would only take long runs on iron and naturally our cost in our casting was lower and we could make a run through 500 or a thousand of one type of part, one set-up, without breaking it. We had enough iron ahead. We ran the year around.

We had iron come in all the time rather than wait for the peak season in the fall of the year when burner sales were highest. We went out. We worked twelve months around. We kept our operating comparatively even and normal, and that is the way we were able to get our cost.

We could machine most of the burners. Most of them have a motor, transformer and a pump, which means two holes. You drill two holes and set the machine. It 2014 takes the same for all burners. I mean you could run.

We also got into a better bracket with the motor manufacturers. I believe when we first started with General Electric—

Q. Are you talking about price brackets now?

A. Yes, our discount was 20 and 5 from the list, and as we progressed and purchased more motors in larger quantities we progressed from 20 and 5 to 20 and 10, and then to 20 and 15, until 1941 our discount was 21 and 15 from the list price.

Q. Was that true also of your purchases of controls, of your control prices?

A. Yes, when we reached a certain volume of controls we were given the next bracket price, which meant a little reduction in our costs.

Q. What about transformers and pumps?

Mr. Haycraft: That is objected to as irrelevant and immaterial. Let us stock to controls.

Trial Examiner Sheppard: We are interested in controls.

Mr. Gilpatric: I would like to have the answer to that.

Mr. Haycraft: I object. He is encumbering the record.

Mr. Gilpatric: We have had that from other witnesses.

Trial Examiner Sheppard: I will let you tell that.

2015 The Witness: The transformer was about the same. The greater the amount of transformers you bought the lower your price became. There was a differential in transformers, probably running up to 75 cents in transformers. The motor people were not quite so strict, but the more you bought from them the lower your price was. You got the better bargain. In fact, they had 500, they had 1000 and up to 5000, and over 5000 price brackets in the pumps, and the higher the quantity the lower your cost.

Trial Examiner Sheppard: What bracket did you start in with the Respondent in 1934?

The Witness: In 1934 we were in the bottom, the low bracket, the first bracket.

Trial Examiner Sheppard: Where were you in '41?

The Witness: I don't know. I think it was what the Minneapolis would call the 4 or 4-A bracket, over 5000 bracket, because while we sold close to 9000 burners, the balance of the controls were Mercoid. I was told by the Mercoid representative in the territory—

Mr. Haycraft: That is objected to as hearsay.

The Witness: (Continued.) —well, we purchased more controls from them than any other burner manufacturer in the territory.

Mr. Gilpatric: Mr. Examiner, referring to your question, the exhibit, Respondent's Exhibit 143 which is in

2016 evidence shows that this company, Mr. Eckhart's company moved up through the Minneapolis-Honeywell brackets up to bracket 4-A.

Trial Examiner Sheppard: Respondent's Exhibit 143?

Mr. Gilpatric: 143.

Trial Examiner Sheppard: Mr. Lockrae testified to that.

By Mr. Gilpatric:

Q. You were aware then at the time that other burner manufacturers were getting better prices than you were from Minneapolis-Honeywell?

Mr. Haycraft: That is objected to as leading.

Mr. Gilpatric: If we can lay the foundation for this we could shorten it.

However, I will withdraw the question.

By Mr. Gilpatric:

Q. Do you know whether or not other burner manufacturers have at times received better prices than you have?

A. I was familiar with the control manufacturers' set-up of prices based on the volume of controls which were purchased.

Q. Mr. Eckhart, would you tell us something about your competition in the oil burner field, with what companies did you compete most in marketing your burners?

A. That would be hard to say, I am afraid. We 2017 had competition with everybody that was selling an oil burner.

Q. Well, were you in what has been referred to here as the low priced field or high priced field would you say?

A. In 1937 we tried to maintain a reasonable price in the wholesaling of domestic oil burners and I think you will find in Oil Heat a full page write-up due to that fact because of a certain underselling going on for low price of burners being made in the industry.

We found that we were not getting any cooperation and therefore we looked to a means toward an end for self-preservation and we stepped up our volume by lowering our price and meeting competition, the lower price competition. That is what brought us down from our $80. started us down to this lower price.

Q. Some of your competition continued, did it not, to sell at higher prices?

A. Yes, we had both higher and lower competition.

Q. How were you able to sell at lower prices than the high priced manufacturers?

A. I imagine it was going out and getting the business and meeting competition and talking and selling yourself and then selling your product.

Q. Did you have any greater or lesser overhead than that of other companies?

A. We did.

2018 Mr. Haycraft: That is objected to unless the foundation is laid that he is familiar with the overhead of other companies.

Trial Examiner Sheppard: Give me what experience you have on that line if you want to.

The Witness: Ours is a small organization. We don't have any advertising expense. We are not nationally advertised. We don't have an advertising agency. We don't have a sales manager. We don't have a field sales organization.

I hop from pillar to post, town to town, contacting and doing the other work in between. It was a one man organization to a great extent, sir.

Trial Examiner Sheppard: In other words, your overhead is very low?

The Witness: Our overhead was extremely low.

Trial Examiner Sheppard: I think that answers my question on that basis.

By Mr. Gilpatric:

Q. Mr. Eckhart, to your knowledge was your business injured as a result of the different price brackets that Minneapolis-Honeywell had on the sale of its controls?

Mr. Haycraft: That is objected to. There was no foundation laid as to any knowledge on the part of the witness as to who of his competitors had a lower price.

2019 The Witness: I disagree. We all knew each others prices in the industry.

Trial Examiner Sheppard: If you know I will let you testify.

The Witness: Well, it was common knowledge in the industry, sir, what your competitors' price was.

Mr. Haycraft: It is not a question of competitor's price. It is a question of what the competitors paid for controls. That was the question.

Mr. Gilpatric: The evidence in this case shows, Your Honor, that this particular company moved up from the bottom to almost the top of the price bracket system of Minneapolis. Of course he knew what the price bracket system was.

Mr. Haycraft: There is no testimony here, Mr. Examiner, that this witness knew what prices his competitors paid. He did not know how many they bought.

Mr. Gilpatric: He knew there were better prices than he was getting.

Mr. Haycraft: How did he know that?

Mr. Gilpatric: He told you how he knew it.

Mr. Haycraft: I am not satisfied unless he knows how much people paid for other things.

Mr. Gilpatric: You can cross examine him on that.

Mr. Haycraft: I object. There has been no founda-
2020 tion laid.

Trial Examiner Sheppard: I will let you testify whatever you have to offer, sir.

The Witness: What is the question now?

By Mr. Gilpatric:

Q. My question is whether your business was hurt or injured as the result of Minneapolis-Honeywell's price bracket system?

A. I don't know how it could be. I don't know how I could answer that question. We did expand every year with the exception of the year 1938 which was a very poor year in every type of industry, sir, and therefore we got up to the year 1941. We could not have taken any more business. We were just going at capacity. We could not have handled it, so I don't think we were hurt to any degree.

If we did not get business—may I answer in this way—the reason they did not get business previous to 1934 was because they did not go out and get it. It was more—

Q. By "they" you mean the Korth Company?

A. Yes, I am only talking about my own company. They did not go out and get it. They used to do a lot of detail letters, etc. You could not sell unless you met the people. It was that type of contact which permitted us to go out and get business.

2021 Trial Examiner Sheppard: All right.

By Mr. Gilpatric:

Q. Did you, yourself do some of this contact work?

A. I did most of it for our company.

Q. You traveled around the country?

A. Yes, sir.

Q. And talked to dealers?

A. Yes, I have gone as far west as Seattle, south and north, and I attended the shows to get the business. We did have a few representatives which we appointed.

Q. Referring back again to your knowledge of Minneapolis-Honeywell's price bracket, were you ever told by Minneapolis-Honeywell's representatives themselves of their price methods?

A. Yes, we all knew it. I don't believe there was a soul in the industry who didn't know there was a differential in price. When we attained that certain volume that you would be eligible for that price bracket. I know, I tried often, I tried to get that price but never was able to get it until I could show them or their books showed that we purchased from them the required number of controls, that is thermostats and relays, to qualify us for the next bracket.

Q. So you grew from one bracket to the next as your volume increased?

A. Yes, and I repeat again, we attempted in good buying trying to persuade them to give us a bracket which
2022 they felt we were not entitled to and which we had not purchased a sufficient volume of controls to warrant them giving us the bracket.

Q. When did you first hear of this proceeding, Mr. Eckhart?

A. I would have to hazard a guess. I don't know how many months it was.

Mr. Haycraft: That is objected to as irrelevant and immaterial.

By Mr. Gilpatric:

Q. Have you met Mr. Haycraft before this hearing today?

A. Yes.

Mr. Haycraft: That is objected to as irrelevant and immaterial.

By Mr. Gilpatric:

Q. How did you happen to meet Mr. Haycraft?

Mr. Haycraft: I would like to get a ruling here. I have a couple of objections here.

Trial Examiner Sheppard: I don't know. Both sides have been doing that. I will let it go on.

Mr. Haycraft: When did I ever do it?

Trial Examiner Sheppard: I don't remember that you have.

Mr. Haycraft: I move to strike the last few answers as not relevant to any inquiry in this case.

Mr. Gilpatric: I am going to make a point of this
2023 because I feel it is very material to show in this case and if I cannot show it I have got to make an offer of proof because the circumstances under which this witness was brought into this case I feel are very material and I

know why Mr. Haycraft does not want this to go in, but nevertheless I am going to press that if he objects.

Trial Examiner Sheppard: I will listen to him. If I don't think it is proper, I will listen to a motion to strike. Go ahead.

By Mr. Gilpatric:

Q. Mr. Eckhart, will you explain the occasion how you happened to meet Mr. Haycraft?

A. I received a telephone call from Fenton Fisher, who is Mercoid's representative in New York, and after passing the time of the day in regular formalities, etc., he said there was—I don't know the exact words—but he said to the effect that there was some type of inquiry into the control price bracket and that there was a representative of the Federal Trade Commission by the name of Mr. Haycraft or Haycroft. It is Haycraft, I believe—I am sorry—who was there and would like to talk to me.

Mr. Fisher at the time said, "Arnold, didn't you use a lot of our combination controls with Minneapolis thermostats and relays?"

2024 I said, "Certainly we did. You know because we bought a thousand or more combination controls from you, which we shipped out with Minneapolis thermostats and relays. In other words, it would show that we bought one thousand or more additional Limit Controls from you than we did your Primary Controls."

"Well", he said, "Mr. Haycraft would like to talk to you", and Mr. Haycraft introduced himself over the wire and said he would like to come out and talk to me. I think it was an arrangement made for that afternoon. I am not definite about it, but he found that he could not make it and called up and made an arrangement for another day.

Mr. Haycraft called on me in our shop and we talked back and forth about this thing, which I told him was not a bit familiar with me. I had not heard about it except that Mr. Fisher had called me when he was in his office, and Mr. Haycraft proceeded to talk to me about the price brackets and the controls, whether we were asked to buy, furnish a certain type of control only with our burners, or I can't remember the exact conversation as it was. I can't remember, I can't repeat the words identically that Mr. Haycraft said nor my answers other than he did tell me—I did tell him rather that in purchasing controls from Minneapolis as friendly as we were with Minneapolis and equally as

friendly with Mercoid, we were never able it seemed to
2025 get any price other than what we were entitled to by having stepped from one bracket to the other, and if we stepped up to one bracket, that at the end of the year we were given a retroactive merchandise rebate only when we earned it.

It was at that time that I think I mentioned to Mr. Haycraft that Mr. Fisher told me that we were the largest manufacturers, purchaser of their equipment out of the New York office for the year 1941, and that we did furnish different Limit Controls, for instance, Mercoid Limit Controls with Minneapolis Controls.

Q. What else was said?

A. The question was brought up by Mr. Haycraft regarding the Quiet-Heet organization, wanting to know whether their activity had hurt us and also about other concerns having been given the lower price bracket, although they had not purchased sufficient controls from Minneapolis to entitle them to that price. He said, "Did you know that?"

I said, "No, I had often thought that might have been the case, but I know in my case I had never been able to get any other price than what we had definitely earned by the volume of sales."

He also asked me, mentioned the name of one or two. He said there were 5, 6, or 7 of these manufacturers that had gotten this low price and asked me if we had lost business to them due to their having gotten this lower
2026 price from Minneapolis.

I told him I did not think so for the reason we were getting all the business we possibly could handle at the time and I didn't know where we were losing any to other concerns, feeling that everyone was entitled to a certain volume of business if they went out progressively and actively went after it.

Q. What did he say to that?

A. I don't know.

Q. Do you recall the substance of the conversation from there on?

A. Well, before, unfortunately just before a telephone rang, Mr. Haycraft said to me, "If you manufacturers don't want to help in this case how are we going to help you?"

I said, "Why? It is kind of late if you are referring to the Quiet-Heet situation because that was back in '36 and

'37. Here we are in 1942. We are out of business through Limitation Orders and we are interested in other things and I don't know how it is going to help us now."

A telephone bell rang and we were doing war work, and I answered the telephone. Mr. Haycraft got up. I thought that he was ready to leave and shook hands with him and he left the office.

That is the only conversation I had with him until I met Mr. Haycraft today, sir.

2027 Q. Did he name any of the other companies which you referred to as having received better prices?

A. As I recall he named two, that was Williams Oilomatic and Timken, and I cannot recall whether he named others. I doubt very much whether he did name the others.

Mr. Gilpatric: That is all.

Trial Examiner Sheppard: Cross-examine.

Cross-Examination by Mr. Haycraft.

Q. Do you recall, Mr. Korth—

A. Eckhart.

Q. (Continued.) Eckhart, that you asked not to be called in this proceeding because of your friendship with both Minneapolis and Mercoid?

A. To you?

Q. Yes?

A. I might have said that. Yes, I would rather not be in on any case.

Q. That is what you told me?

A. Yes.

Q. Don't you have a definite recollection of saying that?

A. It is quite possible, yes. I have never testified in any case and I don't, as I mentioned to you, sir, my friendship with Mercoid is just as great as it is for Minneapolis and I certainly would not want to hurt anybody, but I

2028 certainly am interested in answering any questions that you, sir, or anyone else, sir, would like to ask me if I can honestly answer it and give you my feelings why things were done that we did in our company.

Q. Well, what is your recollection as to losing business to Quiet-Heet?

A. Let us go back a little further, if I may. We made the first Quiet-Heet Burners. He was a dealer of ours. We did object when he started when our prices were $80 and he

immediately started out at $65 and he did sell promiscuously. We sold through dealers and the majority of dealers sold through dealers. He did sell promiscuously. We did, and I believe most everyone in the industry did accuse Minneapolis of doing or giving him a price which he was not entitled to. We could never prove it. We attempted. I did, others did. We were asked to furnish proof where they were giving him an advantage. We were unable to do so, but not wanting to pass any reflections on a competitor, I will say that the majority of the oil burner manufacturers did stand back and give a year guarantee whereby this other account served over the counter, practically to home owners or anybody, a storekeeper or anyone who would come in and buy a burner, as long as they paid for it. If it was all put together it was all right or if a transformer was handed to them in the original carton in which the
2029 transformer was shipped to him they would take it as a package and we know from experience and competition that a good many of these fellows bought from the concern because he was underselling.

They were using the parts for spare and because they could buy these various parts, motors, pumps, transformers, nozzles, controls, cheaper in the bulk and throw the iron away than they could buy the part elsewhere.

Q. When was it that you first felt this competition from Quiet-Heet?

A. We felt the competition shortly after he started up, which I think was sometime in 1936.

Q. Do you remember what price you sold your burners at in 1937 when he was selling his burner?

A. It was a little lower than $80. I don't know, Mr. Haycraft.

Q. Was it still higher than his price?

A. We were always higher.

Q. You never did meet his price?

A. Not to my knowledge.

Q. Do you have any instances to your knowledge of loss of business to Quiet-Heet?

A. In the first place you don't lose business that you don't have in my estimation. We have been all in competition and if I don't get the order somebody else gets the order. It just depends upon who is a better man. That man can sell.

2030 Q. In 1938 you said your prices, your volume of your sales declined, didn't they?

A. Yes, sir.

Q. Do you know whether or not Quiet-Heet sold more burners in 1938 than they did in 1937?

A. I don't know his records.

Q. Do you know as a matter of fact what price he actually paid for controls that he bought from Minneapolis-Honeywell?

A. I don't know off-hand.

Q. Do you know what price anybody paid beside yourself?

A. I don't know definitely other than I know those brackets.

Q. You would have to know how much they paid?

A. Not necessarily. If I sold over 300 or less than 300 I got one price. If they sold from 300 to a thousand or whatever the bracket was at that particular time, they got another price. They could sell 301 and get the price, just the same price as they got on 999.

Q. You know he would have to sell in between?

A. That is correct. We would have to do likewise.

Q. You were in bracket two in 1938?

A. I cannot answer, sir.

Q. Well, do you know about how many controls you bought from Minneapolis-Honeywell in 1938?

A. I do not off-hand because we purchased some Mercoid Controls as well.

2031 Q. According to Respondent's Exhibit 143 you purchased 2250?

Mr. Gilpatric: That is the bracket quantity, not necessarily the number of controls purchased.

Mr. Haycraft: The figure does not show how many he purchased?

Mr. Freeman: Not Respondent's Exhibit 143. That does not show it.

By Mr. Haycraft:

Q. You don't know how many you actually purchased that year?

A. It is a matter of book record and I don't have it in memory, sir.

Q. You don't know what price you paid that year either for controls that you bought from Minneapolis-Honeywell?

A. No, sir, I have not looked at any of this information. I have not looked up as far as prices or volume or any-

thing else is concerned. I was not asked to and I did not. I cannot remember that.

Q. How does it happen that you are down here and testifying?

A. They asked me to come down here.

Q. Who did?

A. Mr. Michelson.

Q. Who is Mr. Michelson?

A. The man that I always contact when pur-
2032 chasing equipment from the Minneapolis-Honeywell Regulator Company.

Q. Did you tell him that you would rather not testify in this case because you were friendly with both Minneapolis-Honeywell and Mercoid?

A. Yes, I told him that in the presence of these gentlemen.

Q. They asked you to come down anyway?

A. Yes.

Q. They were not as considerate as I was?

Mr. Freeman: I move that that be stricken.

The Witness: If you had asked me to testify for you—apparently you did not like the answers I gave you and that is why you did not.

By Mr. Haycraft:

Q. That is in your estimation?

A. You did not ask me.

Q. That is your estimation?

A. You can take that for granted. You did not ask me to come down. I would have. I would have answered you just the same.

Q. Didn't I ask you something about coming down here to testify and you told me that you rather would not?

A. They told me the same thing. If I asked an oil burner man to buy a burner and I walked away I would never get the 10,000 burners, but they did not walk away.

They asked me again and I said, "Sure, if I can tell
2033 the truth as I feel it and see it and I am willing to admit it, I am willing to do it, yes," and it is the same question that you could ask me, Mr. Haycraft.

Q. Well, I am not saying that I am dissatisfied with your testimony. In fact, I am very happy that you are here and I am glad I did not have to bring you, and I am glad the other side did bring you.

A. All right.

Trial Examiner Sheppard: Off the record.
(Discussion off the record.)
Trial Examiner Sheppard: On the record.

By Mr. Haycraft:

Q. I notice on Respondent's Exhibit 146 that down here you have at the bottom of the page "Deduct: Mercoid Controls taken in place of Minneapolis-Honeywell Controls $1.00; short hour motor taken in place of long-hour motor $1.50".

"Add: For following equipment when purchased with burner: Mercoid M-51 warm air control in place of limit control $1.00; M-80 combination fan and limit switch in place of limit control $2.75"?

A. Yes, sir.

Q. That M-80 combination fan and limit switch control that is what you were questioned about by me about that time?

A. That is correct. We used that in large volume.

Q. That is used in what sort of a furnace?

2034 A. That is used in forced hot air furnace, so-called air conditioning units.

Q. Which one of Minneapolis-Honeywell's items on that page correspond to that?

A. The LA401A combination. We used that on line voltage.

Q. In that one you had an additional price of $3.25?

A. Yes, 50 cents difference, or actual cost.

Q. That represented the difference in your cost?

A. That was the actual difference in our cost and the reason for it is if you take the M-80 which was $2.75 and our cost which was $4.75, we deduct the cost of the limit control from that. The difference being LA401A and M-80. We just made that allowance.

Q. What did you pay for the LA401A?

A. Our price was $4.25.

Q. As compared with $4.75?

A. They were about the same year after year on those two.

Q. At the top of the page you have Series Sr-1 burner $53.50 dealer price. Is that your burner complete?

A. Yes, that includes, down below I think it would read price includes three Minneapolis-Honeywell Controls consisting of plain thermostat, intermittent relay and

plain limit control because some dealers would try to want immersion aquastat which cost us 50 to 75 cents more and they would have to pay that if they wanted the immersion
2035 aquastat, sir.

Now the same way that motor was equipped, I think it shows specifications with a long armed motor and if they wanted a short armed motor which some of them wanted to use, they could deduct $1.50. They had their choice.

Q. These other prices on the same burner were different equipment on them or did you have two or three?

A. We had different models.

Q. What is the Sr model?

A. Sr-1 model is our plain model, not as efficient as the Sr-1 DeLuxe model which has a different type turbulator on the end which gave better efficiency.

Q. For which you charged a little bit more?

A. We charged a little bit more. It cost us a little more.

Q. T-2?

A. It was a greater capacity burner. Now the difference between our Sr-1 and Sr-2 was a greater capacity and we went into a different model; when we went into a different model casting altogether when we went into the T model.

Q. The last one is P-4?

A. That is an old type burner which we never changed. It was made by the company before my connection with the company and the sales were very small because I was not a believer in using large burners of that type for domestic heating. I felt, having been originally trained in Bunker Oil, I felt it was a Bunker job when you got
2036 up to 10,000 feet or more.

Q. What is "capacity steam-EDR"?

A. That is direct radiation.

Q. The Sr-1 is a 565. Do you interpret that when translated into room size that that is the size of the house that it would heat?

A. Probably about a 6 room house.

Q. Sr-2, was 800?

A. That would probably go into an 8 or 9 room house, depending on the size of the house and efficiency of the heating plant and whether the house was weather-stripped, etc.

Q. T-2 and T-3, 1400 and 4000?

A. That may take a small store of some kind with apartments in it.

Q. It is more of the industrial type?

A. The same type of burner, Mr. Haycraft, all the way through, with the parts interchangeable. For instance and the motor on the two could be interchanged with the Sr DeLuxe or Sr-1, but when we got into the T-3 we put in a bigger motor. The specifications would show that it is a one-quarter horsepower motor and was not interchangeable. It was not the same diameter.

Q. Now on the back of this where you have parts and control parts?

A. Dealers at times would purchase controls from
2037 is to go with the burner where a control had been out of guarantee or had gone haywire and wanted to replace it.

Q. How much of a mark-up was this from your cost price?

A. I think this was 25 from the list.

Q. From the list?

A. Yes, sir.

Q. And the list was made up by whom?

A. Minneapolis.

Q. It is for the dealers?

A. That was a general published list by Minneapolis to all dealers, distributors, manufacturers, when buying Minneapolis materials.

Q. Can you take the Minneapolis items at the top of the page there and indicate which of the Mercoid items they correspond to?

A. Yes, we run down about two, four, six, eight, ten, twelve, thirteen, sixteen, eighteen, Minneapolis Controls in order which they be used when grouped, the thermostat, relays and limit controls, cutoffs, and vaporstat and then go into Mercoid.

Now if you will go to the top of the page, Minneapolis-Honeywell T11A acratherm would be comparable to the Mercoid type H sensatherm, as far as being a plain room thermostat. It would be a different wiring hook-up.

The Minneapolis RA117A relay would be compara-
2038 ble with Mercoid JMI pyratherm, and then of course any one of the Minneapolis Limit Controls such as P404, LA409, LA419, would be comparable with Mercoid

DA31 and F35 and M51, except that Mercoid M51 warm air control costs us a little bit more money than the Minneapolis 419 airstat, which would be a comparable control. I think we show a higher price.

Q. Take this Minneapolis T42A thermostat, what is that?

A. That is a line voltage thermostat which we used very few of.

Q. What does that correspond with in the Mercoid?

A. That would be similar to Mercoid 855T thermostat. That is a line voltage.

Q. In other words, you paid more for Mercoid line voltage than you did for Minneapolis-Honeywell?

A. That is correct. That one you will notice they charge more for. We charged extra for it. "T" means thermometer and there is a little additional for that.

Q. The T105A chronotherm, what is that?

A. That was an electric clock thermostat.

Q. Mercoid did not have one at that time?

A. They came out with a combination of some sort and I might say we sold very few. The 105A's not having been sold on it I never recommended it and regardless of Minneapolis theory in case of its use.

2039 Q. Take the next one, Minneapolis T111A chronotherm?

A. That was a newer model, their later model.

Q. Did Mercoid have anything to compare with that?

A. I don't know if they compared their combination thermostat and relay which was a relay located in another room other than where the thermostat was. I was not very familiar with any of their clocks.

Q. What is their RA116A relay?

A. That was a constant ignition relay comparing with Mercoid JM, which we don't show on there because at that time we did not sell too many constant ignition relays for domestic use.

For domestic use we used the intermittent relay. It was only when we got into the F. H. A. sales for the builder-trade where we went into the constant ignition, at which time we bought a great many JM's from Mercoid.

Q. Now the P404A pressuretrol, did you say that was comparable to Mercoid DA31 steam control?

A. Yes.

Q. And the price is the same?

A. Well, the price would be the same. That is a plain Limit Control, one we would call a plain Limit Control for steam.

Q. Do you mean that this indicates the price was the same, you paid the same for the Mercoid that you did
2040 to Minneapolis-Honeywell?

A. On Limit Controls?

Q. Yes?

A. They were about the same. I don't think there was any differential.

Q. The next one is L404A?

A. L404A that is a special scale. The first L404A ran from zero to 10 pounds low pressure steam. When we put it on the pressure boiler we would need a high pressure steam control and had two scales, either if the boiler was rated from two to 50, or 5 to 150 pounds, we would need a scale for that range.

Q. The LA409A, what is that?

A. That was the Mercoid F35 risertherm.

Q. The price was the same?

A. Yes.

Q. The LA419A is an airstat?

A. Yes,

Q. The LA419A was $3.85. That corresponds to M51?

A. M51 cost more money for the Mercoid.

Q. Was it a better, heavier job, or how do you account for that difference?

A. Their price was more than the Minneapolis.

Q. Then this combination control LA401A, what does that correspond with on here?

2041 A. 401A combination was the same as M80.

Q. M80, you don't have that?

A. No, we don't have that.

Q. L170A or L444A immersion aquastat?

A. L117A was a low voltage for heating domestic hot water which was equivalent to Mercoid 115W immersatherm.

Q. What is the difference in price there? Was Minneapolis higher?

A. Yes.

Q. The Minneapolis was higher than the Mercoid?

A. Yes, I looked over here but I remember it is higher.

Q. The R19A relay, does Mercoid have anything to correspond with that?

A. No. It is used where a person did not want to use a T42A the second Minneapolis-Honeywell item which would necessitate running bx cable up to the thermostat. You would use a low voltage thermostat, you would use a relay in connection with a circulator job.

Q. Minneapolis-Honeywell C401A low water cut-off fittings, did you have anything corresponding to that?

A. It is a low water cut-off, DA123.

Q. The price was the same on those two?

A. Yes, they had DA131Q Mercoid which was a little different.

Q. A little more expensive?

2042 A. Yes.

Q. As you will note Minneapolis had two types there too?

A. Yes.

Q. Would one correspond with the other at all?

A. No.

Q. They are just a little different?

A. Yes, the second, C401A is the same type, a newer type, and if the blower had an opening to take a screw-type low water cut-off rather than one attached with fittings.

Q. L408A vaporstat, did Mercoid have anything like that?

A. I think—I don't think in all our sales of our company we sold three vaporstats.

Mr. Haycraft: That is all, Mr. Examiner.

Redirect Examination by Mr. Freeman.

Q. Mr. Eckhart, isn't it true M51 warm air control Mercoid which you price at $4.85 contains adjustable mechanism, does it not have a differential adjustment?

A. Yes, it does. They have a differential adjustment there, yes.

Q. And isn't it true that the Minneapolis-Honeywell LA419A airstat does not have such a differential adjustment?

A. No, it does not have it.

Trial Examiner Sheppard: Does that make a difference in price?

2043 Mr. Freeman: That as a matter of fact is the reason.

The Witness: That is the reason I imagine for the difference.

By Mr. Freeman:

Q. Is it not true that the Minneapolis-Honeywell T11A acratherm is comparable to Mercoid H sensatherm?

A. It is true except that the Minneapolis T11A acratherm is 3-wire low voltage whereas the Mercoid sensatherm is 2-wire low voltage.

Q. The T11A acratherm gives you heat acceleration?

A. That is correct.

Q. And the Mercoid type H sensatherm does not give you either acceleration or anticipation, is that correct?

A. Not to my knowledge. It does not, no, sir. There is additional items in the T11A, which gives you that heat acceleration and if you do not want to take advantage of heat acceleration in T11A you just take out, remove that screw, and you get the same operation as a normal thermostat.

Q. But your price quoted here and when you buy the thermostat from Minneapolis-Honeywell it includes that feature of heat acceleration?

A. Definitely, yes, which was a sales feature.

Q. Now isn't it true that when you sold a burner equipped with Minneapolis-Honeywell controls you
2044 always used a T11 acratherm—I am speaking normally now—and a primary control to go with it either of the constant ignition type or the intermittent type?

A. That is correct.

Q. That was standard whether you used the oil burner for hot air furnace or steam boiler or any other kind of heating apparatus?

A. Yes, sir.

Q. Isn't it true that the Limit Control was of the kind dependent upon the particular heating plant?

A. Naturally.

Q. Now isn't it also true then that when you sold oil burners equipped with Mercoid Controls you always used a Mercoid-type H sensatherm together with its primary control, either the JMI, which is the intermittent ignition type or the JM constant ignition type with a particular kind of limit control depending again upon the particular type of heating plant?

A. Yes, that is right.

Q. So isn't it fair to say that with every oil burner which you equipped with Minneapolis-Honeywell Controls you invariably used the T11A acratherm?

A. That is right.

Q. And likewise that is true with those equipped with Mercoid you used a sensatherm and a primary?

2045 A. That is correct.

Q. Then as to limit controls that was dependent upon the particular type of installation, that is, hot water installation with one kind of a limit control, and hot air furnace took another kind?

A. Yes, but there were one or two occasions if we didn't have the particular make limit control in stock through our negligence in ordering them in sufficient time or they did not come in on time, we might substitute a different control, and that is the only control we substituted. If Minneapolis were ordered we might substitute a Mercoid Limit Control, or if Mercoid were ordered and we didn't have a Mercoid we would substitute a Minneapolis-Honeywell. That was a rare occasion but that was the only time we would substitute without the dealer ordering it, and if he would complain we would replace it if he requested it when we got the other controls in. We did it to expedite installation.

Q. Even in such cases where you crossed limit controls, the type of limit control was always dependent upon the type of heating equipment in the house, correct?

A. Yes, surely.

Q. But as far as the primary control and thermostat was concerned it didn't make any difference whether it was on a hot water job or on a hot air job, correct?

A. That is correct.

2046 Q. The only difference they made if they wanted a clock thermostat or something like that then you substituted the clock thermostat for the plain?

A. Yes, the clock thermostat for the plain thermostat but standard controls were plain thermostat and relay of the intermittent type.

Q. That was standard?

A. Plus a plain Limit Control, three controls.

Q. And that plain Limit Control was dependent upon the type of heating plant, is that correct?

A. That is correct, yes, sir.

Q. And whenever anybody wanted an extra you just charged extra for it?

A. It was on our price sheet. If they wanted anything for instance, we would say on a steam job they would ask for immersion aquastat in addition to the three controls which we originally furnished and at that time if they were purchasing Mercoid Controls we would furnish them an

immersion type aquastat or the 115W immersatherm of Mercoid at an additional cost, whatever it would be on our sheet, or if it was a Minneapolis set of controls and they wanted an immersion aquastat for the control of domestic hot water, we would furnish them with the L170. I believe the last one was L170A. That is a low voltage immersion aquastat. That was a three wire and could be used
2047 with Minneapolis-Honeywell Controls and 115W immersatherm. The Mercoid was a two wire immersion aquastat and it was not good policy to mix them up because the majority of dealers had difficulty enough anyway if they tried to cross controls.

It was to their distinct advantage not to do so.

Q. You said that these prices with respect to controls on the backside of the Respondent's Exhibit 146 were the list prices of Minneapolis-Honeywell less 25 per cent?

A. Yes, in most cases. There might be some little difference there but was about the list, the differential.

A. And isn't it true that you likewise followed that same practice with respect to Mercoid's type?

A. Oh, yes.

Q. In other words, you just took the list prices?

A. That is correct, because when you take your limit control prices the prices for Minneapolis-Honeywell and Mercoid with the same discount and we showed them on our price sheet the same.

For instance, the F35 risertherm at $3.85 is the same as L409 surface aquastat at $3.85, because our cost was the same on the list, and the list, you don't have the same list on the limit controls.

Q. As far as thermostat then, Minneapolis-Honeywell and Mercoid, they had different prices?

A. Yes, sir.

Q. And also with the primary controls, they were
2048 different list prices?

A. Yes, and I believe the immersion aquastat showed a different price. Those were the four major controls we usually sent with the burners.

Mr. Freeman: That is all.

Trial Examiner Sheppard: Is there anything further, Mr. Haycraft?

Mr. Haycraft: No, sir.

Trial Examiner Sheppard: Thank you, you are excused.

(Witness excused.)

Mr. Gilpatric: That concludes the list of witnesses we have scheduled here except for one man who is not able to come over. We will have to pass him up.

Trial Examiner Sheppard: All right then gentlemen, in view of the fact that we are not certain as to when we can resume this case, I am going to adjourn the matter on five days' notice and expect around the middle of January Mr. Freeman and Mr. Gilpatric will you two write me the first available date that you can arrange to continue the case in whatever place you want to continue the hearings, and we will make the proper arrangements for you at that time.

Mr. Gilpatric: We will do that, Mr. Examiner.

Trial Examiner Sheppard: You can take an ad-
2049 journment in this case on five days' notice to be called by the Examiner after due notice to all interested parties.

(Whereupon, at 3:15 p. m., December 14, 1943, the hearing in the above entitled matter was adjourned on five days' notice.)

2050

Room 532, Federal Trade Commission Building,
Washington, D. C.,
January 11, 1944.

Met, pursuant to notice, at 2 o'clock p. m., ewt.

Before:

The Federal Trade Commission.

Present:

Commissioner Robert E. Freer (chairman).
Commissioner William A. Ayres.
Commissioner Ewin L. Davis.
Commissioner Charles H. March.
Commissioner Garland S. Ferguson.

Appearances:

Everett F. Haycraft, Esq., attorney for the Federal Trade Commission.

Cravath de Gersdorff, Swaine & Wood, by R. L. Gilpatric, Esq., 15 Broad Street, New York, New York, Bair & Freeman, by Will Freeman, Esq., 135 South LaSalle Street, Chicago, Illinois, attorneys for the Respondent.

Nicholson, Snyder, Chadwell & Fagerburg, by Erwin P. Snyder, Esq., 135 South LaSalle Street, Chicago, Illinois, attorneys for the Mercoid Corporation.

2052 Chairman Freer: The commission has set this time for hearing on the request of the Mercoid Corporation that the subpoena duces tecum be recalled.

There is also, apparently, another request that came in yesterday. Does that involve the matter today also?

Mr. Snyder: That is the same thing, if you are referring to the motion. I just put it in the form of a motion, so it is the same thing.

Chairman Freer: It involves the same matter?

Mr. Snyder: The same matter yes, sir. I thought that was the proper thing to do.

Chairman Freer: The Commission will hear argument in support of the motion at this time. You will have half

an hour, Mr. Snyder. Would you like to reserve some of your time?

Mr. Snyder: Yes, I think I will reserve at least five or ten minutes.

May it please the Commission, this is a motion in behalf of the Mercoid Corporation, asking the Federal Trade Commission to recall a subpoena duces tecum that they issued to Mr. James William Owens, Executive Vice-President of the Mercoid Corporation, under date of November 5, 1943, asking him to appear with copies of some 90 contracts with oil burner manufacturers, or such of them as they had,

and also asking that he produce price lists, discount
2053 sheets and other data showing the various prices at

which Mercoid Corporation offered and sold such controls to said oil burner manufacturers during the years 1937 to 1941, inclusive.

Before I came in I stopped in the Document room and looked at the Documents in this file, and I wonder if you would request that they be sent up, because I want to refer to the exhibits in the file. I could not get them.

Chairman Freer: We will have them brought up.

Mr. Snyder: This is a motion in behalf of the Mercoid Corporation, which is not a party to the matter of the Minneapolis-Honeywell Regulator Company. A complaint was issued by the Commission against the Minneapolis-Honeywell Regulator Company, and in the course of the trial of that matter a subpoena was issued at the request of the respondent, directed to the Mercoid Corporation, as I have said. I want to particularly draw your attention to the fact that the Mercoid Corporation is neither a party to the situation nor has there been any complaint made against the Mercoid Corporation. In fact, the Mercoid Corporation, whenever any request from the Commission for information has been made, has gladly complied with that request, but the Mercoid Corporation has taken the position in respect to this subpoena duces tecum, which is in behalf of the respondent, that it should not be asked to furnish this confidential information, which would

be spread upon the public record or be given to its
2054 competitors, which is more important.

In the motion which I filed there is embodied an affidavit by Mr. Owens that sets forth these various facts. It also sets forth the relationship which has existed between the Mercoid Corporation and the Minneapolis-Honeywell Regulator Company. It has been the recipient of a long,

harassing patent litigation with that concern, and which the Supreme Court on January 3rd handed down two opinions, in both of which it held that the Minneapolis-Honeywell Regulator Company had violated the anti-trust laws in the way it handled the patents under which it was either an exclusive licensee or the owner.

I have drawn your attention to these facts because, while I know the Commission has always been mindful, when requesting information from a concern that it is investigating, or anything of that kind, to hold the thing confidential, I think there has been some misapprehension of the facts here, or the Commission would not have issued this subpoena duces tecum in this case.

In the case of the Commission investigating an industry or a concern, it has always held that information confidential. In fact, the law provides, in Section 6, that if it does make public any information, it is not to make public trade secrets or lists of customers. Now, the con-
2055 tracts called for here are simply lists of the customers of the Mercoid Corporation, and if that determines the policy of the Commission—and it should set the policy of the Commission to some extent—certainly it should be considered in this matter. Now, I know the Commission has taken the position that it should issue subpoenas for the respondents. There is nothing in the Federal Trade Commission Act that requires it to do so, but it has taken that position, but it certainly is discretionary with the Commission whether it should do it or not. There is nothing in the Act that requires the Commission to issue these subpoenas, and I think that when the Commission issues a subpoena to a party that is not a party to the litigation, against whom there is no complaint, and which is not in the course of an investigation of an industry, it should hew to the line, where it will not ask for any information which is confidential or which would work to the harm of the corporation if it is disclosed.

In this particular case I think the first thing we ought to do is to look at the complaint and see upon what this complaint is based.

In Count 1 of the complaint we have a series of seven paragraphs, and the seventh paragraph states that Count 1 is a complaint of unfair methods of competition within the meaning of Section 5 of the Federal Trade Com-
2056 mission Act. Two of these paragraphs embody the actions which the Minneapolis-Honeywell Regulator

Company was held, in these two cases that I have attached copies of, to be in violation of the anti-trust laws, so it could not be under those two paragraphs that they wish the list of our customers and our prices.

In the first paragraph and paragraphs 3 and 4—3 in particular—it is alleged that they have embodied in their contract clauses restricting the purchasers to purchase only from Minneapolis-Honeywell—or at least, purchase a certain portion of their control from Minneapolis-Honeywell. In connection with that—first of all, I want to refer to this first exhibit in this case, which is a stipulation signed by Minneapolis-Honeywell and the Government, and in that they have stipulated that they have entered into these contracts with certain companies.

Now, the subpoena which was issued to us names those companies, but it also names several in addition—three, in fact. If they are seeking to use the subpoena in relation to those companies, why did they put in the three extra companies, except to unlawfully get information?

In the next place, the list of our contracts, or our contracts, are not the best evidence as to why any manufacturer didn't live up to their exclusive contract with the Minneapolis-Honeywell. If they want to get that kind of
2057 evidence, the best evidence is the customer himself.

Why don't they call the customer? Why ask for our confidential list of customers? I don't think that the Commission in its discretion should grant such a request, and especially when we find that they have not stuck to the companies that are mentioned in the stipulation, but have added other companies, showing an improper intent.

Now, if we go on in the complaint, the second count is a complaint of violation of Section 3 of the Clayton Act. It embodies the same paragraph, so the same argument applies to that as applies here.

On the third count, may I refer again to the reason why this is not the best evidence, why our contracts are not the best evidence in this matter? The mere fact that some on these lists, stipulated lists of customers, of Minneapolis-Honeywell had contracts with Mercoid would not show that they did not live up to their contracts with Minneapolis-Honeywell. It does not show how many bought from Minneapolis-Honeywell, which is the question in point.

The stipulation shows that in some of the cases they call for the exclusive buying of the regulators from Minneapolis-Honeywell. Now, the fact that we might have a con-

tract with them, even though we did not furnish them any regulators under it, would not show that they were not living up to their contract. The only way that that
2058 can be shown is by calling the customer. t would not show that perhaps he bought 5 per cent from us because his customer insisted on it. It would not show that he bought from us because Minneapolis-Honeywell could not furnish them to him.

I don't see where our list of customers is really relevant in this matter.

Now, coming to the third count, which is the complaint of discrimination in price between different purchasers buying automatic temperature controls of like grade and quality, what have our prices got to do with that? How does that show that they have not indulged in discrimination among the purchasers? The fact that we have given them prices less than theirs or more than theirs has no bearing on whether they have discriminated under this section of the complaint.

I was not able to see the basis on which they asked for this subpoena, because that was not in the public files, so I don't know the basis on which they requested it from you, or on what basis it was issued, but I can conceive no possible basis on which the Commission ought to exercise its discretion and ask a competitor, a competitor which it has a hard time competing with, says the evidence in these two cases before the Supreme Court—why they should ask that competitor to give to the competitor which has, by its own acknowledgment in the stipulation, up to 60 per
2059 cent of the business—why it should give it its list of customers, give it its prices.

Chairman Freer: As I understand it, the list of customers referred to is contained in the subpoena, is it not?

Mr. Snyder: Yes.

Chairman Freer: Apparently furnished by someone.

Mr. Snyder: We are to tell them which ones we have contracts with, and furnish copies of our contracts, which, in effect, is giving our list of customers, because the affidavit I filed shows that these are practically the entire oil burner industry. So it really is requiring full information from my client.

Now, as to prices, in Exhibit 84, filed in this case last August, I find that the prices are limited to '37, '38 and '39, which Minneapolis-Honeywell has put into the case,

and yet, in the latter part of October they come in and ask for our 1941 prices, and our 1941 prices, as shown by the affidavit of Mr. Owens here, are the present prices. Now, why do they do such things if it is not from improper motives? Are the prices for 1941 of the Mercoid Corporation important in this matter when they are only putting in their own prices through 1939?

I think this is a matter that the Commission can very well feel that, within its discretion, it should refuse
2060 to issue such a subpoena, and should recall it.

Chairman Freer: You have about six minutes left, Mr. Snyder. Mr. Freeman?

Mr. Freeman: May it please the Commission, first of all I might say that the issue here is one between Mr. Owens of the Mercoid Corporation, and the Commission. The Commission issued the subpoena upon application duly made. The materiality, the relevancy, of the evidence there sought was clearly set forth in our application. Upon that application this Commission issued the subpoena.

Now, my good friend Mr. Snyder does not know all of the facts. First, had he carefully examined Exhibit 1 he would have there found the prices set forth at which this respondent sold its controls in the years 1940 and 1941. That is attached to and forms a part of Commission's Exhibit 1. Incidentally, he says that we are unfair because we have added three additional names not set forth in the stipulation, Commission's Exhibit 1, and I call his attention, and your attention, to the fact that the application was based upon those names included in Commission's Exhibit 1, as well as the three additional names referred to in Commission's Exhibit 84.

Commissioner Ferguson: What was Commission's Exhibit 1?

Mr. Freeman: Commission's Exhibit 1 was an
2061 agreed statement of facts to eliminate a lot of proof which otherwise the Commission would have had to put in.

Commissioner Ferguson: Just what did it involve?

Mr. Freeman: It sets forth certain customers of the respondent. It sets forth the type of contract which the respondent had with those specific customers.

Commissioner Ferguson: Does it set forth anything in regard to the Mercoid Company?

Mr. Freeman: No, sir. Now, these names—I think

there are 88, but in any event the names set forth in the subpoena and set forth in our application were those that were specifically referred to by the Commission in its case. Every one of those names has been specifically referred to by counsel for the Commission in examination of some of the witnesses.

Now, Mr. Owens, about whom the issue is here today, testified in behalf of the Commission. He referred to some of these customers. Other competitors of the respondent were called and examined by the Commission, and the sum and substance of the Commission's case hinges around those 88 accounts. I take issue with Mr. Snyder that those 88 accounts represent the majority, or substantially all of the oil burner manufacturers in this country. There are several hundred, and the 88 is only a small proportion of them.

Commissioner Ferguson: What did the Commis-
2062 sion undertake to prove by Mr. Owens?

Mr. Freeman: The Commission's case—they endeavor to show that we had contracts with certain oil burner manufacturers, whereby they would purchase controls from the respondent. I think it is the Commission's position—and when I say "Commission" at least counsel for the Commission, you understand—that in our entering into those contracts with these 88 customers which have been specifically referred to, those customers were precluded from buying controls from respondent's competitors, and respondent's competitor in this case is the Mercoid Corporation, of which Mr. Owens is an officer, the Penn Electric Switch Company, and the Perfex Corporation.

Now, I might say that when we endeavored to put in our case to meet the Commission's case we felt that the best way to get good evidence, not secondary evidence, was to go to the source. So we subpoenaed in like form a Vice President from the Penn Electric Switch Company, and I believe it was the secretary, or at least an officer of the Perfex Corporation. They received the identical subpoena. They responded and furnished us—or the Commission at least made available, subject to our examination and subject to the right of cross-examination on the part of Commission's counsel—all of the information requested.

Now, Mr. Owens of the Mercoid Corporation was
2063 served in due time—on November 5th, to be exact—to report on November 29th. On November 29th he did

report. He took no steps at all, did nothing at all between the 5th of November and the 29th of November, and appeared, came in a little late that morning, and we put on another witness in order to save our time and save the time of counsel for the Commission. He then decided he needed a lawyer. He appeared, and Major Sheppard, who was the Trial Examiner, asked him to take the stand in response to the subpoena, which was duly issued. I then endeavored to examine him, and he refused to answer questions. It got to the situation where he refused to identify documents that we had—and I might say now that we have certain price lists put out by the Mercoid Corporation—and I will get to this question of confidential information—we have some of these 1938 price lists, and I asked Mr. Owens whether or not his company put out a price list of this kind, Form 11, Form 22, Form 33. Those are code numbers to indicate the particular position or price at which a particular customer was to receive controls purchased from the Mercoid Corporation. On advice of counsel he refused to answer. In other words, he would not even identify an exhibit that we handed to him. In one case he said to me: "If you will tell me where you got it I will answer." Now, I am not bargaining for testimony with anyone, and the Commission should not tolerate that kind of a position on the part of a witness who was duly called and who appeared. When I asked him "Do you have the information?"—I wanted to know what he did between November 5 and November 29—he said: "I took it up with the executives of our company, and they said to go ahead and gather this information. You have the information."

2064

"You have the information here?" was the next question. The answer, "I have it here." "Will you produce it?" "No. I was getting it for the Commission. The Commission can have it but not the respondent."

Then I said: "Well, didn't you read your subpoena?" Well, he pleaded that he was a layman and he didn't understand who the respondent was. Now, I say it makes no difference whether he was subpoenaed by the Commission for and in behalf of the Commission, or whether he was subpoenaed in accordance with the law by the Commission for and in behalf of the respondent.

This is not confidential information. In the first place,

these 88 names were not taken from the hat. They were taken from the records produced by the Commission.

I asked him whether he had a contract with this company. That is a question to which he can answer yes or no. Well, he wouldn't answer that. We know, as a matter of fact, that he doesn't have contracts with these 88 com-
panies. He may have contracts with 15 or 20 or 25. I
2065 don't know, but I do know that the Penn Electric
Switch Company, I think, have 15 or 20, and I think I am correct in saying that Perfex had 15 or 20, and I can assume—but this Court does not take mere assumptions—that Mercoid had contracts with some of these companies.

I might say further that in the course of our examination, having been met by the refusal on the part of Mr. Owens to give us certain information requested, we had certain witnesses who were coming on, so we asked them to produce what contracts they had with the Mercoid Corporation, and some of those contracts are now in evidence. These are printed price lists. They are printed contracts. They are sent out to the trade generally—to be sure, the oil burner trade.

Commissioner Davis: I wish you would explain what your contention is as to the competency and relevancy of the contracts between the Mercoid Company and their customers.

Mr. Freeman: I am very happy that you asked that question, Mr. Commissioner, because I can answer that point.

In paragraph 4 of Count 1 of the complaint the respondent in this case, Honeywell, is charged with having agreements—annual contracts, to be specific—with certain oil
burner companies—and I now quote—"and competi-
2066 tors of the respondent have been prevented from
selling their thermostats and limit controls in substantial quantities to the oil burner manufacturers for domestic heating plants, purchasing primary controls from the respondent."

In other words, our annual contracts, so the complaint states, prevent competitors—Mercoid—from selling controls to those companies.

Commissioner Davis: You say "in substantial quantity." Just what do you mean by that?

Mr. Freeman: Well, we are entitled to know that they do actually sell. In other words, we are charged here

with having contracts that tend to limit or stifle competition, and we want to show the true condition, and the best way to show it is by the records of the Mercoid Company, just as we have the records of the Penn Electric Switch Company and the records of the Perfex Company, a corporation, and likewise what records the Detroit Lubricator Corporation of Detroit, Michigan, have on that point. We can show, when we get such evidence as has been asked for from the Mercoid Corporation, that it was not prevented from selling one control, not one penny's worth of merchandise because of any contract that any of these companies had with the respondent. In fact, Your Honor, we have had some witnesses called in our behalf who have

contracts for 1937, 1938, 1939, 1940 and 1941 with all
2067 four of the control companies, and they have testi-

fied that they bought controls whenever they wanted to buy them, in any quantity they wanted to buy them. Now, that goes to paragraph 4 of Count 1.

Commissioner Davis: Isn't the burden upon counsel for the Commission to prove that charge in the complaint?

Mr. Freeman: That is correct.

Commissioner Davis: Has counsel done that?

Mr. Freeman: Mr. Haycraft and I will differ on that. I mean he at least will differ from my version as to whether the Commission has or has not made a case. But I certainly do not want to be precluded from making the best case I can and presenting to the Commission all of the facts. That goes to the question of restrictive contracts.

Then I turn to another phase of the case, and that is the violation of the Robinson-Patman Act, and our defense is that we had to do certain things, that is, give certain prices to meet competition. Now, what is the best way to bring out those facts? Isn't it to go to the place where sales were made? That is the kind of competition we had to meet.

To be sure, we can go out to these 88 companies, and I think we will get from most of them, unless Mercoid writes them, as it has done recently, not to furnish us with any information. But most of these companies will let us have

whatever files they have. There isn't anything secret
2068 about the prices they pay or the quantities they buy.

There isn't anything confidential about it.

We can go out to these 88 companies and we can tour

the United States—the Commission can trail along with us, but we have all of the information gathered up—it was there in the court room in Chicago—Mr. Owens would have given it to the Commission, but he didn't want to give it to the Commission if the respondent might have it. That is the difference.

Now, I might say this: If the Commission should recall this subpoena on the basis that prices are confidential, what is going to happen to one of your investigators when he walks into Mercoid's, or let us say he walks into the respondent's place, assuming that the complaint has not been filed, and he asks for our prices or copies of our contracts and we say, "Oh, no, that is confidential"? That is the kind of precedent Mercoid Corporation is asking the Commission to establish here.

We can get this testimony, but instead of getting it in half an hour or an hour, we will devote our time, the time of your Trial Examiner, the time of your reporters, the time of your trial attorney, and we will go to Connecticut, we will go out on the West Coast—

Commissioner Davis: (Interposing) If it is not competent here, it would not be competent when you in-
2069 troduce it.

Mr. Freeman: It is competent, Your Honor. It is material. It is competent. It is the best evidence. If we do not get this subpoena, if you should recall it, then we will do the next best thing.

I might say this. I think Your Honor will recall the Staley case, which was decided out in the Seventh Circuit, wherein this Commission after the decision by the Seventh Circuit filed a new set of findings of fact in connection with the Robinson-Patman Act, and there the Commission set forth the yardstick as a measure to determine whether or not you had granted certain prices in order to meet competition, and this Commission there correctly stated that you just can't take the word of some purchasing agent, because, after all, the purchasing agent will try to buy at the lowest possible price. So, instead of our going out and getting purchasing agents, where there might be some little thought in your mind as to whether or not the purchasing agent was giving us a ride or a run in order to get a better price, we want the prices at which this company, or these 88 companies, or any one of the 88 companies, actually bought controls. That is the true yard-

stick. That is the true measure. It is competent, very competent, and it is material.

We are charged with carrying on certain discrim-
2070 inations under the Robinson-Patman Act. We can justify that if we show that we had to meet certain prices of our competitors.

We have some oral testimony that invariably Mercoid's price was lower than ours, but again the Commission in the Staley case said, "You can't follow any given pattern." In other words, just because we had to meet it with X company, that doesn't justify our meeting it with Y company or B company or C company.

Now, using the Staley case as a yardstick—and it is a good one—we want to show to this Court that, whatever prices we granted were granted in direct competition, to meet a competitor, something that we are entitled to under Section 2(b) of the Robinson-Patman Act.

Now, I want to come back a little bit to the attitude of Mr. Owens. As I have said, I won't bargain for testimony from anyone, but if we are to have a fair hearing we should have Mr. Owens appear. He has the information. He is ready and willing to give it to the Commission. Why shouldn't we be entitled to examine him with respect to the information, so that the Commission will have full information upon which it may issue any order or do whatever it thinks ought to be done in the light of the full facts?

Now, I think they are very tardy in coming in here—or rather, coming up to the hearing on the 29th, after
2071 they had the motion, or rather the subpoena, for three and a half weeks, and there for the first time raising any question concerning it.

That information is not confidential. These price lists go out to hundreds of oil burner manufacturers. They are printed price lists. They have discount sheets. They are printed. To be sure, we want to know the actual prices, because the Commission is interested in facts. We want to know the prices at which they actually sold.

We did not ask in this subpoena for the amount of dollar volume sold by the Mercoid Corporation. I don't think that is material. When I say it is not material, I mean with respect to the Commission's allegations that our contracts are restrictive, that by our contracts we have kept others from selling controls in any substantial quantity,

or any controls at all. We have had lots of witnesses who have testified that they got controls wherever they wanted to. If they needed Minneapolis-Honeywell controls, they bought their controls. If they needed Mercoid controls, they bought Mercoid controls.

Now, Mr. Owens refused, upon advice of counsel—and I am now quoting from the record—at least, I am paraphrasing—Mr. Owens just refused to identify exhibits that we handed to him. They had to do with the year
1938, and when I gave him a document which pur-
2072 ported to be some sales manual or sales instructions
with respect to contracts when they are entered into—that is, you have to get an order for 25 before we consider it a contract—then he said: "If you will tell me where you got it, I will consider answering it."

Incidentally, on paragraph 4 also, of Count 3—that is the Robinson-Patman count—there is this allegation: "The effect of said discrimination in prices, mentioned in paragraphs 2 and 3 hereof, has been, or may be, substantially to lessen competition in the line of commerce in which respondent is engaged, and to injure, destroy and prevent competition between the respondent and its competitors."

Now, if we can show that Mercoid's prices on the three major controls that are involved were always lower than ours, then how did we tend to lessen competition, or how did we tend to destroy competition, or how did we tend to keep Mercoid from getting its share of the business?

The information we are asking for is material and it certainly is not confidential, because these are published prices. And I think it would be bad practice if, after a subpoena has been issued for three and a half weeks, to come here, after you had had the hearing, or at the appointed time,
for responding to this subpoena, and say that the rec-
2073 ords of the kind that we are asking for are confidential.

Further, as I have said, this witness not only refuses to produce documents which we asked for, but he refuses to identify documents that we have, and the Commission ought not to tolerate that, and the Commission should lend its support to the respondent in this case, so that Mr. Owens will testify, because I know that if the Commission makes a request from Judge Barnes of the United States District Court for the Northern District of Illinois, where we filed a petition, asking for him to enforce this subpoena, we will get it—holding that this is not confidential informa-

tion. And I might say that Judge Barnes is holding that matter open—that is, the petition that I filed—maybe it was improperly filed under the law, but it is still there, held open for some determination on his part, pending a decision on the part of this Commission, and as I left—Mr. Snyder will bear me out—he was there—Judge Barnes said: "They ought to grant this, or at least they ought to tell you why they will not grant it." And I think the Commission should lend its support to the respondent in this case. In other words, if Mr. Owens is willing to testify and give the information to the Commission, the Commission is a litigant in this case just as much as we are, except we do not have the power of enforcement. We must ask that they endeavor to get the proof which we think is material and
2074 important to our case, proof of a kind that, if we get it, we can then say we have had a fair hearing; otherwise no.

Chairman Freer: Mr. Snyder?

Mr. Snyder: Mr. Freeman raises many points that I do not believe have any bearing on this matter. For instance, this one about Judge Barnes. Mr. Freeman went before Judge Barnes and tried to get the witness ordered to testify, and I want to point out that the Act does not provide for the respondent going before any court and asking for an order directing a witness to testify. And Judge Barnes was impressed by it to such an extent that he didn't want to decide the matter, and that is why he stated that they should come down here and ask you whether you would ask the Court to order the witness to testify. It is very plain from the Act that the respondent has no right—

Mr. Freeman: (Interposing.) I agree with you on that.

Mr. Snyder: (Continuing.) —to get a subpoena from the Court, just the same as he really has no right to get a subpoena from you, except at your discretion.

Mr. Freeman: I take exception to that statement.

Mr. Snyder: Because nothing in the Act gives the respondent a right to a subpoena except that you have made some rules of practice that give them such a right.

It was pointed out that there has been a great
2075 deal of delay in this matter. Well, I don't know how delay is of any importance in this matter, when the Mercoid Corporation has no right to appear. It was not consulted at the time this subpoena was asked. It could not present its views on it. And I think Mr. Freeman can be

excused for not recognizing that this was a subpoena of the respondents and not the Commission asking for confidential information.

Mr. Freeman also stated that the prices for 1940 and 1941 were given in this stipulation. That is true as to their general practice, but in Exhibit 84, which lists the prices which were given to each one of these companies, they very carefully took off the prices given after 1939. Now, why should they ask our prices given to these companies after 1939, when they would not give them themselves? That is, I think, the answer to that assertion.

I still contend that, as a matter of relevancy, this subpoena should be refused. I fail to understand how a contract between the Mercoid Company and the prices stated in that contract in any way show that these people, who entered into exclusive contracts stipulated to in Exhibit No. 1, could enter into a contract with Mercoid and not give them any business. That has no bearing on whether these exclusive contracts tied up the business or not.

The only people who can give good and relevant testimony as to that matter are the customers, and Mr.
2076 Freeman states that they called a great many of the customers. I don't see why they need this extraneous list of customers of the Mercoid Corporation. I say the Mercoid Corporation should not be asked to furnish its list of customers.

The law in Section 6 states that when the Commission conducted investigations they are not to make public the list of customers of the investigated companies, and this is just the same thing. They are taking a list of corporations in the oil burner business—and I have the affidavit of Mr. Owens attached, and his testimony—I don't know whether they had his testimony, but they certainly had it in the affidavit—that this constitutes most of the oil burner industry, and I think the facts that they stipulate about most of these corporations show that, and then they want to know which ones named in that list Mercoid sells to, and at what prices. Now, I say, why should they need that information? It is confidential information. Mr. Owens in his affidavit states that this is confidential information between itself and its customer. I don't think the Commission needs to go back of that statement in the affidavit. That is the basis on which his case is made. I don't think the Commission ought to go out and ask confidential information at any

time, and this is only bearing on the discretion of the
2077 Commission, this subpoena. Why should the Commission issue a subpoena to a competitor to furnish the respondent its list of customers and its prices up to 1941, which are the prices that are frozen today? Those are the prices that we have to charge today, and I fail to understand why justice requires this action on the part of the Commission, when the respondent can go out and get his customers to testify about these matters.

Chairman Freer: We will take the matter under advisement and render a decision in due course.

We have another argument set for three o'clock. We will take a recess for five minutes.

(Whereupon, at 2:55 p. m., January 11, 1944, the hearing before the Commission in the above-entitled matter was adjourned.)

2078

Room 1123, New Postoffice Building,
Chicago, Illinois,
July 22, 1944.

Met, pursuant to notice, at 10:00 a. m.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Attorney for the Federal Trade Commission.

Cravath, Swaine & Moore, by R. L. Gilpatric, 15 Broad Street, New York, New York; and Bair & Freeman, by Will Freeman, 135 South La Salle Street, Chicago, Illinois, appearing for the respondent.

2079

Proceedings.

Trial Examiner Sheppard: All right, Mr. Reporter, convene the hearing in the Minneapolis-Honeywell case, Docket No. 4920. Let the record show that the hearing is convened, the last hearing having been held in December of 1943.

J. W. OWENS, a witness called by and on behalf of the respondent, having been previously duly sworn, resumed the stand and testified further as follows:

Direct Examination.

Trial Examiner Sheppard: Now, Mr. Owens, give us your initials again.

The Witness: J. W.

Mr. Hamilton: If the Examiner please, Mr. Chadwell of our office represents Mr. Owens and the Mercoid Corporation and, if your Honor please, I would like to just review the history of the controversy that has surrounded the appearance of Mr. Owens here and there has been an agreement entered into between the Commission and Mr. Chadwell of our office and I would like to bring your Honor up to date on that, if I may.

Mr. Freeman: We object to any such statement and any reference to there being any agreement. There has been no agreement made where we were a party and there has been no agreement made with the Commission.
2080 Mr. Owens is here in response to the subpoena that was duly issued and that is where we stand right now. There has been no agreement as to what is to be produced.

Mr. Hamilton: There is an agreement between the Commission, according to my instructions, between Mr. Chadwell and the Commission and, if your Honor please, I would like to read it.

Trial Examiner Sheppard: Do you know anything about it, Mr. Haycraft?

Mr. Haycraft: I know there is some correspondence between the chief counsel and Mr. Chadwell.

Trial Examiner Sheppard: In reference to his appearance here?

Mr. Haycraft: Yes. I think it would be a good idea, Mr. Examiner, to have some such statement in the record because you will recall at the last hearing that Mr. Owens attended he declined to bring certain information required by the Commission's subpoena and thereafter certain things transpired which are outside of the record up to this time. I think it would be a good idea to have the record show what did transpire since that time. In other words, there were certain motions made before the Commission and there was an argument held before the Commission, the Commission took certain action and the matter is now before the—as I understand, the matter is now before the regular District Court awaiting presenta-
2081 tion.

Trial Examiner Sheppard: I thought that had been settled by Mr. Owens coming here to testify.

Mr. Haycraft: It has not been settled. It is a question of whether or not it will be settled as a result of that testimony. As counsel for the witness has stated, there was some correspondence passing between Mr. Chadwell and the chief counsel that had some relation to Mr. Owens coming here to testify.

Trial Examiner Sheppard: All right, make it short. I will let you put it in as a matter of record. I don't know anything about it myself.

Mr. Hamilton: I would like to bring you up to date on it, if I may.

Trial Examiner Sheppard: All right.

Mr. Hamilton: The subpoena was issued under date of November 2nd, 1943, returnable on November 29, 1943. At that time Mr. Owens appeared on the return day but he refused to testify under a misapprehension, as he stated, that the testimony was for the Commission and not for the respondent in this case and he declined to testify at that time on the ground that he was advised not to divulge certain trade secrets and so on to competitors.

On December 31, 1943 there was a petition to the court for an order requiring Mr. Owens to testify and pro-
2082 duce certain documents in accordance with the petition. On that date, December 1st, 1943, the court postponed action on the petition pending a determination of the attitude of the Commission with respect to the enforcement of the petition.

On December 13th Mr. Owens and the Mercoid Corporation moved the Commission to recall the subpoena and a hearing was had on January 11, 1944 and on April 28, 1944 the motion was denied and on May 28, 1944 a petition to require Mr. Owens to appear was filed and there was a hearing on that and I understand it was continued pending this arrangement to which I will call your attention.

Now, there was correspondence and, as I understand, some telephone conversations between Mr. Chadwell and Mr. Kelley which finally culminated in a letter under date of May 31, 1944 written by Mr. Chadwell and addressed to Mr. Kelley. I will not read that whole letter but I will read into the record the pertinent part of it with reference to the interpretation of the subpoena.

It is addressed to "Mr. William T. Kelley, Chief Counsel, Federal Trade Commission, Washington, D. C.," under date of May 31, 1944. After reciting the history, a very brief history of the case, there is this paragraph which contains, as I am informed, the agreement as to the interpretation of the scope of the petition:

"Therefore, this is to advise you that if you will
2083 dismiss the above mentioned petition which you filed on behalf of the Commission in the United States District Court at Chicago, my client, Mr. Owens, will produce the documents called for by the subpoena when requested at the next hearing of the proceeding before the Federal Trade Commission, which I understand will be

some time in July. In order that there may be no misunderstanding about our interpretation of the subpoena, we wish to inform you that at that time we will produce all written contracts for the sale of automatic temperature controls for domestic oil burners entered into by The Mercoid Corporation for the years 1937 through 1941, inclusive, with the oil burner manufacturers listed in paragraph 1 of the subpoena. We will also produce all correspondence or other data showing prices at which Mercoid offered and sold such controls to said oil burner manufacturers during such years in cases where there were sales to oil burner manufacturers listed in paragraph 1 of the subpoena not covered by the above mentioned written contracts.

"Mr. Owens, of course, will also appear for the purpose of testifying at the time the documents are produced, as required by the subpoena."

Now, Mr. Owens is here and tendered in accordance with this interpretation of the subpoena agreed upon between Mr. Chadwell and Mr. Kelley. Incidentally, if there are certain original documents here which are introduced
2084 into evidence, we will ask the Examiner for permission to withdraw them after they have been photostated and photostatic copies have been substituted.

Trial Examiner Sheppard: That can be satisfactorily arranged.

Mr. Hamilton: That is all I have to say.

Trial Examiner Sheppard: All right. Mr. Freeman, do you want to say anything in reply?

Mr. Freeman: I want to wait until my file gets here with respect to a letter that I have from Mr. Kelley, where he advised me that no agreement was made and as far as any agreement between the Mercoid Corporation and the Commission is concerned, we are not going to be bound by it and we are not going to operate under it.

This subpoena was issued by the Commission and as far as any interpretation of that subpoena is given anywhere's, if there is to be an interpretation of that subpoena, the interpretation is going to be rendered by Judge Barnes or some Federal Court.

We had a petition filed in the court. We are a party to that particular suit and I think it is absolutely improper for the Commission to make any deal or bargain with any witness who is to be produced on our behalf and we are not going to bargain with anyone with respect to that and we

have never bargained with anyone with respect to factual testimony.

2085 Now, I want to read a letter in a few minutes that we have from Mr. Kelley, because I cautioned Mr. Kelley at the time I put in a long distance call to Mr. Kelley, that certain things were happening unbeknown to me, although we were a party to that particular proceedings before Judge Barnes. I couldn't get a copy of the letter that Mr. Chadwell sent to Mr. Kelley although your Chicago man here said he would give it to me, Mr. McKeag, and then later he wrote, or at least felt that he should not give us a copy until after Mr. Kelley had had a chance to look it over.

Now, we want to be treated as a party litigant in this case. This is not a one-sided case at all. As far as we are concerned, all we want from Mr. Owens are the facts, whatever they are, we don't know, but we are not going to bargain as to any particular interpretation as between Mr. Kelley and Mr. Chadwell. And it is rather unfortunate that Mr. Chadwell is not here present, because I personally told Mr. Chadwell that we would not bargain with him with respect to any interpretation of the subpoena and he walked out of the office and he said, "We will leave it for the court" and instead of leaving it for the court he comes on over and makes some deal with the Commission.

Trial Examiner Sheppard: Well, of course, this is all news to me, gentlemen, I don't know anything about it on one side or the other. We will let the matter go then

2086 and when your file comes you will be able to put in your side of the matter. Probably we can all clear this matter up.

Mr. Freeman: I am going to wait until my letter comes from Mr. Kelley. We are in no hurry at all.

Trial Examiner Sheppard: I will let you do that later if you want to and you can go on.

Mr. Freeman: I want to know whether or not there is a deal with the Commission before we proceed. I want to know if the Commission bargained with Mr. Owens as to what that subpoena meant, in the face of the petition pending before Judge Barnes.

Trial Examiner Sheppard: Those things I cannot answer, Mr. Freeman.

Mr. Freeman: I cannot either.

Trial Examiner Sheppard: I know nothing about what took place at all. Mr. Haycraft, can you furnish any light?

Mr. Haycraft: I cannot; I don't know. I knew there was some correspondence but I didn't see it.

Trial Examiner Sheppard: Well, now, we have the letter, a portion of it.

Mr. Freeman: Have you got the answer to that letter, Mr.—what was your name?

Mr. Hamilton: Hamilton.

Mr. Freeman: Have you the answer to that letter?

Mr. Hamilton: No.

2087 Mr. Freeman: Well, it is a good self-serving declaration as far as I am concerned. I would like to know what Mr. Kelley said to that.

Mr. Hamilton: There is a paragraph here, the concluding paragraph that I did not think was material; maybe you think it is. I will be glad to have you know what it is?

"Will you please let me know at your early convenience whether the offer contained in this letter is acceptable. Pending your reply, in accordance with my agreement today with Mr. McKeag, we will withhold filing our answer to your petition."

So there was some sort of an arrangement with reference to that or otherwise we, of course, would have had to answer the petition.

Mr. Freeman: That letter asks for an acceptance on the part of the Commission of your understanding. Now, have they accepted it? You know what an agreement is, you are a lawyer.

Mr. Hamilton: Yes, I have an idea what an agreement is.

Mr. Freeman: A mutual meeting of the minds. Now, all I want to know is whether the Commission has actually—

Mr. Hamilton: I have no letter. Now, what the agreement was or what the agreement was that was reached over long distance other than this letter I have no way of knowing.

2088 Mr. Freeman: As a matter of fact,—and I don't want to cross examine you, Mr. Hamilton,—as a matter of fact you don't know whether an agreement was reached or not.

Mr. Hamilton: Other than what is here.

Mr. Freeman: I will concede that; I have a copy of that letter.

Trial Examiner Sheppard: Let me get it straight. That letter you have just read was from Mr. Chadwell to Mr. Kelley?

Mr. Hamilton: That is right.

Trial Examiner Sheppard: And you haven't any letter from Mr. Kelley in reply to that?

Mr. Hamilton: No.

Mr. Freeman: But I have, Mr. Examiner, and I will produce it in just a few minutes.

Trial Examiner Sheppard: All right. Can't we go ahead?

Mr. Freeman: But if we go ahead we go ahead on the basis that Mr. Owens is responding to the subpoena. We may differ as to the interpretation of the subpoena.

The Witness: That is the only thing, Major, that was agreed upon, or the only arrangement that was made. The only time I have heard deals or bargain or arrangement made was Mr. Freeman's own words and there is a story connected with that that I would rather not bring up here, it won't serve any good purpose and I don't think
2089 Mr. Freeman told all the facts in his statement. He used certain parts, he made half statements and used them for his own purposes. Now, I don't think he wants to do that. We can go ahead with this thing and get through with it.

Trial Examiner Sheppard: Now, I will tell you gentlemen what I want. I want to keep the court proceeding, the pro and con of the court proceeding as far as possible extraneous from our proceeding here, because I have got nothing to do with the court proceeding and possibly the determination of this case will not have. It is a mere matter of whether or not Mr. Owens will testify or not and what testimony he will give and he is here and we are ready to go and the matter leading up to today really we are not interested in. He is here in response to this subpoena and ready to testify and I think we had better go on and make as much progress as we can and whatever you want to put in afterwards you can.

Mr. Hamilton: Of course, as far as my instructions on this thing, as I have stated I know nothing about the merits of this thing because in a general way Mr. Chadwell is handling it throughout; but if there is any question or any difference here as to the interpretation of the scope of this subpoena then, of course, we will simply have to advise Mr. Owens not to testify and thresh this out before Judge Barnes, as he says.

2090 Mr. Freeman: That is perfectly agreeable, but I don't want to start out here on the basis that there

has been any agreement with respect to the interpretation of that subpoena. If we disagree, I mean if Mr. Owens refuses to answer, we can thresh that out in the proper place, but he is here in answer to the subpoena, without any strings tied to it.

Mr. Hamilton: No, he is not here in answer to the subpoena without any strings tied to it. He is here to testify in accordance with this, otherwise he refuses to testify.

Trial Examiner Sheppard: Well, now, don't I gather from this letter that they read into the record there that Mr. Owens is ready to testify?

Mr. Hamilton: He is ready to testify in accordance with the interpretation contained in this letter.

Mr. Freeman: Not in accordance with the subpoena, though, your Honor.

Trial Examiner Sheppard: Well, I think that is a matter for the court, gentlemen, and not for me.

Mr. Freeman: Well, then, maybe we ought to go there.

Mr. Haycraft: I think we ought to go ahead and take his testimony and see whether or not it complies with the subpoena.

Trial Examiner Sheppard: I think we ought to do that, yes, and if there is any difference of opinion I will adjourn the hearing and let you thresh it out in court, 2091 but as long as Mr. Owens is here willingly and said that he will testify along certain lines, you had better go on.

Mr. Freeman: I move that that word "willingly" just stated by yourself be stricken.

Trial Examiner Sheppard: Well, if it is not in the proper form, why, I will strike it with pleasure. Go ahead, Mr. Freeman. Wait a minute, Mr. Freeman. I don't believe I informed the reporter that this is Mr. J. W. Owens of Chicago and he has been previously sworn in this case and he is here upon the witness stand in response to the respondent's subpoena.

By Mr. Freeman:

Q. Mr. Owens, you are the same Owens who testified for the Commission last summer in this case?

A. Last when?

Q. Last summer?

A. Yes.

Q. And you have been served with a subpoena duces

tecum by the Commission in November of 1943, is that correct?

A. That is right.

Q. And you are here in response to that subpoena?

A. That is correct.

Q. Have you the documents, data, price lists, and so forth, called for in that subpoena here with you?

A. I have taken out of our files all the information
2092 that I could obtain readily and I will say I believe will be sufficient for your purposes and should there be anything that you might think or feel is missing in here that you might want us to add, I am ready to go ahead and make further search and get that out of the files to fill in anything that might be missing in here.

Q. That is very fine and as to any originals, of course, we will have photostatic copies so that the originals will be retained by you.

A. As per the arrangements, yes.

Q. Now, I think we can make progress if you will give us a list of the companies enumerated in the subpoena that your company had contracts with for the year 1937.

A. In order to clarify this I will first give you the price and bracket setup and then I will read off the list copied from the names on the subpoena and I will name the bracket in which we quoted that customer. Is that made clear? Is that O.K. with you?

Q. That is very fine.

A. Acme Tool & Gauge Co., No. 3. You don't need the town, do you? You have got that.

Alida Mfg. Co. or Lida Mfg. Co., I don't know which it is, No. 2.

Arcweld Mfg. Co., no record.

Automatic Burner Corp., KMI and type H sensa-
2093 therm, $14.90 net per set.

Bedard Johnson Co., no record.

Berggren Engineering Company, now John Edwards, Inc., No. 2. Bock Corporation—

Q. All those names are on the subpoena.

A. Yes. Bock Corporation, no price.

Braden Engineering, Inc., No. 5.

Brown Oil Burner Eq. Co., no record.

Buck Engineering Co., Inc., No. 1.

Burner Parts & Service, now Penn Boiler & Burner Co., No. 3.

Campbell Machinery Co., no price.
Century Engineering Company, No. 6.
Cleveland Steel Products Corp., No. 6 Special.
Citro Oil Burner Corp., No. 2.
Concord Oil Burner Corp., No. 3. Cancelled June 6, 1937.
D'Elia Oil Burner Co., no record.
DeSoto Oil Burner Corp., no record.
Diesel Burners, Inc., Moosup, Connecticut. There were two companies down there and there was a mixup on that. That is No. 3. On July 1st changed to No. 1.
Mr. Haycraft: What year?
The Witness: 1937.
Mr. Freeman: We are talking about 1937.
A. July 1st, 1937. David Duff & Sons, No. 2.
2094 Eisler Engineering Co., No. 2. On July 1st, 1937, changed to No. 1.
Electrol, Inc., no record.
Enterprise Oil Burner Corp., manufacturers' discount.
Q. Mr. Owens, did you intend to omit Electromatic?
A. No, it just wasn't on here.
Mr. Gilpatric: It is on the subpoena.
Mr. Freeman: It is on our list.
Mr. Haycraft: It is on the subpoena.
The Witness: Where are Electromatic? Just a minute, I might check it. I have another list here. I am sorry. Will you see if it is on our subpoena, please?
Mr. Haycraft: Yes.
The Witness: It is on the list, Electromatic?
Mr. Haycraft: Yes.
The Witness: Where are they located?
Mr. Freeman: San Francisco, California.
Mr. Haycraft: No, Malvern, New York.
Mr. Freeman: Oh, Malvern, New York, that is correct.
The Witness: I don't believe we did any business with them.
Mr. Freeman: Well, you can check and let us know.
The Witness: I will make a memorandum and endeavor to check it.
Fairfield Oil Heating Co., No. 3. On July 1st
2095 changed to No. 1.
Fargo Foundry Co.; manufacturers' discount.
Gar Wood Industries, Inc., no record.
General Oil Burner Corporation, Baltimore, Maryland, No. 3.

General Oil Heating Corporation, West New York, No. 4.
Capitol Oil Burner Co., dealer's price.
Carlson Bros. Tool & Machine Co., no record.
Korth Oil Burner Corporation, No. 3.
Mr. Haycraft: Is that the same as Carter-Korth?
The Witness: Yes, I believe it was formerly Carter-Korth.
Mr. Freeman: Yes.
A. Gold Star Oil Burner Mfg. Co., on September 24, 1937 quoted for the balance of 1937 set consisting of KMI pyretherm, sensatherm and DA-31 pressure control O-14 or Figure 35 sensatherm, in lots of less than 10 sets $20.05 each per set; 10 to 23 sets $18.60 per set; 24 or more sets $18.20 per set. When these sets were furnished with M-51 warm air furnace control add $1.00 to the foregoing prices. Other controls manufacturers' discount.
Hall-Neal Furnace Co., no record.
Harrison Sales Co., No. 3.
Hart Oil Burner Corp., No. 4.
Harvey-Whipple, Inc., No. 5.
Hayward Mfg. Co., Inc., No. 3.
2096 The Heil Co., No. 5.
Herco Oil Burner Corp., No. 5.
Hi-Point Corp., No. 3.
Hoben Mfg. Co., No. 2. On July 1st, 1937 changed to No. 1.
Holtum Mfg. Co., No. 2.
Homestead Engineering Corp., No. 2.
Hubbard Oil Burner Co., No. 4.
Hupp Oil Burner Co., No. 3. On July 1st, 1937, changed to No. 1.
Hyle Oil Burner Co., No. 1.
Jacobson Mfg. Co., No. 2.
Kelly Oil Sales Corp., marked "special." Is there a copy of their contract attached to those papers, the Kelly Oil Sales? Is there a "special" shown in that list which would indicate that price? Will you take a memorandum, please, for me to get that Kelly Oil Sales 1937 contract?
La Grace Oil Burner Co., no record.
Liberty Research Lab. Inc., no record.
Lynn Products, Inc., No. 4.
Malleable Iron Fittings Co., No. 2 and No. 3 but no date shown here as to when the change was made.
Master Oil Burner Co., no record.
Messer Co., No. 2.

Micro-Westco, Inc., no record.

Now, on here I have got Mohawk Oil Burner Manu-
2097 facturing Co., who also, apparently, have gone under the name of Joseph Toker Corporation and American Mohawk Corporation and one other name that I can't make out; No. 3.

Montag Stove & Furnace Works, No. 3.

G. T. Muehlbach, no record.

National Devices Company; the name also shows here as Liberty Airflow Burners; no record.

Neis & Brechtl, no record.

Oil Equipment Laboratories, No. 4.

Old Colony Machine Works Co., No. 3.

Osher & Reiss, Inc., No. 2. On July 1st changed to No. 1.

Packard Oil Burner Mfg. Co., No. 2 and No. 3. The date of the change I do not show here.

Pan-American Engineering Corp., No. 2.

Penn Petroleum Products Co., No. 3.

Petroleum Heat & Power Co., manufacturers' discount.

Quiet Heat Mfg. Corp., of Newark, New Jersey, No. 5.

Quiet Heet Oil Burner Co., Brooklyn, New York, No. 2.

Reliable Oil Burner Corp., No. 1.

Reif-Rexoil, Inc., No. 4.

Rossoe Mfg. Co., no record.

Silent Flash Oil Burner Corporation, No. 2. Cancelled June 7, 1937.

S-K Company, No. 3; cancelled June 3rd.

2098 Simplex Oil Heating Corp., the same as Gold Star.

Do you want me to repeat all that?

Q. No.

A. Standard Products Co., No. 3.

Scott-Newcomb, Inc., No. 4.

Sunray Oil Burner Corp., No. 2.

Todd Combustion Equipment, Inc., manufacturers.

Timken-Detroit Axle Co., (Timken Silent Automatic Division), No. 6.

Volcano Burner Corp., No. 3; changed July 1st to No. 1.

Wayne Oil Burner Corp., No. 5.

Harry C. Weiskittle Co., No. 2.

Westchester Home Equipment Co., No. 2.

Williams Oil-O-Matic, No. 6.

Wisconsin Oil Burner Co., No. 3; changed July 1st, 1937 to No. 1.

York Oil Burner Co., Inc., No. 5.

Q. Mr. Owens, I notice you omitted Goodrich Oil Burner Manufacturing Corporation and the Greenwood Engineering Co., which were on the list. Do you have anything to say with respect to those companies?

A. Is that on there, too, Goodrich and who else?

Q. Greenwood Engineering of Glenarm, Maryland.

Mr. Haycraft: They are on here, right after Gold Star.

2099 The Witness: Oh, I didn't omit Goodrich, did I? Oh, I must have skipped over after Gold Star. You did not call my attention to it.

By Mr. Freeman:

Q. Will you go back now and give us Goodrich and Greenwood so that we have the record straight?

A. Goodrich Oil Burner Manufacturing Corp., now Walter H. Goodrich & Co., No. 2; on July 1st, 1937 changed to No. 1.

Greenwood Engineering Company, no record.

Trial Examiner Sheppard: I suppose those numbers you have been giving there, 1, and 3 and 5, are bracket numbers?

The Witness: He has the key here.

Trial Examiner Sheppard: I see.

Mr. Freeman: I was just going to ask you, Mr. Owens, with respect to brackets.

Mr. Haycraft: I propose that that be marked and put in evidence, Mr. Examiner, if we are going to discuss it.

Mr. Freeman: Well, I can ask him about brackets without necessarily referring to the document, can't I?

Trial Examiner Sheppard: Go ahead.

By Mr. Freeman:

Q. Mr. Owens, you had how many brackets in 1937?

A. Six—no, there is six. There are five shown here. There are apparently six because this one is No. 6.

2100 That probably would be referred to as "special."

Mr. Freeman: I would like to offer in evidence as respondent's exhibit 147 the sheet marked, "1937 Manufacturers' prices," dated December 22, 1936 and as respondent's exhibit 148 the manufacturers' purchase contract, marked 1937 bracket 6 prices."

Trial Examiner Sheppard: Any objection, Mr. Haycraft?

Mr. Haycraft: No.

Trial Examiner Sheppard: Let them be marked the numbers suggested, 147 and 148, and let them be accepted into the record.

(The papers referred to were marked RESPONDENT'S EXHIBITS 147 and 148 and received in evidence.)

Mr. Freeman: We also ask that the pages dated 6/8/37 and entitled "1937 Manufacturers' prices," continued page 2-A and page entitled, "1937 manufacturers' prices continued, page 3," be marked respondent's exhibit 149-A, B and C.

Trial Examiner Sheppard: Any objection to that?

Mr. Haycraft: No.

Trial Examiner Sheppard: Let them be accepted and be so marked.

(The papers referred to were marked RESPONDENT'S EXHIBIT 149-A, B and C and received in evidence.)

2101 By Mr. Freeman:

Q. Now, Mr. Owens, in connection with one of the companies that you mentioned, particularly the Cleveland Steel Products Corporation, you gave me bracket 6 and then added the word "special."

A. Yes.

Q. Was that something better than bracket 6 or will you please explain what is meant by bracket 6, special?

A. Frankly, I cannot unless I have got a letter here which might show that. We included another control in there that was not on the original contract, the No. 6 with recycling control added which, by the way, they never purchased but that explains the "special." You may have that for your records also.

Q. Well, then, Mr. Owens, just so that I understand fully, the price for the KMI or the KMW and sensatherm on the agreements marked "6 special" and the other companies that you sold under bracket 6, like Century Engineering, Williams Oil-O-Matic and Timken, were the prices all the same then?

A. I believe so. You have got the record there. They were all the same except as in the unit here we added—here was your original contract, Mr. Freeman, as submitted to Cleveland Steel, so those prices remained exactly the same when we made up the new contract except that we added another control on there that was not on the original contract and we made it a special apart from the standard No. 6 bracket.

Mr. Haycraft: You had better offer that in evi-
2102 dence so that we know what you are talking about.

Mr. Freeman: The witness has referred to the manufacturers' purchase contract dated December 11, 1935.

The Witness: 1935 is that?

Mr. Freeman: Yes.

The Witness: Yes, I see.

Mr. Freeman: Which is here offered in evidence as respondent's exhibit No. 150 and the later manufacturers' purchase contract just referred to by the witness Owens, dated January 27, 1937, which is being offered in evidence as respondent's exhibit 151.

Trial Examiner Sheppard: Any objection to those?

Mr. Haycraft: No.

Trial Examiner Sheppard: Let them be accepted and marked.

(The papers referred to were marked RESPONDENT'S EXHIBITS NOS. 150 and 151 and were received in evidence.)

Mr. Haycraft: Does that have more than one page, any of those exhibits?

Mr. Gilpatric: No.

By Mr. Freeman:

Q. Mr. Owens, do you have here any record to show the quantities that you required in order to enable a com-
pany to obtain purchases in bracket 6 or do you re-
2103 call the number? If so, give it to us.

A. Well, that is in the other papers that you have there. The whole thing is right there.

Q. Well, the other papers that you referred to are exhibits 147 and 148 and 149 and I am now handing them to you and perhaps you might pick out the information with respect to quantity for bracket 6.

A. O. K.

Q. It will be helpful.

A. No, there is no record here on that.

Q. Do you recall, Mr. Owens, what the quantity was in order for a company to get the benefit of the price in bracket 6 in the year 1937?

A. Well, I would have to make a kind of broad statement on that. In other words, it would be a major oil burner manufacturer.

Q. Well, I note that on respondent's exhibit 147 bracket 5 says, "7500 controls or more" and I am just wonder-

ing where you walked out of bracket 5 and walked into bracket 6 in connection with purchases?

A. Well, I can't recall that at this time.

Q. And also, so that the record is clear, the quantities specified are single units as distinguished from sets, is that correct?

A. That is right.

2104 Q. Now, when you gave Timken the prices therein specified on respondent's exhibit 148 for the year 1937, obviously you expected to get more business than what would be called for if you gave them bracket 5, is that correct?

A. We expected to.

Q. And the amount in the agreement with respect to the number of units is specified as, "Their requirements of the company's automatic controls," is that correct?

A. Yes.

Q. Do you recall whether or not in any of these other No. 6 bracket contracts that you had with Williams, Century or Cleveland Steel, whether any amount was specified?

A. I have Cleveland Steel here. No, there is no amount specified.

Q. And does that go for the other two companies, Century and Williams as well as the Cleveland Steel?

A. I guess "Yes" on that.

Q. Now, Mr. Owens, do you have here the agreements that you had with Williams and Century for the year 1937?

A. It would be the same as either one of these number sixes.

Q. Well, first answer my question, Mr. Owens.

A. No.

Q. You do not have them?

A. No.

Q. Are they available at the company's plant?

A. Yes.

2105 Q. I don't know whether we want them in evidence or not, Mr. Owens, but for convenience, if we could have an opportunity to at least take a look at them.

A. You may have them.

Q. Mr. Owens, in connection with the Petroleum Heat & Power you stated that in 1937 your company extended to Petroleum Heat & Power the manufacturers' discount. Will you refer to exhibit 149-A and point out just what you mean by manufacturers' discount?

A. Manufacturers' discount, 1 to 9 assorted, 33⅓ and 15 per cent; 10 to 23, 33⅓ and 20 per cent; 24 and up assorted, 33⅓ and 25 per cent.

Q. And the same would apply to those other companies where you mentioned "manufacturers' discount"?

A. That is right.

Q. And I take it that the manufacturers' discount is a price a little higher than bracket No. 1?

A. On the control shown in bracket No. 1; that is the standard oil burner controls, yes.

Q. So that in order that we fully understand you first effect some manufacturers' discount and thereafter in order to get a better price you find yourself in bracket 1 and on up, is that correct?

A. That is for a certain amount of controls that
2106 are sold at a net price to the oil burner trade.

Q. We are talking, Mr. Owens, about oil burner controls sold to the oil burner people. That is your KM and your KMI and your sensatherm.

A. Could I tell you what you are driving at, is that permissible?

Q. Sure, just so you steer me on the right course.

A. First of all, Petroleum Heat & Power Company, to whom I imagine you are referring, buy or did buy at that time special controls. For instance, they burn heavy oil. They would buy a special temperature control to mount on their oil heater. That control was sold to all manufacturers at the manufacturers' discount and the only thing that you can get at by running around or going around the bush is the fact that we did not submit Petroleum Heat & Power Company a bracket contract, if you want to refer to that. We merely sold that special control that they bought at a less than discount basis without having submitted any contract to them.

Q. That is clear and thank you. And those controls, then, that you sold Petroleum Heat & Power were in fact, non-competitive with the so-called standard controls that went on domestic oil burners?

A. I am afraid I don't quite understand.

Q. Were they the same controls?

A. No, they were special controls.

2107 Q. So that they were non-competitive to the so-called standard control that you sold?

A. Well, they were a different control, Mr. Freeman.

Q. And thus non-competitive?

A. That is right.

Q. Mr. Owens, I asked in the subpoena that we get copies of the contracts with the oil burner companies mentioned in this list and I take it wherever you gave us a bracket number that your company had a contract with that company?

A. A contract was submitted, yes.

Q. And your company did business with that company on the basis of the contract for the year 1937?

A. That is right.

Q. Now, did you produce the contracts?

A. Did I what?

Q. Do you have those contracts with you?

A. No. I brought the prices. I figured that is what you were interested in securing, was the prices at which we sold them and I did not go to the records to get out each and every contract because I couldn't see any sense to going to all that expense and trouble; if I could inform you,—if I could give you what you wanted in the way of information relative to the prices we quoted and the method we used, that that would suffice. Now, if we have to go through all the records to get out every contract it would mean a lot of work.

2108 Q. Mr. Owens, do you ever change any of the prices which are bracket prices in the agreements, by letters, that is, modify the selling price of the thermostateor KMI by letter?

A. Occasionally, yes.

Q. And would the agreements then reflect the modification?

A. According to what I have testified to here and the markings I got. Of course, I had one of the clerks draw this thing up. Where they marked "No. 6 special" that indicated that it was something outside of the prices you have there and in each of those cases I attempted to show you just what that change was.

Trial Examiner Sheppard: I noticed that and you have given us the date upon which the change was made, haven't you?

The Witness: That is right, when we changed from one bracket to another, but what Mr. Freeman refers to, Major is the fact that we might have reduced the price or changed the price on some one item rather than change the whole contract.

Trial Examiner Sheppard: I see.

The Witness: And where that happened, that they put a mark down here showing "special", which would indicate some change had been made other than shown in this setup of bracket prices on the exhibit, so I brought along those different contracts to show those changes.

Trial Examiner Sheppard: That is very good.

2109 By Mr. Freeman:

Q. Then when you gave us a bracket number for a given company we can assume that that company then received the price referred to in the price list applicable for the year 1937?

A. That would be my interpretation.

Trial Examiner Sheppard: What was that exhibit number?

Mr. Freeman: Respondent's exhibit Nos. 147 to 149, inclusive.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. Now, will you turn to the year 1938 and tell us with respect to your bracket setup for that year, the prices and what you did with respect to each of these companies for that year?

A. Acme Tool & Gauge Company, No. 33.

Q. It might be well, Mr. Owens, since you are deviating now from the bracket numbers 1, 2, 3, 4, 5 and 6 for the year 1938, that you explain your bracket structure for the year 1938.

Trial Examiner Sheppard: If there was any change.

The Witness: Do you want that first?

Mr. Freeman: Well, there have been some changes and he started out on that basis.

The Witness: The 1938 contract prices. Contract
2110 No. 11, minimum order requirements 25 units; No. 22, 50 units; No. 33, 75 units; No. 44, a hundred units; No. 55, 250 units; and the others are stoker.

Mr. Freeman: We are not interested in the stoker. We offer in evidence as respondent's exhibit 78 sales bulletin No. 41 dated January 14, 1938; as respondent's exhibit 73, form No. 11; as respondent's exhibit 74, form No. 22; as respondent's exhibit 75, form No. 33; as respondent's exhibit No. 76, form No. 44; and as respondent's exhibit 77, form No. 55.

Trial Examiner Sheppard: Have they been marked for identification before now?

Mr. Freeman: Yes.

Trial Examiner Sheppard: Is there any objections?

Mr. Haycraft: No.

Trial Examiner Sheppard: Let them be accepted and marked.

(The papers heretofore marked RESPONDENT'S EXHIBITS 73 to 78, inclusive, were received in evidence.)

By Mr. Freeman:

Q. Now, Mr. Owens, the documents that I have just offered in evidence as respondent's exhibits 73 to 78, inclusive, illustrate or comprise the bracket structure and pricing structure as used by your company for the year 1938, is that correct?

2111 A. That is correct.

Q. Now, Mr. Owens, will you proceed with the list of companies called for in the subpoena and give us the names of the companies that your company had contracts with, the bracket that the company was in, and so forth?

A. Acme Tool & Gauge Co., No. 33; Alida Mfg. Co., no record, or no price, I should say.

Arcweld Mfg. Co., no record.

Automatic Burner Corp., No. 55.

Bedard Johnson Co., no record.

Berggren Engineering Co., No. 22.

Book Corporation, No. 11; cancelled April 13th.

Braden Engineering, Inc., No. 44.

Brown Oil Burner Eq. Co., no record.

Buch Engineering Co., Inc., No. 11.

Mr. Haycraft: Mr. Examiner, I submit that that paper that the witness is reading from could very well be received in evidence.

Trial Examiner Sheppard: I am perfectly willing to do that.

Mr. Haycraft: I think with the introduction we have the explanation of it, if it is all right with the witness to save time.

The Witness: What was that?

Mr. Haycraft: To offer in evidence the exhibit 2112 you are reading from.

The Witness: Oh, you mean this exhibit here?

Trial Examiner Sheppard: Yes. It will save you from calling out all those names.

The Witness: Mr. Freeman wanted to ask questions about these different ones. I will be glad to offer this in evidence if that will suit you folks. The whole thing is over there.

Mr. Freeman: Could I look at it?

The Witness: Sure, take it away.

Trial Examiner Sheppard: It will just save you a whole lot of talk.

Mr. Freeman: We offer in evidence a paper entitled, "Prices extended 1937 to 1941, inclusive", furnished by the witness Owens, as respondent's exhibit 152-A, B, C, D and E.

Trial Examiner Sheppard: All right. Any objection, Mr. Haycraft?

Mr. Haycraft: No.

Trial Examiner Sheppard: Let it be accepted and marked.

(The document referred to was marked RESPONDENT'S EXHIBIT 152-A, B AND C, D AND E and received in evidence.)

By Mr. Freeman:

Q. For the year 1938 I note that you have some of the companies in brackets 3, 4 and 5 and others you used
2113 the form number 22. Do I understand that as to those in 1938 where you had numbers 1, 2, 3, 4 and 5 it was merely a carryover from the year 1937?

A. I think the only thing we can do on this, Mr. Freeman, is to agree to get those contracts out marked with numbers that do not agree with the information that I have turned over to you, for the brackets for that year.

Q. So that, then, for the purpose of our record you will get the contracts with Lynn Products, Malleable Iron, Oil Equipment, Old Colony, Osher & Reiss, Packard Oil Burner, Pan-American, Petroleum Heat & Power, Quiet Heet of Brooklyn, New York, for the year 1938?

A. That is the only thing I can do.

Q. Now, turning to the year 1939 you followed substantially the same form numbers prefixed by a letter "B", is that correct?

A. Is that 1939?

Q. 1939.

A. That is correct.

Q. Do you happen to have with you, Mr. Owens, the bracket structure or pricing sheets for the year 1939 of

substantially the same kind that you used in connection with the year 1938?

A. I do.

Q. Will you produce them?

2114 A. Here they are.

Mr. Freeman: We offer in evidence manufacturers' purchase agreements for the year 1939, which agreements are in blank but which disclose the prices at which Mercoid sold controls to manufacturers during the year 1939, the form numbers there being referred to as B-11, B-22, B-33, B-44 and B-55, as respondent's exhibits 153-A, B, C, D, E and F.

Trial Examiner Sheppard: Any objection, Mr. Haycraft?

Mr. Haycraft: No.

Trial Examiner Sheppard: Let it be marked and accepted.

(The documents referred to were marked RESPONDENT'S EXHIBIT 153-A, B, C, D, E and F and were received in evidence.)

By Mr. Freeman:

Q. I note, Mr. Owens, that on one of the agreements the letter instead of being "B" is "F-22" and another one "F-33." Will you please explain that?

A. The "B" designates prices submitted oil burner manufacturers. "F" for furnace manufacturers." There is only one in the list and that is Hall-Neal, there is only one "F" in that list. That was a 33, so there isn't a single one in there of the 22. That is the whole set of prices.

Q. Now, with respect to the Cleveland Steel Com-
2115 pany for the year 1939, I note that the form number is B-44X. Will you please make whatever explanation you can with respect to that particular bracket structure?

A. B-44X refers to a change in the B-44 bracket where a thousand sets of KMW and type H sensatherms are ordered, the price would be $7.75 each net for the KMW and $2.50 each net for the type H sensatherm instead of prices of $8 and $2.70, respectively, shown on the B-44 price schedule.

Mr. Haycraft: What is the date of that?

Mr. Freeman: We are talking 1939.

Mr. Haycraft: Is there any date on that? Is it dated at all?

Mr. Freeman: No.

Q. I note also for the year 1939 that Herco Oil Burner likewise has B-44X.

A. Which would indicate that they were offered that same proposition.

Q. That is the $2.50 price?

A. One thousand set price on KMW and type H sensatherm.

Q. Now, I notice under the Quiet Heet Manufacturing Company for the year 1939 the letters "Spec.", indicating the word "special". Will you please explain the pricing or bracket structure for that company for the year 1939?

A. I find a letter here dated May 16, 1939 addressed to Mr. LaPidus:

2116 "We are returning herewith, signed acceptance of our contract proposal of May 5.

"You will note that we have changed the price of the Type KMW Pyratherm, constant ignition type, to $7.75 each net instead of $8.00 each net. This is in accordance with out conversation at the time of the writer's last visit to New York."

And this "special", I suppose it should be "X" instead of "special", apparently.

Q. Well, now, Mr. Owens—

A. You may have that if you wish.

Q. I understood that the "X" had to do with both thermostat prices and pyrotherms, whereas the letter of May 16, 1939 to Quiet Heet has only to do with the KMW pyrotherm.

Mr. Freeman: Let the record show that Mr. Owens is going to check to determine whether or not "special" in connection with Quiet Heet has to do with the same prices given to Cleveland Steel and Herco.

The Witness: That is right.

Mr. Freeman: Both as to thermostats and pyrotherms.

The Witness: Yes.

Mr. Freeman: We offer in evidence as respondent's exhibit 154 carbon copy of letter to Quiet Heet Manufacturing Corporation dated May 16, 1939.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No objection.

2117 Trial Examiner Sheppard: Let the exhibit be marked and accepted.

(The document referred to was marked RESPONDENT'S EXHIBIT 154 and was received in evidence.)

Trial Examiner Sheppard: We will take a little recess, gentlemen.

(Whereupon a short recess was had.)

Trial Examiner Sheppard: All right, on the record, gentlemen.

By Mr. Freeman:

Q. Now, Mr. Owens, do you have your pricing structure, that is, brackets, prices, quantities, and so forth, for the year 1940 and, if so, will you produce them?

A. The bracket structure runs SB-1, which states: "On a blanket order covering 100 or more sets of primary controls and thermostats, with definite dates for shipment throughout the year, specified on the order, we will extend the following special net prices:

"Type JM Pyratherm.....$8.70 Ea. Net
Type JMI Pyratherm..... 9.20 Ea. Net
Type H Sensatherm..... 2.85 Ea. Net."

Q. And, Mr. Owens, attached to the letter dated January 10, 1940 that you just referred to is a manufacturers' purchase contract likewise marked "SB-1", is that correct?

A. Yes.

2118 Mr. Freeman: We offer in evidence as respondent's exhibit 155 the letter dated January 10, 1940 and as respondent's exhibit 156 the form contract attached thereto.

Trial Examiner Sheppard: Any objection to exhibits 155 and 156, Mr. Haycraft?

Mr. Haycraft: No.

Trial Examiner Sheppard: Let those two exhibits be marked and accepted into evidence.

(The documents referred to were marked RESPONDENT'S EXHIBITS 155 and 156 and were received in evidence.)

The Witness: The No. 2 oil burner contract, the No. 2 bracket is entitled, "MB-2" covering 300 or more sets of primary controls and thermostats, with definite dates for shipment throughout the year specified on the order, we will extend the following special net prices:

"Type JM Pyratherm.....$8.25 Ea. Net.
Type JMI Pyratherm..... 8.75 Ea. Net
Type H. Sensatherm..... 2.70 Ea. Net."

And attached herewith is the form of contract used for the MB-2 bracket.

Mr. Freeman: We offer in evidence as respondent's exhibit 157 the letter dated January 10, 1940 referred to by the witness as MB-2 and as respondent's exhibit 158 the contract dated January 10, 1940, which contract, incidentally, is an executed agreement dated January 10,
2119 1940 with the Acme Tool & Gauge Company of Providence, Rhode Island.

Trial Examiner Sheppard: All right. Any objection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let the exhibits be marked and accepted.

(The documents referred to were marked RESPONDENT'S EXHIBITS 157 and 158 and were received in evidence.)

The Witness: Oil burner contract No. 3, referred to as LB-3, "with blanket order covering 1000 or more sets of primary controls and thermostats, with definite dates for shipment throughout the year, specified on the order, we will extend the following special net prices:

"Type JM Pyratherm.....$7.75 Ea. Net
Type JMI Pyratherm..... 8.25 Ea. Net
Type H Sensatherm..... 2.50 Ea. Net."

The standard form of LB-3 contract is attached herewith, showing the existing prices where blanket order is not placed at the time of signing contract.

Mr. Freeman: We offer in evidence as respondent's exhibit 159 the letter dated January 10, 1940 referred to by the witness as LB-3 and the agreement attached thereto as respondent's exhibit 160 for the year 1940, disclosing price list of form No. LB-3.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No objection.

2120 (The documents referred to were marked RESPONDENT'S EXHIBITS 159 and 160 and were received in evidence.)

By Mr. Freeman:

Q. Before we get too far, Mr. Owens, I note that these letters that you have here given me, particularly respondent's exhibits 157 and 159, that the numeral "100" in typing or mimeograph has been changed to "300" on respondent's exhibit 157 and to "1000" in lieu of "100" on

respondent's exhibit 159. Now, I would like to get the facts with respect to what was necessary in order to get the particular prices specified on respondent's exhibits 157 and 159.

A. The contract as submitted on LB-3 showed net prices of $8.25 on the JM pyratherm, $8.75 on the type JMI and $2.70 on the sensatherm. If at the time the contract was signed and returned that was accompanied with a blanket order covering a thousand or more sets of primary controls, the special net prices referred to before would then apply.

Mr. Haycraft: Referred to in exhibit 159?

The Witness: Yes.

By Mr. Freeman:

Q. And I take it your explanation with respect to the thousand or more sets on LB-3 applies equally as well to MB-1, respondent's exhibit 157, where the printed number "100" has been changed to a number "300"?

A. That was a stenographic error in both cases, where the numbers have been changed.

2121 Q. Then you are stating as a fact that as a condition for the prices scheduled in respondent's exhibits 157 and 159 it was 300 for 157 and 1,000 for 159?

A. That is correct.

Q. Now, will you proceed with the other forms?

A. In the list where we refer to LB-3 special, the only difference between that and the LB-3 letter is that there was no letter sent out and the prices were offered without asking for the blanket order. A, B, C is one there and there is the contract.

Mr. Freeman: We will offer in evidence as respondent's exhibit 161 an agreement referred to by the witness as LB-3 special for the year 1940, the particular exhibit being an executed contract with the Automatic Burner Corporation of Chicago, Illinois.

Trial Examiner Sheppard: Any objection to that?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be accepted and marked.

(The document referred to was marked RESPONDENT'S EXHIBIT 161 and received in evidence.)

By Mr. Freeman:

Q. Now, Mr. Owens, have you given me all of the pricing structures for the year 1940?

A. I have one more here that we submitted to 2122 furnace manufacturers, referred to as FR-1.

Mr. Haycraft: May I ask a question on that?

Trial Examiner Sheppard: Yes.

Mr. Haycraft: Was that furnished to any of the people on this list?

The Witness: Hall-Neal I believe are on that list, Mr. Haycraft.

Mr. Freeman: We offer in evidence as respondent's exhibit 162 Mercoid's manufacturers' purchase contract form FR-1.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be accepted and marked.

(The document above referred to was marked RESPONDENT'S EXHIBIT 162 and was received in evidence.)

By Mr. Freeman:

Q. Might I ask, Mr. Owens, if in connection with furnace manufacturers you had any forms 2 and 3, that is, bracket structures or price structures?

A. No.

Q. Then so far as furnace manufacturers, the prices set forth in respondent's exhibit 162 are as shown on form 1?

A. Fr-1.

Q. Now, does that conclude your pricing structure 2123 information that you have produced with respect to the year 1940?

A. To the best of my knowledge.

Q. All right. Now, Mr. Owens, will you turn to the year 1941 and give us all the information you have with respect to brackets, pricing structure and contracts for that year, with any explanations that you want to make as to any special accounts or special circumstances?

A. Well, to start with, in 1941 we discontinued contracts but we did send out price schedules and they required no acceptance signature either on the part of the customer or on our part. We merely sent them the prices designated in their brackets and I have here SB-1 and in 1941 you will find on the list of the various companies the prices that we submitted shown here. SB-1, MB-2, LB-X, Special-2 and LB-XX. There were several letter changes made that year.

that you will probably come to as you go down the line in checking your 1941 prices.

Mr. Freeman: We offer in evidence as respondent's exhibit 163 SB-1 for the year 1941; as respondent's exhibit 164 MB-2 for the year 1941; as respondent's exhibit 165 LB-X for the year 1941; as respondent's exhibit 166 Special-2 for the year 1941; and as respondent's exhibit 167 LB-XX for the year 1941.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: As I understand it, these were not contracts. What are they? What do you call them, Mr.
2124 Owens,—letters?

The Witness: Well, they would be quotations.

Mr. Haycraft: Quotation letters?

The Witness: Or price schedules.

By Mr. Freeman:

Q. With the terms and conditions under which sales were to be made?

A. That is right.

Q. And the prices at which the company was to purchase the product?

A. That is correct.

Mr. Haycraft: That is my understanding.

Trial Examiner Sheppard: All right. We will accept the exhibits offered into evidence, Nos. 163 to 167, inclusive.

(The documents referred to were marked RESPONDENT'S EXHIBITS NOS. 163 to 167, inclusive and were received in evidence.)

By Mr. Freeman:

Q. Now, Mr. Owens, I note that exhibits 163 to 167, inclusive, which you have referred to by various designations do not of themselves specify quantities and yet you said you sent out the particular one to a particular customer. Will you please explain so that we may know who was entitled to SB-1 and who was entitled to LB-X or LB-XX or what basis Mercoid used in the pricing structure?

2125 Mr. Haycraft: May I inquire, Mr. Examiner, of counsel, whether exhibit 152, does that set forth the various designations? Is that exhibit 152 that long list?

Mr. Freeman: Yes; this is off the record.

Mr. Haycraft: All right.

(Discussion outside the record.)

Trial Examiner Sheppard: On the record.

The Witness: I will answer it to this extent, that where we have given this information before in connection with contracts submitted I have prefaced "1941" with the remark that we were not submitting contracts in that year but, we were sending out price schedules or quotations and I don't believe that there is anything in the subpoena that asked us to say how we set up the price that we quoted any particular customer. Now, that might be one of the things that we argued about and while we have volunteered the information in connection with contracts submitted, I don't believe that it is going to be necessary for me to sit here and say how we determined so and so's price or so and so's prices. We have told you what prices we have quoted to the different companies.

Mr. Haycraft: Isn't all that they are entitled to, Mr. Examiner, under the subpoena or even under the issue in this case what the price was, not how they arrived at it? If he has fully disclosed what the prices were to these various accounts it seems to me that is all they are

2126 entitled to.

Mr. Freeman: I want to know what the prices were to these various accounts.

Mr. Haycraft: Well, he has told you that.

Trial Examiner Sheppard: Isn't that on that exhibit 152?

Mr. Haycraft: That is shown there.

Mr. Freeman: And I think we are entitled to know the quantity which entitled the customer to that particular price. Price doesn't mean anything of itself unless you know how many you had to buy in order to get that price.

Trial Examiner Sheppard: Well, whatever that price was,—I mean whatever the quantity was it was based upon the price that appears in that respondent's exhibit 152.

Mr. Freeman: Well, if Mr. Owens will tell us what the quantities were, that is all we want to know.

Trial Examiner Sheppard: Well, Mr. Owens, can you help us out on that in any way?

Mr. Haycraft: I am objecting to it as irrelevant and immaterial. I don't think it amounts to anything.

Trial Examiner Sheppard: I agree with you that it doesn't amount to anything, but if Mr. Freeman wants it and Mr. Owens can give it to us, maybe it will be important and maybe it will not be.

Mr. Freeman: Mr. Examiner, when you talk about
2127 like quantity or like price, and so forth, as called for in the Robinson-Patman Act, how do you expect us to meet competition if competition may sell one control at a low price when we may have to sell half controls in order to get that price? Don't you think it is important that we know how many you have to buy in order to entitle you to that price? And, obviously, the very fact that they have these various forms, LB-X and LB-XX and MB-Special, there is some place where there is a breaking point or where the company goes out of one price into another price.

We would like to know those prices and prices by themselves, in the absence of quantity, is just knowing half of the answer.

Trial Examiner Sheppard: Well, will Mr. Owens give us that if he has it at hand and if it is important, as you seem to think it is, why, we can have it with us.

The Witness: Mr. Freeman's opening remarks indicated that we were going to live up to the terms of that subpoena. We have tried to do that. Now, we have gone beyond it voluntarily, as I remarked before, but I believe that a study of the bracket, of the various quotations here made to different oil burner companies would really show the method used in extending these prices without trying to bring it down to any hard and fast rule. The previous years for the same companies would pretty clearly
2128 indicate why each one received the quotation he has for that particular year. Now, I don't believe that I care to go further than that, Mr. Examiner.

Trial Examiner Sheppard: In other words, the comparison with 1941 is about the same as the others?

The Witness: With 1940, yes, sir.

Trial Examiner Sheppard: I think that would be sufficient.

Mr. Freeman: Well, now, Mr. Owens, you prefaced your remarks by saying that during 1941 your company did not enter into any contracts and, therefore, that was not called for in the subpoena.

The Witness: No, I didn't say that.

Mr. Freeman: Well, I understood that—

The Witness: No, I didn't say that. Read back, will you please, what I said?

Mr. Freeman: All right.

(Record read.)

Q. Now, will you give me the bracket structure in quantities for the year 1939 and 1940 where you did have contracts with companies? Will you give us the quantities there?

A. Where?

Q. For the years 1939 and 1940.

Mr. Haycraft: He has already done that.

Mr. Freeman: No, he has not.

2129 Mr. Gilpatric: We have got it for 1938 and 1937; nothing for 1939 and 1940.

Mr. Haycraft: I thought you put that in there, if you took a thousand you got so many.

Mr. Gilpatric: Those were only minimum order requirements.

The Witness: That is the way the price was set up, on the basis of the size of the order. If they did not place a minimum order they got one price. Maybe you didn't look in here. Now, here: There is your price if they placed an order for a hundred. Your price is higher if there is no order placed at the time they sent in the contract.

Mr. Freeman: That is SB-1.

The Witness: Well, the quantities are filled in there. Now, we had no particular setup, I don't believe, in 1941, but as I remarked before, you can get a pretty good guide as to the price schedules, the different price schedules.

Trial Examiner Sheppard: By comparing 1940 with preceding years?

The Witness: By comparing 1941 with 1939 and 1940. I think you have got it all there.

Mr. Freeman: So that the record is straight, let us take 1939, when there wasn't any condition as to the quantity originally purchased, or at least no testimony in

2130 the record so far and I find that the prices for the KMW on B-11 is $9.00.

Mr. Haycraft: What exhibit, Mr. Freeman?

Mr. Freeman: Respondent's exhibit 153.

Q. And on the form B-22, respondent's exhibit 153-B, the prices for the same instrument, KMW, is $8.50 and on respondent's exhibit 153-C the price for the same instrument is $8.25; on respondent's exhibit 153-D the price for the same instrument is $8.00.

Now, what I would like to get from you, what quantities were necessary in order to get all the variable prices? There has been nothing in the record as yet with respect

to any quantities or any conditions imposed by Mercoid upon customers in order to obtain those prices.

A. You mean for 1939?

Q. I am speaking for 1939. I am referring specifically to respondent's exhibits 153-A to 153-D, inclusive.

A. I don't have that information.

Trial Examiner Sheppard: Could you get that for us, Mr. Owens? Write me about it. It will save you a trip.

The Witness: If Mr. Freeman will include that in his memorandum of things to get, I will see if I can locate that.

Trial Examiner Sheppard: Just get me a memorandum.

Mr. Freeman: Let the record show that the wit-
2131 ness will obtain with respect to the year 1939 the quantities for the various brackets referred to in forms B-11, B-22, B-33 and B-44.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. Mr. Owens, I note that your year 1939 with respect to 11, 22, 33 and 44 follows the year 1938. Did you happen to have a 55 form in the year 1939, or do you know?

A. Is there any on this list here where we quoted 55?

Mr. Gilpatric: Yes, Williams.

The Witness: How was that?

Mr. Gilpatric: Williams.

The Witness: Williams Oil-O-Matic?

Mr. Gilpatric: Yes.

Mr. Freeman: Yes.

The Witness: What year is that,—1939?

Mr. Gilpatric: Yes, 1939.

The Witness: You will have to add that to the other memoranda.

Mr. Freeman: All right, let the record show that the witness will produce form B-55 for the year 1939 and the preceding request with respect to quantities for that particular B-55 will also apply.

Trial Examiner Sheppard: All right.

Mr. Freeman: Now, can we have the same under-
2132 standing with you, Mr. Owens, with respect to the year 1940, where you actually had contracts, as to the quantity necessary in order to obtain a contract SB-1 or a contract MB-2 and the others which you have furnished in connection with the year 1940,—quantities? You see, Mr. Owens, you first explained that the letters and the quantities initially ordered determined the price.

A. Yes.

Q. Now, that determines a special price different from the contract price, whereas the contracts themselves for the year 1940, such as form SB-2, specifies $9.20 for the JM pyratherm, whereas the form MB-2 specifies a price of $8.70 and form LB-3 specifies a price of $8.25 and LB-3 special specifies a price of $7.75.

A. Well, these contracts all have—that are attached, I believe they all have the quantity filled in.

Q. No.

A. This one is filled in and this one, so evidently that is for a thousand.

Q. When you say "evidently that is for a thousand"—

A. Here we are.

Q. Just a minute, just so the record is clear. When you say "evidently that is for a thousand", you were referring to respondent's exhibit 156, which is the agreement with Citro Oil Burner Corporation, is that correct?

2133 A. That is correct, or SB-1.

Q. And under MB-2 the agreement is with Acme Tool & Gauge Corporation?

A. Yes.

Q. And the quantity therein specified is 5,000 units, is that correct?

A. That is correct.

Q. Respondent's exhibit 158. Now, with respect to LB-3 and particularly respondent's exhibit 160, the number of units is left in blank?

A. That is no particular contract. It is a sample of a contract.

Q. Well, what I would still like to know then is the quantity that is necessary for the purchaser to entitle the prices therein specified?

A. Well, there it is.

Trial Examiner Sheppard: Mr. Owens will get that if he can furnish it.

By Mr. Freeman:

Q. And I notice on the LB-3 special, the Automatic Burner Corporation contract for the year 1940, respondent's exhibit 161, the quantity is specified as 15,000.

A. I believe that takes care of the various brackets.

Q. Well, it still does not take care of LB-3.

A. LB-3 and that special, didn't we explain the 2134 difference there before?

Q. No. Mr. Owens—

A. The difference between the LB-3 and the LB-3 special is that we did not send a letter out with the special. They are both the same except that a letter did not accompany the LB-3 special, but where an LB-3 was sent out a letter accompanied that price schedule offering those the LB-3 special price, but they had to place an order for a thousand sets of controls in order to obtain it. We explained all that before and it is in the record.

Q. Well, then, Mr. Owens, am I to understand, so that the record is clear, that in order to obtain the prices of SB-1 you had to enter into a contract for a thousand units?

A. You had to place an order for a thousand units in order to get that price.

Trial Examiner Sheppard: That is my understanding of that.

Mr. Freeman: Well, if it is your understanding, Major, it does not reconcile with the statement here because they could have received a price of $8.70 if they only ordered 100 sets, whereas the price for a thousand, if your understanding is correct, the price would be $9.20. Now, that doesn't make good sense and I would like to get an explanation as to what entitled the man to a $9.20 price. Obviously, he wouldn't have to buy ten times more to pay fifty cents more per control.

2135 Trial Examiner Sheppard: My understanding is that he would have to buy at least a thousand to get that particular price on that particular date.

The Witness: And only a hundred; to place an order for a hundred or more sets to secure the other price referred to.

By Mr. Freeman:

Q. And the other price referred to is fifty cents less than the other price, correct?

A. I will have to check that.

Q. For the JM pyratherm.

A. It is 95 cents difference in price.

Q. Well, Mr. Owens, I am going to limit my question to respondent's exhibit 155 and respondent's exhibit 156. You have said that a blanket order covering 100 or more sets of primary controls and thermostats, the price for the pyratherm would be $8.70, is that correct?

A. That is correct.

Q. Now, the contract which is attached there to, SB-1, which specifies a thousand units—

A. May I read that, please?

Q. —specifies a price of $9.20, does it not?

A. May I read that, please?

Q. Certainly, but you can answer my question.

A. It reads: "The special net prices extended herewith by the company are based on the purchaser's 1940 control requirements, estimated to be 1,000 units."

2136

This other price covering a hundred sets covers an actual order and it is sort of a bonus for placing an order for that n...ty sets. On the other hand, if we submit these prices to a customer and he signs a contract, it becomes binding. If he only buys one control from us, then the prices shown here are 50 cents higher.

Q. And "by the prices shown here" you refer to respondent's exhibit 156?

A. And this one thousand that you are harping on or keep talking about is, as it says here, based on the purchaser's 1940 control requirements, estimated to be 1,000.

Q. So that the purchaser's requirements of 1,000 or more in the year 1940 entitled the customer to a respondent's exhibit 156 type of contract, is that correct?

A. Yes.

Q. And if that same customer, however, gave you an order for shipment of a hundred or more he received a better price than—

A. He automatically would get a better price.

Q. Now, in connection with respondent's exhibit 158, then, if the customer's requirements of all controls or potential, as we sometimes refer to it, for the year 1940 was 5,000 or more, he paid for controls at the prices specified on the form MB-2, is that correct?

2137

A. That is correct.

Q. However, if that same customer bought 300 or more sets of controls, that is, bought sets of primary and the thermostat, he then obtained the preferential or better price?

A. Fifty cents better price.

Q. As specified on the letter?

A. Yes.

Q. And, likewise, for form LB-3 you have said the quantity was the same as LB-3 special and that amount would be 15,000 units?

A. That is right.

Q. Thereupon that company would receive the price specified on form LB-3, is that correct?

A. That is correct.

Trial Examiner Sheppard: What is that exhibit number?

Mr. Freeman: Referring specifically to respondent's exhibit 160.

Q. And I take it if the same customer who signed the contract of the kind illustrated in respondent's exhibit 160 had placed an order for a thousand or more sets with definite dates for shipment he would then receive the better prices disclosed on respondent's exhibit 159, is that correct?

A. That is correct.

2138 Q. So that in connection with the year 1940 the bracket structure with respect to requirements or potential of a customer was set at 1,000 units on bracket 1 or SB-1, 5,000 units bracket 2 and 15,000 units bracket 3; is that correct?

A. That is correct.

Q. Now, can you tell me whether or not during the year 1940 you had any other contracts,—or, rather, whether or not during the year 1940 you had any other brackets according to potential, that is, other than the thousand, 5,000 and 15,000 units?

A. I couldn't tell you that, but how about referring you to the names of the customers?

Trial Examiner Sheppard: That is on exhibit number?

The Witness: On exhibit R-152-A, to determine if there are any listed that are not included in this bunch here and I will try to explain them as you pick them out.

Mr. Freeman: No, I was asking as a question whether or not you had any other bracket price structure based upon the company's requirements, other than these three that you have specified?

Mr. Haycraft: I object to that question unless it is confined to those concerns listed on exhibit 152.

Trial Examiner Sheppard: Make your answer with reference to that.

Mr. Freeman: I don't think we are limited to these 88 companies. This man is called as a witness. He
2139 can tell me whether or not,—of course, if he doesn't want to answer he doesn't have to, obviously.

Mr. Haycraft: It is irrelevant and immaterial.

Mr. Freeman: We are not limited only to questions called for by documents.

Trial Examiner Sheppard: I told you gentlemen I was going to let you go into that other if you want to, but it will have to first be established whether Mr. Owens has those customers, because if he did not there is, of course, no materiality.

Mr. Freeman: I would still like to know whether or not he had any other bracket arrangements other than those three that you have here produced for the year 1940.

Mr. Haycraft: Regardless of counsel's curiosity in the matter he is not entitled to have it, Mr. Examiner, and I object to the form of the question.

The Witness: As a matter of fact, I brought along all of the prices that I thought we had for that year without even comparing it to that sheet. Now, if there is something else shown in that list sheet, in that list of names that does not appear here, I will try to dig it out and explain it. I don't know that we have any more. As far as I know we haven't anything else.

By Mr. Freeman:

Q. Now, Mr. Owens, I am wondering if we might
2140 ask you in connection with the year 1941, where you had no contracts in operation, as to whether or not during that year 1941 you used the same quantity potential in determining your brackets or where a customer fell into in order to get a price, and I note that in connection with exhibit 152 that most of the companies for 1941 have the same kind of a notation as for 1940.

A. Well, frankly, I don't know how they were determined other than we followed a similar price setup or quotation setup as we had in previous years but sent out price schedules instead of contracts.

Q. Do you know whether in 1940 you sent out any letters where you gave prices better than those referred to in MB-1 or SB-1, where companies ordered a hundred sets or 300 sets or 500 sets initially?

A. Let us go down the line here and any that are marked "Special" I will be glad to explain what those prices were for.

Trial Examiner Sheppard: 152 ought to show anything special.

By Mr. Freeman:

Q. May I then ask you with respect to Acme Tool & Gauge Company for the year 1941, marked "LB-X", what that "X" refers to?

A. Well, let us get out the 1941 price set up and 2141 look at it.

Mr. Haycraft: LB-X is in an exhibit in evidence,—exhibit 165.

The Witness: There you are, sir.

By Mr. Freeman:

Q. I notice in connection with General Oil Heating Corporation for the year 1940 they had form LB-3 and for the year 1941 they had the form LB-X. Can you tell me the difference?

A. Well, let us get out LB-3 for 1940 and LB-X for 1941 and you can see the difference. That is the same price except the difference in the sensatherm.

Q. When you say "same price" you are now referring to the letter of January 10, 1940?

A. That is right.

Q. Conditioned upon an order for a thousand sets?

A. That is right.

Q. And if the price there for the JM pyratherm was $7.75, on the LB-X for 1941 the price was $7.75 or the same thing?

A. That is correct, except the sensatherm.

Q. Now, will you tell me whether or not a condition of ordering a thousand sets or more at one time was the same on LB-X for 1941 as it was on respondent's exhibit 159, which you have referred to as LB-3 for the year 1940?

A. I could only estimate that. I don't really know.

Q. Well, could we find out and get an answer as 2142 to that? Then we will have the information with respect to the year 1941.

Mr. Haycraft: I object to that, Mr. Examiner, as irrelevant and immaterial.

Mr. Freeman: This witness has already testified that the prices were the same. Now I want to know whether or not the conditions were the same.

Mr. Haycraft: I say it doesn't make any difference whether the conditions were the same or not. The prices were the same.

Trial Examiner Sheppard: If Mr. Freeman wants that

and Mr. Owens can get it, I will let you do it. That will remove all doubt on both sides. You can write me a letter on it and I will put it in with rest of the information that you are going to get.

The Witness: I don't really know how that was set up. I didn't handle the sending out of those prices at the time.

Trial Examiner Sheppard: Well, as I say, I am going to leave it up to you to give us the best information on that that you can.

By Mr. Freeman:

Q. Mr. Owens, you made a remark a minute or two ago that there were a lot of specials or changes made in connection with pricings, I believe, for the year 1941 and I will ask you to refer to any documents that you have
2143 here that are directed to any price changes where there were differences over and above these forms which you have already submitted.

A. Well, wouldn't that show it? You could go down the line here and where you don't have a copy to match up with this here it would indicate what that price setup was.

Trial Examiner Sheppard: That is exhibit 152?

The Witness: I notice that all those price changes are in there and any other change that was made was in the way of an increase during the year.

By Mr. Freeman:

Q. May I ask whether or not in the year 1941 your company gave a combined or set price better than the price made up from the two separate units?

A. I am sure we did not.

Q. How about 1939?

A. If it doesn't show here we didn't do it.

Q. In 1937 your company did follow the practice where a thermostat and a primary were purchased at the same time they got a better price than the individual units, is that correct?

A. I believe that is indicated in some of that early pricing.

Q. Can you tell me whether or not that practice or procedure was discontinued after 1937?

A. I am quite sure that it was. We had a change
2144 in management in 1938 and there were quite a few changes made along the line and I believe that we changed some of our pricing policies at that time.

Q. So that I can take the given price for a KMI and a sensatherm and thus get what is the equivalent of a set price?

A. Dating from 1938 on.

Q. Correct. In accordance with these pricing sheets that you have given me, is that correct?

A. I believe that is right because you have got all the information right here in connection with prices and method of offering for sale the various Mercoid controls to the oil burner trade.

Trial Examiner Sheppard: That is from 1937 to 1941?

The Witness: From 1938 on.

Trial Examiner Sheppard: 1938 on?

The Witness: Or 1939, really, because 1938 prices had gone in before this change took place.

By Mr. Freeman:

Q. Can you tell us whether or not Acme Tool & Gauge Company availed itself of the $8.25 price in 1940 for a JM or the $8.70 price in accordance with the contract, do you know?

A. You mean you are asking me if we sold them that year?

Q. Yes.

A. I don't believe that was included in the arrange-
2145 ment. I have a memorandum, though, that I could tell you approximately, more or less in round figures on that particular account. What year did you ask about?

Q. I was asking about 1940. I will take the same information for 1937, 1938, 1939, 1940 and 1941.

A. You are asking about 1940?

Q. I am asking about 1940, yes, first.

A. Well, in 1940 they did buy about $2100 of controls.

Trial Examiner Sheppard: How much?

The Witness: About $2100 worth. That would be over a thousand sets.

Trial Examiner Sheppard: Yes.

The Witness: No, that would only be about—based on the set prices there what was the total for a set? It would only be about 150 sets, so apparently they did not.

By Mr. Freeman:

Q. When you say "apparently they did not" you mean they never availed themselves of this so-called 300 price that was lower than the contract price where the potential was 5,000 units?

A. That would be my guess on it.

Q. I am wondering if you can give me the low price at which you sold controls in the year 1940 and I am talking about the KMI or the KM with the type H sensatherm for that year.

A. For 1940?

Q. Yes, to the Acme Tool & Gauge Company.

2146 A. Whether we sold them at the special price or the—

Q. No, I don't care whether you billed any of these firms or not. What I would like to know is what was the lowest price at which you sold to that company the KM or the KMI.

A. JM. We didn't have a KM.

Q. JM. They are the same, are they not, the JM and the KM?

A. No, they are not. They do the same. They are different. They do the same but they are different controls. The KM has been discontinued.

Q. And superseded by model JM?

A. Yes.

Q. They are both stack switches, both primaries?

A. Yes. I couldn't tell you, Mr. Freeman, what price they were billed because I don't even know if they placed the order for the 300.

Q. Well, would the Acme agreement for the year 1940 show the price at which controls were sold to that company?

A. The Acme agreement?

Q. Yes.

A. Not any more than given here.

Q. Well, then, how could we find out, and since you have here prefaced this with special, or produced a special letter which provides for a special price and an agreement which provides for still another price, how can we find out what was the low billing of a set of controls to that

2147 company for the year 1940?

A. Well, the only way I could find out would be to check the records and the invoices.

Q. Would you do that and let us have that information with respect to Acme?

A. If there is no objection to it I will.

Trial Examiner Sheppard: Yes, you can include that in your letter.

Mr. Freeman: There may be a few more as we go along,

I don't know right now and we don't want to make Mr. Owens any more work than is absolutely necessary.

Trial Examiner Sheppard: No.

Mr. Freeman: There is certain of this information, obviously, that we should have because we now have an answer saying, "We don't know whether we sold at one price or another price" and obviously they do not buy 300 sets of controls if the total billing was around $2,000.

A. That is right. That is what I said. I assumed they paid the higher price.

Q. Now, could you tell me whether or not Citro received the price of $9.20 for a JM pyrotherm as set forth in respondent's exhibit 156 or availed itself of the price set forth in respondent's exhibit 155, and again the year 1940?

A. The answer is no, they did not avail themselves of it. As a matter of fact, they did not buy any
2148 controls. I think your records indicate that there were no purchases. No investigation necessary on that one. I have got a record here on that. There are no purchases by Citro.

Q. Although you did enter into a contract with them for that year?

A. If it was signed, but we got no business out of it.

Q. By the way, do you know when you signed up that contract on January 10, 1940 whether or not Minneapolis-Honeywell had a contract with the company for the year 1940 prior to the time you signed up your contract?

A. I wouldn't know that.

Q. You personally sign a good many of the contracts with your customers, is that correct, Mr. Owens?

A. Well, at that particular time Mr. Holland acted as sales manager and he did most of it.

Q. Did you solicit contracts? When you called on the trade a good bit did you personally solicit contracts or did they all go out through the mail?

A. Well, it was handled both ways.

Q. You personally handled some of it?

A. I might have, yes.

Q. Well, now, did your company make any effort to determine when you submitted a contract to manufacturers whether or not that manufacturer already had a contract with Minneapolis-Honeywell?

2149 A. There wouldn't be any way, as far as I know, how that could be found out.

Q. You submitted your contracts and you accepted contracts, as you did from Citro Oil Burner in the year 1940, not knowing whether Honeywell had a contract with that company for the year 1940 or not, is that correct?

A. That is correct.

Q. And your company did not make any special investigation to determine whether an oil burner manufacturer had already signed up with one of your competitors, before you submitted your contract?

Mr. Haycraft: I object to that as immaterial.

Mr. Freeman: I think it is very material, your Honor.

Trial Examiner Sheppard: All right, Mr. Owens, can you tell us that?

Mr. Haycraft: He has already answered it once.

Mr. Freeman: He has answered it with respect to one company and I am now asking whether his company made it a practice?

Mr. Haycraft: Mr. Examiner, I would like to have counsel indicate to the Trial Examiner on what basis is that relevant to the issues in this case as to whether or not this witness, who is not a respondent and not on trial in this case, his company is not on trial in this case,

2150 —whether or not he took certain steps to find out whether the Minneapolis-Honeywell Company had a contract with a customer.

Now, the only possible effect it would have would be was he trying to breach a contract of Minneapolis-Honeywell, that is the only possible thing that could be brought out by that question. Minneapolis-Honeywell is on trial for entering into certain types of contracts with certain clauses in them. Where in the world can a question of this kind have any relevancy to the issues in this case?

Trial Examiner Sheppard: I think it is just a question which goes to the entire setup of the whole proposition.

Mr. Freeman: That is true.

Mr. Haycraft: With everybody, the practice of entering into contracts.

Trial Examiner Sheppard: That is the only reason that I can see.

Mr. Freeman: We have been charged with entering into contracts and because of those contracts other people could not get business.

Trial Examiner Sheppard: I don't want to take any time now to argue the question. I want to ask Mr. Owens to give us that information and pass on to something else,

if he remembers it. He says he don't know and I expect that that applies to you clearly because these companies and their customers enter into contracts every year
2151 with each other and sometimes it gets on the grapevine and they know about it and sometimes they do not. What difference does it make one way or the other? But if you gentlemen want that, I am going to let him tell you.

Mr. Freeman: Will you read the question?

(Question read.)

A. I don't believe that we have ever taken any steps in that direction any more than any of our other competitors. We just follow the usual procedure.

Q. And as a matter of fact, Mr. Owens, isn't it rather usual that an oil burner manufacturer may have contracts with two or three of the control manufacturers for the same year or for the same period?

A. I have known of cases where various control contracts were received in the mail maybe about the same time from the same customer and it would not be unusual for him to sign all of them and send them back. The smaller the customer the more apt he is to do that.

Q. And that customer then bought from either one of the control manufacturers or from one of the other control manufacturers in accordance with the contracts that he had with those companies, is that correct?

A. The smaller burner manufacturer would be the one that would do something like that, yes.

Trial Examiner Sheppard: All right, gentlemen,
2152 go ahead.

Mr. Freeman: Just off the record.

(Discussion outside the record.)

Trial Examiner Sheppard: On the record.

Mr. Freeman: I have an exhibit I would like to offer in connection with a statement made by counsel for Mercoid, particularly as to some arrangement or understanding or agreement as between the chief counsel of the Federal Trade Commission and Mercoid Corporation and I should like to offer in evidence as respondent's exhibit 168-A a letter from W. T. Kelley addressed to myself, dated June 9, 1944, and as respondent's exhibit 168-B a copy of a letter from W. T. Kelley to William F. Dinnen, attorney in charge of the Federal Trade Commission here in Chicago, dated June 9, 1944.

Trial Examiner Sheppard: All right, these will be accepted for the information of all concerned.

(The documents referred to were marked RESPONDENT'S EXHIBITS 168-A and 168-B and were received in evidence.)

Mr. Freeman: We would like also to offer as respondent's exhibit 169 a group of soft patents of the Mercoid Corporation having to do with its JM and JMI primary controls, as well as a group of patents having to do with its sensatherm room thermostat.

Trial Examiner Sheppard: Any objection to that?

Mr. Haycraft: I don't know anything about it.

2153 It hasn't been properly identified, it seems to me, Mr. Examiner.

Mr. Freeman: These soft copies, as I told you once before, are accepted in any court in the United States.

Trial Examiner Sheppard: I will take them for what they are worth for both of you to use.

Mr. Freeman: I might also say that these are the patent copies which are referred to in the Mercoid catalogues which the Federal Trade Commission introduced through the witness McCabe.

Trial Examiner Sheppard: I was going to say we have two or three of those catalogues already.

Mr. Haycraft: That may be true but I still say there hasn't been any proper foundation laid for that.

Mr. Freeman: We had the same argument with him once before with the patents owned by General Electric and he lost then on that and he ought to lose now.

Trial Examiner Sheppard: Wait a minute, Mr. Freeman. Was Mr. McCabe on the stand when one of those was mentioned?

Mr. Freeman: Yes.

Trial Examiner Sheppard: And this 169, is that an illustration of what he was speaking of?

Mr. Haycraft: If he stated so that would be a different thing, but he has no witness and he has no way of

2154 identifying this; simply an unsupported statement.

Trial Examiner Sheppard: That is the reason I am asking these questions. I thought that possibly this book of exhibits here, 169, was in reference to what Mr. McCabe was testifying about.

Mr. Haycraft: That may be, I don't know, but I still say they are not properly identified, there is no proper foundation laid.

Trial Examiner Sheppard: It is on that basis I have accepted it. If I am wrong you gentlemen will have to correct me.

Mr. Freeman: Let me explain that Mr. McCabe introduced a group of Mercoid catalogues, if you will recall, and those catalogues referred to certain patent numbers on the back page and I certainly have the right to produce copies of those patents which are referred to where Mercoid says, "We make our controls under the following patents" and I am asking Mr. Owens—you know that your catalogues actually do contain a patent notice stating that Mercoid controls are manufactured and sold under the following patents?

Mr. Haycraft: Let the Patent Office speak for itself on that.

Mr. Freeman: Well, then I can offer the patents and that is all I am doing.

Trial Examiner Sheppard: All right, Mr. Free-
2155 man. In order to expedite this matter I am going to accept that 169 for whatever use you want to make of it.

Mr. Freeman: O. K.

(The document referred to was marked RESPONDENT'S EXHIBIT 169 and was received in evidence.)

Trial Examiner Sheppard: Mr. Reporter, I have a matter here which I want to take up with you just for the record.

Mr. Haycraft: Are we going to let Mr. Owens go now?

Mr. Freeman: Yes, we are going to let him go now. Do you want to cross-examine him?

Mr. Haycraft: No, I will do that later.

Trial Examiner Sheppard: We are going to accept into the record now Commission's Exhibit 207-A and B, which was some information that I asked him to send to you, Mr. Freeman and you sent it on to me, I think, I think that is the way I got it, in reference to the tabulation of Penn Sales & Oil Burner controls, dated December the 2nd, 1943. You gentlemen remember that.

(The documents referred to were marked COMMISSION'S EXHIBITS 207-A and B and were received in evidence.)

Trial Examiner Sheppard: Mr. Owens, I am going to excuse you now and I want to thank you for coming down and I am going to adjourn this hearing today until September 7th.

Mr. Freeman: As far as he is concerned.

Trial Examiner Sheppard: As far as he is concerned.

2156 Mr. Freeman: We are going on Monday with some other witnesses.

Trial Examiner Sheppard: We will reconvene in this room at ten o'clock in the morning of September the 7th. And, Mr. Reporter, adjourn the hearing now at this hour to reconvene in this room at ten o'clock on Monday morning, July 24th.

(Whereupon, at 1:45 o'clock p. m., July 22, 1944, an adjournment was taken in the above-entitled matter until 10 o'clock a. m., Monday, July 24, 1944.)

2157

Room 1123,
New Postoffice Building,
Chicago, Illinois,
July 24, 1944.

Met, at 10 o'clock a. m., pursuant to adjournment.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Attorney for the Federal Trade Commission.

Cravath, Swaine & Moore, by R. L. Gilpatric, 15 Broad Street, New York, New York; and

Bair & Freeman, by Will Freeman, 135 South La Salle Street, Chicago, Illinois; appearing on behalf of respondent.

2158 Proceedings.

Trial Examiner Sheppard: Mr. Reporter, you can convene the hearing pursuant to the adjournment we had here on Saturday.

H. T. McANLY was thereupon called as a witness for the respondent and, having been first duly sworn, testified as follows:

Direct Examination.

Trial Examiner Sheppard: Please give us your full name.

A. H. T. McAnly.

Q. And your address, please, sir?

A. Business address?

Q. Yes.

A. 231 South La Salle.

Q. Chicago?

A. Chicago, yes, sir.

Q. You are, I believe, a representative of the firm of Ernst & Ernst?

A. That is right, sir.

By Mr. Gilpatric:

Q. You are a partner in the Ernst & Ernst firm, are you not, Mr. McAnly?

A. Yes, sir. I have been a partner since 1936 and 2159 associated with the firm since 1920.

Q. What, in general, are the types of service which your firm renders?

A. We have three related basic services,—auditing, tax counsel and special services.

Q. In which of these branches has your work fallen?

A. Practically all my time in the last twenty-four years has been devoted to the service we class as special, which is a broad outgrowth of our system and systematizing and cost accounting, covering all types of cost accounting applications, budgeting, production planning and other allied industrial accounting and engineering service.

Q. At the present time what are your particular duties in the firm?

A. Well, at the present time I have direct supervision over all of this special work, cost accounting, and so forth, in our nine mid-western offices, namely, Chicago, Milwaukee, St. Paul, Minneapolis, Indianapolis, Denver, St. Louis, Kansas City and Memphis and with two other partners exercise indirect supervision over the other thirty-six offices in the United States and Canada.

Q. And this supervision relates to the cost work and other special services that you have described?

A. Yes, sir, all of which is an outgrowth, a broad outgrowth of cost accounting.

2160 Q. Are you a certified public accountant, Mr. McAnly?

A. I have been a certified public accountant since 1923 by American Institute examination in the State of Indiana and subsequently have been granted certificates in Illinois, Iowa, Minnesota, Missouri and Wisconsin.

Q. Have you any connection with any accounting bodies or organizations other than your own firm?

A. Well, I am a member of the American Institute of Accountants, a charter member of the National Association of Cost Accountants, a member of the Illinois Society of Certified Public Accountants and a member of the Illinois Manufacturers Cost Association. I am also a member of the advisory committee on accounting at the College of Commerce and Business Administration at the University of Illinois and also a member of the advisory board of the International Accountants Society and co-author of their elective course in standard cost accounting.

Q. Have you written any other articles or made any other publications?

A. I have had a number of articles on cost accounting subjects which have appeared in the Comptroller, the official publication of the Comptrollers' Institute of America, the Journal of Accountancy, the official publication of the American Institute of Accountants, the American Management Association bulletins and other technical publications.

2161 Q. Have you ever addressed any of these bodies to which you have referred?

A. I have addressed various technical groups on various cost accounting subjects, including national and regional conventions of the Comptrollers' Institute of America, the American Institute of Accountants and the National Association of Cost Accountants and have also appeared before twenty-four meetings of local chapters of the National Association of Cost Accountants in various cities in the country.

Q. Has your firm served as the regular auditors for Minneapolis-Honeywell Regulator Company?

A. No, sir. Our firm is not the regular auditors of this company. However, in our special work we serve many companies that are not our own audit clients.

Q. Have you done any such special work for Minneapolis-Honeywell?

A. Well, about a year prior to this assignment we were called in to consult with the comptroller of the company on many of his accounting problems, particularly cost accounting, arising from the introduction of the war program in their plants.

Q. You referred to "this assignment". Do you mean the work that Minneapolis-Honeywell asked you to do in connection with the charges in this proceeding that Minneapolis-Honeywell has violated the Robinson-Patman Act?

2162 A. Yes, sir.

Q. And when did that assignment take place?

A. We were asked to conduct this investigation in May, 1943. So that this other work for this company dealing in cost problems started just about a year prior to that. I might add that more than twenty years ago I personally, as a representative of Ernst & Ernst, did install the accounting and cost system at the Honeywell Heating Specialties Company, which later became a part of this company.

Q. Well, other than the connections which you have just described, have you or your firm had any other relationships with the Minneapolis-Honeywell Regulator Company?

A. None except that I have continued and am today working with the company executives on many of their pricing problems in connection with the war effort as far as cost accounting is concerned.

Q. Now, will you describe in a general and brief way the nature of your engagement by Minneapolis-Honeywell for the investigation you made in connection with this proceeding?

A. Well, I believe that we covered that rather briefly and clearly in the introduction of our letter. We were asked during the month I mentioned to conduct an investigation for the purpose of developing factual data as to the cost differentials applying to the various brackets, price classification brackets of the oil burner manufacturers. At

2163 the same time we were requested to discuss this informally with a representative of the Commission, Mr. Warmack. This was done and in substance Mr. Warmack explained that they were only interested in developing facts and that by working with him as we proceeded in

this engagement, in discussions of principles we would probably save a lot of subsequent argument that so often results where two accounting minds attempt to get together.

We had the privilege of these informal discussions over an extended period and I am sure they were helpful to both sides. I believe the contents of this report as a result of these discussions represents, in general, a meeting of the minds of both parties. There may be some details that would have been approached differently but I think I am correct, if I understand the reactions of Mr. Warmack in some of these meetings with me or with my associates who did the detail work. I think I am correct.

Mr. Haycraft: I will object and move to strike the last part of the answer that indicates whether it was agreeable to Mr. Warmack or the Commission. That can be brought out later. Of course, the statement that they have attempted to comply is proper but I think the statement that he believes that he did is not proper.

Mr. Gilpatric: We are not offering this testimony to show that the Commission has accepted or is in agree-
2164 ment with this report.

Mr. Haycraft: I just want to protect myself on that.

Mr. Gilpatric: Surely, we understand that.

The Witness: My only thought, if I may say so, in mentioning this is to show you that we have tried to work out and get into agreement on many points that might be controversial at a later date.

Mr. Haycraft: That is my understanding also, Mr. Examiner.

Mr. Gilpatric: You are speaking principally of procedure?

The Witness: Procedure and method of approach, not figures. Mr. Warmack has not verified the figures.

Trial Examiner Sheppard: I think I will strike from the record any reference to Warmack being in agreement. Let him speak for himself on that and then let me and the Commission decide between the two.

Mr. Gilpatric: Mr. McAnly—

Trial Examiner Sheppard: By the way, Mr. McAnly, did you say you started that study in 1943 with reference to this matter?

The Witness: Yes, 1943 and I think our report is dated February 7th.

Trial Examiner Sheppard: Was that before the 2165 Commission's complaint?

Mr. Gilpatric: Oh, that was after. The Commission's complaint, I believe, was in February and their engagement began with Mr. McAnly in May.

Trial Examiner Sheppard: I just wanted to get the locale.

By Mr. Gilpatric:

Q. Mr. McAnly, was this work under your charge?

A. This work was conducted under my direction and my participation was much greater, relatively, than normally a partner of the firm would participate in a detailed study of this character; because of its special nature. As explained in the report, we used from four to eight field men who would gather this data, together with employes of the Minneapolis-Honeywell Company and then we would get together for a final review and discussion of principles and tabulations and so on. I, of course, did not do all the detail work; that is obvious.

Q. Will you tell us whether or not any restrictions or limitations were put upon you in this work by Minneapolis-Honeywell?

A. No. As in all cases where we are called upon to conduct an investigation and render an opinion, the scope of the examination must be left to our discretion. Of course, the scope may be modified, that is, the objectives may 2166 be modified but it is up to us to conduct a sufficient scope of examination to render our opinion and accept figures as factual.

Q. What about the methods and procedures which you used in your apportionment of costs in this case? Were they your own decisions or not?

A. Oh, all of the procedures that were developed to apportion operating costs are our own and, of course, they coincided with similar procedures that have been used for years in cost accounting.

Mr. Gilpatric: Will you mark this, please?

(The document referred to was marked Respondent's Exhibit 170 for identification.)

Q. Mr. McAnly, is this document, respondent's exhibit 170 for identification, which I hand you, the report which you made in the manner you have just described?

A. That is correct, yes, sir.

Mr. Gilpatric: Mr. Examiner, before offering this I

would like to make this brief statement, not as evidence but as simply showing the purpose of the offer.

Our position in this case is that in so far as Count 3 alleges a violation of the Robinson-Patman Act in that the price brackets constitutes discrimination, that that discrimination has not been shown to have any substantial effect or the likelihood of substantial effect on competition, either among oil burner manufacturers or between respond-
2167 ent and other control manufacturers. That is our first defense.

Our second defense is that even if these discriminations would otherwise exist, that to the extent the price brackets represent reductions in price they were made in good faith to meet competition. But in addition to those two grounds of defense the statute, of course, offers this third ground, namely, justification of differentials in price by differentials in cost, so that with that defense in mind respondent had made the study to which Mr. McAnly has referred and which I am about to offer.

Now, according to this report the overall difference between the highest price which Minneapolis-Honeywell charged to oil burner manufacturers and the lowest price is justified by differentials in cost. The report also apportions between brackets these costs up through bracket 3-A, so that out of the eight price brackets there is an apportionment between brackets in five of the eight cases.

As to the last three brackets, 4, 4-A and 5, the report does not apportion costs because, as it shows, when you use an inter-bracket apportionment you do not have enough costs when you get to bracket 4 to cover the difference in price between 4, 4-A and 5.

Now, as Mr. McAnly has pointed out, in approaching this study he attempted,—his firm attempted to follow in gen-
eral procedures and methods which would prove to be
2168 acceptable to the Commission. Whether they are or not we will hear. But in doing so there was excluded a number of costs which are not readily apportionable.

For example, there are manufacturing costs amounting to in this particular year,—1941 was selected because it was the most recent normal pre-war year of the company,—manufacturing costs of $7,665,000 were left out completely. There is no attempt made to treat those as variable costs whatever, in accordance with the different quantities purchased by different customers; and other costs, advertising

and general administrative and selling expense, amounting to over a million dollars, were excluded.

Now, in submitting a report on this basis we do not want to be taken as conceding that those costs cannot be apportioned. We admit that if we tried to apportion them we would probably run into differences of view with the Commission's accounting staff and we would also have considerable difficulty in arriving at a basis of apportionment that would perhaps be acceptable generally in the accounting profession, although our position is that many of these items of costs which were excluded do affect the price, the costs at which products, oil burner controls, are manufactured for sale to customers in different quantity brackets.

I just wanted to make it clear that while only a part of the costs in the particular year selected have been ap-
2169 portioned for this report, we do not admit, and neither do Ernst & Ernst, that these expenses are not affected by customer quantity differences.

We, therefore, offer in evidence Respondent's Exhibit 170.

Mr. Haycraft: May I ask a question of counsel as to his statement?

Trial Examiner Sheppard: Yes.

Mr. Haycraft: Do I take it, then, that there is no contention on your part that the differences in the lower brackets, that is, 4, 4-A and 5, are justified?

Mr. Gilpatric: Our position is that in so far as this report is concerned we do not establish or attempt to establish cost differentials between those brackets. We do say that the overall price difference between the discount bracket and bracket 5,—those are the top and bottom brackets—

Trial Examiner Sheppard: 4 and 5, between 4 and 5?

Mr. Gilpatric: No.

Mr. Haycraft: Between 1 and 5.

Mr. Gilpatric: Between 1 and 5. I say the overall, the price difference is justified by cost differentials, but by this report we do not try to establish and we do not establish that between brackets 4, 4-A and 5 there are cost differentials equal to the price differentials for the reasons that I have given, namely, we have excluded certain items of cost and we do not push the inquiry that far.

2170 Mr. Haycraft: I take it, then, from what you have said that you do not intend to go into any further discussion on the study of these costs which have been excluded, like manufacturing costs on products sold, and so on.

Mr. Gilpatric: No. As I have indicated, we are not relying solely, by any means, on this particular defense in answering the charges of this complaint.

Mr. Haycraft: Are you relying on this report?

Mr. Gilpatric: We are relying on this report in so far as it goes and we think it indicates within its four corners what we want to show in this case so far as cost differentials are concerned.

Mr. Haycraft: Is this report to supplement or to replace the one that you put in previously?

Mr. Gilpatric: Well, the report that we put in previously, the 1938 report so-called, about which Mr. Lockrae testified, was not offered by us to justify price differences in that year or in any other year.

Trial Examiner Sheppard: Was that exhibit 2?

Mr. Gilpatric: No, that is exhibit 124. We made clear at the time,—in fact, respondent did not want to offer that at all. We only offered certain conclusions from that to show the fact that we had attempted in good faith after the passage of the Robinson-Patman Act to check our price differences against the cost differences, but we never
2171 offered that as a defense in this case under Section 2(a) of the Act.

Trial Examiner Sheppard: Well, I take this proposed exhibit here to be a further study along that same line in greater detail, but rather supplementary, is that correct?

Mr. Gilpatric: No, the two are not the same thing at all.

Trial Examiner Sheppard: Aren't they?

Mr. Gilpatric: This is a report prepared by an independent firm of public accountants who, we think Mr. McAnly's testimony shows, are expert in this work, whereas the other report was prepared by Mr. Lockrae, who is a representative of the company and who is simply trying to find out for his own information and for that of the company in determining his future pricing policy what the—

Trial Examiner Sheppard: All right. That is what has been referred to heretofore as the cost study that you made, I understand.

Mr. Haycraft: What I am trying to find out, Mr. Examiner, is whether this is the report that they are going to use in defense, or are they going to use the other report to supplement this?

Mr. Gilpatric: No, this report and this is as far as we propose to go on this line.

Trial Examiner Sheppard: All right. Now, there
2172 is one question I want to ask you, Mr. McAnly. While you were making this study and investigation why weren't the matters of the cost that Mr. Gilpatric referred to,—why weren't they taken into consideration at that time,—advertising, and so forth? He said it represents approximately a million dollars.

The Witness: Well, let me explain this. To go back retroactively,—let us take the fixed item of those manufacturing costs: Due to the method of manufacture, to go back retroactively would require the existence of certain types of records which do not exist at the present time. Now, on page 5, if I may refer to the report, where we mentioned that, "No attempt has been made to measure the effect of these items," we make the statement which I think anyone would recognize, that:

"It is obvious that purchases made by large volume customers materially affect the manufacturing cost of products sold because of the economies possible in the purchase of increased quantities of raw materials and parts and the decrease in manufacturing labor and overhead costs due to increased efficiency resulting from larger production lots attendant with the leveling out of seasonal fluctuations in production. The relative size of production orders for stock is directly affected by the quantity contribution of the individual customer for whom the production is planned."

2173 If I may again refer to conversations, I mentioned previously that we tried to work together and cooperate and have an understanding of the principles used and I recall discussing this point with you—

Mr. Gilpatric: By "you" the witness means Mr. Warmack.

The Witness: Mr. Warmack, where the statement was made that where quantities are made for stock it is difficult and not acceptable from the standpoint of the views of the Commission to attempt to show the relative effect of the quantity contribution on the various customers and in the absence of detailed production records which would specifically show that this particular lot of production, made in a big quantity at a greatly reduced cost, were laid up on the shelves of this particular large customer, we felt that we had nothing in the way of detailed records behind us that we can use to approach the problem; but we do feel that this report is not complete, but as far as it goes it is factual.

Trial Examiner Sheppard: Now, would there have been any difference in the results that you show in that report, presumably,—I haven't looked over it,—would there have been any differences in the picture and the results had consideration been given to these things you say you have eliminated?

The Witness: We have eliminated—

2174 Mr. Haycraft: I am going to object to that question, Mr. Examiner.

The Witness: I would love to answer that question.

Trial Examiner Sheppard: Why?

Mr. Haycraft: On the grounds it is too problematical.

Trial Examiner Sheppard: Well, I don't know.

Mr. Haycraft: We can't tell unless we have the facts.

Trial Examiner Sheppard: That may be, but I just wanted to know if there would have been any difference in your results.

The Witness: May I just say this, that anyone will recognize that they would make a difference. The thing that I am not in possession of is what difference, the extent of the difference.

Trial Examiner Sheppard: That covers it, then.

The Witness: But it is certainly obvious that if you operate at a certain production level and then introduce a large volume from certain customers, that you decrease the cost of operations per unit, lessen the fixed expense on the greater quantity of production. The only point I want to make is that the report should not be accepted as a complete study of all items of operating. I think that is all covered in the contents.

2175 Trial Examiner Sheppard: It is?

The Witness: Yes.

Trial Examiner Sheppard: All right. Do you have any objection, Mr. Haycraft, to this particular exhibit?

Mr. Haycraft: Of course, I will have to have it examined by our accounting expert. I don't think there is any question but what it is admissible and we can, probably, subject to a motion to strike or maybe a portion thereof, later, I have no objection at the present time.

Mr. Gilpatric: Probably most of Mr. Haycraft's objections, which I hope will be few, will go to the weight of it rather than the admissibility of it.

Trial Examiner Sheppard: I am going to accept it, gentlemen, just like it is now and if there is anything that occurs to Mr. Haycraft afterwards that you want to sub-

mit any motion on, I will consider it at that time. So you can mark this exhibit 170 and accept it in the record.

(The document referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 170, was received in evidence.)

Mr. Haycraft: Now, I would like, Mr. Examiner, to defer cross-examination of this witness until Mr. Warmack has a chance to study it. I may have some questions of my own that may be good or bad, I don't know, I want to consult with my associates, but I would like to have until 2176 tomorrow morning to study it.

Trial Examiner Sheppard: I think in the matter of a report of this kind time ought to be allowed to counsel to look into the matter and I will grant that motion.

Off the record a minute.

(Discussion outside the record.)

Trial Examiner Sheppard: On the record. I will just defer cross-examination until September 8th, when we come back.

Mr. Gilpatric: September 8th, as far as you know can you be back?

The Witness: Yes.

Trial Examiner Sheppard: Let the record show the Examiner excuses the witness and we will defer his further examination to allow the accountant for the Commission and counsel for the Commission time to study exhibit 170 and I am going to have you come back again on September the 8th, at 10 o'clock in the morning, for further examination. Until that time we will excuse you.

Mr. Reporter, take an adjournment until 2 o'clock.

(Whereupon, at 10:40 o'clock a. m., July 24, 1944, a recess was taken until 2 o'clock p. m. of the same day.)

2177 Afternoon Session.

2:00 p. m.

Trial Examiner Sheppard: Come to order. You may proceed, gentlemen.

DONALD J. GOULD, was thereupon called as a witness for the respondent and, having been first duly sworn, testified as follows:

Direct Examination.

Trial Examiner Sheppard: Please state your full name.

A. Donald J. Gould.

Q. Mr. Gould, give us your business address, please, sir.

A. 858 Book Building, Detroit, Michigan.

Trial Examiner Sheppard: Go ahead, Mr. Gilpatric.

By Mr. Gilpatric:

Q. Mr. Gould, will you state your occupation and the organization with which you are connected?

A. I am the Detroit area manager for the Ross Federal Research Corporation.

Q. How long have you been with that corporation?

A. About ten years.

Q. And what other work have you done for them besides direct research?

A. Well, as is customary in our organization, why,
2178 I spent about two years out in the field as a research interviewer and research supervisor and then I spent about two years in the office as production manager and then I was promoted to the position of research director, which I now hold.

Q. How old an organization is the Ross Federal Research Corporation?

A. The Ross Federal Research Division of Ross Federal Service, Inc., is about twelve years old.

Q. How many offices has that corporation?

A. 32 offices.

Q. And what is the nature of the service it performs?

A. We do general business surveys for manufacturers and radio stations and publications, distributors, department stores and general types of business, automobile manufacturers.

Q. Can you give us any idea of the scope of the business carried on by Ross Federal?

A. Well, in the years prior to the war we made an average of about 1700 surveys a year.

Trial Examiner Sheppard: How many?

The Witness: 1700.

By Mr. Gilpatric:

Q. To your knowledge have any of the results of surveys conducted by Ross Federal been accepted by governmental agencies or commissions?

2179 Mr. Hayeraft: That is objected to as irrelevant and immaterial.

Trial Examiner Sheppard: This is put in in connection with his experience. I will let it go in. Give it briefly.

The Witness: I can't tell you without consulting the records. I know that we have had some studies made which have been submitted as evidence before the Federal Communications Commission in Washington in radio station hearings for granting of licenses. I don't recall any others offhand.

By Mr. Gilpatric:

Q. Mr. Gould, was your company asked by Minneapolis-Honeywell Regulator Company to make any survey or analysis in connection with this Federal Trade Commission proceeding?

A. Well, not as such at the time the request was made. We were requested to make a study of the price structure of dealer, wholesaler and manufacturer on household burners of two and a half gallon capacity or less as those prices existed in 1941. At the time the request was made we were not told what the information was to be used for. We were just merely asked to make the survey in the routine manner just as we do most surveys.

Trial Examiner Sheppard: When was it made, the beginning and ending?

The Witness: The field work was started in June, 1943 and ended in September, 1943. The tabulations or 2180 analysis of the study was carried on through to the 15th of January, as I recall it, this year.

Trial Examiner Sheppard: All right.

By Mr. Gilpatric:

Q. Will you outline generally the manner in which you proceeded to make this survey?

A. Well, I met with Mr. C. B. Swett and Mr. Lockrae at the time they said they wanted this work done and they outlined to me, as I previously stated, that they wanted an analysis of the price structure, after which we prepared a questionnaire. We took that questionnaire out in Minneapolis to test it, to be sure that the answers we got were unbiased and then we asked them what areas they operated in so we could make a typical cross-section and get accurate information and they gave us their operational areas and from those we selected fifteen cities in which to do the survey.

After we had made that selection we took that out to Mr. Swett and Mr. Lockrae and asked them if there was anything that might be a local condition or an unusual condition in any of the areas where we wanted to make this survey and, if so, we would like to know it and they said the selection was satisfactory and that it was typical of the areas in which they operated.

Q. Having made that selection of areas,—as I understand it, Ross Federal picked the cities within these
2181 general areas that were given to it in the first instance?

A. That is right.

Q. Having made that determination of areas what was the next step that you did?

A. The next step, of course, was to set up the field work. I went out to all of the cities with the exception of—let's see.

Q. Look at your record.

A. I will have to consult my record on that because I don't remember just what the cities were. I went out myself to the cities with the exception of Cedar Rapids, Waterloo and Milwaukee and set the survey up with my supervisors in each one of the cities and stayed there to see that the work was properly done the first couple of days. The three cities which I gave as an exception were set up by my production manager, Mr. B. B. Bray, of Minneapolis.

Q. Well, how did you set up these surveys?

A. Well, we went out and took the telephone book first in each city and looked up the jobbers and dealers under the classified section of the telephone book and then after that I went to see the manager of Minneapolis-Honeywell in each one of these cities and asked him for his salesmen's route books, which I compared with the list that we had

made from the telephone directory, to be sure that it was complete. I just merely made that request and did
2182 not tell them what it was for. They had been authorized by Mr. Swett to let me have those books and I took them over to a desk and sat down and looked them over and took the information as to the dealers off of them, as to who the dealers were and just merely gave them back to the manager without any explanation as to why we wanted them.

Q. In other words, the information you got from these call books was to verify the information you got from the telephone directory as to who were the oil burner dealers and jobbers in that particular city?

A. To verify and to add, because you cannot get in the classified telephone directory all of the people that handle the product in a community.

Q. Well, as a result of your work how many different jobbers and dealers in the oil burner trade were called upon?

A. 535, as contained in my certification.

Q. Now, after you got the results of the field work done with those 535 different wholesalers and dealers, what did you do then?

A. Well, we brought the questionnaires in and made a preliminary tabulation by the city of the information that was obtained.

Q. Did you take any step to verify the information as to oil burner prices that you had received from these wholesalers and dealers?

2183 A. Well, we did for this reason: When we got the information in,—we make in our organization a number of surveys of this type, in which we get price information from manufacturers and usually the information patterns up fairly well as to prices. In other words, there isn't any particular wide range in prices. In this particular case we found that there apparently was no pattern of prices. In other words, we went out and interviewed these dealers and wholesalers and they gave us information as to the prices they paid and the prices they charged and they in most cases signed the reports that the information was correct, but when we got into the office we found that those would not pattern to any particular price range and, therefore, we wrote to the manufacturers of these burners. As I recall, there were 92 of them.

Q. 83, I think.

A. 83, I beg your pardon, and asked them to verify this information, telling them that we had made this price survey for Minneapolis-Honeywell and that the dealers had given us these prices and enclosed a copy of our original, from our tabulation that showed the prices that had been given us by the dealer and asked them if they would verify this for us and in 69 of the cases, why, they came back—

Q. 64, wasn't it?

A. 64, I beg your pardon. In 64 of the cases they came back and verified that information for us.

2184 Q. Well, now, in the report which I will refer to in a minute, did you use any unverified price information, that is, any information you got from dealers and jobbers which was not subsequently corrected or confirmed by manufacturers?

A. No. All the information in this report was from verified information.

Q. Well, will you just tell us briefly what information you were trying to get by this survey?

A. Well, the information they were trying to get in this survey was the price structure as to what the dealer paid wholesale from the manufacturer or from the distributor for oil burners and the price at which those burners were sold.

Q. Is that oil burners complete with controls?

A. Well, if you don't mind I will get my instructions on that. If you will get me my brief case, it has that information in it. What was the question again, Mr. Gilpatric?

Mr. Gilpatric: Read it, please.

(Question read.)

A. Yes, it was oil burners complete with tank and a pipe and controls. That was on the—wait a minute, I am a little bit confused on it. There are two sections to this thing. Well, now, the retail prices—I beg your pardon, there is a correction here. The retail prices were with the tank and pipe and all. The wholesale prices were merely with controls. The installed price was the one which I

2185 understand doesn't have any bearing in this hearing.

You see, we did more than one thing in the survey. We got some sales information also, in addition to this other information.

Q. So that the prices in this report, which will be referred to—

A. Are merely with the controls.

Q. —are the prices paid by the jobber to the manufacturer or the dealer to the wholesaler for an oil burner with controls?

A. That is correct; with controls, that is right.

Mr. Gilpatric: Mark this, please, for identification.

(The document referred to was marked Respondent's Exhibit 171 for identification.)

Q. I show you a report, Respondent's Exhibit 171 for identification and ask you what that is?

A. This is a report of our findings to Minneapolis-Honeywell as to the price ranges by bracket of the jobber prices and dealer prices of domestic household burners of less than two and a half gallon capacity, per hour capacity.

Q. Do you have in front of you another copy of that?

A. That is a copy of that.

Q. Look at the third page and tell me what the references to bracket numbers in the left hand column refer to?

2186 A. Those refer to Minneapolis-Honeywell manufacturers' selling brackets.

Q. You mean by that that the prices following those brackets are the prices paid by the jobber or the dealer, as the case may be, to the oil burner manufacturers who come within that particular bracket of Minneapolis-Honeywell?

A. That is correct, yes.

Q. Where did you get the information from as to where a particular oil burner manufacturer fell bracketwise?

A. A complete list of all manufacturers in the bracket in which they fell was furnished us by Minneapolis-Honeywell at the time we started the tabulation.

Trial Examiner Sheppard: What year does this cover?

The Witness: This covers 1941.

Trial Examiner Sheppard: Just one year?

The Witness: Just at that time, yes. In our instructions to our field representatives we said, "'All information is on the basis of prices in the industry as they were in 1941, before there were any war restrictions on this equipment."

Mr. Gilpatric: I might say, Mr. Examiner, as I said this morning, the year 1941 was picked because it was the last normal pre-war year and, also, because that was the year which had been informally agreed on with Mr. Warmack as the year for the cost study.

Trial Examiner Sheppard: All right.

2187 Mr. Gilpatric: We used the same year for this study.

Trial Examiner Sheppard: All right.

By Mr. Gilpatric:

Q. Now, Mr. Gould, will you explain what this sheet to which I have referred, this third page,—it is unnumbered but it is the third page, on which there is no typing,—is?

A. It is headed—

Mr. Haycraft: Just a moment. I don't want the record to show that Mr. Warmack agreed to anything. He had no authority to agree to anything and I don't want the record to show that he did.

Trial Examiner Sheppard: Is there such a statement there, Mr. Reporter?

Mr. Haycraft: Yes.

Mr. Gilpatric: Well, let me put it this way, then, that the year 1941 was picked for the purpose of both the cost study and this survey of oil burner prices after we had talked to Mr. Warmack. We are not attempting to hold the Commission or Mr. Warmack to any definite agreement on any of these things.

Trial Examiner Sheppard: I take it, in view of what happened this morning—

Mr. Haycraft: This hasn't any relation, as I understand it, to the cost study.

2188 Trial Examiner Sheppard: I am going to leave that open as I said this morning. Mr. Warmack is not bound by anything said here because I want to have him have his say about the matter, and then I will be the judge and the Commission as to the equity of the situation.

Mr. Gilpatric: Mr. Haycraft is right, there is no relationship between these two studies except that we picked the same year for each, that is all. There is no other connection.

Trial Examiner Sheppard: I see.

By Mr. Gilpatric:

Q. Now, Mr. Gould, will you just tell us what that page is supposed to show, what the statistics there are intended to set forth?

A. Well, the figures on this page are an analysis of the difference in prices charged for burners comparing one bracket with the next highest bracket or the next lowest. I

am not familiar with the discount practices, or whatever it is, so I don't know, but it is just merely an analysis showing the difference between what was paid, on the average, by bracket 1 and bracket 2, and brackets 2 and 3, and so forth, on through it.

Q. Now, you will have to be more specific when you say "prices charged". Give us an example of what happened when you went to a particular jobber or dealer
2189 and asked him about his prices. How would you classify him,—how would you classify the information that you got?

A. We classified the information by the lowest price that was given by a bracket 1 dealer and the highest price as to what he paid the jobber.

Q. You don't mean a bracket 1 dealer. You just said that referred to the manufacturer.

A. Well, then, let me clarify that by saying that he was handling the burner in that bracket class. In other words, if you went in to a dealer who handled a burner that was in bracket 1 you asked him what he paid for that and this is an analysis showing the lowest price that was given us and the highest price that was given us by those dealers.

Q. As having been paid by a jobber to an oil burner manufacturer?

A. That is right.

Q. Who on the list furnished you by Minneapolis-Honeywell was classified in this bracket 1, is that right?

A. That is right.

Mr. Haycraft: I object to counsel testifying, Mr. Examiner.

Mr. Gilpatric: I am just trying to show—

Trial Examiner Sheppard: He is trying to simplify it.

Mr. Haycraft: That, Mr. Examiner, would all go
2190 to the weight of the exhibit and whether or not this witness is competent to identify what he is doing, or explain what he is doing. Now, if counsel is going to do it, why, that deprives me of the opportunity of objecting to the exhibit itself.

Trial Examiner Sheppard: Just don't do that, Mr. Gilpatric.

The Witness: I will be glad to answer. If there is anything that you want explained, naturally, I will be glad to explain it in full. As I said, this is an analysis of the figures, after all the figures were obtained and verified and

broken down by manufacturers, Minneapolis-Honeywell manufacturers.

In other words, taking bracket 1 as an example, and the same way down through all the brackets, we found out what was the lowest price, we asked each jobber what he paid for his burner when he got it from the manufacturer.

Mr. Haycraft: Mr. Examiner, I would like at some time or another to be able to offer an objection to the offer of this exhibit. Now, I don't know whether it is going to be offered now or at some other time. They are talking about things in the exhibit and I would rather your wouldn't do that until it is passed on.

Mr. Gilpatric: Suppose I make a formal offer of it and then let Mr. Gould do his explaining?

Trial Examiner Sheppard: All right.

2191 Mr. Gilpatric: Let me first make this brief preliminary statement.

Mr. Haycraft: Yes, I would like to know the purpose of it.

Mr. Gilpatric: The purpose of this offer is as follows: One of the issues raised by Count III of the complaint, which we talked about this morning, is whether or not competitive conditions among the oil burner manufacturers as contrasted with control manufacturers has been affected by the alleged discriminatory price structure of Minneapolis-Honeywell, that is, these price brackets.

Now, you have heard a number of different oil burner manufacturers testify in this case both for the Commission and for the respondent, but respondent felt that to get a better picture of the industry as a whole we should not confine ourselves simply to the testimony of the few who appeared here, so this survey was undertaken and it shows the prices charged by oil burner manufacturers in 1941, some 64 in number out of a possible 83, as reported first by the jobbers to the dealers, some 535 of whom were interviewed, who actually paid the prices. They were the people that bought the oil burners from the manufacturer and they paid various prices ranging all the way, as this shows, from down in the forties up to over a hundred.

Now, that information was then verified by going
2192 back to a particular manufacturer and asking, as Mr. Gould has pointed out, "Are these prices which we have from your trade correct in accordance with what your prices actually were in 1941?" And when that information was so verified it was used in this survey.

The result is that we have what, in our opinion, is a comprehensive survey of the price conditions in the oil burner industry for the year 1941 as compiled by an independent research organization that went out and did this job, having had similar work carried on by this organization for ten, twelve years, and who come in here and offer in the form of a report, which we in turn offer in evidence, the results of that in the form of showing the high and low prices charged by oil burner manufacturers classified according to the particular bracket in which they were treated by Minneapolis-Honeywell for the purpose of what prices they paid, in turn, to Minneapolis-Honeywell for their controls and we think that the relationship, or the lack of it, between what the oil burner manufacturers charged their customers and what Minneapolis-Honeywell charged the oil burner manufacturer for the controls has a definite bearing and is definitely material on the issues of Count III and, in particular, the issue of whether these price brackets of Minneapolis-Honeywell did have the effect or had the tendency or likelihood of substantially affecting competition among the oil burner manufacturers.

2193 Now, it seems to me that again we are faced with a situation where any objections that are raised to this kind of a survey or the results of it go to the weight, how much credency, how much importance should be attached by the Commission to the results of this sort of a survey. You don't have here 64 manufacturers or 535 dealers but you have a man under whose supervision this survey work was carried on and we offer it simply as that, no more and no less.

Mr. Haycraft: May I ask the witness a couple of questions?

Trial Examiner Sheppard: Yes.

By Mr. Haycraft:

Q. When you say "verified", did you personally verify whether or not the prices quoted were actually received or did you rely upon the result of a questionnaire or statement made?

A. No, in verifying we relied on letters received from manufacturers.

Q. You did not check the information back against the original records?

A. Yes, it was checked against the original record.

Q. You looked at the invoices?

A. We didn't look at the invoices. We took the dealer's signed statement.

Q. I am asking you—please answer my question. Did you look at the invoices?

2194 A. We did not, no, because in a great many cases we find that these people do not keep records.

Q. Then they had to trust to their recollection?

A. That was why we verified the prices with the manufacturer.

Q. How could you verify them if you did not look at the invoices?

A. Well, because the manufacturers had records of what they charged these people. We asked them what they charged them.

Q. How do you know they told you the truth about it?

A. We wrote them a letter and asked them to tell us what they charged.

Q. That is what you relied on?

A. Yes.

Q. Did you check the records of the manufacturer or the jobber?

A. Well, the way—

Q. Now, just answer my question, please. Did you check the records of the manufacturer or the jobber?

A. No.

Mr. Gilpatric: We concede that he did not.

Mr. Haycraft: Then, Mr. Examiner, the exhibit is wholly incompetent as well as irrelevant. We cannot try a case and use this as legal evidence when neither the man that prepared it nor anyone connected with it is in position

2195 to say that any statements in there with respect to the prices are correct. It is based upon hearsay, legal hearsay and I submit it is a fundamental objection that cannot be overcome by simply saying "We offer it for what it is worth," because it isn't worth anything.

Mr. Gilpatric: Mr. Examiner, reports of this nature have been used now for a decade in this country both by American business and by governmental agencies. The Department of Commerce, the Federal Trade Commission—

Mr. Haycraft: Wait a minute. The Federal Trade Commission has never done it. They have never used anything like that.

Mr. Gilpatric: Well, we will just stick then to some of the other governmental agencies. The Department of Labor, Bureau of Labor Statistics, I know the Department

of Commerce has, I have seen the reports and this witness has testified the Federal Communications Commission has accepted reports similarly prepared by his organization.

Now, to be sure, if you are going to classify it according to one of these pigeon-holes in the law of evidence, it is not the best evidence. You would have to have in here all of these 535 dealers and all of these 64 manufacturers and if we are not going to be allowed to offer a report independently prepared of this nature, we are going to have to carry on here for a long time and call in 64 manufacturers,
2196 because we are going to get it in the record and we have tried to do it in a fair way and in a way that it couldn't be charged that it was information emanating from respondent's files or someone that was biased or interested in this proceeding and this witness is here to tell you how he did it and the basis of the experience that formed the foundation for it.

Mr. Haycraft: I don't quarrel with the witness, Mr. Examiner. He told us how he did it. It is because of that particular fact that it is not evidence.

Mr. Freeman: That goes to the weight that you give it.

Mr. Haycraft: No, it does not. It goes directly to whether it should be received or not. There has got to be some foundation. It has got to have some foundation and there is no foundation. You haven't any foundation at all. It is different entirely from the exhibit this morning. We had a report this morning where the man prepared the report from the original records, he went there and verified it from the original records themselves. That is a different proposition. We don't have that here.

Mr. Gilpatric: You understand, Mr. Examiner, that this witness and his organization just did not simply accept the recollection of some little oil burner wholesaler or jobber as to what happened three or four years ago. He went out and went back to the manufacturer who, as this wit-
2197 ness says, of course had records on the prices at which he sold his goods in 1941 and where he had those two things corrected and coincided and checked against each other then and then alone was the price used.

Mr. Haycraft: Mr. Examiner, the fundamental error is this, that we are entitled to talk to and see the man who made those prices, that is, the original manufacturer, to see whether he made those prices and whether they are accurate. An exhibit of this kind and character should be based on evidence that has been received in this case, that is O. K.,

but you are putting the cart before the horse. If you had your invoices, your other evidence, your invoices from the manufacturers and jobbers, then you could give the exhibit a proper foundation.

Trial Examiner Sheppard: When you gentlemen first brought that out I thought that was what it was, that it was a compilation of the invoices, and so forth, that we have sworn statements on in this record from the men who did make those sales and I thought it was going to be such a compilation.

Mr. Gilpatric: Well, now, Mr. Examiner, we have here and we will be glad to offer them, the original letters written by these manufacturers to this organization certifying to their prices.

Mr. Haycraft: That doesn't help us. Those manu-
2198 facturers have got to be on the witness stand subject to cross-examination. That is the way we try cases in the Federal Trade Commission.

Mr. Gilpatric: Well, I respectfully differ. I don't think it is—

Trial Examiner Sheppard: Well, gentlemen, one of you says this report is of no value or no weight and the other attributes a great deal of weight to it. I am going to take it, Mr. Freeman and Mr. Gilpatric. I rather agree with Mr. Haycraft on that question, however, but I will give it such consideration as I think it is worth and the Commission will, too, and you gentlemen can use it as you see fit and I am going to accept it on these terms.

Mr. Haycraft: Of course, I have an exception automatically?

Trial Examiner Sheppard: Yes.

(The paper referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 171, was received in evidence.)

By Mr. Gilpatric:

Q. Just one further question, Mr. Gould, now that exhibit 171 is a part of the record. Will you just explain what the pages following the third page, about which I asked you before, represent? That is, the fourth, fifth, sixth and seventh pages of the report. Unfortunately, they are
2199 not numbered. Will you tell us what they represent?

A. Well, the following pages are merely a further analysis of the first table, which is a condensed table of all the areas. The following pages by manufacturers' bracket

show the reports as they were given in each area that was surveyed.

Trial Examiner Sheppard: In the fifteen areas?

The Witness: In the fifteen areas.

Trial Examiner Sheppard: Yes.

By Mr. Gilpatric:

Q. In other words, the information on the third page is taken from the information on the following pages?

A. Yes. It is an analysis of the complete fifteen areas.

Q. Yes.

A. The others, the following pages are broken down.

Q. By these fifteen areas, as the Examiner pointed out?

A. By the fifteen areas.

Q. Now, what about this last?

Trial Examiner Sheppard: Now, Mr. Gould, I was going to ask you that. Have you got a sort of a summation of the whole proposition?

The Witness: Well, that is this third page here showing the difference in prices between the various brackets. In other words, as I started to say when he interrupted me here, to give you an analysis of how this works out, take bracket 1, for example, and it goes right on through 2200 that.

Mr. Freeman: Go ahead and explain it. When you say, "It goes right through" the record is not clear.

The Witness: The same thing is done in each bracket so that if you explain it, why, you have explained the whole thing. In bracket 1 we have asked the dealer or the jobber what he paid the manufacturer and the lowest price we got in those fifteen areas was $50. The highest price that we got when we asked the same question, "What did you pay for your burner," was $111.00.

By Mr. Gilpatric:

Q. That is the same manufacturer, now?

A. No, not the same manufacturer.

Q. The same area?

A. No, not even the same area. This is an analysis of all fifteen areas.

Q. Oh, yes.

A. The other is compared back here. The lowest price we got in all the fifteen areas was $50.

Mr. Freeman: For bracket 1?

A. For bracket 1. And for bracket 1; asking the same

question, "What did you pay the manufacturer for the burner," the highest price was $111.00. Well, that might have been a different manufacturer but he was still in bracket one.

Mr. Freeman: Right.

2201 Mr. Haycraft: But did you know that—how did you know whether he had the same equipment on it?

The Witness: That was not gone into, as to just what the equipment was. We asked what the price was.

Mr. Freeman: It was the same equipment in so far as oil burner and controls was concerned, domestic oil burners capable of burning two and a half gallon or less per hour, as the witness has already testified.

Mr. Haycraft: If he doesn't know what the equipment was that was on the burner, that $111.00 might be accounted for by something else.

The Witness: I am merely telling you what we did and what we were asked to do and what came out of it.

Then this lowest price that was given us by jobbers who were handling burners of manufacturers who were in bracket 2, which is $45. So there was a difference between what the bracket 1 man paid lowest and bracket 2 of $5. The highest that was paid by a jobber to a bracket 2 manufacturer was $92—or, rather, was $96.20, or a difference between bracket 1 and bracket 2 of $14.80.

Now, the same comparison is made all the way through the report. This is the jobber price and this is the dealer price but the same formula is used all the way through.

Trial Examiner Sheppard: All right.

Mr. Gilpatric: Have you a copy of the question-

2202 naire here that you used?

The Witness: Yes, I have. Here is a copy of the questionnaire that was used.

Mr. Gilpatric: Mark this, please, respondent's exhibit 172 and this document respondent's exhibit 173 for identification.

(The documents referred to were marked Respondent's exhibits 172 and 173 for identification.)

Q. This sheet called respondent's exhibit 172 for identification is the questionnaire I asked for?

A. That is correct.

Q. Is that the questionnaire which was used in the interviewing done by representatives of your field force with the 535 dealers and jobbers to whom you have referred?

A. That is right.

Q. Is this document, respondent's exhibit for identification No. 173, the instructions issued to your field representatives in connection with the use of that questionnaire?

A. That is correct.

Mr. Gilpatric: I offer those both in evidence.

Mr. Haycraft: I object to them as being wholly irrelevant and immaterial.

Trial Examiner Sheppard: Those were issued, what you sent out to them?

A. That was the questionnaire.

2203 Q. It was a questionnaire, was it?

A. A questionnaire, and it is customary in all research services to issue written instructions to the people who do the field work and that is the written instructions to those people as to how to conduct the field work.

Q. And, of course, you got answers back from these people?

A. That is correct.

Mr. Gilpatric: You took these questionnaires around, as I understand it.

The Witness: By personal interview, yes, to all the dealers.

Trial Examiner Sheppard: That is my understanding, you sent this to them all.

A. No, the man went in and interviewed the dealer or the jobber, as the case may be, personally.

Q. I see and you got the information right there?

A. And the dealer or the jobber in most cases signed here at the bottom of the report.

Mr. Gilpatric: Referring to respondent's exhibit 172.

The Witness: Certifying that this information was correct.

Trial Examiner Sheppard: I am perfectly willing to take this, gentlemen, but I think we ought to have the whole picture and we ought to have the whole thing

2204 that was responsive to these. Of course, anybody who would want to study the report as a whole,—I mean who really studied the whole situation, would be entitled to the responses that these people made.

The Witness: You mean the individual questionnaires?

Trial Examiner Sheppard: That is right.

Mr. Gilpatric: May I say, Mr. Examiner, that we have—we don't happen to have them here,—but we have the original questionnaires that were filled out as a result of these

interviews and signed in most cases by the dealer or jobber and we will be glad to either show those to Mr. Haycraft or to put them in evidence if you wish.

Mr. Haycraft: They ought to be in evidence.

The Witness: There are about forty pounds of them.

Mr. Freeman: All right.

Mr. Haycraft: I will ship them down to Washington.

Trial Examiner Sheppard: Gentlemen, I am going to state that if it is available and any persons from the Commission's staff want to use them for any purpose or reason, then they will be available without incumbering the record.

Mr. Gilpatric: We so state on the record and they will be retained and kept available at any time.

Trial Examiner Sheppard: I will state on the record, Mr. Reporter, that, if necessary, to be available to
2205 any representatives of the Commission who want to make a study of it, and that I am going to accept and give consideration in reference to my study to respondent's exhibits 172 and 173.

(Whereupon the documents above referred to, heretofore marked RESPONDENT'S EXHIBITS 172 and 173, were received in evidence.)

The Witness: Of course, as I pointed out, there are some questions on there that have no reference to this report, on which additional information was obtained for the Minneapolis-Honeywell Company, that does not go to the hearing.

Mr. Gilpatric: But it does contain questions with reference to the price information that you have offered?

The Witness: That is right, it contains all that and more to it.

Trial Examiner Sheppard: All right.

Mr. Gilpatric: I want to supplement my statement, Mr. Examiner, that the company also has available at any time for the use of the Commission the letters which Ross Federal Research Corporation wrote to the various oil burner manufacturers, whose prices had been obtained in the field, and the original letters received back, either certifying as correct or if the information was incorrect giving the correct prices. I am not going to offer all these in evidence but they are available and can be inspected at any time by the Commission.

2206 Trial Examiner Sheppard: That is a part of the work sheets that we have been talking about?

Mr. Gilpatric: Yes.

Trial Examiner Sheppard: They will be made available if request is made.

Mr. Gilpatric: That is all.

Trial Examiner Sheppard: Any cross-examination?

Cross-Examination by Mr. Haycraft.

Q. I notice on the second page of this letter, Mr. Gould, this introductory statement you have in here, in the third to the last paragraph:

"An examination of the data obtained showed that a chaotic price condition existed throughout the industry in 1941 and that the prices given varied from one geographic section to another, and likewise varied within the geographic section itself, and that there was no definite pattern of either wholesaler or dealer oil burner prices."

What do you mean by the word "chaotic"?

A. Well, I mean they didn't match and as you can see by the—

Q. What do you mean, they were not all the same?

A. They did not seem to—in other words, in Baltimore, taking bracket 1 of the table headed, "Oil burner jobbers and dealers purchasing for the various Minneapolis-
2207 Honeywell brackets," under bracket 1, in Boston the low price was $65 and the high price was $72. In Chicago it was $79 and the high price was $84. In Minneapolis the low price was $80 and the high price was $111. You can see there that there were quite wide variations.

Q. What do you mean by "chaotic", that is what I want to get a definition of?

A. Well, I mean chaotic in that they did not show any continuity at all, that they differed widely.

Q. You mean there were different prices, is that right?

A. Widely differing prices, yes.

Q. Are you prepared to testify whether or not the prices quoted were on identically the same things or not?

A. No. The question asked—I don't know just what you mean by that; whether I knew that they were technically the same?

Q. Well, did the burner have anything other than controls on it, for instance?

A. Nothing but controls. We asked the question, "What make of oil burners did you sell in 1941 and what models of each" and we told the jobber or the dealer, whoever was

affected, that we were referring to the two and a half gallon burner, per hour capacity burner, with controls only.

Q. Well, you don't know whether the information you got, though, included tank or pipe or included installa-
2208 tion service or anything of that kind?

Mr. Freeman: He just got through saying the oil burner and controls only.

Mr. Haycraft: Now, Mr. Examiner, I am examining this witness. I did not bother them when they examined him. I am just asking the witness whether or not he knows if the information that he got included other things besides controls and the only way he could find out would be to go and come back with the original records. Now, that is why I am trying to bring this out.

The Witness: No, we defined that all in our written instructions and we said: "Wholesale price,—complete with controls but without accessories, means as they sell it to the retailer without pipe or tank."

Q. Those are your instructions when your men went to the dealers or to a jobber but my question is how do you know whether the information they gave you was in conformance with the questions you asked?

A. We don't know that, only that—

Q. Did you make any inquiry to find out why there was such a variance in the prices for the same articles?

A. We did by talking to dealers.

Q. Now, are you talking about dealers or wholesalers?

A. Wholesalers, as to asking them whether this was the correct price? Naturally, we couldn't make any com-
2209 parisons or inquiry with regard to range in prices because we could not go to one dealer and say, "You gave me such a price, you gave me your price of $111 and the fellow down the street gave me a price of $80, why this difference," because those were trade practices which it would be a breach of confidence on our part to reveal to one dealer what prices were paid by another, either dealer or jobber.

Q. It might be a different manufacturer's line?

A. That is what I pointed out before.

Q. In other words, these different prices referred to different kinds of oil burners, different brands of oil burners?

A. That is right.

Q. Different makes?

A. That is right.

Mr. Haycraft: That is all.

Trial Examiner Sheppard. Anything alse, gentlemen?

Mr. Freeman: No.

Trial Examiner Sheppard: Thank you and you are excused, Mr. Gould.

The Witness: Thank you.

(Witness excused.)

Mr. Gilpatric: Well, Mr. Examiner, except for any redirect examination that may result from Mr. Haycraft's continued cross-examination of Mr. Lockrae and for the additional information which we are to get from Mr. 2210 Owens on September 7th and, of course, any redirect examination of Mr. McAnly, who is going to appear again on September 8th, the respondent has no further proof to offer on its direct case.

Trial Examiner Sheppard: All right, gentlemen. You have stated the reasons why we will have to go into September and I am going to adjourn the hearing to convene in this room at ten o'clock in the morning on the 7th of September and to run as long as you gentlemen will require on your side and then Mr. Haycraft will be given an opportunity to state whether he wants to offer any rebuttal. We will consider that at that time.

Mr. Gilpatric: Off the record.

(Discussion outside the record.)

Trial Examiner Sheppard: On the record. All right, we stand adjourned until September 7th, at 10 o'clock.

(Whereupon, at 3 o'clock p. m., July 24, 1944, the further hearing in the above-entitled matter was adjourned until September 7, 1944, at 10 o'clock A. M.)

2211 Room 1123,
New Postoffice Building,
Chicago, Illinois,
Thursday, September 7, 1944.

Met, at 10 o'clock a. m., pursuant to adjournment.

Before:

W. W. Sheppard, Trial Examiner.

Present:

Everett F. Haycraft, Attorney for the Federal Trade Commission.

Cravath, Swaine & Moore, by R. L. Gilpatric, 15 Broad Street, New York, New York; and Baer & Freeman, by Will Freeman, 135 South LaSalle Street, Chicago, Illinois; appearing for the respondent.

2212 Proceedings.

Trial Examiner Sheppard: I suppose we are all here, gentlemen. We will proceed.

Mr. Reporter, you may convene the hearing in the Minneapolis-Honeywell case which was ordered by the Examiner to be convened in the City of Chicago on this morning, the 7th of September, 1944, for the purpose of finishing Mr. Owens' testimony and for any other matters that may come up.

Before we start I want to correct an exhibit number that the docket section has called my attention to. You all remember that at the last hearing there was an exhibit that I ordered the reporter to mark Commission's exhibit 208, which was some matter sent in to me by Mr. Malcolm Henning of the Penn Electric Switch Company. I ordered that exhibit marked Commission's exhibit 208, but it appears that it had already been marked 207-A and B and Mr. Karsner of the docket section called my attention to that, so I am going to cancel the exhibit that I ordered to be marked 208 and let that exhibit be as it is already on our records, as Commission exhibit 207 A and B. You can make your corrections accordingly.

Now, there is another matter: Under date of July the 25th, 1944 Mr. Henning sent me some figures here that ap-

pears to be the annual volume of control purchases applicable to the price brackets. It goes from bracket 1 to bracket 5. I presume that fits in the testimony somewhere of Mr. Henning.

2213 Now, it appears from my records, gentlemen, that as I have cancelled exhibit 208 I can use that for this exhibit number, which will tie in with Commission's exhibit 207, which is also matter from Mr. Henning; so, Mr. Reporter, you can mark that exhibit Commission's exhibit 208 and it will be accepted into the record and will be considered in connection with Mr. Henning's testimony.

Mr. Haycraft: Is that 208-A and B?

Trial Examiner Sheppard: Yes, that will be Commission's exhibit 208-A and B.

(The papers referred to were marked COMMISSION'S EXHIBITS 208-A and B and received in evidence.)

Trial Examiner Sheppard: Now, is there any other correction along that line that we can take up here, or shall we proceed with Mr. Owens?

Mr. Gilpatric: Mr. Examiner, we submitted to Mr. Haycraft quite an elaborate list of corrections. I don't see any need to stop now, do you?

Mr. Haycraft: I haven't got them yet. I don't know where they are.

Mr. Gilpatric: I guess they are in your office.

Trial Examiner Sheppard: Well, I didn't want to go into the corrections in the entire record. I am going to let you gentlemen get together on that and let you take care of that probably in the last hearing of the case, wherever

2214 that might be, so we won't go into that at this moment.

Mr. Freeman: We are ready for Mr. Owens, if the Examiner please.

Trial Examiner Sheppard: All right, Mr. Owens, if you will come around. Show Mr. J. W. Owens, having been previously sworn in this case, appears on the stand for further testimony.

J. W. OWENS, recalled as a witness by and on behalf of the respondent, having been previously duly sworn, was examined and testified further as follows:

Direct Examination by Mr. Freeman.

Q. Mr. Owens, at the time you last testified on July 22, 1944 there was certain additional information that you were going to get from your records and under date of August 29th I wrote you a list—

A. You will have to speak a little louder. I have got a bad cold that has affected my hearing very much. I am sorry.

Q. What I want to get, Mr. Owens, from you are those things which you were going to look up since you last testified on July 22nd and I now ask you whether or not you have the prices and brackets with respect to the company known as the Electro-Magnet?

A. I have looked up all that stuff.

Q. Electromatic.

2215 A. We have on record of any dealings with that company.

Q. And when you say you have no records does that mean that you did not quote the company at any time?

A. We did not quote them and we did not sell them.

Q. Do you have the special contract for the year 1937 with Kelly Oil Sales Corporation?

A. I have got a copy of one we made dated January 6, 1937 with—that is the wrong one, pardon me. January 15, 1937. That was with the Sunray Burner, Inc. I believe it is the same company. That apparently was placed following a call by one of our representatives, at which time they placed an order for a thousand sets of controls, that is, the Sunray, which to my understanding is the same as Kelly. It was shipped to Kelly but charged to Sunray Burner and the prices at which the thousand order was taken are somewhat below the January 15, 1937 price records that I have here. Although it is not a signed copy of a contract it apparently is a copy of a contract that was submitted to them.

Q. May I have the contract that was submitted bearing date of January 15, 1937 to Sunray?

A. I am not positive that it was submitted. I can show you the copy of what was in our records. I would guess it was submitted.

Q. Well, in any event, Mr. Owens, you can state that prices corresponding to those appearing upon the
2216 January 15, 1937 paper entitled, "Manufacturers purchase contract," were made to the Sunray Burners or the Kelly people?

A. This is the price at which the order was accepted.

Q. And when you refer to "this is the price at which the order was accepted," you now are referring to a paper dated—

A. February 4, 1937.

Mr. Freeman: The paper entitled, "Manufacturers purchase contract," dated January 15, 1937 to Sunray Burners, Inc., which is the same company as the Kelly Oil Sales Corporation, is offered in evidence as respondent's exhibit number 174.

Trial Examiner Sheppard: Any objection?

The Witness: I have photostated that. Let me have it back. I want all the original papers back. I don't want any further misunderstanding on that score.

Mr. Freeman: Oh, there has been no misunderstanding and I have all of your original papers and they are here and you may have them all.

The Witness: Thank you.

Trial Examiner Sheppard: I think we had an understanding that they would be photostated. You can accept respondent's exhibit 174.

(The paper above referred to was marked RESPONDENT'S EXHIBIT NO. 174 and received in evidence.)

Mr. Freeman: Will you now let me have the paper
2217 dated February 4, 1937 which discloses the prices at which sales were made to Sunray-Kelly?

We offer in evidence the latter or order from Sunray Burners, Inc., dated February 4, 1937, as respondent's exhibit 175.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be accepted.

(The paper above referred to was marked RESPONDENT'S EXHIBIT NO. 175 and received in evidence.)

By Mr. Freeman:

Q. Mr. Owens, can you tell me whether or not the set price for controls sold to Sunray Burners in 1937 is the aggregate of the price which you quoted during that year for the three controls that go to make up a set? That is, the

total of the individual price for a KMI stack switch and the type H sensatherm and a limit control?

A. That is correct. The 95 cents difference in price between the $15.00 and $15.95 were furnace controls for the furnace. That was 95 cents higher in price than either the steam or hot water.

Q. So far as the fifteen dollar set price, that included the KMI pyratherm?

A. That is right.

Q. And the type H sensatherm and the ordinary 2218 limit control?

A. That is right.

Q. Now, would you give me the individual unit prices, if you can, for the year 1937 for those same items? Mr. Owens, I have here the original of your 1937 manufacturer's prices, which is already in evidence and you can use that if it will be of any help.

A. Maybe if you would give me my stuff back and kept the photostats I would have all of that information.

Mr. Freeman: I am now handing to you all of the exhibits which you produced at the hearing on July 22, 1944 other than those that have already been turned over to you, that is, to your attorney.

A. Have you got the rest of the contract copies that I have turned over to you?

Q. You have them all now, with those that were delivered to your attorney.

A. All that were what?

Q. You now have all of them.

A. You mean the three blue copies you gave to him that you are talking about?

Q. I delivered to him more than three blue copies.

A. All I have got here is 1940 and 1941. You gave me back 1938 and 1939. I don't believe I can determine from the information I have here just what the separate 2219 billing price was on those.

Q. Do you have the 1937 price bracket structure which you produced when you last testified?

A. Yes. That is this one right here.

Q. And that is respondent's exhibit 149?

A. Yes.

Q. Now, what prices appearing upon respondent's exhibit 149 make up a total equalling the price which you actually extended to Sunray in 1937, if any?

A. You mean the individual prices?

Q. Yes.

A. Individual control prices. I can't tell you from the information I have here. It doesn't add up right. I know there was another contract submitted but I cannot find it here.

Q. Isn't it true that on respondent's exhibit 149-C, ordering from 1000 to 2500 complete sets, to be taken in shipments of not less than 100 complete sets, that the set price included a MKI thermostat or pyratherm was $16.60?

A. Yes, that is true.

Q. So that for the year 1937 we now have in the record a $15 set price, which is lower than any bracket price found upon your prices for 1937, respondent's exhibits 149-B and C?

A. Yes, with the exception of copies of contracts that we have introduced, such as the Williams Oil-O-Matic and
2220 Century. Their prices are on a parallel with the prices quoted Sunray that year.

Mr. Freeman: Well, except, Mr. Owens, we never had the Williams Oil-O-Matic agreement for 1937 or Century, so that if you have any such agreements you might produce them now.

We offer in evidence Williams Oil-O-Matic agreement for the year 1937, dated October 29, 1937, as respondent's exhibit 176 and the price sheet attached thereto, likewise dated October 29, 1937, as respondent's exhibit 177.

Trial Examiner Sheppard: 176-B.

Mr. Freeman: All right.

Trial Examiner Sheppard: Those are now 176-A and B, Mr. Reporter. Is there any objection, Mr. Haycraft?

Mr. Haycraft: No.

Trial Examiner Sheppard: Let them be accepted as 176-A and B.

(The documents above referred to were marked RESPONDENT'S EXHIBITS 176-A and B and were received in evidence.)

Mr. Freeman: We offer in evidence as respondent's exhibit 177 Mercoid Corporation purchase contract with Century Engineering Corporation dated January 6, 1937.

Trial Examiner Sheppard: Any objection to that?

Mr. Haycraft: No.

2221 Trial Examiner Sheppard: Let it be accepted.

(The document above referred to was marked RESPONDENT'S EXHIBIT NO. 177 and received in evidence.)

By Mr. Freeman:

Q. I take it, then, that in the $15 set price to Sunray or Kelly that the KMI or MKI was put in at $8.85, and I am referring to the Century contract where I have taken that figure. Is that correct?

A. That is the price shown.

Q. Now, will you answer my question? Is that the price extended to Sunray?

A. That would be my understanding of it.

Q. Well, a moment ago when I asked you with respect to the 1937 prices, and I referred to the documents that you produced at the last hearing instead of those that you have produced this morning, you said that the price given to Sunray was the same as that given to Century and Williams Oil-O-Matic. That is correct, is it not?

A. That is what I understood.

Q. And I now ask you what price was given to Sunray for a type H sensatherm?

A. According to this price I have here it would be $3.

Q. And when you say "this price here" you are now referring to respondent's exhibit 177,—the Century Engineering contract, is that correct?

2222 A. That is right.

Q. So that at $8.85 for an MKI pyratherm and $3 for a thermostat, your limit control was put in at $3.15, is that correct?

A. Well, the limit control should be $2.85.

Q. Well, Mr. Owens, all I am trying to get is the breakdown of the set price for Sunray, if that is possible and when I asked you to do that you referred to the Century and Williams agreements and we now have them in evidence and perhaps, taking all of those documents which you have produced this morning you can now give me that breakdown as applied to Sunray.

A. Well, that is as close as I can come to it.

Q. Well, then, I note on the Williams Oil-O-Matic price sheet under the heading "Combination sets", that the price for a KMI and a type H sensatherm is $12.20. Is that correct?

A. That is what it says.

Q. How does that price compare with individual price units which we find upon the contract as of the same date, respondent's exhibit 176-A?

A. I couldn't tell you that either.

Q. Well, isn't it true that a type H sensatherm on the contract respondent's exhibit 176-A sold for $3 and a KMI pyratherm for $9.40, making a total of $12.40? Is that not correct?

A. According to this it is $12.40, yes.

2223 Q. And when you say "according to this," you refer to the exhibit 176-A?

A. That is right.

Q. Now, do you know whether they were invoiced at $12.40 or invoiced at $12.20 when they bought controls in the year 1937?

A. I don't even know if they bought any. My guess would be that they were billed at the lower price.

Mr. Haycraft: I object to that and move to strike his guesses, Mr. Examiner.

Trial Examiner Sheppard: Well—

Mr. Freeman: What is your best recollection, Mr. Owens?

Trial Examiner Sheppard: That is right, I was going to say give us your best recollection.

The Witness: The lower price would be my best recollection.

Trial Examiner Sheppard: I will accept that.

By Mr. Freeman:

Q. At what price did you sell limit controls to Williams Oil-O-Matic?

A. I would say, according to this exhibit 176-A, at the price shown on here, which would be $2.85. On the furnace control it would be $3.80.

Q. Well, let us just take the ordinary limit control,

2224 Mr. Owens, that is the lower priced one. That was $2.85?

A. That is correct.

Q. So that even if we take the price of $12.20 for a sensatherm and a KMI pyratherm and add to it $2.85, we get a combination or set price of $15.05?

A. That is right.

Q. And I take it, or, at least, let me ask you for your best recollection as to the price extended Williams in 1937, when Williams bought in sets?

A. Well, the sets very seldom work out. What I mean by that is that most of the shipments were other than in sets.

Q. To Williams?

A. To Williams as well as other customers.

Q. Well, you did not sell in other than sets to Sunray during the year 1937, did you?

A. Yes, I believe we did.

Q. But you don't have any of the individual prices, other than a set price, for Sunray here?

A. I don't know; I might have. No, I haven't.

Q. Well, in any event, I might shorten this by asking you whether or not the prices that you have produced today for the year 1937 are, in fact, lower prices than appeared on the documents that you submitted on July 22, 1944?

Mr. Haycraft: I am going to object to that question. It is too indefinite, Mr. Examiner, no probative value.

2225 Trial Examiner Sheppard: Well, I don't know. I will let him answer it if he can. It is in line with this testimony.

Mr. Haycraft: The record shows, Mr. Examiner, that he produced a large number of exhibits when he was on the stand before. Now, unless counsel indicates which exhibits he has in mind there would be no probative value to it.

Mr. Freeman: I called attention specifically, Mr. Haycraft, to the 1937 price list and that happens to be in one document and one exhibit.

Mr. Haycraft: Is there any reason why the record cannot show the number of the exhibit so that when the Commission and others examine it they will know what he is talking about?

Mr. Freeman: Respondent's exhibit 149.

Trial Examiner Sheppard: That is what I thought it was. You have been talking about it.

Mr. Freeman: Why, we have been talking about it all morning.

The Witness: Apparently there is about a 65 cent set price difference between the lowest price shown on the 1937 prices, exhibit 149-C and the price we extended to Sunray and about 60 cents difference between that and the price given to Williams, according to the figure that we have worked ont here just now.

2226 Q. And referring to the same exhibits, the difference of 65 cents that you have just stated with respect to Sunray is applicable to the bracket where a company buys 250 sets at one time instead of 100 sets as purchased by Sunray, is that correct?

A. Well, it is not exactly correct because, as I would

judge, the Sunray order, it is on order for a thousand sets. Even though they were taken out in several different shipments it is still an order for a thousand sets.

Q. Doesn't your bracket structure say with respect to prices, "Sets to be taken in shipments of not less than 250 complete sets?"

A. That is correct.

Q. And in connection with the Sunray order shipments were to be made in varying amounts from a hundred sets on specific days and 150 on two other specific days, with 400 sets to be taken between June 30 and September 1st,—correct?

A. That is correct.

Q. So that in purchasing as did Sunray for shipment of a hundred complete sets at one time, the set price would have been $16.60, or $1.60 more than what was actually extended Sunray, is that correct?

A. According to the bracket, yes, but not according to the way we had to go after business.

Q. Mr. Owens, that phrase of "going after busi-
2227 ness" rather intrigues me and so that there will be no misunderstanding as to just what you mean by "going after business" and so that the record is clear would you please explain further what you mean by that phrase?

A. Well, the only thing that I mean by that is going back to 1937 and knowing conditions as they were at that time, that any concern that would place with us an order for a thousand sets we would not argue too much about what price we would give them or what bracket he might go into.

Q. And did you follow that practice in 1938?

A. I would say yes.

Q. And isn't it a fact that it is true in the business right today?

A. No.

Q. Or at least up to 1940?

A. Up until when?

Q. 1940, just prior to the present emergency.

A. Well, yes, because we decided in 1941, as I told you, to cut out sending out contracts.

Q. Well, in 1941 we entered into the emergency and, of course, there were then restrictions on commercial manufacture for ordinary civilian use, so I am talking about

the period, say, from 1937 up until 1941, or just prior to the present emergency period.

Mr. Haycraft: I am going to object to the form
2228 of that question, Mr. Examiner, because what is the present emergency period or when does it start? If he means when were the restrictions placed on him by the government, then he ought to indicate the date in 1942.

Mr. Freeman: Well, I will limit my question and fix the terminating date as December 31, 1940.

Mr. Haycraft: I object to that because there wasn't any emergency at that time.

Mr. Freeman: Well, I am asking my question between 1937 and December 31, 1940.

Trial Examiner Sheppard: All right, you can answer that.

The Witness: Just what was the question?

Trial Examiner Sheppard: Go back and repeat that question.

(Record read.)

The Witness: I would say "yes" in answer to that question.

Trial Examiner Sheppard: Mr. Owens, that year of 1938, anyhow, was a period of where you all had a pretty tough time, wasn't it?

The Witness: That is right.

Trial Examiner Sheppard: 1938. The whole industry I mean.

The Witness: Yes.

2229 Trial Examiner Sheppard: Yes. All right.

By Mr. Freeman:

Now, Mr. Owens, on this combination of the KMI and a type H sensatherm, where you gave Williams a 20 cent better price when they purchased the two units as distinguished from purchasing one unit, do you know whether the 20 cent reduction was applicable in like amount to the KMI and the type H sensatherm or did the reduction fall to one of the two units and, if so, which one?

A. I don't believe that was ever used, Mr. Freeman.

Q. Turning, then, to the Sunray Burner order of February 4, 1937, exhibit 175, when you extended a $15 set price there, which is 65 cents lower than the lowest bracket price appearing upon respondent's exhibit 149, to which of the three units did the reduction apply, or was it spread on all three of the units?

A. Reduction from what? The price shown in exhibit 174?

Q. No, I asked you specifically with respect to exhibit 149, which was the exhibit that you referred to and I took your own figures of 65 cents lower than the lowermost price shown on respondent's exhibit 149, passing by any question as to whether the company took a hundred sets at a time or 250 sets at a time or a thousand sets at a time.

A. Well, on that particular one there would be a difference of $1.15 instead of 65 cents.

2230 Q. Well, take either difference, $1.15 or 65: All I want to know is whether that was spread on the three instruments that made up the set or applied to only one instrument and, if so, which one? The amount is immaterial for the moment.

A. I am going to have to merely estimate this.

Mr. Haycraft: I object to that, Mr. Examiner.

Mr. Freeman: Give us your best figures from the documents that you have here produced this morning.

Mr. Haycraft: Furthermore, Mr. Examiner, I am going to object to it. It is irrelevant and immaterial to the issues in this case as to which of the various controls bore the reduction. I don't see that that has any bearing at all, even on the interpretation that counsel gives to the contract.

Mr. Freeman: Much has been said with respect to the specific account—

Mr. Haycraft: May I finish my objection?

Mr. Freeman: I thought you were through, sir.

Mr. Haycraft: I am not. For the simple reason that the respondent's record up to now shows that they deal in sets and they do not sell the same in units; although they are priced in units they sell in sets.

Mr. Freeman: Well, that is a misstatement of fact, Mr. Haycraft.

Trial Examiner Sheppard: I was going to say this: I thought they all preferred to sell in sets and do most 2231 of the time, but they do at times sell in individual units in accordance with the request of the particular customer. I think I will let Mr. Owens give those figures and see whether they are applicable, whether they are applicable to the whole transaction or whether they are applicable to one of the integral parts. It may be a matter of interest.

The Witness: If I answer this question Mr. Freeman is going to hop from this over to the other contract and I am going to have to go through it again, so maybe if we go off the record here a minute I would like to talk to Mr. Freeman and save me one or two headaches at least.

Trial Examiner Sheppard: Yes, let us go off the record. We may simplify it. Let us take a five minute recess here.

(Whereupon a short recess was had.)

Mr. Freeman: Are you ready to resume, Major?

Trial Examiner Sheppard: Yes, go ahead, gentlemen. Get on the record, Mr. Reporter.

By Mr. Freeman:

Q. My last question, Mr. Owens, was directed to whether the reduction when they bought in sets or more than one unit at a time applied to one specific item or was spread equally among the various items and give us that information, if you can, from the documents that you have here.

A. Well, I couldn't say just where that would 2232 apply. I could only estimate it from some of the other prices, like Century Engineering. Now, their contract, the KMI shows at $8.85 and the lowest price we show on exhibit 149-B for 1937 is $10.25 and on 149-C, bracket 5, complete set $16.15.

Now, to add up the complete set price on the Century Engineering you would have $8.85 against $10.25, $3 against $3.35 on the sensatherm and $2.85 against $2.85 for the limit control. Now, that is as close as I can come to estimating what the individual control prices would be.

Trial Examiner Sheppard: It seems to me it would be on the whole set instead of the one individual.

Mr. Haycraft: The limit control, if I may observe there, are the same on both, so it would be on the other two.

Trial Examiner Sheppard: It would be on the other two. That limits it, then, to two of them instead of three.

The Witness: That is right. 35 cents on the sensatherm and the balance would be on the primary control.

By Mr. Freeman:

Q. Which amount is $1.40?

A. That is right.

Q. That is the difference between $10.25 and $8.85, or $1.40?

A. That is right.

Q. Well, apparently, just so we get the record straight, Mr. Owens, taking your individual prices which ap-
2233 pear upon respondent's exhibit 149, that is the lowest prices applicable, make a total for the three units, that is, a KMI, a type H sensatherm and a limit control, of $16.45?

A. That is correct.

Q. And when that same set of instruments, that is, the three instruments that I just referred to individually, are purchased in sets the price is $16.15, taken from respondent's exhibit 149-C?

A. That is right.

Q. However, the Century, in accordance with respondent's exhibit 177 and to Sunray, in accordance with respondent's exhibit 174 and likewise 175, as well as to Williams Oil-O-matic, in accordance with respondent's exhibits 176-A and B, prices were extended to those companies lower than the lower-most prices for 1937 taken from respondent's exhibit 149-A, B and C, is that correct?

A. That is correct.

Q. And that is true whether the purchases were made as individual units or made in sets?

A. That is correct.

Q. Now, Mr. Owens, do you have the contracts for the year 1938 with Lynn Products, Malleable Iron, Oil Equipment, Old Colony, Osher-Reiss, Packard Oil Burner, Pan American, Petroleum Heat & Power and Quiet Heet of Brooklyn?

A. They are all 1938?

2234 Q. Yes.

A. What was the first one?

Q. Lynn Products.

A. The Lynn Products, who, according to our records, were extended No. 3 bracket prices in 1938, I have been unable to locate a copy of that contract but the record should show what price they received in 1938, according to the copies that I gave to you showing the 1938 prices.

Q. And the bracket 3 for the year 1938 corresponded to your Form 33 for that year?

A. That is right.

Q. And how about Malleable Iron?

A. Malleable Iron? We had no contract with them, according to this last information I have, although originally

it showed as a No. 4. We had a contract but we couldn't locate it, but according to the first record we had they show as having been extended No. 4 bracket prices.

Q. And when you say "bracket No. 4," that would be the prices—

A. 44.

Q. 44?

A. That is correct.

Q. As shown on respondent's exhibit 76?

A. That is correct. The same remarks would apply to the Oil Equipment Laboratories at Elizabeth, New Jersey.

2235 Q. Bracket 4?

A. Yes.

Q. And how about the contract?

A. Well, that is it. I can't locate that either.

Q. And how about Old Colony?

A. Old Colony, who shows here as No. 3, apparently—wait, I think I have got that here. That was sent down to New York, to our New York office and was never submitted.

Q. Do you know whether you sold any controls to Old Colony in the year 1938?

A. I think we had that question up once before, Mr. Freeman.

Q. Well, my memory is not as good as yours. If you will just give me an answer that will suit me.

A. It isn't how much we sold or whether we sold them. It is one of the things that did not come under the subpoena.

Q. Well, that is your interpretation. I am asking you whether or not you sold any controls to Old Colony in the year 1938?

A. Well, we did not.

Q. And how about Osher-Riess?

A. Who?

Q. Osher-Riess.

A. Osher-Riess? According to this we submitted them a No. 3. That is, we sent to the New York office a No. 3 bracket price but I have no copy of the contract, which

2236 would indicate that they probably did not submit that price to Osher-Riess that year.

Q. And how about Packard Oil Burner?

A. Packard Oil Burner? They had a No. 2 early in the year and then we changed that to a No. 3 later that year.

Mr. Freeman: We offer in evidence as respondent's exhibit 178-A the contract with Packard Burner Manufacturing Co., dated March 28, 1938 and as respondent's exhibit 178-B the letter of March 15, 1938 to Packer Burner.

The Witness To be photostated and returned.

Mr. Freeman: That is correct.

Trial Examiner Sheppard: Any objections?

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let them be accepted as respondent's exhibits 178-A and B.

(The documents above referred to were marked RESPONDENT'S EXHIBITS NOS. 178-A and B, and were received in evidence.)

By Mr. Freeman:

Q. Mr. Owens, I understood when you testified last July that in order to have a contract price effective it was necessary that a minimum order be purchased initially, otherwise there was no contract. Is that correct?

A. I don't believe I understand that.

2237 Q. Well, referring specifically to respondent's exhibit 78, which is a portion of your sales manual or pricing structure, it was necessary for a company to purchase an initial order of 25 units for a Form 11 contract and 50 units for a Form 22 contract, and so forth, is that correct?

A. Yes.

Q. Now, isn't it a fact that that condition with respect to purchases was eliminated in the year 1938?

A. What was eliminated?

Q. The requirement that in order to get a particular price that you get an initial order with the contract?

A. I couldn't say yes or no on that. If an order was not received there wouldn't be any contract. There wouldn't be any sense of signing at the time if they didn't accompany it with an order.

Q. Well, I asked you the last time with respect to exhibit 78 whether or not it was necessary that an initial order come along with the contract in order for the customer to get a particular price.

A. That was the understanding, yes.

Q. And I understood you to say that in order to get a specific price you depended upon the minimum number of units purchased when the contract was returned to the company.

A. Are you relating to 1938?

Q. Yes.

A. Well, whatever the price schedule shows is all
2238 I know and you have got that, exhibit number—

Q. 73.

Trial Examiner Sheppard: 78.

Mr. Freeman: No. 78.

A. All right, I refer you to that in answer to your question.

Q. Well, if your company discontinued the practice of requiring minimum orders in 1938, did you thereafter adopt that practice in 1939 and 1940?

A. All I can do is refer you to the copy of our records for those years, which I have already turned over to you.

Q. Do you recall whether or not in 1939 and 1940 you required initial minimum orders?

A. I don't remember; I don't recall.

Q. Now, do you have the agreement for Pan American for the year 1938?

A. Did you want the Packard first?

Q. You have already given me Packard, Mr. Owens.

A. Packard?

Q. Yes.

A. I gave you one but we sent them a revised one, I told you, and that one—

Q. Well, then, let me have the revised one and give me any explanation that you care to with respect to the revised agreement.

A. Well, when the revised agreement was sent to
2239 New York, —was sent in by New York I wrote them this letter here and that is the explanation I got back, so that is the whole story. It is quite a bit to read into the records.

Mr. Freeman: Well, referring to the first one, first to the letter that you wrote, dated September 21, 1938, we will offer that letter as respondent's exhibit 179-A and the—

Mr. Haycraft: What is the date?

Mr. Freeman: September 21, 1938. And the reply or explanation, as you stated, dated October 3, 1938, as exhibit 179-B.

Mr. Haycraft: What is the date of the first one?

Mr. Freeman: September 21st.

The Witness: There is the copy of your new agreement.

Mr. Freeman: We also offer in evidence as respondent's exhibit 179-C the second purchase contract for the year 1938.

Mr. Haycraft: Date?

Mr. Freeman: Which is in blank and undated, although there appears the receiving stamp of the Mercoid Corporation dated September 21, 1938.

Trial Examiner Sheppard: That is when they went from one bracket to another, I believe, in the middle of the year, Mr. Owens?

2240 The Witness: Yes.

Trial Examiner Sheppard: All right. Any objection to that?

Mr. Haycraft: No.

Trial Examiner Sheppard: Let it be accepted as respondent's exhibit 179-A, B and C.

(The documents above referred to were marked RESPONDENT'S EXHIBITS Nos. 179-A, B and C and were received in evidence.)

By Mr. Freeman:

Q. Will you now turn to Pan American and tell me whether you have the contract with that company?

A. It is my recollection that we sent a No. 1 bracket contract out to Neil Peterson, our San Francisco distributor, and to the best of my knowledge he never submitted that contract.

Q. And what bracket—

A. No. 1.

Q. Petroleum Heat & Power?

A. According to the records we submitted a No. 4 bracket to our New York office but apparently that was never submitted either because we couldn't find any record of it having been signed.

Q. And No. 4 is your [illegible]?

A. That was in 1938.

Q. Yes. Now, how [illegible] Quiet Heet of Brooklyn?

2241 A. I was unable to locate a copy of the contract for Quiet Heet other than to determine that they were submitted a contract in a No. 2 bracket. There is a letter acknowledging it. Here is another letter of a month later, which will in a way answer the question that you asked a while ago about submitting an order with a contract to make it legal or official. That apparently

was changed, making it unnecessary that they submit an order with the contract to make the prices effective:

Q. So that the record then be straightened out, after March, 1938 it was no longer necessary that a company in order to get a contract of one or the other of your brackets send in with the contract an initial minimum order, is that correct?

A. Well, this one letter would indicate that but I would not state positively that it was carried through on all the various contracts that have been submitted. We might have for reasons of our own still held to that in certain cases.

Q. So that in certain cases you may have required the initial order as a condition—

A. That is possible.

Q. —for a price?

A. I don't say that is the case but it is possible.

Q. Well, at least back so far as Quiet Heet, however, on March 16, 1938 you advised the company, "We are pleased to advise you that the contract"—

Mr. Hayeraft: I object to that unless the exhibit 2242 is in evidence.

Mr. Freeman: Well, it—

Trial Examiner Sheppard: I don't know.

Mr. Freeman: It saves a lot of time because I am not really interested in that letter, only in that one thing and when that is in I am through.

Trial Examiner Sheppard: I think so. I will let you both do that.

Mr. Freeman: "We are pleased to advise"—

Mr. Hayeraft: I would rather have the letter if we are going to save any time on it.

Trial Examiner Sheppard: Just read on, Mr. Freeman.

Mr. Freeman: "We are pleased to advise that your contract has been approved and is now effective without the initial order previously required."

Q. And that same condition was given or made effective to the Packard Burner Manufacturing Co., and I refer you to respondent's exhibit 178-B?

A. The wording of this letter here by Derby at New York would indicate that we might have to pass a ruling because he mentions in here that all contracts will become effective without the initial order, so that possibly answers your question in full, all contracts. I wasn't sure of that before and I couldn't answer it.

2243 Trial Examiner Sheppard: I think that is plain enough.

By Mr. Freeman:

Q. Mr. Owens, you were to determine whether "special" in connection with the Quiet Heet contract had to do with the same prices given to Steel Products.

A. You are jumping now to 1938, I believe.

Q. Yes. That was one of the things that you were to check and give us the information.

Mr. Haycraft: May I ask, is that the same Quiet Heet? We have been talking about Quiet Heet of Brooklyn up to now.

The Witness: Now we are talking about Quiet Heet of New Jersey, is that right?

Mr. Freeman: Correct, and I am asking you now to give me the information that you said you would dig up when you last testified, on record page 2116.

A. That B-55 that we refer to here apparently is the same as B-44 special for Williams. Which contract is that? Cleveland Steel. The only difference between the Quiet Heet and the Williams and Cleveland Steel was the price, was $2.50 on the sensatherm to Cleveland and Williams and $2.70 to Quiet Heet.

Q. Quiet Heet did get a price reduction of 25 cents on the primary?

2244 A. That is correct.

Q. That is, the price corresponded to the pen and ink prices as distinguished from the printed prices appearing on the contract?

A. That is correct.

Q. And that is the reason you refer to it as a special?

A. Yes, or a B-55, which is the same thing.

Q. Now, you were to produce a form of contract known as the B-55 for the year 1939.

A. That is this.

Q. And by "that is this" you are now referring to the contract—

A. B-44 with the price change in it.

Q. So that B-55 for the year 1939 was not any printed price structure but a pen and ink price structure or a modification of B-44 for the same year, is that correct?

A. That would be my understanding of it. Now, wait. Well, here is the other, B-55. You had that.

Trial Examiner Sheppard: Yes, there is one of that already in the record.

The Witness: It is already in the record.

Mr. Gilpatric: Not the contract.

By Mr. Freeman:

Q. Mr. Owens, you are now referring to 1938 as a B-55.

A. Oh, I see. Pardon me.

2245 Q. And we are talking about B-55 for 1939. Let us take our time. I don't want the record confused and I am not trying to confuse you.

A. Well, that is the only explanation I have, is that there was a slight reduction made in those two prices and then it became the B-55.

Q. And we are both talking about the year 1939?

A. 1939, that is correct.

Q. Now, can you give me in connection with the year 1939 the quantities for your Form B-11, B-22, B-33, B-44 and B-55?

A. Well, I believe you already have that in this.

Q. No, we never received it for the year 1939 and you were to dig that up in accordance with record pages 2130 and 2131.

A. You don't have those at all?

Q. No, not the quantities.

A. Do you have the contracts?

Q. We have the contracts, yes.

A. Well, then you haven't got this?

Q. No.

A. Well, there it is.

Mr. Freeman: The witness now hands to counsel a paper entitled, "1939 oil burner manufacturers' net prices," dated 2-28-39, which we offer in evidence as respondent's exhibit 180.

The Witness: To be photostated and returned.

2246 Mr. Freeman: Yes.

Trial Examiner Sheppard: Any objection?

Mr. Hayeraft: No.

Mr. Freeman: And let the record show that this document, respondent's exhibit 180, has been produced to give the quantities required for the various brackets in forms B-11, B-22, B-33, B-44 and B-55 for the year 1939.

Trial Examiner Sheppard: All right. Let the respondent's exhibit 180 be accepted.

(The document above referred to was marked RESPONDENT'S EXHIBIT No. 180 and received in evidence.)

By Mr. Freeman:

Q. Am I correct, Mr. Owens, that the total of the bracket B-11 to B-44, appearing upon respondent's exhibit 180, is set forth as a thousand for B-11, 3000 for B-22, 7500 for B-33 and 15,000 for B-44?

A. That would be my understanding.

Q. And then I notice opposite the word "rider" quantities such as 100 under B-11, 250 under B-22, 500 under B-33 and 1,000 under B-44 and I now ask you whether or not the term "rider" has to do with an initial order requirement in order to get the price of the particular bracket?

A. Have you got your photostats of these original ones we submitted?

Q. Yes, I have.

2247 A. Is there anything on the back page of any of any of those about a rider, right inside here, 1939?

Q. The contracts that you submitted for the year 1939, B-11—

A. Is there anything on the inside at all of any of those?

Q. 153-A to 153-F did not include any rider and if the term "rider" on the price list respondent's exhibit 180 has any bearing or in any way modifies or changes the terms and conditions of the agreements 153-A to F, inclusive, you might give me whatever explanation you can.

A. Well, my only guess on that would be that an order for that number of controls would be required to make that contract effective or to put it into effect. That is probably what the rider referred to, unless there was a—what year was it we had that special, we put out those special net prices where they jump from one bracket to another when they placed an order? Was that in 1939?

Q. That was in 1940.

A. Well, I don't know what that rider could be.

Q. I now refer you to the 1939 agreement with Cleveland Steel Products, which bears the notation "B-44" thereon, but which you said was a B-55 because of a special pen and ink price for primary and thermostat—

Mr. Haycraft: What is the exhibit number?

Mr. Freeman: It has not been offered as yet.

Q. But in which there appears therein a rider.
2248 A. Well, that is the rider then.

Mr. Freeman: All right. We offer in evidence as respondent's exhibit 181 the agreement of Mercoid with Cleveland Steel Products Company dated February 18, 1939.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: No.

Trial Examiner Sheppard: Let it be accepted.

Mr. Freeman: And as part of exhibit 181 there appears therein a rider, is that correct?

A. Yes.

Q. And I now ask whether or not the rider and the amounts specified therein corresponding to a particular bracket as found upon respondent's exhibit 180 is in the form of a sticker which you attached to your various contracts for the year 1939?

A. I would say it does.

Trial Examiner Sheppard: Make the contract 181-A and the rider 181-B.

Mr. Freeman: All right.

(The documents above referred to were marked RESPONDENT'S EXHIBITS 181-A and B and were received in evidence.)

By Mr. Freeman:

Q. Mr. Owens, am I correct in my understanding that as to your 1939 net prices with respect to the 115-W
2249 immersatherm and the 115-3 immersatherm the low net prices were changed from $3.50 to $3.25 on October 11, 1939?

A. That is correct.

Q. Now, Mr. Owens, can you give me the quantities applicable to individual brackets for your forms SB-1 and those used in the year 1940?

A. Well, on looking these over again the only thing I could make out of it was that where the blanket order was placed for a hundred or more sets that would automatically move them up into the next higher bracket.

Q. And by "higher bracket" that meant a lower price?

A. Yes. Your SB-1 with an order automatically became SB-2 or whatever that next one is—MB-2, small, medium and large. The other was LB-3, I believe. Yes, there are three brackets. Where they did not place an

order they got the SB-1 price. If they did, they got the medium price.

Q. But what quantity was necessary?

A. The quantity mentioned on here, that really governed it, which would answer your question to my way of thinking, and would be the number that they ordered at the time. If it was a blanket order covering a hundred or more sets it automatically put the SB-1 into the medium price. The 300 sets would entitle them to the price shown on, I believe, LB-3, $8.25 and $2.70.

Q. So am I correct in my understanding, then,
2250 that for the year 1940 any company that could buy a hundred sets at one time obtained prices corresponding to those found on respondent's exhibit 155?

A. Is that MB-2?

Q. MB-1, or SB-1.

A. SB-1 would be what they would get if they did not order a hundred or more sets.

Q. So that I have a correct understanding, SB-1, respondent's exhibit 155, gives prices which were extended to a company provided it did not order the hundred sets at a time?

A. That is correct.

Q. So that if a company ordered more than a hundred sets at a time it then—

A. A hundred or more.

Q. —obtained—

A. If they placed an initial order of a hundred or more, then they immediately received the MB-2.

Q. And the MB-2 has a number "300" in there, is that correct?

A. And where a company which was submitted a MB-2 contract placed an order for 300 or more sets they would then get the prices shown in the LB-3.

Q. And if a company ordered a thousand sets or more what price would they get?

A. They would get the special net prices shown here.

2251 Q. And when you say "shown here" you are now referring to respondent's exhibit 159, correct?

A. Yes, that is correct.

Q. Well, then, what price would a company get if it bought more than 300 sets, that is, more than 300 primaries and thermostats?

A. 300 or more they would get LB-3; less than a thousand it would be LB-3.

Q. And more than a thousand?

A. They would get the LB-3 prices with the special net prices that applied on the JM.

Q. JMI?

A. JMI and type H, contained in the letter of January 10th.

Q. Well, Mr. Owens, I am still confused on that 300, so straighten it out if you will bear with me for just a moment or two.

Trial Examiner Sheppard: Do you want to go off the record?

Mr. Freeman: No, I want it on the record because I think the record is still confused and I think Mr. Owens would welcome straightening this out.

Q. If a company bought in January, 1940 less than a hundred controls, that is, a hundred primaries and a hundred thermostats, what price would it get for the type JMI pyratherm and the type H sensatherm?

A. You are assuming that they were submitted 2252 on SB-1 contract?

Q. Yes.

A. And you are also assuming that they did not place a blanket order for a hundred or more sets at the time they signed that SB contract.

Q. That is correct.

A. And they sent in an order for one, two or three or less than a hundred sets, then they would be entitled to the prices shown on SB-1.

Q. Contract?

A. Contract.

Trial Examiner Sheppard: That is exhibit what?

Mr. Freeman: And that is exhibit 156.

Trial Examiner Sheppard: All right. Now go ahead.

By Mr. Freeman:

Q. Then in order to get the price of $9.20 for a JMI in 1940 how many units would have to be purchased, and that is the special net prices you referred to, which we find on respondent's exhibit 155.

A. Well, that would apply to any small burner manufacturer who would not be able to buy a hundred or more sets in a year.

Q. Well, if he bought less than a hundred sets in a year he would operate under SB-1 contract, respondent's exhibit 156, correct?

A. That is right.

2253 Q. And that price would be $9.70 for the JMI?

A. That is right.

Q. Which is your intermittent ignition type?

A. Yes.

Q. And $3 for the type H thermostat, correct?

A. That is correct.

Q. Now, if he bought a hundred or more primary controls and thermostats at one time I understood you to say that he would then get the price which we find on MB-2?

A. That is correct.

Trial Examiner Sheppard: And what exhibit is that?

Mr. Haycraft: With the initial order.

Mr. Freeman: Which is exhibit 157.

Trial Examiner Sheppard: All right, that is plain enough. Now, take up the next one.

By Mr. Freeman:

Q. So that the letters of January 10th, SB-1, respondent's exhibit 155, merely gave a price that would take a bracket 1 account over to a bracket 2 account, provided he bought 100 primary controls and thermostats at one time?

A. As far as the main items are concerned. I haven't checked the other price items on that.

Q. And is that all the information you have as to bracket prices for the year 1940?

A. Yes.

2254 Q. That is, the determining factor for the year 1940 was whether they bought a hundred sets at one time, 300 sets at one time or a thousand sets at one time?

A. I wouldn't say that.

Q. Well, can you give me any explanation as to what was the determining factor for brackets for the year 1940? In other words, all I want to know, Mr. Owens, what was the determining factor in extending to a particular company a particular price?

A. I am afraid I couldn't answer that.

Q. Well, at least we have one determining factor here in respondent's exhibit 155, where a company ordered more than a hundred sets and we have another determining

factor of the same kind where a company ordered 300 or more sets?

A. That is right.

Q. As we find on respondent's exhibit 157, is that correct?

A. Yes.

Q. And then we have still another factor of the same kind where a company ordered a thousand sets, as we find on respondent's exhibit 159, is that correct?

A. Yes.

Q. Is it true that you had only those three brackets for the year 1940?

A. That covers all our prices for that year, yes.

Q. Now, was there anything else that you can recall that in any way determined any prices, other than
2255 those that we find on respondent's exhibits 156, 158 and 160?

A. Well, we do have a short period have lower prices prevailing on the type JM pyratherm, but I don't know whether that was 1940 or 1941.

Q. Well, do you have any documents here that will give you information as to any prevailing lower prices for the primary and thermostat?

A. If you will just get your documents out that you have I will be glad to answer questions on them. No, that was 1941.

Q. Mr. Owens, I have delivered to you and to your attorney each and every document that you brought on July 22, 1944 and you now have them.

A. Is that what you are now talking about? No, that was in 1941, not in 1940. That was the only prices we had, yes.

Q. Now, what bracket for the year 1940 was Williams Oil-O-Matic in?

A. I think LB-3 special.

Q. And can you give me the price at which primary controls of the intermittent type were sold to Williams in the year 1940?

A. I didn't hear that.

Trial Examiner Sheppard: Read it.

(Question read.)

The Witness: $7.75 for the JM and $8.25 for the JMI.

2256 By Mr. Freeman:

Q. So that, in reality, there were really four brackets in 1940?

A. That is right.

Q. I have a note here that on record page 2133 you were to tell us the number of units to be purchased in order to entitle the purchaser to the prices specified in your LB-3 contract.

A. Isn't that what we just went over?

Mr. Haycraft: It has already been covered.

The Witness: It says, "Produce information with respect to what you generally do." LB-3 would be sufficient.

By Mr. Freeman:

Q. Well, you tell me what you do in connection with LB-3; in other words, what would be the requirements? Just give me the number and that will end it.

A. Your LB-3 was extended to a few of the large companies, that is, LB-3 special, like Automatic Burner Corporation, which would be a large buyer, Century Engineering, Cleveland Steel Products, Electro, Inc., Clifton, New Jersey, Gar Wood Industries, Korth Oil Burner Corporation, the Ohio Oil Burner Corporation of Peoria, Harvey-Whipple, Inc., Springfield, the Herco Oil Burner Corporation of Lancaster, Lynn Products, Lynn, Massachusetts,

Malleable Iron Fittings, Bradford, Oil Equipment

2257 Laboratories, Petroleum Heat & Power Company,

Quiet Heet Manufacturing Corporation.

Trial Examiner Sheppard: Which one is that?

The Witness: At Newark.

Trial Examiner Sheppard: All right.

The Witness: The other is Quiet Heet Oil Burner. This is Quiet Heet Manufacturing at Newark; and Williams Oil-O-Matic.

By Mr. Freeman:

Q. And the prices to all those companies were the same?

A. Yes.

Q. Can you give me quickly,—and I am about through,—the basis on which Mercoid offered its various 1941 bracket prices to oil burner manufacturers even though you had no contracts for that year?

A. Well, we merely went over the schedule of customers

and determined quotations that we would extend based on the size of the manufacturer.

Q. Well, was there any yardstick that you used? That is, any specific numbers for the year 1941 as apparently you did in earlier years?

A. The same letter went out with all the price schedules.

Q. That is, the same letter in the year—

A. Circular letter.

Q. —1941?

2258 A. That is all we sent out, was that circular letter that went out with each quotation for 1941.

Q. Now, do you have the price schedule that went along with your letter of January 15, 1941 which you have handed me?

A. I am afraid that I haven't got that. You have got it.

Q. No, I never had it, Mr. Owens, and you have never furnished it to me.

A. The 1941 prices?

Q. No, sir.

A. You got them and I never got it back.

Trial Examiner Sheppard: I thought those were all given when you were here last.

Mr. Freeman: I am asking with respect to brackets. That is, the quantities.

A. SB-1, MB-2, LBX.

Q. And you are now referring to all the originals which I returned to you, correct?

A. That is right, this morning.

Q. Well, now, will you give me the quantities that determined whether the SB-1 or MB-2 or LBX price was to apply?

A. Well, we used approximately the same—

Trial Examiner Sheppard: The same things you did before?

The Witness: The same thing we did in 1940.

Trial Examiner Sheppard: I mean the same quantity.

2259 By Mr. Freeman:

Q. I am asking with respect to that, that is all I want. And, Mr. Owens—

Mr. Haycraft: Are you going to offer that evidence he just now identified, the one he handed to you, that letter?

Mr. Freeman: I got all the information I want.

Q. You were to determine the lowest price at which sets of controls were sold to Acme Tool & Gauge Company in the year 1941. Have you done so?

Trial Examiner Sheppard: Is that Acme?

Mr. Freeman: Acme.

A. Well, none of the billings are on a set basis. They ordered 300 sets of controls and we billed the type H at $2.70, JMI at $8.75 and the DA-31s at $2.75, also the figure 35 risatherm for $2.75. Now, we had one order earlier in the year before they placed the order for the 300 sets, that we billed the JMI at $9.20, type H at $2.85 and the DA-31 at $2.75. That price was revised along in May when they placed the order for the 300 sets. That was placed May 16th.

Q. And have you given us the May 16th or the price extended after May 16th of that year?

A. How?

Q. Have you given us the price that you extended to Acme after the order for 300 was given?

A. Yes, I gave you those prices on the 300. That 2260 is the lower prices.

Q. Mr. Owens, I asked you to check, so that the record might be clear, your notation which we find on respondent's exhibit 152-A that A KMI and type H sensatherm was sold in sets to Automatic Burner Corporation for the year 1937 at $14.90 and I asked you to check and tell me whether the set only included those two items or whether it in fact included a limit control.

A. Are you through with this Acme?

Q. No, I am referring now to Automatic Burner Corporation. I am through with Acme.

A. You are through with Acme?

Q. For the moment.

A. Will you repeat that question, please?

Trial Examiner Sheppard: Read the question.

(Question read.)

The Witness: First of all, we did not sell Automatic Burner Corporation anything in 1937, so that it would not be a sale that we would be referring to there. It was undoubtedly a quotation rather than a sale. Now, whether I can find that quotation or not I don't know. I can only guess that that $14.90 was a complete set of controls, that included them.

Q. That is, that it includes the three elements?

A. It includes the three and I think that parallels
2261 our lowest price we quoted that year to Cleveland Steel, to Williams and others. We figured that price around $15 a set.

Q. That is correct, and that is why I wanted to correct the record to show that it included not only a KMI and a type H but also a limit control.

A. I believe it would.

Trial Examiner Sheppard: It would be natural to conclude that.

Mr. Freeman: Well, the record shows otherwise.

Trial Examiner Sheppard: Does it?

Mr. Freeman: Yes, as produced here and I just wanted to get it straightened out.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. Now, Mr. Owens, so that there be no misunderstanding with respect to these exhibits, I have already delivered to your counsel and I have his receipts for the originals of respondent's exhibits 148, 150, 151, 154, 156, 158, 160 and 161 and I have this morning handed to you original of respondent's exhibit 147. Will you see if you have it?

A. Wait a minute, 147?

Q. Yes.

A. Yes.

Q. Now, you have got that one?

A. I have got it. I check 147.

2262 Q. And you have exhibit 149-A, B and C, is that correct?

A. I have got 149-B. I also have 149-A and C.

Q. Do you have exhibits 152 and 153?

A. 152-A to E and 153-A to F.

Q. So that the record is clear, you have all of exhibit 152 and 153, correct?

A. Yes.

Q. All right. And exhibit 155?

A. Check.

Q. Do you have it?

A. Yes.

Q. 157?

A. Check.

Q. 159?

A. Check.

Q. Do you have exhibit 162?
A. To 167.
Q. Inclusive?
A. Inclusive.

Mr. Freeman: That is all. Now, with respect to the exhibits which were produced this morning it is requested that counsel for Mercoid Corporation have a negative and four positive copies made and deliver them to us together with the bill for the same.

Mr. Gilpatric: 174 to 181.

2263 Mr. Haycraft: Mr. Examiner, I might say that it is customary for the Commission to retain the exhibits and make photostats and then send the bills to the parties who ordered them. I don't believe it would be proper for the reporter to let those go out of his hands.

Mr. Freeman: Just off the record.

(Discussion outside the record.)

Trial Examiner Sheppard: The usual procedure will be followed here.

Mr. Freeman: Let the record show that we would like the Commission to furnish us one negative and four positive copies of each of the exhibits produced by the witness Mercoid today.

Trial Examiner Sheppard: Just take a note of that, Mr. Reporter and send it back. Now, Mr. Freeman, are you finished with Mr. Owens?

Mr. Freeman: Yes.

Trial Examiner Sheppard: Now, Mr. Haycraft, I think you had better wait until after lunch.

Mr. Haycraft: I think I can get through in a few minutes.

Trial Examiner Sheppard: All right.

Cross-Examination by Mr. Haycraft.

Q. With respect to these various accounts to
2264 which your attention has been called—

Mr. Freeman: Will you refer to them specifically, Mr. Haycraft?

Mr. Haycraft: Can I go on without being interrupted, Mr. Examiner?

Trial Examiner Sheppard: Yes. I don't think he means to interrupt you.

By Mr. Haycraft:

Q. Will you indicate for the record which ones you made sales to during the years covered by your inquiry from 1937 to 1941 and the approximate volume of those sales, if you can? I am referring to the list of companies beginning with Acme Tool & Gauge Company, page 2092, and the testimony on the succeeding pages.

A. For every year from 1937 to 1941?

Q. Yes.

A. Well, Acme, we sold them $700 in 1937, $300 in 1938, $2,700 in 1939, $2,100 in 1940 and $2,000 in 1941.

Trial Examiner Sheppard: Those were sets, were they?

Mr. Haycraft: Dollars, he means.

The Witness: Dollars, yes, sir. $700, $300, $2,700, $2,100 and $2,000.

Trial Examiner Sheppard: That is all right.

The Witness: Alida Manufacturing Company, 2265 Brooklyn, no sales over the years. Arcweld Manufacturing Company—

Mr. Freeman: If he has a list we can save a lot of time if he wants to put it in. That was Mr. Haycraft's suggestion when we were asking about contracts and no contracts.

Trial Examiner Sheppard: That is up to the witness.

By Mr. Haycraft: Is there anything in the paper that you want?

A. No.

Q. Is that all right?

A. That was made up for this particular purpose and wouldn't mean anything.

Q. There is nothing in there that you want to keep confidential?

A. No.

Mr. Freeman: Except that I would like to ask one question, if I may, here.

Trial Examiner Sheppard: Wait a minute, I want to get this straight. Mr. Owens, if it is satisfactory with you we will just take that and save you testifying on it.

The Witness: I will be glad to do it.

Trial Examiner Sheppard: All the information is on there and we will just have the reporter mark that.

The Witness: If you folks can under my—if you can understand my hieroglyphics there. The figures represent hundreds that are shown in the sheet.

2266 Trial Examiner Sheppard: Mark that Commission's exhibit 210, Mr. Reporter.

Mr. Gilpatric: What is exhibit 209?

Trial Examiner Sheppard: I had it marked "reserved". It may be that we put that 208 and 209 in the record of the 22nd. I put 208 in and that is the reason I was just behind one number. Have you got any 209?

Mr. Gilpatric: No.

Trial Examiner Sheppard: I think we had better mark that 209, Mr. Reporter, instead of 210.

Mr. Freeman: That is not in yet?

Trial Examiner Sheppard: No.

Mr. Freeman: I wanted to ask Mr. Owens one question before it goes in. May I ask that question?

Trial Examiner Sheppard: Yes.

By Mr. Freeman:

Q. You said a moment ago that Commission's exhibit 209 was made up for this purpose. At whose request?

Mr. Haycraft: I didn't understand him to say that.

Mr. Freeman: Well, do you want the testimony read?

Mr. Haycraft: Yes, read it back to me.

Mr. Freeman: All right, go right ahead and read it back.

(Record read.)

Mr. Freeman: Does that satisfy you, Mr. Hay-
2267 craft, that it was made for this purpose?

Mr. Haycraft: I didn't hear him say that.

Mr. Freeman: I did and I now repeat my question, to-wit, at whose request was it made up for this purpose, and I am referring specifically to Commission's Exhibit 209.

A. Because that was the way I understood the subpoena at the start.

Q. Was that made up—

A. At my request, after I read the stuff when I first got the subpoena, after I read the subpoena, when I first got the stuff out, I thought this was included and I had it made up.

Q. That is, you thought the volume of sales was to be included?

A. Yes, that is the way I read it.

Q. And did you likewise understand that the prices were to be included?

A. The prices? What do you mean, "the prices"?

Q. That is, the individual price extended to these companies.

Mr. Haycraft: I object to that question as having nothing to do with this exhibit.

Trial Examiner Sheppard: I don't know what this is about at all. I will just let Mr. Owens answer for whatever it amounts to.

The Witness: I am willing to answer the question 2268 if I can understand it.

Q. Do I understand that the exhibit which you have in your hand, Commission exhibit 209, was produced by you following your receipt of the subpoena in November of 1943?

A. That was correct. I had it the first day that I came up here, when I found out that—

Mr. Freeman: That is all I want to know. No objection.

Trial Examiner Sheppard: All right.

(The document above referred to was marked COMMISSION'S EXHIBIT 209 and received in evidence.)

By Mr. Haycraft:

Q. These pencil notations on the exhibit in the various columns at the top indicate the years, do they?

A. This is the sales for the year 1937, 1938, 1939, 1940 and 1941.

Q. And are these all in hundreds of dollars, the figures that are on there?

A. In hundreds of dollars, yes, sir.

Q. So, for instance, the first one says "7-C."

A. That would be $700 and $300, $9,300, $2,000.

Q. You are referring to Braden Engineering?

A. Yes. $1,300, $1,300, $14,200, $13,200.

Q. What is this 137?

A. That is $13,700.

2269 Q. Down on the second page I notice between the name Micro-Westco, Inc., and Mohawk Oil Burner Manufacturing Company, a notation, "Am. Mohawk Corp."

A. Well, that company had at least three different names, the Mohawk Oil Burner Manufacturing Company, the Mohawk Oil Corporation and the Joseph Toker Utilities, so that the figures shown here represent the combined sales to these companies, whose bills were all paid by Joseph Toker.

Mr. Haycraft: It is understood, Mr. Examiner, that

I am not offering in evidence the notation, typewritten notation at the bottom of the page, which does not refer to the exhibit, as I understand it. Is that all right?

Trial Examiner Sheppard: The Examiner will not consider it.

Mr. Haycraft: The typewritten memorandum at the bottom of the page does not refer to the other material in the exhibit, does it?

Trial Examiner Sheppard: Nothing but the names and the amounts, on exhibit 209.

The Witness: Well, that was the information that was put on there. You see, this is page 3 and then we went ahead and got out the rest of the data by the time I got the subpoena.

Mr. Haycraft: I see.

The Witness: This is the first thing I got out.

2270 As I said, I did not understand that that was not included at the time. I made that list up when I first got the subpoena, is the first thing I did.

Trial Examiner Sheppard: All right.

Mr. Haycraft: That is all.

Trial Examiner Sheppard: Anything else, Mr. Freeman?

Redirect Examination by Mr. Freeman.

Q. Where we have the figure "132" in pencil below the year 1941 for Burner Parts & Service, now Penn Boiler & Burner Co., I take it that means $13,200?

A. That is what I understand.

Q. And likewise, then, for Herco under the year 1937 the figure—or, rather, for the year 1939 the figure 2494, that means $29,400?

A. Yes.

Q. And for Kelly Oil Sales Corporation the 70 indicates $70,000 in sales?

A. That is what it would indicate but I am not positive that is correct.

Q. Well, for Malleable Iron Fittings for the year 1938 we have $600?

A. $600.

Q. For the year 1939 $3,200?

2271 A. That is right.

Q. For the year 1940, $15,300?

A. That is right.

Q. And for the year 1941, $23,900?

A. I would say that was correct, but this, I am positive that is wrong.

Q. On that Herco we have $12,100 in 1937?

A. Yes.

Q. $13,700 in 1938?

A. Yes.

Q. In 1939 we have $29,400?

A. Yes.

Mr. Haycraft: Mr. Examiner, is it necessary to go into all this? What is the use of offering the exhibit if he is going to testify to it?

Mr. Freeman: Just a minute.

Q. And for 1940 we have $25,800 and for 1941 $21,600?

A. That is right.

Q. And the figures in each case indicate hundreds less the last two figures?

A. That is right.

Q. That is, the zeros are omitted?

A. The only one that I can see that you pointed out that may be wrong would be Kelly. I don't believe they bought $70,000 in that year.

2272 Mr. Freeman: That is the only reason I called your attention to these figures, so that if there were any errors you might correct them.

Trial Examiner Sheppard: All right.

Mr. Freeman: That is all.

By Mr. Haycraft:

Q. Where there are blank spaces, what does that mean?

A. That there were no sales.

Mr. Haycraft: That is all.

Trial Examiner Sheppard: Mr. Owens, I want to thank you for coming here. I am glad that you were on the stand and I excuse you at this time.

(Witness excused.)

Trial Examiner Sheppard: We will adjourn at this time until 2:30.

(Whereupon, at 1 o'clock p.m., September 7, 1944 a recess was taken until 2:30 o'clock p.m. of the same day.)

2273 Afternoon Session.

2:30 p. m.

Trial Examiner Sheppard: We will come to order. You may proceed.

Mr. Freeman: Major Sheppard, we would like to recall Mr. Henning for a question or two.

Trial Examiner Sheppard: Very well.

M. E. HENNING was recalled by the Respondent for further examination as follows:

Direct Examination by Mr. Freeman (Continued).

Q. Mr. Henning, when you last testified in response to the subpena duces tecum you produced some eight contracts that your company had entered into with the various companies named upon the subpena and I now ask you whether or not in addition to those companies that you had contracts with, did you actually make sales or did you give quotations as to prices of controls to companies other than those eight that you had contracts with?

A. Yes, we did.

Q. And I have asked you to check your records as to those companies that you actually sold to, named in the subpena, even though you did not have contracts, and

2274 have you prepared such a paper?

A. Yes, we have.

Q. Will you hand it to me?

A. Yes (witness hands document to counsel).

Q. So that the record is clear, will you state whether or not these are all of the companies that you made sales to even though you had a contract or you didn't have a contract?

A. Yes, these constitute all that we could find.

Q. And the tabulation thereon, that is for the years 1937 up to and including 1941, indicate the prices at which you sold controls in sets to the respective companies therein mentioned.

A. Yes.

Q. And will you tell us whether or not, of the companies mentioned, the controls included a thermostat, a limit con-

trol, and a primary of the intermittent type or the constant ignition type?

A. I believe these were intermittent.

Q. And I notice under the name Century Engineering—

Mr. Haycraft: I object, unless the Exhibit is in evidence.

Mr. Freeman: What was that objection?

Mr. Haycraft: I object to your questioning about it.

Mr. Freeman: All right; we will offer it in evi-
2275 dence as Respondent's Exhibit 182.

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: Let me see it.

Trial Examiner Sheppard: Mr. Freeman will let Mr. Haycraft see it.

Mr. Haycraft: May I ask the witness some questions about it?

Trial Examiner Sheppard: Yes.

Mr. Haycraft: What do the figures on here represent,—the price or the amount, or what?

The Witness: These figures represent the price per set, consisting of three pieces.

Mr. Haycraft: It does not represent any volume?

The Witness: No.

Mr. Haycraft: Then as I understand it, you say that actual sales were made to these various firms at the prices indicated.

The Witness: Yes, or quotations.

Mr. Haycraft: Some of them may not have been sales.

The Witness: That is correct.

Mr. Haycraft: Either sales or quotations.

The Witness: Yes; as I understood it, the subpena asked for both, either sales or quotations.

Mr. Haycraft: Did you superintend the prepara-
2276 tion of this Exhibit?

The Witness: Yes, I did.

Mr. Haycraft: And from what sources was it prepared?

The Witness: It was prepared from our Pricing Department.

Mr. Haycraft: Was it prepared from invoices or was it prepared from price sheets?

The Witness: From our regular Pricing Department which prices all invoices.

Mr. Haycraft: You can't tell then whether actual sales were made at these prices or not?

The Witness: Yes; I am sure that some sales were made because this sheet also includes some contracts which we

had and in those instances we give you the dollar-cents volume.

Mr. Haycraft: But my question is whether you can testify whether the sales were made to each and every name mentioned on here?

The Witness: I couldn't from looking at it, but I can see from this that each of these include a number of companies where sales were made.

Mr. Haycraft: I object to it as irrelevant and immaterial.

Trial Examiner Sheppard: I will accept it and
2277 give it study in reference to your other testimony connected therewith.

(The paper referred to, was marked for identification as RESPONDENT'S EXHIBIT 182, and was received in evidence.)

Mr. Freeman: That is all.

Trial Examiner Sheppard: Any cross examination?

Mr. Haycraft: No. Yes, I believe I would like to ask him one question.

Trial Examiner Sheppard: Step back.

Cross-Examination by Mr. Haycraft.

Q. Where there are blank spaces on the Exhibit, what does that indicate?

A. That no sales or quotations have been made to the company.

Mr. Haycraft: That is all.

Mr. Freeman: We offer in evidence as Respondent's Exhibit 183, a book of patents having to do with primary controls and thermostats under which Respondent manufactures its primary controls and thermostats here involved. Mark it.

(The bound book of documents referred to was marked Respondent's Exhibit 183 for identification.)

Trial Examiner Sheppard: Any objection?

Mr. Haycraft: As I understand it, these are the
2278 patents listed in the stipulation.

Mr. Freeman: Correct.

Mr. Haycraft: No objection.

Trial Examiner Sheppard: Let it be accepted.

(The documents referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 183, were received in evidence.)

Mr. Freeman: I would like to make a statement for the record with respect to the portion of the Complaint by the Commission involving the Freeman patent and the Cross patent. At the time Respondent filed its Answer in this cause it had a favorable decision with respect to its practices from the United States Circuit Court of Appeals for the 7th Circuit. That case went up to the Supreme Court, which was argued in December of 1943 and decided by the Court on January 3, 1944.

The Supreme Court of the United States reversed the Honeywell-favorable decision from the 7th Circuit Court of Appeals, and on February 7, 1944 denied a petition for re-hearing.

Promptly upon the denial of the petition for rehearing Respondent in this case terminated all of its agreements of every kind involving either the Cross patent or the Freeman patent, all of its practices condemned by the Supreme Court have been eliminated, and I want to
2279 state on this record as counsel for the Respondent, that all of the practices complained of in connection with the Cross patent and the Freeman patent have now been ended and are not now being carried on in any way by the Respondent.

I might also say that patent markings in connection with these two patents have been removed from any and all controls sold by the Respondent and that in Respondent's literature it has eliminated any reference to either of these two patents or the markings involving those two patents.

Mr. Haycraft: I should like to ask counsel if we are to infer from this statement that there will be no defense testimony or evidence submitted on these two counts?

Mr. Freeman: There will be no further evidence of any kind because the Supreme Court has spoken and we are living up to the decision of the Supreme Court, and I think we can save time on the part of the Respondent and likewise on the part of the Commission, because that is now a dead issue.

Trial Examiner Sheppard: What count of the Complaint was that in? I have forgotten.

Mr. Gilpatric: Count I, paragraphs 5 and 6.

Mark this as Respondent's Exhibit 184.

(The document referred to was marked Respondent's Exhibit 184 for identification, consisting of 27 pages.)

2280 Mr. Gilpatric: We offer in evidence a copy received from the Securities & Exchange Commission of a prospectus relating to Perfex Corporation, dated July 8, 1944. Since the relevancy of this may not be readily apparent I would like to make this brief explanation of the offer:

One of the issues in this proceeding is whether the practices and conduct of the Respondent have affected competition among control manufacturers. We have had the testimony through a witness called for the Commission, Mr. Julius Luthe, the president of Perfex Corporation that his company started in the control business in 1936 and by 1941 considered itself the second largest manufacturer in the industry.

This prospectus, which is put out by the Perfex Corporation and on file with the Securities & Exchange Commission corroborates that evidence. It states, among other things as bearing on this issue—

Mr. Haycraft: I object to what it states if it is going to be received in evidence.

Mr. Gilpatric: Well, I think with that statement and showing this, of course, to Mr. Haycraft, that will be sufficient as an introduction (handing documents to counsel). We are only relying for the description of the business of Perfex on pages 5, 6 and 7.

Mr. Haycraft: I object, Mr. Examiner, to the offer 2281 on the ground that it covers a period of time subsequent to the time which is really in issue in this case and that it includes the activities of the Perfex Corporation in the war period and so, in my opinion, has no probative value in this proceeding.

Furthermore I am deprived of the opportunity of cross-examining the witness who prepared it with respect to a number of the statements contained therein, a privilege which should be granted in all cases of this kind.

Mr. Gilpatric: It is only offered to the extent that it relates to and supplements the testimony of Mr. Luthe. Any statements that are extraneous to his testimony as to the position of Perfex and its ability to compete and become one of the principal factors in the industry are not offered and we do not claim them to be binding on the Commissioner or Perfex Corporation.

Trial Examiner Sheppard: I think the testimony as already had by witnesses in reference to not only Perfex but some others that came out in the testimony in reference

to the prosperity and growth of these various units are enough study for the Examiner and possibly for the Commission to show the indications along those lines. Those witnesses were subject to cross-examination by Mr. Haycraft.

A statement of this kind, which is more or less a public record taken from the Securities & Exchange Com-
2282 mission may be of interest to me and to the Commission, both, and I would have let it go in without objection, but if Mr. Haycraft wants to cross-examine on that and he has that right, I am going to bar it, so the motion to incorporate this in the record is denied.

Mr. Gilpatric: Then it is marked for identification, and we will have an exception.

Trial Examiner Sheppard: That is right; and any use you gentlemen may want to make of it can be done.

Mr. Gilpatric: Now, except for the recall of Mr. McAnly—

Trial Examiner Sheppard: He will be here tomorrow.

Mr. Gilpatric: He will be here tomorrow, and outside of correcting two figures in his report and making a brief statement about his testimony, the Respondent's case will be completed, and subject to any redirect examination after Mr. Haycraft's cross examination.

Trial Examiner Sheppard: We will adjourn till tomorrow morning at 10 o'clock a.m.

(Whereupon, at 3 o'clock p.m. the hearing in the above-entitled matter was adjourned to Friday, September 8, 1944, at 10 o'clock a.m.)

2283

Room 1123, New Postoffice Building,
Chicago, Illinois,
Friday, September 8, 1944.

Met, at 10 o'clock a. m., pursuant to adjournment.

Before:

W. W. Sheppard, Trial Examiner.

Present:

Everett F. Haycraft, Attorney for the Federal Trade Commission.

Cravath, Swaine & Moore, by R. L. Gilpatric, 15 Broad Street, New York, New York; and Baer & Freeman, by Will Freeman, 135 South LaSalle Street, Chicago, Illinois; appearing for respondent.

2284 Proceedings.

Trial Examiner Sheppard: Convene the hearing, Mr. Reporter, in Docket 4920, Minneapolis-Honeywell case. Show the usual appearances and show Mr. H. T. McAnly of Chicago, having been previously sworn in this case, reappears upon the stand by agreement for, I believe, cross-examination at this time, isn't it?

Mr. Gilpatric: Well, there are a couple of questions we would like to supplement.

Trial Examiner Sheppard: All right, on behalf of the respondent, Mr. Reporter.

H. T. McANLY, recalled as a witness by and on behalf of the respondent, having been previously duly sworn, was examined and testified further as follows:

Direct Examination.

Mr. Gilpatric: In the first place, it appeared after the close of the hearings last July that the bracket prices shown on two pages of the report, respondent's exhibit 170, differ from the prices shown in Commission's exhibit 1, that is the stipulation. The difference was due to the

fact that in two years—in one year, rather, two of the bracket prices shown in the stipulation were lower than those shown in the report because of the fact that on quantity purchases of limit controls there was a further reduction allowed.

Trial Examiner Sheppard: What years were those?

2285 Mr. Gilpatric: Just 1941. So I would like to ask Mr. McAnly to read into the record the three corrections, the three sets of corrections which are necessary in order to eliminate that inconsistency.

Trial Examiner Sheppard: Can you make it on the report?

Mr. Gilpatric: We haven't got it here, unfortunately. You see, the original exhibits, I suppose, are in Washington.

Trial Examiner Sheppard: All right, it will have to be done on the record then.

Mr. Gilpatric: All right.

By Mr. Gilpatric:

Q. Will you indicate what they are, Mr. McAnly?

A. On page 4, the schedule at the bottom of the page, in the price schedule column opposite bracket No. 4 it reads $15. It should read $14.90. Bracket 4-A reads $14.50. It should read $14.25. Now, page 6 schedule—

Q. Exhibit A?

A. Exhibit A, column 3, opposite bracket 4 reads $15. It should be $14.90. Opposite 4-A it reads $14.50. It should be $14.25. And in column 6, price differential opposite bracket 4 reads 35. It should be 45 cents. 4-A reads 50 cents; it should be 65. And opposite bracket 5 it reads 75. It should read 50.

2286 Q. Now, Mr. McAnly, do these changes which you have just made for the record affect in any way the other computations and conclusions in that report, respondent's exhibit 170?

A. No, they deal only with selling price differentials in the last three brackets and our report, of course, dealt only with cost and made no attempt to compute or compare cost differentials with selling price differentials in those three brackets. We stopped with 3-A, as we have explained before, so that this makes no change in any of our comparisons.

Trial Examiner Sheppard: And this change that you have just indicated there happened only in 1941?

The Witness: That is right.
Mr. Gilpatric: Yes.
Mr. Haycraft: Well, the whole exhibit is 1941.
The Witness: Yes.
Trial Examiner Sheppard: Yes, it only deals with 1941.
Mr. Gilpatric: It only deals with 1941.
Trial Examiner Sheppard: That is right.

By Mr. Gilpatric:

Q. Now, Mr. McAnly, in view of the bulk of this report and the desire of everyone, including, I believe, the Trial Examiner, to have the essence of it briefly stated, I wonder if you could summarize very briefly by way of concluding your testimony what this report shows,
2287 so that we will have in one place in the record a very short statement of what it is?

Trial Examiner Sheppard: Very good.

The Witness: Our job was to make an analysis of the actual costs incurred by Minneapolis-Honeywell during the year 1941 in the manufacture and distribution of controls for domestic oil burners, with a view toward ascertaining which of those costs could be so apportioned between Minneapolis-Honeywell's eight manufacturers' price brackets as to account for or justify the difference in price between those brackets. We set out to make this apportionment by the use of methods and procedures which are recognized as in accordance with accepted accounting practice.

As I testified last July, out of total costs for 1941 of approximately $11,000,000, we excluded from the allocation over $8,500,000, consisting principally of manufacturing costs, general advertising and certain items of home and branch office selling and general administrative expenses. That left some $2,445,000 for analysis and distribution where applicable among the price brackets. The types of expenses thus distributed consisted of certain home office selling and administrative expenses, various branch office expenses and expenses of the finished goods stores and shipping department.

Using only recognized bases of apportionment we reached the conclusion that, compared to a total price difference of $6.50 between Minneapolis-Honeywell's
2288 socalled discount price, which was its highest price to manufacturers for 1941, and its bracket 5 price,

which was its lowest price, there was a cost differential of $9.40 per set of controls. In other words, the over-all reduction in price from Minneapolis-Honeywell's top price to its bottom price, as represented by its 1941 price bracket structure, was more than justified by cost savings realized through selling in quantities to the lowest price group.

When it came to distributing those cost savings among the eight brackets, however, all but 46 cents of the $9.40 was spread over the first five brackets, so that what was left, namely, 46 cents per set of controls, was not enough to account for $1.60 difference in price between brackets 4 and 5. That is why our report stopped short of allocating costs as between brackets 4, 4A and 5. That fact does not, however, detract from our first conclusion that the over-all difference in price between the top and the bottom brackets was justified, nor does it mean that the price differences between the last three brackets could not likewise be justified by cost savings, were we able to allocate additional items of cost excluded from consideration in this report, which was not practical.

I think that summarizes the contents of our report and conclusions.

2289 By Mr. Gilpatric:

Q. Well, Mr. McAnly, in view of the corrections made in the report should that $1.60 figure be $1.85 now? Could you figure that out?

A. Let me see. No, your 45, 65 and 50 are still your $1.60.

Q. Well, the difference in selling price between $14.90 and $13.75 is only $1.15.

A. Well, your difference is your difference between $15.35 and $13.75, isn't it? It is the price of 3A and 5.

Q. You are right.

A. It doesn't make any change in that at all, just within the last three brackets.

Mr. Gilpatric: All right. That is all we have, Mr. Examiner.

Trial Examiner Sheppard: Cross-examine.

Cross-Examination by Mr. Haycraft.

Q. In your study did you make comparison between the products sold at $17.35, bracket 4, with your $13.75 and $14.25 and $14.90 in determining whether or not the difference was justified?

Mr. Freeman: Just off the record.

(Discussion outside the record.)

Mr. Haycraft: Exhibit A I am referring to. I am looking at exhibit A now of respondent's exhibit 170.

2290 Mr. Freeman: All right.

Mr. Haycraft: Page 6 of the report.

A. Well, we only carried our comparisons down as far as 3A.

Q. You made no comparison with any of the various brackets then, 1, 2, 3, 3A, with 4, 4A and 5?

A. No. Comparisons are available on the exhibit for comparisons within the brackets up to 3A, but as the schedule shows we only have 46 cents left and to attempt to spread the 46 cents over the last three brackets would not have meant anything to compare with the $1.60 that was the sales price differential.

Q. Now, referring to exhibit B of respondent's exhibit 170, will you explain how you arrived at the figures under the separate columns in line 1, that is, "Manufacturing cost of products sold"?

A. Well, that, in effect, is the sum of the individual product costs produced by the company as set forth in the sales analysis records of the company.

Q. What does the item $7,665,233.49 represent?

A. That is the manufacturing cost of all products sold.

Q. Of all products?

A. That is right.

Q. Including things other than controls for burners?

A. Oh, yes. That is everything.

Q. What is the $6,382,399.65?

2291 A. Well, that is the manufacturing costs of all products except cost of products sold to the oil burner manufacturers.

Q. In other words, that is the difference between the first column, $7,665,233.49 and $1,282,833.84?

A. That is right.

Q. Now, then, what is the basis for the last line, "Manufacturing costs applicable to products sold to oil burner manufacturers"?

A. Well, that is the actual product sold to each of the oil burner manufacturers, the quantities of each, extended by their factory cost to produce.

Q. Where did you get the figures?

A. From the records of the company. In other words,

the company have in their records the specification cost of each item, material, labor and burden and then we multiplied that out and that is the total and I think we explain in the report here how we reconciled that with the over-all cost. In other words, that is the sum cost,—the same cost that the company uses when they figure inventories, product costs for selling prices, and so forth.

Q. Now, then, how are these various items made up in the remaining columns on there, namely, "Manufacturing cost of products sold by price brackets", then the "Discount, and the No. 1, 2, 3, 3A, 4-4A and 5"?

A. Well, we had the sales on the units sold to
2292 the customer within each bracket and that merely is the extension of those units multiplied by the factory costs of each. In other words, that is an analysis of that $1,282,833.84 figure.

Q. You mean that you made a total of the sales by units to oil burner manufacturers in each bracket?

A. That is right. We got that from these sales records. That is a part of the company's regular procedure. They have cards that give us that information, on which we based our study, and on which we test our study.

Q. In other words, if a customer was put in class 5, regardless of the reason he may have been put in there, you counted the units sold to that customer under class 5 in making up your tabulation?

A. That is right, by customer bracket analysis.

Q. I suppose you have work sheets so that I can ask you about specific customers, as to where they were classified?

A. I think we have.

Q. Can those sheets be made available? Will those work sheets be made available?

Mr. Gilpatric: Yes, they will be.

By Mr. Haycraft:

Q. Then, as I understand it, after you determined the number of units in each classification you multiplied that by the cost?

A. Yes, that is the cost.

2293 Q. The unit cost that you determined from your compilation or their figures, which?

A. Well, they are their figures which we verified and satisfied ourselves that they are right.

Q. What was the unit, the basis used in determining those figures, the cost unit? What did you multiply by?

A. Well, each limit is made up of a bill of material that has a series of parts and sub-assemblies and assemblies and each one of those in turn has a specific cost computed. In other words, the company maintains costs all the time in their records.

Q. What I am trying to determine is what you used in making up this $6,196.14?

A. We used the cost on the various products that were represented by the customers in that classification, that covered their purchases.

Q. I want to know what the number was, what was the unit, what was the figure that you used?

A. Well, they are gathered from the different units in there. That is the total cost of all the products sold to the oil burner manufacturers in the discount group. The only purpose of that line there anyway is to determine a base against which to measure this distribution cost and get a percentage which, in turn, you can apply to the set of controls.

2294 Q. All right. Now, then, tell me this: What proportion of the total manufacturing cost, $1,282,833.84, is represented by the brackets that you used,—discount, and the 1, 2, 3, 3A?

A. What portion?

Q. Yes, what percentage of that?

A. Well, the sum of 1, discount, up through 4A.

Q. Through 3A?

A. Through 3A. I would have to figure that. The sum of all of them equal $1,200,000, to the $857,000, which is roughly two-thirds, would leave about one-third that would represent the costs in that group.

Q. Then your testimony is that the analysis that you made is only about on a third of the products sold and manufactured?

A. That is right, about a third spread between brackets. Of course, the over-all covers the $857,000 as well, when you talk of over-all.

Q. Well, the only over-all comparison you made was between the discount column and the last column 5, is that right?

A. That is right.

Q. You did not make any comparison, for instance, of

column No. 1 with No. 4, 4-A and 5, or between column 2 and column No. 4, 4A and 5?

A. No, but any one of those columns can be compared with 5 very easily.

Q. Well, that is not the question. I am asking you
2295 whether this report contains that comparison, not whether it can be compared. I am asking you whether you did compare it.

A. Just a second. I think we have—no, I guess there is no schedule that contains a comparison of 2 with 5 or 1 with 5, but I cannot help but add that it can be readily compared from the report, from the figures contained in the report.

Q. Now, referring to line 9 of this same exhibit will you please explain in detail how you arrived at the figures appearing on that line applicable to each of the price brackets? Just where do you get $9.40, $5.12, $2.04, $1.15 and 46 cents?

A. Well, we determined in line 8 the ratio of the distribution cost as finally allocated to the price brackets, which we express in line 8.

Q. How did you make up line 8?

A. Well, by dividing the total under line 6 by line number 1.

Q. All right.

A. Then the application of that ratio—

Q. You misspoke yourself there, didn't you? You mean line 7, don't you, the total?

A. Oh, yes.

Q. $10,902.30.

A. That is right, line 7.

Q. Divided by $6,196.14, is that right?

2296 A. That is right, which gives you the ratio. Then we apply that ratio to the cost of the standard set of oil burner controls.

Q. Where is that in the report and what is the figure that you use?

A. As I said, it is readily ascertainable. I mean it can be calculated, but I think—

Mr. Haycraft: I think, Mr. Examiner, we should have some explanation of that which would verify the figures. He says it is the standard cost for the set.

The Witness: It is the cost of that set, to which has been applied this item to get the—

Trial Examiner Sheppard: Suppose I give you fifteen or twenty minutes and let you boys do that.

Mr. Haycraft: They have it.

The Witness: We can give it. I think it was felt that there wasn't any reason to carry in here the specific cost as an item, that it could be explained.

Mr. Freeman: The manufacturing cos all the way through is the same regardless of bracket.

The Witness: We have made no change in that. The only thing is we do not show in here the cost of that set and, therefore, we were requested to leave it out. It can be computed.

2297 Mr. Freeman: It doesn't make any difference what the cost of a set is as long as we start with the same cost all the way through each bracket.

Mr. Haycraft: That is a matter of argument, Mr. Examiner and I am entitled, it seems to me, in cross examination of this witness to find out the basis of these various figures.

Trial Examiner Sheppard: Yes. I am going to have you do that right now, if it takes half an hour.

Mr. Freeman: Do you contend, Mr. Haycraft, that the manufacturing cost enters into this picture?

Mr. Haycraft: It does if it is used as a basis.

Mr. Freeman: We do not use it as a basis.

Mr. Gilpatric: We do not do that in this whole report.

Mr. Haycraft: I would like to have the witness testify, Mr. Examiner. I am asking him these questions.

Trial Examiner Sheppard: All right, go ahead. Let Mr. Haycraft do his examining.

The Witness: Well, we apply the ratios to this base, which is the manufactured cost of this set. Therefore, the cost, if you divide the $9.40 by these ratios, you will have the cost. We use the same cost all the way across. Now, it is only a matter of very simple calculation for us to produce the cost figure that represents the cost of the set. That is what you are after, isn't it?

2298 Trial Examiner Sheppard: All right. Let me know if you want this witness to do that and I will have him do it.

Mr. Haycraft: I am merely trying to find out what the report represents, Mr. Examiner.

Q. I wish also to ask you this question: I notice you refer to the cost on a set basis and yet we have in the

beginning of the exhibit and all the way through it unit volume. Now, how did you relate your unit volume to a set price and set cost?

A. Well, there are three units to a set.

Q. Is that the way you did it?

A. That is the way it is done and this set, that is, the one for oil burners, is the main item, the most popular and we confined it to that. I think that is explained in the report.

Q. Now, then, on page 8 you have got here various distribution costs, cost differentials and price differentials and so on. Now, are those all on a unit basis or on a set basis? You will recall the report indicates the price scale is on a set basis.

A. That is right.

Q. Now, what about the distribution costs and the cost differentials and the price differentials?

A. They follow the price scale. They are per set.

Q. They are all on per set?

A. It is a segregation of the bracket classification, is the way it is described. It is a unit classification but by purchasing one set that gives you three units, isn't 2299 that right?

Q. In other words, your discount column would be equal to about 50 sets?

A. That is right, it should read 1 to 50 and number 1 should be 50 and one-third of that.

Q. Now, that same explanation would be true as to page 4, wouldn't it, that you made?

A. Yes, sir.

Q. Now, turning to page 13 of the report, in the middle of the page reference is made to: "Statistics relating to sales, manufacturing cost of products sold, number of sales invoices, and number of billing lines were obtained from tabulations prepared on electric sorting and tabulating equipment from approximately six hundred and thirty thousand punched cards. The punched cards were prepared by the company in the ordinary course of its business during the year 1941 as a part of its regular accounting and sales analysis procedure and covered all sales of the company."

Now, what did these punched cards show? You say they were cards that were used. What did they purport to show?

A. Well, the company accomplished their sales analysis and various statistics as to quantities and items sold by using the International Business Machines electrical sorting and tabulating procedure and that requires a key punch operator to punch on this card, making holes
2300 in certain fields on a card which identifies each line of the invoice as to quantity and product number and in their case unit cost and selling price, that is, the extension of that quantity and that is all tied up then with the particular invoice from which these cards are prepared so that they may be resorted back and tested against these cards.

Q. Are these cards coded so as to show the bracket classification of the customer?

A. I don't know whether there is a definite code on bracket classification or whether we took that from the specific customers. They are not on the individual cards, no, but they are identified by customer. Then you see the company can sort these cards by using any field they desire to prepare any kind of statistics.

Q. Well, who did the sorting of the cards, that is what I am trying to get at? Did you do it or did the company?

A. Well, that was done under our supervision and we exercised the same care in testing anything that was done that we would normally during the course of any audit. We laid out the procedure and worked with their personnel representatives.

Q. Well, did you check the classification, the assortment as to classification? You say they could be sorted as to classification, as to customers and then they should be sorted as to classification. Did you check it your-
2301 self as to the classifications? How sure can you be, for instance, that you got all the cards in each classification, in the 1, 2, 3, 3A, 4, 4A and 5 and so on?

A. Well, I would say that the test of the work that we did in connection with the preparation of data was sufficient to satisfy us that it is accurate. I think the punched cards that we handled or accounted for came within two per cent of the total sales dollar volume of the company, so that we are sure we had all the cards.

Q. Well, that may be but how are you sure, or how can you be sure that you had them classified right?

A. Well, we satisfied ourselves sufficiently that we are willing to make the statements that we have, that we think that they are accurate.

Q. Yes, but, Mr. McAnly, under cross examination at this time I am trying to find out what steps you took to satisfy yourself? In other words, the Commission has got to be satisfied now, that is the next step.

A. Well, as far as the detailed test checking that we did, I have with me here two of the men who did the work so that in the event there is any question as to just exactly the steps that we took we can make a definite statement on that. In other words, the extent of our participation in this thing we can give to you first hand.

Q. I will pass that for the time. Who were the 2302 men that worked on it?

A. Mr. Reese and Mr. Johannsen.

Mr. Freeman: Do you want to have him answer that question right now?

Mr. Haycraft: If he can answer it.

The Witness: I will be glad to have him answer that question.

Mr. Freeman: Well, he is here now.

Mr. Haycraft: Well, I would rather get through with this witness and then take Mr. Reese.

Q. Who was the other man?

A. Mr. Johannsen.

Q. Now, on page 14, under the title, "Salesmen's calls:

"Salesmen's calls were segregated into two general classifications, manufacturers and other customers.

The calls on manufacturers were divided between oil burner manufacturers and other manufacturers.

Reports of salesmen's calls on file at the home office were inspected and tabulated by us. Effect was given to the relative time consumed in making calls on manufacturers as compared with calls on dealers, jobbers and other customers from data furnished by the salesmen or their supervisors in which consideration was given to the specific customers and territories."

Now, to what extent did you make the inspection of 2303 salesmen's reports that you referred to? Did you find that there were full files of salesmen's reports in all offices where you made your study?

A. Well, we point out in the last paragraph that there were a few cases where we did not have all of the data. We had access not only to salesmen's calls, but to correspondence, expense reports covering traveling.

Q. Were you able to determine from the inspection that

you made of these reports the length of time that the salesman spent at the places of business of each of the customers that he called on?

A. Well, the only place that any relative time was considered was getting a variation of the time required generally among manufacturers by getting a few salesmen who called wholly on manufacturers.

Q. Did you make any attempt to distinguish or divide this time as between manufacturers in the various brackets? In other words, did you make any attempt to determine how long salesman A spent in the office in calling on manufacturer X as compared with manufacturer Y, X being in one classification and Y in another?

A. Not by the salesman.

Q. Not by the same salesman?

A. But each salesman's calls were analyzed and his salary and traveling expenses spread among the 2304 manufacturers uniformly on a pure call basis, but if one salesman, the same salesman, handled several customers in different bracket classifications they would be a uniform cost per call, but to the extent that the different salesmen handled the different customers in the different bracket classifications it naturally would follow that their specific expense was spread over the brackets that they handled. So if one customer is handled by one salesman, his cost would follow in that classification uniformly, each salesman, but not an average of all. Do you see what I mean?

Q. I see what you mean and I think that you have answered my question. I wanted to ask you whether it would be possible to make the study as I have indicated in my question,

A. I don't think so from the data that was available.

Q. That is, would that be due to the fact that it was a long time back?

A. That is right and I doubt if you could tell from the sales call reports the relative time that he might spend. I think that if it were possible we would try to give effect to that, although we felt that we had to accomplish some of that by confining it to the specific salesman.

Q. I assume that you have in your study indicated the, —in your work sheets you have a full record showing the salesman, the names of the accounts that the salesman called on.

2305 A. Yes, sir.

Q. So that can be checked.

A. That is right. It is in such shape that it can be checked.

Q. Now, looking at page 22 of the report, where employes listed on that page are engaged in part in connection with sales to oil burner manufacturers and in part connected with sales to other manufacturers, how were those percentages arrived at in the division of time in those two columns?

A. Well, as explained underneath, by direct consultation with the respective individuals, which was true in the majority of cases.

Q. Would the answer be, then, that estimates were made?

A. Well, "estimate" might be a little misleading. They are more in the nature of opinions.

Q. And not based on—

A. No, there is no time report.

Q. —time records, then?

A. No.

Q. How did you arrive at 87.9 per cent for this fellow Dennison, consulting engineer, on oil burner manufacturers and 12.1 per cent on other manufacturers? That is getting it down pretty fine. I am just wondering whose opinion could get that close?

Mr. Gilpatric: It is seven-eighths if you give it in terms of numbers.

2306 The Witness: That is probably the way it is. One-eighth and seven-eighths.

Mr. Haycraft: I would like the witness to do the answering, Mr. Examiner, rather than counsel.

Trial Examiner Sheppard: All right. The Examiner is paying more attention to the witness.

By Mr. Haycraft:

Q. As I understand it, then, these percentages were based upon the opinions of employes of the respondent as to the division of time?

A. And checked with their supervisor, but I would like to make this comment if I may. At the bottom of the page we do draw a comparison. In other words, after this was accomplished and we got the respective opinions of these people, as a result we applied that,—in distributing their salaries and their traveling expense or cost to the extent

they had it, we allocated 40 per cent to heat control whereas—allocated 40 per cent of this to oil burners, whereas the actual sales volume of oil burners was 43 per cent. In other words, even after taking their opinions or estimates, which is the best you can get, there is a measure of how much in line it might be when in the final analysis it did not give us as much as if we had spread it in a lump on a sales basis. While neither may be exactly right, certainly one has some effect in checking the other.

2307 Q. What was the basis for the 43 per cent and 57 per cent?

A. Well, of your heating control sales 43 per cent was oil burner and 57 per cent other. Now, this allocation—

Q. What figure is that?

A. That is down on page 22.

Q. Where else can you find the figures that you base your 43 per cent on?

A. Well, just from the figures that we have taken of the salary,—or, rather, of the sales. It is not in the report exhibits. It is merely a comment in the report.

Q. Don't we have that here?

A. No, it is not separated. They would be included in that column in the first exhibit A there, "other customers."

Q. Exhibit A or exhibit B?

A. Exhibit B I guess it is. On line 1, exhibit B.

Q. You do not have those figures, then, do you, which show the 43 per cent and 57 per cent?

A. We do not have the figures that make up the two percentages but the sales analysis records of the company disclose that on the heating control sales volume 43 per cent is oil burner and 57 other, so that we just drew the comparison in here to show that this allocation is a reasonable approximation, if that is what you may call it.

Q. Well, as I understood in the beginning of this thing, you were going to include those items which were

2308 readily ascertainable. As I understand it here you say—on page 12 you say:

"The items of distribution cost fall into two general classifications:

1. Those which unquestionably affect differentials in cost as between customers.

2. Those which are generally accepted as having no effect on such cost differentials.

The items in the first group which unquestionably affect

cost differentials fall into two further general divisions, namely: those which lend themselves readily to bracket classification and those which are not so readily allocated to bracket classification.

In this report we have utilized only those items affecting distribution cost differentials which were readily allocated to the respective quantity brackets."

Now, in your opinion, does this figure that I have just called your attention to on page 22 come within that definition, "readily allocable?"

A. I would say it does.

Q. And yet they are based upon opinion?

A. It is a direct selling cost.

Q. And yet they are based upon opinion and not based upon time records?

A. Well, the only cases where the opinion enters into it is the division between oil burner and other manufacturers.

2309 Q. Yes.

A. Under your oil burner classification—

Q. Isn't that an allocable proposition? You are checking a call on the oil burner manufacturer and other manufacturers, aren't you?

A. Yes, and I contend that the test that was used as determined by the total volume makes it a pretty reasonable allocation.

Q. You would not contend for a moment, though, that it is accurate when it is not based on time records, would you, as an accountant?

A. I can point out to you many cases where time records are not necessarily accurate either. In other words, because there is a time record supporting something does not make it accurate. My opinion is that an individual that is an executive can give you a much better idea of how his effort is devoted than anything he could put down in the form of a time record. In fact, in cost accounting today we have very little use for so-called actual time records. We work on what is called the required time as determined scientifically. If they take more time than that we do not call that cost to the item. It is a cost that is thrown out.

Q. Is that the policy you followed in preparing this report?

A. In preparing the report as applied to the basis
2310 of allocation where it is used.

Q. Now, turn to exhibit C, page 20 of exhibit 170. Now, you have a figure there of $92,908.80, shown as heating controls division,—salaries to the heating controls division. Have you got that?

A. Yes, sir.

Q. Now, look at the bottom of page 21, under the same office and administrative expense, analysis of exhibit C. You have a sub-heading, "Heating controls division, $90,699.80." Now, which one is correct?

(No response.)

Mr. Hayeraft: We can pass that for the time being.

A. Let us check that.

Q. If you want your assistants to take a look at that, why, we will pass that for the time being.

A. I can say this, that regardless of that item there, which could be a slip, the amount that is applied, the 45, is a part of the $90,699.80, so that the discrepancy is in the not applied section. That is carried out on the next page. It is probably just an error in classification in the total column here. Your total salaries on exhibit C are $171,127.81, so that the classifications within the group of 171 are a little different here on exhibit C than they are over here, but the amount that is segregated between other customers and the amount we used agrees in total 2311 with the 171. Is that clear? I mean have you got the figures?

Q. That is the only explanation you have to make at this time?

A. That is the only one I have here today unless we check the thing and see.

Q. You know of no reason why the items could not be the same in both places in the exhibit, do you? They are supposed to represent the same thing?

A. Well, they represent the same total. Now, it is just a different segregation, yet one is called "Heating controls division."

Q. Well, they should come out in the same amount?

A. They do come out exactly to the same amount in total but it is a group.

Q. They do not come out $92,809.80?

A. No, but we have used less than 92 in the other schedule, which means that some part of that is down in the non-applied.

Mr. Freeman: Mr. Reese can answer that for you Mr. Hayeraft.

Mr. Reese: On exhibit C—

Mr. Haycraft: Just a minute.

Mr. Freeman: He doesn't want it now.

Mr. Haycraft: I would like to have but one man at a time.

Q. Now, turning back to pages 16 and 17 of re-
2312 spondent's exhibit 170, under the caption, "Other oil burner manufacturers also manufacturing other equipment," you make an example there of the Conco Engineering Works. Will you explain the accounting bases for the figure that you arrived at there to determine the percentages of primary control sales volume, which would determine the amount allocable to the control sales volume to this concern?

A. Well, you understand the purpose of that, Mr. Haycraft.

Q. No, I don't think I do. I would be glad to have you explain that, too.

A. Well, we have what we class in the report as mixed manufacturers, oil burner manufacturers that also manufacture other equipment and we wanted to deal with the oil burner end of their business to make them comparable with the oil burner manufacturers who were exclusive oil burner manufacturers.

Q. Well, that being true why was it necessary to have any more than the volume of the sales to that concern?

A. Well, we had to separate the volume of sales to that concern between oil burner sales and other and this was the means that was worked out to arrive at that split between the two.

Q. Well, wouldn't the actual invoices do that?

A. Yes, but we didn't have the time to take each invoice and separate each customer.

Q. I thought that had already been done by the
2313 630,000 cards that you are talking about. That was my understanding of the purpose of the cards, to show you line by line on your invoices the products sold to these various customers whose names you had on there and then you classified them by brackets. That is what you said.

A. That is right.

Q. Then what was the necessity of this?

A. Well, we had no breakdown. The detail,—the reason for this and the reason why we had to resort to this

as the best basis I would like to refer to Mr. Reese, who worked that out.

Q. All right, I will put that down for Reese, too.

Turn to page 37 of the report. Now, here we have a study of office salaries, receivables from credit department, billing and order department, stock room and office salaries generally which are specifically set forth here on page 37.

Now, I would like to call your attention to two or three items there that are not very large but I would like to see just what your reason for including them is. The switchboard item of $438.94: What accounting principle was followed there in including the switchboard expense?

A. You are dealing with branch expenses there and the function of the switchboard in connection with a lot of telephoning and in connection with the receipt and shipment of orders. I think we give each—we have got an explanation.

2314 Q. Pages 46 and 47?

A. Yes.

Q. Well, how did you determine it was $438.94 as the amount operable to burner controls?

A. Well, we say it follows, closely follows the correspondence, invoices and other documents contained in the general files.

Q. Well, how do you mean closely follows? What did you do, count the pieces of paper?

A. That is right.

Q. Just count pieces of paper and use that as a measuring stick for the number of telephone calls, is that it?

A. We use that as a basis for making the split.

Q. Are you assuming that they are going to use the telephone every time they write a letter or a memorandum?

A. No, but—

Q. Isn't that one of the items you cannot allocate?

A. Well, that becomes a matter of opinion again, doesn't it?

Q. Well, what is your opinion?

A. I would say that it is allocable and it is reasonably accurate, that your activity with your customers is measured by your correspondence. It pretty generally lines up with all activity with the customer and if that is true, why, using that as a basis for spreading telephone expense is proper.

Trial Examiner Sheppard: Was that arbitrarily
2315 done or was it done upon some actual basis?

The Witness: Well, the basis was determined by examining the contents of the files and the percentage we applied was used to determine the split of that expense. The item itself was practically immaterial, so we did not approach this thing by necessarily just picking out the items that would be material. We looked at the classification of expense and tried to work out a basis. In this case it looks rather ridiculous to even play around with a four hundred dollar item but we tried to be consistent.

By Mr. Haycraft:

Q. What is the accounting system you followed in accounts payable?

A. I think that is also the—

Q. How did you get accounts payable at all in this exhibit? That doesn't have to do with accounts payable. It has to do with the purchase of commodities, doesn't it?

A. Well, accounts payable in this exhibit, you are dealing there again with branch expense. The purchases of branches are primarily purchases of material and other items that have to do with the operation of the branch.

Q. We are dealing with sales, aren't we?

A. Wait a minute. The department handles all the salesmen's expense accounts and customers' remittances. The name "accounts payable department" is somewhat of a misnomer. It is an accounting term but we
2316 describe it. We say this department checked and paid all salesmen's expense reports, and customers' remittances. In other words, when you get down to a branch operation you do not have too well defined functions in that office.

Q. Now, take the item on this same page of, "General office clerical, $2,041.43." How did you determine the percentage to be allocated to oil burner manufacturers in that instance?

Mr. Gilpatric: What page is this—48?

The Witness: Is this on page 48?

Mr. Haycraft: It is broken down on page 48.

A. Well, now, we state there that these expenses are of a general character, that they are overhead. They represent the overhead and supervision of the other individuals within the functions covered at the branch, so following what is an accepted principle of overhead dis-

tribution we spread this expense in relation to the salary of the other individuals. In other words, that is quite comparable in a shop to spreading the foreman in relation. He goes along and we spread in relation to the people that work under him.

Q. Well, how did you determine whether it went into a bracket, that is, 1, 2, 3 or 4?

A. Well, we took the other salaries which had been allocated on these various bases from the branches and we said these general costs thus would follow those.

2317 Q. Is it one of those that you estimated back here where we find opinions?

A. No, this is a branch. That is the home office. This is actual allocations that have been made.

Q. How did you allocate the salaries of the other officials that have been made here? Was that based on actual or estimate?

A. Which one are you talking about now?

Q. You say "other office salaries." How did you determine other office salaries?

A. Well, we just went back to the bottom of page 47, which shows the basis of the accounts payable. $135 out of $3,900 of accounts payable was allocated over into brackets and on the switchboard $438.

Q. You are not answering my question. You referred to the fact that you allocated this on the basis of other office salaries. What are the other office salaries?

A. I am trying to tell you the other office salaries were allocated on the branch office basis and after we got them allocated then we spread the other office salaries in relation to that.

Q. Does that go back then—

A. That goes back to all of these items that are listed on page 37 down to "general clerical".

Q. In respect to the switchboard you say you

2318 referred to papers in the general files. Now, did you follow that generally in the other items there or did you have a different method for determining the percentage bases allocable to the manufacture of these various items?

A. Well, after we got the switchboard and the mail desk and the sales record calls and stenographic and so on allocated as we have outlined then we took the supervisory expenses, salaries of the office manager and other clerks who could not be allocated to functions and spread

them as an overwriting, so to speak, on the salaries that we had spread on these various bases, which is a common method of overhead allocation or practice. Overhead follows the labor.

Q. Turning now to page 49 of the report, you have an item there under, "Rent, Light, Heat", and so forth, of $92,759.70, a total item. Then the amount allocated to oil burner manufacturers is $2,227.76. Is that on the basis of floor space or what is the basis?

A. Floor space of each one of these functions that a branch performs and then the cost of the floor space of the function was distributed to the brackets in the same way that the functional cost of the salaries were distributed.

Q. Floor space first?

A. Yes.

Q. And then following the same thing?

A. Yes. We have certain men charged to the 2319 order department and the billing department and that expense was allocated to the oil burner manufacturers in the same way that the rent was allocated and in the same way that the clerks were spread. It is the same allocation to oil burner manufacturers because based on what we call a bracket allocation.

Q. Now, the salaries of the supervisors in these branch offices—

A. What page are you on now?

Q. We are still on page 49. "The expense for the space used by the heating control salesmen was distributed to the various price brackets on the basis of the heating control salesmen's salaries and expense. The expense for space allotted to industrial sales and service," and so forth, was eliminated.

Now, is this salesmen's salaries and expense the items that you referred to a moment ago in your testimony as being spread over in accordance with the various items explained on page 37?

A. The individual salesmen?

Q. Or is there a difference between the way you have determined that?

A. Oh, the salesmen's salaries and expense we covered much earlier in the testimony.

Q. Does that include the home office as well as the branch? I thought it was the home office salesmen.

A. No.

2320 Q. Is that branch office as well?

A. The individual branch salesmen, the individual salesmen were spread.

Q. What I am trying to get at is, how did you relate, if you did relate, your supervisor in the branch office to the home office with respect to the salesmen?

A. They are on the salesmen's call basis.

Q. And that goes back to the—

A. To the sales call reports.

Q. To the sales call reports which you referred to in your earlier testimony?

A. That is right.

Q. Is that true with respect to the item at the bottom of page 58, "Selling salaries and expenses"?

A. That is right. That is covered on 59.

Q. Now, calling your attention to the second paragraph on page 59, it says:

"The salary and expense of each salesman who called on oil burner manufacturers were reduced to a cost per day by dividing the sum of the salesman's salary and expense by the number of days engaged in sales work. The cost per call on oil burner manufacturers was determined by dividing the daily average number of calls, which each salesman could make on manufacturers, into his cost per day."

Now, what I want to know is how did you deter-

2321 mine that particular figure, what each salesman could make?

A. Well, in some cases we had a record of salesmen who called only on oil burner manufacturers, so we could get a measure there and then by contact with various supervisors and so on we felt we had to give a weighting to that, otherwise it worked in reverse as far as helping us in our calculation, because to just use an average cost per call on average dealers and manufacturers, —or, rather, on both dealers and manufacturers would give you a lesser cost, so what we did was attempted to give a weighting that would be truly representative as far as it was possible to get it of oil burner,—of what the oil burner or what the manufacturer call requires as compared with the others.

Q. And you added that all up together and an average drawn from that?

A. Well, you remember it was done by salesmen. Each specific salesman was spread individually.

Q. Well, take, for illustration, could you determine—

A. You see, the average number of calls which these salesmen could make, if he only called on manufacturers, performed by the various supervisors and based on experience within that respective territory,—you see you have to do it by each man because one individual might have a closely populated district and could have four or five manufacturers within easy reach.

2322 Q. Was there any indication in your study there as to how long a time or how much time these salesmen are allowed to spend with their customer? Was there a limit placed on the amount of time he was to spend with them?

A. I don't think there is.

Q. You say the other determining item is what calls each salesman could make on manufacturers, that is, the average number of calls?

A. Well, you have to look at each salesman's specific manufacturers and he has to—and then also the scope of his work. That would be something he would work out with his supervisor, and finally the sales manager. After all, there is some direction of these salesmen.

Q. I assume you have work sheets on that to show what items you took into account?

A. That is right.

Q. Now, turning back to page 50 you have an item of "postage." Would you include stationery and supplies there, or is that just postage?

A. It is just postage, I guess.

Q. On page 49 we have the stationery and supplies?

A. Yes.

Q. I take it that these were based upon—is that described in the paragraph, "The expense of the smaller branches," and so forth, with respect to those items?

2323 A. That is right. In other words, the postage follow the contents of the files as far as correspondence and so on.

Q. The general files. What do you mean by "general files"?

A. Well, that would include—the general files would include everything.

Q. Did you pull out correspondence with oil burner manufacturers?

A. That is right.

Q. And count those pages and sheets as compared with the other?

A. Compared with the total.

Q. Compared with the total?

A. Yes.

Q. Did you examine those files in these two offices in Chicago and New York or did you examine those files in each branch office?

A. Well, we explain in here that Chicago and New York, we conducted surveys there for examination and that makes up more than half the branch space, I believe. Now, we used Indianapolis and Boston as typical branches to measure the rest of them and based on the experience there we felt that,—we had to be practical in this thing and when you take Boston and Indianapolis and New York and Chicago you have the great majority of the total cost.

Q. Now, at the bottom of page 51 you have an 2324 item, "Unclassified expense, $13,358.94." What do you mean by unclassified expense?

A. Well, as explained at the top of page 52 there, they are just miscellaneous items in connection with the operation of the branch. We figure their overhead the same as rent and anything else, or an overwriting expense that should follow the direct.

Q. And on what basis did you determine to divide that between the heating control business and other business?

A. In relation to the salaries of the individuals, on the basis that they were divided.

Q. How could you determine that if it is unclassified?

A. No, no, the amount of this expense is not described other than just as unclassified or miscellaneous expense, but it is easy enough to get a ratio of that expense to salaries that have been distributed and if four and a half per cent of the salaries were distributed, why, four and a half per cent of this expense should follow those salaries. It is an indirect item that can be tied down to the branch cost as an overhead item.

Q. Now, I take it that the office traveling expense on page 52 was only taken from the Chicago and New York branches, is that right?

A. That is the only place that they had a separate account on this for the office manager and that follows the basis that we distributed his salary on. I assume

2325 in the other branch it is not a big enough item that was carried. It is not a very big item here.

Q. How about the management expense,—the same way?

A. Well, that is covered on page 53. It is a little different. There again we follow personal calls or supervision of salesmen.

Q. Did you have any records showing the amount of time that the management—

A. We had personal call records. You see, the branch manager's time is divided between making calls of his own and supervising salesmen, so the personal calls would follow his own calls and the supervision is—his supervision cost was allocated in relation to the salesmen's calls that he supervises.

Q. You have then the names of the accounts so that we could separate them between the accounts?

A. On the personal calls, yes.

Q. And whether it was on oil burner business or manufacturer business or jobber business or on other items outside?

A. That is right, that is his personal calls.

Q. Yes. Did you make any allocation between the item of that expense,—I mean between the time that he spent in supervising and those that he made calls, or does one follow the other?

A. Well, what he spent supervising was spread 2326 in relation to the salesmen's calls, of the salesmen that he supervised.

Q. Well, then, you related it directly to the length of time when the salesman called. Now, is that the same salesman that you allocated his time when he should have called, or the length of time that he could have called?

A. Well, the only could have or should have that enters into this picture is trying to get away from using just a pure average cost per call when it is known that you do have to devote a little more time in dealing with manufacturers than you do with dealers on the average.

Q. Your reports do not disclose the length of time that he used in various calls. Doesn't he on any daily report show that? Do you have any daily report showing the time that he spent in making calls each day?

A. Well, the reports would not be too complete in that respect because there is a lot of time in any selling cost

between days and between calls and it is difficult to allocate. You have almost got to work on an average over a number of days. As long as you work with the same salesman—

Q. Even though he may have called on one bracket man today and on another bracket man tomorrow or he may have called on two different brackets on the same day, you are going to make an average?

A. Yes, I would say your average would probably be more accurate than any attempt to determine just
2327 what would constitute the time of a call.

Q. That would be regardless of the fact that he may have spent two days with a bracket 5 man and ten minutes with a bracket 1 man.

A. And tomorrow it might be the reverse.

Q. I am just asking whether that is true or not, what I just said? Your average—

A. Yes.

Q. Let me put it this way: The average would not disclose the actual time that may have been spent with, say, a customer in classification 5 as compared with a customer in classification 1?

A. That is possible. It would depend upon the period that you computed the average over, but I would like to also say that you have to at least consider how it is practical and possible to figure these items into a selling price and, therefore, you have to use averages.

Q. Well, you have to use averages if you are going to do anything about it, but the question that I want to know is whether you are going to get anything like an accurate comparison of the length of time that a salesman may spend in the various classifications in such a system?

A. Well, I would say you would get as accurate a one as you can possibly compute.

Q. With past records. You could certainly com-
2328 pute it with current records, couldn't you?

A. Well, I doubt it. That is, you can compute anything if you put it down on a piece of paper but what would constitute the time of a call, the time a man actually was in the plant of a customer, the time he had to interview, the time he spent getting there and if he is here and tomorrow he has to be over some place else who pays for the difference in the time lost. If you go into anything like an actual time it would be important to have all of that

to get anything that would mean anything, but you can say that over a period of time it takes so much time on an average to handle the affairs of a manufacturer and particularly with a salesman, one salesman.

Q. That is the basis of your report here, then. In other words, you have it worked out on what a salesman,—the time that he should take?

A. What each salesman, what each salesman who constantly calls on the same group of accounts. Now, it is obvious, if it is true that he takes more time to handle a large distributor than a small one, then that salesman is not going to have as many customers, so his average cost per call will be higher and, therefore, will be reflected as a charge against the cost of doing business with that type or bracket of customer, so this is done with each salesman.

Q. What do you mean? You are assuming, then, that one salesman calls only on one classification?

2329 A. No, I didn't say that.

Q. Then how are you going to distinguish between the length of time he is going to call on different customers in different classifications? Your average figure would not reflect those differences.

A. Well, I don't believe that there is anything in evidence to show that there is any difference in the time on the average it should take.

Q. All right, that is what we are trying to find out, because I understand that is the purpose of this exhibit, to show that either there was or was not and I am trying to find out from you the nature of the study you made to determine that. You cannot tell us today, can you, as you sit there whether or not this report reflects a difference in the cost or the expense of selling to class A, class 1 or 2 or 3 or 3A from a salesman's standpoint with respect to the length of time that he spends in calling on those various accounts?

Mr. Gilpatric: Mr. Examiner, I think he is arguing with the witness. The report states what it attempts to show and what it covers and we have had all this average business before.

Trial Examiner Sheppard: I think we have had this. I think the witness has explained what he can, unless you have something else.

Mr. Haycraft: I would like to have that last ques-

2330 tion answered.

Trial Examiner Sheppard: If you can add anything else to it, Mr. McAnly, I will let you do so.

The Witness: Well, he asked me whether in my opinion our report discloses the cost of doing business with the various customer bracket classifications and I say as far as it has gone it does and the basis that we—

Mr. Haycraft: Well, you didn't get my question.

The Witness: And the basis that we have used for salesmen's costs, by confining it to individual salesmen and using an average within the salesmen, in my opinion does reflect the true cost because if he spent more calls with one customer than another we would have a higher cost on that customer.

Trial Examiner Sheppard: That is the reason I asked you a while ago if it was an average that you attempted to show there instead of measuring the time on the report sheets that the salesmen made, or sent in, where he called upon Mr. A for a half hour or he called upon Mr. B for three hours. A great many people have salesmen indicate how long they spent with a customer and I thought possibly these report cards that the respondent had probably showed that and you took those figures.

The Witness: No.

Trial Examiner Sheppard: And if you did not it 2331 has got to be sort of an average, in my judgment and you have to do it as best you can by allocating to one salesman and two salesmen the approximate time in the course of a business day. That is the way I am taking it, anyhow.

The Witness: That is right.

Trial Examiner Sheppard: All right, go ahead.

By Mr. Haycraft:

Q. On page 75 you have listed an item under "Sales clerical salaries" and show the sales clerical account segregated on certain functional activities and I notice among other things you have a receptionist, switchboard operator and general file clerks. Does the receptionist follow the same classification or method of classification as your switchboard operator and general file clerks?

A. Where is that?

Q. In the middle of page 75.

A. Oh, up here, I see.

Q. It runs back to a number of invoices there, I take it. That is your branch office expense,—home office expense.

A. Total number of invoices. Yes, that is the home office.

Q. How did you relate your receptionist activity to invoices?

A. Well, the only basis that is used, the relation is merely in dividing this $11,000 worth of expense between oil burner and other. Correspondence, telephone
2332 calls and general activity with customers pretty generally follows the volume of orders received, which in turn is either measured by orders or invoices and it just wouldn't have been practical at the home office to attempt to go into the volume of correspondence in the files and so on because it is a different situation, so we merely took the measure of activity with customers that way, with measure of volume of activity, not price, and applied this class of expense on that basis, which only gives you about five per cent.

Q. Well, I was just wondering how you figured that the receptionist—

A. The receptionist does not prepare orders or invoices but the receptionist is a part of a general group, mailing and everything else, that does deal with customer relationship, which in turn is measured on the basis of the number of times we deal with a customer, which in turn follows a number of invoices.

Q. Now, did you follow any different system of allocation of expense between manufacturers of—between customers that are manufacturers and others in your home office expense than you do in your branch office?

Mr. Gilpatric: May I have that question read?

(Question read.)

The Witness: Well, I would say yes. In many cases they are not even comparable; I mean the basis. In
2333 each case we tried to follow a distribution that would give us the most accurate answer. Now, where they were exactly similar, why, the basis that could be worked out was used.

By Mr. Haycraft:

Q. Well, on page 82 I notice you have here, "Miscellaneous legal expense and audit fees."

A. Yes, but we did not use any of that.

Q. You have a number of items in there having to do with credit and collection expense. Over on page 90 you have, "Doubtful accounts written off." Where do you

draw the line of distinction between credit expense as a legal fee and doubtful accounts written off?

A. Well, the doubtful accounts were specific write-offs within these brackets.

Q. You have an item of credit and collection expense on page 37, if you will go back and look at that. I want to see where you drew your line of distinction between those two. The credit and collection expense on page 37 is included and yet on page 82 you—

A. That is branch expense again, isn't it?

Q. That is the reason I asked you the question a while ago. That is what I am trying to straighten out now.

A. I think, further, in our accounting department at the home office we also have that same class of expense, but I am really talking legal and audit fees, outside legal fees.

2334 Q. Well, you have a collection expense here in your miscellaneous legal and audit fees.

A. Well, it is outside legal cost.

Q. In other words, when a case goes to court you mean?

A. Apparently. Have we got the detail on that here?

Mr. Reese: We have a page—

The Witness: 82.

Trial Examiner Sheppard: Wait a minute. I don't want too many people talking here.

Mr. Gilpatric: Let the record show, however, that we have that information and that there are others here who can supply it if you want it.

Trial Examiner Sheppard: All right.

By Mr. Haycraft:

Q. I want to again make sure that I understand your testimony here, that all of this study that you have here had to do with the allocation of expenses and so on in brackets up to and including 3A and did not include the accounts which fell in the 4, 4A and 5 brackets, is that correct?

A. We treated them collectively.

Q. You treated them collectively?

A. They are in here collectively.

Q. But they are not in here separately?

A. No.

Trial Examiner Sheppard: They show in the results?

2335 The Witness: We show in the total. In other words, when we reach a point where we are within, —I don't think it was exactly the 46 cents,—we finally came out to where it was apparent that we couldn't have made any distinction between the figures we were going to be able to develop from those brackets we just treated them collectively. Some of them we had and some of them we did not but we ceased to make any further division.

By Mr. Haycraft:

Q. But you did bring them in here at various places where you have them lumped?

A. That is right, they are all lumped. The breakdown would not mean very much, any breakdown we might have would not be too accurate because when we ceased to consider them we just forgot them from the standpoint of division.

Trial Examiner Sheppard: I was going to ask you that same question, Mr. McAnly, but Mr. Haycraft has covered it, so now I won't bother you any more.

Mr. Haycraft: That is all.

Mr. Gilpatric: No redirect, but we will have to recess for a few minutes before we put Mr. Reese on.

Trial Examiner Sheppard: All right, we will take a short recess.

(Whereupon a short recess was had.)

Trial Examiner Sheppard: All right, gentlemen, 2336 let us go on.

Mr. Gilpatric: I call Mr. Reese.

H. H. REESE was thereupon called as a witness for the respondent, and, having been first duly sworn, was examined and testified as follows:

Direct Examination.

Trial Examiner Sheppard: Give me your initials, sir.

A. H. H. Reese.

Q. And your address, your business address?

A. 1204 First National Bank Building, Minneapolis.

Trial Examiner Sheppard: All right, proceed.

By Mr. Gilpatric:

Q. Mr. Reese, you are employed by the accounting firm of Ernst & Ernst, are you not?

A. That is right.

Q. And you have in that capacity worked on the report made by your firm on the determination of cost differentials relating to the Minneapolis-Honeywell Company?

A. Yes.

Q. Respondent's exhibit 170?

A. Yes.

Q. Now, will you turn to page 1 of exhibit C, page 20 of the report and page 21 and explain, if you can, the reason why on the first page salaries of the heating controls division are shown at $92,809.80, whereas on
2337 page 21 the salaries of the heating controls division are shown as $90,699.80?

A. Yes, sir. On exhibit C, page 1, the figures shown are in accordance with the accounts as they are kept by the company. In preparing our study we found in some instances that for our purpose we would have to make segregations and combinations of accounts in order to truly reflect the bracket differentials. Therefore, on the group making up the $171,000 figure we took the individuals whose salaries comprised that total and in making that study and the classification of each individual we arrived at $90,699.80 as being applicable to heating controls and, in turn, as shown by the total there, we accounted fully for the $171,000 total.

Q. But as to heating controls alone you allocated somewhat less than the company had?

A. Yes, sir, but the purpose of that, I might restate, was to facilitate any subsequent checks that would be made by the Federal Trade Commission, to enable them to trace our figures back to the books and our papers backing up this report show the connection between the $92,000 and the various other items listed with a total of $171,000 and also with the $90,000 that we classify as heating controls.

Mr. Gilpatric: All right.

Trial Examiner Sheppard: Cross-examine.

Mr. Haycraft: I have nothing on that, Mr. Examiner, but there were two other points that I was going to
2338 examine Mr. Reese on if I may be allowed to do so at this time.

Mr. Gilpatric: All right, go ahead.

Cross-Examination by Mr. Haycraft.

Q. One was the explanation of the items that were on the punched cards, that were used in the preparation of your exhibit, the 630,000 punched cards.

A. The specific information evidenced by the punchings?

Q. That is right.

A. Well, it would be the customer and the—

Q. The name of the customer?

A. Yes, which was identified by a number, you understand.

Q. Yes.

A. And the sales, the number of items.

Q. The nature of the items?

A. Yes, sir, and the cost.

Q. Now, as I take it you had to get from the company, that is, the respondent the classification of the various customers?

A. Yes. To clear that point up, the tabulations, as you can imagine, were on huge listing tapes about so wide and the company has a code book in which it designates,—the code designates the bracket classification of each customer by customer number.

Q. The same number that is used in this?

2339 A. Yes. And in using that code book we prepared special tabulations, hand tabulations of the machine tabulations and thus built up the analysis of sales and cost of sales of bracket classifications.

Q. I am going to ask you the same question that I asked Mr. McAnly, that he could not answer but that he thought you could answer, and that is to what extent did you check those code classifications to determine that they were correct and that your resulting tabulations correctly reflect the volume of business done with each classification?

A. Our papers will show the exact number of invoices that we used to make comparisons. I cannot tell you the exact number but I will say the detail was very substantial. In other words, we satisfied ourselves that the information shown on these punch cards reflected listings actually from the company's billings in the form of invoices to their customers.

Q. Did you spot check, is that what you mean?

A. Yes, there was quite a number of them.

Q. For instance, if I should give you the names of three or four accounts could you tell me in what classification you put those in?

A. Yes, because we built those up by hand and it is subject to verification.

Q. And they can be made available?

A. Yes, it is available for your auditor.

2340 Q. Now, the other question had to do with the items on pages 16 and 17 of the report, exhibit 170, and the necessity for projecting these oil burner manufacturers who also manufacture other equipment, why that could not be done by just taking the same accounts that you referred to in your testimony, why it was necessary to go into this detail as indicated by pages 16 and 17?

Mr. Gilpatric: Mr. Haycraft, we are going to have Mr. Johannsen, another one of the Ernst & Ernst men, to cover that. That was his field.

Mr. Haycraft: All right, let it ride. That is all.

Trial Examiner Sheppard: You are excused.

A. F. JOHANNSEN was thereupon called as a witness for the respondent and, having been first duly sworn, was examined and testified as follows:

Direct Examination.

Trial Examiner Sheppard: Give us your name and address.

A. A. F. Johannsen, Minneapolis.

Q. And your address is Minneapolis?

A. Yes, Minneapolis.

By Mr. Gilpatric:

Q. Mr. Johannsen, you are employed, are you not, by the Ernst & Ernst firm?

A. Yes, sir.

2341 Q. You have worked on this report, respondent's exhibit 170?

A. Yes, sir.

Q. In particular are you familiar with the subject matter on pages 16 and 17 of the report dealing with what are termed mixed manufacturers?

A. Yes, sir, I am.

Q. Will you explain, if you can, the necessity for the

use of the ratios and the treatment of these mixed manufacturers' volume that is explained on those pages and why you did not use simply the cards as has been suggested earlier?

A. The equipment that is sold to oil burner manufacturers, such as thermostats and other heating control equipment, also is used in conjunction with other types of manufactured products such as furnaces, hand boilers and other types of heating equipment. In order to segregate them we had to classify the mixed manufacturers into two groups, those mixed manufacturers who manufacture furnaces and also oil burners and other manufacturers who also manufacture oil burning equipment. The reason we segregated them into furnace manufacturers is because the furnace manufacturers do not use the same standard combination of controls that is used by other heating equipment. If I may refer to this, they use a combination control, fan limit control, which is not used in connection with an oil burner and, therefore, we had to segregate the sales applicable to the manufacturer of oil burning equip-
2342 ment and those applying to the furnace equipment which they manufacture.

Q. In other words, there were certain situations where the same manufacturer was buying control equipment to put on different types of heating equipment, one of which was the standard set of oil burner controls, namely, the oil burner unit, and the other the furnace unit and he only used the primary and the thermostat in that standard combination, plus a third unit that was not part of the standard?

A. That is right.

Mr. Gilpatric: You may cross-examine.

Cross-Examination by Mr. Haycraft.

Q. With respect to the volume of business of these special controls sold to oil burner manufacturers that were also sold to other manufacturers, were they included in any way or were they excluded from your report?

A. Will you repeat that, please?

(Question read.)

Q. I will repeat it. What was done with respect to the figures showing the volume of sales of these special combination controls that were sold to burner manufacturers who were also furnace manufacturers?

A. The portion which was determined to be oil burning equipment going on oil burning equipment was in-
2343 cluded in the cost applicable to oil burners and the other was excluded.

Q. Now, this Conco Engineering Works that was used here as an example, what did that company manufacture?

A. They manufactured heating equipment other than oil burners and also oil burners. They were not a furnace manufacturer.

Q. What was the other heating equipment that they made?

A. I believe in this case that it was a stoker or a gas burner. They manufactured both the gas and stoker and oil burner.

Q. Well, then, as I understand it your study did not include sales of heat controls for other than oil burning equipment? If it was gas burning it was not included, or if it was stoker or controls for coal it was not included, is that right?

A. That is right.

Q. Well, wouldn't your figures in the invoices on these punch cards show that information?

A. No, sir, they do not. They show that there were so many units sold but it does not show whether they were used in connection with an oil burner or whether they were in connection with a furnace or whether they were in connection with some other type of heating equipment and, therefore, since those figures were not available we had to determine as best we could do it for the various classes.

Q. And the method you followed is set forth there on these two pages?

2344 A. That is right. I can explain that in detail if it is not clear to you.

Mr. Haycraft: Off the record I think it is probably a good explanation to make off the record.

(Discussion outside the record.)

By Mr. Haycraft:

Q. I will ask one question for the record. I assume you have the work sheets on this so that they can be made available to our accountant?

A. Yes, sir.

Mr. Haycraft: That is all.

Trial Examiner Sheppard: All right, thank you, sir.

Mr. Gilpatric: With that the respondent rests its case.

Trial Examiner Sheppard: All right, Mr. Haycraft, what about any rebuttal that you have?

Mr. Haycraft: I am going to have to have rebuttal. Perhaps I had better lay a foundation for it. Mr. Examiner, at this time I move to strike from the record respondent's exhibit 170 as being incompetent and of no probative value. Depending on your ruling on that, as to whether there will be any rebuttal on that particular phase of it.

Trial Examiner Sheppard: The motion is denied. The Examiner believes that it constitutes some information that ought to go to the Commission in this case.

2345 Mr. Haycraft: Then in view of your ruling, Mr. Examiner, I am sure that we will have rebuttal testimony and that after Mr. Wormack has had an opportunity to check against the original records to make up an exhibit, which will purport to cover the same territory and also following that there may be other testimony necessary in view of the testimony of Mr. Owens. There has been quite a wide field opened with Mr. Owens and the other two witnesses, that is, Mr. Henning of the Penn Electric Switch and the Perfex Corporation.

However, I am not in a position at this time, not having had a chance to go over this record since our last hearing, being engaged in other matters, I cannot tell you at this time where that testimony should be taken but I think probably we could finish it here, we could figure on a hearing here in Chicago, to present our rebuttal on this exhibit 170 and also probably the other matters that I may want to present. I would like to be given as much time on that as possible, to meet your engagements and the engagements of counsel for the respondent. I won't know just where I am until I get back to Washington.

Trial Examiner Sheppard: I want to give you. Mr. Haycraft, plenty of time to let Mr. Wormack make his study of this exhibit. I have been interested in respondent's exhibit 170 and it seems both long and rather complicated and will require some study. How about this

2346 going over until the middle of November? Or how about the middle of October?

Mr. Haycraft: Well, the only thing is I have another case set down for hearing in New York on the 17th of October which will probably take until close to the middle

of November. If you could make it the middle of November I think probably that would give us time enough.

Trial Examiner Sheppard: Well, now, let's see, gentlemen. I don't want to put this case over until the first of the year.

Mr. Gilpatric: We would like to see the end of this case some time.

Trial Examiner Sheppard: Yes, I want to get through with it, too. Get off the record, Mr. Reporter.

(Discussion outside the record.)

Trial Examiner Sheppard: On the record.

Gentlemen, in view of what Mr. Wormack tells me in reference to his activities for the next two months on other cases, as well as on this one and Mr. Haycraft's engagements and the engagements of respondent's counsel I am not disposed to set a definite date now for resuming the testimony in this case, but I am going to adjourn it on five days' notice with this understanding, Mr. Wormack, that when you are ready you communicate that fact to Mr. Haycraft and he to me and then I will take it up with the respondent's counsel and set a date as quickly as is possible to resume this case, taking into consideration
2347 what you have all told me and with that understanding all around, gentlemen, I am going to declare the hearing here adjourned.

(Whereupon, at 12:25 o'clock p. m., September 8, 1944, the hearing in the above-entitled matter was adjourned without date.)

2348 Room 307, U. S. Court House,
Minneapolis, Minnesota,
Tuesday, January 9, 1945.

Met, pursuant to agreement, at 11:15 o'clock, a. m.

Before:

W. W. Sheppard, Trial Examiner.

Present:

Everett F. Haycraft, Attorney for the Federal Trade Commission.

Gravath, Swaine & Moore, by R. D. Gilpatric, 15 Broad Street, New York; and

Baer & Freeman, by Will Freeman, 135 South La-Salle Street, Chicago, Illinois; appearing for respondent.

2349 Proceedings.

Trial Examiner Sheppard: Mr. Reporter, convene the hearing in the Minneapolis-Honeywell case, Docket No. 4920. It appears this is our first hearing since September 8, 1944. Show the usual appearances.

Before we start, gentlemen, there has been a little mix-up in our exhibits called to my attention by the Official Reporter, and I am going to read into the record the corrections that I have made.

Mr. Henning's letter, dated December 2, 1943, now appearing in the record as Exhibit 207-A and 207-B, I am going to have re-marked and it will be hereafter designated and known as Commission's Exhibit 210-A and 210-B.

(The paper referred to was remarked Commission's Exhibit 210-A and 210-B for identification.)

Mr. Hayeraft: I assume it will be stipulated that everything said as to Exhibit 207 will apply with respect to Exhibit 210.

Trial Examiner Sheppard: That is right.

Mr. Henning's letter to the Examiner, dated July 25, 1944, appearing in the record as Commission's Exhibit 208-A and 208-B, will be hereafter known and designated as Commission's Exhibit 211-A and 211-B.

(The papers referred to were remarked Commission's Exhibit 211-A and 211-B for identification.)

2350 Trial Examiner Sheppard: The exhibit indicated and appearing in the record now as Commission's Exhibit 209-A, -B, and -C will be given a new designation and be hereafter known as Commission's Exhibit 212-A, -B, and -C.

(The documents referred to were remarked Commission's Exhibit 212-A, 212-B, and 212-C.)

Trial Examiner Sheppard: Now that leaves, Mr. Reporter, our next number to be used, if any, by the Commission as 213, and the next number on behalf of the Respondent will be 185.

Mr. Gilpatric: Mr. Examiner, Respondent has one more exhibit to offer in its direct case. Mr. Reporter, will you mark this for identification Respondent's Exhibit 185?

(The papers referred to were marked Respondent's Exhibits 185-A, 185-B, 185-C, 185-D, 185-E, and 185-F for identification.)

Mr. Gilpatric: The purpose of this offer, Mr. Examiner, is to have the record contain the price brackets extended to the 88 oil burner manufacturer customers of Minneapolis-Honeywell, who were named in the stipulation, Commission's Exhibit 1, and about whom we already have in the record the total amount of their sales by the Respondent and other control manufacturers, and who are also named in the subpoenaes that were issued at the re-
2351 quest of Respondent to certain other control manufacturers. The Respondent would like to have the record show the prices at which these particular 88 accounts were sold by it during the years 1937 through 1941. This exhibit was prepared under Mr. Lockrae's supervision from the records of the company, and if Mr. Haycraft wants to examine Mr. Lockrae about it, he is available.

Trial Examiner Sheppard: All right; do you want to do that now, Mr. Haycraft, or later? I will probably accept the exhibit and give you a chance to cross-examine Mr. Lockrae, if you want to, a little bit later on.

Mr. Haycraft: I would like to ask Mr. Lockrae a few questions about it at the present time.

Trial Examiner Sheppard: Let the record show Mr. A. H. Lockrae, having been previously sworn, appears on the stand again for examination by Mr. Haycraft.

A. H. LOCKRAE was thereupon called as a witness by the Commission and, having previously been duly sworn, testified further as follows:

Cross-Examination by Mr. Haycraft.

Q. Where did you obtain the information on which this exhibit is based, from which it was prepared?

A. From our sales records.

2352 Q. Is there any particular title or description that you give to the sales records from which this was prepared?

A. Well, there are two or three sources from which the information is available. The first was the contract itself, which is kept in our order department files, and also from the price records maintained in the order department on the individual customer's price cards.

Q. Is there a code-book kept of these prices as compared with the contracts?

A. I don't quite understand—

Q. Well, is there such a book in your records, a code-book where you can locate and find the customer designation?

A. Well, we go primarily right by the contract that you originally issued. That is the origin of each customer's price each year.

Q. Now at the top of this exhibit it is referred to as "Price Brackets Extended". Now, as I understand it, this exhibit does not purport to show the quantities actually purchased by these various companies, or whether or not they were entitled to be in these particular brackets because of quantities they purchased?

A. The statement simply shows the price brackets that were extended the customer.

Q. During those particular years?

A. During those particular years.

Trial Examiner Sheppard: I thought the record had that.

Mr. Gilpatric: Not for these particular accounts.

2353 It has the bracket structure for these years but not the individual prices.

By Mr. Haycraft:

Q. In order to determine the actual price you would look at the bracket?

A. You would look at your price schedule.
Mr. Gilpatric: In Commission's Exhibit 1.
Mr. Haycraft: That is all.
Mr. Gilpatric: That is all.

(Witness excused.)

Trial Examiner Sheppard: Off the record.
(Discussion off the record.)
Trial Examiner Sheppard: For the record. Respondent's Exhibit 185-A to -F is received.
(The papers referred to, heretofore marked for identification RESPONDENT'S EXHIBIT 185-A, 185-B, 185-C, 185-D, 185-E and 185-F, were received in evidence.)
Trial Examiner Sheppard: Now do I understand that is the end of your case?
Mr. Gilpatric: Yes.
Trial Examiner Sheppard: Now, Mr. Haycraft, I am ready for whatever you have in rebuttal.
Mr. Haycraft: Mr. Examiner, I wanted to recall Mr. McAnly in connection with Respondent's Exhibit 170, 2354 and I was authorized by the Commission to bring him from Chicago to Minneapolis. Counsel for the Respondent very kindly stated that if necessary to have him here, they wouldn't require us to do that, but he felt that Mr. Reese and Mr. Johannsen, who prepared Respondent's Exhibit 170 would probably be as well informed, if not better informed, as to the details of that exhibit.
Trial Examiner Sheppard: They are here then?
Mr. Haycraft: They are here, and with that understanding I would like to call Mr. Reese,—I believe he is the senior accountant and worked on that exhibit,—to go into some detail as to the way in which the exhibit was made up.
Trial Examiner Sheppard: Let the record show Mr. H. H. Reese, having been previously sworn, appears on the stand again for examination by Mr. Haycraft.

H. H. REESE was thereupon called as a witness by the Commission and, having previously been duly sworn, testified further as follows:

Cross-Examination by Mr. Haycraft.

Q. I believe you testified in this proceeding at Chicago on September 8, 1944?

A. I did, yes.

2355 Q. That you had worked on the determination of cost differentials, which is in evidence as Respondent's Exhibit 170?

A. That is right.

Q. This exhibit that I now show you (indicating)?

A. Yes, sir.

Q. Do you have available the worksheets that were used by you in the preparation of that exhibit?

A. They are on file at our office, yes.

Q. Do you have any of them available in the court room this morning?

A. I do not.

Q. Will you testify, first, as to the problems that were given you in the preparation of this exhibit,—what the problem was and what your instructions were with respect to the preparation of the exhibit?

A. I think that is set forth here in the introductory paragraph of our report, Mr. Haycraft.

Q. On page what?

A. 4.

Q. By that you mean of Respondent's Exhibit 170?

A. Yes, sir.

Q. Under the title "Introductory Statement"?

A. In the opening paragraph.

Q. Well now, in this Introductory Statement you

2356 have here, does that contain the bracket classification that was to be used in the preparation of the exhibit?

A. That is shown at the bottom of that page.

Q. What was your source of information as to this bracket classification? Did you get that from the respondent, the Minneapolis-Honeywell?

A. Yes, sir.

Q. How were you to determine whether or not the account that you were studying fell within those classifications?

A. That was the classification established by the company, covered by its contract with its customers, and the prices that had been charged.

Q. And those you accepted?

A. That is right.

Q. You did not make then, as I understand it, any study to determine whether or not the prices at which these various customers were sold corresponded to the bracket that should be assigned to them in accordance with the quantity they purchased?

A. We made no reclassification of the brackets assigned to the respective customers.

Q. Well, you did not make any before the preparation of the exhibit. Have you had occasion to make such a study since?

A. No, sir.

2357 Q. Will you turn to the table on page 6 of the exhibit.

A. (Witness complies.)

Q. Now, this is entitled, "Statement Showing Volume Brackets, Prices, Distribution Costs, and Comparison of Reductions in Costs for Specified Brackets with Reductions in Respective Prices". Then you have eleven columns on this page, and then under the first column "Bracket Classification" you have 1, 2, 3, 3A, 4, 4A, and 5. First, there is "Discount". Now, that Discount is the first bracket classification?

A. Yes, sir.

Q. Is that what we might call a list price?

A. Yes, sir.

Q. Then in the next column you have the "Annual Unit Volume", and I take it that refers to the number of units that the customer was required to purchase in order to come within the respective brackets, is that correct? In other words, in the Discount bracket, if you bought from 1 to 149, he would be entitled to the basic price?

A. Yes, sir.

Q. Which in this instance is found in the next column in the amount of $20.25, is that right?

A. Yes, sir.

Q. And then in order to come under bracket 1 he had to buy from 150 to 1,049, and the price for that

2358 bracket was $17.35?

A. Yes, sir.

Q. In order to come within bracket 3 he had to buy from 3,000 to 7,499 and the price he was to get was $15.90?

A. Yes, sir.

Q. In bracket 3A he is supposed to buy from 7,500 to 14,999 and at the price of $15.35?

A. That is right.

Q. In bracket 4 he was supposed to buy from 15,000 to 22,499 and the price was $14.90. There was a correction, as I understand it, of the original exhibit, is that right?

A. Yes, sir.

Q. In 4A he was supposed to buy from 22,500 to 29,999 and pay $14.25 for purchases in that bracket, is that right?

A. Yes, sir.

Q. And bracket number 5 was 30,000 units and up, and $13.75 was the price for that quantity?

A. Yes, sir.

Q. Now then, as I understood your testimony a moment ago, you based your exhibit and preparation of the exhibit on the assumption that the prices furnished you for the respective customers were not only the prices actually paid but that the quantities they bought were within those respective brackets.

Mr. Gilpatric: I object to that, your Honor. That 2359 wasn't the witness' testimony. He simply stated that he took the brackets as they had been assigned by the company and didn't make any assumptions.

Trial Examiner Sheppard: Is that correct?

Mr. Haycraft: No, he didn't say he didn't make any assumptions. That is counsel's statement.

Trial Examiner Sheppard: I am asking the witness. Straighten us out on that.

The Witness: I stated that we used and accepted the bracket classification established by the company.

By Mr. Haycraft:

Q. Now in this "Distribution Cost" that you have in column 4 of $90.40 on your discount bracket, how was that made up? How did you determine the $90.40 in the distribution Cost?

A. Do you mean how—

Q. I think if you will look over on page 7, Exhibit B, you probably can answer that question.

A. The various elements of Distribution Costs, including Home Office selling expenses, branch expenses, Home

Office administrative expense, and warehouse and shipping expenses are assigned to the various brackets by appropriate means described in the text of the report, and were assigned to the unit on the basis of the specification cost of each unit.

Q. Well, for instance, on this Exhibit B, on page
2360 7, I notice you have in this column under "Discount" $10,902.30.

A. Yes, sir.

Q. Now, that is the sum of the amounts that you had allocated of the different forms that fell within that Discount bracket as furnished you by the Minneapolis-Honeywell Company. Now, do you have your work sheets showing the names of the forms that—

A. (Interposing) I do not have them here but we have them; they are available.

Q. Would you have them available so as to bring them to the court room this afternoon?

A. Yes, sir.

Q. And you have work sheets, I take it, for each of the other brackets?

A. Yes, sir.

Q. In other words, your work sheets would cover that whole exhibit?

A. Yes, sir.

Mr. Haycraft: I will ask to have this marked for identification.

(The documents referred to were marked Commission's Exhibits, 213-A, 213-B, 213-C, 213-D, 213-E, 213-F; 213-G, 213-H, 213-I, 213-J, 213-K, 213-L, 213-M, 213-N, 213-O, 213-P, 213-Q, 213-R, 213-S, 213-T, 213-U, 213-V, 213-W, 213-X, 213-Y, 213-Z, 213-Z-1, 213-Z-2, 213-Z-3, 213-Z-4,
2361 213-Z-5, 213-Z-6, 213-Z-7 and 213-Z-8 for identification.)

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Haycraft:

Q. Referring to Commission's Exhibits 213-A to -Z-8, inclusive, will you state just what those sheets are and how you made them up?

A. Yes, sir. We covered that in here on page 13 of Respondent's Exhibit 170.

Q. Whereabouts on the page?

A. Starting with the same paragraph here (indicating), "Statistics relating to sales, manufacturing cost of products sold, number of sales invoices, and number of billing lines were obtained from tabulations prepared on electric sorting and tabulating equipment from approximately six hundred and thirty thousand punched cards."

Q. This exhibit then, is the result of that which you just described there?

A. That tabulation, yes.

Q. All right. Now, from this exhibit are you able to testify as to the actual quantity sold to any given account mentioned in there?

A. The number of units sold are shown, yes.

Q. Now, will you refer to the Master Oil Burner
2362 Company? Can you find that?

A. Yes, sir.

Q. How many units were sold to Master Oil Burner Company in 1941?

A. Referring to this tabulation, it indicates 989.

Q. Was that direct from the factory, or does it include the branch office?

A. That is factory shipments.

Q. See if there are any branch sales.

A. 20.

Q. Making a total of 1,009?

A. Yes, sir.

Q. Now, what price did they pay?

A. Our figures here do not show the price.

Q. What bracket did you put them in then—can you tell from that?

A. Yes, this is in the Discount bracket.

Q. What volume should be included in this Discount bracket?

A. 1 to 149.

Q. Then, according to Exhibit 170, what bracket should this customer have been put in?

A. Well, the number of units indicated here includes items other than the oil burner—no, I am wrong on that. I would like to have the unit figure elaborated on by Mr. Johannsen later on.

2363 Q. You can't answer that?

A. There is a technical angle on that that I am not sure of at the moment.

Q. Do you want to consult him before answering?

A. Right now—

Q. Well, I would like to get the answer at this time.

Mr. Haycraft: If he wants to consult Mr. Johannsen off the record, I have no objection, Mr. Examiner.

Trial Examiner Sheppard: We will go off the record a minute and you can confer.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Haycraft:

Q. All right, now do you want to answer?

A. Yes.

Q. The question is, what bracket should that go in?

A. It would be in—

Q. The quantity bracket?

A. That would be bracket 1.

Q. Bracket 1. In other words, the quantity that they had bought would entitle them to be put in bracket number 1?

A. Yes, sir.

Q. Now, the Jackson Oil Burner Company.

A. On the same page,—that is 198.

Q. All right, what bracket did you put that in in 2364 Exhibit 170?

A. That was in the Discount bracket and should have been—

Q. Bracket number 1?

A. Yes.

Mr. Gilpatric: When you say "should have been" you are talking about the quantities—

The Witness: Based according to the quantity.

By Mr. Haycraft:

Q. Now, in preparing Respondent's Exhibit 170, page 7, were these two items included in the amount of $6,196.14, which was the Discount, manufacturing cost of products sold by price brackets?

A. Yes, sir.

Q. Now, in determining the $90.40 on page 7, which was one of the original questions I asked you this morning, in column 4 on page 6—

Mr. Freeman: Exhibit 7?

By Mr. Haycraft:

Q. (Continuing) Do you remember the preliminary questions I asked you?

A. No.

Q. Now, in making up the $90.40 item which appears here on page 7, to what extent or for what purpose do you use the $6,196.14 item in the Discount column on the top of the page?

2365 A. $6,196.14, you say, at the top?

Q. Yes.

A. That was used in establishing the ratio of distribution cost to manufacturing cost.

Q. In other words, the $10,902.30 item was related to the $6,196.14 item? The total distribution costs, in the amount of $10,902.30, was related to the manufacturing cost of products sold, $6,196.14; and the ratio of the distribution cost to manufacturing cost was 1.760?

A. Yes.

Q. Then what use was made of your 1.760 to determine your $90.40?

A. That was applied to the cost of the standard set.

Q. Which was $5.34?

A. Approximately, yes.

Q. Where do you get that figure of $5.34?

A. From the cost records of the company. It was omitted from this report at the request of the company, but it is available.

Q. Now, which bracket in this exhibit, page 7, did you place the cost of distribution, or serving of this Master Oil Burner Company,—also in the Discount bracket?

A. Yes, sir, the same.

Q. The same as the manufacturing?

A. Yes, sir.

2366 Q. Do you know whether or not there was an adjustment at the end of the year on that account?

A. The retroactive—

Q. Adjustment?

A. I don't know.

Q. Would that exhibit for identification show that?

A. No.

Q. Now, take the account of the Ace Engineering Company. In what bracket did you place that in Exhibit 170?

A. That was in bracket 1.

Q. And what was the volume of sales?

A. In units?

Q. In units, factory and branch.

A. 1,072.

Q. In what quantity bracket should he fall?

A. According to the quantity, that would come under bracket 2.

Q. In that bracket the quantity limits were from 150 to 1,049 units, is that right?

A. That is right.

Q. Now, the B & W Oil Service Company, in what bracket did you put that?

A. That is in bracket 1.

Q. What is the volume of his sales?

A. 59 units.

2367 Q. In what bracket should he be placed in?

A. That would be in the Discount bracket.

Q. In the Discount bracket?

A. Yes.

Q. And in making up this exhibit, in which column did you place his cost,—in the Discount column?

A. No, we put him in bracket 1, as he was classified by the company.

Q. In other words, his cost figures went into bracket 1?

A. Yes, sir.

Q. Now take the account of the Braden Eveready Company—

A. 42 units.

Q. In what column was he placed?

A. He is in bracket 1.

Q. And in what bracket should he fall from the quantity standpoint?

A. The Discount.

Q. The Discount bracket. And then you placed his cost figures in column number 1 in this exhibit, in the Bracket 1 column?

A. Yes.

Q. Tak the account of Carlson Brothers Tool & Machinery Company—

A. 24 units.

Q. In what bracket did you place him in this exhibit?

2368 A. In bracket 1 also.

Q. The cost figures went into bracket 1?

A. Yes.

Q. According to the quantity sold, where should he have been?

A. Discount.

Q. The C. F. M. Corporation—
A. 93 units.
Q. In what bracket did you put him in the exhibit?
A. Bracket 1.
Mr. Gilpatric: I want to make it clear that we don't accept this questioning as an admission. The Ernst & Ernst firm didn't put these fellows in any bracket. They found them in these brackets and the reports reflect that.
Trial Examiner Sheppard: I understand that.

By Mr. Haycraft:

Q. And according to the quantity, what bracket would that have gone in?
A. Discount.
Q. Chalmers Oil Burner Company,—in what bracket did you put his cost figures?
A. 1.
Q. And what quantity did he buy?
A. 36.
Q. And what bracket then, according to the quan-
2369 tity, would he go?
A. In the Discount bracket.
Q. Columbus Metal Products Company,—in what column did you place his costs?
A. 139 is the quantity there.
Q. And where would that be?
A. That would be in Discount.
Q. Drexel Manufacturing Company,—in what column did his cost go?
A. Number 1. 58 is the number of units.
Q. That would be in the Discount bracket from a quantity standpoint?
A. Yes.
Q. But you placed him, you said, in bracket 1.
A. In bracket 1.
Q. Goodrich Oil Burner Manufacturing Corporation.
A. That is in number 1.
Q. What is the volume of sales?
A. 66 units.
Q. In what bracket then would he fall from the quantity standpoint?
A. Discount.
Q. Greenwood Engineering Company?
A. That is in bracket one.
Q. What is the volume of sales?

2370 A. 133.

Q. In what bracket would he fall from the quantity standpoint?

A. That would be Discount.

Q. Hyle Oil Burner Company,—in what bracket did you place him in this exhibit?

A. That is in bracket 1; 121 sales; that would be in Discount.

Q. 121 sales in the Discount bracket. Milwaukee Oil Burner Company,—in what bracket did you place him in this exhibit?

A. Number 1.

Q. What was the volume of his sales?

A. 132.

Q. What quantity bracket would that entitle him to?

A. To the Discount.

Q. Oil Burner Exchange, Inc.—

A. 137.

Q. In what bracket did you put his cost figures?

A. That was in bracket 1.

Q. In what bracket would he fall from the quantity standpoint?

A. Discount.

Q. Quiet Heet Oil Burner Company,—in what bracket did you put him in the exhibit?

2371 A. That is number 1.

Q. How many did he buy?

A. His quantity was 96.

Q. Which would place him in what bracket from a quantity standpoint?

A. Discount.

Q. R. & S. Products Corporation.

A. Number 1, and 52 units in quantity.

Q. What bracket?

A. Discount.

Q. Rayfield C. L. Company,—in what bracket did you put his cost figures?

A. Number 1, and the quantity is 141.

Mr. Freeman: Is that 141?

The Witness: 141 units, yes, sir.

By Mr. Haycraft:

Q. And 141 would put him in Discount, is that right?

A. That is right.

Q. Red Wing Oil Burner Company,—in what bracket did you put his cost figures?

A. Number 1.

Q. What was the volume of sales?

A. 63.

Q. 63 units, which would put him in what quantity bracket?

A. Discount.

2372 Q. Swirling Heat, Inc.,—in what bracket did you put his cost figures?

A. Number 1, and his quantity was 122.

Q. That would put him in what bracket from a quantity standpoint?

A. Discount.

Q. Syncro Flame Burner Company.

A. In bracket number 1; the quantity is 26.

Q. In what bracket would he fall from the quantity standpoint?

A. The Discount bracket.

Q. Wayland Machine Company.

A. Number 1.

Q. The volume of sales?

A. It would be 105 units.

Q. That would put him in the Discount bracket?

A. Yes, sir.

Q. Weishettle Company, Inc.,—in what price bracket did you put him in your exhibit?

A. Number 1.

Q. What is the volume of his sales?

A. 51 units.

Q. In what bracket would he fall from the quantity standpoint?

A. Discount.

2373 Q. Columbia Boiler Company.

A. 130 units.

Q. And you put that in your price bracket 1?

A. Yes, sir.

Q. And what would it come under on a quantity basis?

A. Discount.

Q. Kienzel and Merrick,—what price bracket did you place that under?

A. That was in number 1.

Q. What is the volume of his sales?

A. 11 units.

Q. That would put him in what bracket?
A. Discount.
Q. Mechanical Products Company.
A. 129.
Q. And you have put him in price bracket number 1, have you?
A. That is right.
Q. In what bracket would he fall from the quantity standpoint?
A. According to the quantity it would be Discount.
Q. Scholze and Stadler—in what price bracket did you put him in the exhibit?
A. Number 1.
Q. And what is the volume of his sales?
2374 A. 92 units; that would be Discount, according to quantity.
Q. Kool-O-Matic Combustion Company,—in what price bracket did you put him?
A. Number 1.
Q. What was the volume of his sales?
A. 78 units.
Q. In what bracket would he fall from the quantity standpoint?
A. That would be discount from quantity.
Q. Pacific Automatic Heat Corporation,—in what column did you put him in the exhibit?
A. Number 1; 88 units.
Q. In what bracket would he fall from the quantity standpoint?
A. Discount.
Q. Liberty Air Flo Burner, Inc.,—in what price bracket did you put him in your cost study?
A. Number 1.
Q. What was the volume of sales?
A. 44 units.
Q. In what quantity bracket would that put him?
A. Discount.
Q. Plymouth Engineering Works,—in what bracket did you put his cost figures?
A. Number 1.
2375 Q. What was the volume of sales?
A. 97 units.
Q. What quantity bracket then would he go in?
A. Discount.
Q. Seal-O-Strain Corporation.

A. Number 1.
Q. And what was the volume of his sales?
A. 109 units.
Q. In what bracket would he fall from the quantity standpoint?
A. Discount.
Q. Campbell Machine Company,—in what bracket did you put him in your cost study?
A. In bracket 2.
Q. That would be 1,050 to 2,999 units?
A. That is right.
Q. Or the $16.45 price?
A. That is right.
Q. You put him in bracket 2 in your study. What was the volume of his purchases?
A. 505 units.
Q. In what quantity bracket then would he go?
A. Number 1.
Q. Chandler Company,—in what price bracket did you put him in the exhibit?
2376 A. Number 2.
Q. What was the volume of his purchases?
A. 802.
Q. In what quantity bracket then would that go?
A. Number 1.
Q. Fairfield Oil Company,—in what price bracket did you put him in the exhibit?
A. Number 2.
Q. How many units did he buy?
A. 858.
Q. In what quantity bracket would that place him?
A. Number 1.
Q. General Oil Heating Company,—in what price bracket did you place him?
A. Number 2.
Q. And how many did he buy?
A. 731.
Q. In what quantity bracket would that put him?
A. Number 1.
Q. Hi-Point Corporation,—in what bracket did you place him in your cost study?
A. Number 2.
Q. How many did he buy?
A. 852.

Q. And in what quantity bracket would that place him?

2377 A. Number 1.

Q. Todd Combustion Equipment Company,—in what price bracket did you place him?

A. Number 2.

Q. How many did he purchase?

A. 972.

Q. In what quantity bracket would that place him?

A. Number 1.

Q. Enterprise Engine & Foundry Company,—in what price bracket did you place him in the exhibit?

A. He is in bracket 2.

Q. And how many did he buy?

A. 4,061.

Q. That was from the factory. Did he buy some from the branch also?

A. Yes, the total is 5,131.

Q. Then in what bracket would he fall from the quantity standpoint?

A. Bracket 3.

Q. Bracket 3, or $15.90, and the range is from 3,000 to 7,499 units in that bracket, isn't it?

A. Yes, sir.

Q. Do you know whether or not there was a credit given at the end of the year?

A. No.

2378 Q. But at any rate you put him in bracket number 2 for the purpose of this study?

A. Yes, sir.

Q. You can find that out, can't you?

A. Whether or not a retroactive credit was issued?

Q. Yes.

A. Yes.

Q. Atlas Manufacturing Company.

A. 821.

Q. In what quantity bracket then would that place him?

A. That would be in number 1.

Q. DeSoto Oil Burner Corporation.

A. It is in number 3; the quantity is 1,977.

Q. In what quantity bracket would that place him?

A. Number 1.

Q. Diesel Oil Burner Corporation, New York.

A. I beg your pardon,—that would be number 2. And the next account?

Q. Diesel Oil Burner Corporation of New York. In what bracket did you place him in your study?
A. Number 3.
Q. What quantity did he buy?
A. 1,916.
Q. In what bracket would he fall from the quantity standpoint?
2379 A. Number 2.
Q. Electral Incorporated,—in what bracket did you place him in your study?
A. Number 3.
Q. What quantity did he purchase?
A. 1,118.
Q. What quantity bracket did that entitle him to?
A. Number 2.
Q. Gasconaire Company.
A. It is in number 3.
Q. You placed him in number 3 in your study?
A. Yes, sir.
Q. What quantity did he buy?
A. 1,016.
Q. In what quantity bracket would that place him?
A. Number 1.
Q. Gold Star Oil Burner Company.
A. It is in number 3.
Q. What quantity did he purchase?
A. 2,441.
Q. Now, in what quantity bracket would that place him?
A. That would be number 2.
Q. Gould Engineering Company,—in what bracket did you put his cost figures?
A. Bracket number 3.
2380 Q. What was the volume of his sales?
A. 2,671, was the quantity.
Q. In what quantity bracket would he fall?
A. That would be number 2.
Q. Lynn Products Company,—in what bracket did you place him?
A. Number 3.
Q. What quantity did he purchase?
A. 2,209.
Q. In what quantity bracket would he fall?
A. Number 2.
Q. Malleable Iron Fittings Company.

A. Number 3.
Q. What is the quantity of his purchases?
A. 1,923.
Q. In what bracket would that place him?
A. Number 2.
Q. Sawmeyer Corporation.
A. Number 3.
Q. What was the volume of his purchases?
A. 2,402.
Q. What quantity bracket would that entitle him to?
A. Number 2.
Q. Wisconsin Oil Burner Company.
A. Number 3.
2381 Q. What price bracket?
A. Number 3; 1,376 units.
Q. In what quantity bracket would that place him?
A. Number 2.
Q. Sun Ray Burners, Inc.
A. Sun Ray, did you say?
Q. Yes. You put that in 3, did you?
A. Yes. The quantity we have here is 1,077.
Q. In what quantity bracket would that be?
A. That would be under 2.
Q. Hart Oil Burner Corporation,—in what price bracket did you put him?
A. Bracket 3; 2,446 units.
Q. And according to the volume of purchases, what quantity bracket should be have gone in?
A. 2.
Q. York Oil Burner, Inc.,—what bracket did you place him?
A. That is in number 3.
Q. What is the volume of his purchases?
A. 1,641.
Q. In what quantity bracket would that place him?
A. Number 2.
Trial Examiner Sheppard: We will take an adjournment until 2 o'clock.
2382 (Whereupon, at 1:15 P. M., a recess was taken until 2 P. M., this day.)

2383 **Afternoon Session.**

2 P. M.

Trial Examiner Sheppard: Come to order, gentlemen. You may proceed.

H. H. REESE resumed the stand and testified further as follows:

Cross-Examination by Mr. Haycraft (Continued).

Q. The next company is the Beckett Engineering Company. In what price classification is that?

A. 3A.

Q. That is for purchasing from 7,500 to 14,999 units at $15.35, is that right?

A. That is right.

Q. Now, how many units did this company buy?

A. 2,031.

Q. And according to the quantity bracket, what quantity bracket would he fall in?

A. 2.

Q. Bethlehem Foundry & Machine Company.

A. That is 3A.

Q. How many did he buy?

A. 6,464.

Trial Examiner Sheppard: Off the record.

2384 (Discussion off the record.)

Trial Examiner Sheppard: On the record.

By My Haycraft:

Q. In what bracket would he fall from the quantity standpoint?

A. 3.

Q. Delia Oil Burner Company,—what price bracket did you place that in?

A. That was 3A; 5,459 units.

Q. And what quantity bracket would that fall in?

A. That would be 3.

Q. U. S. Burner Corporation,—in what price bracket?

A. 3A; 6,348 units. That would place it in 3.

Q. Ray Oil Burner Company.

A. That is 18,056.

Q. In what quantity bracket would it fall?

A. That was in 3A and according to the quantity it would be in 4.

Q. Now, can you, from consulting that exhibit before you, tell me how many of the customers you had for 3A that I haven't questioned you about? In other words, what proportion of your total number were in the same quantity bracket?

A. The total number here is 7.

Q. In other words, out of the 7, two of them were in the same quantity bracket as you put in the price
2385 bracket, is that right?

A. Yes, sir.

Q. Now take Century Engineering Company. What bracket did you put that customer in?

Mr. Gilpatric: On that and from here on we object to going into the brackets 4, 4A, and 5 because we don't make any claim that the bracket differences there are borne out by cost.

Mr. Haycraft: There is a claim though, Mr. Examiner, that that group of brackets as between the Discount brackets is justified.

Mr. Gilpatric: Not for 4, 4A and 5. It doesn't make any difference whether a manufacturer is in 4, 4A or 5 for the comparison he is making.

Mr. Haycraft: I will read the statement here on page 9, which reads: "From the costs which we have been able to allocate, the overall reduction in price between the discount bracket and bracket number 5 is more than justified and also the successive reductions in price between each bracket from the discount bracket to bracket number 3A, inclusive, appear in order. From the amount of cost which was allocated to bracket number 3A (totaling $0.46), it is obvious that the successive reductions in price aggregating $1.60 from bracket number 3A through bracket number 5 cannot be justified through the use of the
2386 portion of operating costs which was readily allocable to the customer quantity bracket classifications."

Trial Examiner Sheppard: All right, if it is there, you can go into it.

By Mr. Haycraft:

Q. Now, in making up your cost study in what price bracket classification did you put Century Engineering Company?

A. Number 4.
Q. And that is 15,000 to 22,499 units with a price of $14.90, is it not?
A. Yes, sir.
Q. Now, how many did they buy?
A. 8,398.
Q. And that would entitle them to what quantity classification?
A. That would be 3A.
Q. Hardey Whipple, Inc.
A. That is in 4.
Q. How many did he buy?
A. 8,632.
Q. What quantity bracket would he go in?
A. 3A.
Q. Norge Heating & Conduit Division,—in what price bracket did you put him in the cost study?
A. 4.
2387 Q. How many did he buy?
A. 10,771.
Q. That would entitle him to w[illegible] quantity bracket?
A. That would be 3A.
Q. Paragon Oil Company.
A. That is in 4.
Q. How many did he buy?
A. 14,501.
Q. That would place him in what quantity?
A. 3A.
Q. Reif Rex Oil Company,—in what price bracket did you put him?
A. We put him in 4.
Q. How many did he buy?
A. 4,940.
Q. And what quantity bracket would that place him in?
A. 3.
Q. Scott Newcombe, Inc.
A. That would be 4.
Q. How many did he buy?
A. 9,003.
Q. That would place him in what quantity bracket?
A. 3A.
Q. Silent Glo Oil Burner Corporation.
A. That is in 4.
2388 Q. How many did he buy?
A. 11,289.

Q. In what quantity bracket would that put him?
A. 3A.
Q. Wayne Oil Burner Corporation.
A. That is in 4.
Q. How many did he buy?
A. 1,267.
Q. And in what quantity bracket would that place him?
A. Number 2.
Q. Korth Oil Burner Corporation,—in what price bracket did you put him in?
A. 4.
Q. What did he buy?
A. 22,739.
Q. What quantity bracket would that put him in?
A. 4A.
Q. Do you know whether or not there was any refund given?
A. No, I don't.
Q. Nu-Way Corporation.
A. That is in 4.
Q. How many did he buy?
A. 5,874.
Q. And what quantity bracket would that place him in?
A. 3.

2389 Q. Now in that number 4 bracket, were there any of the accounts that you entered there in the price bracket that corresponded to the same quantity bracket, or were they all different? In other words, if they had been granted the discount they were entitled to in the quantity bracket, would any of these have fallen into the number 4?
A. No, sir.
Q. And the Anchor Post Fence Company,—in what price bracket did you put him?
A. That was 4A.
Q. That covers 22,500 to 29,999 with a price of $14.25, is that right?
A. Yes, sir.
Q. How many did he buy?
A. 3,339.
Q. What quantity bracket then would he fall in?
A. 3.
Q. Incidentally, were there any other accounts in this bracket, 4A, according to your study?
A. Other than mixed manufacturers, no.

Q. We are not including them. All right now, in what price bracket did you place the Automatic Burner Corporation?

A. Number 5.

Q. And bracket number 5 covers 30,000 and up, with a $13.75 price, doesn't it?

2390 A. Yes.

Q. All right, how many did he buy?

A. 19,838.

Q. In what quantity bracket would he fall?

A. Number 4.

Q. The Cleveland Steel Products Corporation.

A. That is number 5.

Q. How many did that company buy?

A. 19,445.

Q. In what quantity bracket would he go?

A. Number 4.

Q. Delco Appliance Division,—in what price bracket did you put him?

A. Number 5.

Q. How many did he buy?

A. 26,691.

Q. According to the quantity bracket, in what bracket would he go?

A. 4A.

Q. Gilbert & Barker Manufacturing Company,—in what price bracket did you put him?

A. Number 5.

Q. How many did he buy?

A. 25,404.

Q. According to the quantity, in what bracket would he fall?

2391 A. 4A.

Q. The May Oil Burner Company,—what price bracket did you put him in?

A. 5.

Q. How many did he buy?

A. 14,191.

Q. According to the quantity bracket, where would he fall?

A. 3A.

Q. Micro West Company,—what price bracket did you put him in?

A. 5.

Q. How many did he buy?

A. 6,992.

Q. According to the quantity bracket, where would he be?

A. 3.

Q. Timken Silent Automatic Company,—what bracket did you put him in?

A. 5.

Q. How many did he buy?

A. 11,411.

Q. In what quantity bracket would he fall?

A. 3A.

Q. Williams Oil-O-Matic Corporation,—in what bracket did you put him?

A. 5.

2392 Q. How many did he buy?

A. 16,332.

Q. In what bracket then would he fall from the quantity standpoint?

A. 4.

Q. Now, how many other customers did you have in this bracket aside from those I have listed?

A. 3, I believe.

Q. And they bought over 30,000 units, those other three?

Trial Examiner Sheppard: Over how many?

Mr. Haycraft: Over 30,000 units.

Trial Examiner Sheppard: That is 10,000 sets.

By Mr. Haycraft:

Q. 30,000 units would be 10,000 sets, wouldn't it?

A. That is right.

Q. Now, in making up Respondent's Exhibit 170, page 7, you have under Distribution Costs—home office selling expenses, branch expenses, home office administrative expense, and warehouse and shipping expenses. Now, when you say "Home Office Selling Expenses", where did you get the figures from on that, those items of that heading?

A. Those were expenses incurred at the home office.

Q. That is at the Minneapolis-Honeywell home office here in Minneapolis?

A. That is right.

2393 Q. Now where did you get the figures as to the branch expenses?

A. The amounts were taken from the books of the company at the home office.

Q. Well, what branches were included there?
A. All branches.
Q. And what branches were they?
A. There is a list in here (indicating).
Trial Examiner Sheppard: I think they are listed, aren't they?
Mr. Freeman: It is all in the report; I don't know why we need to go over it again and have this man list them. He has said, "all branches".
Trial Examiner Sheppard: Just give the page number.
The Witness: On page 8 the branches are given in detail.

By Mr. Haycraft:

Q. Well now, in making up your distribution cost study, as indicated on pages 11 and 12, the following pages there, I notice here on page 12 that you have listed the discount bracket the same as the bracket we have been talking about. Now, in making your entries in these columns here under price brackets, did you follow that set-up there, or did you follow the actual prices that you found in the ledgers, or books of the Respondent?

2394 A. We followed the actual company classification.

Q. So that this bracket as set forth here on page 12,—I mean this system of brackets or set up of brackets,—was not followed at all?

A. That is the basis that the company uses, but we followed their actual classification in other words, that is the potential quantity.

Q. Well, it says here, "Preliminary to the assignment of distribution costs which affect cost differentials in price brackets, it was necessary to make a separation of sales and manufacturing cost of products sold between Oil Burner manufacturers and all other customers as follows:"—and then you list this group of brackets here. Was that actually done? Was the separation on that basis?

A. No, the separation was made on the basis of the company's classification of each customer.

Q. That is, at the prices at which they were actually sold rather than the quantities?

A. That is right.

Q. Now, can you trace for us the manner and give us an illustration of how the distribution cost figures were made up for any g. en oil burner manufacturer customer, showing the various items that went into the distribution cost? For instance, take this oil burner manufacturing

company in Chicago,—the Automatic Burner Cor-
2395 poration. Do you have any figures on that company to show how you allocated the distribution costs for the salesmen's time and all that sort of thing?

A. That was based, as the report indicates, on the number of calls on the customer, the invoice lines, billing lines, the number of invoices rendered, and so on.

Q. Well, when that all had been totalled up, that was placed in the price bracket on which this particular customer was placed?

A. Yes, sir.

Q. And not according to the quantity that he bought?

A. That is right.

Q. Now, if you had followed the policy, as indicated here on page 12, of allocating and dividing up the customers according to the quantity they bought, do you have any way of knowing whether the figures that you obtained as to the cost of distribution for each price bracket would be the same or varied from those figures which you have presented in this study?

A. There is no way to know unless you actually recast the figures.

Q. Will you explain why that is true?

A. Because such a change would change all factors affecting the final result.

Q. Will you mind indicating for the record what
2396 those factors were and how they would be changed by the changing of the bracket classification?

A. It would change the allocation of the various elements of distribution costs. It would change the cost of sales, and it would be in a different price category.

Q. Can you give us an illustration, or would it be possible to work up an illustration on actual accounts,—take five accounts, and run an account in each one of the brackets and show how that would be changed?

A. I don't think it would be practical to arrive at any results with less work than reclassifying everything.

Q. In other words, you think a projection of that kind would not serve any purpose?

A. I don't think it would.

Q. I merely wanted to have you illustrate for the Examiner and for the record, if you can illustrate it, by taking some account, any one account that you want to at random that we have worked on here today, and show how, putting it in the bracket, the quantity bracket that it would fall

in, it would change its relationship to the exhibit. I used that Automatic Burner Corporation because that is one we were so familiar with at Chicago.

Mr. Gilpatric: You are asking him to assume that the prices changed?

Mr. Haycraft: Assume that he sold at the price
2397 to which he was entitled in the bracket.

Mr. Gilpatric: In other words, taking Automatic, if you are using that as an example, you would assume a higher price from that account because you put him in a lower bracket?

Mr. Haycraft: That just happened to be one that is 4 now. We might take one with probably a little more outstanding difference. It might be Micro West Company, which should have been in 3 if it had been sold according to the quantity bracket. I don't care anything about the difference; I just want an illustration of what changes it would make, what elements and factors we would have to take into consideration.

Mr. Gilpatric: But you are asking him to assume that Micro West instead of being charged bracket 5 prices was charged bracket 3 prices?

Mr. Haycraft: Yes.

Mr. Gilpatric: That is purely hypothetical, you understand.

Trial Examiner Sheppard: I will let it go in, but I will consider it as that. Of course, I am interested in the actual situation.

Mr. Gilpatric: Yes.

A. Well, the effect there,—I can't tell what the effect would be. The changes would be moving these five
2398 elements of cost from the bracket in which we classified them to a lower bracket, which would mean the allocation of the cost of salesmen's calls, and billing lines, —perhaps I don't get your question.

By Mr. Haycraft:

Q. That is exactly what I want. It would also make a change in your manufacturing cost columns, too, wouldn't it?

A. Yes, sir. I said all five facts.

Q. Which were used as the bases for figuring your ratio?

A. That is right; it would change all of those.

Q. Turning to page 58 in this exhibit 170, Mr. Reese,

I notice you have one item here, "Selling Salaries and Expenses" in which you allocate to the oil burner manufacturers about $40,000. You have got that divided up in price brackets and Discount 1, 2, 3, 3A, and a group of 4-4A-5 together. I should like to ask you this question, if it is possible for you to furnish me with the work sheets from which this group of figures were made up so that you can testify as to the actual allocation of the expenses to the different customers, and I will give you the names of the accounts that I want to make the test study in: Master Oil Burner Company, the Ace Engineering Company, the Ray Oil Burner Company, the Enterprise Engine & Foundry Company, the Wayne Oil Burner Corporation, and the Korth Oil Burner Corporation, and the Automatic Burner Corporation.

2399 Mr. Gilpatric: Mr. Reporter, will you read the question back, please?

(The question was read by the reporter.)

Mr. Gilpatric: Those work sheets, Mr. Examiner, have been available to the Commission now for about three months. We will give the work sheets back, but we are not going to have Ernst & Ernst do a lot of work.

Mr. Haycraft: I am not asking him to do any work; I am asking him to testify as to what he has done, and I am certainly entitled to that.

Trial Examiner Sheppard: I take it, gentlemen, that you will agree that a great deal of this is interesting to me because it is a clarification of what is in that record there, Exhibit 170. You all are familiar with it; I am not. I haven't touched it yet and all this is rather illuminating to me. Can you do that for us, Mr. Reese?

The Witness: Off the record, may I speak to my assistant?

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

The Witness: Yes, with respect to salesmen's calls, they can be allocated directly to each account.

By Mr. Haycraft:

2400 Q. What other elements do you have on this exhibit, page 58, under selling salaries and expenses, do you have besides salesmen's calls in there?

A. All of your various—

Q. Over on 59, don't they all relate back to the salesmen's calls, every one of them?

A. Everything that follows the salesmen's calls can be traced.

Mr. Haycraft: All right. I would like to then request, Mr. Examiner, that that be done and the witness be excused today and that he appear tomorrow morning with those work sheets so that he can testify further with respect to those accounts.

Trial Examiner Sheppard: Can you do that in that time? We will go off the record, Mr. Reporter.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

The Witness: May I reopen that question on one point with respect to the allocation of certain indirect selling expenses to the individual accounts? I would like to clear up one point that, for instance, sales supervision was not assigned specifically to any one of these companies. It followed the over-all allocation of salesmen's calls, or the cost of salesmen's calls.

By Mr. Haycraft:

Q. Once you determine your cost of salesmen's 2401 calls, you have the basis for your allocation?

A. That is right, but there is no reason to allocate it to a specific company. That was handled in the over-all rather than individually.

Mr. Haycraft: The main thing I was after was the salesmen's expenses. That is my next line of examination, Mr. Examiner, and in view of what you said this morning or this noon as to your wanting to help the reporter to keep up his daily copy, why I thought that would be a good place to stop, and if we could have that available tomorrow morning I could go into that.

Mr. Freeman: I suggest that we let Mr. Johannsen go back and get whatever work sheets are necessary and let Mr. Haycraft continue with his further examination of this witness, and then when these papers are here produced Mr. Haycraft can come back to this.

Trial Examiner Sheppard: All right, can we go on with this witness now on anything further, Mr. Haycraft?

Mr. Haycraft: I can't go any further until I have the information that we asked for.

Trial Examiner Sheppard: All right then, you get the information we want on that proposition, Mr. Reese, and have it for us tomorrow sometime. If you can have it the first thing in the morning, all right; otherwise, we will

give you more time. We are going to take an ad-
2402 journment now until 9 o'clock in the morning.

Mr. Gilpatric: Mr. Examiner, I don't want this to happen tomorrow. I have come all the way from New York and the Commission has had four months to find what it wanted so they would be able to proceed. The papers have all been available. Now we have other engagements and it is just not fair to the company or to ourselves to tell us at this time they want something that we haven't got here. Mr. Haycraft could have told Mr. Freeman in Chicago yesterday about this when he saw him. We weren't told a thing about it.

Mr. Haycraft: I told Mr. Freeman two or three days ago and I told him again yesterday that I wanted to go into the details of this report.

Mr. Freeman: You didn't ask for any specific work sheets or we would have had it here. The work sheets of Ernst & Ernst have been available for better than four months and they have been inspected and inspected by accountants for the Commission. They are now available at the offices of Ernst & Ernst in Minneapolis and the Commission can come back and get them any time they want them.

Mr. Haycraft: I move then that we adjourn to meet in the office of Ernst & Ernst tomorrow morning. If they don't want to bring them over here, we will go over there.

Trial Examiner Sheppard: I had this hearing
2403 here in Minneapolis because of the question of these records, you know.

Mr. Freeman: We are not refusing to furnish these records. They are available and we offer them to you.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

Mr. Freeman: I just want to say that Mr. Haycraft should designate now what else he may want to get into, and we will have them over here.

Mr. Haycraft: That is all I can think of at the present time, but I don't want to put myself in the position of saying that I am not going to ask for anything more.

Trial Examiner Sheppard: I am going to take the adjournment. Can you all meet at 9 o'clock in the morning instead of 10? All right then, Mr. Reporter, we will stand adjourned until 9 o'clock tomorrow morning.

(Whereupon, at 3:20 P. M., January 9, 1945, the hearing in the above-entitled matter was adjourned.)

2404 Room 307, U. S. Court House,
Minneapolis, Minnesota,
Wednesday, January 10, 1945.

Met, pursuant to adjournment, at 9 o'clock A.M.

Before:

W. W. Sheppard, Trial Examiner.

Present:

Everett F. Haycraft, Attorney for the Federal Trade Commission.

Gravath, Swaine & Moore, by R. L. Gilpatric, 15 Broad Street, New York, New York; and Baer & Freeman, by Will Freeman, 135 South LaSalle Street, Chicago, Illinois; appearing for respondent.

2405 Proceedings.

Trial Examiner Sheppard: Convene the hearing, Mr. Reporter, pursuant to the adjournment taken yesterday, and show the usual appearances.

Mr. Haycraft: At the close of the hearing yesterday afternoon I gave Mr. Reese the names of some firms that I wished him to secure some original work papers on with respect to the cost of the salesmen's activities, what they call salesmen's reports, and after the session was closed we talked unofficially around here and off the record and compromised by giving him four other names, the names of four other firms which have come out of one office. I wanted to make the burden as light as I could on the office, and I am informed this morning that Mr. Johannsen is better equipped to answer those questions with respect to that matter than Mr. Reese because he worked on that end of the report himself.

Trial Examiner Sheppard: It has been my idea all the time that if we could just have one or two cases to illustrate the point here it would be better than going into great detail.

Mr. Reporter, show this gentleman, Mr. A. F. Johannsen of Minneapolis, Minnesota, having been previously sworn, appears on behalf of the Commission.

Mr. Haycraft: I would like to have him show the
2406 same appearance as Mr. Reese, if you don't mind.

Trial Examiner Sheppard: Yes, Mr. Reese was on the stand yesterday and this gentleman will testify along the same lines, but I understand he has more definite knowledge of the questions involved.

A. F. JOHANNSEN was thereupon called as a witness by the Commission and, having previously been duly sworn, testified further as follows:

Cross-Examination by Mr. Haycraft.

Q. What, if anything, did you have to do with the preparation of Respondent's Exhibit 170, Mr. Johannsen?

A. Well, are you speaking now of the detailed work in accumulating the information, or in writing the exhibit?

Q. Both.

A. I either prepared or supervised the preparation and accumulation of the information that is contained in the report, and also with the help of Mr. Reese and other members of our organization prepared the formal exhibit, the formal report.

Q. At the bottom of page 58 of this report there is an item of "Selling Salaries and Expenses" and on the next page is an explanation of how the information was gathered which is set forth in this tabulation. Is that your work?

2407 A. That is either my work directly or under my supervision.

Q. Well now, you were asked, I believe, to be prepared to testify this morning with respect to four accounts in the New York area, New York branch area, with respect to the salesmen's expenses, salesmen's salaries, and so forth. Are you prepared to do that?

A. I am prepared to give you the information as to the number of calls and the cost of those calls on these companies.

Q. Well, would you name the companies that you have in mind and take them up one at a time.

A. Well, the first company is the General Oil Burner Company.

Q. Where is that located?

A. That is located in Baltimore, in the New York area.

Q. Do you know what price classification that was placed in in your report on page 7 of the exhibit?

Mr. Gilpatric: In bracket 2, according to Exhibit 185.

A. In bracket 2.

By Mr. Haycraft:

Q. Is that General Oil Burner Company or General Oil Heating?

A. I have General Oil Burner Company.

Mr. Gilpatric: May we go off the record?

Trial Examiner Sheppard: Off the record, Mr. 2408 Reporter.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

By Mr. Haycraft:

Q. All right, skip General Oil Burner. Take the next one then, Mr. Johannsen.

A. Gold Star Oil Burner Company.

Q. Where are they located?

A. In New York.

Q. And that is in what bracket?

A. Bracket number 3.

Q. What salesmen called on them?

A. Frank Ammon, W. J. Brown, A. Michelson, and J. D. Patrick.

Q. Now, did they all call on them at the same time or different periods of time?

A. Our records unfortunately do not show whether they called on them together or individually.

Q. Does it have the time devoted for each one, the number of calls for each one?

A. Yes.

Q. How many calls did Frank Ammon make?

A. Frank Ammon made one call.

Q. Was he a salesman or a supervisor?

A. He was a salesman.

Q. All right, go ahead. Brown,—how many calls 2409 did he make?

A. W. J. Brown made six calls.

Q. How many did Michelson make?

A. Four calls.

Q. And Patrick?

A. Thirteen.

Q. Now, how did you determine the amount of money to be charged to this particular account for salesmen's calls?

A. I would like to have that question repeated.

(The question was read by the reporter.)

A. We first determined the total number of days that the salesmen worked.

Q. Was that each salesman? Have you put it as if one salesman made all the calls?

A. I believe your question was, how did you determine what this salesman's cost per call was.

Q. That is right, this company's cost per call.

A. Well, for each salesman.

Q. That is right, go ahead.

Mr. Gilpatric: He is now talking about Ammon, is that correct?

The Witness: I am now talking about Ammon.

By Mr. Haycraft:

Q. All right, go ahead.

A. We determined first how many days Frank
2410 Ammon worked in sales work.

Q. How many days did he work?

A. He worked 244 days.

Q. All right, then what did you do?

A. We determined through information on the salesmen or their supervisors, based on the territory that they worked in and the type of calls that they made, how many calls they could make on contract manufacturers per day.

Q. That was an estimate given to you by other employees of the respondent?

A. That was obtained either from the salesman or from the salesman's supervisor.

Q. You don't recall now which?

A. The records that we have here do not show.

Q. But then, in other words, it wasn't based upon actual time records?

A. No, sir.

Q. (Continuing) Of the length of time that this salesman spent with this particular account?

A. No, sir, the salesman's call record did not show the actual time elapsed.

Q. All right, what did you do next?

A. We then determined the cost per day by adding the salesman's salary and his expenses and his direct supervision to establish the cost per day.

2411 Q. And what did you get in the case of this particular salesman?

A. The cost per day was $16.34.

Q. How many calls did you have him making on the contract customers, according to your record?

A. You are referring now to the daily calls, or the total calls?

Q. The daily calls.

A. He made two calls per day on contract manufacturers, which brings his cost per call to $8.17. In addition to that, we have his general supervision, which includes the eastern zone manager, which is Mr. Michelson, and determined the amount of supervision applied to this individual salesman. This was accomplished by determining the man-days of all salesmen over which he had supervision and by taking the ratio of man-days to the amount of his salary and expense allocable to supervision we arrived at a cost per day and then further worked that out to a cost per call.

Q. What was it in this instance?

A. It was 58 cents.

Q. Per call?

A. Per call.

Q. And you had four calls, is that right?

A. That is not right.

Q. You are talking about Ammon yet,—58 cents 2412 to be added to Ammon?

A. That is right. In addition to that we had further supervision by Mr. Chapler, who supervised the heating control salesmen of the eastern zone.

Q. How did you work that, the same way?

A. In this we took all the heating control salesmen of the eastern area, arrived at the man-days for all salesmen. By taking the ratio of that portion of his salary expense which was allocated to supervision, we arrived at a cost per day, and extended that further to a cost per call for the individual salesman.

Q. You say that part was allocated to supervision. Did he have other duties besides supervision?

A. He also made direct calls himself.

Q. How did you divide his time? Was that estimated again, or based on actual records?

A. Mr. Chapler worked a total of 244 days. He made 72 calls on contract manufacturers. The number of calls that he could make per day was one, because of the nature of the call that he made. Therefore we accounted for 72 days spent on his own personal calls on contract manu-

facturers. In addition to this he spent thirteen days calling on customers other than contract manufacturers. This was arrived at by dividing the number of calls that he did make on other than contract manufacturers
2413 by the number of calls that he could make, which is three calls per day. That gives us thirteen days, leaving 159 days which was allocated to supervision.

Q. Well then, how much did you allocate to Frank Ammon from Chapler's supervision?

A. $3.06 per call.

Q. Why do you say that he only made one call a day whereas Ammon was making two calls a day on contract customers,—that is, when he made calls himself and was not engaged in supervision?

A. That was the information furnished us as to the number of calls that he could make, based on the type of customers that he called on.

Q. Did they tell you what type of customers he called on as compared with the other fellow?

A. I don't quite get the question.

Q. Well, you say he could only make one call because of the type of customer that he called on. Now, as I understand it, Ammon, for instance, could make two calls. What was the difference in the type of customer that Ammon was supposed to call on and Chapler was supposed to call on?

A. I don't think that I can answer as to the type of calls.

Q. It didn't come to your knowledge?

A. I am not familiar with the companies that they called on.

Q. Did you have any other supervisory expense
2414 than that what you have indicated? Was that the total?

A. That was the total.

Q. Then the total of that would be about $11.81 per call for Frank Ammon, is that right?

A. That is right.

Q. Now, in which bracket did you enter that in making up your final tabulation, in which price bracket?

A. In regard to Gold Star Oil Burner?

Q. Yes.

A. It was entered in the bracket in which Gold Star had been placed by the company.

Q. That was 3?

A. That was bracket number 3.

Q. Now, what was the cost per call of W. J. Brown? I assume that was worked out on the same basis?

A. He was worked out on the same basis. In fact, I might add that all salesmen were worked out on this basis.

Q. And what was your cost per call for W. J. Brown?

A. $17.51½.

Q. And Michelson?

A. Michelson was $74.38.

Q. Now, he was his own manager, you say?

A. That is right. J. D. Patrick was $11.84½.

Q. Then what did you have as the total of all to be charged?

A. The total cost of calls of the four salesmen
2415 mentioned here on the Gold Star Oil Burner Company was $568.40.

Q. All of them went into bracket number 3, is that right?

A. That is right.

Q. That $568.40 was a part of this item of $9,736.89 on page 58?

A. That is right.

Q. Now, would there have been any difference in the manner of figuring the cost per day if this account had been placed in bracket number 2? Would there be any difference in your $568.40 if he had been in a different discount bracket?

A. I don't quite get your point.

Q. I say, if it was a fact that he should have been in bracket number 2 rather than bracket number 3, would that make any difference in your item of $568.40?

A. When you are speaking of—

Q. The sum of the salesmen selling to the Gold Star Oil Burner Company,—in other words, the amount of money allocated to that account for salesmen's calls was $568.40 as a part of the expense?

A. That is right.

Q. Now, would it make any difference as to what his quantity of sales were? There was no relation—

Mr. Freeman: Mr. Haycraft uses "his" to mean the Gold Star Company.

By Mr. Haycraft:

2416 Q. There was no relation as between the Gold Star's cost for purchases?

A. No, this was not in relation to sales.

Q. However, if it had been figured on the basis of bracket number 2, Discount bracket number 2, it would have been placed on page 58 in the item where you have $4,731.17, would it not?

A. If it had been placed in bracket 2, it would have been added to bracket number 2.

Q. And taken away from bracket number 3? In other words, it would make bracket number 3 smaller and bracket number 2 higher, would it not?

A. Yes, it would be taken out of 3 and placed in whatever bracket you placed it in.

Q. Do you have before you there the figures as to the purchases by this particular account?

A. No, sir.

Q. You know what the brackets were though, do you not, Mr. Johannsen?

A. By referring to the report, I can tell.

Q. Referring to page 2,379 in this record, the quantity purchased was 2,441 units. What bracket would that put him in from a quantity standpoint, Mr. Johannsen?

A. It would put him in bracket 2 strictly on the quantity purchases.

2417 Q. Yes. Now then, take the next account—

Trial Examiner Sheppard: He was in bracket 2, wasn't he?

Mr. Haycraft: No, they put him in bracket 3.

The Witness: When you say "they put him in",—do you mean that we—

Mr. Haycraft: No, the respondent put him in bracket 3 in figuring the expense. The witness testified that those costs were put in bracket number 3 that I have just been asking about.

By Mr. Haycraft:

Q. Now then, will you take the next account that you have there?

A. Korth Oil Burner Corporation.

Q. Where is that located, New York City?

A. It is located in New York.

Q. And in what price bracket was his expense allocated?

A. Bracket number 4.

Q. Now, what does your record show as to the salesmen calling?

A. My record shows that W. J. Brown made one call and Chris Jensen made thirteen calls.

Q. Those were all the calls that were made?

A. Those were all the calls recorded.

Q. Are either one of those supervisors?

2418 A. W. J. Brown is a supervisor.

Q. Now then, following the same procedure, will you give us the amount that was allocated per call for each one of these salesmen for this account?

A. W. J. Brown was $17.52; Chris Jensen was $15.88½.

Q. That included supervision?

A. That included supervision.

Q. And that made a total of $33.40 per call?

A. It does not.

Q. What was the total amount of calls, the total amount allocated to this account on salesmen's calls?

Mr. Freeman: Do you mean for all calls?

Mr. Haycraft: All calls.

A. $224.03.

By Mr. Haycraft:

Q. That was made a part of this $11,681.29 on the exhibit, on page 58?

A. Made a part of bracket number 4.

Q. And that is a part of 4, 4A, and 5 that is shown on this exhibit, is it not?

A. That is right.

Q. Now, how many units did this company buy?

A. I don't have that information.

Mr. Gilpatric: It is on page 2,388 of the record.

By Mr. Haycraft:

2419 Q. Page 2,388 shows that this customer bought 22,739 units. What bracket would that put him in according to the quantity bracket?

A. What was the figure?

Q. 22,739.

A. Bracket number 4A.

Q. Then if he was placed in bracket 4A, it would still go into this $11,681.29 on page 58? There would be no change on that?

A. That is right.

Q. Now, take the Petroleum Heat & Power Company.

A. I have it.

Q. Will you testify as to what bracket you put that account.

A. Bracket number 5.

Mr. Haycraft: May we go off the record?

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: There will be a five minute recess.

(A short recess was taken.)

Trial Examiner Sheppard: You may proceed.

By Mr. Haycraft:

Q. Take the account of Anchor Post and Fence Company, Mr. Johannsen, and first tell me what bracket you placed his sales expense in.

2420 A. Bracket number 4A.

Q. And what salesmen called on him and what was the cost of the salesmen's calls?

A. F. Bell made ten calls and the total cost was $85.00.

Q. That is all the sales expense you have?

A. That is all that the record shows.

Q. And that, I take it, was made a part of your item of $11,681.29 on page 58 of Respondent's Exhibit 170, is that right?

A. Yes, under bracket 4, 4A, and 5.

Q. Now, on page 2,389 it appears that this firm bought 3,339 units. In what quantity bracket would that place him according to your exhibit there?

A. On the volume basis that would put him in bracket number 3.

Q. And so that if you figured these calls and expenses on volume basis, this item would have gone in the item of $9,736.89 rather than the $11,681.29, is that right?

A. It would have gone into bracket 3.

Q. That is the item, bracket 3. Now, will you take the account of Electral and first tell me what bracket he was placed in in your study.

A. Number 3.

Q. And who made the calls there and what was the expense?

2421 A. W. J. Brown made four calls at a cost of $70.00; Chapler made one call at a cost of $45.30;

Jensen made two calls at a cost of $31.77; and Verstrate made five calls at a cost of $62.87.

Q. What is the total?

A. $209.94.

Q. Now, according to the testimony yesterday of Mr. Reese, at page 2,379, this customer purchased 1,118 units. Now, what bracket would that place him in on a quantity basis?

A. Bracket number 2.

Q. Now, this $209.94 is a part of the item of $9,736.89, according to page 58, Exhibit 170, is it not? That is bracket number 3?

A. That is part of bracket number 3.

Q. And if it had been allocated to bracket number 2, quantity bracket, it would have gone into this item of $4,731.17,—it would have been added to that?

A. It would have been added to the bracket 2.

Q. And deducted from bracket number 3?

A. That is right.

Q. Now, will you take the account of Fairfield Oil Company. What price bracket did you place him in in your study?

A. He was placed in bracket number 2.

Q. Who called on him and what was the expense?

A. W. J. Brown made two calls at a cost of $35.00; Patrick made eight calls at a cost of $94.72.

2422 Q. And what was the total, together?

A. $129.72.

Q. Now, according to the testimony of Mr. Reese yesterday, the Fairfield Oil Company purchased 858 units. That is on page 2,376 of the record. Now, what quantity bracket would that place him in?

A. On a quantity basis that would have placed him in bracket number 1.

Q. And from your testimony I understand that this $129.72 is included in your item of $8,536.09,—no, that is $4,731.17, which is bracket number 2, and if he had been allocated in bracket number 1, it would have been added to $8,536.09 and deducted from the other item, is that right?

A. May I have that question read?

(Question read by the reporter.)

A. It would have been added to the bracket number 1 total.

Q. And deducted from bracket number 2?

A. That is right.

Q. Now, are the illustrations that I have asked you about typical of the changes that would have to be made if the report was recast to conform to the quantity brackets, according to the testimony of Mr. Reese yesterday as to the brackets that these various accounts were placed in?

A. Just what do you mean when you say "typical"?

Q. Well, in all those instances where an account
2423 was placed in price bracket number 1, we will say, and according to the quantity bracket and his actual purchases he would have been placed in the Discount bracket. In order to make the change to put him in the Discount bracket, the changes that you have already testified to are illustrative of what would have to be done with respect to reallocating those expenses from a price bracket as given to you into a quantity bracket as developed in the testimony yesterday?

A. You are referring to salesmen's expense only?

Q. That is right; that is all I am talking about.

A. The salesmen's expense, if allocated other than it was allocated, would have to be taken out of the bracket in which it was placed and put into the bracket in which it will be reclassified.

Q. Referring back to page number 7 of this exhibit and the various items under distribution costs in the different price brackets, if the changes were made there on other items of distribution than we have referred to in your testimony this morning,—if they were changed from one bracket to another, what would it require in the way of changes in your distribution expenses? Can you determine that from the exhibit itself, or can you determine it from your work sheets?

A. I would like to have you repeat that. If I didn't misunderstand you, you said "other expenses", and
2424 I thought the testimony here was confined to salesmen.

Q. It was. I am now asking you the general question, using the salesmen as an illustration; that is, what I want to find out with respect to the other expenses, other than salesmen's expenses,—would your distribution costs be reallocated from one price bracket to another following the quantity bracket basis rather than the price basis?

A. All of the expenses that have been allocated ac-

cording to the bracket classifications that were used were based on factors, I think, that have been covered in his testimony and if any of the factors were changed it would mean recasting the allocation of these expenses on the basis of the new classifications.

Q. Now, this item that we have been talking about this morning of "Selling Salaries and Expenses" of $40,239.28 as assigned to total oil burner manufacturers is a part of the items listed in the column entitled "Applied To Cost Differentials Affecting Oil Burner Manufacturers" of branch expenses on page 34 of this exhibit and represents manufacturers' selling expenses, salesmen's salaries, salesmen's expenses, commissions, and is the principal item of that particular column, is it not, as branch office expense?

A. You are referring now to the $40,239.28?

Q. That is right.

A. That is the part applied to cost differentials
2425 affecting oil burner manufacturers of lines 23 through 36 on that same page.

Q. Those were the ones that I just read, were they not?

A. That is right.

Q. Now, scattered across this same page under the respective price brackets may be found the amounts set forth on page 58 about which I have questioned you, this $2,602.94 for Discount column, $8,536.09—price bracket number 1, $4,731.17—price bracket number 2, $9,736.89—bracket number 3, $2,950.90—bracket number 3A, and $11,681.29 in the last column, which is a combination of bracket numbers 4, 4A, and 5,—isn't that correct?

A. Well, I think your question, unless I misunderstood you, is have I located the figures?—yes.

Q. Well, I say, the information on page 58 about which I questioned you this morning is set forth on page 34 under the respective bracket numbers?

A. Those figures are the same.

Q. And if you made the changes that I questioned you about this morning with respect to these different salesmen's expenses, those changes would have to be made, of course, on these other items in page 34,—in other words, the same changes would be made there under their respective price brackets?

A. I believe your thought is, would any changes
2426 made in the detail be reflected in the summary—

Q. That is right.
A. The answer is yes.
Mr. Haycraft: That is all, Mr. Examiner.
Trial Examiner Sheppard: Redirect examination.

Redirect Examination by Mr. Gilpatric.

Q. Mr. Johannsen, when you were discussing Gold Star Oil Burner, you described how the cost per call of Mr. Ammon, one of the salesmen, was figured out. Can you tell us whether or not your records show the actual number of calls made by Mr. Ammon during the year 1941 on all customers?
A. Yes, they do.
Q. And how are those divided up on your work sheets, those calls?
A. Those are divided up by oil burners, and other manufacturers, and all other customers.
Q. Now, from what record were those figures taken that go to make up the total number of calls made by Mr. Ammon?
A. From the company's record on the salesmen's call reports.
Q. As reported by the salesmen?
A. As reported by the salesmen.
Q. In arriving at the total number of calls, you didn't make any estimate?
A. We made no estimates. These were salesmen's figures.
2427 Trial Examiner Sheppard: In other words, everyone of them worked on those days, as I understand it?
The Witness: That is right. These are actual calls reported by Mr. Ammon.

By Mr. Gilpatric:

Q. The only estimate, therefore, that was made was the number of calls on contract manufacturers that could be made in one day?
A. That is right, the number of calls that he could make on contract manufacturers in one day.
Q. But the actual calls made over the year were taken directly from the company's records of calls actually made?

A. That is right.

Q. In the case of calls made by a supervisor like Mr. Michelson, there was no supervisory charge against his calls, was there?

A. In the case of Mr. Michelson, who is the zone manager, there was no supervision; as far as branch expenses were concerned, it was charged to him. With other supervisors, depending upon their position, some of them did receive a charge for supervision from men above them. Mr. Michelson's time was charged against those men over which he had supervision, and the other supervisors' time was charged against the men over which they had supervision, but none of it was applied against a man over which they had no supervision.

2428 Trial Examiner Sheppard: I have one question to ask you. It seems to me, gentlemen, that all that I have been listening to here is minutiae of business administration—salesmen's expenses, how many calls they have made, and all that sort of thing. Of course, that is necessary matter to take into consideration in any cost accounting by any concern doing business anywhere. All I am interested in knowing in that respect is whether or not in making your bracket, your quantity brackets as shown in the record here, those things were taken into consideration. That is the question before us here, and really the only one of any importance. If these things were taken into consideration in making your quantity brackets, okay; if they were not, as Mr. Haycraft indicates there, it is an important item to be considered.

Now, my question to you: Were those things taken into consideration? Did you gentlemen get that information and consider it and count it in, and does it show in the quantity brackets as before us in this case? All the salesmen's salaries, the days they worked, and all that minutiae of business administration,—was that taken into consideration here by the respondent in fixing their quantity bracket proposition?

Mr. Haycraft: If I may interpose an objection, Mr. Examiner,—this witness doesn't know because he

2429 is not a party of the respondent. All he has done is made a study, an after-the-act study. I agree with you as to your point, as to what the issues are here, but I don't believe that the question you have propounded would be properly propounded to this witness. You might

ask that of Mr. Lockrae, or some other official of the Respondent.

Trial Examiner Sheppard: If you cannot answer the question, just say that you cannot.

The Witness: I may not have interpreted your question properly. If your question was, did we allocate every item of expense to brackets?—

Trial Examiner Sheppard: That is right.

The Witness: The answer is that every item that could be readily allocated we did, but there are many items that weren't.

Trial Examiner Sheppard: Well, I don't see any reason at all for you gentlemen getting it if you weren't going to use it, don't you see, and I assume that what you did get was used there in the making by the respondent of the quantity brackets.

The Witness: If that is your question, that is covered in our report in detail as to the expenses that were used, on page 5 of our report.

Trial Examiner Sheppard: Page 5 of Exhibit 170?

The Witness: That is right.

2430 Trial Examiner Sheppard: Now I may tell you gentlemen that of course it will be my duty to make a detailed study of that exhibit, but I wanted to be sure of that one question. I am going to take this witness' testimony on that line, and if Mr. Lockrae or some of the gentlemen on the stand before are on again, I want to ask them the same question.

All right, now is there any other examination by you?

Mr. Gilpatric: Not of this witness.

Mr. Haycraft: There is one question I want to ask.

Recross-Examination by Mr. Haycraft.

Q. In arriving at the allocation of the expense of Frank Ammon to the Gold Star Oil Burner Company, where you have an $11.81 total there, do you give the same value, the same amount of expense to the work that he does, the calls that he makes on the Gold Star Oil Burner Company as those he makes on other customers, or was it a weighted average made there?

A. I think I covered that before in saying that we did weight the calls on contract manufacturers according to the best estimate of the time that it took him to make those calls.

Q. As compared with the time on other business?
2431 A. That is right.
Mr. Haycraft: That is all.

Redirect Examination by Mr. Gilpatric.

Q. Just to make that point clear: Wasn't it true that whether Mr. Ammon called on a customer in bracket 2 or whether he called on a customer in bracket 5, in each case confining myself to contract manufacturers, the charge per call was the same?
A. That is right.
Trial Examiner Sheppard: I would have thought that. All right, thank you, Mr. Johannsen.
(Witness excused.)
Now, gentlemen, we will have a brief recess.
(A short recess was taken.)
Trial Examiner Sheppard: Mr. Reporter, show Mr. William J. Warmack, Washington, D. C., of the Federal Trade Commission on the stand.

WILLIAM J. WARMACK was thereupon called as a witness for the Commission and, having been first duly sworn, testified as follows:

Direct Examination by Mr. Haycraft.

Q. Will you state your full name, please?
2432 A. William J. Warmack.
Q. What is your occupation?
A. Accountant.
Q. By whom are you employed?
A. By the Federal Trade Commission.
Q. Do you live in Washington?
A. Yes, sir.
Trial Examiner Sheppard: How many years, Mr. Warmack, have you been with the Commission?
The Witness: Since May, 1929.

By Mr. Haycraft:
Q. Are you a certified public accountant?
A. Yes, sir.
Q. Since when?
A. 1933.

Mr. Freeman: Why don't you give us the state while you are at it?

By Mr. Haycraft:

Q. While you have been with the Commission, what has been the nature of your accounting experience?

A. I worked in the power investigation—that is, the power and light investigation from 1929 until 1935 or '36. Since late 1936 I have been engaged principally on accounting work in connection with the administration of the Robinson-Patman Act by the Commission, par-
2433 ticularly Section 2(a) of the Act. In answer to Mr. Freeman's suggestion, I am a certified public accountant of Florida.

Q. Now, what has been the nature of your activities and what cases have you been engaged on in connection with Section 2(a) of the Robinson-Patman Act? What were your duties in that respect?

A. Reviewing cost reports and comparisons under cost data submitted to the Commisison in attempted justification of price differences by various companies; that is, attempted justification of price differences under the due-allowance proviso of Section 2(a) of the Robinson-Patman Act. In addition, why I have made considerable studies of companies' records, checking the figures that have been compiled and compiling figures myself or supervising the compiling of figures and statistical data, all of which had to do with the costs which were worked up generally by companies and offered to the Commission in justification of price differentials under Section 2(a) of the Robinson-Patman Act.

Q. And can you recall the particular cases that you have worked on in that connection?

A. Well, the largest case I guess was the Standard Brands case. One of the cases in which I did considerable work and acted as a witness for the Commission for some time was the Standard Oil case. It was a case that had grown on account of alleged discrimination down in
2434 Detroit. And various other cases—I could name many of them. A considerable part of the work was devoted to companies in which formal complaints were never issued by the Commission. Of course, I cannot name those.

Q. Well, have you examined Respondent's Exhibit 170 in evidence in this case?

A. Yes, sir.

Q. Will you explain the extent of such examination and any investigation you may have made of underlying records?

A. Yes, I studied the report in Washington and I had Mr. Charles Argus of the Commission's staff assigned to a study of the report also. In connection with our study, why Mr. Argus spent a good deal of time here in Minneapolis in reviewing the working papers of Ernst & Ernst, certified public accountants, who had prepared the exhibit, and also reviewed and studied some of the records of the company at its office here in Minneapolis.

Q. How much time have you spent, yourself, in addition to what Mr. Argus may have done in the study of this exhibit and the underlying records?

A. I would say all told probably about a month.

Q. Do you have a copy of that report before you?

A. Yes, sir.

Q. Will you turn to page 6 of the exhibit?

A. (Witness complies.)

2435 Q. (Continuing.) And testify as to what that page represents, your interpretation of it?

A. Well, that page is a statement which shows the manufacturing cost, total manufacturing costs applicable to products sold to customers other than oil burner manufacturers, the manufacturing costs applicable to products sold to oil burner manufacturers—

Mr. Gilpatric: Is this page 6 he is talking about?

The Witness: Page 7.

By Mr. Haycraft:

Q. I asked you about page 6.

A. I beg your pardon. Page 6 is a statement which shows the discount bracket classification of the Respondent; the annual unit volume applicable to each of the separate discount brackets; the prices applicable to each of the separate discount brackets; the distribution cost applicable to the Discount bracket, bracket 1, bracket 2, bracket 3, and bracket 3A, as developed by the Respondent in that line of figures, which is column 4 on page 6, as taken from the last row of figures on the bottom of page 7 of the exhibit.

Column 5 on page 6 of the exhibit shows the cost differential, the deduction of each figure; that is, the deduction of the next lower figure in each instance from the

figure just above it. The price differential is column 6,
and that is the difference between the prices of each
2436 lower bracket from the immediately higher price
bracket as shown in column 3. Column 7 shows the excess of reduction in cost over reduction in price from the next higher bracket, as marked as a header for that column.

Column No. 8 shows the excess of cost over the excess of price as between the Discount bracket and bracket 1, bracket 2, 3, and 3A. Column 9 shows the same as compared with bracket 1; that is, the excess in each instance as between bracket 1 and bracket 2, bracket 1 and bracket 3, and bracket 1 and bracket 3A.

Column 9 shows the same comparison between bracket 2 and bracket 3, and bracket 2 and bracket 3A.

The last column on the sheet shows the difference between bracket 3 and bracket 3A.

Q. Now, referring to page 7 of the exhibit, which you started to explain a while ago, will you complete your explanation as to page 7 and then testify as to the relationship between the two pages?

A. Yes. Well, I had explained that the top line showed the total manufacturing costs, and that it shows that $1,282,833.84, manufacturing costs, was applicable to the production of oil burners sold to all those manufacturers; and that figure, continuing on the line, shows the amounts of manufacturing costs that were applicable to the sepa-
rate discount brackets as worked up by the Re-
2437 spondent. Would you like those figures read into the record?

Q. The top line there?

A. Yes.

Q. Yes, broken down.

A. The figure shown in the Discount bracket, $6,196.14; bracket No. 1, $39,352.41; bracket No. 2, $60,831.88; bracket No. 3, $188,867.92; bracket No. 3A, $129,732.93; and for brackets 4, 4A, and 5 combined, the manufacturing cost is shown as $857,852.56. Distribution costs are likewise shown on page 7 of Respondent's Exhibit 170, and are classified into four general classes: Home office selling expenses, Branch expenses, Home office administrative expense, and Warehouse and shipping expenses.

I can give the total of all of the distribution expenses if you would like that for the record here, or the total of each of those classifications.

Q. Give me the grand total.

Mr. Gilpatric: Is it necessary to have Mr. Warmack read into the record figures that are all in evidence?

Mr. Haycraft: It is for the purpose of this examination.

Trial Examiner Sheppard: All right, go ahead.

Mr. Freeman: We object to it then as not the best evidence. The best evidence is the documents.

2438 Trial Examiner Sheppard: I will consider it in the nature of an explanation.

Mr. Freeman: Who pays for the printing of this record, your Honor?

Mr. Haycraft: We pay a little of it.

Trial Examiner Sheppard: Go ahead.

A. The total distribution cost shown on page 7 of Respondent's Exhibit 170 is $3,591,633.04.

Mr. Freeman: We object to that answer as secondary evidence. The document speaks for itself.

Trial Examiner Sheppard: All right, show the objection.

Mr. Freeman: If he wants to make any explanation of any of these figures as an expert, or give his opinion with respect to the figures, that is agreeable; but if he merely reads what is on the document, it is not good evidence. It is secondary. And I make that objection to each of the answers from here on, your Honor.

Trial Examiner Sheppard: Well, I am letting him do it because I think from what Mr. Haycraft indicates that he wants to go into it.

Mr. Freeman: It is already in the record, your Honor.

Trial Examiner Sheppard: I mean, some explanation.

Mr. Freeman: If he wants an explanation, then we

2439 do not object to it, but he is not asking for an explanation. He is asking what the figures are.

Mr. Haycraft: You do not know what I am going to ask until I get through.

Trial Examiner Sheppard: Go ahead.

Mr. Freeman: Well, up to now I am making my objection.

A. (Continuing.) There is shown on page 7 of Respondent's Exhibit 170 distribution costs of $3,423,608.10 which were not used in the calculations of price differences in the report.

Mr. Freeman: The same objection.

Trial Examiner Sheppard: All right. Have you got

anything to say in reference to why they were not used or applied?

Mr. Haycraft: He will have when I get through.

Trial Examiner Sheppard: Oh, all right.

Mr. Haycraft: This is all preliminary.

Trial Examiner Sheppard: All right; go ahead.

A. (Continuing.) It shows distribution costs which Respondents used in their cost defense in the amount of $168,024.94, and that item was separated between the quantity price brackets as follows: Discount bracket, $10,902.30; bracket No. 1, $37,708.81; bracket No. 2,
$23,247.15; bracket No. 3, $40,830.72; bracket No. 3A,
2440 $11,322.89; and brackets 4, 4A, and 5 combined,
$44,013.07. Line number 8 shows the ratio of the distribution cost to manufacturing cost of products sold, —that is for the separate price brackets as shown on the exhibit,—and those ratios represent the relationship of the distribution cost to the manufacturing cost. In other words, the manufacturing cost, as shown at the top, was divided into the distribution cost to arrive at those ratios. The ratios are as follows: The Discount bracket—1,760 per cent, that is 176 per cent; bracket No. 1—.958 per cent, that is 95 and 8/10ths per cent; bracket No. 2 is .382 per cent, and that is 38 and 2/10ths per cent; bracket No. 3 is .216 per cent, and that is 21 and 6/10ths per cent; bracket No. 3A is .087 per cent, and that is 8 and 7/10ths per cent.

The last line on the page represents the distribution cost per standard set of oil burners, and those figures were arrived at by relating the ratios just stated to the average production cost of a standard set of oil burners. Those are the figures which I just stated are carried over to column 4 of page 6.

By Mr. Haycraft:

Q. Does the exhibit in itself contain the average production cost of a standard set of controls on an oil burner?

A. It is not shown on the exhibit, no, sir, but that information was made available to us. I believe it
2441 is in the record.

Q. Do you subscribe to the accounting methods employed by Respondent in the preparation of this exhibit, as indicated by the relationship of these two pages and the pages that follow?

A. May I have that question again?
(The question was read by the reporter.)
A. No, sir, not entirely.
Q. What objections do you have?
A. Well, the costs set forth on page 7 have been assigned to price brackets and those price brackets do not, in many instances, follow the quantity brackets. In other words, the costs have ben set up here according to the prices at which the customers paid for the products which they purchased and not according to the quantities that the customers purchased.
Q. What effect, if any, would that have upon a cost study of this kind? What is the meaning of that?
A. Well, the results will mean that the figures as set forth here from the standpoint of quantities are greatly distorted.
Q. Will you explain that?
A. Yes. I might explain that by way of an example, if I may.
Q. Go ahead.
2442 A. If a customer were to purchase 1500 units, for example, which would place him in the No. 2 bracket according to the Respondent's annual unit volume brackets, and for which, according to their price schedule, he should pay $16.45,—well, if that customer were allowed to purchase at the price of $15.90, which would be bracket No. 3, his cost in that instance, according to the way that this cost report has been prepared, would be assigned to bracket No. 3. The quantity limits of bracket No. 3 are 3,000 to 7,499 units. Now that would mean this: that a customer purchasing, for example 1500 units,—it would assume that it cost the same to sell that customer per unit as it would cost to sell the customers who purchase within the quantity limits of the No. 3 bracket. That means 3,000 to 7,499 units instead of the bracket in which it should rightfully fall, which would be bracket No. 2, and the quantity limits set forth for that bracket, according to the Respondent's price schedule, are 1,050 units to 2,999 units. It would be that bracket that the costs of serving that customer should fall, and it would be that bracket that the cost of manufacturing that product that was sold to that particular customer should fall. But if you will refer to the top of page 7, the cost of serving that customer would be in the figure of $188,867.92—I mean the cost of

manufacturing the product that was sold to that cus-
2443 tomer—whereas, according to the quantity limits as established by the company, it should rightfully be added to the $60,831.88 in the report; that is, the manufacturing cost.

Now the cost of serving that same customer would be included in the $40,830.72, whereas it should rightfully be in column 2 and be added to the item of $23,247.15.

Q. Well, how much of this off-scale selling did you find —that is, not in the proper brackets?

A. Based on manufacturing cost, I believe about 43 per cent of the total was sold at off-scale prices.

Trial Examiner Sheppard: What per cent?

The Witness: About 43 per cent, I believe, your Honor.

By Mr. Haycraft:

Q. Well, do you have the actual figures on that? Can you give us the number of accounts and the amount of money involved in the respective brackets?

A. Yes, sir. The figures with respect to the total manufacturing cost of the goods sold at off-scale prices—I don't think I have them added up right here. I have that, I believe, at the hotel. I could bring it up and give you that. But I do have the names of the customers here, as a matter of fact the names of all of the customers, and I have the quantities, the number of units, and the manufacturing cost of the goods sold to each of the customers
2444 who were sold at off-scale prices.

Q. Well, yesterday you heard the testimony of Mr. Reese and that of Mr. Johannsen this morning. Now, taking those accounts, do they correspond to the accounts that you have in mind from your study?

A. Yes, they are the identical accounts.

Q. And taking those accounts then as a basis, will you testify as to the number of accounts in each bracket that are off-scale,—that is, the total amount of such accounts, the brackets into which they should go if they had been properly allocated according to the exhibit, and the resultant changes that would take place in the various cost items of each account?

A. May I have the question again, please?

(The question was read by the reporter.)

A. Yes, I can do that. I might call your attention to this: I cannot tell you what the difference in the distribution cost will be, but I can tell you the difference in the

manufacturing cost and the number of units in each instance.

Q. Why is it that you cannot tell me what the difference would be in the distribution costs?

A. Because that represents just exactly what these accountants have done. They have gone out and have compiled these distribution costs in retrospect. They had
2445 to go back and build them up for 1941. They have had to separate them on the best measuring factors that they were able to get together, and there is no distribution cost set forth as such for any one account; that is, the total distribution cost, as was testified by Mr. Johannsen this morning. You can ear-mark and positively identify a few of the items of distribution costs applicable to a single customer, but you can't do that in the case of all of them and for this reason, among others: For example, some of the costs were separated in whole or in part on the basis, for instance, of numbers of invoices, or numbers of invoice lines, and those would be separated in the total number of lines according to the customers which had fallen in one of these price brackets according to the way that the accountants had separated them, and it would just be an enormous task to take the customers one by one and go back and make the separation. So I can't tell you what the difference in the distribution costs—that is, the total difference will be.

Q. But you can do it as to the manufacturing cost?

A. Yes, sir.

Q. Well, will you proceed to do that, beginning with the accounts that were listed in the Discount bracket by the witness Reese yesterday?

Trial Examiner Sheppard: Mr. Warmack, I want
2446 to get something straight in my mind. Your reference to 43 per cent,—is that 43 per cent of the 88 customers of the Respondent that we have had so much testimony about?

Mr. Haycraft: It has nothing to do with the 88, Mr. Examiner.

The Witness: No, your Honor. If you will refer to page 7 of Respondent's Exhibit 170, in the column headed "Manufacturing Costs Applicable to Products Sold to Oil Burner Manufacturers", and the figure is $1,282,833.84?

Trial Examiner Sheppard: Yes.

The Witness: 43 per cent, or about 43 per cent of that

total cost of production represents the cost of the oil burners which were sold at off-scale prices.

Trial Examiner Sheppard: I see.

Mr. Haycraft: The figure, if I may refresh your recollection, is $563,550.74.

Mr. Freeman: You will have available the work sheets of the Commission in connection with these figures that you are now giving?

Mr. Haycraft: All that he is referring to.

The Witness: Most of those are down at the hotel.

Mr. Freeman: You get them this noon.

The Witness: I can give you those figures, that is the off-scale and selling, if you would like it.

By Mr. Haycraft:

2447 Q. Well, is that the figure of $563,550.74?

A. Yes, sir, that is correct.

Q. All right. Now then, we will go to your study of these accounts. Take the Discount bracket first.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

A. In the Discount bracket we have two accounts that were sold at off-scale prices, or were classified as off-scale, classified in the Discount bracket and the quantities showed that they apparently were sold at off-scale prices. First, we have one account which purchased 1,009 units and another one that purchased 198 units. Of course, the volume limits were from 1 to 149 units so naturally they are off-scale. The two accounts total 1,207 units and the manufacturing costs applicable amounted to $2,639.57.

Mr. Gilpatric: That is for both?

The Witness: Yes, sir. Now, there is shown under the Discount column on Respondent's Exhibit 170, page 7, the manufacturing cost of $6,196.14. When we deduct the cost applicable to these two customers from that, we have remaining $3,556.57 that would be left in that particular column; and that assumes, of course, that there will be nothing coming back, but there is a cost of manufacturing back from other columns, or from other discount brackets.

2448 By Mr. Haycraft:

Q. First, what did you do with this $1,207? What bracket did that go in?

A. It wasn't $1,207. It was 1,207 units.

Q. 1,207 units.

A. And the manufacturing cost of that was $2,639.57, and that should be added to $39,352.41, manufacturing cost applicable to bracket No. 1, in Respondent's Exhibit 170, page 7.

Q. All right, go ahead. Take bracket No. 1 now.

A. Now, in bracket No. 1 we have total number of units, 18,798, and those are applicable to $39,352.41, which is shown as manufacturing cost under bracket No. 1 on page 7 of Respondent's Exhibit 170. Now, I count 30 instances of off-scale selling out of, I believe, 79 customers.

Mr. Gilpatric: What was that, 13 out of—

The Witness: 30 out of 79.

Trial Examiner Sheppard: That is in bracket 1?

The Witness: Yes, sir, that is in bracket 1. Now the total number of units applicable to those was 3,526 units and the total manufacturing cost applicable to those 3,526 units was $8,501.66. Now when that figure is deducted from the figure of $39,352.41, shown in bracket No. 1 on page 7 of Respondent's Exhibit 170, we have the remaining figure applicable to the manufacturing costs of
2449 those customers which were properly classified within the quantity limits. In bracket No. 1 we have a manufacturing cost applicable to that of $30,850.75 instead of $39,352.41.

Trial Examiner Sheppard: A difference of—

The Witness: (Continuing.) Of $8,501.66.

By Mr. Haycraft:

Q. What did you do with this item of $8,501.66?

A. Well, there was 1,072 units of it that was not properly classified. And 1,072 units purchased by one customer, of course, under the company's annual volume price schedule, would rightfully fall within quantity limits applicable to the No. 2 bracket, which has quantity limits of 1,050 units to 2,999 units. The manufacturing cost applicable to the 1,072 units is $2,659.36. That item of cost should be added to the item $60,831.88 of manufacturing cost as shown in the first line of page 7 of Respondent's Exhibit 170. All of the other off-scale selling in the No. 1 bracket represented sales which, under the quantity price schedule of the company, would rightfully fall in the Discount bracket. That was 2,454 units, the cost of which was $5,849.30, and that figure should rightfully be added to the

$6,196.14 item of cost on page 7 of Respondent's Exhibit 170 and representing the manufacturing cost of the Discount customers—that is, manufacturing cost of products sold to the Discount customers.

2450 Q. Now, your total then of off-scale units, is 3,526?

A. That is correct; and deducting those from the total of 18,798 units leaves 15,272 units which were properly classified, and leaves a manufacturing cost of $30,850.75 properly classified.

Q. Instead of what?

A. Instead of $39,352.41 as shown on page 7 of Respondent's Exhibit 170.

Q. All right, proceed now then to bracket No. 2.

A. In bracket No. 2 we have listed 17 customers, of which it appears that 7 were sold at off-scale prices. The total units in this bracket as shown by the working papers of Respondent's accounts was 30,193 and the total manufacturing cost which, of course, is shown at the top of page 7 of Respondent's Exhibit 170, under bracket No. 2, is in the amount of $60,831.88.

Mr. Gilpatric: Mr. Warmack, all the way through here you are excluding mixed manufacturers?

The Witness: Yes, sir, I am not including mixed manufacturers because time wouldn't permit us to go in and get it, and, as a matter of fact, this represents the major part of the business. That is, I could give you the percentages on that if you would like but we didn't go into that particular part of it.

Trial Examiner Sheppard: Mixed manufacturers?

2451 The Witness: Mixed manufacturers.

Trial Examiner Sheppard: What I mentioned yesterday?

The Witness: Yes, sir. I didn't have time to go into that particular phase of it.

Trial Examiner Sheppard: Well, were those few in number in comparison to the other?

The Witness: Well, your Honor, their sales, their cost —I could give you one of them and you could judge it as to the relative relationship.

Trial Examiner Sheppard: All right. I don't want to interrupt the examination here. We will take that up later. I may have some questions on that.

A. (Continuing.) Six of the customers classified in

the No. 2 bracket purchased in quantities which were within the quantity limits applicable to the No. 1 bracket. The total number of units purchased by those customers was 4,720 units, and the total manufacturing cost of those units was $10,204.58. Now, one of the customers in this bracket No. 2 purchased in a quantity limit which would entitle him to the prices applicable to the No. 3 quantity bracket classification, and although it is not in the record, it is my understanding,—I have not actually determined that this is true—

Mr. Haycraft: I object to it then. I don't want
2452 anything to go in here that hasn't been checked by yourself and you know it.

Mr. Freeman: How can you object to it? We have the right to object; you can't object.

Mr. Haycraft: I can if I want to.

Mr. Freeman: You can move that it be stricken as not responsive, but you can't object to his testimony.

Trial Examiner Sheppard: Go ahead.

Mr. Freeman: Certain rules of evidence ought to be followed here, your Honor.

Trial Examiner Sheppard: What is that?

Mr. Freeman: Certain rules of evidence ought to be followed.

Trial Examiner Sheppard: Absolutely; you have a right to object.

Mr. Freeman: But we are not objecting. He can move that it be stricken as not responsive.

Trial Examiner Sheppard: That is correct.

A. (Continuing.) That particular customer who purchased 5,131 units, and which was classified in this No. 2 bracket, should rightfully be placed in the No. 3 bracket. The manufacturing cost applicable to the 5,131 units was $13,020.10. The total manufacturing cost applicable to the off-scale selling in this particular bracket was
$23,224.68, and that applied to 9,851 units. That
2453 figure of $23,224.68, when taken from the manufacturing costs under bracket 2 on page 7 of Respondent's Exhibit 170, of $60,831.88, leaves $37,607.20, and it leaves properly classified 20,342 units instead of 30,193.

By Mr. Haycraft:

Q. Now, what was done with these off-scale—

Trial Examiner Sheppard: Wait a minute; I want to know what was improperly classified?

The Witness: 9,851 units, your Honor, were not properly classified, and according to our figures here $23,224.68 represented the cost—

Trial Examiner Sheppard: All right.

The Witness: (Continuing.)—of those units that were not properly classified and leaving $37,607.20 of those which were properly classified in that bracket.

Trial Examiner Sheppard: No. 3, wasn't it?

The Witness: That was No. 2 bracket.

By Mr. Haycraft:

Q. What was done with the off-scale items? What did you do with those costs, or have you already answered that?

Mr. Gilpatric: He has given us the figures on each, where they belong.

By Mr. Haycraft:

Q. Did you divide it as to how much went into bracket 3 and how much went into bracket 1?

2454 A. Yes, I believe I gave that; I am sure I did.

Q. All right, go ahead.

A. Next we have bracket 3. It appears that there are 27 customers in that bracket, of which 14 purchased in quantity limits which in every instance were lower than the quantity limits applicable to the No. 3 bracket. Two of the customers in this instance purchased 1,837 units, which had a manufacturing cost of $3,343.50. They should be in bracket 1 and that figure should be added to the figure of $39,352.41 under the No. 1 bracket classification of manufacturing cost on page 7 of Respondent's Exhibit 170.

The next item is the customers who should have properly been classified, according to the quantity limits in which they purchased, in the No. 2 bracket. They purchased a total of 23,200 units—

Mr. Freeman: Is that 12 customers?

The Witness: 12 customers, yes, sir. And the manufacturing cost of those units was $42,542.92, which should be added to the item of $60,831.88 of manufacturing cost under bracket No. 2 on page 7 of Respondent's Exhibit 170. All of this off-scale selling—that is, the manufacturing cost of it—in bracket No. 3 amounted to $45,886.42. The total manufacturing cost applicable to the No. 3 bracket is set forth on page 7 of Respondent's Exhibit

170 as $188,867.92. Now, deducting the $45,886.42 from
that figure, we have $142,981.50 of manufacturing
2455 cost which is properly classified, your Honor, according to the Respondent's quantity price brackets and $45,886.42 not properly classified.

Now we go to bracket 3A and there we have 7 customers, of which 5 purchased in quantity limits which were different than the quantity limits applicable to this bracket. The quantity limits for this bracket are 7,500 units to 14,999 units. We have in that 1 customer who purchased 2,031 units, which falls within the quantity limits of the No. 2 bracket. The cost of those 2,031 units was $3,703.42 and, of course, that should go back and be added to the item of $60,831.88 at the top of page 7 of Respondent's Exhibit 170.

Mr. Gilpatric: What is that cost figure again?

The Witness: $3,733.42. We have 3 customers classified in the 3A bracket which purchased in quantity limits that would fall in the No. 3 bracket. They purchased a total of 18,271 units at a manufacturing cost of $31,858.88, and that item of manufacturing cost should be added back to the item of $188,867.92, representing manufacturing costs applicable to the No. 3 bracket on page 7 of Respondent's Exhibit 170.

We have 1 customer in bracket 3A who purchased in quantity limits applicable to the No. 4 bracket, sir. In
other words, he was classified here as having paid a
2456 price higher than what he would have to pay, according to the quantity that he purchased.

Trial Examiner Sheppard: In other words, he paid a price 4 bracket when he ought to have paid a price 3A?

Mr. Hayeraft: Just the other way around; he paid a 3A price when he should have been allowed the 4.

Trial Examiner Sheppard: I see.

Mr. Gilpatric: You understand, Mr. Examiner, that all of this "properly" and "should have been" business is definitely disputed by the Respondent?

Trial Examiner Sheppard: Oh, yes.

The Witness: (Continuing.) That represented 18,056 units and the manufacturing cost of the same was $28,716.62, which should have been added to the item of $857,852.56 on page 7 of Respondent's cost report that was classified, your Honor, in the limits applicable to the proper quantity price bracket.

Now, the total cost of the off-scale selling in this bracket

is $64,308.92. That is the manufacturing cost. That figure, when deducted from the figure of $129,732.93, representing the manufacturing cost of the 3A bracket, as set forth in Respondent's Exhibit 170, page 7, leaves a balance of $65,424.01 of manufacturing cost applicable to the units and the customers' purchases which were properly classified within the quantity limits of the Re-
2457 spondent—that is, the quantity limits of this bracket 3A.

Next is bracket No. 4. There we have 10 customers, 10 customers in bracket No. 4, not a single one of which were classified in the proper quantity brackets. That is, not a one of the customers purchased within the quantity limits as set forth by Respondent, in Respondent's price schedule applicable to bracket No. 4.

Trial Examiner Sheppard: Have you got the number of those customers there in bracket No. 4?

The Witness: Yes, sir. I was going to tell you now where they should go, or where they would have been properly classified, sir.

Trial Examiner Sheppard: Go ahead.

The Witness: One of the customers should have been classified, according to the quantity limits, in bracket 2. He purchased 1,267 units and the manufacturing cost of those units was $2,288.16. That figure should be added to $60,831.88, which represents the manufacturing cost as set forth on page 7 of Respondent's Exhibit 170 for the bracket 2 customer classification.

They have two customers who purchased in bracket No. 4 whose purchases fell within the quantify limits applicable to bracket No. 3. They purchased a total number of 10,814 units, with a manufacturing cost of
2458 $19,709.90, and that figure should be added to the figure of $188,867.92, the manufacturing cost for bracket 3 customers on page 7 of Respondent's Exhibit 170.

They have 6 customers—

Trial Examiner Sheppard: Have you got there how much of that was properly allocated?

The Witness: I will have to give it to you in total, your Honor.

They have 6 customers who purchased at prices applicable to bracket No. 4 and whose purchases fell within the quantity limits applicable to bracket No. 3A. The total purchases amounted to 62,592 units and the manufac-

turing cost of which was $102,166.23, which should be added to the figure of $129,732.93. That is the manufacturing cost applicable to bracket No. 3A, page 7, of Respondent's cost report.

We have 1 customer here who purchased in quantity limits applicable to bracket No. 4A. He was classified in Respondent's cost report—

Mr. Gilpatric: You have already counted 1¢ out of 10. Is this 11?

The Witness: I beg your pardon?

Mr. Gilpatric: You have given us 1 that belongs in 2, 3 that belong in 3, and 6 that belong in 3A, which accounts for all 10 in this bracket.

2459 The Witness: I gave you 1 who purchased in the 2 bracket, 2 who purchased in—

Mr. Freeman: You said 3.

The Witness: I am sorry. I will read it into the record, your Honor, so we will have it straight. One of the customers who purchased at prices applicable to the No. 4 bracket purchased within the quantity limits applicable to the No. 2 bracket, 2 of the customers purchased within the quantity limits applicable to the No. 3 bracket, 6 purchased within the quantity limits applicable to the No. 3A bracket, and 1 purchased within the quantity limits applicable to the 4A bracket. That accounts for the total 10.

Trial Examiner Sheppard: All right.

The Witness: (Continuing.) The total manufacturing cost applicable to the No. 4 bracket was $175,507.59, and that is a portion of $857,852.56, as shown for the 4, 4A, and 5 brackets on Respondent's Exhibit 170, page 7.

By Mr. Haycraft:

Q. Did your last answer refer to 4 or 4A?

A. It referred to No. 4 bracket. I believe I stated that the total manufacturing cost of heat controls sold at the No. 4 price amounted—that is, the manufacturing cost was $175,507.59. The total customers that we have been talking about, purchasing in this bracket, purchased

2460 goods which cost $164,078.28, leaving what would appear to be properly classified a cost of manufacture of $11,429.31. Now, your Honor, that figure would be applicable to mixed manufacturers, which we did not cover here. Whether they are classified right or wrong, I don't know. But we did not cover it and it would appear

that that figure is properly classified. In other words, $164,078.29 is improperly classified and $11,429.31 is properly classified, according to quantity limits.

Trial Examiner Sheppard: All right.

A. (Continuing.) We only have 1 customer in the No. 4A bracket, and that 1 purchased within quantity limits applicable to the No. 3 bracket. The total manufacturing cost for other customers—that would include the mixed manufacturers, or customers who were not wholly engaged in the manufacture of oil burners—amounted to $17,669.31. The manufacturing cost of the products sold by this 1 customer—

By Mr. Haycraft:

Q. You didn't give the quantity.

A. And applicable to 3,339 units. The total manufacturing cost was $6,336.95, which should properly be added to the $188,867.92 of manufacturing cost applicable to bracket No. 3 on page 7 of Respondent's Exhibit 170.

Mr. Gilpatric: What does that leave mixed manufacturers in this class?

2461 The Witness: That leaves a figure of $11,332.36, and it appears, for your units, that a total of 8,674 units were sold in this bracket; and that left 5,335 which apparently were properly classified, or at least we didn't look into them.

Now in the No. 5 bracket, it appears here that we have 11 customers. Out of the 11, 3 purchased within quantity limits applicable to the No. 5 bracket classification—that is, 30,000 units or over. We have 1 which purchased within quantity limits applicable to the No. 3 bracket classification. That was 6,992 units, at a manufacturing cost of $13,649.30. That item should properly be added to the figure of $188,867.92 applicable to the No. 3 bracket on page 7 of Respondent's Exhibit 170. We have 2 customers who purchased at prices applicable to the No. 5 bracket but who purchased within quantity limits applicable to the No. 3A bracket. The total purchases amounted to 25,602 units, and the manufacturing cost of which was $53,391.85. That figure should properly be added to the item of $129,732.93, representing the manufacturing cost applicable to the 3A bracket on page 7 of Respondent's Exhibit 170.

We have 3 customers who paid the No. 5 bracket price who purchased in quantity limits applicable to the No. 4

bracket. Their total purchases were 55,675 units and
2462 the manufacturing cost was $99,257.06. That figure, of course, is included in 4, 4A, and 5.

Mr. Freeman: It stays where it is at now in the report?

The Witness: Yes; if there was a breakdown between 4, 4A, and 5, it should move back and properly be added to the amount applicable to the No. 4 bracket, which is shown as $175,507.59.

There are 2 customers who paid a price applicable to the No. 5 bracket but who purchased within quantity limits which fell within the 4A bracket. The total units amounted to 52,095, and the manufacturing cost amounted to $82,276.05. Of course, that cost figure is included in the combined cost figure of $857,852.56 on page 7 of Respondent's Exhibit 170. If that were broken down, it should properly be added to the cost figure developed by Respondent's accountants applicable to the 4A bracket, the manufacturing cost figure of $17,669.31. In this bracket No. 5 we have a total manufacturing cost of $664,675.66—

Mr. Gilpatric: Does that include mixed manufacturers?

The Witness: Yes, sir. I had to take the total figure in each instance, and the total units amounted to 356,492. We find that 140,305 of those units were misclassified, according to the quantity brackets, leaving 216,187 units
2463 properly classified. And, of course, that assumes, your Honor, that the mixed manufacturers were properly classified that I didn't go into, and it means that $248,574.26 was not applicable to bracket No. 5 from the standpoint of quantity limits. This left $416,101.40 of manufacturing cost which was applicable to bracket No. 5.

Trial Examiner Sheppard: All right.

The Witness: Now, I have not given you what the adjustments to the brackets would be from the standpoint of numbers of units and what these figures here would be carrying them out to 4, 4A, and 5 after giving effect to all these changes. If you desire that, I will be glad to give it to you.

By Mr. Haycraft:

Q. What is that—4, 4A, and 5, you say?

A. 4, 4A, and 5. I have carried them out to show each one separately.

Q. Can you give us the total?

A. I can give you what the total should be, or I can give you the breakdown of this, or both.

Q. What do you mean "both"?

A. Do you want the proper total for all of them?

Q. Yes, I want the proper total for all of them.

Mr. Gilpatric: This is manufacturing cost or units?

2464 The Witness: I will give you both.

By Mr. Haycraft:

Q. Manufacturing cost and units.

A. Discount bracket,—the proper number of units classified according to quantity limits would be 3,750 units, with a manufacturing cost of $9,398.87. Bracket No. 1,—the total number of units would be 23,036 and the total manufacturing cost would be $47,038.40. Of course, that $47,038.40 in this instance is comparable to $39,352.41 on the report. Bracket No. 2 would be 47,912 units. That is compared with 30,193 which are applicable to the figures shown in the report. The manufacturing cost would be $88,831.06 as compared with the manufacturing cost of $60,831.88. Bracket No. 3 would be 117,694 units and not 98,184 units. The manufacturing cost would be $227,556.63 and not $188,867.92 as shown by the cost report. Bracket No. 3A would be 120,284 units and not 70,445 units, and the manufacturing cost applicable to 3A would be $220,982.09 and not $129,732.93.

Now the next three figures are totaled in the report. I will give you the figures which should add to that total. For bracket No. 4 it is $175,507.59; for bracket 4A it is $17,669.31; and for bracket No. 5 it is $664,675.66. And those three figures should total to $857,852.56.

Q. Now then, what were your figures—what should they be?

2465 A. The manufacturing cost applicable to the quantity limits in bracket No. 4—that is, if the quantity limits to customers were properly allocated—would be $139,402.99 and not $175,507.59.

Mr. Freeman: He doesn't have to put this argument in. The question was, what should the figures be?—and he makes comparisons and argues these figures, and that is why we are having trouble in following what his figures are.

Trial Examiner Sheppard: Well, I didn't know that it was argument.

Mr. Freeman: Well, when he says they are and they

should be, the whole thing is argument. The question was directed to, What should the amount be?—and it is confusing—

Trial Examiner Sheppard: That is what I thought he gave us. The amount should be what he just said.

Mr. Freeman: And then he turns around and says it shouldn't have been the figure that he gave us before.

Trial Examiner Sheppard: That is a comparison, Mr. Freeman,—it should be this and not that. I will let that stay in just as it is. It is a comparison.

The Witness: I was just trying to do that for your benefit, your Honor, when you read this record in the end; that was the only purpose. I am not arguing.

Trial Examiner Sheppard: All right.

2466 By Mr. Haycraft:

Q. Go ahead.

A. The units applicable to bracket No. 4 are 79,451 as compared with the units allocated to that bracket by Respondent's accountants of 103,194.

Mr. Freeman: Now will you repeat those numbers so we can follow it?

The Witness: 79,451 and 103,194.

By Mr. Haycraft:

Q. What about the factory cost?

A. I have given that before. In bracket 4A the manufacturing cost should be $133,522.40 instead of $17,669.31. The number of units should be 80,169 and not 8,674. In bracket No. 5 the manufacturing cost is $416,101.40 and not $664,675.66. The number of units are 216,187 and not 356,492.

Trial Examiner Sheppard: That was 5?

The Witness: That is bracket 5.

By Mr. Haycraft:

Q. Now the combined 4, 4A, and 5?

A. The total for those would be $689,026.79—that is the total manufacturing cost—and not $857,825.56 shown on page 7 of Respondent's Exhibit 170.

Q. Now I believe you stated that you could not make a similar reallocation of the costs to the distribution

2467 costs set forth on page 7 of the exhibit, is that correct?

A. That is correct, sir.

Q. I will ask you whether or not the changes indicated in the manufacturing cost would have any effect upon the distribution cost?

A. Yes, sir, they certainly would.

Q. What, as an accountant, would you say that effect would be primarily?

A. Well, it would have the effect of changing the cost per unit, as set forth in the last line of page 7 of Respondent's Exhibit 170. The extent of the change I could not say.

Q. Would it have any effect upon the ratio figures that you gave in your testimony a while ago—that is, 1.760, and .958, and .382, and .216, and .087?

A. Yes, sir, those figures would be changed.

Q. Then would there necessarily be a change in the resultant figures at the bottom of the exhibit—$9.40, $5.12, $2.04, $1.15, and $.46?

A. Yes, sir, they would be changed.

Q. Can you tell what the nature of those changes would be without making a recast of the report?

A. No, sir.

Q. In your study of Respondent's cost exhibit 170 and the underlying records which support that exhibit,
2468 do you have any other objections to the way in which the exhibit was prepared?

A. Well, the principal objection, of course, is the one just stated. That is, the costs were assigned to the quantity price brackets not on the basis of the quantity limits within which customers purchased but on the basis of prices, and that objection was because of the fact that there was extensive off-scale selling. In order to answer your question, it would be necessary to state generally the methods employed in the separation of costs by Respondent's accountants. The costs were separated largely on the following bases: The number of sales invoices and credit memorandums; the number of billing lines: the number of invoice lines; the number of salesmen's calls—and those calls were weighted to give effect to the estimated time spent in making calls on separate classes of customers but particularly on the contract customers; and other statistical information was gathered from the files which were used to some extent to separate the separate costs.

I understand that Respondent is not manufacturing and is not merchandising its regular line of products at the

present time as it would under normal peace-time conditions. This means that the Respondent's accountants could not inaugurate a study when they started this thing of the time and effort expended by individuals engaged in
2469 the normal selling activities in order to develop the most accurate measuring factors for the separation of these distribution costs which were used in the company's cost report. Therefore, they had to develop measuring factors as stated above.

Mr. Freeman: Was that your second objection?

The Witness: I will have to state, Mr. Freeman, what was done in order to talk about it, if I may.

By Mr. Haycraft:

Q. Go ahead.

A. Respondent, as I understand it, had never made time studies during prior years when they were operating normally to develop what I would consider to be the most accurate measuring factors which could be used in the separation of distribution costs. That is, based, as far as it could be based, on effort expended. I feel that Respondent's accountants made an honest and diligent effort to analyze their distribution costs and I think that they probably established the best measuring factors possible for use in the separation of costs under the existing circumstances. That is, they had a job here that they had to do in retrospect. I have always contended in previous cases before the Commission that nothing short of time studies of selling activities and related activities should be considered as proper support for measuring factors to be used in separating those costs which are closely related to effort expended by the separate employees.

2470 Now, as I stated, my principal objection is the classifying of the costs according to the prices in view of the fact that there was extensive off-scale selling.

The next thing that is questionable, of course, is the measuring factors, or at least some of the measuring factors used for the separation of the costs by Respondent's accountants. The correctness of some of the measuring factors is questionable and this is in view of the fact that the company did not avail itself of past opportunities, as I just stated, during years of normal operations to develop the most accurate measuring factors possible. I feel, however, from a review of the studies and efforts made by Respondent's accountants in their attempt to separate the

costs that they probably did the best job that they could. I rather think that the procedure followed was probably the best that could be followed under existing war-time conditions, except for the fact that I certainly do not subscribe to the separation of costs to the quantity brackets on the basis of prices paid, in view of this off-scale selling.

Now, we have quite a few of the costs which were separated on the basis of estimates. I address myself particularly to home office selling. We have on page 22 of this exhibit, Respondent's Exhibit 170, a list of executives and others in the home office who engaged in
2471 home office selling, and the expenses and costs in connection with the activities of these individuals are separated, I believe, on the basis of estimates made. The best evidence, in my opinion, Mr. Haycraft, would be, of course, to follow some manner of measuring the time and effort expended by these people, and there is always a question in my mind in going back and estimating what time was expended on certain work some year or two years back. I am positive I could not estimate mine with any degree of accuracy.

Q. Would that apply to any other than the home office expense?

A. Well, yes.

Q. How about the branch offices?

A. Well, in the branches I believe the principal cost is the salesmen's salaries and sales manager salaries and expenses, and in that the Respondent's accountants made as thorough a review and study as they could of the salesmen's records. They weighted the salesmen's calls as best they could. There is certainly some estimating that had to go on there and a better job could be done if a study of time and effort were made—that is, the time and effort expended by some of these individuals. In the case of branch offices, I think the accountants did the very best job they could do.

2472 Of course, there are some other expenses other than those, and those are shown on page 34 of Respondent's Exhibit 170. But the principal expenses used in the cost report here—that is, the expenses incurred at the branches—represented the salesmen's salaries and expenses. I might say that the total of the costs used in the branches was $66,135.88, of which $40,239.28 represented the salesmen's salaries and expenses. That is in-

cluding supervisory salaries. There are some classes of expense there that should be separated, in my opinion, on the basis of some studies of time and effort. For example, office salaries in the branches. Office salaries and other office expenses are shown in the amount of $10,250.08. That was the only portion of that expense that was used in the cost defense.

Mr. Freeman: Over how many branches was that ten thousand dollars distributed, if you happen to know?

The Witness: That is shown here in the report. We had that page yesterday, but I don't remember at this moment. I will try to locate it. (Witness checks report.) That is shown on page 11, and it shows 6 separate branches, I believe.

Mr. Gilpatric: You mean six billing areas, don't you, —not 6 branches?

The Witness: Well, I assume that that is correct, 2473 sir. With respect to that $10,250.08, I think that the accountants employed the best means possible for the separation under existing war-time conditions, and in the case of some of those expenses, why they followed as good as you could use under any conditions.

Does that answer your question, Mr. Haycraft?

Mr. Haycraft: Yes.

Trial Examiner Sheppard: We will adjourn until 2 o'clock, gentlemen. That will give you time to get anything that Mr. Freeman may want.

(Whereupon, at 12:45 p.m., a recess was taken until 2:00 p.m., this day.)

2774 Afternoon session, 2:00 p.m.

Trial Examiner Sheppard: Mr. Reporter, you may convene the hearing, pursuant to our adjournment for lunch.

WILLIAM J. WARMACK resumed the stand and testified further as follows:

Direct Examination (Continued) by Mr. Haycraft.

Q. Mr. Warmack, Mr. McAnly in testifying in this proceeding for the Respondent, at page 2,308 in referring to data on page 12 of Respondent's Exhibit 170, and items on page 22 of the same report, made this statement—that is, I was calling his attention on cross-examination to the statement in the exhibit at page 12 and also the tabulation on page 22. The statement to which I called attention was: "In this report we have utilized only those items affecting distribution cost differentials which were readily allocated to the respective quantity brackets." I directed his attention to the items on page 22 of the report and asked him whether the figures on that page came within that definition of readily allocable, and he said they did. He admitted, however, that they were based upon opinion but stated that they were a direct selling cost. He said the only cases where opinion enters into it is in the
2475 division between oil burner and other manufacturers.

Do you agree with Mr. McAnly's opinion, as expressed in pages 2308 and 2309?

Trial Examiner Sheppard: May I have just the last part of that read?

(The last portion of the question was read.)

A. Well, Mr. McAnly's opinion as set forth on page 2309 seems to cover the situation that you referred to I believe a little better than over on page 2308.

By Mr. Haycraft:

Q. Well, you read what you refer to and then give your opinion.

Trial Examiner Sheppard: Take your time and read it, Mr. Warmack. We want to give you all the time you need.

The Witness: Your Honor, I think that it would be well to read a part of this right into the record so that I might give my opinion with respect to it, if I may be allowed to do that, sir. Mr. McAnly and Mr. Haycraft were speaking with respect to tests and with respect to items of cost which were readily allocable to the quantity price brackets, and Mr. McAnly stated in part: "I contend that the test that was used as determined by the total volume makes it a pretty reasonable allocation." He was addressing himself directly to the separation of costs as set forth by the percentages as shown on
2476 page 22 of Respondent's Exhibit 170. Mr. Haycraft asked, "Question: You would not contend for a moment, though, that it is accurate when it is not based on time records, would you, as an accountant?" And Mr. McAnly answered: "I can point out to you many cases where time records are not necessarily accurate either. In other words, because there is a time record supporting something does not make it accurate. My opinion is that an individual that is an executive can give you a better idea of how his effort is devoted than anything he could put down in the form of a time record. In fact, in cost accounting today we have very little use for so-called actual time records. We work on what is called the required time as determined scientifically. If they take more time than that, we do not call that cost to the item. It is a cost that is thrown out."

Mr. Haycraft asked: "Is that the policy you followed in preparing this report?" Mr. McAnly stated: "In preparing the report as applied to the basis of allocation where it is used."

There is one point there that I don't exactly know what Mr. McAnly meant when he stated, and I quote: "We work on what is called the required time as determined scientifically." Well, we would have to know just what was meant by that. His statement, "My opinion is that an individual that is an executive can give
2477 you a much better idea of how his effort is devoted than anything he could put down in the form of a time record."—I do not subscribe to that. I rather think that accurate, or reasonably accurate time records could be kept by any individual if he desired to keep his time records. As to whether or not an estimate is more accurate than that is anybody's guess, your Honor. Mr. McAnly stated: "I can point out to you many cases

where time records are not necessarily accurate either." Well, they are not pointed out. Of course, I couldn't question that.

He states, "In other words, because there is a time record supporting something does not make it accurate." Well, it may not make it accurate,—I mean, right to the most exact thing,—but I think it does make it more exact and more accurate than an estimate could make it.

Does that answer your question, Mr. Haycraft?

By Mr. Haycraft:

Q. Well, would that be true particularly where the estimate was made three years after the performance of the duties took place?

A. Well, I don't see how it could be as accurate as it could have been if records had been kept of the time and effort expended at the time that it was expended. I feel that the Respondent has made every possible test and check in retrospect to determine that the esti-
2478 mates as set forth on page 22 of Respondent's Exhibit 170 were or may have been fairly reasonable, although we have no time records to show that they were accurate or inaccurate. I think that the accountants have done everything possible within reason to determine the reasonableness of those estimates.

Q. I think that has to do with the office expenses, doesn't it,—on page 22 was that?

A. On page 22 is a part of the home office selling expenses, and it represents the compensation and expenses of the individuals listed on that page. That is officers and others working out of the home office.

Q. Do you have any criticism of the report other than you have already expressed, Mr. Warmack?

A. Well, we have over on page 62 a similar situation which has to do with what you might call similar classes of expense, maybe slightly or somewhat removed from those expenses we have been talking about. Over on page 62 and carrying forward for a page or two there, we have officers' salaries, and a part of those salaries have been apportioned to that group of costs which was applied to the oil burner manufacturers and then separated over to the quantity price brackets. That is shown in detail on page 61; the portion that was assigned to oil burner manufacturer business and then a separation of that particular portion on to the quantity price brackets,

—that is through the 3A bracket. The costs as-
2479 signed to the 4, 4A, and 5 brackets were lumped.

I might call your attention to the salary and compensation expenses of the vice-president in charge of sales, who it is stated has direct supervision over the entire sales organization, including the home office, branches, and foreign offices. This gentleman estimated his time and that time was then separated between branch offices, foreign offices, heating control sales, refrigeration sales, and air conditioning sales on the basis of the best estimates that this individual could furnish. I might call attention to this also that the accountants I don't think left many things unturned in trying to establish the reasonableness of those percentages as far as they were able to do so, as I say in retrospect, looking back, to a prior year for which the estimates covered. The salary of this individual was then separated between oil burner manufacturer business and other business and, of course, according to the separation just made here on the basis of his estimates. Then that portion which was assigned to the oil burner manufacturers was separated on the basis of the salesmen's calls as they had been weighted, as we talked about previously.

Q. As testified to by Mr. Johannsen and Mr. Reese, is that what you mean?

2480 A. Yes.

There is one other question here. As to some manner of measuring this man's time currently,—inasmuch as that could not possibly be done when this report was prepared and these accountants made this study, why the only thing they could do, Mr. Haycraft, was to get these estimates and then test them the best they could if they were going to use this class of expense. If a study could have been made in prospect rather than in retrospect, it could have more definitely been determined how far removed from the actual activities of the salesmen the functions of this individual would have been. That follows through to a greater or lesser degree, the comment made there, with respect to the other individuals that are named on page 63 of Respondent's exhibit, whose titles are shown on page 63 of Respondent's Exhibit 170.

Q. Now, Mr. Warmack, with respect to the matter of the accounts that you discussed this morning that were off-scale, it was stipulated or understood that with respect

to the Master Oil Burner Company, which was allocated in the Discount bracket and should have been in No. 1, that a refund was made by the manufacturer so that he was—

Mr. Freeman: That is a retroactive credit as distinguished from a refund.

By Mr. Haycraft:

2481 Q. (Continuing.). That a retroactive credit was granted to this customer so that he would be placed in bracket No. 1, and with the Jackson Oil Burner Company the same is true,—both of those being the only concerns that were off-scale in the Discount bracket; that on the Ace Engineering Company, which was in bracket No. 1, a retroactive credit was given, and also the Enterprise Engine & Foundry Company which was in bracket No. 2, the Ray Oil Burner in No. 3A, and the Korth Oil Burner in No. 4. In your opinion, what effect would that have upon the tabulations that you were discussing this morning as set forth on page 7 of the exhibit?

A. Well, it would not change the figures given you this morning; that is, the figures adjusted to the brackets in accordance with the quantities purchased rather than the prices which were charged and which procedure was followed in the preparation of Respondent's Exhibit 170. But it would mean this: It would mean that Master Oil Company was actually sold at prices applicable to the No. 1 bracket; that they purchased in quantities applicable to the No. 1 bracket, within the quantity limits of the No. 1 bracket, but that the cost of serving him was contained in the Discount bracket. And to me that distorts the Discount bracket as well as the No. 1 bracket.

2482 It means that the Jackson Oil Burner was sold in quantity limits of the No. 1 bracket, they were given a price applicable to the No. 2 bracket, but the cost of serving that customer are in the No. 1 bracket and not in the No. 2 bracket. Whatever cost that was serves to overstate the cost applicable to the No. 1 bracket and to understate the cost as shown in the No. 2 bracket.

The Enterprise Engine & Foundry Company was sold at prices applicable to the No. 3 bracket, his purchases were within the quantity limits applicable to the No. 3 bracket, but in Respondent's Exhibit 170 the cost of serving this customer, whatever it is, is in the No. 2 bracket and not in the No. 3 bracket. Those two brackets are distorted by whatever that cost may have been.

The Ray Oil Burner Company was sold at prices in the No. 4 bracket, his purchases were within the quantity limits prescribed for the No. 4 bracket, his costs are in the 3A bracket in Respondent's Exhibit 170, and by whatever the costs were of serving this customer, Ray Oil Burner Company, those two brackets, bracket No. 3A and bracket No. 4, are distorted by whatever that cost is.

The Korth Oil Burner Company purchased in the 4A bracket at prices applicable to the 4A bracket, purchased in quantities prescribed for the 4A bracket. His cost, of course, is as shown in Respondent's Exhibit 170, properly classified inasmuch as the 4, 4A, and 5 brackets were combined. If that were carried out and the costs of those
2483 were separated, his cost under the accountants' study would fall in the 4 bracket and not in the 4A bracket.

Does that answer your question?

Q. I merely want to ask you again as to whether or not you can be sure that it would not distort your last column which contains a combination of the three—4, 4A, and 5? In other words, would not the fact that the 4 and 4A, columns were distorted make a change in your totals?

A. Oh, indeed yes. In the case of the Ray Oil Burner, why that is shown on page 7 of Respondent's Exhibit 170 under the column 3A, and the manufacturing cost, in whatever quantity of oil burners were sold or heat controls were sold to the Ray Oil Burner Company, is shown in the $129,732.93. Whatever that cost is would properly be assignable to the next bracket—that is, added to the $857,852.56, which is the total of the 4, 4A, and 5; and the distribution cost shown on page 7 of Respondent's Exhibit 170 under the 3A bracket is $11,322.89. That figure would be reduced by whatever it cost to serve that customer and whatever that cost is should then properly be added to the next bracket.

Does that answer your question?

Q. Yes. Would the distortions that you have just described so affect this exhibit that it could not be corrected without recasting? I am having particular reference to your distribution costs.

2484 A. Mr. Haycraft, we don't know how much it would affect it because we don't know how much the cost is. We could come to some idea on those by determining what the manufacturing cost was, and that would serve as some criterion on which to maybe form some idea;

but as to what the distribution cost is applicable to all of these, or any one of these, we don't know.

Q. Could that be determined without recasting the entire exhibit?

A. Oh, yes, that could be determined, but it would be a pretty difficult task to determine it.

Q. Why is that true?

A. For the reason that the costs have been separated by Respondent's accountants Ernst & Ernst, certified public accountants, on several different bases. That is, different costs were separated on different bases and sometimes on a combination of bases. I might say, for example, on costs separated on the basis of numbers of invoice lines, you would have to go back and take out the number of lines and determine then what each invoice line cost and then assign that cost, that particular item of cost to the proper bracket. And those things,—I think they run into many, many thousands probably, on several different items, and that is quite an enormous task.

Mr. Haycraft: That is all.

2485 Trial Examiner Sheppard: Cross-examine.

Cross-Examination by Mr. Freeman.

Q. Mr. Warmack, a moment ago you said it was rather difficult to do a job in retrospect that should have been done in prospect. That is correct, is it not?

A. Do you mean that I stated that, or that that statement is correct?

Q. That is the statement that you made and I am now asking you whether you made that statement?

A. I think I made that statement, yes.

Q. Now, what do you mean by "in prospect"?

A. Currently, sir.

Q. Now, you understand that Minneapolis-Honeywell when it enters into its contracts extends to the particular customer a price for the next twelve months, do you not?

A. That is my understanding.

Q. And is that what you call "in prospect"?

A. I did not have any current group of contracts, or any particular contract in mind when I made that statement, and I don't think that one is exactly running along in the same thought or meaning as the other is. We were talking about an accounting study and now you are talking about selling something.

Q. Well, I am asking you whether or not the
2486 particular transaction that was engaged in by Honeywell when it entered into a contract with the customer,—as to whether or not you consider that a transaction in prospect?

A. I have no idea.

Q. Now, turning to page 62 of Respondent's Exhibit 170, I am going to ask you how you would have allocated the vice-president in charge of sales, his time, to the various departments that he served, to-wit: Branch offices, Foreign offices, Heating control sales, Refrigeration sales, and Airconditioning sales?

A. For what purpose, sir?

Q. What?

A. For what purpose, sir?

Q. For the purpose of making the study; or I want your explanation, since you registered some sort of a complaint against the way it was done and you are an expert in this field. All we are asking you now is to tell us what you would have done in allocating the vice-president's time, and I am speaking about the vice-president in charge of sales.

A. Well, before I can answer your question, Mr. Freeman, I would have to have a considerable amount of information with respect to the different and varying functions of this individual much more than is set forth here, or that has been explained to me. I could not answer your question without having full and complete in-
2487 formation with respect to the daily, weekly, monthly, and yearly activities of this individual.

Q. Well then, as a matter of fact, when you criticized page 62 of Respondent's Exhibit 170 as to the allocation of time, you had no personal knowledge as to whether or not the time allocated is correct or otherwise?

A. Not of my own knowledge, no. I do know that it is an estimate made in retrospect, and I do know this, Mr. Freeman, that I could not make an estimate that would be very accurate of my own time for two years ago.

Q. Who would be the best judge of your own time two years ago?

A. I imagine that I would.

Q. And, therefore, the vice-president in charge of sales, with whom Ernst & Ernst consulted, in your opinion was the best judge of his time as to how it was allocated during the year 1941; correct?

A. Yes, sir, I certainly think that is true.

Q. Now in the tabulations that you gave us this morning, in reaching your conclusions as to accounts which you said were off-scale and should have been in other brackets, did you take into consideration orders on hand with shipping instructions for such orders where the orders were received in December and shipped early in January, and applicable to the 1941 contract?

2488 A. I didn't make any tabulation of those.

Q. You do concede, as an accountant, that any orders received during 1941, applicable to the 1941 contract and shipped say in January of 1942, do apply as against the quantity provided for in the 1941 contract or agreement?

A. May I have that question again?

(The question was read.)

Mr. Haycraft: I object to that question, Mr. Examiner, as being outside the record here—

Mr. Freeman: This man is an expert.

Mr. Haycraft: Just a moment, please, until I state my objection. This exhibit that we are talking about,—now, as I understand it, this refers to sales of these products within that year, 1941. Now, I say it is not proper cross-examination to prospect into the deliveries in 1942. That simply is outside of this exhibit and outside of the direct examination.

Trial Examiner Sheppard: I think some of these contracts sort of overlap.

Mr. Haycraft: Yes, but this exhibit doesn't overlap. This exhibit, as I understand it, represents only sales in 1941 regardless of whether it was under contract or what.

Mr. Freeman: Your Honor, in any of these contracts that we gave them a price, if that contract ran into

2489 the following year, we can't be criticized because they took 90 per cent of their contract quantity over a period of 11 months of one year and completed the next 10 per cent of their quantity the following year. They are still entitled to the quantity and they are still entitled to the price which that quantity entitled them to.

Trial Examiner Sheppard: I think so.

Mr. Freeman: And I am merely asking whether, in making his conclusions this morning as to off-scale accounts, he did take into consideration that possibility, and he can say yes or no.

Mr. Haycraft: Well, Mr. Examiner, I make the further objection that whether he took it into consideration would have no bearing whatever upon the exhibit, which does not go into the 1942 transactions. What difference does it make? Furthermore, there is absolutely not one bit of evidence to base the assumption on. There is not a bit of evidence from the testimony of any witness that that fact existed.

Mr. Gilpatric: We are talking about what Mr. Warmack is trying to do to the exhibit here. He is shifting accounts around. Now we are asking him whether he took that into account.

Mr. Haycraft: Even then, Mr. Examiner, they should in the examination of this witness only refer to the
2490 facts developed in this case and which is a matter of record here and could be relied upon.

Mr. Gilpatric: It is in the record in the form of contract exhibits which you put in, Mr. Haycraft.

Mr. Haycraft: But the record doesn't show and there is no testimony in there to support the statement made in the question.

Trial Examiner Sheppard: Well, as I understand Mr. Freeman's question, it could apply to December, 1942 and on over to 1943 just as well.

Mr. Haycraft: What of it? What has that got to do with this exhibit?

Trial Examiner Sheppard: I will let you answer that, Mr. Warmack, on that basis.

The Witness: May I hear the question again and also hear your statement on which basis I am to answer.

(The question was read.)

Trial Examiner Sheppard: Now that can be answered for 1942, December, 1942, and over into 1943 just as well. In other words, it is an overlapping proposition.

The Witness: Well, your Honor, a yes or no answer to that is not a complete answer. I would be happy to explain, if I may.

Trail Examiner Sheppard: That is right.

The Witness: Thank you. I did not determine
2491 what the amounts of those orders were. In the calculations I took the figures that the accountants had and I certainly did not go to the company's records myself to determine what orders were on hand and what orders were not shipped for December, 1941. Neither did I determine or even make any effort to determine what your

overlapping was, or your unshipped orders at the beginning of the year; and if you are going to consider one, you have got to consider both.

By Mr. Freeman:

Q. Well, you considered neither?

A. I took the figures your accountants had and that is all.

Q. Well then, when you put a customer in your so-called off-scale classification, you do not know, as a matter of fact, whether that customer rightfully belonged in your off-scale classification, is that not correct?

A. I could not know of my own knowledge, no. But may I explain that, your Honor?

Trial Examiner Sheppard: Yes, I want you to explain as you go along.

The Witness: We drew this list off,—we notified Mr. Reese and Mr. Johannsen. We asked for a conference with Mr. Lockrae. We were granted the conference with Mr. Lockrae and Mr. Johannsen attended. Mr. Wernicke attended; and Mr. Argus of the Commission's staff
2492 and myself attended that conference. That was a day or two before Thanksgiving, I believe, in 1944 at Mr. Lockrae's office here in Minneapolis. We showed him the list that we had of these customers, and I do not—well, I am positive of the fact that Mr. Lockrae did not point out one single one to us that we asked him, were these sold at off-scale prices? And he did not say that any single one of them that we had on the list were sold at off-scale prices that I remember.

By Mr. Freeman:

Q. In fact, Mr. Lockrae said nothing to you with respect to the accounts that you call now off-scale accounts?

A. Well, he talked all afternoon about them; I rather think he said quite a bit.

Q. But I am asking you, when you made your recast and transferred, as you call it, units and manufacturing costs from one column to another column,—did you in making your transfers, as an accountant, take into consideration any orders received in December and shipped in January of the following year, or did you take into consideration the date of the contract and the date of the termination of the contract in connection with any of your reallocation of costs?

A. I considered those things at some length, yes. I discussed them as I explained just now with Mr.
2493 Lockrae and asked him, "Were they or were they not sold at off-scale prices?"—and he said that they were. So if they were sold at off-scale prices, then I did not examine the contracts as to the dates. I did not examine into when the shipments were made but accepted this as a year's run of business, the figures that the accountants had.

Q. Well now, did you examine any of the contracts as to their date of execution and their date of termination, which contracts are in this record as Exhibit 4, in behalf of the Commission?

A. I have seen some of them.

Q. Well now, obviously if a contract started in May of 1941 and continued for a period of 12 months, when would it expire?

A. Twelve months after it was entered into.

Q. May, 1942, correct?

A. Did you say it was entered into in May, '41?

Q. Yes; in May, '42, correct?

A. '42, yes.

Q. And obviously in the 1941 business it would cover only a period of 8 months; correct?

A. Certainly.

Q. Now, if during that 8 months a customer bought two-thirds of the amount that entitled him into the bracket of his price, according to your figures you would
2494 have had that customer in an off-scale account classification?

A. Not necessarily, no.

Q. Well, isn't that, as a matter of fact, where you put him?

A. I don't understand your question.

Q. Now, even at the sake of repetition, a customer that entered into a contract on May 1st, 1941 had eight months more to go in 1941; correct?

A. Yes, but may I inquire right there—I don't mean to be arguing with you, Mr. Freeman—

Q. I don't mind any argument; you go right ahead.

A. Is this a new customer that you have never sold before?

Q. Yes, just a brand new one.

A. Is it the renewal of a contract?

Q. No, just a brand new customer.

A. I see, thank you.

Mr. Haycraft: I am going to object to any such question unless counsel will name the customer. If there are such customers, let's have them.

Mr. Freeman: You didn't name any of them.

Mr. Haycraft: What good is it going to do to go into the testimony and get the answers if there aren't any customers in that category?

Trial Examiner Sheppard: It would be much more interesting to the Examiner if customers were named,
2495 as we did this morning. We had definite customers.

Mr. Haycraft: Take any one of those that began in May and ran in that category.

Trial Examiner Sheppard: Take some one customer—there are dozens on our list here—to illustrate your point instead of A, B, and C. Off the record.

(Discussion off the record.)

Mr. Freeman: Well, put it on the record now. I am getting tired of this off-the-record stuff as between the Commission's expert and the Examiner.

The Witness: Well, I certainly do not object to having every word I speak put on the record, but I just thought we would shorten it a little.

It was that very thing that I went and presented these names to Mr. Lockrae for, to find out if that thing existed, and he didn't mark a single one.

Mr. Freeman: Was he there as counsel for the Commission, or what was he there for?

The Witness: I was there seeking information, sir.

Mr. Gilpatric: We are trying this case before the Examiner and not while you go around and talk to people on the side. We don't expect to make our explanations to you in private. That is what this court-room is here for.

Trial Examiner Sheppard: Go ahead, gentlemen.
2496 He is ready to answer your question and I am going to let him answer it.

By Mr. Freeman:

Q. Will you just answer my question?

Mr. Haycraft: He has answered it, Mr. Examiner.

Trial Examiner Sheppard: I want real definite accounts, as we had this morning, from both sides.

The Witness: Mr. Examiner, with reference to Mr. Gilpatric's remark, when I made my investigation out here I understood that all records would be made available

to me and every record that I asked for was made available to me. And now am I to understand that I was not supposed to go and talk to Mr. Lockrae to get him to enlighten me on these things?

Mr. Gilpatric: The point of my remark, Mr. Examiner, was this: Mr. Warmack is now trying to use something that Mr. Lockrae may or may not have said as binding on the Respondent in this case. That was never any understanding between us. Whatever Mr. Lockrae may have done in the absence of counsel, or may not have done, is not to be taken as binding on Respondent here. That is all I am saying.

The Witness: I was only seeking information, gentlemen.

By Mr. Freeman:

2497 Q. Mr. Warmack,—perhaps I can shorten it,—you were given every document and work sheet that you asked for by the Respondent and likewise by the accountants for the Respondent, is that not correct?

A. Yes, sir, and I would like to add—

Q. Now, did you ask for any of the contracts as to their date of execution or date of termination when you began making your study, recasting figures that were given to you by Respondent's Exhibit 170?

A. Mr. Argus—

Q. You can just answer that yes or no, whether you asked for them or not.

A. Well, I happened to have a man out here that was working under my direction and supervision, and that is what I was trying to tell you, that he asked for and did review some contracts.

Q. Now these work sheets that you were working from this morning and from which you were testifying, were they made by yourself or by Mr. Argus?

A. They were made by both of us jointly.

Q. They do not show anywhere that consideration was given to contracts that didn't necessarily coincide with the calendar year?

A. There is no such notation on those sheets. That was what I tried to find out, secure information along
2498 that line. There is nothing like that in this Respondent's report, or Respondent's Exhibit 170. Here is exactly what happened, if I may explain: I studied these accountants' working papers as best I could and

Mr. Argus studied them. The Respondent and all of its representatives extended every courtesy that anybody could extend to help us to expedite our review of these papers and the work and data that we were studying—that is, the underlying data of this Respondent's Exhibit 170. When I came across the situation which appeared on its face to represent extensive off-scale selling, I was not sure whether that was true or not. I didn't know and I did want to know. So I asked for a conference with Mr. Lockrae; I was told that he could tell me better than anyone else. In that conference we had these lists, and I asked Mr. Lockrae if any of them there were wrong, and Mr. Lockrae did not mark, or point out, or call attention to a single one, except this is what he did do: He called attention to the fact that although classified in a customers' classification codebook in one bracket, that some particular customers would be given later credits or refunds which would in effect move them to the other bracket. We called his attention to these names. He looked up many of them on records that he had at his disposal right in his desk, and he did not call our attention to a single one that we thought was being sold off-scale, that he
2499 thought we were in error on. That was the information I wanted, Mr. Freeman.

Q. And Mr. Lockrae did tell you where certain customers belonged in other brackets and received retroactive credit. You asked him about that?

A. Oh, we asked him about the whole works, Mr. Freeman, every question.

Q. Now how does it happen with respect to the six accounts which did belong in different brackets and which we have since learned actually did receive retroactive credits, that you did not take that into your calculations when you made your recast?

A. I most surely took it in.

Q. You knew that they belonged in other brackets?

A. That is right where I put them, where they belonged.

Q. But you didn't know whether or not the company actually had received retroactive credits?

A. I couldn't know it of my own knowledge, Mr. Freeman.

Q. I thought that was some of the information you were asking Mr. Lockrae for?

A. Well, I say, he told me but I couldn't know it of my own knowledge. I had it by information, sir.

Q. Well now, this meeting that you had with Mr. Lockrae was several months ago and yet today you had no way of knowing whether or not these six companies had 2500 or had not received proper retroactive credits?

A. I don't know it now; but I certainly do not disparage your statement that they did.

Q. Now as an expert I am going to ask you, when a price is extended to a customer in bracket 3 and that customer has a contract dated as of the first of the year, so we have a calendar year coinciding with the contract year, and at the end of 9 months that customer has taken exactly three-fourths of the controls called for and then that customer goes out of business,—you would consider that customer an off-scale account in accordance with the tabulations you made this morning, is that correct?

Mr. Haycraft: Here again, Mr. Examiner, I object and for the same reason as before. If he has such a customer, name him.

Mr. Freeman: This man is an expert. I am entitled to test his ability to answer.

Mr. Haycraft: Ask him if he put any such in there. That is the way—

Trial Examiner Sheppard: If you have got a real case, Mr. Freeman, I would rather have it; if not, I am going to let Mr. Warmack answer that question for you but I am going to give it the probative value whatever I think it is worth, as it doesn't refer to any definite account.

Mr. Freeman: Well, I am interested in determin-
2501 ing this man's qualifications, because he has stated several times that he was an expert with respect to Section 2(a) of the Robinson-Patman Act and I am trying to find out what it means and get an expert's opinion on it.

Mr. Haycraft: I don't know, Mr. Examiner,—I haven't said anything before, but I do wish to call attention to the fact that Mr. Freeman is the only man who has used that word "expert" with respect to this witness. The witness himself certainly did not and I did not. Now counsel for the Respondent, if he wishes to accept him as an expert—

Mr. Freeman: Well, I thought the qualifications that you gave him certainly put him there.

Mr. Haycraft: If you accept him as such, all right.

Mr. Freeman: Well then we are both agreed, Mr. Haycraft, that he is an expert and we will proceed from there.

Trial Examiner Sheppard: All right, Mr. Warmack, I

am going to let you answer that question for Mr. Freeman.

The Witness: May I have the question read?

(The question was read.)

The Witness: What bracket was that,—you said bracket 3, did you?

By Mr. Freeman:

2502 Q. You can put him in any bracket.

A. If he were in bracket 3 and he had a contract to buy 3,000 units and he purchased 3,000, lacking one-fourth of 3,000, that would drop him down to bracket 2. But if he had a contract to purchase 7,500 and purchased three-fourths, he would still be in bracket 3. It was just that sort of thing that I asked Mr. Lockrae: Did he have any such thing as that, and if he did I wanted to put him in the right bracket. But he didn't mark a single one.

Q. Just a minute. If he had a contract to purchase 7,500, he wouldn't have been in bracket 3A. He would have been in bracket—

A. 7,499, that was the limit.

Q. That is bracket 3?

A. That is bracket 3.

Q. And if he had a contract to purchase 7,500, he would have been in bracket 3A, correct?

A. Yes, just one more unit.

Q. Well now, will you answer my question, taking this nine months' period—

A. What what I do, or what did I do?

Q. What would you do?

A. I would take it out to Mr. Lockrae and ask him, was it right? And if he said "Yes", I would put him where his quantity fell, which I did do.

2503 Q. And even though he bought only three-fourths of the amount?

A. Oh no, oh no.

Q. (Continuing.) You would move him back?

A. If such a case existed, that was the information I was seeking, sir.

Q. Well, what would you have done with that kind of information had such a case existed? Just give us your opinion.

A. I would have let that customer remain in the quantity that he was buying in if the quantity and the price bracket in which he bought coincided according to your

price schedule, in the absence of information which would indicate to me that he should be otherwise classified.

Q. So you concede that there might be occasions where a man didn't reach his bracket—

Mr. Haycraft: I object to that question. He didn't make any such concession at all. That is just why I insisted at the beginning that he give him some concrete illustrations. He used a hypothetical question. Now he says "you concede it might have existed".

Trial Examiner Sheppard: Mr. Freeman understands that all questions that are not actual cases I give probative value to.

Mr. Haycraft: It isn't entitled to probative value; it shouldn't be regarded at all.

2504 Mr. Freeman: I hadn't finished my question—

The Witness: Did I answer your question, Mr. Freeman?

Mr. Freeman: We were interrupted.

The Witness: I beg your pardon.

Mr. Haycraft: I have an objection to the form of the question, Mr. Examiner. Here he asks a hypothetical question and then based upon his answer, he says, "You concede this might have happened", which is an entirely improper deduction from his answer.

Trial Examiner Sheppard: Well, I prefer to have this examination as free from objections as possible, so we can get a connected story on this. So, Mr. Reporter, I think if you will read that question—

Mr. Freeman: No, I am going to ask another because I was interrupted before I had finished my question.

Trial Examiner Sheppard: Go ahead.

By Mr. Freeman:

Q. Now, did you take into consideration any customer where Mr. Lockrae has testified that he extended to that particular customer a price because he had to meet competition?

A. I didn't even consider the competitive angle at all. I was dealing in quantities.

Q. Well now, you understand the other exception, 2(b) of the Robinson-Patman Act, do you not?

2505 A. Well, I would rather that the Act stand for itself.

Q. Well, you understand it, do you not? Do you understand it?

A. I might ask you, do you understand it, sir.

Q. Listen, you just answer my question, do you understand?

Trial Examiner Sheppard: Yes, just answer the question. Don't go into arguments.

Mr. Haycraft: I don't think, Mr. Examiner, that this witness has qualified as a lawyer yet. I object to the form of the question, whether he understands another section of the Act when we are talking about 2(a) in this exhibit.

Mr. Freeman: Now, Mr. Examiner, I am asking him, when he made this reallocation and when he testified this morning that certain customers were off-scale customers,—I am asking him, as a matter of fact, whether or not he took into consideration any of those customers which Mr. Lockrae specifically testified to that he extended certain prices because of competitive conditions. This witness can answer that question with a yes or no answer.

Mr. Haycraft: If you will name the account, he can answer it. I have been trying to get this witness to know what Mr. Lockrae testified to a while back.

By Mr. Freeman:

Q. First I want to know whether you did or did
2506 not take that into consideration?

A. Take what into consideration.

Q. The fact that certain customers received certain prices because of competition?

A. I was told that they did. As far as why they received it, I have no care. That is the company's business. I thought you asked me just now, Did I understand that section of the law?—and I asked you as an attorney if you understood it.

Q. I first asked you whether or not you took that into consideration in making your report, or your recast of figures?

A. I don't understand what you are talking about. If you can tell me what that has to do with accounting, then I will answer any question on accounting you will put to me, or try to. But you are asking me something here that moves away from accounting, and I don't think I have been qualified to answer anything here except accounting questions.

Q. Did you consider Williams Oil-O-Matic as an off-scale account?

A. I do not know.

Q. Well, that is a name or a company that I think you referred to. You have your work sheets with that name on, and I am giving you a specific company.

A. I can find out for you.

2507 Q. Will you take a look?

(Witness checks records.)

A. Williams Oil-O-Matic Corporation was given the price applicable to bracket 5, and the quantities we found in the records appeared to be applicable to quantity bracket No. 4.

Q. Now, answering my question: When you recast Williams Oil-O-Matic from bracket 5 to bracket 4, you did not take into consideration the fact that Honeywell, the Respondent, extended to Williams Oil-O-Matic a price which happens to coincide with the bracket 5 price because of competitive conditions, did you?

Mr. Haycraft: That is objected to as irrelevant and immaterial, Mr. Examiner, and not proper cross-examination, and not a proper question to ask an accountant. As a matter of fact, it assumes testimony which was put in by another witness, which had nothing to do with this particular defense. They are trying to mix potatoes and watermelons here.

Trial Examiner Sheppard: I think you are right, Mr. Haycraft, but I want to give Mr. Freeman some latitude.

If you can answer that, you may do so; if you cannot, you may so state.

The Witness: I don't understand what he is talking about.

Trial Examiner Sheppard: We will take a brief

2508 recess, Mr. Reporter.

(A short recess was had.)

Trial Examiner Sheppard: On the record. You may proceed.

By Mr. Freeman:

Q. Referring now specifically to the Cleveland Steel Products Company, in your recast this morning you put that company in bracket 4, is that not correct?

A. I will look it up. Do you know what bracket it was in before?

Q. Originally it was in bracket 5.

A. That is correct.

Q. And I now ask you whether or not in making your recast you took into consideration that Honeywell, or the

Respondent, extended to the Cleveland Steel Products Company a price better than the bracket 4 price because of competitive conditions?

Mr. Haycraft: I am going to object to that, and so I won't be doing it all the time, to all similar future questions on the ground that it is not proper cross-examination. It takes into account facts which are not within this witness' knowledge and were not a part of the working papers, and should not be taken into consideration. It is irrelevant and immaterial whether he took it into account or not. It has no basis in this study.

2509 Trial Examiner Sheppard: I agree with you, but I am going to—

Mr. Freeman: Your Honor, I think you are wrong, and for this reason—

Trial Examiner Sheppard: I am going to let you answer, if you know, just as I did before.

Mr. Freeman: Your Honor, will you hear me for just a minute? I do not mean to be argumentative or discourteous. We are entitled to know the basis upon which he recast his figures, and all I am asking him is. Did he or did he not take that into consideration? All he has to say is, I did not, and that is the answer. It is proper cross-examination and we are entitled to know what he used as the basis for making his figures. That is all I am asking; I think it is proper.

Mr. Haycraft: No, Mr. Examiner, he is not entitled to ask him whether the moon is made of green cheese, if he took that into account. The point is that he is only entitled to ask in this question facts which were called to the witness' attention during the process of the study, or that he might have found or should have found from the working sheets of the Respondent or its accountants. He is not entitled to go outside of that and see how this man's mind might possibly work under a given set of circumstances, because it does not exist.

2510 Trial Examiner Sheppard: I am going to let you answer, Mr. Warmack. If you know, just tell Mr. Freeman what you know about that.

The Witness: May I inquire, your Honor—you say taking into consideration,—considered with respect to what? I just don't get your question exactly, Mr. Freeman. I am sorry.

By Mr. Freeman:

Q. You disregarded any other conditions other than the fact that in accordance with a particular number of units the Cleveland Steel Company fell into a particular bracket; is that correct?

A. No, sir, that is not correct.

Q. Well then, what did you consider when you moved—in making your recast—Cleveland Steel from bracket 5 to bracket 4?

A. I considered the possibility with respect to that account and all other accounts that there could be certain situations or conditions that would arise whereby the quantity would not be the only guiding factor for making the separation and resetting these costs, the manufacturing costs. The manufacturing costs are the only ones I was able to take off. In view of that I asked the Respondent's representative to tell me just which accounts
2511 should be left as is although the quantities did not measure up to the quantity limits applicable to each bracket. Inasmuch as not any accounts were designated as having certain factors related to them which would enable me to set them in a more proper bracket than the quantity itself would call for, I set them in the brackets according to the quantities. That is what I considered and that is what I did, sir.

Q. Did you recognize that there might be factors other than quantity that would change the bracket situation?

A. Now are you speaking of quantity brackets, or of price brackets, please?

Q. The same bracket that you talked about when you said a moment ago you took into consideration something other than quantity alone.

A. I will try to state that again, your Honor, as to exactly what I did, if counsel doesn't understand, or I would rather that my answer be read to counsel.

Trial Examiner Sheppard: That you didn't take anything into consideration except the quantity?

The Witness: I took into consideration the points that I just enumerated.

By Mr. Freeman:

Q. Well, what were those points that you enumerated?

Trial Examiner Sheppard: I don't remember myself, Mr. Warmack.

2512 Mr. Haycraft: Let the reporter read it. The answer is rather long and I suggest in the interests of brevity—

Trial Examiner Sheppard: We want to get you exactly on the record, and I would like for you to state again for the benefit of all of us what you took into consideration in these matters that you say are off-scale.

The Witness: I will tell you exactly what I did, your Honor.

Trial Examiner Sheppard: That is right.

The Witness: I took off a list as best I could and I tried to take them off as accurately as possible of the numbers of units sold to each customer. If you will remember, when Mr. Reese testified with respect to those things, he would have to refer to a number of pages sometimes. We had to take those and add them up. That is, they sold 400 units on one page to a customer and to the same customer the next page showed 458, and another page showed that—

Trial Examiner Sheppard: You would add all those up?

The Witness: We had to add those up. Now, when we got them added up for everyone of the customers, then we extended those which appeared to be outside of the quantity limits of the quantity bracket in which
2513 they had been placed. They were so numerous I was very uncertain as to whether or not even our figures could be correct, because I couldn't imagine that much off-scale selling, sir.

I contacted Mr. Lockrae, or Mr. Wernicke, or both of them—I think both of them—and I asked for a conference with them. Mr. Argus and I went out. I notified Mr. Reese and Mr. Johannsen and Mr. Johannsen sat in on that conference. I called it to Mr. Lockrae's attention and showed him how extensive it was. I asked Mr. Lockrae if he could tell me in any instance why any single one of the customers should be classified in a quantity bracket other than the bracket where the quantity limit would coincide with the quantities purchased by that customer. For example, if a customer were to enter into a contract, a new customer, in November of 1941 and only purchase a few units during the latter part of the year, it would show on those figures that he prorably should fall in the Discount bracket whereas rightfully he may fall in the No. 3 bracket, or something like that.

Not one of those was pointed out to me. Therefore, I had to drop back and let the quantity follow the quantity limit, and that is what I did do in every instance.

Now, if there is anything that is mysterious about that, I would certainly like to know what it is.

Trial Examiner Sheppard: Well then, I am going
2514 to ask you another question that may clear up a whole lot of talk there and get it straight from the start: When you had that chat with Mr. Lockrae in reference to those specific contracts which you wanted to make inquiry about—

The Witness: I didn't have any particular one in mind, sir.

Trial Examiner Sheppard: Didn't you?

The Witness: No, sir.

Trial Examiner Sheppard: Well, those that you saw were going to result in being off-scale; that is what you were talking to him about?

The Witness: Yes, sir, customer sales.

Trial Examiner Sheppard: Did Mr. Lockrae tell you of any special arrangements in reference to prices to meet competition in that category?

The Witness: Oh, yes, sir. He stated that he had told Mr. Haycraft that there was off-scale selling to meet equally low prices of competitors.

Trial Examiner Sheppard: All right.

By Mr. Freeman:

Q. Now all I want to know is whether, when you made your recast, you did not take those accounts into consideration?

Trial Examiner Sheppard: Now, do you understand that?

Mr. Freeman: You ask it, Major.

2515 Trial Examiner Sheppard: I will just ask that question again so we can have a little picture of the whole situation here. When Mr. Lockrae told you about the matter of the competition and when you then resumed your work on the proposition, did you take that matter of competition into consideration in reference to these firms or corporations here, these manufacturers, that would otherwise be off-scale without the question of competition being involved?

The Witness: Well, the question of competition, your Honor, has nothing to do with an accounting study at

all, and the fact that a customer's purchase will fall within the quantity limits of a bracket and that customer is given a preferred price,—in other words, at a price that doesn't fall there,—I would want to, if I were making a study, know what it cost to serve that customer; and that is the way that I made the segregation to the best that I could.

Trial Examiner Sheppard: I understand you fully and completely. You used the figures involved instead of taking into consideration the matter of competition at all.

The Witness: That is not an accounting question, so I did not try to answer something that was not an accounting question.

Trial Examiner Sheppard: That is right.

By Mr. Freeman:

2516 Q. How would you take into consideration the cost of distribution with respect to the customer that was given a preferred price on account of competition?

A. Will you please explain that? I don't exactly understand your question.

Trial Examiner Sheppard: Just read that to him, Mr. Reporter.

(The question was read.)

A. Will you please explain your question?

By Mr. Freeman:

Q. Well, by way of example and further explanation of my preceding question—

A. Thank you.

Q. (Continuing.)—let's take the Cleveland Steel Products Company, which did receive a preferred price. Where would you put the cost of distribution applicable to Cleveland Steel Products Company—in bracket 5 in accordance with price, or in bracket 4 in accordance with quantity?

A. In making your cost defense?

Q. Yes.

A. I think I would leave it out completely, assign a cost to it and then move it out.

Q. Then it is your position as an accountant that in connection with any costs applicable to particular accounts where those particular accounts received a preferred
2517 price on account of meeting competition, that those costs should actually be removed from any cost study where you try to justify differentials between brackets?

A. In the first place, may I answer and explain—I think this will answer your question.

Q. All right.

A. In the first place, I rather think for the purpose, and only for the purpose of this cost defense, that if it were possible it would be well to remove those costs entirely and show the costs applicable to the serving of those customers where you were trying to prove that the cost differential was equal to the price difference under the due-allowance proviso of Section 2(a) of the Robinson-Patman Act. Now if that is impossible, Mr. Freeman, and sometimes it is—maybe oftentimes it is—or if you were making a similar study to see just what you could do, on the average within certain quantity limits and price brackets, they would have to be left in then. But they would be placed in the group where the quantity applied, not what you paid for them.

For example, in a study of that kind you would want to know how you could set your quantities and how you could set your prices, and by way of further example, on page 6 of Respondent's cost report, we have there the bracket classification in the first column, the quantity 2518 or annual volume in the second column, and the prices in the third column. Now, if you wanted to determine,—if you could justify the $16.45 price against some other price—I look at bracket 2 applicable to quantities of 1,050 to 2,999—in a cost study of that kind, you wouldn't pick up one customer and just say, "well, here is a Discount customer up here that buys 25 sets" and drop him down and put him down in there and say "we are going to justify that." You are justifying by quantities, which is what the due-allowance proviso says, "different quantities".

Q. But you do agree with me, and I think I understand your last answer, that when you make a preferred price in order to meet competition, that you cannot use the figures applicable to that particular account in connection with justifying any differentials as between brackets, based upon quantities?

A. No, I wouldn't say that. I would say you would remove it, if you could. It would be better if you could, but you can't always do it. Accounting is not an exact science, sir, and sometimes why some people think that you just write down a bunch of figures and add them up

and divide by something and you have it, but that is not the answer and that is not it. By way of further example, if you have a customer on which you have made a study

and you determine that you can serve that customer 2519 in a No. 2 bracket who purchases 1500 units and selling for $16.45, and justify that against other prices that you have applicable to other quantities, and then you say because of competition, "I will sell that customer at the 3A price under the classification," which is $15.35, or in other words, give him a $1.10 better price,—well, that doesn't mean now that you are going to drop his quantity down in here and camouflage the whole picture up at all. If you are going to do anything like that, you distort your cost picture. Leave his cost up there; you want to know what it costs to serve him.

Q. Well then, it is your thought where you give someone a preferred price in order to meet competition that you may perhaps put his cost into a particular quantity bracket applicable to the quantity that he purchases, or throw him out altogether with respect to justifying costs under the due-allowance section of the statute?

A. If I understand your question, I think you have stated what I think about it. I would be glad to restate that. I think this, that in the preparation of a cost report to determine that price differentials do not exceed cost differentials, you have got to follow quantities.

Q. But when you sell in order to meet competition, then you do not have to justify the differential?

A. That is for the lawyers to find out amongst 2520 themselves. That is not an accounting question.

Q. Well then, isn't it a fact that when you get into that kind of a situation where you extend a better price, or a preferred price,—I think that is the term you used,—in order to meet competition, then the particular cost applicable to that account should not be taken into consideration or mixed up with other accounts that come properly within proper brackets,—is that not so?

A. If I understand your question, I think that is true. But let me state it and then we will see if I understand it. If a customer is buying within quantity limits applicable to your $16.45 price at we might say 1500 units, and because of some competitive reason you gave him, or because of any reason, or if you were just big-hearted—

Q. Well, let's not be big-hearted; let's just meet competition.

A. $15.35, you gave him that price,—then you couldn't pick his cost up out of the quantity limits applicable to No. 2 and drop him down into 3A. You will distort 3A and you will distort No. 2 also.

Q. Well, if he is left out of both brackets, then clearly there is no distortion of any kind?

A. If you can make the separation, you have done a good job. A lot of times it can't be done, not with any degree of certainty or accuracy.

2521 Q. Well then, you agree with me that in setting any price structure in accordance with brackets, that prices are made in anticipation,—correct?

A. I didn't follow you just exactly; I am sorry.

(The question was read.)

A. In anticipation of what, sir?

Q. In anticipation of the quantities actually purchased by the individual customer?

A. I think we better get Mr. Lockrae to testify on that. He is the sales manager for the company.

Q. Well, you know, as a matter of fact, that customers are extended prices, say on January 1st, which are to be applicable during the year? You know that, do you not, from your own experience and investigations made from time to time?

A. I have known of such things, yes, sir.

Q. Just what do you mean by time and effort studies?

A. Accounting studies to determine the length of time and the amount of effort expended by individuals.

Q. Do you think that any executive in charge of sales could allocate his time down to the minutes, as to which belonged in one classification and which belonged in another classification?—and I am specifically directing your attention to page 62, where the time of the vice-president in charge of sales of Honeywell, the Respondent, was

2522 broken down.

A. It would be a rather difficult task. He could currently keep some kind of records from which later he could establish reasonably some information with respect to cost. That is, if he kept some kind of records currently, then he could do it better than by a couple of years later going back and guessing at it.

Q. Well, doing it in prospect instead of retrospect, what do you say the vice-president in charge of sales should do in order to allocate his time?

A. Have Mr. Reese and Mr. Johannsen work him up some kind of a record for him to keep and let him keep it.

Q. And just what would he allocate his time to when he went out during the day and took a haircut?

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record. Is there a question before us, Mr. Reporter? Just answer, Mr. Warmack,—just give the best answer you can to that and we will go on.

By Mr. Freeman:

Q. I will add to that question:—or if the man was sick for a day?

A. In questions of that kind, Mr. Freeman, you are picking up a drop of water out of the ocean and want to know what we would do with the drop in the event
2523 the tide went in or out. That is about what it might be comparable to. So we would have to have all of the facts coming forth, all of the functions and everything, and then perhaps the questions could be answered. But you can't—

Q. (Interposing.) Well then, in making an allocation in order to determine what price you are going to extend, you have to do that at the close of the year as distinguished from at the outset of the year, is that not so?

A. Have to do what, sir?

Mr. Freeman: Read the question, Mr. Reporter.

(The question was read.)

A. Not necessarily. You would have had to have done that if you were following the due-allowance proviso of Section 2(a) subsequent to June 19, 1936.

By Mr. Freeman:

Q. But you recognize that prices change from time to time and the cost of distribution changes from time to time, and prices are usually made on a yearly basis. Now what I am asking you is, is it your thought that you have to anticipate at the outset of the year how much time the vice-president in charge of sales is going to devote to branch offices, and how much time he is going to devote to heating, refrigeration, and air conditioning, or do you wait until the end of the year when you have records, because all the records in the world made during the
2524 year wouldn't tell you exactly, or even give you a

good guess as to how much time you were going to spend next year.

A. I don't think that question is at all even appropriate here. That is not the way you make time studies, in the first place. It doesn't even follow accounting thought, in the second place, and for many other reasons. Why you would have to come down and make a time survey if you want to determine anything, or develop any information of any value, or of value in the fitting of a situation of this kind. But from an accounting standpoint,—and I did 't say time study meaning that the only thing to study is time,—there are many other things as these gentlemen have studied here. But it has always been my feeling that a study of time and effort expended in selling activities and related activities for the purpose of determining cost differentials which, under the due-allowance proviso, would justify price differentials,—you don't have to make the study for a whole year. You might have to make it for longer,—the kind of industry, the buying habits of your customers, if you are doing seasonal business,—why there are so many factors, Mr. Freeman, that enter into those things until you can't make any answer that is all-inclusive, all exclusive. That is an enormous task in any industry.

Does that answer your question?

Q. Yes, and we agree 100 per cent with you. Now 2525 in these time and effort studies that you are talking about, you agree with me that you have to take into consideration what was done yesterday in order to anticipate what you are going to do tomorrow,—using today and yesterday, or tomorrow and yesterday by way of example?

A. Well, we generally look back and see what the past has produced in order to try to plan our course for the future, if that is what you mean. I mean, that is not necessarily only in accounting and price fixing. It might be in sailing a ship, or an airplane, or in shooting a gun, or most anything.

Q. Now, do you agree with the report of Ernst & Ernst that the over-all differential between the Discount bracket and bracket 5 is more than accounted for under the due-allowance section of the statute?

A. I think you will have to elaborate on your question a little. Do you mean that their figures are mechanically

wrong, or do I subscribe to the accuracy of the figures, or just what do you mean, sir?

Q. Well, the figures that we have here more than justify the differential between the Discount manufacturer and the price extended to a bracket 5 manufacturer?

A. I believe if you will show me that calculation, why I could maybe answer your question.

Q. Will you take a look at Exhibit A, page 6, of
2526 Respondent's Exhibit 170?

A. Yes, sir, I am looking at that.

Q. Do you agree with the statement therein contained, "From the costs which we have been able to allocate, the overall reduction in price between the discount bracket and bracket number 5 is more than justified."?

A. According to their figures, why it would be justified, but I do not subscribe to the figures.

Q. Now, I understand that what you did this morning in recasting figures was merely shuffling from one column or bracket into another bracket, but you didn't change the cost, the overall spread between the discount manufacturer and bracket 5?

A. What do you mean by "overall"?

Q. The difference between the two. You didn't change the over-all cost any? You merely shuffled from one column into another, and all I am asking you now is whether or not the overall—

A. (Interposing.) I don't know what you are talking about, Mr. Freeman; I am sorry.

Q. You say you do not know?

A. No, sir.

Q. Do you know what is meant by the overall reduction in price between a Discount manufacturer and bracket 5?

A. I think so.

2527 Q. Well, do you or do you not know?

A. I can tell you what I think it is and then you may judge.

Q. All right.

A. My understanding of it is that it is the difference between $20.25 and $13.75, or a difference of $6.50.

Q. And in accordance with the distribution cost of Respondent's Exhibit 170, as shown on page 6, the distribution cost is $9.40—

A. Is that a question?

Q. And that is more than the spread or differential be-

tween the Discount manufacturer and the bracket 5 manufacturer?

A. I wonder if you would tell me if you can show me in the report what the cost is applicable to the No. 5 bracket?

Q. Well, according to your recasting, what do you consider the distribution cost applicable to the Discount manufacturer?

A. I do not know. It is based entirely upon the relationship, or based largely upon the relationship of the manufacturing cost to the distribution cost, and as to the mechanics of the way this figure is arrived at, according to the figures that I put in this morning, why the manufacturing costs applicable to the Discount bracket are materially changed.

Trial Examiner Sheppard: Did you make any
2528 change in that figure, Mr. Warmack, of $9.40?

The Witness: I couldn't get that far, Judge. Before you can do that you would have to change all of your distribution cost figures. If I may show you, this $9.40 is here (indicating). You relate this $6,196.14 of manufacturing cost to this $10,902.30 of distribution cost to arrive at 1.760, or it means that this figure is 176 per cent of this figure (indicating). Then you take your average cost per set of controls and multiply it by that factor and arrive at the $9.40. Now, I did show that this figure here should be materially changed, but I did not change this figure here (indicating).

Trial Examiner Sheppard: I see.

By Mr. Freeman:

Q. Well, you took out two accounts from the Discount manufacturers, correct?

A. Yes, sir, and put them in No. 1 bracket.

Q. And you don't know, do you, whether that change would make the distribution cost reach a figure less than $6.45, which is the difference between the Discount manufacturer and the bracket 5 price, do you?

Mr. Haycraft: I object to the form of that question, because it does not include the witness' testimony this morning. He not only took out those two, but he put a lot more in, so the whole thing has been juggled up.

2529 Trial Examiner Sheppard: You said $6.40. You meant $9.40, didn't you?

Mr. Freeman: $9.40 is the distribution cost, your Hon-

or, and $6.45 is the difference that we passed on to customers.

Trial Examiner Sheppard: I see.

Mr. Freeman: And I am asking him whether these changes that he made would have reduced the $9.40 down to $6.45.

Mr. Haycraft: But he didn't give him all the changes, that is the point. He only gave part of it, and I object to the form of the question.

Mr. Freeman: I will ask another question.

By Mr. Freeman:

Q. With all the changes that you have made, would it reduce the distribution cost from $9.40 to a figure below $6.45?

A. I certainly do not know.

Trial Examiner Sheppard: We will take a five minute recess.

(A short recess was had.)

Trial Examiner Sheppard: On the record. You may proceed.

By Mr. Freeman:

Q. Mr. Warmack, if Ernst & Ernst had omitted 2530 from its report all costs applicable to what you call off-scale accounts, would the resulting study and report, as made by Ernst & Ernst, accord with proper cost accounting principles what would, in your opinion, comply with the due-allowance proviso of Section 2(a)?

A. That is, of course, a question for the Commission to decide. It has always been my opinion, feeling in these things, that nothing short of time studies of selling activities and related activities should be considered as proper support for measuring factors to be used in separating those costs which are closely related to the effort expended by the separate employees. I will state this, however, inasmuch as that could not be done, that the accountants, Mr. Reese and Mr. Johannsen of the Ernst & Ernst firm of certified public accountants, made an honest and diligent effort to analyze the distribution costs of the Respondent and they probably established the best measuring factors possible for use in the separation of those costs under existing war-time circumstances. That was necessary in view of the fact that the Respondent did not avail itself during prior years when they were operating

normally of the opportunity to develop what I would consider to be the most accurate measuring factors which could be used in the separation of distribution costs.

Does that answer your question?

2531 Q. Well, I think it does. I am just trying to get this straight, Mr. Warmack: Your objection to this report, aside from the fact that it was made in retrospect instead of in prospect, without time studies, over and above such objection or criticism of the report,—the other criticism is directed to the fact that there are off-scale accounts which have been put into brackets where they did not belong?

A. That is my principal objection, sir, that latter.

Mr. Freeman: That is all.

Trial Examiner Sheppard: Redirect.

Redirect Examination by Mr. Haycraft.

Q. Let me ask you whether or not in your opinion the removal of those off-scale accounts that were, according to the testimony of Mr. Lockrae, to meet competition, whether that could be made without distorting the remainder of the exhibit,—that is, the remainder of the cost study as to the other accounts?

A. If I follow you, Mr. Haycraft, you want to know if you could take out the cost applicable to the off-scale selling and then set up the remaining costs in the same form as they are set up here; and in that event they would, of course, follow directly the respective quantity price brackets, is that correct?

Q. That is right.

2532 A. I feel that probably that could be done. I believe that Mr. Johannsen could tell us more about the difficulty that would be experienced in such an endeavor than I could. If you wouldn't mind, I would be happy to have his expression on that from a professional standpoint.

Q. Well, could it be done without recasting the whole report with respect to the costs of distribution items that are in there?

A. No, sir, I think you would have to have a new report entirely. It might be possible that you could go through and just throw those out and then leave the rest as is, but that would be an extremely difficult problem. It would

virtually go to the point of recasting the report, in my opinion. As I stated, I would like to hear Mr. Johannsen on that from a professional standpoint, or Mr. Reese, or both of them.

Q. What, if any effect, or what consideration should be given to those accounts in your opinion where the retroactive credit memorandum had been given?

A. Well, the costs should be placed in the proper quantity price bracket and removed from the bracket in which they appear at present.

Q. Well now, with respect to page 6 of Exhibit 170 and your questions with respect to that $9.40 item there which is compared to a difference of about six dollars and
2533 something,—that is the difference as between $20.25 and $13.75,—you were asked on cross-examination whether or not the changes that you would make in the exhibit would change the $9.40 sufficiently to wipe out or to overcome the difference between that and the six dollars?

A. Yes, sir.

Q. You said in your answer that you did not know. Now I am asking you why you made that answer? What is the reason for making that answer?

A. The reason is this, Mr. Haycraft: If these costs, as set forth on page 7 of Respondent's Exhibit 170, were reset, which would mean that the cost report would have to be recast, we know now what the manufacturing cost would be, or about what it would be,—I think the figures I put in this morning were correct and accurate, reasonably so,—but I have no idea what the changes would be in the distribution costs; that is, those costs that would be assigned to the separate quantity price brackets if they were reset in accordance with what I advocate here. Therefore, I couldn't possibly tell what the resulting costs would be per set, per bracket. No one could tell that unless those distribution costs were actually reset and then we would know just what they would show and not until then.

Q. Now, Mr. Warmack, when you discussed this matter of off-scale prices, off-scale selling, and the different
2534 concerns that you found were outside of the brackets that they had been allocated to in this cost study; and talked this matter over with Mr. Lockrae, did he indicate to you at that time that all of these concerns were sold at off-scale because of competitive conditions or com-

petitive demands, or did he just simply say that some of them were, or what explanation did he give of the off-scale selling?

A. Well, he indicated to me that off-scale selling, and I took it from what he said, that he meant that all off-scale selling was done because of competitive situations. That was what I took from his conversation. I don't remember that I asked him that positive question. What I was mostly interested in, if I may go a little further there, was to know if there were any of those customers that I had listed as being sold at off-scale prices that in fact were not being sold at off-scale prices. There were so many of them until I was quite concerned about it, and we went down the lists. I do remember that he stated that one customer should not have been in that at all. I don't remember and I am sure that Mr. Lockrae did not mark any one customer that I should leave in a bracket inasmuch as the quantity of that customer did not measure within the quantity limits prescribed for that quantity bracket. That was what I was interested in particularly. And another thing which was discussed at that meeting was
2535 whether or not I was asking the company to recast the report. I had no right to do that and I did not do that. I only pointed out, and did that very freely with Mr. Wernicke, Mr. Lockrae, Mr. Huff was in there—at least for a while, Mr. Johannsen was there, Mr. Argus of our staff and myself were there, and I don't recall any others at the moment who attended; but as a result of that discussion I was under the impression that the company wanted to have the accountants recast the report, and Mr. Lockrae was to discuss that with Mr. Freeman in Chicago the following day. That was the intention at the moment and that was the occasion for my calling you over the phone about the situation. I went to Mr. Lockrae to find out if I was right myself or if I was wrong. I only wanted to get the right answer, if I could to this situation.

Q. Now, Mr. Warmack, in your experience of making studies of this kind, would it be, in your opinion, a complete study to make a selection of a number of the accounts, make a study on that basis and leave out others for the alleged reason that they were put in different brackets because of competitive conditions?

A. Mr. Haycraft, that would be a pretty difficult question to answer without being confronted with all of the

factors and situations involved and seeing them written down on paper, and then you could evaluate the situation, and I don't hardly believe you could before-hand.

2536 Mr. Haycraft: That is all.

Trial Examiner Sheppard: Is there anything else, Mr. Freeman?

Mr. Freeman: No.

Trial Examiner Sheppard: Mr. Warmack, in your study of the study compiled by the Ernst & Ernst people, referred to in this case as Respondent's Exhibit 170, were there any elements that entered into the study of the business of Respondent made by those gentlemen that you didn't consider?

The Witness: No, sir, I don't think so. There may have been some little trivial account that amounted to nothing that I didn't study, or didn't look into thoroughly.

Trial Examiner Sheppard: Second, their study resulted in that $9.40 that we have been talking about here—

The Witness: That $9.40 is the cost per set of controls, the distribution cost per set of oil burners sold to discount customers,—in the discount bracket, I mean.

Trial Examiner Sheppard: Now, did your study, or would your study change that figure at all one way or the other?

The Witness: Yes, sir.

Trial Examiner Sheppard: Would it change it materially?

2537 The Witness: I couldn't tell you that, your Honor, for the reason that the only thing that I was able to do was to determine that the manufacturing cost, as set forth at the top of page 7, Respondent's Exhibit 170, for each of the separate brackets would be materially changed. If we were to use those, which would be the wrong thing to do, and relate them to the distribution costs as set forth here, those figures—and $9.40 would be one of them—would be materially changed. But before we could get a correct answer, the distribution costs would have to be reset in the manner that I outlined for the manufacturing cost, because one relates closely to the other inasmuch as the way the accountants have arrived at these distribution costs per unit is by relating the total manufacturing cost in a given bracket to the total distribution costs in the same bracket, to arrive at a ratio or a factor

which, when multiplied by a standard set of controls, gives the distribution cost per standard set of controls.

Trial Examiner Sheppard: All right. Is there anything else?

By Mr. Haycraft:

Q. And when you say a standard set, you mean the cost of a standard set?

A. The manufacturing cost of a standard set.

Q. I understood you to say a moment ago, and I
2538 want you to check me if I am wrong, that taking into consideration the changes you have made in the discount figure, when applied to the distribution figures as they now stand, there would be a substantial change in your $9.40?

A. Oh, yes.

Q. In other words, if you didn't make any change in the distribution costs.

Trial Examiner Sheppard: Did you say it would be material?

The Witness: I can tell you in a minute exactly what it would be, if you would like.

Trial Examiner Sheppard: I would like to know.

Mr. Gilpatric: Except that he said it would be wrong to do it that way.

The Witness: Yes, sir, it would.

Trial Examiner Sheppard: Well then I don't want it.

Mr. Haycraft: The reason it would be wrong, if your Honor please, is that you can't make the comparable readjustment in your distribution costs that he has made in his manufacturing costs. He doesn't know. We just haven't any way of knowing, and your guess or anybody's guess is as good as another one.

The Witness: I could give you exactly what it would be in the way it is set, but that would be conjecture
2539 as to whether it would be right or wrong. I rather think it would be wrong.

Trial Examiner Sheppard: All right, is there anything else, Mr. Haycraft, that you have on rebuttal?

Mr. Haycraft: No.

Trial Examiner Sheppard: Is there anything else you gentlemen have?

Mr. Haycraft: I have a motion to strike the exhibit.

Trial Examiner Sheppard: Which exhibit?

Mr. Haycraft: 170.

Trial Examiner Sheppard: You haven't made it.

Mr. Haycraft: I am making it now.

Trial Examiner Sheppard: I am going to deny that and give it study and let the Commission have the benefit of passing upon it and studying it, too. I think it has a place in this record.

Mr. Haycraft: We close our case then.

Trial Examiner Sheppard: All right.

Mr. Gilpatric: May we go off the record for a minute?

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record. Mr. Freeman and Mr. Gilpatric, Mr. Haycraft informs me 2540 that he has no further rebuttal to offer in this case and his case is closed. Now what can I do for you gentlemen further?

Mr. Gilpatric: We would like an opportunity to put in surrebuttal, and in view of the engagements of counsel and yourself that have been discussed, we would like to have this hearing adjourned on the basis that you will set a new date on five days' notice to the parties after we let you know, and you clear with Mr. Haycraft a suitable time.

Trial Examiner Sheppard: Is that satisfactory, Mr. Haycraft?

Mr. Haycraft: That is all right.

Trial Examiner Sheppard: The Examiner, in view of the status of things as stated above, will adjourn this case, to be reconvened again at the convenience of all concerned, subject to five days' notice to the parties.

(Whereupon, at 4:33 p.m., January 10, 1945, the hearing in the above-entitled matter was adjourned.)

2541 Room 1123, New Post Office Building,
Chicago, Illinois.
September 18, 1945.

Met, pursuant to notice, at 2:00 p. m.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

E. F. Haycraft, Attorney for the Federal Trade Commission.

Wayne & Moore, by R. L. Gilpatric, 15 Broad Street, New York, New York, and Bair & Freeman, by Will Freeman, 135 South LaSalle Street, Chicago, Illinois, appearing for Respondent.

2542 Proceedings.

Trial Examiner Sheppard: We will begin the hearing, gentlemen. In the matter of Minneapolis-Honeywell Regulator Company, No. 4920, ordered by the Commission to be convened in Chicago at 2 o'clock p.m. this date, the 18th of September, 1945.

Let the record show Mr. Everett F. Haycraft appearing for the Commission and Mr. Will Freeman and Mr. Gilpatric appearing for the respondent.

All right, gentlemen, I am ready.

Mr. Gilpatric: We will recall Mr. Johannsen.

A. F. JOHANNSEN was thereupon called as a surrebuttal witness for the Respondent and, having been previously duly sworn, testified as follows:

Direct Examination.

Trial Examiner Sheppard: You have been on the stand before, haven't you?

The Witness: Yes, sir.

Trial Examiner Sheppard: Show this gentleman having been previously sworn in this case. He appears on the stand at the request of the respondent.

All right.

By Mr. Gilpatric:

Q. Mr. Johannsen, since the last hearing in this proceeding on January 10th, have you made any changes
2543 in the cost study which was previously introduced in evidence in this proceeding as Respondent's Exhibit 170?

A. Yes. We have prepared a supplement in accordance with the suggestions and criticisms that were set forth by the Commission at the meeting in Minneapolis, I believe it was in January.

Q. Have you a copy of that supplement?

A. Yes, sir.

Mr. Gilpatric: I would like to have this marked as Respondent's Exhibit 186 for identification.

(The paper referred to was marked Respondent's Exhibit 186 for identification.)

By Mr. Gilpatric:

Q. Will you describe as briefly as you can for the Major in the record just what this supplement comprises, what you have done in preparing this supplement?

A. In preparing this supplement we have recast the entire cost distribution on the basis of moving the customers, so-called off-bracket customers, into the brackets in which they fall, based on volume alone, and there were four companies in going through our working papers, there were four companies that have been eliminated because they were not oil burner manufacturers and had been included in the original report in error, in our original study in error. In addition, we eliminated one
company, the Braden Everedy Company which, in
2544 this case there were returns which exceeded purchases, and that company was eliminated from our study.

Q. In other words, that company was really not a customer at all in 1941?

A. That is right.

Q. Will you name the other four companies that you excluded?

A. The Gasconaire, the Mayflower Air Conditioning Company, the Olson, and the U. S. Radiator Company.

Q. Now, Mr. Johannsen, in recasting your cost study to put, as you have said, each of these so-called off-bracket accounts into the brackets where their actual quantity of controls purchased put them, rather than the brackets

which were assigned to them in the contracts placed at the beginning of the year 1941, how did you proceed? In other words, will you explain, what did you actually do in arriving at the end results shown in this supplement, Respondent's Exhibit 186 for identification?

A. We recast the whole study. That is, we started from the beginning and recast them on the same basis as the original study had been compiled, only moving these customers into the brackets in which their volume placed them.

Q. In referring to these customers, where did you get the accounts? What did you go by in reallocating these so-called off-scale accounts?

A. The original statistics that we had worked up 2545 from the previous study.

Q. But what was the guide in determining which was an off-scale account and which wasn't?

A. The number of customers and the names of the customers were arrived at in working with Mr. Warmack of the Federal Trade Commission, exceptions that they had taken at the time of the previous hearing.

Q. You mean the ones that were referred to in Mr. Haycraft's examination of Mr. Reese at the last hearing?

A. That is right, that is off-scale customers.

Q. In preparing this supplement, did you adhere to the same accounting procedures and methods that you filed in your original report?

A. Yes, sir.

Q. Did you introduce any changes in your principles of allocation or distribution of costs?

A. No, sir. They were exactly the same as in the original study.

Mr. Gilpatric: Respondent offers in evidence the supplement of correspondence study as described by Mr. Johannsen, as Respondent's Exhibit 186.

Trial Examiner Sheppard: Do you want to have time to study that, Mr. Haycraft?

Mr. Gilpatric: I should add, Major, that we sent copies of this about a month ago to Mr. Haycraft or 2546 Mr. Warmack.

Mr. Haycraft: Not to me.

Trial Examiner Sheppard: You can have time to study it.

Mr. Haycraft: I haven't had time to study this, but Mr. Warmack has, and it is my understanding that the

exhibit does make the changes it purports to make. However, I do have the same objections to this exhibit that I had to the previous exhibit from a standpoint of it being a study in retrospect, if you recall the time Exhibit 170 was offered in evidence, that the different objections were raised. One of the objections is that while it may be good to be made at this time and probably is in accordance with the criticism that was made by Mr. Warmack, the other objection still stands, that is to say, as to the fact that it was in retrospect and it could not be based upon actual sales, current records, and it does contain, as I understand from the previous examination of this witness and other witnesses previously, that there are certain necessary estimates that had to be made because of the fact that it was made in retrospect, and for that reason I still have that objection to the exhibit.

Mr. Gilpatric: Do I understand, Mr. Haycraft, then, that your objection as to this is, in a word, because it was made after the event, rather than contemporaneously with the transactions.

Mr. Haycraft: Yes, I make that objection at this 2547 time.

Trial Examiner Sheppard: The Respondent's Exhibit 186 is admitted into the record.

(The paper refered to, heretofore marked for identification RESPONDENT'S EXHIBIT 186, was received in evidence.)

Mr. Gilpatric: I have no further questions.

Trial Examiner Sheppard: Now, Mr. Hacraft, if you don't want to examine now, I am perfectly willing to give you time to look over that tonight and have this gentleman come back in the morning when you will be more prepared.

Mr. Haycraft: I think I could ask a few questions now at the present time and then I would like, Mr. Examiner, to reserve the right to cross-examine further tomorrow.

Trial Examiner Sheppard: All right. Go as far as you can with it.

Mr. Haycraft: In other words, will you be able to have him available tomorrow?

Mr. Freeman: Well, he has a reservation on the plane this evening, but it is up to you and the Major when you will be through with him. I guess he can stay if he has to. He would like to be released.

Trial Examiner Sheppard: Probably if some other man —can one of these gentlemen here—

Mr. Freeman: Mr. Reese is here.

2548 Trial Examiner Sheppard: Mr. Reese, yes. He may be able to give you what information you want and we will excuse this gentleman.

Mr. Gilpatric: I might make this statement, that any of the working papers or any of the data which is behind this Respondent's Exhibit 186 is fully available in the future as it has been in the past to the Commission, and it can always be examined and copies taken.

Cross-Examination by Mr. Haycraft.

Q. Well, I would like first of all to ask Mr. Johannsen if he can testify as to the difference that it made, or—put it this way. Are the figures that were used as the basis for the computations in 186 exactly the same as were used in 170? I notice here in the first page of this exhibit there is a reference to the total distribution costs on a revised basis from $166,182.62, instead of $168,024.94, allocated to the various quantity price brackets for oil burner manufacturers in the original report. Now, will you explain why there is that difference in your basic figure?

A. Well, that difference represents the amount which applied to those customers which have been eliminated from the portion applied to oil burners which was used in that capacity in our original study.

2549 Q. Now, on the first page there are certain results of your reallocation, summarized. Now, what is the figure that would correspond to that in the Exhibit 170? (Handing document to witness.)

Mr. Gilpatric: Will it help you if you follow my copy in this?

Trial Examiner Sheppard: Yes, sir.

The Witness: That is shown on the bottom of Page 8 in the original.

By Mr. Haycraft:

Q. Then I take it that the result of your reallocation made a change in the fourth column, Distribution Cost, the fifth column, Cost Differential, and the last column, Excess of Reduction in Cost over Reduction in Price.

A. That is right.

Q. Then according to the Exhibit 186, or the new exhibit, the Bracket Classification 3-A, there is no excess re-

duction in cost over reduction in price, but rather there is the contrary, is that right?

A. The excess there is two cents in the red, which would be that there is no excess.

Q. So that it does change the results of your 3-A classification from a fourteen cent excess to a two cent deficit?

A. That is right.

Q. On that 3-A?

2550 A. That is right.

Q. The 3 remains the same, is that right, that classification?

A. The 3 remains the same, thirty-four cents.

Q. And your 2 changed from $2.18 to $1.42 excess, is that right?

A. That is right.

Q. Now, that discount, that discount is one as compared with the list price. Do you notice it goes from $1.38 up to $4.20?

A. That is right.

Mr. Gilpatric: Bracket 1.

By Mr. Haycraft:

Q. Is that correct?

A. I didn't understand your question.

Q. Your excess on your discount—strike that. Your excess on Bracket 1, classification of change from $1.38 to $4.20.

A. That is right.

Q. Is that due to the fact that the comparison is made with your Bracket 1 price with the discount price and that Bracket 1 cost and the discount cost?

A. Yes, that is right.

Q. In other words, that is due to the fact that your cost of distribution on your discount—or is that your list

2551 price when you say discount? Is that your list price?

A. That is the first price bracket.

Q. From $9.40 up to $11.22, in other words, your cost of distribution?

A. The distribution cost has changed from $9.40 to $11.22 in the discount bracket.

Q. That is the first bracket?

A. That is the first braeket.

Q. Then your cost differential was changed from what, $4.28 to $7.10?

A. $4.28 to $7.10.

Q. And that accounts for your changed excess in that column?

A. That is right.

Q. Now, in your own language will you explain, the same language that we can all understand, will you explain that increase in excess as to that discount bracket, how you accounted for it and the result of your recasting?

A. Well, in recasting, there was a movement of customers from the Bracket 1 to the discount bracket and from other brackets to the discount bracket, and some from one bracket upward, and as a result that affected all the factors that were used in the distribution of these expenses, and this is the result, as evidenced in the supplemental report, that net result.

2552 Q. Now, will you explain just what steps you took in recasting your report to determine which bracket an account would go in as a result of your recasting? Just what steps would you take?

A. We analyzed all of the customers that were used in the previous study and made a review with the accountants of the Federal Trade Commission and decided that we were in accord on what brackets they were to fall in, based on volume, unit volume. After the customer had been placed in this bracket according to volume, all the factors which were used in this study were also placed in that bracket. By factors, there is invoices, billing lines, total invoice lines, salesmen's calls and what other factors were used.

Q. Now, turning to your first exhibit, Exhibit A—

A. Which is Exhibit A? Is that the supplement?

Q. Yes. I will ask you to indicate the corresponding page in Respondent's Exhibit 170. Exhibit A is a part of Exhibit 186. Now, what is the corresponding exhibit in 170?

A. That is also Exhibit A on page six.

Q. Now, then, turning to Exhibit B of your supplement, Respondent's Exhibit 186, will you indicate which page or exhibit that it corresponds to in Exhibit 170?

A. That is Exhibit B on page seven.

Q. Now, at the top of Exhibit B in Exhibit 186, under manufacturing cost of products sold by price brackets, I notice you have opposite the first line, manufacturing

2553 cost of products sold, amounts that differ from those indicated in Exhibit B of the original Exhibit, 170. I will ask you where those figures came from, that is, what is the basis of the new figures on the new exhibit?

A. In the original report under manufacturing costs applicable to products sold to oil burner manufacturers, were included those customers that I mentioned just a few moments ago. In our supplement those costs have been moved into the preceding column, which is manufacturing costs applicable to products sold to other customers.

Q. All right. Now, then, go on and explain your explanation of the other figures following on manufacturing cost of products sold by price brackets. There you started with discount and number 1, 2, 3 and 3-A and so on.

A. Well, the change in the distribution of the manufacturing costs applicable to products sold to oil burner manufacturers is included in the following columns, that is under Discount 1, 2, 3, 3-A; 4, 4-A, 5. Now, in placing these customers representing this cost of products sold into different brackets, the cost of products sold follow those customers, making a change in the distribution of those costs.

Q. And are these figures, do these figures that you have on that exhibit correspond to the figures suggested by Mr. Warmack when he testified in criticism of the original Exhibit 170?

2554 A. Yes, they do.

Q. Now, then, following on down the exhibit, the distribution costs which you have set forth in Lines 2, 3, 4, 5, 6 and 7, what explanation do you have of the different figures in those columns in the new exhibit as compared with the old one?

A. Well, the same thing applies there. In the original report the amounts applied to cost differentials affecting oil burner manufacturers represented amounts including the customers that I mentioned heretofore, and in making changes on that, affected the expenses included in the distribution cost headings, that is, lines 3, 4, 5, 6.

Q. In other words, those two columns not applied and applied to cost differentials, you made the changes which account for changes in the amounts represented in those columns?

A. That is right.

Q. And then over in the discount, under the price brackets there you have your distribution costs set forth there. Is your explanation of the changes there the same as you made with respect to the manufacturing costs, or does it vary?

A. That is true. It is the same as it was in the manufacturing costs.

Q. Well, then, you mean by that that you applied the different factors that were applicable to the distribution costs?

2555 A. That is right. The factors on which these distribution costs were distributed over the price brackets were changed as between the brackets, and the recast or the supplement represents the factors used after the customers had been allocated to the brackets in which they had fallen, based on volume only.

Mr. Haycraft: May we have a five minute recess?

Trial Examiner Sheppard: Yes, we will recess for ten minutes.

(A short recess as taken.)

Trial Examiner Sheppard: All right, come to order, gentlemen. We will proceed.

By Mr. Haycraft:

Q. Do you have before you there, Mr. Johannsen, some of the work sheets that you used in making this recast of the old Exhibit 170?

A. Yes, sir.

Q. Will you first identify those work sheets which you used in connection with the preparation of Respondent's Exhibit 170 which were the bases of your recast?

A. Well, I have here a summary of the salesmen's calls showing the total calls, those calls made on other customers, calls made on oil burner manufacturers and the distribution of the calls made on oil burner manufacturing customers over the brackets.

2556 Mr. Haycraft: I ask that sheet be marked Commission's Exhibit No. 214 for identification.

(The paper referred to was marked Commission's Exhibit 214 for identification.)

By Mr. Haycraft:

Q. Now, the one you just identified as 214 is the work sheet used in the preparation of Respondent's Exhibit 170, is that correct?

A. That is right.

Q. Now, what is the corresponding work sheet used in the preparation of Respondent's Exhibit 186, do you have that there?

A. Yes, sir, we also have a summary of the salesmen's calls which is used in compiling the supplement.

Mr. Haycraft: I would like to mark the next exhibit number 215.

(The paper referred to was marked Commission's Exhibit 215 for identification.)

By Mr. Haycraft:

Q. Now, take the next factor. Take the old one first.

A. We have a summary of the billing lines showing the total lines, those on all other customers and those applying to oil burner manufacturers, and the distribution of those applied to oil burner manufacturers over the price brackets.

Mr. Haycraft: I ask that be marked Commission's 2557 Exhibit 216.

(The paper referred to was marked Commission's Exhibit 216 for identification.)

By Mr. Haycraft:

Q. I take it that which you just identified refers to your work sheet in connection with Respondent's Exhibit 170.

A. That is right.

Q. Now, the corresponding work sheet used in the preparation of Respondent's Exhibit 186.

A. Yes, sir. We have a similar summary that was used in compiling the supplement.

Mr. Haycraft: I ask that be marked Commission's Exhibit 217.

Trial Examiner Sheppard: Mark it 217 for identification.

(The paper referred to was marked Commission's Exhibit 217 for identification.)

By Mr. Haycraft:

Q. Now, the next factor that you took into consideration in the work sheet.

A. Summary of the total invoice lines, showing the same columns, total, other customers, oil burner manufacturers and the oil burner manufacturers as distributed on the price brackets.

Mr. Haycraft: I ask that be marked Commission's 2558 Exhibit 218 for identification.

Trial Examiner Sheppard: Let it be so marked.

(The paper referred to was marked Commission's Exhibit 218 for identification.)

By Mr. Haycraft:

Q. That is the one used with the original Exhibit 170?

A. Yes, sir.

Q. Now, will you identify the corresponding work sheet used in the preparation of Respondent's Exhibit 186?

A. A similar schedule was used, a similar summary was used in compiling the supplemental report. I would like to make a correction, if I may, Mr. Haycraft. The Exhibit that is marked Exhibit 217 is a summary of the invoices and not of the billing lines. It is comparable.

Mr. Gilpatric: Off the record.

(Discussion off the record.)

By Mr. Haycraft:

Q. Now, I take it from what you said a moment ago that you made the correction of the exhibit now marked as 217 as the one that corresponds to 216. Now, will you give us the corresponding exhibit to 218, the one you used in the preparation of your original Exhibit 170? Now, I want the one that corresponds to that used in the Respondent's Exhibit 186.

A. Exhibit 218 is a summary of the total invoice lines, and we have a similar—

Q. Well, that is a similar summary of which you just now said should be marked Exhibit 219.

2559 Trial Examiner Sheppard: Mark it 219.

(The paper referred to was marked Commission's Exhibit 219 for identification.)

By Mr. Haycraft:

Q. Now, do you have another summary that was used?

A. We have a summary of the total invoices.

Q. Used in the old exhibit?

A. Used in the old exhibit.

Mr. Haycraft: I ask that be marked Commission's Exhibit 220.

Trial Examiner Sheppard: Let it be marked.

(The paper referred to was marked Commission's Exhibit 220 for identification.)

By Mr. Haycraft:

Q. Now, do you have a corresponding summary used in the preparation of Respondent's Exhibit 186?

A. Yes, sir, we do.

Mr. Haycraft: I will ask that be marked Exhibit 221 for identification.

Trial Examiner Sheppard: Let it be marked.

(The paper referred to was marked Commission's Exhibit 221 for identification.)

By Mr. Haycraft:

Q. Now, are those summaries that you used all summaries that you used in the preparation of the two exhibits?

2560 A. I think they are, sir.

Q. And I take it you are willing to leave those or have them made available so that Mr. Warmack and Mr. Argus can refer to them in their testimony?

A. Yes, sir.

Mr. Haycraft: Off the record.

(Discussion off the record.)

Mr. Haycraft: I am willing, Mr. Examiner, to excuse this witness, providing the work sheets can be left here and some one can identify them. I don't want to call Mr. Warmack, and probably Mr. Argus tomorrow and show the check that was made, if a check has been made, of these various work sheets, and at least we want to lay the foundation for it. I don't know for sure about that, but I do want to have access to them. I don't want to put them to too much inconvenience, but in excusing this witness I would like to have some one that can identify the work sheets and have the work sheets available tomorrow.

Mr. Gilpatric: Well, we can have these work sheets here. We will hold them and produce them. They have been marked by the stenographer. Do you need any more than that?

Mr. Haycraft: I don't think so. I understand those are the ones that we will need. Off the record.

(Discussion off the record.)

Mr. Gilpatric: The respondent will produce at the
2561 request of Mr. Haycraft the work sheets which have been identified as Commission's Exhibits 214 through 221 for identification, and will also furnish photostatic copies of those work sheets to Mr. Haycraft and Mr. Warmack, with appropriate markings to show any red figures, if there are such.

Trial Examiner Sheppard: Is that satisfactory to you, Mr. Haycraft?

Mr. Haycraft: That is right.

Mr. Gilpatric: I would like to ask just one question on redirect, or two questions.

Redirect Examination by Mr. Gilpatric.

Q. Mr. Johannsen, as now recast to reflect putting each of these oil burner manufacturers into brackets where there are actual quantities called for, does the supplement, 186, now meet the criticisms that Mr. Warmack made in his examination, other than the objection which Mr. Haycraft made today that the study was made in retrospect?

A. Yes, it does.

Q. Now, as to that last objection, would it be possible, in your opinion, to make up a report such as this supplement, Respondent's Exhibit 186, based on actual quantities, except after the event? Could you make it up before 1941, in other words?

A. I don't see any way possible that it could be
2562 made up before the minute it actually happened. It was the report of sales, and the calls were actually made. I don't see how we could make it up before 1941.

Q. I am talking about now using the basis of distribution between the brackets, actual quantities.

A. Yes, I understand. We couldn't make it before.

Q. Couldn't you know what the actual sales were for the year 1941?

A. That is right.

Mr. Haycraft: By that, Mr. Johannsen, you don't mean that a study could not have been made in 1941 or 1942 that could have been based on actual current sales figures and costs?

Mr. Freeman: Mr. Haycraft, when you say 1942, are you talking about the 1941 sales or are you talking about sales that remained in 1942?

Mr. Haycraft: 1941 or 1942.

Mr. Freeman: I still don't—

Mr. Haycraft: In other words, there were sales records available in 1941 based upon actual sales, were there not?

The Witness: The same records—the sales, the actual sales, are recorded in our figures now, Mr. Haycraft.

By Mr. Haycraft:

Q. Well, the actual expenses, I mean, of time
2563 studies or time records of the salesmen who sold these products were available in 1941?

A. I don't know whether they were available in 1941 any more than they were available in 1944.

Q. Well, are you sufficiently familiar with the records of Minneapolis-Honeywell Regulator Company to know whether or not they keep records of salesmen's calls in 1945?

A. Yes, they keep records of salesmen's calls.

Q. And the time spent by salesmen in calling on different accounts?

A. No, time spent is not recorded.

Q. But the name of the call is recorded?

A. Yes, sir.

Q. And do you know whether or not that same record was kept in 1941?

A. That record was kept in 1941. That is the record that I was speaking of, sir.

Q. Were there time records available of each salesman for 1941 the time you prepared it, Respondent's Exhibit 170?

A. When you say time records, there were records of the calls that they made.

Q. Well, did those records show the length of time that the salesmen called on the different accounts?

A. No, sir.

Q. And that time was estimated, is that right?

2564 A. That time was weighted after discussion with the salesmen, their supervisors, and taking into consideration the type of customers that they called on, we arrived at what we considered a reasonable weighting of salesmen's calls.

Q. As I understand, there has been no change in the method of preparation of that feature of it in your new exhibit.

A. No, sir, there has not.

Q. Well, how about the records of the supervisory personnel? Did you base that on the time records, or was that estimated? It is on page 22 of the original exhibit.

Mr. Gilpatric: What exhibit are you referring to now, Mr. Haycraft?

Mr. Haycraft: 170.

Mr. Gilpatric: Well, if we go into all that, Major, maybe we don't have any time records.

Mr. Haycraft: You opened it up on your redirect examination as to this particular point.

Mr. Gilpatric: No, we are talking about actual quan-

tities of control purchases, not expenses at all. We admit we have no time records. We don't keep a stop watch on salesmen. There is no basis for that, either 170 or 186.

Trial Examiner Sheppard: That was estimated in 170 just like it was in the other, wasn't it?

Mr. Haycraft: 186, you mean.

The Witness: That is right.

2565 Trial Examiner Sheppard: That is my understanding of it.

The Witness: That is right.

Mr. Haycraft: Off the record.

(Discussion off the record.)

Mr. Haycraft: Will you read my last question?

(The reporter read the question as follows:

"Well, how about the records of the supervisory personnel? Did you base that on the time records, or was that estimated? It is on page 22 of the original exhibit.")

Mr. Freeman: I say counsel for Honeywell has already stated on the record that neither the salesmen's time nor the supervisors' time was ever timed by the use of a stop watch or any other time element.

By Mr. Haycraft:

Q. Referring to page 22 of the original Exhibit 170, I will ask the witness whether or not it would have been necessary to have made the estimates that were made there if the exhibit had been prepared in 1941, or the close of 1941.

Mr. Freeman: What do you mean by the close of 1941, Mr. Haycraft?

Mr. Haycraft: Before the year 1942.

In other words, Mr. Examiner, the position that we take on this is that the law was passed in 1936. It con-

2566 templated that studies of this kind would be made currently in order to justify differences in cost of distribution and cost of manufacturing and so on with respect to the commodities. Now, our position is that an exhibit prepared many years after cannot meet the requirements of the law, that it must necessarily be based on estimate, not upon actual costs.

Now, the question that I am asking from this witness is whether or not if this exhibit had been prepared at the time, that is, in 1941, based upon current records in the offices of the respondent, it would have been necessary to have made the estimates that were made.

Trial Examiner Sheppard: Can you answer that, Mr. Witness?

The Witness: Well, I am sure that I don't quite understand Mr. Haycraft's question.

By Mr. Haycraft:

Q. Well, here on page 22, Mr. Johannsen, it says the division of time was ascertained by direct consultation of respective individuals and by correspondence when direct consultation was impossible. Division of time was determined by review of the division sales manager, then there was an apportionment made of oil burner manufacturers on the basis of the time devoted to each upon this estimate. Then you say the resultant total ap-
2567 portionment representing the approximate amount of home office heating control and so on. Now, the question is whether those figures couldn't have been gotten exactly or reasonably exactly if it had been obtained at the time the work was done.

A. Well, I think, as Mr. Gilpatric said, that they do not keep stop watches on these executives' time, so I don't know that it would have been available then except through the same method that we have used here.

Mr. Haycraft: That is all, Mr. Examiner.

Trial Examiner Sheppard: Anything else, Mr. Gilpatric?

Mr. Gilpatric: Not from this witness.

Trial Examiner Sheppard: You are excused, then, Mr. Johannsen.

(Witness excused.)

Trial Examiner Sheppard: Anything else you gentlemen want this afternoon? Otherwise, we will go over to ten o'clock tomorrow morning.

Mr. Gilpatric: Well, we can.

Mr. Freeman: We have got another witness here. We might just as well keep on going.

Trial Examiner Sheppard: Yes.

Mr. Gilpatric: I want to recall Mr. Lockrae.

Trial Examiner Sheppard: Show Mr. Lockrae has been previously sworn and is on the stand at the request
2568 of the respondent.

A. H. LOCKRAE was thereupon called as a surrebuttal witness for the Respondent and, having been previously duly sworn, testified as follows:

Direct Examination by Mr. Gilpatric.

Q. Mr. Lockrae, are you familiar with the list of the 77 so-called off-scale accounts which were brought out during the testimony at the hearings in Minneapolis on January 9th and 10th?

A. I am.

Q. Are you prepared to explain for the record the considerations which in each case accounted for the fact that those customers were, to use that phrase, off-scale?

A. Yes, sir.

Q. Now, I will go down the list of accounts as they appear in the record at that hearing and the first I will ask you is whether you have any preliminary general explanation or statement to make with regard to them.

A. Well, before starting an individual explanation of the so-called off-scale accounts mentioned by Mr. Warmack in his testimony in the last hearing, I think it would be helpful to you, Major, if I made this preliminary statement.

As my testimony will develop, more than half of
2569 the 77 off-scale accounts mentioned by Mr. Warmack represented instances where, on the basis of the information which we had at hand at the time, we issued our 1941 contract; the quantities on which the price brackets were based were fully justified, either by the oil burner manufacturer in past performances, or by his future prospects.

As I have testified before, and has been brought out by what other control manufacturers have said here, it has been the practice of our company and of the control industry generally over a period of years to issue its contracts for a particular year either during the preceding December or in the early part of January of that year.

This practice, which was followed in 1941 as in prior years, has not necessarily been one of our choosing. It is essential that the oil burner manufacturers know what the prices of their components are to be before they can figure their costs and put out their own price lists and selling literature for the year. We, like other control

manufacturers, have therefore been confronted with the necessity of telling our customers early in the year what they will have to pay for controls, and that decision on our part has to be made on the basis of foresight.

As has already been explained on the record, if the manufacturer exceeds his contract quantity in the course of a year and earns a better price, we are compelled
2570 not only by competition, but in fairness to our customer to give him the benefit of his larger volume through a retroactive credit. On the other hand, it would obviously be impossible for us or any other control manufacturer at the end of a year to go back and try to collect higher prices on controls furnished months before because a particular customer did not have as good a year as he expected or as he had had the year previous.

As will be seen from the individual explanations which I am going to give, each account is analyzed on its own merits and in the light of its own facts at the time we issue our contracts and determine our bracket prices for the ensuing year. Nevertheless, there sometimes exists throughout the industry a condition which is so general that it affects many of the oil burner manufacturers. That was true in 1941 when it became evident, in the late spring of 1941, that there were going to be governmental restrictions on us of fuel oil. The effect of this condition on the oil burner industry began to be discussed in the trade papers along about June, with the actual impact on sales coming later.

The publicity over the fuel oil situation, the prospect of rationing and planning, the discontinuance of the manufacturing of oil burners, had the combined result of reducing the volume of many oil burner manufacturing
2571 sales below their expectations for the year 1941, and was undoubtedly a contributing factor in many of them not purchasing the quantity of controls they had agreed to take, a circumstance which we had no way of predicting at the time we issued our 1941 contracts at the end of 1940.

Q. Well, now, the first account that was brought out by Mr. Haycraft's examination of Mr. Reese was the company known as Master Oil Burner Company, which was originally shown as a discount bracket. Will you explain why that was treated that way?

A. Master Oil Burner started in 1941 with a discount contract, and up until May 1st of that year had purchased

just one instrument. Then they secured orders for oil burners for several Army camps in the Northwest. Our Seattle office requested a Bracket 1 contract, which we prepared and submitted to them on April 25, 1941. This contract was executed on May 5th, was returned to our home office, and we have a letter in our files written by our Mr. Neby of our sales department to Mr. Scheimo of our order department, advising the new Bracket 1 contract superseded the discount contract previously signed.

Master Oil Burner Company actually received our Bracket 1 prices throughout the year.

Trial Examiner Sheppard: All right. Take up the next one.

2572 Mr. Gilpatric: Just for the record, now, I want to state the references to the testimony previously on Master Oil Burner Company was at page 2360 and 2362. The next one is Jackson Oil Burner Company, referred to on page 2363.

By Mr. Gilpatric:

Q. What have you got to say about that?

A. Jackson Oil Burner Company had a discount contract in 1940 and started off with a discount contract in 1941. Our records show they purchased 198 instruments in 1941. Our records show that our order department was instructed to issue a retroactive credit by our Mr. Neby on November 26, 1941.

Trial Examiner Sheppard: He was in a discount?

The Witness: He earned a Bracket 1 contract and got the benefit of Bracket 1 prices.

By Mr. Gilpatric:

Q. So that he really was a Bracket 1 account?

A. He was a Bracket 1 account for 1941.

Trial Examiner Sheppard: Go ahead.

By Mr. Gilpatric:

Q. Now, the next account operated was B & W Oil Burner Service Company, mentioned on page 2366 of the record, Bracket 1.

A. Well, this company succeeded the Berryman Oil Burner Company, and we give them a Bracket 1 con-
2573 tract April 1, 1940, calling for 150 units. Incidentally, the Bracket 1 price was $18.10 a set. In the last nine months of 1940, B & W purchased 85 instruments,

and although they did not fulfill their contract, yet we gave them a Bracket 1 contract in 1941 because Mercoid Corporation was still our competition, as they had been at the Berryman Oil Burner Company. It was felt we could not get any business from B & W if we increased their set price.

Now, then, the highest manufacturer's price given by Mercoid in 1940 that we knew of was to the Fairfield Oil Heating Company, and reported by our Mr. Patrick on June 6, 1940. This price was $15.25 a set. It was quite reasonable to assume that our price to B & W in 1941 of $17.35 a set would not be as low as prices which would be quoted by Mercoid.

Q. The next account mentioned was Braden Everedy. That was referred to before on page 2367 of the record. Now, the next one was Carlson Brothers Tool & Machine Company, mentioned on page 2367 of the record.

A. In 1939 we had a Bracket 1 contract with this company calling for 150 instruments, and their purchases amounted to 195 that year. We gave them another Bracket 1 contract in 1940 calling for 150 instruments, and they purchased 119. Now, then, the total purchases for the two years amounted to 314 devices which would make 2574 their average purchase for the two years 157 instruments. We were, therefore, not hesitant to give them another Bracket 1 contract in 1941 calling for 150 instruments.

Q. C. F. M. Manufacturing Corporation, referred to on page 2368 of the record.

A. Our first manufacturer's contract with this company was executed in September of 1941 and they purchased 93 instruments in the remaining three and one-half months of that year. Our Bracket 1 contract calls for 150 units, and it would seem rather obvious if they could purchase 93 instruments in three and one-half months that they would have no difficulty whatsoever in fulfilling their contract had it been in force for a full year's time.

Q. Chalmers Oil Burner Company, page 2368 of the record.

A. Chalmers were given a Bracket 1 contract in 1941 calling for 150 instruments, and their direct purchases totaled 36. However, we knew Chalmers were purchasing burners equipped with our controls from the Aldrich Company in sufficient volume to make their combined usage of our controls in excess of 150 instruments per year.

Q. Is that the type of transaction that you referred to as a dual transaction?

A. Yes, sir.

Q. Columbus Metal Products, Incorporated, page 2369 of the record.

2575 A. This company had a Bracket 1 contract in 1939 calling for 150 instruments, and they purchased 256. In 1940 they were given a Bracket 1 contract calling for 150 instruments and they purchased 206. Having earned their contract the previous year, in fact, the previous two years, we naturally had no reluctance in giving them a Bracket 1 contract in 1941. Their purchases did fall off that year, however, to 139 devices.

Q. That was the case we had two years' experience with?

A. That is right.

Q. Drexel Manufacturing Company. That is page 2369.

A. Our first contract with this account was executed in 1941, but our records show that they did not purchase anything from us after November 1st of that year, and we knew they were out of business as of March 5, 1942. Whether their burner activities ceased because of the oil scare or if they were devoting their efforts to the war industry, we just don't know. We do know that they did business with us just a few months and then actually went out of the oil burner business a few months after the beginning of 1942.

Q. Goodrich Oil Burner Manufacturing Corporation, page 2369 of the record.

A. This company had standardized on Mercoid controls for a great many years, and used ours as optional equipment and sold them to their dealers at a premium

2576 price. In our 1940 negotiations it was decided that we would lower our prices in hopes that if we came closer to Mercoid's prices we would get a larger share of the business. The price of $17.25 a set was given Goodrich in 1940, which was still one dollar higher than our knowledge of Mercoid's prices in 1938. At the end of the year we found Goodrich had purchased only 343 controls from us, and in view of this record we put them on a Bracket 1 status in 1941, calling for 150 instruments.

Q. That is the case where Mr. Johnson testified in Philadelphia in this proceeding?

A. Yes, sir.

Q. Greenwood Engineering Company, page 2369.

A. We started this company in 1940 with a discount contract. They purchased 155 instruments, and were given a retroactive credit because these purchases exceeded the minimum of our first bracket, which called for 150 instruments. In view of their 1940 purchase record, we naturally gave them a Bracket 1 contract for 1941. Their actual purchases that year fell off to 133 instruments.

Q. So they were about ten per cent shy?

A. That is right.

Q. Hyle Oil Burner Company, page 2370.

A. This company were given a Bracket 1 contract in 1940 calling for 150 units, and actually bought 238. On the basis of their 1940 record we gave them a Bracket
2577 1 contract for 1941 calling for 150 instruments.

Q. Milwaukee Oil Burner Corporation, page 2370.

A. This company was given a Bracket 1 contract in 1940 calling for 150 instruments, and they purchased 135. Because their purchases were within ten per cent of the contract quantity, and in view of the much better business outlook at the beginning of 1941, we thought we were justified in again extending Bracket 1 prices for that year.

Q. This was again a case where you placed your contract at the end of 1940 or early in 1941?

A. Yes, sir.

Q. Oil Burner Exchange, Incorporated, page 2370 of the record.

A. Their company had a Bracket 1 contract in 1940 and bought 187 instruments. On the basis of their record in 1940 we gave them a Bracket 1 contract for 1941.

Q. Quiet Heet Oil Burner Company of Brooklyn, New York, page 2370 of the record.

A. This company was given a Bracket 1 contract in 1940 calling for 150 instruments, and they actually purchased 679. In view of their 1940 purchase record we naturally gave them a Bracket 1 contract calling for 150 instruments in 1941.

Q. R-S Products Corporation, page 2371 of the record.

A. We gave this company a Bracket 1 contract in
2578 1940 calling for 150 instruments, and they purchased 258. In view of their previous year's purchase record, we gave them a Bracket 1 contract in 1941 calling for 150 instruments.

Q. C. L. Rayfield Company, page 2371 of the record.

A. This company was manufacturing industrial oil burners primarily in 1941, but they had designed a burner which they expected to put into production during that year. They did not secure underwriter's approval on the new burner until November of 1941, and then after Pearl Harbor they started on war production. We gave them a Bracket 1 contract in 1941 calling for 150 instruments, and our record shows they actually purchased 141, only failing to fulfill the contract quantity by nine devices. As outlined in our Mr. Steyskal's report of January—

Mr. Hayeraft: I object, Mr. Examiner, to reading those records. This witness can testify as to what he did and what factors he may have taken into consideration, but I submit that he should not read the reports given to him by those who are not on the witness stand.

Mr. Gilpatric: Well, Mr. Examiner, may I make this explanation, that—

Mr. Haycraft: The witness can give his reasons, but should not be allowed to go in and quote from reasons given by third parties.

Mr. Gilpatric: Well, these reports were addressed
2579 to Mr. Lockrae, and he is simply giving the basis for his action at that time.

Trial Examiner Sheppard: I think it just makes a connected story.

Mr. Gilpatric: We don't intend to use those as competent evidence but simply showing the basis for this man's conduct of the business.

Trial Examiner Sheppard: All right. I understand. I will remember that when I go over the record.

The Witness: Well, this was interesting. That is why I wanted to read it. As outlined in our Mr. Steyskal's report of January 23, 1941, the Rayfield burner was at underwriter's laboratories going through both. M. H. and Mercoid control equipment.

Mr. Haycraft: I move to strike that, Mr. Examiner.

Trial Examiner Sheppard: That can go out. That last part can go out.

By Mr. Gilpatric:

Q. Did you have any knowledge of that yourself, Mr. Lockrae?

A. Not other than the report, although the underwriter's records are available here in Chicago and can be gotten in half an hour.

Q. Well, all right. Let me ask one further question. Whose are those reports, such as the one just referred to, received by—by you in the ordinary course of your
2580 business as in charge of the heating control sales?

A. Yes, sir. This is one of the customary call reports that our salesmen render after making a call on a manufacturer.

Q. Are they part of your regular records?

A. They are a part of our regular records.

Trial Examiner Sheppard: That is what I have been expecting, that you have those in your files at home in reference to each one of those.

By Mr. Gilpatric:

Q. In fact, you have them here?

A. As a matter of fact, I have photostats here.

Trial Examiner Sheppard: All right, go ahead.

By Mr. Gilpatric:

Q. Red Wing Oil Burner Company, referred to on page 2371 of the record.

A. These people had a bracket 1 contract in 1940 calling for 150 instruments, and they purchased 231. Obviously we gave them another Bracket 1 contract calling for 150 instruments in 1941.

Q. Swirling Heat, Incorporated, page 2372 of the record.

A. In 1940 this company was given a Bracket 2 contract calling for 1050 instruments, but they only purchased 122. In view of this 1940 record, we placed them in Bracket 1 in 1941, calling for 150 instruments.

Trial Examiner Sheppard: In other words, you
2581 went back from two to one?

The Witness: That is right. In our Mr. Bell's report—he called on this company in December 26, 1940—he stated this customer felt we were justified in placing them back in the first bracket in 1941 instead of giving them the second bracket prices.

By Mr. Gilpatric:

Q. The next account is Synchro Flame Burner Corporation, page 2372 of the record.

A. We gave this customer a Bracket 1 contract for 150 units in 1940, and they purchased 173. We naturally gave them a Bracket 1 contract again in 1941.

Q. For 150?

A. That is right.

Q. Wayland Machine Company, mentioned on page 2372 of the record.

A. This company had a Bracket 1 contract in 1940 calling for 150 instruments, and it was executed on April 2nd of that year, and the remaining nine months of the year they purchased 275 instruments. On the basis of their 1940 purchase record for nine months, we naturally gave them another Bracket 1 contract in 1941.

Q. Harry C. Weiskettel Company, page 2372 of the record.

A. This company started in 1940 with a discount contract, and their purchases were sufficient to warrant
2582 a retroactive credit.

Triel Examiner Sheppard: In other words, they exceeded 149?

The Witness: That is right. Our Mr. Swanson's letter to our order department on October 18, 1940, confirms this, and having earned the required quantity in 1940, we gave them another Bracket 1 contract in 1941.

By Mr. Gilpatric:

Q. Columbia Boiler Company, page 2373 of the record.

A. These people signed a Bracket 1 contract calling for 150 instruments on August 22, 1941. From that time until the end of the year, approximately five months, they actually purchased 121 units. It seems rather obvious if they had been purchasing from us throughout the entire year that they would have equalled or exceeded the contract quantity.

Q. Kienzle—

Mr. Haycraft: Mr. Examiner, I have made these objections before, but I think it should be made, and I don't want to have to indicate that I am not making the objections when they should be made. This witness on numerous times, in giving his explanation, has advanced argument which should not be a part of his testimony, "It seems obvious," or something of that kind. Now, as I understand it, he is to state actually what happened, rather than what might have happened or what should have hap-
2583 pened or what could have happened.

Mr. Freeman: Well, he is not a lawyer. He is trying to tell a running story here of what actually went through his mind or his makeup in extending to companies

in 1941 a particular bracket, and we are not arguing this case, Mr. Haycraft.

Mr. Haycraft: The witness is arguing the case, and that is what am objecting to. I want the last answer read, and I move to strike that portion of it beginning, "It seems obvious."

Trial Examiner Sheppard: Go back there and see.

Mr. Freeman: I think he is stating that as a fact.

Trial Examiner Sheppard: I don't object to your telling me what your records show, but if there is anything outside of that, don't comment on it. In other words, let me have what you have there that your records show.

The Witness: Comments that I have made anywhere, Major, have been simply those of a logical business man who handles five or six hundred of these transactions in the course of a year. They simply express my thinking in terms of logic as any business man would naturally think in analyzing a problem like this. If that is objectionable, why, that is one thing. If it isn't I do think it brings out my reasoning and my responsibility in the handling of these various transactions.

2584 Mr. Haycraft: I will ask that the last answer be read, and you will see what I mean.

Trial Examiner Sheppard: All right, go back and read the last answer.

(The reporter read the answer as follows:

"These people signed a Bracket 1 contract calling for 150 instruments on August 22, 1941. From that time until the end of the year, approximately five months, they actually purchased 121 units. It seems rather obvious if they had been purchasing from us throughout the entire year that they would have equalled or exceeded the contract quantity.")

Mr. Haycraft: That is purely argument.

Trial Examiner Sheppard: Yes.

Mr. Freeman: Major, would you rather have us say—which we can do in order to bring these facts out—that having purchased 121 units in five months, that would be exactly 24 units per month or 288 units in a year, and 288 units is far in excess of 150. Now, we can ask fifteen questions and bring that out. All this witness has said, having purchased 121 instruments in five months, had they purchased for the full year, then he uses the word, "It is obvious." Now, I think he is a layman. He is not a lawyer, but if you would rather have it in small questions,

we can bring it out, and had this customer operated
2585 for a full year this customer would have bought 288 units.

Mr. Haycraft: That is a matter of argument which counsel may argue to the Commission, but he certainly has no business in bringing it out from this witness. I really think it is a small matter.

Mr. Freeman: I do, too. We are not working before a jury here.

Trial Examiner Sheppard: What I want to do is get the entire picture. That is all I want. I think we used fifteen pages of the record right there in that little talk.

Mr. Haycraft: I move to strike that comment, that part of the answer, Mr. Examiner, that I called your attention to, and ask that the witness be instructed not to give matters of opinion of that kind, or argument.

Trial Examiner Sheppard: Well, I will let that stand this time, but don't do it any more, Mr. Witness. Go ahead. Just give us the record that you have without comment. All right.

By Mr. Gilpatric:

Q. The next account is Kienzle & Merrick, mentioned on page 2373 of the record.

A. We started to do business with this company on May 20, 1940. They had a Bracket 1 contract calling for 150 instruments, and they actually purchased 124.

Q. At what rate per month is that, Mr. Lockrae?
2586 A. That would be approximately at the rate of ten per month.

Trial Examiner Sheppard: Now, that would—

Mr. Gilpatric: Wait a minute—

The Witness: I beg your pardon. I was thinking that for the year, they actually purchased an average of ten per month for the year, considering the entire year, but their contract was signed on May 20th, so that would be about 15 units per month average.

By Mr. Gilpatric:

Q. How much is 15 times—

Mr. Haycraft: I object to that, Mr. Examiner. The Commissioner can certainly multiply.

Mr. Gilpatric: I think Mr. Haycraft's objection goes to the weight of the evidence and not to what we are trying to get as a running account here that tells a story, and why, when he had to decide what bracket into which

this account should be put, he put them into Bracket 1, and if it is plain to the Examiner without elaboration, we will let it go.

Trial Examiner Sheppard: I think I understand it. In other words, this particular account didn't come up to the requirements, and you gentlemen wouldn't feel justified in putting him into No. 1 again.

Mr. Freeman: He did come up, your Honor. The customer only owned it for a period of eight months, and during the eight months' period, purchased 124 units,
2587 which is far in excess, if you prorate 150, which is Bracket 1 quantity, in 12 months he should have purchased on the basis of about twelve and a half instruments a month, but during—

Trial Examiner Sheppard: If he had run that time.

Mr. Gilpatric: But he had a full twelve months.

Mr. Freeman: He started in May of 1940, and obviously when we are executing figures here for 1940, there is only eight months left, and this account bought in excess of the quantity prorated for the eight months' period.

Mr. Haycraft: Isn't that all a matter of argument? That is what I am contending.

Trial Examiner Sheppard: Well, a matter of explanation, anyhow. We all would feel justified, then, in giving him a No. 1 account.

The Witness: Yes, sir.

Trial Examiner Sheppard: On a showing of eight months.

The Witness: What would that customer say to me if I didn't do that? His argument would be, "Good heavens, in eight months I bought 124 instruments. You have got to give me your 150 quantity."

Trial Examiner Sheppard: I get your point.

By Mr. Gilpatric:

Q. The next account is Mechanical Products Company, referred to on page 2373 of the record.

2588 A. We gave these people Bracket 1 contract in 1941 calling for 150 instruments, and they actually purchased 129. However, as substantiated by our Mr. Farnes' report of September 27, 1941, this company was devoting 75 per cent of its effort to the manufacture of airplane parts for the war effort. The report further states we were getting all of this company's business and it should increase when his business resumed.

Mr. Haycraft: I move to strike the reference to their report.

Trial Examiner Sheppard: I think I will let it go on in, gentlemen, so we can have the connected account. Just go ahead in the way that you have been going. I think it is too small a matter.

By Mr. Gilpatric:

Q. Scholz & Stalder Company, page 2373, also, of the record.

A. We gave this company a Bracket 1 contract in 1939 calling for 150 instruments, and they purchased 179. They also had a Bracket 1 contract in 1940 calling for 150 instruments, and they purchased 139 because their two years previous purchase record averaged 159 instruments per year, so we again placed them in Bracket 1 in 1941.

Q. Koalamatic Combustion Company, page 2374 of the record.

A. In 1939 this company was given a discount contract, and they purchased 219 instruments. This gave them a retroactive credit and placed them in Bracket 1 for the 2589 year 1940. In 1940 they purchased 110 devices, and as stated, they purchased 219 instruments in 1939, or a total of 329 devices for the two years. In view of the fact that the two year average was 164 instruments, we gave them a Bracket 1 contract again in 1941.

Q. Pacific Automatic Heating Company, page 2374 of the record.

A. Prior to our extending the 1941 contract, our Seattle branch reports that they investigated the fire department record of the number of oil burner installations made within the city limits in Seattle, and it revealed that Pacific had installed 138 burners in 1940 within the city limits. They were also conducting an outside business through dealers in other localities of which there was no contract. If they were to sell 138 burners in a year, the three instruments to a burner, this would obviously be a greater quantity than would be required to justify a Bracket 1 contract.

Mr. Haycraft: I move to strike that again, Mr. Examiner. As I understand, the witness is supposed to be testifying as to what the sales were in previous years, and so on, and justification. Now, this is a matter which is going beyond that, and he is giving some argument not based upon his own experience, but on something that this

company may have done and could have done in another field.

Mr. Gilpatric: He is giving his reasoning and why
2590 he gave this account a lower price than it might otherwise have gotten.

Trial Examiner Sheppard: I think so, gentlemen. I am going to let you give that explanation. I will give the value of what I think it is worth. I think you have a right to give me the explanation that you have for putting these men in various accounts.

Mr. Gilpatric: He may have been wrong. He may have made a mistake, Mr. Examiner, but that is what his thinking was, and why he did it.

By Mr. Gilpatric:

Q. The next company is Liberty Airflo—

Trial Examiner Sheppard: I don't think you finished your explanation.

The Witness: Would you read the last?

(The reporter read the answer as follows:

"Prior to our extending the 1941 contract, our Seattle branch reports that they investigated the fire department record of the number of oil burner installations made within the city limits in Seattle, and it revealed that Pacific had installed 138 burners in 1940 within the city limits. They were also conducting an outside business through dealers in other localities of which there was no
contract. If they were to sell 138 burners in a year,
2591 the three instruments to a burner, this would obviously be a greater quantity than would be required to justify a Bracket 1 contract.")

Trial Examiner Sheppard: Does that finish it?

The Witness: Yes.

Trial Examiner Sheppard: All right. Take up the next one.

By Mr. Gilpatric:

Q. Liberty Airflo Burners, Incorporated, mentioned on page 2374 of the record.

A. This company had a Bracket 1 contract in 1940 calling for 150 units, and they actually purchased 759. They were given a Bracket 1 contract for 1941, but it is interesting to note that they went out of business in May of that year, according to Mr. Neby's memorandum to our Mr. Scheimo of June 3, 1941.

Q. Plymouth Engineering Works, Incorporated, page 2374 of the record.

A. This company took over the National Oil Burner Company of Whitman, Massachusetts, late in 1940 or early in 1941. During 1940 we sold National 534 instruments under a Bracket 1 contract calling for 150 or more units. Logically, when Plymouth Engineering Company offered their business, we gave Plymouth a Bracket 1 contract in 1941 calling for 150 instruments. We were informed that Plymouth had gone out of business the fore part of September in 1941, as outlined in our Mr. Neby's
2592 letter of September 4th to Mr. Hoyt of our Boston office, and by Mr. Neby's letter to our order department of September 16, 1941.

Q. Seal-O-Strain Corporation. It is on page 2375.

Trial Examiner Sheppard: These are all, gentlemen, as I understand it, these were all that Mr. Warmack took exception to?

The Witness: That is right.

Mr. Gilpatric: Yes.

Trial Examiner Sheppard: In his examination.

Mr. Gilpatric: These are the so-called off-scale accounts which Mr. Warmack called off and we are explaining.

The Witness: These people had a Bracket 1 contract in 1940 calling for 150 instruments, and our records show they purchased 187. Their previous year's purchases entitled them to Bracket 1 prices again for 1941.

Mr. Gilpatric: This is all of Bracket 1. Do you want to break off here today?

Trial Examiner Sheppard: You might as well finish.

Mr. Freeman: There will be quite a number.

The Witness: Don't let this scare you. It is mostly photostats.

Trial Examiner Sheppard: Finish up what you have got in front of you.

By Mr. Gilpatric:

2593 Q. Campbell Machine Company. This is referred to on page 2375 of the record.

A. This company has been doing business with us since 1925, and until the advent of natural gas in Minneapolis, the prices given them were justified on the basis of their volume purchases. With the advent of natural gas and the resulting keen competition, oil burner manufacturers

in Minneapolis were of necessity extremely price conscious of other components of other manufacturers and the prices of their burners. We knew competition was extremely active with all of our local oil burner accounts, and it was felt if we increased prices to Campbell, we would lose their prices to competition whose prices were lower than we had already been extending Campbell.

Q. The next account is Chandler Company.

Trial Examiner Sheppard: Let me have the name that you just laid down there.

The Witness: Campbell Machine Company.

Trial Examiner Sheppard: That was right in your own city?

The Witness: Minneapolis.

By Mr. Gilpatric:

Q. The next is the Chandler Company, referred to on page 2375 of the record.

A. Our first contract with this company was executed on May 3, 1940. It was a Bracket 2 contract and 2594 called for 1050 instruments. In the remaining eight months of 1940, Chandler purchased 876 instruments, and we gave them another Bracket 2 contract for 1941 calling for 1050 instruments.

Q. That was for twelve months, the new contract?

A. The new contract.

Q. Fairfield Oil Heating Company, Incorporated, page 2376 of the record.

A. These people had a Bracket 2 contract in 1939 calling for 1050 instruments, and they purchased 1146. We gave them another Bracket 2 contract in 1940 calling for 1050 units, and they purchased 937. In these two years, Fairfield bought 2,083 instruments, or an average of 1,041 per year, so we had no hesitance in giving them another Bracket 2 contract for 1941.

Q. Is there any competition in this account?

A. We also had Mercoid's competition to meet with Fairfield, and it is interesting to note our Mr. Patrick's report of June 6, 1940—

Mr. Haycraft: I object to that. There is no talk about a competitor.

Trial Examiner Sheppard: I don't think it is necessary to go into that. Objection sustained.

Mr. Gilpatric: I want to bring this out, though, that—

Trial Examiner Sheppard: You can bring out
2595 about competition. I think that is important.

Mr. Gilpatric: Because the Supreme Court has said—

Trial Examiner Sheppard: And name the competition, but the details is what I don't want. All right. Tie up the next one.

By Mr. Gilpatric:

Q. Well, I would like to ask you, Mr. Lockrae, what was your competition with this account?

Mr. Haycraft: He has already stated it.

Trial Examiner Sheppard: Mercoid.

The Witness: Mercoid was our competition.

By Mr. Gilpatric:

Q. And according to your records, what was the price which Mercoid was extending to this account?

Mr. Haycraft: That is objected to.

Trial Examiner Sheppard: I think that is important. I will let you state that.

The Witness: According to a report in our files rendered by our Mr. Patrick on June 6, 1940, he stated that Mercoid was selling Fairfield controls for about two dollars less per set than our prices.

Trial Examiner Sheppard: That is the detail I want.

The Witness: And our price to Fairfield that time was $17.25 a set.

By Mr. Gilpatric:

2596 Q. So that meant Mercoid's price was $15.25, according to your information?

A. Yes, sir.

Q. Now, when you got reports of this kind, Mr. Lockrae, relating to competitive prices, how did you treat them in your records?

A. Well, as I have testified, heretofore, we maintained what we termed a price file, and we collected all of the reports that came in from the field that had anything to do with our various competitors' prices in that file, and incidentally, this report I just mentioned bears a margin notation stating that "duplicate of this report placed in competitive price file."

Trial Examiner Sheppard: All right.

By Mr. Gilpatric:

Q. General Oil Heating Corporation, page 2376 of the record.

A. This company was given a Bracket 2 contract in 1940.

Trial Examiner Sheppard: Bracket 2?

The Witness: Bracket 2 in 1940, calling for 1050 instruments, and they purchased 1,201. In view of this record, we gave them another Bracket 2 contract calling for 1050 instruments in 1941.

By Mr. Gilpatric:

Q. Hi-Point Corporation, page 2376 of the record.

A. This company was given a Bracket 1 contract 2597 in 1939, and earned a retroactive credit in November of that year which is substantiated by a letter of our Mr. Swanson of November 8th, and they actually purchased 1512 instruments during 1939. They were given a Bracket 2 contract in 1940 calling for 1050 instruments, and our records show that they purchased 1,033. Because they missed their contract quantity in 1940 by only 17 devices and their previous two years' purchases averaged 1,272 instruments per year, a Second Bracket contract for 1941 calling for 1050 devices was extended to them.

Q. Todd Combustion Equipment Company, mentioned on page 2377 of the record.

A. This company had a Bracket 2 contract in 1940 and purchased 1140 instruments. On the basis of this history, they earned and were given a Bracket 2 contract in 1941. Their purchases that year, according to the audit and figures, amounted to 1,517 devices.

Q. Mr. Lockrae, in the record, according to Mr. Reese's testimony, Todd only purchased 972 units during 1941.

A. Those figures were reaudited according to my understanding, and actually they did buy 1,517 devices. Incidentally, our tabulating record which we use in our sales department and which is given to us by our accounting department monthly, showed that they had bought 1,488 instruments.

Mr. Haycraft: May I inquire there, then, if there 2598 was any change made? Was there any change made on that account?

The Witness: In what respect, Mr. Haycraft?

Mr. Haycraft: In the accounting that was made. Did you leave them in that same bracket you had them?

The Witness: Well, yes, because that is where they belonged.

Mr. Gilpatric: The accountants corrected that, as I understand, left them where they were.

Mr. Haycraft: Then I understand there was no change made on this particular account.

Trial Examiner Sheppard: My understanding is that he went again into a Second Bracket.

The Witness: That is right.

Trial Examiner Sheppard: All right, take up the next.

By Mr. Gilpatric:

Q. Enterprise Oil Burner Company, mentioned on page 2377 of the record.

A. Enterprise had a Bracket 2 contract with us in 1940 and purchased 3,451 devices. They were given another Bracket 2 contract in 1941, and they purchased sufficient controls to earn, and they were given, a retroactive credit. Again it will be remembered that a preponderance of Enterprise products consisted of industrial oil burners.

2599 Mr. Gilpatric: That completes all Bracket 2 accounts.

The Witness: Does it?

Mr. Gilpatric: Yes.

Trial Examiner Sheppard: We will excuse you until tomorrow morning.

(Whereupon, at 4:10 p. m., September 18, 1945, the hearing in the above-entitled matter was adjourned to 10:00 a. m., September 19, 1945.)

2600 Room 1123, New Post Office Building,
Chicago, Illinois.
September 19, 1945.

Met pursuant to adjournment, at 10:00 o'clock a. m.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

E. F. Haycraft, Attorney for the Federal Trade Commission.

Wayne & Moore, by R. L. Gilpatric, 15 Broad Street, New York, New York, and Bair & Freeman, by Will Freeman, 135 South LaSalle Street, Chicago, Illinois, appearing for Respondent.

2601 Proceedings.

Trial Examiner Sheppard: We are ready to proceed pursuant to our adjournment taken yesterday.

Show Mr. Lockrae on the stand and show the appearances of these gentlemen and we will go ahead.

A. H. LOCKRAE resumed the stand and testified further as follows:

Direct Examination by Mr. Gilpatric (Continued).

Q. Mr. Lockrae, the next account mentioned in the record in the testimony of Mr. Reese under examination of Mr. Haycraft on January 9th is the Atlas Manufacturing Company.

Mr. Haycraft: What page is that?

Mr. Gilpatric: Page 2378.

By the Witness:

A. In 1940 Atlas purchased 1,258 units under Bracket 2 contract calling for 1050. In 1941 they were given a third bracket calling for 3000 units. In 1941 we originally submitted Atlas a Bracket 2 contract based on our 1940 purchases and as outlined in our Mr. Meder's report of January 31, they decided to accept a Bracket 3 contract

calling for a thousand sets and promised to place an order with shipping dates for 350 sets.

Meder discussed this situation with his superior, W. J. Brown, and the latter called on Atlas on February 5,
2602 1941 to check into the situation further.

As Mr. Brown reports under that date, he explained our agreement and Atlas stated an order for 325 sets of controls to be delivered by April 16, would be made up and sent Mr. Brown.

In Mr. Brown's February 5th report he asked us to prepare a Bracket 3 contract, and on February 11th, being skeptical of what was going on, I wrote Mr. Brown questioning his transaction.

He replied on February 13th, explaining that Atlas was bidding on two building developments of 500 burners each and felt sure they would obtain at least one of them. If they were successful in this, then with their anticipated normal purchases it seemed possible they would fulfill the one thousand set out in our contract.

I acknowledge Mr. Brown's letter on February 17th, expressing my pleasure that he intended to hold up delivery of the contract until he was satisfied that Atlas could meet the quantity specifications.

The Atlas contract was signed on March 3rd, and the initial order for 350 sets was given us. Twenty-five sets were shipped and we were instructed to ship the balance by May 1st. Then apparently Atlas' promise did not materialize, for we never did complete the shipment of the original order. In fact, only 819 units were taken all year.

2603 It will be noted that we offered, and at last accepted, a Bracket 2 contract in 1942.

The manner in which this transaction was handled, I believe, shows that we were diligently trying to protect our price.

Mr. Haycraft: I move to strike that, Mr. Examiner.

Trial Examiner Sheppard: Yes. We do not want the argument. I just want the facts.

Mr. Haycraft: Beginning with that last sentence.

By Mr. Gilpatric:

Q. Well, Mr. Lockrae, would you say this transaction is typical of the way you looked into situations where customers were asking for contracts calling for higher quantities than they had purchased in previous years?

A. Yes, sir. All I am trying to do here is to substantiate what I have testified to previously to the effect that we did not go out and promiscuously give prices without justification to back them up.

Trial Examiner Sheppard: I think, Mr. Lockrae, if I heard you right you said something about a No. 3 bracket in that contract. Was that right?

The Witness: That is right.

Trial Examiner Sheppard: And you referred to that as calling for a thousand sets. Would that call for three thousand sets?

2604 The Witness: One thousand sets, three thousand units, Major.

Trial Examiner Sheppard: That is right. Well, my figures are three thousand units then on that.

The Witness: That is right.

Mr. Haycraft: I suggest, Mr. Examiner, that the witness translate that into units as we go along. Otherwise we will be confused. He uses "sets" one time and "units" another.

The Witness: I will be glad to do that.

Trial Examiner Sheppard: I think it is better. Most of these that you have testified on yesterday are plain to me because they are all—most of them I would say, ninety per cent of them you testified to yesterday were on the 150?

The Witness: That is right. We took these by the brackets where Mr. Warmack did as he went through and that is why they were all 150. Now we have stepped up into the next bracket which is our 1050.

Trial Examiner Sheppard: And that is individual sets?

The Witness: That is right.

Mr. Freeman: Individual units.

Trial Examiner Sheppard: Individual units?

The Witness: That is right.

And this particular man who had been buying in the 1050 unit bracket, due to the anticipated increase in

2605 business that he expected, wanted, and we gave him, a 3000 unit contract.

Trial Examiner Sheppard: That is right.

The Witness: Which condition subsequently pointed out they could not fulfill.

Trial Examiner Sheppard: I get you. All right.

The Witness: And I only wanted to use this as an example of what information I gave you and Mr. Hay-

craft before and you will remember that I testified that we were religiously upholding our policy wherever we possibly could and that no salesmen or anyone in the field was authorized to issue a contract or to make any price revisions. That is strictly under our control in Minneapolis. All of our contracts originate in Minneapolis and we have no blank contracts floating around in the field. No one in the field can make up a contract. No copies are ever sent out except when they are marked "Sample" with a stamp an inch high, because we will not take chances on any of our salesmen or our field organization quoting prices or quantities to a customer without the approval of the home office, and this was a specific instance of that that I came across, and I simply wanted to cite it to uphold what I have said previously.

Trial Examiner Sheppard: All right.

By Mr. Gilpatric:

Q. The next account mentioned in the record is 2606 the DeSoto Oil Burner Corporation, page 2378.

A. In 1940 DeSoto was given a Bracket 2 contract calling for 1050 instruments and earned a retroactive credit which was issued to them on February 25, 1941 and, incidentally, I have the photostat of that here.

Logically we gave them another third bracket contract in 1941, but their purchases dropped to 1977 instruments. This company, like others, that year suffered materially from the oil scare and shortage which curtailed the sale on oil burners and, as a matter of fact, they actually went out of the oil burner business the latter part of 1941. They have not manufactured any burners since that time.

Q. In other words, it was a case where you were predicating your 1941 contract on the 1940 purchases?

A. Yes.

Q. The next company is Diesel Oil Burner Corporation of New York, page 2378 of the record.

A. This company was given a Bracket 3 contract in 1940 which called for 3000 instruments and they purchased 3801. We gave them another Bracket 3 contract in 1941.

Q. The same as the previous case?

A. Right.

Q. The next company is Electrol, Inc., page 2379 of the record.

A. Electrol was given a Bracket 3 contract call-
2607 ing for 3,000 instruments in 1940 and their purchases totaled 2504. We were competing with Perfex in this case and our price to Electrol in 1941 was $15.90 a set; and to substantiate the fact that we knew what was going on price-wise I'd like to quote an excerpt from our Mr. W. J. Brown's report of June 13, 1939, and I quote:

"They, Electrol, Inc., are quoting $4.00 extra on our equipment over Perfex. Suggested to Mr. LaBahn that this be lowered about 50 per cent, which would give his dealers the same benefits his competitive manufacturers are giving to their dealers, which is approximately $2.00; and in many cases no extra difference in control sets of any one particular make.

"I further pointed out to Mr. LaBahn that he could increase his volume of business to obtain a lower price on our equipment. He stated he would take the matter into consideration."

Q. That was then a case in competition?

A. Purely competitive.

Q. Next is Gasconaire, but that's already been covered as being a case of not an oil burner manufacturer?

A. That is right. That was a natural mistake for the auditors to make, Mr. Haycraft, because they actually used an oil burner safety control in conjunction with
2608 their gas burner.

Q. The next company is Gold Star Oil Burner Manufacturing Company, mentioned on page 2379 of the record.

A. These people were given a Bracket 3 contract in 1940, calling for 3000 units and they actually purchased 4160. On the basis of this record we gave them a Bracket 3 contract again in 1941 calling for 3000 instruments.

Q. Gould Engineering Corporation, referred to on page 2379 of the record.

A. This company was given a Bracket 3 contract calling for 3000 units in 1940 and they purchased 4245. In view of this history we gave them a Bracket 3 contract in 1941 calling for 3000 instruments.

Q. Both these companies were on the basis of their previous years' volumes?

A. Yes.

Q. Lynn Products Company, page 2380 of the record.

A. This company was given a Bracket 3 contract in

1940 calling for 3000 instruments, and they actually bought 3318. Again, in view of their previous years' purchase record, we gave them a Bracket 3 contract in 1941 calling for 3000 instruments.

Q. Malleable Iron Fittings Company, page 2380 of the record.

A. This company was given a Bracket 3 contract 2609 in 1941, calling for 3000 instruments. The complete situation surrounding this account is already in the record and shows the controversy that occurred between Malleable Iron Fittings and Minneapolis-Honeywell.

Q. Is that Mr. Gillis?

A. Mr. Gillis. In so far as competitive prices were concerned, we knew that Mercoid was enjoying the greater portion of Malleable's business and it seemed that they would give Malleable prices at least as good as those they gave the S-K Company of Philadelphia and the Bascon Company.

As reflected in our 1940 sales reports from Mr. Dorsey of our Philadelphia office and Mr. Hoyt of our Boston office, Mercoid's prices to both S-K and Bascon were $14.20 a set. This was made up of a Thermostat, $2.70, the KMI Relay at $8.75, and a Limit Control at $2.75.

Our price to Malleable was $15.90 a set, and our reasoning dictated that Mercoid's price would be at least as low as $14.20 a set.

Q. Actually what was it, according to the record in this case, do you recall?

A. The testimony in the record showed Mercoid's price was $13.50 a set.

Q. The price at which you were competing was lower than what you had—

A. Actually anticipated.

2610 Q. Yes.

Sanmeyer Corporation mentioned on page 2380 of the record.

A. This company was given a Bracket 2 contract in 1940 calling for 1050 instruments and they purchased 2913.

In view of the fact that they only lacked 87 instruments of their contract quantity in 1940, which called for 3000 instruments, and because of the better business outlook for 1941, the beginning of the year, we again gave them a contract calling for 3000 instruments.

Trial Examiner Sheppard: In other words, he went up from 2 to 3?

The Witness: That is right.

Trial Examiner Sheppard: Under his showing?

The Witness: That is right.

Trial Examiner Sheppard: All right.

Take up the next one.

By Mr. Gilpatric:

Q. Wisconsin Oil Burner Corporation, mentioned on page 2380.

A. This company had a Bracket 2 contract in 1940, calling for 1050 instruments and their purchases combined with those of the L. J. Mueller Furnace Company to whom they were supplying burners earned Wisconsin a retroactive credit.

During 1940 we sold Wisconsin 1495 units and sold direct to Mueller Furnace Company 2187 units that 2611 were used in conjunction with burners manufactured by Wisconsin.

In 1941 we gave Wisconsin a Bracket 3 contract calling for 3000 instruments. Our direct sales to them amounted to 1376 devices and our sales from Mueller Furnace consisted of 2268 instruments that were used in conjunction with the Wisconsin Burner. This gave Wisconsin a total volume credit of 3644 units.

Q. Is that what you call a dual transaction, Mr. Lockrae?

A. Yes, sir.

Q. Sunray Burners, Inc., page 2381 of the record.

A. This account was affiliated with Kelly Oil Sales Company and we had a Bracket 3 contract calling for 3000 instruments with Kelly in 1939.

During that year they purchased 5005 instruments. In 1940 we gave Kelly another Bracket 3 contract for 3000 instruments, and they bought 2414.

In 1939 and 1940 they purchased 7419 instruments or a yearly average of 3659.

On the basis of this average volume we gave them a Bracket 3 contract in 1941 calling for 3000 instruments, but before the year was over they had quit building oil burners and were buying them from another manufacturer.

Q. Was there any competition in this account, do you recall?

A. The competitive situation was extremely keen and involved Mercoid; and from the potential volume
2612 standpoint it was quite apparent that Mercoid would give Sunray prices equal to or better than those given Bascon or S-K because Kelly Oil Sales was a much larger account than either of those two.

Mr. Haycraft: I move to strike the last statement as purely argumentative.

The Witness: It is our reason in establishing our policy basis of giving these prices, Mr. Haycraft.

Trial Examiner Sheppard: I think that is part of the competitive picture there. Whenever you do have a strenuous competitive picture I think you have a right to explain your side of it.

The Witness: Our price in 1941, incidentally, to Kelly was $15.90 a set and the price that Mercoid had given S-K and Bascon with a lower potential volume was $14.20.

By Mr. Gilpatric:

Q. Yes; and what does the record actually show Mercoid's prices to Sunray to have been in 1941?

Mr. Haycraft: I object to it as irrelevant and immaterial unless this witness knew.

Mr. Gilpatric: Well, Mr. Examiner—

Trial Examiner Sheppard: I did not get that question. Will you read it please?

(The reporter read the question as follows:

"Q. Yes; and what does the record actually show
2613 Mercoid's prices to Sunray to have been in 1941?")

Trial Examiner Sheppard: On that same transaction?

Mr. Gilpatric: I just wanted to show, Mr. Examiner, that Mr. Lockree's information at the time has been subsequently confirmed by what the facts are, to bring out the accuracy of the information under which he was testifying.

Trial Examiner Sheppard: He has already testified to Mercoid.

Mr. Gilpatric: No, Mr. Owens did. I simply wanted to refresh your recollection on this particular account because of the enormous detail in this case.

Mr. Haycraft: My point is, Mr. Examiner, that unless this witness had those figures before him at the time he made this price it is irrelevant and immaterial what it turned out they were. All this is retrospect. It has noth-

ing to do with what prompted him to make the price at the time unless he had the figures before him.

Trial Examiner Sheppard: Mr. Lockrae, if that is in connection with this picture I will let you state that.

The Witness: I only stated here, Major, that according to our best judgment Mercoid would give Kelly Oil Sales or Sunray a price at least equivalent of the prices they were giving; and we knew that they were giving to S-K and Bascon $14.20 a set.

Now, I only pointed out that we were on the con-
2614 servative side because the record actually shows they paid $13.70 a set for Mercoid's controls.

Trial Examiner Sheppard: And your prices were $15.90?

The Witness: Our price was $15.90.

By Mr. Gilpatric:

Q. The price you thought you were going to meet was $14.20?

A. Was the $14.20 price.

Mr. Haycraft: I move to strike that last question, Mr. Examiner, as not in accordance with the facts or the record and that it has no probative value. If you read the question you will find that it refers to a situation that does not exist.

Trial Examiner Sheppard: Well, the record contains both sides of that question. I will let it stand.

Mr. Haycraft: What he said, Mr. Examiner, was that that was a price that he met. He did not meet any price.

Mr. Gilpatric: No; I said, "going to meet".

Mr. Haycraft: Or, "going to meet". He did not meet it or never attempted to meet it, apparently.

Mr. Gilpatric: Under the statute you are not required to.

Trial Examiner Sheppard: All right, gentlemen, that is a matter of argument. Go ahead.

2615 By Mr. Gilpatric:

Q. Hart Oil Burner Company, page 2381 of the record.

A. This company had a Bracket 3 contract calling for 3000 instruments in 1940 and they purchased 4446. In view of this record we gave them another Bracket 3 contract in 1941 calling for 3000 instruments.

Q. The next company is York Oil Burner Company, Inc., page 2381 of the record.

A. In 1939 we sold York 4712 devices and in 1940 we sold them 2524, making a total of 7236 or a yearly average of 3618.

On the basis of this history we gave York a third bracket contract calling for 3000 instruments in 1941.

Q. Was there any competition in this account? Do you recall?

A. Perfex competition was encountered during 1940 and 1941; and we realized we were up against an appreciable price difference.

Q. What was the price difference according to your information that you had to take into account?

A. Well, we knew that Perfex were giving Reif-Roxoil an account with less potential than York, a price in the neighborhood of $14.65 and this was outlined in our Mr. Chapler's report of September 27, 1939.

Now, in addition, we knew that control prices were declining and in view of that it seems to us that our price to York in 1941 of $15.90 a set would not come any-
2616 where near meeting the prices that they were obtaining from Perfex, and again the record shows Perfex price to York in 1941 was actually $13.70 a set.

Trial Examiner Sheppard: Against $15.90 for you?

The Witness: Against our price of $15.90.

Trial Examiner Sheppard: All right. Go ahead.

By Mr. Gilpatric:

Q. The next company is the R. W. Beckett Engineering Company, page 2383 of the record.

A. I am going to ask your indulgence a little bit in going over this account because again it simplifies one of the situations that we were faced with constantly.

In 1939 we gave Beckett a Bracket 2 contract calling for 1050 units and the quantity of their purchases, combined with those of Fox Furnace Company, to whom they were supplying oil burners, warranted a retroactive credit.

Trial Examiner Sheppard: When was that?

The Witness: That was in 1939.

A. (Continuing)—and that substantiated my letter of February 9, 1942 our audit department requesting that this credit be issued.

2256 sets of oil burner controls were shipped to Fox by us in 1939, which would be the equivalent of 6768

devices and we shipped direct to Beckett 1560 in-
2617 struments, making a total of 8328 units that Beckett received credit for.

By Mr. Gilpatric:

Q. What was the situation in 1940 in that account?

A. Well, late in 1939 Beckett lost the Fox Furnace Company business and we did not think that the quantity of Beckett's purchases during 1940 would warrant a Bracket 3 contract calling for 3000 instruments. Consequently we presented, and Beckett signed, a Bracket 2 contract calling for 1050 units. This was on January 11, 1940.

Then Beckett made a deal with Olson Manufacturing Company of Elyria, who are large operators in the furnace business, to supply them with burners; and here Mercoid's competition came right into the picture.

Q. Have you any information as to that competition to this account?

A. Frank Snowberg, in his report of January 11th, at which time he presented and Beckett signed our second bracket contract, points out that Mercoid was giving Beckett prices on the JMI Pyrotherm of $8.25, and the Sensatherm at $2.50, a total of $10.75 for the two pieces of equipment.

The price we had given Beckett in our second bracket was $10.65 for the RA 117 relay and $3.75 for the Thermostat, making a total of $14.40. In other words, our price was $3.65 higher than Mercoid's.

2618 Q. Now, what did you do about that?

A. Well, that is a situation that I got into personally and on February 9, 1940 Mr. Snowberg and I called on Beckett Engineering and Mr. Beckett complained bitterly because we had raised his price over the previous years. Because he could buy Mercoid controls at approximately $4.00 a set less than MH, he said he had no recourse except to start using some of their equipment.

It was during this visit that I gave Beckett a $1.00 lower price, which was the same as our Bracket 3A. He could still buy Mercoid for approximately $3.00 less per set and as a result in 1940 Beckett only purchased 1993 instruments from us.

Q. Do you know whether Mercoid sold the balance of Beckett's requirements for that year?

A. I don't know how many controls Beckett bought

from Mercoid but I do know that on March 11th Mr. Snowberg again reported that Beckett had made a deal with Olson Manufacturing Company and it was obvious that the difference in control price was too much for Olson to overlook and Mercoid equipment was listed in their price list.

It is also significant that during 1940 Olson did not purchase a single oil burner relay from us; and from this we can only deduce that all the burners which they sold were equipped with Mercoid's controls.

2619 Q. That happened in 1941 with this account?

A. In 1941 the competitive stiuation was just about as it had been heretofore. We presented, and Beckett signed, our contract calling for 7500 units.

Trial Examiner Sheppard: That is a 3A contract?

The Witness: 3A contract.

A. (Continuing)—During that year it was again significant that Olson only purchased two oil burner relays from us.

By Mr. Gilpatric:

Q. Now, when you said, Mr. Lockrae, that you personally handled this account, you mean you personally called on the customer?

A. The situation was so acute that I thought it was necessary to make a trip to Elyria in order to find out just exactly what the setup was and what was going on.

Q. But the other account you testified to you are personally familiar with, you supervised?

A. That is right. Our price to Beckett in 1941 was $15.35 a set. And if Mercoid continued their 1940 price of $8.25 for the Pyrotherm, $2.50 for the Sensatherm, and $2.75 for a Limit Control, which we knew was the prevailing price of several manufacturers, this would make the Mercoid set $13.50 net or, in other words, our price was still $1.85 higher than Mercoid.

Q. This account then was entirely competitive;

2620 it wasn't a question of previous volume purchases justifying your 1941 contract?

A. This account illustrates what we were up against competitively and also the steps that we had to take to preserve our share of the business.

Trial Examiner Sheppard: All right. Go on to the next one.

By Mr. Gilpatric:

Q. The next account is Bethlehem Foundry & Machine Company, page 2383 of the record.

Trial Examiner Sheppard: Before you go on, what was that last account, the name of it?

The Witness: Beckett, B-e-c-k-e-t-t, Engineering Company.

Trial Examiner Sheppard: All right. Go ahead.

A. Bethlehem had a Bracket 3A contract in 1940 calling for 7500 units and they actually purchased 9,191. In view of this record we gave them another Bracket 3A contract in 1941 calling for 7500 instruments.

By Mr. Gilpatric:

Q. D'Elia Oil Burner Company, page 2383 of the record. Pardon me, that is 2384 of the record.

2621 A. The company had a Bracket 3 contract in 1939 calling for 3000 instruments and they actually purchased 6397. When they decided to enter the low price burner field in February of 1940 it seemed, from their previous years' purchase record, that they would only have to increase their volume by 20 per cent, roughly, in order to earn our Bracket 3-A contract which covered 7500 instruments.

Q. Was there any competition on this account?

A. We were faced with Mercoid competition and it was quite apparent from the facts that we had that Mercoid would give us a price at least as low as they had extended Bascom, S-K or possibly Beckett Engineering, because D'Elia offered a greater potential than these accounts.

The S-K and Bascom Mercoid price was $14.20 a set and our price to D'Elia in 1940 was $16.25 a set and the record shows that Mercoid actually sold D'Elia for $14.20 a set.

In view of this competitive situation with Mercoid in 1940, in 1941 we again gave D'Elia our Bracket 3-A price which was $15.35 a set and the record shows that Mercoid actually quoted $13.70 in 1941, whereas they quoted $14.20 the previous year.

Q. This next company is U. S. Burner Corporation, page 2384 of the record.

A. This company had a Bracket 3 contract in 1940
2622 and their purchases were sufficient to warrant a retroactive credit. This is confirmed by letter of our Mr. Swanson to our Order Department on December 27, 1940.

In view of this 1940 record we again extended the Bracket 3-A contract in 1941, calling for 7500 instruments.

Q. That brings us to Bracket 4 and upwards. Have you any general statement to make as to the distinction between the two types of accounts, that is, these Bracket Discount 3-A and Brackets 4, 4-A and 5?

A. Well, before going into a lot of detail as to the so-called off-scale accounts in Brackets 4, 4-A and 5, I should like to point out that for the year 1941 all such accounts were handled directly out of our home office, either by Mr. Pauling, who, I am sorry to state, has died since he testified in this proceeding, or by myself.

Trial Examiner Sheppard: We will take a five minute recess.

(Whereupon, a short recess was taken.)

Trial Examiner Sheppard: We will resume. Will you proceed?

By Mr. Gilpatric:

Q. Mr. Lockrae, you were talking about the brackets, 4A and 5 accounts when we recessed.

A. Well, as I explained, either Mr. Pauling or I
2623 contacted a majority of those accounts and so our files don't contain as many reports from our branch offices and salesmen relating to these larger accounts as was the case with the brackets we have already covered.

And I believe it should also be noted in contrast to the spotty competition which we encountered in selling the small and medium-sized oil burner accounts, competition for the larger accounts is constant and ever present.

Trial Examiner Sheppard: In other words, you do not have as much trouble with your big accounts as you do with the little ones?

The Witness: No, just the reverse. This is because all of our competitors go after the big volume accounts, whereas they do not have the manpower or organization to strenuously compete for the smaller ones.

By Mr. Gilpatric:

Q. Now, the first of these Bracket 4 accounts that is mentioned in the record is Ray Oil Burner Company and it is mentioned on page 2384 of the record.

A. This company was primarily an industrial burner manufacturer, but they did produce some domestic units. In 1941 they started the year with a Bracket 3A contract

calling for 7400 units; and our records show that we shipped them 19,544 instruments that year. Our order department was requested to issue a retroactive credit on December 11, 1944, giving this customer the benefit 2624 of our Bracket 4 prices.

Q. Do you encounter any competition with this account?

A. As with all accounts of that magnitude, we did encounter competition.

For example, in our Mr. Peterson's report, which was received February 5, 1940, he listed price Ray was paying Mercoid as $13.75. Our comparable equipment would have sold Ray for $15.50.

We were told that Ray used quite a few of the Mercoid controls and to our knowledge they are continuing to use them on some types of orders today.

Q. Now we will take up Century Engineering Company, mentioned on page 2385 of the record.

A. Well, Century was a highly competitive account and both Penn Switch and Mercoid had enjoyed an appreciable amount of their business for several years.

We knew that Mercoid had prices as low as $8.25 on the J. M. Constant Ignition Control, $2.50 on the Thermostat; and it was common knowledge their Limit Control was being sold as low as $2.75.

This made Mercoid's price per set $13.50 and our 1940 price to Century was $14.75.

Q. What about Penn?

A. Well, in 1941 Penn started to sell Century their No. 661 Primary Control at $6.57 each. A sales report of 2625 our Mr. Henry C. Carlson, dated July 23, 1941, substantiates this.

On the basis of this new primary control of Penn's Century was able to buy their set for $11.57 and this set included the 661 at $6.57, the Thermostat at $2.50, and a Limit Control at $2.50.

Our price to Century for the Constant Ignition set of controls was $14.05 in 1941.

It is also interesting to note that the record shows in this case that Penn Switch price to Century in 1941 was $14.40 and in 1940 was $13.50. Because of this price it is apparent that it was based on the Penn No. 670 control and not on their lower priced No. 661.

Q. What was Mercoid's price to Century in 1940?

A. Mercoid's price to Century in 1940, according to the records, is $13.50.

Q. Did you get any of Century's business?

A. We did—

Q. In the face of this competition?

A. We did get a share of Century's business, but in order to do it our prices had to be somewhat commensurate with the competitive prices we knew existed.

Q. The next company is Harvey-Whipple, page 2386 of the record.

A. In 1939 we were obtaining the majority of this
2626 company's business; but the situation surrounding the account became highly competitive in 1939, during which year Perfex obtained about one-half of the business. This was reported by our Mr. Chapler under date of February 7, 1940; and the report further points out that Perfex was hammering so hard to get more of this business that they even offered to put in a consignment stock of any size that Harvey-Whipple would want.

Perfex sold Harvey-Whipple in 1939 and it seemed that they were willing to give Harvey-Whipple, with their potential, a price that was equal or better than they had extended to Reif-RexOil, because Reif-RexOil did not have nearly the potential that Harvey-Whipple had.

This price was $14.65 per set per Perfex whereas our price to Harvey-Whipple in 1940 was $15.85 and in 1941 it was $14.90.

Q. What were Mercoid's Perfex prices in those years?

A. Well, it is interesting to find in the record that both Mercoid and Perfex priced their controls to Harvey-Whipple in 1941 at $13.70 a set and it also shows that Mercoid's price during 1940 to Harvey-Whipple was $13.50.

Q. Could you increase your prices in the face of that competition?

A. We found ourselves in no position to increase prices
2627 to Harvey-Whipple during these years, as this would often have tended to throw more of their business to competition.

Q. The next company is Norge Heating & Conditioning Division of Borg-Warner Corporation, mentioned on pages 2386 and 2387 of the record.

A. Well, again I am going to ask your indulgence, Major, because here is another case that typifies a few more of the problems that we had to encounter in conducting our business.

We started doing business with Norge on the volume basis in 1939 and during that year they purchased 15,390 instruments.

Trial Examiner Sheppard: That was in what year?

The Witness: In 1939.

Trial Examiner Sheppard: In Bracket 4?

The Witness: Well, I will have to check on that.

A Voice: That's right, Bracket 4.

Trial Examiner Sheppard: All right, go ahead.

A. (Continuing.) Then they began to gradually drop out of the heating business and, as a matter of fact, they returned a quantity of surplus instruments to us in 1939.

But during that year they were again preparing to build burners and the price of controls was a very decided factor.

As shown in our Mr. Peterson's report of February 6, 1939, Norge asked for prices on 500, 1000 and 1500
2628 sets of our controls. Prior to that time we had submitted our Bracket 3 contract calling for 3000 instruments and the price per set was $16.65.

It was not felt, in view of the large stock of controls which Norge had on hand, that they would have need for more than an additional 1000 sets.

Q. What was the competition encountered?

A. It was with both Penn and Perfex and that is borne out in Mr. Peterson's report of February 6th and that same report also points out that Perfex was about $2 under us on a set of oil burner controls and this meant that the Perfex price was in the neighborhood of $14.65 a set.

Then on March 8, 1939, our Mr. Kaiser, who had charge of our branch in Detroit, called on Norge and he was again advised that they could obtain Perfex controls for $2 less per set and that they would give Norge this low price on any order for 24 or more controls of one type at one time; whereas we were asking Norge for an order for 5,000 sets in order to get our lower price.

Q. What happened about that Perfex competition?

A. We [illegible] we didn't meet it but we did give Norge the benefit of our Fourth Bracket prices and this amounted to $15.95 [illegible] set of controls.

Q. What happened in 1940?

A. We [illegible] continued Norge in our Fourth
2629 Bracket which called for 15,000 instruments and our price that year was $15.85 a set and we continued in the same bracket in 1941 when the price became $14.90 per set. And our sales to them in 1941 amounted to 10,771 units.

Q. Did you consider increasing your price in the low-bracket as far as purchases were concerned?

Mr. Haycraft: That is objected to as irrelevant and immaterial whether he increased his price.

Trial Examiner Sheppard: Yes.

By Mr. Gilpatric:

Q. What did you do on that?

Trial Examiner Sheppard: I will let you tell me what you did about it.

A. Well, if we had been lacking in foresight during the controversy which came up in 1939 and if we hadn't dropped our prices 70 cents on a set of controls in order to at least show a willingness to come closer to competition, as sure as I am sitting here we would not have continued to enjoy any appreciable part of Norge's business.

Q. What about the Penn competition?

Mr. Haycraft: I move to strike that out as problematical and hearsay.

Trial Examiner Sheppard: Well, that should be considered in connection with that competition.

The Witness: It is a fact.

2630 Trial Examiner Sheppard: It seems to me from the figures there that that fits lower into a 3-A contract there.

The Witness: According to quantity.

Trial Examiner Sheppard: According to quantity.

The Witness: But to maintain that business, we had to give them our Bracket 4 price.

Trial Examiner Sheppard: I see. All right.

By Mr. Gilpatric:

Q. Now, what about the Penn competition?

A. Well, in addition to Perfex, we very well knew that Penn Electric Switch Company would obtain an appreciable part of the Norge Refrigeration control business.

They also built refrigerators and we also knew that if they combined, that is, if Penn Switch combined the Norge purchases of refrigeration controls with Norge heating control volume, that Penn would be in a position to quote them their low volume business on the oil burner controls and that would only be a natural thing for them to do. We would do the same thing.

But we were really up against competitive prices which

I think could be best illustrated by quotation from our Mr. Kaiser's report or letter of February 12, 1940, and I quote:

"I have been in touch with Norge in connection with
2631 getting a contract signed. I have not been able to get a session with Mr. Mueller, Chief Engineer, for the past three weeks. This morning I had a session with H. Rowley, purchasing agent. You will remember that you sent me two contracts, one based on Bracket 3 and the other on 3A. You will also remember that we have been giving them Bracket 4 prices during 1939. Accordingly, a Bracket 3 contract would be an increase of 70 cents a set and 3A would mean an increase of 30 cents per set of oil burner controls over 1939.

"Rowley hit the ceiling and said that this was the best we could do. They would have to make a change in controls. I explained to him our bracket requirements, Robinson-Patman and our regular arguments, including that fact that we played along with them during 1939, but to no avail.

"He stated that this was just about the worst time for us to try to get a price increase because the manufacturer of the furnace casting and jacket had just increased their price on that part of the unit, making it necessary for them to look for a new source of supply. They have not been able to find a new source of supply at the same price and it was accordingly their plan to continue and to absorb
the price increase themselves until such time as they
2632 could get a new source of supply at a lower price.

He said regardless of our bracket structure, they had been paying a premium for using M-H controls and could save considerable by using other controls with their own name on them, presumably Perfex."

And there is an additional quotation from Mr. Kaiser's letter of February 12, 1940, and I quote:

"I won't attempt to go into any further detail because you will appreciate that I used every argument that we have. Therefore, to sum it up, it now stands as follows, that unless we continue them on the 1939 basis they will switch to other controls."

Q. That was the Bracket 4 basis in 1939?

A. That's right.

Trial Examiner Sheppard: What was done about it?

The Witness: Well, my judgment was that if we had attempted to increase Norge price, we would have lost

this business and we therefore gave them a price of $14.90 per set in 1941, which was still higher than the price at which they obtained Perfex controls in 1939.

Trial Examiner Sheppard: That would put them in Bracket 4?

The Witness: Right; and from the competitive price stand in our potential, we felt certain that Perfex 1941 price would be considerably less than they had quoted
2633 in 1939.

Trial Examiner Sheppard: I thought that was the amount of units that he bought in 1940.

The Witness: In 1940.

Mr. Gilpatric: The record shows on page 2387 that Norge bought 10,771 units.

Trial Examiner Sheppard: Well, that figure would put him in Bracket 3A, wouldn't it?

The Witness: Yes.

Mr. Gilpatric: That's right.

The Witness: In quantity.

Mr. Haycraft: That is the 1941 figure.

The Witness: Was that 1941? Yes, that's right, that was 1941. Well, I can tell you what it was. I brought the record book along with me.

In 1940 we sold them 3325 instruments, according to our record, and you will remember that I previously stated that they were carrying inventory which they had purchased the previous year.

Trial Examiner Sheppard: All right, go ahead.

By Mr. Gilpatric:

Q. Take the account of Paragon Oil Burning Corporation mentioned on page 2387 of the record.

A. Well, in 1939 Paragon started out with a Third Bracket contract calling for 3000 units and they ac-
2634 tually purchased 10,330. They earned, and they were given, a retroactive credit.

And during 1939 they also used some Mercoid controls as evidenced by our Mr. Meder's report of September 13, 1939.

As a matter of fact, they pushed Mercoid controls wherever it was possible to do so through the builder trade and we had this competitve situation facing us in 1940.

Q. Then what bracket did you give them for the year?

A. In view of the quantity that Paragon had purchased in 1939, we gave them a Bracket 4 contract in 1940 calling for 15,000 instruments, and they actually purchased 13,700.

Q. What bracket did you give them in 1941?

A. Well, again, because of the competitive situation that existed in 1940 and the fact that their purchases amounted to 13,700 instruments, we gave them our Fourth Bracket contract in 1941 which called for 15,000 devices. They actually purchased 14,501, which was just 499 short of meeting our contract obligation.

Q. What was your information at that time on a competitive price situation?

A. Well, our price to Paragon that year was $14.90, that is, in 1941. And from the price information gathered from the field in 1941 it seemed to us that Mercoid would have quoted Paragon at least as low a price as they did
2635 Beckett Engineering Company, which, considering the limit control of $2.75, amounted to $13.50 a set.

Now, again, that seemed obvious because Paragon had a greater potential than Beckett Engineering.

Q. Can you confirm that in any way?

A. Well, I could confirm that from the purchases which Beckett made from us and also which Paragon made from us, just those figures, not including the competitive controls that they use, showed the comparison potential.

Q. What about the price?

A. Well, this set price of $13.50 was also confirmed in a letter of January 13 from our Mr. Jennings of our Boston office, showing Mercoid had quoted Weatherall Engineering, Inc., a concern of not nearly as large potential as Paragon, $13.50 a set.

Here we have a $13.50 set from Beckett Engineering Company, out in Elyria, Ohio; we have a $13.50 set price reported on Weatherall Engineers, from Providence, Rhode Island.

Trial Examiner Sheppard: That is against your price of $14.90, isn't it?

The Witness: $14.90, yes, sir.

By Mr. Gilpatric:

Q. That was the competition in that account?

A. Yes.

2636 Q. All right. Now, take this Reif—

A. I'd like to make one more remark with reference to this account, because on June 17 our Mr. Jennings reported that Korth Oil Company, also a Bracket 4 customer, had been quoted Mercoid prices of $7.50 on the J. M. Constant Ignition Control; $2.50 on the Thermostat, and $4.75 on the combination Control.

Trial Examiner Sheppard: Making the whole thing what?

The Witness: This made this whole set $12.75 and our comparable price on the same equipment figured $14.05 a set.

By M. Gilpatric:

Q. Was Korth in the same bracket as Paragon?

A. Yes, sir. Now, we will pass to Reif-Rexoil, Inc., which is mentioned on page 2387 of the record. In 1939 we have a Third Bracket contract with Reif calling for 3000 devices and they actually purchased 7157.

During that year Reif reported that they had purchased approximately 2000 sets of Perfex controls; that they cost them $2 less than our controls and that they were working out okay.

Q. That is 6000 units?

A. Yes, sir. Our price per set was $16.65 and on that basis they would have paid Perfex $14.65.

2637 The report of Mr. Chapler on December 27, 1939, contains the reference to Perfex controls just outlined. And while he was skeptical concerning the number of Perfex controls sold by Reif in 1939, yet it is interesting to note that the price information they gave us was correct.

The record shows that Perfex price to Reif during 1939 was $14.65 per set.

Trial Examiner Sheppard: Against your price of what?

The Witness: Against our price of $16.65.

By Mr. Gilpatric:

Q. What happened in 1940 with this account?

A. To maintain our position with Reif and come closer to the competitive situation that we knew existed at that time, we gave them our Fourth Bracket price of $15.85 per set and they purchased 6756 units; and again in 1941, due to the same Perfex competition, we gave Reif our Fourth Bracket price of $14.90 per set.

Q. What were Perfex prices in those years, 1940 and 1941?

A. Well, it is interesting to note from the record that Perfex 1940 price to Reif was $14.15 a set and their 1941 price was $13.70 a set.

Trial Examiner Sheppard: Against your $14.90?

The Witness: Against our price of $14.90.

Trial Examiner Sheppard: All right. Go ahead.

2638 By Mr. Gilpatric:

Q. The next account is Scott-Newcomb, mentioned on page 2387 of the record.

A. Well, Mr. Scott, who heads up this company, is one of the pioneers in the oil burner industry and we have been doing business with his company for the past ten years or more.

Trial Examiner Sheppard: Didn't he testify in this case?

The Witness: No, sir.

Trial Examiner Sheppard: I thought he did.

The Witness: You have a man from Electrol, and I was about to state here that prior to this Mr. Scott was associated with Electrol, Inc.

Trial Examiner Sheppard: I see.

A. (Continuing.) Mr. Pauling always contacted this account from the home office but I do recall his visit with Mr. Scott the fore part of 1939, at which time he was given our $15.95 per set price.

I remember distinctly a discussion that we had and Mr. Pauling's firm conviction that competition was after this account and that he had had to give this price in order to retain our share of the business.

In view of the fact that Perfex had sold concerns with similar or lower potential at $14.65 per set and Mercoid at $15.40 a set, it seemed understandable to us why
2639 we would have to radically lower our price to Scott-Newcomb if we were going to keep any of their business.

Q. Did you?

A. In 1939 we originally extended a price of $21.05 per set.

Q. What year was that?

A. 1939, and in that year Scott purchased 3262 instruments.

Q. What about 1940?

A. Well, in 1939 the record shows that Perfex' price was $15.70 a set against our price of $15.95.

In 1940, Penn Switch was $15.15 a set against our price to Scott of $15.85.

Now, during 1940, and to uphold Mr. Pauling's judgment in this case, Scott-Newcomb purchased 8034 instruments.

Q. What was your price in 1941 to Scott?

A. In 1941 our price was $14.90 a set and he purchased 9003 instruments.

Trial Examiner Sheppard: All right. Take the next one.

By Mr. Gilpatric:

Q. The next company is Silent Glow Oil Burner Corporation, mentioned on pages 2387 and 2388 of the record.

A. We enjoyed the majority of Silent Glow's business in 1938. However, Perfex' price competition came
2640 into the picture during 1938 and 1939 and it still existed in 1940.

We gave Silent Glow a price of $15.85 per set in 1940 and they purchased 9782 devices; but a substantial portion of their volume that year was supplied by Perfex. And due to Perfex competition that continued in 1941, we gave Silent Glow a price of $14.90 and they purchased 11,290 devices.

From the information in our price file we were aware, in 1939, that Perfex had quoted a company where there was less potential $14.65 per set of controls, that company being Reif-Rexoil.

And in selling Silent Glow at $15.85 per set in 1940 and $14.95 in 1941, it was felt that we had not gone as low as the Perfex price, and we also knew that Perfex prices had declined since 1939.

Q. Wayne Oil Burner Company, referred to on Page 2388 of the record.

A. This was a highly competitive account and we had to do business with them on that basis.

This case record also contains considerable testimony with reference to this company and the preponderance of their purchases during the years of 1940 and 1941 was from our competitors.

Q. That was Mercoid, wasn't it?

A. It was primarily Perfex. Had we increased
2641 prices to Wayne during these years, it is my judgment that we would have gotten even a smaller percentage of their business.

Q. The next company is Korth Oil Burner Corporation.

A. These people head a Bracket 4 contract in 1941 which called for 15,000 instruments and they actually purchased 22,739. They earned and received a retroactive credit.

There is already in the record a considerable amount of evidence as to why we had to extend prices which we did in order to obtain some of Korth's business in the face of lower competitive prices that existed.

Mercoid was our competition with this account and Korth purchased their controls from us on builders' jobs and where a competitive price difference of a few dollars meant losing or getting the business. Korth reported to us that in 1940 he purchased 2000 sets of Mercoid that were used in this manner.

Q. 6000 instruments?

A. 6000 instruments.

Q. Do you have any information on Mercoid prices to this account?

A. Well, with reference to Mercoid prices, it is interesting to note our Mr. Jensen's report of June 17, 1941.

Korth was able to buy the Mercoid Thermostat for $2.50, the J. M. Primary Control for $7.50, and the Mercoid Combination Control for $4.75.

2642 This made a total of $14.75 for the set and at that time Korth was paying us $2.95 for the Thermostat, $9.15 for the RA-116 Constant Ignition Relay and $5.25 for the Combination Control. This made a total of $17.35 a set.

In other words, Korth was in a position to use Mercoid controls on competitive jobs and save $2.60 per set.

Q. Did you know about any sales of Korth burners with Mercoid controls?

A. Well, Thatcher Furnace Company was a good customer, of course, and used their burners in the furnaces that they sold. And on May 7, 1941, our Mr. Jensen reported that Korth had sold 1300 burners to Thatcher with Mercoid controls.

Q. Now, take the company called Nu-Way Corporation, also mentioned on page 2388 of the record.

A. In 1938 we gave Nu-Way a Bracket 2 contract calling for 2250 units and a price per set of $19.35.

There was a shakeup in the Nu-Way organization and on March 29 we learned that a Charles P. Culbert had taken over a sales manager at Nu-Way. This information was contained in a report from our Mr. Cochrane and a report also pointed out that Perfex had quoted a price about $4 lower than ours.

On May 3d I received a letter from Mr. Culbert
2643 asking what prices we were going to charge the Nu-Way Corporation that year and he went on to state, and I quote:

"You understand, of course, that in order to accomplish my objectives this year I need a competitive price based

on future requirements more than present possibilities of purchase. Please write me at Rocky Island so I will have the information when I return there on May 9."

I made an appointment to see Mr. Culbert the following week and in the meantime received another letter from Mr. Cochrane dated May 7, 1938, outlining that Mr. Culbert had really turned things upside down, that the controls made by Penn would be standard at $2.50 net extra to dealers for Mercoid; and that there would be a $5 net extra charge to the dealer for Minneapolis-Honeywell controls.

I visited Mr. Culbert, as I had promised, and his whole object in this meeting was to beat down our prices. He did not accomplish his objective and although we maintained our price, yet we only sold Nu-Way 1676 instruments. We had sold them 2753 in 1937 and 4561 in 1936.

Q. What happened in 1939?

A. Well, in 1939, knowing of this competitive situation, we gave them our Bracket 3 price of $16.65 per set and we sold them that year 2106 units; and it was during 1939 that Mr. Culbert and Nu-Way parted company.

2644 Q. Did that make any difference?

A. It made a decided difference and, as pointed out in our Mr. Cochrane's report of February 22, 1940, our quotation that year was such that Nu-Way felt justified in making a $2 net extra charge to dealers and $1.50 net extra charge to distributors when M-H controls were supplied with their burners, and this represented their actual cost difference between the two controls, that is, between Penn Switch and Minneapolis-Honeywell.

Q. Did you have any information in your records at that time as to Penn Switch prices to Nu-Way?

A. Well, on the report just referred to there is a notation at the bottom which reads:

"Duplicate filed in price file. Carly."

This again substantiates the fact that we did maintain price files wherein all competitive price information was kept and this particular report, and because of my own confidence in Mr. Gipple's integrity—he is the secretary of Nu-Way Corporation—proved to me that the Penn Switch controls were bringing a price to Nu-Way of $14.75 per set.

In 1940 we lowered our price to $16.25 per set, and in that year Nu-Way purchased 3641 devices.

Q. What happened to Nu-Way's business during that year?

A. During 1940, under the guidance of Mr. Clockau and Mr. Gipple, Nu-Way's business increased remark-
2645 ably and, after learning that they were supplying several well-known furnace companies, such as Bard Manufacturing Company of Bryan, Ohio, Dewey-Sheppherd, Maywood, Illinois, Haul-Neal Furnace Company, Indianapolis, Indiana, the Majestic Company at both Huntington and Indianapolis, Indiana, Seasonaire Corporation of America, Detroit, the Train Company of La Crosse, Wisconsin, we naturally felt in view of competitive price situations and their increased volume, that we should give them our Bracket 4 prices for 1941.

The contract called for 15,000 units, the price per set was $14.90 and Nu-Way purchased 5875 instruments direct from us.

However, in addition to the instruments that we shipped direct to Nu-Way in 1941, we sold oil burner controls direct to Nu-Way manufacturing accounts for a total of 1986 sets.

Q. How many instruments?

A. Now, then, on the basis of three units per set of controls we could give Nu-Way credit for 5958 instruments which we shipped direct to their customers and this total, combined with our direct shipments to Nu-Way of 5875 devices, made a total credit for the year of 11,833 instruments.

Now, from a total of 1676 units shipped to Nu-Way in 1938, when Mr. Culbert was in charge, to a total of
2646 11,833 instruments in 1941, is a record in which we take justifiable pride, particularly when this was accomplished in the face of keen competition and without extending prices that were lower than our competitor.

But if we had not lowered our prices to Nu-Way as we did, we would not have gotten that volume of business.

Q. Anchor Post Fence Company.

Trial Examiner Sheppard: Your lowered price in that instance was still higher than the competitive price?

The Witness: Yes, sir.

Trial Examiner Sheppard: By how much? Can you tell me the actual figure on that?

The Witness: Well, as I pointed out here, Major, in 1940 they were purchasing from Penn Switch at $14.75 and our price that year was $16.25. That is $1.50 difference per set.

By Mr. Gilpatric:

Q. What was their price in 1941?

Trial Examiner Sheppard: Was that the 1940 price you just gave me?

The Witness: That was the 1940 price.

Trial Examiner Sheppard: See if you can give me the 1941 price.

The Witness: That was $14.90 a set. I do not have their record, but remember their previous year's price
2647 of Penn was $14.75. Our 1941 price was still higher than theirs. It was $14.90.

Trial Examiner Sheppard: It was pretty close together, though, wasn't it?

The Witness: That is right.

Trial Examiner Sheppard: All right. Go ahead.

A. Anchor Post Fence was given a price of $19.85 on a set of controls and a contract for 7500 units. In 1937 we sold them 7660 instruments.

I am going back quite a ways here in order to develop this story.

In 1938 Perfex nad Mercoid competition appeared and a report of our Mr. Dorsey pointed out that Anchor had received prices anywhere from $12 to $19 a set and that Mercoid had quoted $13.50 per set.

This was $6.35 less than our 1937 price and it was very apparent that we were going to have to lower our price structure if we were to continue to enjoy Anchor's business.

So we extended a price of $17.25 to Anchor in 1938, but this price was so unattractive that they standardized on Perfex controls and we sold them only 1941 instruments.

Trial Examiner Sheppard: Your price was not low enough to suit them?

2648 The Witness: That was exactly the case and our volume dropped between 1937 and 1938 a total of 6239 instruments.

This keen competition continued in 1939 and we lowered our price to $16.65 per set and that year sold Anchor 4056 instruments as against 1421 the previous year.

Perfex was again standard equipment during that year and Anchor charged the dealer $3 extra when a burner was supplied with our controls. Our files show that we would have to meet a price of around $13.85 but we did not see fit to do it.

Trial Examiner Sheppard: What is the lowest price there that you quoted on that?

The Witness: Up until 1939 it was $16.65.

Trial Examiner Sheppard: Go ahead.

Q. All right.

A. (Continuing.) Then in 1940 we still faced the Perfex competition and we knew that we were up against a Perfex price of $13.85 for we had indications that their prices were dropping.

We gave Anchor a price of $15.15 per set and they purchased 4327 instruments. In other words, we just about held our own for the previous year when they bought 4056.

2649 In 1941, with a repetition of the competitive situation we had faced the previous year, we ended up by giving Anchor a price of $14.25 a set and they purchased only 3359 instruments even with our lower price. Their quantity fell off from the previous year's purchases. We were confident that Perfex had again lowered their price to Anchor in 1941 and I so informed our Mr. Chapler in my letter of March 7th of that year, pointing out that as near as I could figure from the information that we had accumulated from the field, that Perfex was quoting Anchor $13.20 for a set of Intermittent Ignition Controls and $12.70 on the Constant Ignition. We did not lower our price of $14.35 a set even though we were confident Perfex was away underselling us, and as a result it is estimated that we got only about 15 per cent of Anchor's business in that year.

By Mr. Gilpatric:

Q. Even though they had your Bracket 4A prices?

A. That is right.

Trial Examiner Sheppard: We will take a brief recess.

(A short recess was taken.)

Trial Examiner Sheppard: Let us proceed.

By Mr. Gilpatric:

Q. The next company is Automatic Burner Corporation, which is mentioned in the record at Page 2389.

2650 A. Automatic Burner was given a Bracket 4A contract in 1940 and their purchases that year amounted to 15,739 instruments. In addition, we sold Holland Furnace Company 15,129 units for use with ABC

Burner, which made a grand total of 30,868 devices credited to Automatic Burner Corporation.

This earned them a retroactive credit and it was given to them as shown in our Mr. Swanson's memo to our Order Department on December 10, 1940. We gave Automatic Burner a Bracket 5 contract in 1941 calling for 30,000 instruments, and their direct purchases amounted to 19,851 instruments.

Holland Furnace purchased 21,315 units that year, making a grand total of 41,166 instruments to ABC's credit.

Q. Was that a dual transaction?

A. That was a dual transaction, yes, sir.

Q. What about competition in this account?

A. We were confronted with competitive situations at Automatic Burner year after year.

As a matter of fact, in 1940 and 1941, they started to use Perfex controls and we knew it. Because of Automatic Burner's potential, we likewise knew that Perfex could give them their very best price, which was lower than the prices we extended. The record shows the competitive situation we [illegible]ed and also that our prices 2651 were higher than competition.

Q. This was a case that Mr. Hirsh testified about?

A. Yes, sir.

Q. He was the president of this company?

A. He was the president, but he is since deceased.

Q. The next company is Cleveland Steel Products Corporation, referred to on page 2390 of the record.

A. This account has always been extremely competitive and the record shows our basis of doing business with them. Our prices were always higher than our competitors' prices.

Q. Who was the witness there?

A. O'Brien, Mr. J. L. O'Brien.

Trial Examiner Sheppard: I remember he testified in this case.

Mr. Gilpatric: In Cleveland.

By Mr. Gilpatric:

Q. All right. That is already covered, then, in your testimony.

Trial Examiner Sheppard: I remember his testimony very well.

Mr. Gilpatric: We won't go into that one further then.

By Mr. Gilpatric:

Q. Delco Appliance Division of General Motors Corporation, mentioned in the record of this case on page 2390.

2652 A. As I testified previously, this company made its own thermostats and primary controls. So our sales to them in 1941 consisted of primarily limit controls. We sold them 23,524 limit controls and gave them our low price.

You will remember that customers obtained our lowest price on limit controls in our Bracket 4A, which calls for 22,500 instruments.

Q. You mean in Bracket 5 there is no lower price on limits?

A. Yes, sir, and on that basis Delco's purchases on limit controls actually exceeded the Bracket 4A quantity.

But further testimony that I have already given points out that limit controls were shelf items, that one manufacturer's make was on a par with their competitors' and I know that Delco could have purchased their limit controls from our competitors at the same price as we extended them.

Q. What about competitive prices on limit controls taken as a unit?

A. Our prices on limit controls have followed competition's prices, and we have never been able to obtain a price premium on limit controls.

Q. Did Delco use any other devices than limit controls?

A. Yes. They used some miscellaneous devices in 1941, to the best of my knowledge. The oil burner
2653 controls that they bought were used for replacement purposes, and they were also building gas furnaces and purchased some of our gas burner controls, such as gas valves, pilots, thermostats, to use therewith.

Q. That competition there was limited entirely to limit controls?

A. Virtually to limit controls. Delco also manufactured a stoker in 1941 and they used Perfex controls exclusively with that stoker.

Q. The next company is Gilbert & Barker Manufacturing Company, mentioned on page 2391 of the record in the previous hearing in this case.

A. This concern has been one of our major accounts for a great many years and were extended our lowest prices.

In 1939 they began to develop and sell low priced burners and selected Penn Switch controls as standard therewith.

As reported by our Mr. Chapler on October 2, 1939, Gilbert & Barker had sold about 3000 of the Penn-equipped burners. In our Mr. Chapler's report of December 4, 1939, he says, and I quote:

"Mr. Elliott said they had tried out the new low-priced Penn switch stack control and that it seemed to function okay. He is putting one of these jobs in his home for observation and test."

2654 In 1940 we quoted our RA-116 Constant Ignition Protector Relay at $7.80 to Gilbert & Barker. And again, from Mr. Chapler's report of June 27, 1940, we learned that the price of the new Penn Switch Relay was $7.30.

It should be remembered that Gilbert & Barker were buying our RA-116 Protector Relay at that time for $8.45 but they had been advised that we expected to have our new RA-116 Relay available a few months hence and that it would be priced at $7.80.

Q. As against the Penn Switch Relay of $7.30?

A. Of $7.30. Gilbert & Barker reported to have sold about 3000 Penn-controlled equipped burners in 1939 and they continued to merchandise them during 1940.

Q. What happened in 1941?

A. We maintained our price of $7.80 on the RA-116 Relay and Gilbert & Barker standardized on the Penn control for their burner.

It was reported they purchased between 8,500 and 12,500 sets of controls from Penn and the saving of approximately 50 cents per set, in my opinion, was the determining factor in our losing this volume of business.

Q. Who got the preponderance of Gilbert & Barker's business from you?

A. It is my understanding, during that year, that Gilbert & Barker gave Penn Electric Switch Company
2655 the preponderance of their business.

Q. Did you ever quote a price as low as Penn Electric Switch's price?

A. To my knowledge, we never quoted a price to Gilbert & Barker or to anyone else as low as Penn Electric Switch.

I would like to point out that they were given our lowest prices and yet these prices were not low enough for us to get the preponderance of their business.

Q. That is a big account, isn't it?

A. A big account.

Trial Examiner Sheppard: Can you give me, without any trouble, the difference between your lowest price that you gave them and the price that got the business?

The Witness: Well, the principal factor there, Major, was on the primary control and then Penn Primary Control was priced to them, according to our Mr. Chapler's report, at $7.30 and our control at $7.80. So there was a 50-cent price premium being paid us for our control.

By Mr. Gilpatric:

Q. That was after you had lowered your price?

A. That was after we had lowered our price.

Trial Examiner Sheppard: All right. Take up the next one.

By Mr. Gilpatric:

Q. The next one is May Oil Burner Corporation, 2656 mentioned on page 2391 of the record.

A. This account has been a consistent user of M-H controls but Perfex began to knock at their door in 1938 and our files show that May installed 25 sets of their controls for test that year.

Also later in 1938 our files show that Perfex had presented their new high-voltage constant ignition control to May and that they advised it was to be priced between $6 and $7.

Q. Was there any other competition for this account?

A. We knew that Penn Electric Switch Company was active in this account in 1938 and with our accumulated competitive price data we were certain that our competitors quoted May prices that were lower than ours.

We felt it was necessary to give them our best prices in order to hold this business and we knew that our low price was higher than our competitors' low prices.

Q. The next company is Micro-Wesco, Inc., also mentioned on page 2391 of the record in this case.

A. In 1939 a competitive situation arose with Penn and Micro was given our Third Bracket contract calling for 3000 units. They actually purchased 3,089.

As shown in our Mr. Cochrane's report of February 1, 1939, Micro standardized on Penn controls and charged a price difference when M-H controls were supplied.

2657 Q. There was an extra charge on M-H controls?

A. To their dealers when they were supplied. As

borne out in our Mr. Reichow's report of April 17, 1939, Micro packed either a Penn or an M-H primary control with each burner and when M-H was sold it was priced at $1.50 over Penn.

Q. What happened in 1940?

A. Well, the competitive situation became even more acute in 1940 and I called on Micro, in company with our Mr. Cochrane, on January 3.

Micro had started to build up their volume through sales to furnace and boiler manufacturers and we gave them our Bracket 4 price of $15.85.

Inasmuch as I had been led to believe that the $1.50 price difference which Micro had charged in 1939 represented the difference in price between our controls and Penn Switch, it seemed to me that our price reduction of 80 cents would still make our prices higher than Penn.

We sold Micro 6526 instruments direct in 1940 and in addition supplied several thousand instruments to the furnace and boiler manufacturers to whom they were selling burners.

With sales to Lenox and their other manufacturing customers, plus our direct sales to Micro, their overall volume exceeded 30,000 instruments.

2658 Now, obviously, this volume of business would be sufficient for any of our competitors to quote Micro their very lowest prices and again we knew that our competitors were soliciting this business.

Our prices were higher than competition. Micro was entitled to our lowest prices on a volume basis and I am convinced if we had quoted any higher prices that competitive controls would have received plenty of consideration, as they did back in 1939 when the price difference was $1.50.

Q. The next company is Timken Silent Automatic Division of the Timken-Detroit Axle Company.

A. The record already contains several phases of the testimony with reference to our business dealings with this company in 1941. The keenest of competition existed. Our competitors' prices were less than ours and they got the larger share of Timken's business.

Q. Even though Timken got your best prices?

A. Yes.

Trial Examiner Sheppard: I remember that, gentlemen.

Mr. Gilpatric: Rockwell & Crawford.

Trial Examiner Sheppard: There were several of them.
Mr. Gilpatric: Yes.

2659 By Mr. Gilpatric:

Q. The next company is Williams-O-Matic Heating Corporation, referred to on page 2391 of the record.

A. The record already discloses the competitive situation existing with this account and it has existed every year that we have been doing business with Williams. Our prices were always higher than competition. As a matter of fact, Williams charged more for their burners equipped with our controls until 1939.

Trial Examiner Sheppard: Is this Williams-O-Matic?
The Witness: Yes, sir.
Mr. Gilpatric: We have a lot of testimony on that, too.
Trial Examiner Sheppard: Yes. I remember.
Mr. Gilpatric: That was the case where Penn—
The Witness: Both Penn and Mercoid were involved in that competition.

By Mr. Gilpatric:

Q. Well, now, there is one other account that is mentioned on page 2481 of the record and that is Ace Engineering Company, a Bracket 1 account. It is out of order but it will go in later in the record. Can you explain about that?

A. Ace Engineering Company had a Bracket 1 2660 contract in 1941 calling for 150 or more instruments and our audited records show that they purchased 1,072 devices. In checking I find a retroactive credit memorandum was issued them in the amount of $251.50, equalizing the cost of their controls to our Bracket 2 status.

Q. Now, Mr. Lockrae, can you very briefly just sum up this testimony you have given so that we have in one place a brief statement on it?

Mr. Haycraft: I object to that, Mr. Examiner He made a statement in the beginning, an introductory statement.

Trial Examiner Sheppard: Well, it may be helpful to all of you. It may be helpful to me. We will let him do that.

A. This detailed explanation of each of the off-scale accounts has taken so long that it might be helpful for me to sum it up in a few words.

Of the 77 accounts characterized by Mr. Warmack as being "off-scale", one, namely Gasconaire, was not an oil burner manufacturer at all and was erroneously included by Ernst & Ernst in their original cost study.

Of the 76 remaining accounts, 6 were instances of retroactive credits where the customer was, by the end of the year, given the benefit of the control prices to which the quantity of his purchases entitled him. That leaves
2661 70, of which 40 fall into the category where, on the basis of the facts known to us at the time the contracts were issued, we were justified in extending prices we did. That justification usually took the form of the customer's past performance, that is, where either his purchases during 1940, or the average of his purchases for the years 1939 and 1940 equalled or exceeded the contract quantity on which his 1941 prices were based.

In a few of the forty instances we didn't rely entirely on past performance, but were influenced by the customer's prospects for future business. By that I mean not merely what business he thought he would do but actual orders of which we ourselves knew or other factors that we could check independently.

Then there were 8 accounts where the facts called for a different explanation. Four of those were examples of what have been referred to as "dual transactions", that is, where to arrive at the true volume of the oil burner manufacturer we had to take into account not only our direct control sales to him but also our sales of controls to furnace manufacturers who bought their burner units from him.

Then there were two instances where we were dealing with new customers and had no past performances to guide us in determining contract quantity and in two
2662 other instances the account either went out of business during 1941 or converted to war work.

This leaves only 22 out of the 77 cases referred to by Mr. Warmack as to which the principal consideration affecting our determination of the price bracket to be extended to the customer was the competitive situation. In each of those cases I have given you the information as to competitive conditions which we knew we had to meet and which influenced our decision as to which bracket the customer should be put.

These 22 accounts represent only a small part of our contract customers so that percentagewise the number of instances where we in effect departed from our bracket structure to meet competition was relatively small and nothing like the percentage that might have been inferred from Mr. Warmack's original list of 77.

Mr. Gilpatric: That is all.

Mr. Haycraft: Mr. Examiner, I should like to have the notes that the witness used in this direct examination so that I can go over them, and also I would like to defer cross-examination until tomorrow so that I could have a copy of the record that is made.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: We shall reconvene in
2663 this room at 10 o'clock on Wednesday, October 3, 1945.

We now stand adjourned.

(Whereupon, at 12:15 p. m., September 19, 1945, the hearing in the above-entitled matter was adjourned.)

2664

Room 1121, New P. O. Building,
Chicago, Illinois,
Wednesday, October 3, 1945.

Met, pursuant to adjournment, at 10:00 a. m.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Attorney for the Federal Trade Commission.

Cravath, Swain & Moore, by R. L. Gilpatric, 15 Broad Street, New York, N. Y., and

Bair & Freeman, by Will Freeman, 135 South La Salle Street, Chicago, Illinois, appearing for Respondent.

2665

Proceedings.

Trial Examiner Sheppard: All right, gentlemen, we will come to order.

Miss Reporter, you will convene the hearing in the matter of Minneapolis-Honeywell Regulator Company, Docket No. 4920, ordered by the Examiner to be reconvened in Chicago, October 3, 1945, at 10:00 o'clock in the morning of said date.

Show Mr. Everett F. Haycraft appearing for the Commission, Mr. Will Freeman and Mr. Gilpatric appearing for the respondent.

Show Mr. Arthur F. Lockrae having been previously sworn on the stand for cross-examination by the Commission.

ARTHUR F. LOCKRAE was thereupon called as a witness by the respondent and, having been previously duly sworn, testified further as follows:

Cross-Examination by Mr. Haycraft.

Q. Do you have a list of the twenty-two accounts that you testified were accounts that were sold on the competitive basis, that is to say, the differences in price were based on competition?

A. I haven't a list of those.

Q. You said there were 22?

2666 A. Yes, that can be easily compiled.

Q. How long will it take you to get that?

Mr. Gilpatrick: We have got it here, I think.

Mr. Freeman: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: I think it would be a good idea to list those in the record.

A. B. & W. Oil Burner Service Co. Do you want the record read?

By Mr. Haycraft:

Q. Yes.

A. 2366-7.

Mr. Gilpatric: That is the original record reference, you know.

A. (Continuing.) Campbell Machine Company, 2375, Electrol, Inc., 2378, Malleable Iron Fittings Company, 2380; R. W. Beckett Engineering Company, 2383, D'Elia Oil Burner Co., 2383, Century Engineering Co., 2385, Harvey-Whipple, Inc., 2386, Norge Heating & Conditioning Division, Borg-Warner Corporation, 2386, Paragon Oil Burner Corporation, 2386, Reif-Rexoil, Inc., 2387, Scott-Newcomb, Inc., 2387, Silent Glow Oil Burner Corporation, 2387, Wayne Oil Burner Company, 2388, Anchor Post Fence Company, 2389, Cleveland Steel Products Corporation, 2390, Delco Appliance Division, General Motors Corporation, 2390, Gilbert & Barker Manufacturing

2667 Company, 2390, May Oil Burner Corporation, 2391, Micro-Westco, 2391, Timken Silent Automatic Division, Timken-Detroit Axle Company, 2991, Williams Oil-O-Matic Heating Corporation, 2391.

Trial Examiner Sheppard: Those are the 22?

Mr. Gilpatric: Yes.

Mr. Haycraft: I only get 20 on that.

Mr. Gilpatric: 22.

Mr. Haycraft: Yes, that is right.

By Mr. Haycraft:

Q. Have you made any computation or calculation of the quantity of sets or units both, in those 22 accounts during the year 1941?

A. We have those records and I think they are already in the record.

Q. You haven't any tabulation of that?

A. I wouldn't make any tabulation on that.

Q. First with respect to the B. & W. account, that is located in Chicago, Illinois?

A. Yes, sir.

Q. I believe you stated that the Berryman Oil Burner Company was a predecessor?

A. That is right.

Q. Now, in your testimony you stated that you gave them a Bracket 1 contract in 1941 because Mercoid
2668 Corporation was still your competition as they had been at the Berryman Oil Burner Company?

A. Yes, sir.

Q. And you also stated that the highest manufacturer's price given by Mercoid in 1940 that you knew of was to the Fairfield Oil Heating Company. Where was that located?

A. Let me think. It is down in Connecticut. I just don't recall offhand the city, where they are located.

Q. Well, did you have any information as to the price at which Mercoid was selling to the B. & W. or Berryman?

A. We had no specific information that I know of as to what the exact Mercoid price was to either Berryman or B. & W.

Q. Ordinarily what would you say was the differential in price between the Mercoid set and your set as was generally understood or observed in the trade?

A. Well, that would all depend on the quantities that you are thinking about.

Q. Let us say equal quantities.

A. Well, here is a typical case before us of this B. & W., and, as I stated here, the highest price that we knew of that Mercoid was quoting was $18.10 a set. Now, our comparable price, as I recall, on our first bracket was $20.25. There is $2.15 difference between those two prices.

Q. And did you enjoy any business with the Berry-
2669 man Company at that differential?

A. I have to check our records on that. I believe we did sell them some controls but in what quantity I would have to go back to the records.

Q. That was back in 1939?

A. Back in 1940 and 1939. They were in business several years prior to 1940, 1941.

Trial Examiner Sheppard: 1939 or 1940?

The Witness: They were a small account here in Chicago and I do know we sold them some controls prior to 1941.

By Mr. Haycraft:

Q. Now, I notice your testimony you often referred to your bracket prices in previous years. Now, can you tell us what changes were made? You mentioned the years 1938, 1939 and 1940 before 1941. Could you give us the bracket changes, the changes in bracket prices for those years so that we have a comparison?

A. Again, if I am not mistaken, you already have that.

Trial Examiner Sheppard: I was going to say I thought that was in the record already.

Mr. Gilpatric: It is in the stipulation, Exhibit 1.

Mr. Haycraft: Do you have all those figures there?

Mr. Gilpatric: Yes.

Trial Examiner Sheppard: Yes, that is all in that 2670 Exhibit 1.

(Document handed to Mr. Haycraft.)

The Witness: Off the record?

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Mr. Haycraft: In other words, your price was $18.10?

The Witness: Yes, not $20.25 and the lowest price of Mercoid was $15.25 in 1940. So the difference there was $2.85 on the set of controls.

Mr. Freeman: That is, your price was higher throughout?

The Witness: Higher by $2.85.

By Mr. Haycraft:

Q. Now, in 1941, your top bracket price was $17.35?

A. That is right.

Q. That is Bracket No. 1?

A. Yes, sir.

Q. So that brought you somewhat closer to the Mercoid price?

A. Providing the Mercoid price didn't also drop in 1941.

Q. Well, did you have any information as to whether it did or did not drop, I mean, as of that time?

A. I can't say that we had comparable information on the Mercoid high price in 1941.

Q. Now, I notice that in your bracket prices your 2671 1941 prices were less than your 1940 prices on all brackets. Can you tell us the reason for that reduction in bracket prices?

A. As I have testified before, those bracket prices were

set according to the information that we had that would enable us to maintain our business in the face of competition. It is pretty well indicated right here with this price of Mercoid of $15.25 a set in 1940, the high price that we had the record of, versus a price that we had of $18.10 and we felt it advisable to lower our price to come closer to that competition.

Q. In other words, your $17.35 was $2.10 more than that $15.25?

A. Yes, sir, if they didn't lower their price again in 1941.

Q. Did you further lower your bracket prices in 1942?

A. Those prices have remained stable ever since. If you will recall, I believe the testimony shows that we put through a 10 per cent increase in November of 1940, but reverted to the old price at the request of OPA in February, I believe it was, of 1941. So there were only those slack months there. Let's see, that would be three months that those prices were in effect.

Q. Those were the 1940 prices?

A. Those were the 1941 prices.

Q. I mean, 1941 prices?

2672 A. That is right. In 1942 we reverted to the previous 1941 prices.

Q. There was no time, then, after December, 1941, that you observed any other bracket prices other than those indicated on this form?

A. Yes. There were three months until February of 1942. I believe I misstated that at first. I was thinking that price change occurred in November of 1940, but it was November of 1941 and we reverted back to these prices.

Trial Examiner Sheppard: 1941?

The Witness: 1941.

By Mr. Haycraft:

Q. To the 1941 prices?

A. Yes.

Q. What was it in that three months' period?

A. Well, I can't give you the exact figures, but it was roughly 10 per cent increase for those three months.

Mr. Gilpatric: Over your 1941 price?

The Witness: Over the 1941 price.

By Mr. Haycraft:

Q. Well, was that increase made because of the let-up in competition?

A. That increase was—
Q. The lack of competition?
A. Increased costs.
Q. Did you then disregard the competition that
2673 you had in making those higher prices?
A. We felt that our increased costs justified an increase in our prices of 10 per cent. We had had no increase basically in prices since 1937 and we decided to increase our prices approximately 10 per cent and that is what was done, regardless of what the competitive situation was.
Trial Examiner Sheppard: That showed up on all the brackets?
The Witness: All the brackets.

By Mr. Haycraft:
Q. Now, in Chicago at the time that you were selling to the B. & W., at the Bracket 1 prices, you had other customers that were being sold at higher bracket prices?
A. Again I would have to check, Mr. Haycraft, because if we did it would be a discount manufacturer. There might have been some in Chicago.
Q. Well, I have in mind the Automatic.
A. Well, you said at higher prices.
Q. Higher brackets.
A. Oh, you mean lower prices?
Q. Yes.
A. Yes, we did sell other manufacturers at lower prices than we sold B. & W. in Chicago.
Q. And the Automatic, A. B. C., was one of them?
A. That was one of them.
2674 Q. And can you recall any other accounts in Chicago at that time, offhand? How about Sanmeyer?
A. Yes, that is one.
Q. And are you sufficiently familiar with the business of those concerns to know whether or not they sold their burners equipped wtih Minneapolis-Honeywell devices, controls in and around Chicago? In other words, were they competitive?
Mr. Freeman: Are you talking about retail price, wholesale price, jobbers' price, or are you talking about comparable equipment or whether or not the burners were installed? What are you talking about?
Mr. Haycraft: I am talking about the sale of a burner containing the controls, equipped with controls.

Trial Examiner Sheppard: Did you get the question, Mr. Lockrae?

The Witness: If I understand your question correctly, Mr. Haycraft, you are asking me if I knew that Automatic Burner Corporation, B. & W., and Sanmeyer sold burners in Chicago in 1941 equipped with our controls?

By Mr. Haycraft:

Q. That is right.

A. That is a question I could not answer definitely, because Sanmeyer, A. B. C., and B. & W. were also using competitive controls. Now, what type control they put
2675 on their burners when they sold them in Chicago, I could not say.

Q. Well, you sold the controls for use in the burner?

A. Wherever they might sell them.

Q. Now, take the account of Chalmers Oil Burner Company in Minneapolis, Minnesota. Now, that account you said you were selling at Bracket 1 prices, which calls for 150 minimum because you knew that Chalmers were purchasing burners equipped with your controls in the Aldrich Company in sufficient volume to make their combined usage of your controls in excess of 150 instruments per year. You sold controls to the Aldrich Company?

A. Yes, sir.

Q. Did you give them a volume discount?

A. Yes, sir.

Q. What bracket did you sell them?

A. They bought at our lowest price, Bracket 5.

Q. You refer to that sort of a transaction as a dual transaction?

A. Yes, sir.

Q. That is, within this case, though, you gave one customer Bracket 1 prices and another customer Bracket 5 prices; is that right?

A. That is right, in view of the different quantities involved in their purchases.

Q. Why didn't you give the Chalmers the same
2676 bracket price you did the Aldrich?

A. Well, that seems to be perfectly obvious. Aldrich was buying in excess of 30,000 instruments a year from us. Chalmers is a small manufacturer. His quantity, when he was building all of his own oil burners, wouldn't have warranted better than a Bracket 1 price.

Q. In fact, wouldn't have warranted a Bracket 1 price?

A. In previous years it would warrant a Bracket 1 price, possibly a Bracket 2.

Q. You stated here that Chalmers bought in sufficient volume to warrant a combined usage of controls in excess of 150 instruments. How many did they buy from you?

A. I can't tell you exactly how many they bought, Mr. Haycraft. I do know, and I am pretty sure, that the oil permits in the City of Minneapolis and St. Paul, while I haven't looked them up, I would be willing to gamble that they showed Chalmers installed in the Twin Cities far more burners than the requirements to make 150 units that is involved.

Q. Now, I take it that you, as a matter of more or less gambling or estimating as to what Chalmers might or might not do, that was the basis for your determination of what bracket you put them in, is that right?

A. No, sir, that is not right. To me there was no gamble involved at all. Here is Chalmers that had been in
2677 business in Minneapolis, to my knowledge, since 1927 and their business consisted of the sale of oil burners and Mr. Chalmers, Mr. Rosche, his engineer, and his office help lived all those years and apparently comfortably on the profits they made in the sale of oil burners and they certainly couldn't do that if their sales were confined to anywhere near 50 oil burners a year, and, incidentally, their credit was very good.

Q. Well, the direct purchases in 1940 were 36.

A. That is right.

Q. And you had no figures to note how many more they bought?

A. I had no figures, concrete, at that time, but it was the safest assumption in the world; so far as I was concerned that they bought in excess of 50 burners from the Aldrich Company.

As a matter of fact, Mr. Haycraft, just to confirm that, I chatted with Mr. Chalmers over the phone when this question came up and he told me at that time that he had bought far in excess of the 50 that were required to make this 150 unit purchase from Aldrich.

Q. But you did not get that information before you made the price?

A. No, it was not necessary. It was so perfectly obvious that I wouldn't have wasted five minutes to
2678 settle that question in my own mind.

Q. Did you contact Chalmers direct before that

contract was signed, yourself? Did you make any calls on them?

A. Oh, I have made calls on Mr. Chalmers at times, but never any number a year or anything of that sort. Our local Minneapolis man handled that account like he handled the others in Minneapolis.

I had met Mr. Chalmers. In this event or another he would come up to the office to see us occasionally. I would drop in to see him occasionally, but just when I couldn't tell you.

Q. Now, did you call B. & W.?

A. No.

Q. Now, are there any other accounts in Minneapolis that you were selling at different bracket prices in 1941?

A. Yes.

Q. What other accounts were they?

A. Well, just from memory, without referring to the record, Mr. Haycraft, we were selling Chalmers in Bracket 1, we were selling Campbell Machine Company in Bracket 2, and we were selling the Hubbard Company in Bracket 2. I can recall those from memory.

Q. On that Campbell Machine account, while we are up there in Minneapolis, we might as well take that up.

What information did you have with respect to that 2679 concern's requirements before you made the contract?

A. We were quite familiar with the operation of the Campbell Machine Company. Again they were an old-established concern in Minneapolis.

Q. Well, what factor did you take into consideration before you determined to put that in a Bracket 2 contract?

A. Just as I previously testified, Mr. Haycraft.

Q. Well, it is rather general, your testimony. I am trying to get more specific testimony.

A. We knew the condition of the oil-burning industry in Minneapolis. We know that our competition was active in Minneapolis. As a matter of fact, before Mr. Chalmers started to sell the Aldrich burner, he was buying a preponderance of his controls from Perfex. That same situation faced us with these other accounts in Minneapolis. We had competition at Hubbard Oil Burner Company from Perfex and we just knew that if we increased either Hubbard's price or Campbell Machine Company's price that we were faced with a loss of that business and we continued them in Bracket 2.

Trial Examiner Sheppard: What year was that?

The Witness: 1941.

Trial Examiner Sheppard: And the previous year the same price?

The Witness: The same price.

By Mr. Haycraft:

2680 Q. Then you did not take into account in making that bracket price to them any quantity that they might have bought or might buy in the future?

A. As I have just testified, Mr. Haycraft, we went into that situation with our eyes open. We knew the competitive situation existed and we maintained that at the previous year's price with the full knowledge that we would lose that business or a goodly portion of it if we attempted to increase our price in the face of an already lower competitive price. It was perfectly obvious that Perfex—

Q. What were the competitive prices there? You did not tell us that.

A. We are right back again to our knowledge of Mercoid's price with Fairfield Oil Heating of $18.10. We knew that they would be tickled to death to quote that account $18.10 or probably a better price in order to get that business. That was the competitive price that we had in mind.

Q. Well, I am trying to find out whether or not you had any information from the officials of Campbell Machine Company as to the price they were being sold by either Perfex or Mercoid or that were being offered by Perfex or Mercoid.

Mr. Freeman: You mean the specific price or lower price?

Mr. Haycraft: A specific price.

The Witness: I couldn't say that we had that
2681 specific price information as regards Campbell Machine Company.

Q. Well, you gave them a better price than you did Chandler. Why was that? Are they in the same competition as Chandler that you had there?

A. Campbell's purchases were greater than Chandler's. They were a bigger operator. They always had been a bigger operator.

Q. What do you mean? Had their purchases from you been more?

A. Their overall purchases or their purchases from us had been more.

Q. What were their purchases in 1940?

A. I would have to refer to the record on that.
Q. And how many did they purchase in 1941?
A. I do not have my book.
Mr. Gilpatric: That is not in the record.
The Witness: I am sorry that I do not have that with me. I do not have that information for you.
Mr. Haycraft: Off the record?
Trial Examiner Sheppard: Off the record.
(Discussion off the record.)
Trial Examiner Sheppard: On the record.
The Witness: Here it is, 505 instruments.

By Mr. Haycraft:

Q. In 1941?
2682 A. In 1941.
Q. Do you know how much Chalmers bought in 1941?
A. The record shows they bought direct from us 36, and just how many they bought from Aldrich with their burners, I don't have specific knowledge.
Q. Now we turn to—first, before we have that, were there any other accounts in Minneapolis that you sold in 1941?
A. Well, the one that I just mentioned, the Hubbard Oil Burner Company and their name hasn't been mentioned, to my knowledge, heretofore.
Q. Do you know what bracket they were sold in?
A. They were sold in Bracket 2.
Q. And what were their purchases?
A. I am sorry. According to this record, Mr. Haycraft, Hubbard was in Bracket 1. They bought 274 instruments.
Q. That is where they are entitled to be?
A. That is where they are entitled to be.
Mr. Freeman: Let the record show that the document just referred to by the witness Lockrae was certain papers made by the Federal Trade Commission.

By Mr. Haycraft:

Q. The next account I want to direct your attention to is the Goodrich Oil Burner Company of New Haven, Connecticut, page 2575. Is this one of your 22 accounts?
Mr. Gilpatric: No, it is not.
2683 The Witness: No.

By Mr. Haycraft:

Q. Well, I understand from your testimony here that they had standardized on Mercoid controls?

A. Yes, sir.

Q. And used yours as optional equipment?

A. That is right.

Q. And sold their burners when equipped with your controls at a premium price?

A. Yes, sir.

Q. In 1940 you stated you lowered your prices, so you might come closer to Mercoid's prices. You make a comparison there of $17.25. That was the price that you offered them—you offered to Goodrich in 1940.

Now, let's see what bracket that would be in. $17.25 was your Bracket 2 in 1940, was it not?

A. Yes, sir.

Q. And do you know whether you got any business from them at that price or not? 343 controls; is that right?

A. That is right; 343 instruments.

Q. Now, do you know what price they were paying Mercoid at the time that you were able to sell them 343 instruments?

A. I don't know specifically the price that they were paying Mercoid. We did know, however, that Mercoid were selling accounts that we would call comparable at a

2684 price that was less than ours.

Q. You mean comparable in quantity?

A. Quantity.

Q. Number of burners put out?

A. Number of burners put out.

Q. How did you have those facts? How did you know how many oil burners this concern put out?

A. Well, after you have been in this business for several years, Mr. Haycraft, and you get reports from salesmen, one of the things that you are naturally curious about—the salesmen is—is how their customers are progressing, how many burners they are building and that is a common question to ask a customer, "How many burners did you turn out in 1940 or 1941?"

Q. Well, this Goodrich account was comparable with what other account that you knew when you were informed were buying controls from Mercoid?

A. Well, Goodrich, in my opinion, would be comparable to the Bascom Company in Boston. We knew Mercoid was selling Bascom in 1940 for $14.20 a set of controls.

Q. How did you know that?
A. From our sales reports.
Q. That is, your salesmen reported that?
A. Our salesmen reported that.
Q. How did he know?
2685 A. In discussion with the customer.
Q. So there was a difference then of $3, almost, or $3.05?
A. On that basis.
Q. And, in other words, you were able to sell 343 instruments to Goodrich in 1940 at a premium of $3.05?
A. That is right.
Mr. Gilpatric: The record already shows a $5 differential on controls for Goodrich. When Johannsen testified in Philadelphia he told us about that.

By Mr. Haycraft:

Q. Now, when you put them in Bracket 1 in 1941, you were charging 10 cents more in 1941 than you did in 1940; is that correct?
A. Yes, sir, that is correct.
Q. So that your Bracket 1 price in 1941 was almost the same as your Bracket 2 price in 1940?
A. That is right.
Trial Examiner Sheppard: Mr. Lockrae, did your competitors raise prices at the same time?
The Witness: To my knowledge—
Mr. Freeman: This was not a raised price.
The Witness: This was not a raise in price.
Mr. Freeman: This was not a raise in price that Mr. Haycraft just referred to because he is referring to a discount bracket and Bracket 1.
2686 Trial Examiner Sheppard: I understand, but I want to go back. You said in 1941 you did raise your general prices in all brackets 10 per cent?
The Witness: That was in the fall of 1941.
Trial Examiner Sheppard: That is right.
The Witness: And that applied to our 1942 business, for three months only.
Trial Examiner Sheppard: For three months only?
The Witness: That is right.
Trial Examiner Sheppard: Oh, I see.
The Witness: That was put back on the old basis at the request of the OPA.
Trial Examiner Sheppard: I see.

By Mr. Haycraft:

Q. To your knowledge, did your competitors increase their prices at about the same time?

A. I am not positive that all of them did that, Mr. Haycraft, I know that one company, one competitor did. I am not sure as to the others.

Trial Examiner Sheppard: And the same amount, 10 per cent?

The Witness: I don't know that, Major. I don't know what that price was.

Trial Examiner Sheppard: All right, go ahead.

By Mr. Haycraft:

2687 Q. Can you tell me how many controls the Goodrich bought from your firm in 1941?

A. 66 instruments.

Q. And still you did not know what they were paying Mercoid at the time?

A. I did not know specifically what they were paying Mercoid.

Q. Why is it you did not list this account as one of the competitive accounts?

A. They were justified by their previous year's purchases. They bought 343 units in 1940. Logically it would only be safe to assume that they could buy at least 150 in 1941.

Q. Well, now, as I understand it, the 22 accounts are not the only accounts where you had competition with Mercoid and Perfex?

A. Certainly not. We had competition with every account.

Q. But they are the only accounts where you say to us now that the off-scale prices were made to meet competition?

A. Of course they were.

Q. As a matter of fact, you had this competition with Mercoid and Perfex in all your accounts?

A. Practically all of them.

Mr. Freeman: We will concede that.

By Mr. Haycraft:

Q. In some places you cut your price by off-scale
2688 selling in order to come near their price; in other places you didn't; is that right?

A. That is right.

Q. In other words, there was not any uniformity in your practice at all?

A. Oh, yes, there was uniformity. When you take the number of accounts we have—and we are talking about a few here that were off-scale—I think that there was comparable uniformity in our method of doing business.

Q. All right. We will take the next one now of Quiet Heet Oil Burner Company of Brooklyn, on page 2577. I don't want to confuse that with Quiet Heet over in Newark.

A. That makes quite a difference.

Q. I think you testified there that you placed them in Bracket No. 1 because they bought 679 instruments in 1940, is that right?

A. Yes, sir.

Q. What other accounts were you selling in Brooklyn at the time, do you recall?

A. No, I don't, Mr. Haycraft. I would have to go to the record to find that out.

Q. Well, there is the Seal-O-Strain Corporation on page 2592 of the record. Now, there you placed them in the same bracket although they purchased only 187 instruments?

A. Well, that is right. They had made their 2689 bracket for quantity the previous year, which called for 150. Likewise, Quiet Heet made their bracket, which called for 150.

Q. And yet the Quiet Heet in the previous year had bought three or four times as many as the Seal-O-Strain bought?

A. Our requirement with each account was exactly the same. They signed the same contract, calling for 150 instruments. They both got the same price.

Q. But one customer bought very substantially more than the other, didn't they?

A. Yes.

Q. At the same price?

A. That is right, because our bracket was from 150 to 1050 instruments and they both were in that qualification.

Q. How did you take in that bracket price running from 150 to 1050? What brackets did you take into consideration that anybody coming in that bracket was entitled to the same price?

A. That 1050 bracket is a carry-over from a great many years and I think I previously testified, Mr. Haycraft, that in setting up those brackets in prices as well as the quan-

tities, that we classified these customers where we thought they logically belonged on a quantity basis; and again competition entered into it just as much as with any other group of accounts.

We shifted our bracket quantities around to meet
2690. competition. We had to, the same as we shifted our prices around to meet competition.

Q. Well, here is another account that you had in Brooklyn at that time, which was the Atlas Manufacturing Company, wasn't it?

A. That's right.

Q. Page 2601. Now, in that case they had been in Bracket 2 in 1940 and had purchased 1258 units, but you gave them a Bracket 3, put them in Bracket 3 and gave them a Bracket 3 contract in 1941, base on representations made to you that they were hopeful of getting some increased business?

A. That's right.

Q. Which they did not get. Now, what were their total purchases in 1941?

A. 819 instruments.

Q. So they really belong in Bracket 1?

A. Yes, sir, according to the quantity that they bought.

Q. In your opinion, do they have a competitive advantage over those other two located in Brooklyn who were in Bracket No. 1?

A. Whether or not they were selling burners in Brooklyn, whether the others were selling in Brooklyn, I haven't any idea, Mr. Haycraft. The figures of the testimony certainly clearly point out that our Bracket 1 prices were higher than our Bracket 2.

2691 Q. I call your attention to the account of Weiskittel.

A. What page?

Mr. Gilpatric: Do you have a page number on that?

Mr. Haycraft: 2581.

By Mr. Haycraft:

Q. (Continuing.) I take it that that account was placed in Bracket 1 based on their 1940 purchases?

A. Yes, sir. They earned a retroactive credit in 1940, giving them Bracket 1 prices, and their quantity in that year warranted another Bracket 1 contract in 1941.

Q. What were their 1940 purchases?

A. I am afraid I would have to go to the record for that,

Mr. Haycraft. I don't have that information here, what they bought in 1940. I do know it was more than the 150 units required to get the Bracket 1 price.

Q. What did they buy in 1941?

A. In 1941 they bought 51 instruments.

Q. Were you selling any other account?

A. Yes, we were selling May Oil Burner Corporation. We were selling Anchor Post Fence Company.

Q. And were you giving them an extreme discount?

A. We were giving an extreme price to May Oil Burner Corporation, but we did not give the extreme price to Anchor Post Fence Company.

Mr. Gilpatric: When you say "extreme" you mean
2692 your low price?

The Witness: Low price.

By Mr. Haycraft:

Q. Well, why did you make the distinction between May and Anchor?

A. Well, again it was the quantity of the purchases that legislated the bracket price we had to give them and the competition we had to meet in both of those accounts.

Q. The same competition?

A. We had the same competition with both of those accounts.

Q. That is, in both accounts you had competition of Perfex?

A. Perfex, and we also had Mercoid competition at Anchor Post in years previous to 1941. We might have had it again in 1941.

Q. But you put May in Bracket 5, and what bracket did you put Anchor Post in?

A. Anchor Post? 4-A.

Q. Now, in the case of Anchor Post you were unable to get a large proportion of their business that you were in May?

A. No, sir.

Q. Did you call on those accounts, yourself?

A. I have called on them spasmodically for a great many years.

Q. We will take Anchor Post. Did you call on them at the same time?

2693 A. Yes. When I would go to Baltimore I would call on both of them almost invariably.

Q. And did you call on the Electrol account?

A. I can only recall having visited their place of business once.

Q. Did you call on the Malleable Iron Fittings Company?

A. Not regularly. I have been at their factory.

Q. The R. W. Beckett Engineering?

A. Yes, I called on them. I see them usually, oh, once or twice a year, sometimes more frequently than that.

Q. How often did you see the two accounts in Baltimore here?

A. Oh, it would average once a year. I don't believe it would be any more than that.

Q. The D'Elia Oil Burner Company? Did you call on that company?

A. I have called on them, but again not regularly.

Q. Did you call on the Century Engineering?

A. Yes, I used to see Century usually two or three times a year.

Q. Harvey Whipple?

A. I would call on Harvey Whipple when I happened to be east, which would be once or twice a year.

Q. Norge?

A. Yes, I have called on Norge, but again not regularly. If I happened to be in Detroit, I would usually see the 2694 major accounts there.

Q. Paragon Oil Burner Company?

A. Yes, I called on Paragon, but again not regularly.

Q. Reif-Rexoil, Inc.?

A. Same with Reif.

Q. Scott-Newcomb?

A. I never called on Scott-Newcomb.

Mr. Gilpatric: That was one Mr. Pawling called on.

The Witness: Mr. Pawling always made that contact.

By Mr. Haycraft:

Q. Silent Glow?

A. Yes, I called on Silent Glow several times.

Q. Wayne Oil Burner?

A. The same with Wayne, I used to see them quite frequently.

Q. Cleveland Products you made a number of calls?

A. Yes, a number of calls there.

Q. Delco Appliance?

A. I would see them occasionally, but again not regularly.

Q. Gilbert & Barker?

A. Like Silent Glow, Harvey-Whipple and Gilbert & Barker, while I was in that neighborhood I would call on all of them.

Q. Micro-Westco?

A. Yes, I called on them, rather often.

Q. Timken?

2695 A. Again there I would see Timken each time I was in Detroit. It was likely to vary, sometimes three or four times a year; other times maybe a couple of times a year.

Q. Williams Oil-O-Matic?

A. I called on them quite frequently.

Q. Were there some accounts that you called on more frequently than others where there was a more competitive situation? Was that a factor that required your presence?

A. It could very well require my presence. If there was a situation like that existed, naturally I would be interested.

Trial Examiner Sheppard: Your visits are goodwill visits, are they?

The Witness: Yes, Major, almost entirely. I would take a swing around perhaps the Mid-west two or three times a year, perhaps down East one or twice a year, even perhaps out to the West Coast once a year or every two years and then when I made those trips, why, I of course called on every account that time would permit. That is why I was there.

By Mr. Haycraft:

Q. Did you call on the larger accounts usually?

A. Usually.

Q. Well, weren't there instances when you were sent for?

A. Yes.

2696 Q. Where the salesman figured he was not equal to the situation?

A. Yes, indeed, those things happened several times in my recollection.

Q. Can you recall some of the instances?

A. Well, as I testified the Beckett case was one. Another was with Nu-Way Corporation. Those are typical examples of that sort of thing.

Q. Now, in the making up of Respondent's Exhibit 186, what information did you furnish the accountant with re-

spect to your calls and the time that you expended on these various accounts in determining the allocation of your expenses?

A. Mr. Haycraft, practically all of my time was spent in handling of our oil burner business, manufacturers' business. Whether I was on the road or whether I was in the office, that was my primary responsibility.

We had Mr. Lyford look after our gas accounts the same way. I paid little or no attention to those accounts. I seldom, if ever, called on a gas account.

The same applied to Mr. Scoggin, who is primarily interested in our stoker accounts and I paid very little attention to that branch of the business except in an advisory capacity. I might call on a stoker account occasionally or an oil burner account occasionally or meet the boys at conventions, but that was practically the exception.

2697 Q. You mean the gas?

A. I mean the gas, but that was practically the extent of it. There was—I did not attend any conventions for either the stokers or gas in 1941.

Q. Was any record kept or did you furnish to the account of the records any time you expended on these various accounts?

A. No; it was physically impossible. It would be ridiculous to try even to keep a record. It wouldn't have been worth the time involved to keep it. It is impossible for a man in business to keep time cards. We even go down in that respect to our employees that have any responsibility at all—we don't require them to keep time records. They are not time clerks and we are not clock watchers and we don't operate our business in that manner.

Q. Well, how was the expense involved in your activities allocated, then?

A. Well, it was allocated 100 per cent to the oil burner division, which was rightfully so.

Q. And it was spread over all accounts equally?

A. Oh, I don't know how they spread that, Mr. Haycraft.

Q. As I understand from your previous testimony there was no time record kept?

A. There was no time record.

Q. So there could be no allocation of your ex-

2698 penses to any particular account?

A. I don't know how my time was allocated to those various accounts.

Q. Take the account of Kienzle & Merrick, Minneapolis.

Mr. Gilpatric: What page is that, Mr. Haycraft?

Mr. Haycraft: 2585.

By Mr. Haycraft:

Q. Now, you say here that you started to do business with this company on May 20, 1940, on a Bracket 1 contract. Would that be during that calendar year or until the next contract was signed?

A. Well, all of our contracts expire on December 31; so they bought 124 instruments from May 20, 1940 to December 31, 1940.

Q. When was their contract for 1941 negotiated and signed?

A. I couldn't say to that without again looking up the contract, but it was probably either in December of 1940 or in January of 1941. That would be my guess on it, Mr. Haycraft, because they were right there in Minneapolis.

Q. The reason I ask this: I think it is a typographical error on page 2587 on the 6th line down. Mr. Freeman was questioning. You say you started in May, 1941.

Mr. Gilpatric: That should be 1940.

The Witness: 1940, that is right.

Q. And both those years should be 1940; is that 2699 right?

A. That is right.

Mr. Gilpatric: Yes.

By Mr. Haycraft:

Q. So that it is your custom where a contract is entered into during the calendar year, you have that contract expire in December and then you begin a new contract at the beginning of the following year?

A. That is right.

Q. So far as you know, that custom was followed in this instance?

A. I am almost positive it was, Mr. Haycraft. I am quite sure the record would verify that.

Q. Now, in this account of Mechanical Products Company, Seattle, Washington—

Mr. Gilpatric: What record number?

Mr. Haycraft: It starts at the bottom of page 2587.

Q. (Continuing)—you say that this company was devoting 75 per cent of its efforts to the manufacturing of

aeroplane parts for the war effort. When were they doing that? Not in 1941, were they?

A. That information was given us in a report by our Mr. Farnes on September 27, 1941. Now, just when they started their war work, I can't tell you, but they were devoting 75 per cent of their effort in September, surely, if they were tooled up and prepared to turn out that many parts they would have had to start their operations several months prior to September.

2700

By Mr. Haycraft:

Q. Did Mr. Farnes state what he based his report on?

A. No. He called on Mr. Shinman, who is the owner of that business, on September 27 and then reported that 75 per cent of his effort was being devoted to the manufacture of aeroplane parts.

Q. That was his estimate or Mr. Shinman's estimate?

A. Well, apparently—I can't say for sure—but apparently that is the information that Mr. Shinman gave him.

Q. Now, in connection with your Scholz & Stalder account, Chicago, page 2588 in the record, there you don't base your 1941 contract on the 1940 business but you combined the two years and then made an average?

A. Yes, sir.

Q. When did you do that? Just now when you were testifying or did you do that before, before you made your contract?

A. You never know how much inventory a concern has at the beginning of a year and it is only fair to a customer to give him the benefit of the doubt. Now, here is a concern that in one year bought 179 and the next year they bought 139. Now, it isn't beyond reason at all to expect that on January 1 of 1941 that those people had 11 of our instruments in stock, that they actually used 150 of our instruments.

2701 Q. Well, that may be. I am not asking for the argument on that. What I am trying to find out is whether you actually made that calculation that you are now talking about at the time that you signed up the 1941 contract or whether that is now an afterthought to justify the placing of that in that bracket.

A. That is a common occurrence, Mr. Haycraft. If you were calling on these accounts—

Q. I want an answer to my question.
Mr. Freeman: He is giving you an answer.
A. I am giving you an answer.

By Mr. Haycraft:

Q. Let's not go around the barn on that.
Were these factors in your present recollection the factors that you took into consideration at the time you made the contract or are they now your afterthought as to why you did it?

A. Those same policies go back in our method of analyzing an account year after year. It is nothing new.

Q. What is your present recollection of what you did at the time that you granted that discount?

A. I can only tell you it was common practice for us to consider the purchases of a company two years in succession in order to give us a fair average of their yearly purchases from us, just as was outlined here in the
2702 case of Scholz & Stalder.

Q. Did you do that in all instances?

A. In all instances where there was any doubt. That would be only the logical thing to do. We keep records year after year of these accounts. We know this inventory situation exists. It always exists. They might have overbought some in one year, a little bit in one year. They might have had a bigger inventory in one year than another.

Q. As a matter of fact, did you take into account more than two years?

A. Not that I recall, Mr. Haycraft. Two years was the fair average, to my way of thinking.

Q. It is your testimony now that at the time of this account coming up for your determination, you recall that you did take into account that there was a two-year average which would entitle them to be put in Bracket 1?

A. As I testified, Mr. Haycraft, there has been a common practice for us to consider the purchase of an account two years in a row if their previous year's purchase didn't warrant the same quantity price the preceding year and the Scholz & Stalder—I can't say that I previously remember the Scholz & Stalder—but I took those two years into consideration. But it was common practice with us. Undoubtedly we did it with Scholz & Stalder, but I can't swear here today, specifically, that we did that back in

1941; but that was our common practice and un-
2703 doubtedly we did it with Scholz & Stalder.

Q. Wasn't it your policy, if it was anywhere near the 150, to do the same thing?

A. In some cases we did, yes.

A man missed his bracket by a few instruments, it was only logical to give him the benefit of the doubt and it was necessary to do that if we wanted to continue to get his business. We have got a competitive situation in every one of these accounts, as well as the quantity.

Q. In this Koalamatic Combustion Company, page 2588, how many did they buy in 1941?

A. I would have to check that.

Q. Can you get that?

A. 78 instruments.

Q. The Pacific Automatic Heating Company in Seattle, page 2589. Now, I take it from your testimony there that you did not have any record of sales to that company before 1941?

A. Not to my knowledge.

Q. And the way in which you determined what bracket you were going to place them in was to see how many burners they had installed in the previous year?

A. Installed in the city limits of Seattle.

Q. Did you know who was selling them their controls in 1940?

2704 A. Yes, Mercoid was selling them in 1940.

Q. And you expected to get all the business in order to give them Bracket 1?

A. I couldn't say that—answer that. It would be expected to get all of their business, Mr. Haycraft. I know that we presented to them, and they were willing to sign a contract that they would buy 150 instruments from us in 1941 and we took the precaution of further checking to see if they had potential enough to do that. We more than satisfied ourselves of the potential on the basis of the installation records right there in the city of Seattle.

Q. Do you know what they were paying Mercoid then?

A. I do not.

Q. You don't know how much of a premium they were paying?

A. I do not.

Mr. Freeman: You do concede, Mr. Haycraft, that there was a premium?

Mr. Haycraft: I don't concede anything. Off the record.

(Discussion off the record.)

By Mr. Haycraft:

Q. Take the case of Chandler Company, Cedar Rapids, Iowa, page 2593. You say the first contract with that company was executed on May 3, 1940. Now, what factor did you take into consideration to put them into Bracket 2?

2705 A. That is very easily explained, Mr. Haycraft. Chandler took over another company, oil burner manufacturer, in Cedar Rapids at that time.

Q. What was the name of the other company?

A. I am trying to think. It doesn't come to me at the moment. I can get you that name. We knew the volume of business this other company was giving us and when Chandler, who was a much larger concern—and they were, incidentally, in the wholesale business and very well regarded and had a high reputation—we felt they would surely do as well as their predecessors in the oil burner business and we gave them a Bracket 2 contract and I think the facts justified that our judgment was sound in that case.

Q. How many did they buy?

A. Well, in eight months in 1940 they bought 876 instruments.

Q. How many did they buy in 1941?

A. In 1941—I will have to check that—they bought 802 instruments, and again Penn Electric Switch Company was our competition in that account.

Q. You did not list that account as one of your accounts, meeting the competitive price?

A. No, but I do recall right now that Penn Switch was competing with us on that account.

Q. The next account is the Fairfield Oil Heating

2706 Company of Connecticut. That is at page 2594 of the record.

Mr. Freeman: Which account is that?

The Witness: Fairfield.

By Mr. Haycraft:

Q. Now, in that case you put them in Bracket 2 in 1939 and 1940. That was $17.25 in both years, wasn't it, and

then in 1941 you placed them in Bracket 2 which made it $16.45; is that right?

A. That is right.

Q. So that your Bracket 2 in 1941 was really a price reduction from 1940?

A. That is right.

Q. About 80 cents?

A. That is right.

Q. Now, you said you had Mercoid competition there?

A. Yes, sir.

Q. Do you have the report of Mr. Patrick of June 6, 1940, referred to?

A. Yes.

Q. What did they say with respect to Mercoid competition?

A. He specifically states there that although Mercoid stands him about $2 per set less than M-H he would rather standardize on one make but does get calls for Mercoid, mostly distant territory—mentioned Pennsylvania as outstanding Mercoid users. That ends the sentence.

2707 Q. What else?

A. At present has an account there that expects to use about 500 or more burners per year and they insist on Mercoid.

Q. Now, in that situation you sold them in 1940, 937 sets or units. Then you reduced your price 80 cents in 1941, but kept them in the same bracket as to quantity, that is, calling for 150 units. How many units did they buy in 1941?

A. They bought 858.

Q. Units?

A. Units.

Q. Now, you did not list this firm in one instance where you did not list your low price to meet the competitive price but listed this as an account where you gave them—where you kept them in Bracket 2 because of what they had bought in the two previous years?

A. That is right. That could have logically been listed either way. We did definitely have Mercoid competition and their average the two previous years did warrant our giving them the quantity bracket.

Q. Now, that $2 differential that Mr. Patrick reported would put the Mercoid price in 1940 about $15.25, wouldn't it?

A. In 1940?

2708 Q. You were selling at $17.25?

A. Yes. It would be about $15.25, yes.

Q. So that when you sold them at $16.45 in 1941, they were 80 cents nearer their 1940 price?

A. Yes.

Q. Do you know what they did in 1941?

A. If they again didn't drop their price in 1941. Well, the way we would have reasoned a thing like that, Mr. Haycraft, we dropped everyone's price in Bracket 2 that year, not just Fairfield. We dropped everyone that was buying in that Bracket 2 and it did bring our price closer to the previous year's Mercoid price by 80 cents, but we still were higher, considerably, than Mercoid.

Q. Do you know whether you were still $2 higher or just $1.20 higher or did you have any information at that time as to whether Mercoid followed that price reduction?

A. We knew that Mercoid prices dropped in 1941.

Q. But you don't know how much?

A. I don't know how much in that particular case.

Q. Well, did you find out how much they actually dropped that year in accounts of this size?

Trial Examiner Sheppard: You mean later on?

Mr. Haycraft: During the year 1941.

A. I don't know specifically what the difference was in that class of accounts.

2709 By Mr. Haycraft:

Q. Well, you do know this, do you not, that in 1940, according to your reports, you were $2 higher than Mercoid and you sold them 937 units?

A. Yes, sir.

Q. Do you know what proportion that was of their requirements?

A. I wouldn't care to estimate. This one report that I read here, Mr. Patrick's, said they had one customer who was taking 500 burners equipped with Mercoid. There alone would be instruments considerably more than we sold them all year.

Q. But you don't know whether they had any other Mercoid accounts?

A. I don't.

Q. In other words, in this case it was a case of where the oil burner manufacturer was selling on account, that

is, a furnace account, I assume, and equipping that entire account with Mercoid controls?

A. It could have been a builder, a furnace manufacturer, but you will recall that his report stated that the Mercoid was sold mostly in distant territory and he mentioned Pennsylvania as outstanding. Mercoid users—plural—not just one. There may have been more there for all I know.

Q. Do you know whether or not he required a
2710 premium as to this particular customer when the burner was equipped with Minneapolis-Honeywell controls?

A. Offhand I can't answer that.

Q. The next account is Todd Combustion Equipment Company, page 2597. In that account you corrected some previous testimony as to the quantity.

A. Quantity sold, yes.

Q. So that, according to your testimony now, they came within the 1050 bracket?

A. Yes, sir, both years, 1940 and 1941.

Q. The next account is one that you have already discussed somewhat before, the Atlas Manufacturing Company in Brooklyn, page 2601. When was that contract signed? Was that in March, 1941?

A. Off the record.

(Discussion off the record.)

A. The Atlas contract was signed March 3, 1941.

Q. Now, had they taken any devices between January and March, 1941, before they signed the contract?

A. I would have to check that.

Q. Any deliveries made?

A. I would have to check that. I don't know offhand.

Q. Now, when it was first suggested to you that the Bracket 3 contract be entered into with this customer, what was the first thing you did? I suggest you look
2711 at your letter of February 11, 1941, addressed to Mr. Brown.

A. Well, when I received Mr. Brown's report of February 5, I wrote him on February 11 asking him that he give us some more information regarding the story back of this move that Atlas wanted us to make.

Q. Well, my question was: What was the first thing you did? Would you say the first thing you did was to check the 1940 purchases of this customer?

A. I would say from this letter that that's what I did, because I cited in the letter that they bought 234 sets,—

Q. They would place them—

A. —or 1258 units in 1940.

Q. That would place them in Bracket 1, wouldn't it?

A. No, sir, that would place them in Bracket 2.

Q. Bracket 2, I should say. Then you also stated that unless they had been using a competitive control of greater volume than you were aware of—

A. I could see no justification for a 1000-set contract or a contract for 3000 units based on the previous year's purchases. I also told him that I felt there was something back of this, that it had gotten by us.

Q. What did you mean by that?

A. Well, I thought that there was some more information in the background that he hadn't given me regarding this particular transaction.

2712 Q. What was the competitive control that you had in mind there?

A. Mercoid.

Q. And what was the quantity that you understood in volume? What information did you have as to the volume?

A. I can't tell you that on this date—I can't tell you about something that transpired back in 1941.

Q. You don't have any reports?

A. I don't have anything here that indicates anything about that.

Q. Now, when was it that you found out that they fell down on their building development bids or failed to get the business?

A. Well, I can't answer that either, because an account like this, ordinarily we would pick up—if they had a Bracket 3 contract and they had only purchased 25 sets, it should have come to light pretty quickly. Apparently it didn't. Why, I can't answer; but I only know at the end of the year they had only bought 819 units.

Q. The next one is the Diesel Oil Burner Corporation in Jamaica, Long Island.

A. What page is that?

Q. 2606. How many did they purchase in 1941?

A. 1916 instruments.

Q. So on that quantity they should have been in Bracket 2?

2713 A. For 1941.

Q. And Atlas would have been put in Bracket 1 from the quantity they purchased?

A. Tat is right.

Q. And they were given Bracket No. 3 prices?

A. That is right, but, of course, Diesel earned their bracket in 1940.

Q. And Atlas didn't?

A. Atlas did not. That is, Atlas did not earn a No. 3 contract in 1940.

Q. The next one is Electrol. Now, then, in 1940 they purchased a total of 2504, which would put them in Bracket 2; is that right?

A. That is right.

Q. I notice in this case that you suggested to Electrol—yes, I guess it was you—

A. Not I, Mr. Brown.

Q. —or Mr. Brown suggested—was he authorized to make a suggestion?

A. Well, that is only a natural suggestion to make, for any of our salesmen to make.

Q. That is, he suggested that they cut their $4 extra price on M-H equipment, on Electrol burners with M-H equipment?

A. That is right.

Q. 50 per cent?

2714 A. That is right.

Q. So there would be only $2 difference?

A. Then he would be more closely in line with his competitive manufacturers and the prices extra they were charging to their dealers. That was only a logical thing to try to do. I hope he succeeded.

Q. Do you know whether he did or not?

A. I can't say at the moment.

Q. Do you know what the price was of the other—in other words, how much of a premium they were paying M-H for a set of controls as compared with Perfex on these burners? I notice you say your price is $15.90 a set in 1941.

A. That is right.

Q. Do you know what Perfex's price was?

A. We knew that Perfex and Electrol had some kind of a patent tie-up, and I haven't any documentary evidence to substantiate this at all; but it was my impression right

along that Electrol was getting the Perfex bottom price on their control equipment.

Q. Well, let's see if I have got this straight now. You sold them 2504 units in 1940?

A. 1940.

Q. On a Bracket 3 price, which was $16.65 a set?

A. That is right.

Q. Then, in 1941 you say you sold them $15.90, 2715 so they were still in Bracket 3?

A. At a lower price.

Q. Now, that reduction was about 70 cents?

A. That is right.

Q. A set?

A. Yes, and that same reduction was enjoyed by all manufacturers buying Bracket 3 in 1941.

Mr. Gilpatric: A general reduction, wasn't it?

The Witness: General reduction.

By Mr. Haycraft:

Q. Now, do you know how many you sold them in 1941?

A. 1118 instruments.

Q. And you sold them 1118 instruments at $15.90 a set and Electrol, in turn, charged the public $4 extra for oil burners carrying your equipment?

A. That was in 1939 that they charged $4 extra. What they charged extra in 1941, I don't know.

Q. Or in 1940?

A. Or in 1940.

Q. Well, do you know whether they charged any extra in 1940?

A. I don't know.

Q. Well, why did you bring it to our attention, this letter of 1939?

A. I thought this letter would be of interest to
2716 you in knowing that Electrol was charging dealers extra for Minneapolis-Honeywell controls over Perfex, which certainly indicated that they were paying less money for Perfex than they were paying for Minneapolis-Honeywell.

Q. That would be in 1939; but what about those two years? Was it your idea to give us the impression they were doing the same thing in 1940 and 1941?

A. I think you will find that the same procedure was followed in 1940 and 1941, but what the difference in price was in those years, I don't know.

Q. Well, that is what I would like to find out. I had the impression from your testimony that this was a premium paid during those two years.

A. No, because it is right in the testimony, if you will note there, an excerpt from our Mr. W. J. Brown's report of June 13, 1939, and I quoted.

Q. Yes, but you don't say—you don't know what happened in 1940 and 1941?

A. That is right.

Q. So I had the impression, and anyone reading the text would have the impression, that that would apply to the succeeding years.

A. I don't know.

Q. You don't know?

A. If you would like that information, I will get it
2717 for you. Electrol's records are available now. We can get it.

Mr. Gilpatric: It has all been testified to. They were charged a premium all the way through. We had a witness on the stand here from Electrol, Mr. Bendix.

Trial Examiner Sheppard: I don't know why you need to check. The man who represented Electrol so testified. That is the best evidence.

Mr. Haycraft: If that is in the record, all right.

Mr. Freeman: It is in the record. Mr. Bendix so testified.

By Mr. Haycraft:

Q. Then if that is true, in spite of the fact that the public was required to pay $4 extra on Electrol burners equipped with M-H controls, you sold them 1100 and some odd units in 1941?

A. That is correct, except you say the public, and it was the dealer.

Q. The dealer?

A. The dealer.

Q. You don't know what the public paid?

A. I don't know.

Trial Examiner Sheppard: I think I will excuse you now until 2:00 o'clock.

(Whereupon, at 12:00 o'clock noon, a recess was taken until 2:00 p. m., this day.)

2718 Afternoon Session:

2:00 p. m.

Trial Examiner Sheppard: All right. We will go ahead when you are ready, Mr. Haycraft.

ARTHUR F. LOCKRAE resumed the stand and testified further as follows:

Cross-Examination by Mr. Haycraft (Continued):

Q. The next question is Malleable Iron Fittings Company, page 2608. You stated here that you knew that Mercoid was doing a greater portion of Malleable's business. How did you know that?

A. It is already in the record, Mr. Haycraft, that Malleable Iron Fittings and Minneapolis-Honeywell had some differences of opinion, and we practically lost out on Malleable Iron Fittings' business that year, and from then on Mercoid continued to be their standard control and enjoyed the major portion of their business.

Q. Did you have anything to do in the negotiations of that contract?

A. Nothing in the way of personal contact with the account.

Q. You did not contact Mr. Gillis?

A. I did not contact Mr. Gillis after that occurrence.

2719 Q. Do you know what price they actually were paying at that time, paying Mercoid? I notice you testified with respect to what other customers were paying, but do you know what—

A. I did not know at that time specifically what Malleable was paying for Mercoid.

Q. Now, you had them in Group 2, $15.90 a set?

A. That is right, and we later dropped them to 3, if I recall correctly.

Q. $15.90 in 1941?

A. That, I think, is the Bracket 3 price, because it was in 1941. As I remember, we gave them Bracket 3.

Q. And that was not based on anything that they bought in 1940?

A. No, sir.

Q. Do you know what the sales were to them in 1940?

A. We sold them 1923 instruments.
Q. In 1940 or 1941?
A. 1941.
Q. You don't know what you sold them in 1940?
A. I don't have that record with me.
Q. Well, was that 1923 instruments sold before or after the misunderstanding you had with them?
A. That was afterward. The misunderstanding—I may be a little bit hazy on this, but that was back, I think, in 1939.
2720 Q. So that you did continue selling them in spite of that?
A. We certainly did.
Q. And in 1941 you sold them 1923 instruments?
A. That is right.
Q. At $15.90 a set?
A. Yes, sir.
Q. And I think you testified here yesterday—I mean in your last time on the stand—that you learned later that Mercoid was paying $13.50 a set.
Mr. Freeman: Selling.

By Mr. Haycraft:

Q. Or Mercoid was selling at $13.50 a set to the Malleable Iron Fittings Company, which was $2.40 less than you were charging?
A. Yes, sir.
Q. Now, the Sanmeyer Corporation of Chicago, page 2610, you gave them in 1941 a 3,000 instrument contract, Bracket 3, based on their 1940 purchases of 2913, is that right?
A. Yes, sir.
Q. What did they buy in 1941?
A. 2402 instruments, and I can add right there that they were buying Mercoid also in 1941 in what I think was representative quantities.
Q. Do you know what price they were paying?
A. I do not know what price they were paying Mercoid.
2721 Q. Do you know what quantities they were buying?
A. I do not know what quantities they were buying, but I do know they were using a substantial quantity of Mercoid controls.

Q. Do you know whether they were buying more from Mercoid than they were from you?

A. I couldn't say that.

Q. Were they making a burner, the Sanmeyer Corporation?

A. Yes, sir.

Q. And were they selling in competition with the Automatic Burner Corporation?

A. It is my belief, Mr. Haycraft, that they were not competing with Automatic Burner Corporation because the Sanmeyer burner was a modulating or low-high fire burner more commonly used in industrial or semi-industrial applications, and Automatic Burner Corporation was making purely a domestic type of burner.

Q. Did the Sanmeyer make any domestic at all?

A. They could use this burner for domestic, but it was not commonly used that way because it was much more expensive than the ordinary domestic gun type burner.

Q. Now, the next account is the Wisconsin Oil Burner Corporation. You stated you had that on Bracket 2 in 1940 and you sold them 1945 units that year. Now, you say you sold direct to the Mueller Furnace Company,
2722 2187 units that were used in conjunction with burners manufactured by Wisconsin. Well, now, who visited the account of the Mueller Company?

A. Mueller is located in Milwaukee, and our direct contact with them is through our Mr. Harold Pride, who has charge of our Milwaukee office.

Q. Did he make separate calls on Mueller Furnace Company?

A. Well, Mueller we have sold a great many years, not only oil burner controls, but gas controls and furnace and boiler controls, and then they took on this Wisconsin Oil Burner to augment their line, and it was just one of those things that happens constantly. Here was a furnace manufacturer broadening his field. He was going from gas to oil, took on the Wisconsin burner. Our Mr. Pride, of course, knew it, and it was another one of those dual transactions.

Q. Now, did you give Mueller the same price that you gave Wisconsin?

A. No, sir. Mueller's purchases from us were far greater than Wisconsin.

Trial Examiner Sheppard: They were in different brackets, weren't they?

The Witness: Yes, sir.

By Mr. Haycraft:

Q. Well, let me see if I understand it correctly. They bought 2,187 units in 1940. In 1941 they bought 2,268 units.

2723 A. That is Mueller.

Q. Mueller. Now, what bracket were they in?

A. I would have to check my record, because we classify them as a furnace and boiler manufacturer, but if my memory serves me correctly, they are buying on our bracket for Wisconsin 15,000 instruments.

Mr. Gilpatric: Each sale is shown here only for use in conjunction with Wisconsin burners?

The Witness: That is right, but there are other purchases for gas, and furnace and oil burner controls would exceed that quantity.

By Mr. Haycraft:

Q. Would you pool all those various controls?

A. Oh, yes. Any manufacturer that bought from us, we didn't care. We still don't, whether they are buying refrigeration controls, whether they are building stokers or gas burners or what not, as long as they are using our instrument, a unit is still a unit.

Q. Then you allowed the Wisconsin Oil Burner to add the Mueller instruments, that is, that were bought direct, were not bought through Wisconsin, so they could get a higher bracket or a lower price?

A. That is right.

Q. Did the Wisconsin Oil Burner do anything to your knowledge to cause the Mueller Company to use the M. H. devices?

2724 A. No.

Q. That was your own direct contact did that?

A. That is right. Mueller was buying their controls direct from us, and there was no use of their buying the burner and the controls from Wisconsin. They simply bought the burners and bought the controls from us. That is often common practice with furnace manufacturers of that size.

Q. But so far as the Wisconsin Oil Burner Corporation is concerned, they signed a contract, Bracket 2 contract?

A. For 1050 instruments.

Q. In 1940. Then, in 1941 they signed a Bracket 3 contract calling for 3,000 instruments?

A. That is right.

Q. And they actually placed orders for 1,376 devices?

A. They actually purchased those direct from us.

Q. Now, the Sunray Burners, Inc. How are they affiliated with Kelly Oil Sales Company?

A. Well, as I understand the picture, they were totally owned or partially owned by the Kelly Oil Sales Company. Kelly Oil Sales manufactured their own burner for years, and then they set up this Sunray account to actually manufacture those burners, and they took their entire output.

Q. Well, in your dealings with Sunray or with Kelly—

A. Our dealings with Kelly were actually building the burners, direct with Kelly, and then with Sunray, too,
2725 over the manufacture of those burners, our dealings were with Sunray.

Q. I notice you don't list this with one of your competitive accounts, although you do say here that competition was extremely keen.

A. That is right. That is another account that we could have listed either way or both ways.

Q. Well, now, when you made that Sunray contract, just which one of those factors did you take into consideration, the competitive situation, the volume of business they did in the preceding year, or the dual account that they might have with Kelly Oil?

A. That was not a dual account as we term dual account, Mr. Haycraft.

Q. Well, did you give them credit for what the Kelly Oil sales—

A. Yes, as I recall, we had a contract back in 1939 with Kelly. That was a Bracket 3 contract, and in that year they bought 5,005 instruments. Now, I say here we gave Kelly another Bracket 3 contract. We may have done that although the controls were delivered to their subsidiary, the Sunray. I would like to check my records on that before I will say positively. My first impression was that when Sunray started in business, we did business with Sunray and no longer had a contract with Kelly, but I am not sure of that.

Q. This, according to your testimony, said you
2726 gave them a contract.

A. It says we gave Kelly another Bracket 3 contract in 1941.

Q. And they bought 2,414 instruments?

A. That is right, and then it says—to continue—if you will note, Mr. Haycraft, before 1941 was over they quit building oil burners and were buying from another manufacturer.

Q. Well, just what, then, did you take into account to put Sunray in Bracket 3? It isn't clear to me.

A. Well, let me reiterate it. I think it is clear right here in this prior testimony. In 1939 our dealings were with Kelly, and they had a Bracket 3 contract calling for 3,000 instruments, and they actually bought 5,005, and then in 1941 they had another Bracket 3 contract for 3,000.

Mr. Freeman: It should be 1940.

The Witness: Pardon me. Wait a minute. No, during the year of 1941 we gave Kelly another Bracket 3 contract for 3,000, and they bought 2414. Now, that was based on the fact that in 1939 and 1940 they purchased 7319 instruments for those two years, which would give them a yearly average of 3659, and—

Mr. Haycraft: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

2727 The Witness: During that year they purchased 5,005 instruments. That is 1939, right?

Mr. Gilpatric: Yes, it is.

The Witness: And then in 1940—it is printed here 1941. It should be 1940, is that right?

Mr. Gilpatric: Yes.

The Witness: This should be 1940, Mr. Haycraft, and this should be 2314.

By Mr. Haycraft:

Q. That is in line 16, you can change 2314, and line 15, 1941 should be changed to 1940?

A. That is right, so in 1939 and 1940 they purchased a total of 7319 instruments or a yearly average of 3659, so in 1941 we gave them another Bracket 3 contract.

Q. And what did they buy?

A. They bought 1,077 instruments that year before they went out of business of manufacturing oil burners and buying from somebody else.

Q. Do you know when that was?

A. I don't recall, and the record wasn't clear on it.

Q. Now, your price to Sunray was $15.90 a set?

A. $15.90 per set.

Q. And you say here at page 2612 that was your price at Kelly Oil sales. Do you mean by that to Sunray?

A. Well, you could look upon those two accounts as being one and the same, Mr. Haycraft, if that will clear your thinking. Now, we have it listed on this contract as Sunray. I think our contract was with Sunray, but I am not sure about that.

Q. All right, then, the price that you understood Sunray was paying Mercoid was $14.20, is that right?

A. The price of $14.20 we knew had been extended by Mercoid to the S. K. Oil Burner Company and the Bascom Company, and neither of those two concerns had the potential of Sunray, so we felt that Mercoid's price to Sunray would be $14.20 or less.

Q. Well, in determining that, though, you didn't take into consideration anything that was sold you by Sunray or Kelly?

A. No.

Q. Did you ever find out what they actually paid?

A. I believe that Mr. Owens testified that he took an order from Sunray for a thousand burners and he gave the price, but I don't remember.

Q. It is the top of page 2614. Let's see if that is right. According to your notes, $13.70.

A. That would be the figure, $13.70.

Q. So that the actual price of $13.70 as compared to your $15.90 was $2.20 difference?

A. Yes, sir.

Q. Now, do you know what time that $13.70 price was made?

2729 A. I wouldn't know unless the record shows the date of that order, and it seems to me that the date was in the record.

Mr. Freeman: You mean Mercoid's date?

The Witness: Mercoid's date.

Mr. Freeman: Mercoid were giving you 1941 prices when Owens testified.

Mr. Haycraft: Was it 1941 or 1940?

Mr. Freeman: 1941.

By Mr. Haycraft:

Q. So that if the $13.70 price, if that is the correct figure that Sunray was paying Mercoid in 1941, they bought 1,077 units from you at $2.20 more?

A. Premium per set.
Q. More per set?
A. Per set.
Q. Now, take up the York Oil Burner, York, Pennsylvania.
A. What page was that?
Q. It is right on the next page.
A. Oh, yes, 2615.
Q. There again, did you have any information from York Oil Burner as to the price they were paying Perfex?
A. According to my recollection. I am not sure about that.
Q. As I understood your testimony, you compared the price that you thought—
2730 A. That is right. We compared that to Perfex Oil. We didn't have any definite recorded information from York.
Q. But you were selling York at $15.90?
A. We were selling York at $15.90 in 1941.
Q. And you determined later that they were paying Perfex $13.70?
A. Yes, sir.
Q. In 1941?
A. Yes, sir.
Q. So there again, there was a difference of $2.20?
A. Yes, sir.
Q. And how many units did you sell York in 1941?
A. 1641.
Trial Examiner Sheppard: Units?
The Witness: Units.

By Mr. Haycraft:

Q. In other words, they bought 1641 units and paid a premium of $2.20 per set?
A. Yes, sir.
Q. Higher than they paid Perfex?
A. Higher than they paid Perfex.
Q. Do you know which control was standard in York that year?
A. Perfex was standard.
Q. Do you know which was standard in Sunray?
2731 A. Minneapolis Honeywell was standard, so far as I know.
Q. Malleable Iron Fittings, Mercoid was standard, wasn't it?

A. Yes, sir.

Q. What about Electrol, did they have their own device?

A. No, Electrol, part of their device they manufactured themselves, but the other part they bought from Perfex and Perfex was standard.

Q. While we are on that, see if I can get some of these others. R. W. Beckett Engineering. That is the next one coming. Which device was standard on that in 1941?

A. Our controls were standard on the Beckett, although it catalogued both types.

Q. And by standard, if we get our definitions uniform on that, by that you mean that they would be—that the burner would be equipped with that if the customer did not request any other make of device?

A. I think that is absolutely true in the case of Beckett. I think they furnished Mercoid controls to certain dealers who wanted to save some money on an oil burner, but if a dealer wrote in an order for a burner and didn't specify the control, I am pretty sure Beckett would have shipped our control.

Q. All right. Now, what is the situation with respect to D'Elia Oil Burner Company?

2732 A. The same situation would apply there.

Q. Century Engineering?

A. No, Century Engineering used both our controls and Penn Switch controls, and as I believe I testified before, Penn Switch got the preponderance of the business of that account. Now, again they allowed their dealers to buy a burner and specify either control, either M. H. or Penn.

Q. And they catalogued both of them?

A. Yes.

Q. Was there any difference in price?

A. Yes, there was a difference in price. There was a difference in the price of the controls to start with.

Q. I mean to the dealer.

A. And Century never gave away anything that I know of.

Q. In other words, they charged the dealer the difference in price?

A. I am quite sure that they did.

Q. How about Harvey-Whipple?

A. Harvey-Whipple, there was another case where M. H.

and Perfex were standard and they gave the dealer the option when it came to the choice of control.

Q. Norge Heating?

A. Our controls were standard with Norge Heating.

Q. Paragon?

A. Our controls were standard with Paragon.

2733 Q. Reif-Rexoil?

A. There they used both M. H. and Perfex, and the same situation would apply; if the dealer wanted H. M. he got it, and if he wanted Perfex, he got it. And again, while I don't have anything in the record, Reif is similar to Century. I never knew them to give away anything, and it would be my judgment that if they bought Perfex controls, they would get them at a lesser price than they would get M. H.

Q. Scott-Newcomb?

A. Scott-Newcomb, M. H. were standard.

Q. Silent Glow?

A. Silent Glow was in exactly the same situation as Harvey-Whipple. They used both Perfex and M. H., and gave their dealers the option.

Q. Wayne Oil?

A. Wayne Oil, Perfex was standard. If the dealer wanted M. H., they got it. If they sent in an order for a burner without specifying, they would get Perfex.

Q. Do you know whether they charged their customers extra for M. H. equipment?

A. We were told, Mr. Haycraft, that Wayne made no difference in price in 1941 to the dealer. They could have M. H. or Perfex.

Q. Anchor Post Fence?

2734 A. Perfex was standard equipment and Anchor did price a charge difference.

Mr. Gilpatric: For M. H.?

The Witness: For M. H.

By Mr. Haycraft:

Q. Cleveland Steel?

A. M. H. was standard.

Q. Delco Appliance, General Motors?

A. Well, as you recall, Delco built their own controls. We only supplied the limit control.

Q. Gilbert & Barker?

A. With Gilbert & Barker, Penn Switch was standard, and they got the preponderance of the business.

Q. Did they charge more for—

A. I can't say as to that, Mr. Haycraft. My memory says that the Penn control was standard on their price burner and our control was standard on their deluxe burner.

Trial Examiner Sheppard: I don't remember anything in the record about any premiums except on yours.

The Witness: As far as we know, Major, no manufacturer ever charged a premium to get one of our competitor's controls. If a premium was charged, it was always when M. H. controls were used.

By Mr. Haycraft:

Q. On this Gilbert & Barker Manufacturing Com-
2735 pany, as I understand your testimony, it is that on their cheap line Penn Switch is standard, and on their expensive, M. H.?

A. Yes.

Q. When you said Penn Switch got the preponderance of business, do you mean the preponderance of the entire business?

A. That is right.

Q. By that you mean there were more cheap burners sold than more expensive?

A. Yes, sir.

Q. You had a substantial sale of that?

A. That is right.

Mr. Freeman: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

The Witness: But nevertheless, their controls were standard and they bought more controls from Penn than they did from us?

By Mr. Haycraft:

Q. What is the situation in the May Oil Burner?

A. M. H. controls were standard.

Q. Micro-Wesco?

A. M. H. controls.

Q. Timken?

2736 A. Perfex controls were standard.

Q. Well, now, was that on all burners?

A. On all burners.

Q. How do you account for the sale of 11,000 units, then?

A. Dealer demand. They wanted our controls.

Q. Did they pay a premium for them?

A. I am not sure whether they did or not.

Q. Williams Oil-O-Matic?

A. Williams Oil-O-Matic give the dealers the choice of Perfex, Mercoid or—I beg your pardon. They give them the choice of Penn, Mercoid or M. H.

Q. And what did they charge extra for M. H.?

A. At the beginning of 1941 they had an extra charge when M. H. were supplied. Late in the year, in August, I believe, of that year, just as the peak selling season was coming along, as a sales incentive they offered M. H. as optional at no additional price.

Q. B and W?

A. Frankly, I don't know the situation surrounding that account, whether Mercoid was standard or whether our controls were standard.

Q. Campbell?

A. M. H. controls were standard.

Q. Now, I will ask you whether or not as a business proposition the fact that a control is standard equip-
2737 ment on a burner is an advantage to the manufacturer of the control that is standard.

A. Well, it all depends on how you look at it, Mr. Haycraft. A manufacturer like May Oil Burner, for example, they build just one type of burner. It is a quality burner. They buy the best motors and pumps and transformers and controls that they can buy, and M. H. was standard on that burner and has been for a great many years. They have tried out other controls, but they have always standardized on M. H. Now, just a few miles away in the same city is Anchor Post Fence, and their policy is diametrically different. Now, they have a gun type burner that competes with May, and they are out to get business at a price. Perfex controls cost them less money. They therefore can price their burner less with Perfex controls, and it is their standard, although the dealer can have M. H. controls if they want to pay the difference in price. Now, right along that line, Anchor Post built a rotary burner and M. H. controls are standard on that higher quality rotary burner, but the sales are in the minority.

Q. Most of the sales, then, that you made to Anchor Post, was for their oil burner?

A. It would be for both, and I think it was for both, because the rotary burner part of their business was not

a big part; it was small in comparison to the num-
2738 ber of gun type burners that they built.

Q. Well, in your judgment, did you sell more or less controls where M. H. was standard than you did to accounts where Mercoid or Penn Switch were standard?

A. Well, it would all depend on the account and the attitude of that account. Now, with Gilbert & Barker we were standard on their deluxe burner, and they didn't sell nearly as many of those burners as they did their lower price burner that was equipped with Penn Switch controls.

Q. But did you get a larger proportion of the sales of controls that went on the deluxe burner?

A. Well, we got, as far as we know, all of the sales that went on the deluxe burner.

Q. What I am trying to get at is whether of not the fact that a device or heat control is standard on the burner gives the manufacturer of that control an advantage over competitors that are not standard on that.

A. Mr. Haycraft, the dealer, in this day and age, usually gets what he wants, and I don't care whether it is Anchor-Post Fence or whether it is Century Engineering or any accounts you may name, business is done along the lines of less resistance, and a manufacturer is not going out and argue with a dealer to try to get him to take a different control than he wants to buy with his burner. Now, any
dealer can get what he wants from any manufacturer,
2739 as far as I know. They may try to sell him their standard control, but if he insists that he wants a specific control, he gets it.

Q. Well, as a matter of policy, hasn't it been your policy to try to get your customers, the burner manufacturers, to make your device standard?

A. We try to get every dollar's worth of business we can get from every account.

Q. Does that mean that you do?

A. We get every dollar's worth of business we possibly can get from every account.

Q. Answer my question. Do you try to get your customers to make your device standard?

A. Listen, if we can get an account to buy our controls and they don't buy anything else, we are very, very happy indeed, and they then become standard equipment on that manufacturer's burner.

Q. Well, isn't that your policy, to try to get them to standardize on your device?

A. If we can get them to catalogue our controls and not catalogue any other, if that were possible we would be very, very happy indeed.

Q. Isn't that your proposition to the Cleveland Steel Products?

A. Yes, I think it was our proposition to Cleveland
2740 Steel Products because in the year previous they had been standardized on Mercoid, and if they offered our controls as standard, the dealer was not going to demand Mercoid in the vast majority of cases because they would rather have M. H. than they would Mercoid any time, or Penn or Perfex, because they knew they were getting a higher quality control, one that they could go out and sell to the home owner without having to do two selling jobs, first on the burner and then on the control, therefore, all those advantages to the dealer in using M. H. controls. There are very few dealers that ever came to my attention that got their back up because the manufacturer was selling them M. H. controls.

Q. Even though they had to pay as high as $4.00 a set extra?

A. No, I said that they never got their back up if the manufacturer supplied them. I didn't say at what price burners.

Q. It wouldn't make a difference?

A. It would make a difference to anyone, of course.

Q. By your testimony you mean if he had paid the same price for both controls they would prefer M. H.?

A. Absolutely, every time, and you will find—

Q. Even if he required them to pay a premium?

A. Even if he was required to pay a premium. The average dealer would rather do it, thank God, than to buy a competitor's control at a lesser price.

2741 Q. And yet, as I understand your testimony, in 22 accounts you broke over and made off-scale prices to get your share of the business.

A. Yes, sir.

Mr. Freeman: What do you mean by your share?

Mr. Haycraft: That is what I would like to know.

By Mr. Haycraft:

Q. What do you mean by your share? You used that term a good many times in your direct testimony, and I would like to get a definition of it.

A. All right. Of course, having charge of sales, I could

selfishly say that a hundred per cent of the business would be our proper and legitimate share, but we know that there is a tremendous amount of the oil burner business done with a price burner, and the manufacturer is always tempted to put the lower price controls on his burner. Now, if we can get them to use our controls at a price premium, even though they go out and add and make a difference in the price of a burner equipped with our controls to the dealer, we know that we are going to get our share of that business. I couldn't say what our share was in any particular account. You could look at the overall picture. It is in the testimony that we got around 60 per cent of the oil burner business. Well, if we ever get less than 60 per cent, I will say from here on in we
2742 are not getting our share of the business.

Q. Let's turn to the Beckett account.

A. On 2616 it starts.

Q. What was your share of the business at R. W. Beckett, Inc., Engineering?

A. Well, that depends on the year that you want to talk about.

Q. Well, we will start in 1939.

A. Well, in 1939 I would say that our share of the business that year was pretty close to a hundred per cent, because to my knowledge they weren't using any competitive controls that year.

Q. And was that another dual account?

A. Yes, it was a dual account at first with the Fox Furnace Company. That was in 1939, and then later it became a dual account with Olsen Manufacturing, but as it turned out, Olsen didn't buy any controls from us. We thought it was a dual proposition when they went in with us.

Q. But you gave them a Bracket 3 contract, didn't you?

A. We gave them in 1939, yes. In 1940, after we knew they had lost the Fox Furnace business, even though they had purchased a combined 8328 units the previous year, we put them back on a Bracket 2 basis at the start of 1940.

Q. Now, then, where did you find out what price they were paying Mercoid for their sets of controls?

2743 A. Well, that information first came in a report from our Mr. Snowberg, who had called on Beckett. Later it was confirmed to me in person when he called on Beckett.

Q. And Beckett told you?

A. That is right.

Q. And he told you your price was almost $4.00 more than Mercoid's?

A. Perhaps he didn't say it in just those words, but he gave us the price that he was paying for the relay at that time, and it was easy enough to adduce the rest, because we knew what Mercoid's limit control was priced at.

Q. In 1940 what was your share of the business?

A. I couldn't say as to that, Mr. Haycraft. I don't know how many sets Olson used of Mercoid. I don't know how many sets Beckett used of Mercoid.

Q. Now, then, that was in 1940. Did they start buying Mercoid then?

A. Yes, in 1940.

Q. Then what would you say your share of the business in 1941 was?

A. Well, again the same situation existed. They were still selling Olson. Olson, to our knowledge, were buying Mercoid controls, and I couldn't say how many Olson bought or how many Beckett actually bought that year.

I do know they catalogued Mercoid controls, and I do
2744 know Beckett catalogued both M. H. and Mercoid in 1941.

Q. Well, was your instrument standard in 1939 on Beckett?

A. Yes, in 1939 they were.

Q. 1940?

A. Well, then they catalogued both types.

Q. And did the customer ever have a choice at the same price, or did the customer have to pay more?

A. I couldn't answer that. I would say that the customer would have had to have paid more if he bought M. H. controls.

Q. Now, then, do you know what your sales were in 1940?

A. I don't have that here. I am sorry. I forgot that.

Q. In your 1941 sales, though, Beckett Engineering was a little over 2,000 units, was it not?

A. What year was that?

Q. 1941.

A. 2,031 instruments.

Q. And you don't know whether that was your share of the business or not?

A. I couldn't answer that.
Mr. Gilpatric: That is what he actually got?
The Witness: That is what we got.

By Mr. Haycraft:

Q. And you got that at a price which was nearly $4.00 more than Mercoid, is that right?

A. I couldn't say that again, because we lowered 2745 our price $1.00.

Q. Oh, I see.

A. And that would make $3.00.

Q. Here it is, $1.65 higher than Mercoid.

A. That is right.

Q. That is your estimate, isn't it, page 2619, is that correct?

A. No, sir. You are down on another—wait a minute. That is right. In 1941, according to these figures, our price would have been $1.85 higher than Mercoid.

Q. And you got a total of 2,000 units on that basis?

A. Yes, sir.

Trial Examiner Sheppard: I thought you said four.

The Witness: Pardon?

Mr. Haycraft: Well, 2,000 units were sold. At the beginning of the period it was $4.00 difference, but they reduced their price and they came down to $1.85.

Trial Examiner Sheppard: I see.

By Mr. Haycraft:

Q. You reduced that price by giving them a higher bracket?

A. That is right. We gave them our Bracket 3 prices.

Q. You didn't have any idea they would buy that many?

A. My thinking at the beginning of 1941 would have been that in their normal business they couldn't have bought enough controls to justify the 3-A bracket 2746 quantity of 7500 units.

Q. See if I can get it correct. Your price at that time, 1941, was $15.35 a set with a 3-A price, wasn't it?

A. $15.35.

Q. Now, the D'Elia Oil Burner Company, Bridgeport, Connecticut.

A. Page 2620.

Q. At that time, in 1939, you gave them a Bracket 3 contract. In 1940, was that the year the Mercoid competition developed, or was that prior to that time?

A. It developed in 1940. In 1939 they bought 6397 instruments.

Q. Their standard equipment?

A. And they were standard equipment, but they decided in 1940 to enter the low price burner field. That was in February of that year, and that is when the competitive situation showed up, and we gave them our Bracket 3 contract which called for 7500 instruments.

Q. And they had bought 6300 the year before?

A. Yes, sir. They had only lacked 1103 instruments of earning the 7500 quantity the year before, and obviously if they were going into the low price burner business, it seemed as though they could easily make a 7500 commitment for 1940.

Q. Well, do they still keep your control standard?

2747 A. To my knowledge they do.

Q. The low price burner?

A. To my knowledge they did.

Q. And you sold them over 5,459 units in 1941. Now, how much of a premium did they have to pay you for those controls over Mercoid?

A. Well, the record shows that Mercoid quoted $13.70 in 1941, and we were selling D'Elia at $15.35, so that would be $1.85 per set of controls.

Q. Provided Mercoid offered D'Elia the same price?

A. I beg your pardon. The Mercoid price is in the record that they either quoted or sold D'Elia, 1941, at $13.70.

Q. You learned that afterwards?

A. That is right. We thought that they were getting a price from Mercoid of about $14.20.

Q. So it was your impression when you made that $15.35 price that you were coming within—

A. $1.15 within their price.

Trial Examiner Sheppard: I think that is the closest one I have noticed, I mean in the competitive price between them.

Mr. Freeman: That is what they thought, but in fact it was the $1.85.

Trial Examiner Sheppard: It was?

Mr. Freeman: Yes, in fact.

2748 By Mr. Haycraft:

Q. So that you sold to D'Elia Oil Burner Company 5,459 units at a premium of $1.85 a set over Mercoid, is that right?

A. That figure, where did you get that, Mr. Haycraft?

Mr. Freeman: It is in the record.

Mr. Gilpatric: It is in the record.

Mr. Freeman: It is in the record. It is all right.

By Mr. Haycraft:

Q. The next account is the Ray Oil Burner Company.

A. On page 2623.

Q. Well, that is one of your Bracket 4 accounts, isn't it?

A. Yes, sir.

Q. Now, this report that you had on Ray, and the Mercoid price, is a difference of $1.85 again, isn't it?

A. $1.75.

Q. $1.75?

A. Yes.

Q. Did you get that from Ray himself or was that—

A. That came direct from Ray through our Mr. Peterson, who calls on Ray. Mr. Peterson is the manager of our San Francisco branch.

Q. Well, was that price made to meet that competition or was it justified by your previous dealings with that firm?

A. Well, Ray were given our Bracket 4 prices, and 2749 they earned them as far as their purchases were concerned. They purchased in excess.

Q. How many did they buy in 1941? Is 19,544 correct?

Mr. Freeman: If that is not in the record, it ought to be.

The Witness: The figure they have here for 1941 is 18,056 instruments that we sold them in 1941.

By Mr. Haycraft:

Q. That would be Bracket 4, wouldn't it?

A. Yes, sir.

Q. Now, as I understand your testimony in the record, you sold the Ray Oil Burner Company 18,000 units, or 19,000, whichever figure is correct, at a premium of $1.75 per set over your competition?

A. No, in this case that would not be true, Mr. Haycraft, because this price that I have mentioned in here, Mercoid's and ours, was not on the conventional or stack control, limit control and thermostat used with the domestic burner. If you will recall, the predominant part of Ray's business was the industrial oil burner. Now, what Mercoid's price might have been to Ray on their standard domestic controls, I don't know.

Q. That is what this price was that you mentioned in your testimony, $26.24 being Mercoid, $13.75?

A. That is right, and our comparable equipment 2750 sold Ray for $15.50.

Q. But you don't know how much of this 18,000 was on domestic, is that what you mean?

A. That is the point.

Q. Do you have any way of determining that?

A. No, I wouldn't know.

Q. Now, take Century Engineering. Did you get the price of your Mercoid and other controls from the Century at that time?

A. We had a direct price comparison from Century in 1941 covering Penn controls. To my knowledge we didn't have any information from them concerning the Mercoid price.

Q. Except from other dealers?

A. Except comparing with other concerns of similar size and potential.

Q. Well, now, what was the comparison of Penn Switch?

A. Well, do you want the figures that we got from Century or the figures that appear in the record?

A. What you got from Century?

A. All right. Now, let's see.

Q. $11.57, isn't that right?

A. That $11.57 price is correct for the set controls, including Penn's new lower priced constant ignition control No. 661. Now, I know that Century used some of those controls, and I also know that they used some of the 2751 Penn better quality constant ignition controls.

Q. Well, if they used the constant ignition, $11.57 was the price, and your price was $14.05?

A. Yes, sir.

Q. They used the other one, and their price was $13.50, is that right?

A. That is how I deduce that, because I think that $13.50 covers the number 670 control.

Q. Why do you think that?

A. Because of the previous price we got from Century of $11.57 where the 661, the cheaper control, was involved, and I will say that there was $1.50 difference between the two primary controls, their deluxe job and their price job.

Q. Well, if it was based on your $14.05 compared to $11.57, that would be about $2.50 there, wouldn't it?

A. Approximately $2.50.

Q. Based on the other. What was your comparable figure, $14.40 to $13.50?

A. Our price to Century was $14.05 on the constant ignition set, and on the Penn deluxe, according to the record, that is $13.50, so there would be 55 cents difference there.

Q. What is this $14.40 figure that you sold—oh, I see, your price.

A. I think there is an error right there in this testimony, Mr. Haycraft. On line 11, it is interesting to
2752 note the record shows in this case that Penn Switch's price to Century in 1941 was $14.40, and in 1941 was $13.50. I think that is in 1940 instead of 1941.

Trial Examiner Sheppard: That may be changed right there and the record will show that it should be changed in other copies.

The Witness: That is right.

By Mr. Haycraft:

Q. What is your price to Century in 1940?

A. I am sorry, but I will have to look that up, Mr. Haycraft, because this record doesn't show the constant ignition.

Q. Now, then, line 16 on the same page, you say Mercoid's price in 1940 was $13.58. Isn't that $13.50?

A. Yes, it is $13.50.

Q. Now, what was their price in 1941, or is that the 1941 price?

A. No, Mercoid's price to Century in 1940 was $13.50 a set.

Q. And what was the price in 1941, do you know?

A. I don't know Mercoid's price in 1941.

Q. You don't know what your price was and you can't make that comparison at this time, can you?

A. Yes, we know our price in 1941 was $13.50. No—beg your pardon. That is off the record. That was wrong. That was Penn Switch.

2753 Q. Your price in 1941 is $14.05?

A. Right.

Q. On the constant ignition?

A. That is right, and that is all they use.

Q. That would be 55 cents more than Mercoid's if they had the same price in 1941 as they had in 1940?

A. Yes, sir.

Q. How many did you sell them in 1941?

A. We sold them 8398 instruments.

Q. Do you know whether that was your share of the business?

A. According to my way of interpreting, it was not, because Penn Switch got the most of the business with Century Engineering Company.

Q. That is your understanding, but did you see any figures on that?

A. No, but the conclusions are very, very obvious, and evident, Mr. Haycraft, because the biggest account that Century had was Crane Company, and Penn controls were standard on all the Crane burners.

Q. I see on page 2624 you say that your price to Century is $14.75. Is that constant ignition or the other?

A. Now, off the record, I would say that was right, Mr. Haycraft, because that allows $1.10 difference for the intermittent over the constant.

Q. What was the intermittent?

2754 A. $15.85.

Q. So that your $14.75, then, in 1946, is compared with Mercoid's $13.50?

A. Yes, sir.

Q. And on page 2625, line 20, you say, "We did get a share of Century's business, but in order to do it, our price had to be somewhat commensurate."

A. Yes, sir.

Q. Is that the word?

A. Yes, sir.

Q. "With the competitive prices we knew existed"?

A. Yes, sir.

Q. Are you referring, then, to 1940 or 1941 there in that statement?

A. From the continuity of the testimony here, I think you have been referring to 1940, although the same statement could be made for 1941.

Q. In 1941 you got 8,398 units. You don't know whether that is more or less than your 1940 sales?

A. I don't. I would have to look that up for you.

Q. You don't know how many burners they put out?

A. No, I don't.

Q. The next one is Harvey-Whipple, Springfield, Massachusetts.

A. Page 2625, at the bottom.

2755 Q. Did they tell you, did Harvey-Whipple tell you what the Penn Switch and Mercoid prices were, or did you learn that from other sources?

A. Harvey-Whipple did not tell us what price they were paying for Perfex. The nearest account for whom we had received the Perfex price was Reif-Rexoil.

Q. In 1940 they were buying your M. H. equipment for $15.85 as against $13.50.

A. In 1940 our price to Harvey-Whipple was $15.85.

Q. And the Mercoid's price was $13.50?

A. That is correct.

Q. And Perfex, $13.70?

A. That is right.

Q. And you don't know how much business you did with them that year?

A. Now, wait a minute. I think we are a little confused there, Mr. Haycraft. In 1940 our price to Harvey-Whipple was $15.85, and Mercoid's price in 1940 to Harvey-Whipple was $13.50. Now, in 1941 our price to Harvey-Whipple was $14.90, and the Perfex price to Harvey-Whipple was $13.70.

Q. I see. And what was the Mercoid price?

A. I don't believe that is shown in the record.

Q. What did you finally sell them that year?

A. 8632 instruments.

Q. So that in 1941 you sold 8,632 units to Harvey-
2756 Whipple, and at that time, that was at a premium of at least $1.40 per set over your competitors, is that right, $1.20, at least $1.20?

A. $1.20 between our 1941 price and the Perfex 1941 price.

Q. $1.40 probably was Mercoid.

A. It probably was Mercoid, at least that.

Q. Now, the next account is Norge Heating & Conditioning Division of Borg-Warner Corporation. You started business with that firm in 1939, and they bought 15,000 instruments, which would put them in what bracket?

A. Bracket 4.

Q. And then in 1940 you put them in the same bracket? In 1939 you started doing business with them and they were in Bracket 4?

A. And we sold them 15,390 instruments that year.

Q. That year you were $2.00 above your competitors in price, your set?

A. That is what Norge reported to us on two separate occasions, that they could buy Perfex controls for about $2.00 less than ours.

Q. But they didn't—

A. They bought that many.

Q. In 1940 did they continue to buy from you and pay that premium?

A. We sold Norge in our Bracket 4 in 1940, and
2757 they paid us $15.85 a set.

Q. You don't know how many you sold that year?

A. I do not have that record.

Q. In 1941?

A. In 1941.

Q. You reduced the price?

A. We kept them in the same bracket, and they bought 10,771 instruments.

Q. And what was the difference in price during that time?

A. You mean between our price and our competitors'?

Q. Yes.

A. I don't know what it was that year. I only know that the year previous it was $2.00.

Q. Well, if your price is $14.90 and they obtained the $13.50 price from Mercoid, it would be $1.40, wouldn't it?

A. Yes, sir.

Q. But you don't know whether that was right?

A. I don't know whether that was right or not.

Q. They didn't give you any information in 1940 and 1941 as to what they were paying their competitors?

A. Not to my knowledge, but our price in 1941 would still be higher than the Perfex reported price in 1939.

Q. Now, in the Paragon Oil case, you started off with a third bracket in 1939. Were they featuring your device as standard?

A. As far as I know, they were.

2758 Q. They did handle some Mercoid controls that year?

A. Yes, they did.

Q. Then you put them in Bracket 4, in view of the quantity they purchased in 1939, which was what—10,330, and in 1940 they purchased 13,700 units.

A. Yes, sir.

Q. And do you know what premium they were paying for your controls?

A. Except by comparison with the prices that we knew Mercoid had quoted concerns that had a smaller potential than Paragon, such as Weatherall Engineering.

Q. The second line on page 2635, I ask again whether that shouldn't be $13.50 a set instead of $13.57?

A. I think $13.50 is correct there.

Q. Well, if your assumption is correct, then you were charging this account $14.90, or $1.40 more than Mercoid?

A. Yes, sir.

Q. And you sold them 14,501 units in 1941, is that right?

A. Yes, sir.

Q. Reif-Rexoil. Now, were they at one time standardized on your controls?

A. They standardized on our controls at one time.

Q. Well, in 1939 they were standardized?

A. That is right, in 1939.

Q. They were in third bracket, and bought 7,157 units?

2759 A. That is right, and they were using Perfex.

Q. At $2.00 less?

A. At $2.00 less per set that year.

Q. In 1940 you reduced, put them in fourth bracket price, $15.85, and they bought 6,756 sets. Now, how much was that if the Perfex price that year was $14.15—is that right—as compared to $15.85?

A. Perfex' 1940 price was $14.15 a set, and their 1941 price was $13.70 a set.

Q. Well, you have got your price—you cut your price, too, from $15.85 to $14.90?

A. So that year we were $1.20 higher. That is, in 1941 we were $1.20 higher than Perfex.

Q. In 1940 you were $1.70 higher?

A. In 1940 we were $1.70 higher.

Q. All right. Now, then, in 1940 when you were $1.70 higher, you sold them 6,756 units?

A. Yes, sir.

Q. In 1941 you sold them 4,940 units?

A. Yes, sir.

Q. Although you were 50 cents closer in price?

A. Closer in price.

Trial Examiner Sheppard: Say that again, Mr. Haycraft.

Mr. Haycraft: I say in 1940 they sold them 6,756 2760 units and their price, that is, M. H. price, was $1.70 higher than Perfex. In 1941 they sold them 4,940

units, and their price was $1.20 more, or 50 cents closer to the Perfex price than in 1940.

Trial Examiner Sheppard: All right.

Let's take a five minute recess.

(A short recess was taken.)

Trial Examiner Sheppard: All right. On the record.

Mr. Haycraft: The next is Scott-Newcomb.

Mr. Gilpatric: Page 2638.

By Mr. Haycraft:

Q. Is this correct? Page 2639, line 10, from 1939 the record shows that Perfex' price was $15.70 a set against your price of $15.95?

A. Let me check that.

Q. What bracket was that?

A. Let me check that. Well, according to my notes, that is correct, Mr. Haycraft.

Q. Let's see, now. That would mean 1939; at the top of page 2639 you say, "We extended a price of $21.05 a set," is that right? 1938, that must be.

A. Yes, that is 1938.

Q. Do you want to correct that?

A. Yes, sir.

Trial Examiner Sheppard: Let the record be cor-
2761 rected. The reporter will make the correction on the permanent record and we will change them all.

By Mr. Haycraft:

Q. In 1939 you put them in Bracket No. 4 and gave them a price of $15.95?

A. Yes, sir.

Q. Per set?

A. Yes, sir.

Q. And during that year they bought 3,262 instruments?

A. That is right.

Q. Well, what bracket would that ordinarily put them in if you follow the brackets?

A. Bracket 3.

Q. And in that year is it your testimony that the Perfex price was $15.70 per set?

A. Yes, sir.

Q. In 1940 the Penn Switch price was $15.15 a set against your price of $15.85?

A. Yes, sir.

Q. And they bought 8,034 instruments in 1940 as compared with 3,000 in 1939, is that correct?

A. That is right.

Q. Now, is it correct, then, that the difference in price in 1939 was 20 cents a set as between M. H. price and the Perfex price?

2762 A. Yes, sir.

Q. And the difference in 1940 was 70 cents per set?

A. Between Penn Switch and M. H.

Q. In other words, when you increased your differential, the difference between your price and Penn Switch, you sold more instruments?

A. That is the way the case turned out to be.

Trial Examiner Sheppard: You mean when he went from 4 to 3?

Mr. Haycraft: No, he is still in 4.

Trial Examiner Sheppard: I thought he was in 3.

Mr. Haycraft: He kept them in the same bracket.

Trial Examiner Sheppard: I thought he dropped to 3 there.

Mr. Gilpatric: His quantities put him in 3, but he was kept for price purposes.

Mr. Haycraft: In 1940 the $15.85 was the Bracket 4 price. It is ten cents less than the 1939 prices.

Trial Examiner Sheppard: I get it, competition.

Mr. Haycraft: But the Penn Switch price was dropped to $15.15. In other words, they dropped 55 cents.

By Mr. Haycraft:

Q. You are talking about two different companies?

A. No, in 1939 it was the Perfex price.

Q. Well, wasn't Perfex there in 1940?

2763 A. Yes, but I don't know what their price was in 1940.

Q. The Penn Switch price was lower?

A. That is right.

Q. You don't know whether the Perfex price was lower or not?

A. I don't know.

Q. In 1941, line 16, that isn't a correct quotation of that question, I don't think. What was your price in 1941 to Scott? Do you mean Scott-Newcomb?

A. Scott-Newcomb.

Q. In 1941 your price was $14.90. That was the regular Bracket 4 price?

A. That is right.

Q. And you sold 9,003 units. Now, what was the price of Penn Switch and Perfex during those years, do you know, during 1941?

A. I don't have any direct price information from Scott-Newcomb, but there is plenty of other information with respect to accounts comparable in quantity to Scott-Newcomb, if you want it.

Q. Well, what were those other prices?

A. $14.20 and $13.70.

Q. $13.70, and the Reif-Rexoil, wasn't it? That was the Perfex price?

A. That is right.

2764 Q. That would be $1.20 less than your price, is that right?

A. That is right.

Q. Your device was standard on Scott-Newcomb?

A. Yes, sir.

Q. Do you know whether or not you got your share of the business that year?

A. I was quite content to say that we got our share of the business that year.

Trial Examiner Sheppard: Say that again.

The Witness: I say I am quite content to say we got our share of the business that year.

By Mr. Haycraft:

Q. The price you gave them, though, would require them to give you about 15,000 units, wouldn't it?

A. That is right.

Q. It was based on that?

A. On quantity.

Mr. Freeman: You say if based on quantity?

The Witness: If based on quantity.

By Mr. Haycraft:

Q. Now, the next is Silent Glow Oil Burner. There again, you had Perfex competition, didn't you?

A. Yes, sir.

Q. You had them in Bracket 4 also, didn't you?

2765 A. Yes, sir.

Q. Did their purchases in 1940 entitle them to that bracket?

A. No, sir. They did not meet that quantity in 1940. It was the competitive situation that legislated that price in 1941.

Q. Your $14.90 price in 1941, do you know what the Perfex price that year was?

A. As I recall, in similar companies, it was $14.20 and $13.70.

Q. In those two years. That would be $1.20 difference, then, wouldn't it?

A. In the one case it would be $1.20 difference. In the other it would be 70 cents difference. But in 1941 it would be $1.20.

Q. And your sales to that account increased in 1941 over 1940 and 1939, did they not?

A. Yes. In 1940 they had 9782 instruments, and in 1941 they purchased 11,290 instruments.

Trial Examiner Sheppard: Mr. Lockrae, what other consideration outside of competition made you get away from the regular bracket prices?

The Witness: Well, to my knowledge, Major, there is nothing else.

Trial Examiner Sheppard: Just a mere matter of 2766 competition?

The Witness: It is a matter of competition.

Trial Examiner Sheppard: All right.

The Witness: Because we never gave lower prices unless we had to.

Trial Examiner Sheppard: In other words, you never broke away from the bracket prices?

The Witness: Unless we were forced to.

Mr. Haycraft: Well, you have 55 instances here aside from price, 22 that you gave us that were off-scale prices in your brackets.

The Witness: That is true, Mr. Haycraft, but based on the previous year's history or other extenuating circumstances, we felt and we still feel that those accounts were given the right bracket price.

By Mr. Haycraft:

Q. Well, isn't that your answer, then, that where there were other circumstances, such as an average of previous years—

A. Yes, you can say where there was an average of previous years or of the two previous years, or where the account made their quantity the previous year, we had

nothing else to do but to give them the same price bracket the succeeding year.

Mr. Gilpatric: But the point is, Major, the time he did that he didn't know they weren't going to make
2767 the bracket. We are talking about hindsight one moment and foresight the next.

Trial Examiner Sheppard: My question went more to policy.

Mr. Gilpatric: Well, policy was never to go off bracket except in competition.

Trial Examiner Sheppard: I am cognizant of the matters that Mr. Haycraft has brought out here in reference to combining two years.

Mr. Gilpatric: Yes.

Trial Examiner Sheppard: I think I get a pretty good picture of this.

By Mr. Haycraft:

Q. Now, the Korth Oil Burner Corporation. Was your device standard on Korth burners?

A. It was standard on Korth burners except where they were selling to speculative builders or to furnace manufacturers who were buying strictly on price. Then Mercoid was standard.

Q. Well, the difference between the price of your controls and Mercoid's in 1941 was $2.60 per set, is that right?

A. That is right, when you take into consideration the constant ignition relay, the thermostat and the combination control.

Q. Now, do you know how many of the sales that you made to Korth during that year consisted of that particular set?

2768 A. I couldn't say, Mr. Haycraft. I don't know how many combination controls we sold them that year. We could figure it out from our records, but I don't recall. If you want to know the difference on standard sets of controls, the price difference would be pretty easy to work this backwards, if you would like to have that.

Q. If you can give it to us.

A. Just off the record, then.

Q. Then I will ask you the question on the record. What was the difference between the Mercoid price per set and the M. H. price per set on ordinary controls?

A. It would be approximately $1.85 a set.

Q. So that your sale of 22,739 instruments to Korth in 1941 would be on a premium of at least $1.85 per set?

A. It would be approximately $1.85 a set.

Q. And that portion of the combination control would be $2.60 a set?

A. $2.60 a set.

Q. Now, the Nu-Way Corporation, the difference there was about $2.00 per set, was it not?

A. In 1941?

Q. Yes, or was that earlier?

A. Well, in 1940 we had information that led us to believe that the price difference was $1.50 a set. That was the price that Nu-Way charged extra when our con-
2769 trols were furnished to their distributors.

Q. What year was that?

A. That was in 1940.

Q. What about this top of page 2644 where it says—

A. That is just what I was referring to.

Q. —$2.00 net extra charge.

A. To the dealer, and that is another correction right there. That $1.50 should be $1.50 to the distributor.

Q. You didn't know anything further than that?

A. Yes.

Q. Well, how about in 1940, you lowered your price to $16.25 per set, and Nu-Way bought 3,641 devices. Was that more or less than they bought the previous year?

A. My recollection is that it is more than they bought the previous year.

Q. Then in 1941, what bracket did you put them in that year?

A. In Bracket 4. The price was $14.90 a set.

Q. That was not based on any of their purchases?

A. That was based on competition situation which we knew existed.

Q. And is that what you just referred to, the $1.50 difference?

A. Yes, the $1.50 difference the previous year.

Q. Now, then, you made a price of $14.90 in 1941, which was a reduction of $1.35 from your 1940 price, wasn't it?

2770 A. Yes, sir.

Q. And you sold 5,875 units that year, is that right?

A. That is right.

Q. Now, do you know what the price was of the Perfex for the competitive unit?

A. Not specifically as pertains to Nu-Way. Concerns of the same class, yes, $13.70 and $14.20 a set.

Q. Assuming it was $13.70, it would be a difference there of—

A. $1.20.

Q. $1.20 per set?

A. Per set.

Q. Now, the Anchor Post Fence account.

A. Page 2647.

Q. M. H. was standard equipment on this account?

A. No, sir.

Q. At any time?

A. That goes back to 1937 when M. H. was standard equipment on that account and the subsequent years Perfex was standard equipment.

Q. In 1940 and 1939 you still continued to sell this account about 4,000 units, is that right?

A. Yes, sir, that is right.

Q. What was the difference in price during those two years? Do you know?

2771 Mr. Freeman: You mean different as against competitors?

Mr. Haycraft: Yes, M. H. price and Perfex.

The Witness: Well, in 1940 we had information that led us to believe the Perfex price was $13.85, and our price to Anchor was $15.15, or a difference of $1.30 a set. In 1941 we gave Anchor a price of $14.25 a set, and from the information we accumulated from the field, it seemed to us that Perfex was quoting Anchor $13.20, or $1.05 difference.

By Mr. Haycraft:

Q. This $14.25 price that you give, though, was your 4-A price?

A. 4-A bracket price.

Q. And it was next to your lowest price. You did have a price to large consumers of $13.75, didn't you?

A. That is right.

Q. Your sales in 1941 were a little over 3,000 units, that is right, isn't it, 3,339 units?

A. Yes, sir.

Q. And a difference of about $1.20 per set?

A. $1.05 a set.

Q. Now, in the Automatic Burner account your device was always standard, was it not?

A. Our controls have been standard with Automatic Burner Corporation for quite a few years.

2772 Q. When was it they began to use some Mercoid and Perfex controls?

A. Well, I think Mr. Hirsch testified that they had always purchased some competitive equipment which included Perfex and Mercoid.

Q. Now, I notice you did not list this Automatic Burner account as one where you made a price on account of competition, is that right?

A. Automatic Burner justified the price we gave them based on the volume of their purchases and our sales to Holland Furnace Company of our controls that were used with Automatic Burner Corporation's burners.

Q. It took the two accounts together, though, to make it?

A. Yes, it was another dual transaction.

Q. Did you give Holland the same price you did Automatic Burner Corporation?

A. Yes, in that case they both got the benefit of our old price.

Q. Do you know anything about the prices that were being quoted the Automatic Burner Corporation by Perfex and Mercoid?

A. I could only say this, Mr. Hayeraft, that I will gamble the last dollar I possess that either one of those competitors would give Automatic Burner Corporation their lowest price.

Q. And the lowest price that you knew of in 1941

2773 was what, $13.50 and $13.70 per set?

A. $13.20 we had a record of to Anchor Post Fence on Perfex.

Q. And $13.50 on Mercoid?

A. And we had a record in 1941 of $13.50 on Mercoid.

Q. And your price, did you give them a 4-A?

A. Five.

Q. $13.75?

A. $13.75.

Q. So you would say that you got your share of the business in that instance?

A. Yes, we did.

Q. In fact, you got the bulk of it?

A. Yes, sir.

Q. That added a premium of 25 cents so far as the Mercoid is concerned, and 55 cents so far as Perfex is concerned, based on quotations that you knew about?

A. That we knew about, based on the actual prices that they probably quoted A. B. C. The difference would be greater than that, because I think the record would show here other concerns—

Q. That is all you knew about?

A. At that time. As was subsequently proved, they were buying $13.00 a set; at least they were selling other concerns at that price.

2774 Trial Examiner Sheppard: Did that price go on to the bracket price?

Mr. Freeman: No.

Mr. Haycraft: That was the bracket price if you combine it as a dual account.

By Mr. Haycraft:

Q. The Automatic Burner Corporation sales were 19,838 units for the Holland Furnace?

A. Holland Furnace purchased 21,315.

Q. So that put them up into the 30,000 bracket. If you counted the Automatic Burner Corporation alone, they would be in Bracket 4, would they not?

A. Well, you better say 4-A, Mr. Haycraft, because you see, there is only 149 units out of Bracket 4-A, 19,851, as against 22,500. It would be right in between our Bracket 4 and 4-A.

Q. It would be in the 4 bracket?

A. That is right, in the 4 bracket.

Q. Cleveland Steel Products Corporation. What is your lowest price to Cleveland Steel Products in 1941?

A. $13.75 on the intermittent ignition set of controls.

Q. And in that instance would you say that you got your share of the business?

A. Yes, sir.

Q. Now, there again, how many did they buy that 2775 year? 19,445 units, is that right?

A. If you have that on the record, that is their pur[illegible]. I don't have the record here.

Q. Now, that would place them, if they were on the bracket, that would place them in Bracket No. 4?

A. Bracket No. 4.

Mr. Freeman: That is one he listed as a competitive account.

The Witness: That is right.

By Mr. Haycraft:

Q. Was there any more competition between Cleveland Steel Products than there was with Automatic Burner Corporation?

A. In 1941?

Q. Yes.

A. Well, as I have said many times, Mr. Haycraft, our competitors were campaigning on the doorstep of all of these larger accounts. There was never a minute when we weren't facing competition from both of those accounts.

Q. Well, the only difference is that in the case of the Automatic Burner Corporation you didn't list them as an account where you went off scale to meet competition, because by combining their purchases with the Holland Furnace you put them into that Bracket 5?

A. That is right.

Q. Whereas the Cleveland Steel Products, they
2776 just had the one account. In other words, you just—

A. We handled them purely on a competitive basis.

Q. So as far as competition was concerned, the competition was probably about the same in both accounts?

A. I would say it was probably equivalent, because they were after the business of all of those bigger accounts.

Q. Now, in the Delco account, was that off-bracket price there made to meet competition?

A. I don't consider it an off-bracket price, Mr. Haycraft, because the price that we gave Delco on limit controls is the same in our Bracket 4-A as it is in 5, and Delco purchased 23,524 limit controls, and our Bracket 4-A quantity is 22,500 instruments.

Q. Couldn't you put them in Bracket 5?

A. It wouldn't make any difference, because the price on the limit controls was the same.

Q. I see. Gilbert & Barker, did you sell them?

A. 2653 is the page.

Q. Off-scale prices to meet competition there?

A. We had to handle Gilbert & Barker purely on a competitive basis. For many years they made the 30,000 instruments required to get our low price, but when Penn Switch broke in with that account and they divided their business, they made their Bracket 5 quantity each year,
but we had to give them our low price in order to
2777 get any of their business. As it was, we lost over half of it to Penn Switch.

Q. What makes you think you lost over half of it?

A. Based on reports which we had in from our salesmen. I am speaking now of 1941.

Q. Well, how much business did they do in 1941?

A. Well as our Mr. Chapler reported, it was reported they purchased between 8500 and 12,500 sets of controls from Penn, and their purchases from us during 1941 were—

Q. 25,000 units?

A. 25,000 units. So if they bought 12,000 sets from Penn, they would have bought more from Penn than they did from us.

Q. Well, if they bought 8,500, it would be about the same.

A. It would be about the same, yes, sir.

Q. So you don't think you got your share of the business?

A. No, sir, I don't think we got our share of the business there.

Q. That Micro-Westco, is that another one of your dual accounts?

A. Yes, sir. Micro-Westco sold their burners to quite a number of furnace manufacturers like the Lenox Furnace Company who, incidentally, bought them out in 1942, and they sold to a number of other furnace manufacturers.

Q. They didn't standardize on your instruments?

A. Yes, they did. The burners that Micro-Westco sold to their dealer trade were standard with our con-
2778 trols and Lenox Furnace Company purchased our controls for us with the Micro-Westco burners, as did others like the Dowagiac Steel, and several other furnace manufacturers.

Q. Well, you have listed this account also to meet competition. Now, which factor was it that was instrumental in getting you to give them the Bracket 5 when they were buying some devices themselves?

A. Well, actually, Mr. Haycraft, we were justified in giving them our low price on both bases, because with our dual transactions they never exceeded our Bracket 5 quantity, and then again, we had the competitive situation to face at Micro.

Q. What was the difference between the M. H. price per set and Penn Switch price per set to the May Oil Burner Corporation?

A. What page was that, Mr. Haycraft?

Q. The bottom of page 2655 and the top of 2656.

A. Well, again we knew that any of our competition, considering the May volume, would give them their lowest prices.

Q. You had them in what, Bracket 5?

A. We had them in Bracket 5 in 1941.

Q. Giving them $13.75?

A. That is right.

Q. But they bought 14,000 units which would put them in 3-A?

A. That is right.

2779 Q. Now, what was the Penn Electric Switch? Do you know what price it was that they were quoting?

A. Well, the Penn—

Q. The May Oil Burner Corporation, 1941?

A. I know that they would quote them their low price.

Q. $13.20 is the lowest price.

A. And that is the price that I am confident that Penn would have been glad to have given May if they had gotten their business.

Q. Well, did you manage to obtain your share of that business?

A. Yes, sir, we did.

Q. How about Timken Silent Automatic? Did you manage to retain your share of that business?

A. No, sir, I don't think we did. Perfex was standard equipment with them, and they got the preponderance of the business.

Trial Examiner Sheppard: Who did that?

The Witness: Perfex.

By Mr. Haycraft:

Q. Was the difference in price the same?

A. We gave Timken our Bracket 5 price, and Timken obtained Perfex' low price.

Q. But you don't know exactly what it was?

A. I do not know what it was. We do know that

2780 they quoted around $13.00 to other accounts.

Q. But in spite of that you did sell them a thousand units?

A. Yes, sir.

Q. But you don't know what percentage that was?

A. I don't know what percentage that was of their business.

Q. Are they putting out a cheap burner and expensive burner?

A. Yes, they had two burners, a rotary burner and gun type.

Q. And the rotary burner was yours?

A. No, sir, Perfex was standard on both burners.

Q. Now, the Williams Oil-O-Matic Heating Corporation. Is the situation the same there as with Timken?

A. No, sir. It was not exactly the same, because Williams Oil-O-Matic purchased from Mercoid and from Penn and from Minneapolis-Honeywell.

Q. They also required their dealers to pay a premium for part of that year, didn't they?

A. They did, part of 1941 for M. H. controls.

Q. I don't know whether I brought this out or not, Mr. Lockrae, but in the Anchor Post Fence Company account your controls were standard equipment, but dealers were required to pay $3.00 extra for them, were they not?

A. In what year?

Q. 1939.

A. In our Mr. Dorsey's report of April 14, he stated that M. H. controls remain as standard equipment
2781 on their present model gun burner, and also on the rotary burner. However, they did advise their dealers that their new pressed steel burner—and that, incidentally, Mr. Haycraft, was a gun burner—their price burner, was to have a standard equipment fluid heat controls manufactured for them by Perfex. He further stated that they would not attempt to force the dealers to take Perfex if they showed a desire for M. H. and paid the $3.00 difference. Then, on June 6th, about two months later, Mr. Dorsey again wrote us and said, as outlined in his previous report, "The private brand Perfex controls are only being offered as standard on their new pressed steel burner," which was their price burner. Our controls were still standard on their present line of gun burners. That would be their high priced gun burner, and also their rotary burner. So we were still standard on their deluxe burners, but on the price burner where they got their volume, Perfex was then standard.

Q. Well, do you know how long they continued to have that $3.00 difference in dealer price?

A. I know it continued through 1939.

Q. Which burner was that?

A. That was on the pressed steel low priced burner.

Q. Well, now, going into 1940, to refresh your recollection from this report, tell us what changes, if any, took place with respect to the Anchor Post account, from
2782 your standpoint. (Handing document to witness.)

A. What year was involved there?

Q. 1940. Beginning of the year 1940.

A. Well, in the report which we received, or which was written on December 28, 1939, by our Mr. Dorsey, he said they had not decided on their 1940 policy, but the way things looked they would probably go along the same as they did in 1939 unless we had prices, and by that he meant lower prices that would make it worthwhile for them to change. He said that Perfex was somewhat under $2.00 less in 1940 than they were in 1939.

In 1940 we gave Anchor a price of $15.15 per set, and it was indicated that Perfex' price to Anchor that year was $13.85 a set, but subsequent to that the record showed they actually purchased Perfex controls for $13.20 per set that year.

Q. Now, the $13.75 price in Bracket 5 in 1941, that was on intermittent ignition?

A. Yes, sir.

Q. What was your price on constant ignition set of controls in that same bracket in 1941?

Mr. Gilpatric: Off the record.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record.

2783 The Witness: $13.00 was our price on the constant ignition set in our fifth bracket.

By Mr. Haycraft:

Q. In 1941 the Perfex price was what on constant ignition, according to your report?

A. According to the report we got from the field, Perfex' price to Anchor in 1941 on the constant ignition set of controls was $12.70.

Q. What was it on their intermittent?

A. And on the intermittent ignition it was indicated that Perfex was quoting $13.20 per set.

Q. Now, was that constant ignition used on any particular type of burner?

A. Constant ignition and intermittent ignition burners are pretty generally interchangeable. In other words,

it is simply a function of whether they want the ignition to stay on all the time or whether they want it off once the fire is ignited, and most manufacturers, or I will say a goodly number of them, they buy a transformer that will stand up under constant duty. So if a dealer prefers to use a constant ignition control, why, he can put it on and then the spark is on all the time the burner is running. Lots of dealers think that it is a safer method of operating the oil burner than having the spark off as soon as the fire ignites and then let the flame support itself.

2784 But Anchor Post, their standard on their price burner was constant ignition. That is the control they furnished as standard equipment.

Q. What is the difference in manufacture, or why is a constant ignition control cheaper?

A. The constant ignition control only contains one relay unit and the intermittent ignition control contains two relays. That is the basic difference in the cost and price. The thermostats and the limit controls are identical.

Q. Seventy-five cents' difference, then, represents the difference in relay?

A. Difference in the relay.

Q. Does Anchor Post use this constant ignition on all their burners, or just on one burner?

A. I understand they use it only on their new cheap burner. They use intermittent ignition on the rotary burner. I know that for sure.

Q. Now, in this Williams Oil-O-Matic account, didn't Williams make the M. H. equipment optional on all their burners except the high pressure burner, which was two and a half more than the Penn?

A. In 1940, Mr. Haycrafft, they made our controls or Penn or Mercoid optional.

Q. I mean without further expense.

A. Oh, no. They did in two or three months, I believe. There was an interlude in there in 1940. They made

2785 our controls optional on all of their burners, and with the exception of their high pressure price job, the price on burners equipped with our controls and competitors was the same, but on their price job they charged $2.50 more when M. H. controls were furnished.

Q. You mean their cheap job?

A. Their cheap job.

Q. And that lasted until along in 1941 when it was taken off, is that right?

A. I will have to check the record on that, Mr. Haycraft, to answer you explicitly. I know that that continued on, to my recollection, until August of 1941, and at that time they were putting on a sales campaign and they offered our controls at no extra cost as a sales incentive, and it remained that way, and they are that way today, as far as I know.

Q. Was the price of $13.75 on intermittent controls the lowest price that you ever sold the sets in 1941?

A. Well, to my recollection that is the lowest price that that control was ever sold an oil burner manufacturer, $13.75. Constant was $13.00.

Q. And that was for 30,000 units and up?

A. That is right.

Q. And you had one customer that bought approximately 90,000 units that year, didn't you?

A. Yes. I think you are referring to Quiet Heat.

2786 They paid the same price. Yes, it was the same price.

Q. Isn't it a fact that the Quiet Heat and the Petroleum Heat and Power Company were the only two accounts in Bracket 5 that actually were considered, according to the purchases, belonging in that bracket?

A. Again I would have to check before I could answer that, Mr. Haycraft.

Q. In other words, you had dual accounts which, by combining the purchases of the burner manufacturer with the furnace manufacturer, you sold—

A. That isn't quite correct, Mr. Haycraft, because Aldrich Company bought more than 30,000 instruments; according to this record they bought 31,731 instruments that year.

Q. Then there were three, Aldrich, Quiet Heat and Petroleum.

A. It would be those three accounts, then, that were classified as oil burner manufacturers that earned the Bracket 5 price on the basis of quantity without considering dual transactions in 1941, and the rest of them were sold in that bracket on the basis of competition.

Mr. Haycraft: I think that is all, Mr. Examiner.

Trial Examiner Sheppard: All right. Any questions?

Mr. Gilpatric: No, I think Mr. Haycraft's examination has considerably clarified the record for us.

Trial Examiner Sheppard: All right, then, Mr. Lockrae, I will excuse you, sir. Mr. Haycraft, have you got

2787 any of these gentlemen you want to put on?

Mr. Haycraft: I will have a witness tomorrow morning.

Trial Examiner Sheppard: We will adjourn until 10:30 tomorrow morning.

(Whereupon at 4:50 p.m., October 3, 1945, the hearing was adjourned to 10:30 a.m., October 4, 1945.)

2788 Room 1121, New Post Office Building,
Chicago, Illinois,
Thursday, October 4, 1945.

Met, pursuant to adjournment, at 10:30 a. m.

Before:

W. W. Sheppard, Trial Examiner.

Appearances:

Everett F. Haycraft, Attorney for the Federal Trade Commission.

Cravath, Swaine & Moore, by R. L. Gilpatric, 15 Broad Street, New York, New York; and

Bair & Freeman, by Will Freeman, 135 South La Salle Street, Chicago, Illinois, appearing for respondent.

2789 Proceedings.

Trial Examiner Sheppard: Miss Reporter, you can convene the hearing pursuant to our adjournment taken yesterday. Show the usual appearances for these gentlemen and show Mr. William J. Warmack on the stand, having been previously sworn in this case, and he appears now called on behalf of the Commission.

Mr. Haycraft: I suppose I should, Mr. Examiner, before calling Mr. Warmack, ask whether or not counsel for the respondent have concluded their rebuttal or surrebuttal.

Mr. Gilpatric: That is correct, we have.

Trial Examiner Sheppard: All right.

Mr. Haycraft: I suppose, then, in calling Mr. Warmack, we might be put in a position of calling a witness in sur-sur-rebuttal.

Trial Examiner Sheppard: That is right.

WILLIAM J. WARMACK was thereupon called as a witness by the Commission, and, having been previously duly sworn, testified further as follows:

Direct Examination by Mr. Haycraft.

Q. Mr. Warmack, you are the same Mr. Warmack that testified in this proceeding on January 10, 1945?

A. Yes, sir.

2790 Q. Have you examined Respondent's Exhibit 186?

A. Yes, I have.

Q. And have you compared that with Respondent's Exhibit 170?

A. Yes, sir.

Q. What else have you done with respect to the statements contained in Respondent's Exhibit 186, just in a brief way?

A. We have made a field study, or at least a review of the offices of Ernst & Ernst, certified public accountants in Minneapolis, who prepared this document. In that connection we examined the underlying data that was compiled in connection with the preparation of this document that is Respondent's Exhibit 186.

Q. Will you refer to these two exhibits, 170 and 186, and testify as to your interpretation of the changes that took place or the differences between the two exhibits with respect to any justification of differences in prices to different customers under the various brackets indicated in the exhibits?

A. Yes, sir.

Respondent's Exhibit 170, that information is shown on page 6. That page is marked Exhibit A of Respondent's Exhibit 170. The page number is not shown in Respondent's Exhibit 186, but the page is likewise marked Exhibit A.

I refer particularly to column 8 on each of those pages.

On column 8 in Respondent's Exhibit 170, there is

2791 shown an excess of cost differential over price differential of $1.38 and the comparison of the $20.25 price per set of oil burners as compared with the $17.35 per set price. That figure in Respondent's Exhibit 186 is $4.20.

Still in column 8, a comparison between the $20.25 price

per set and the $16.45 per set is $3.56 in Respondent's Exhibit 170 as compared with $5.62 in Respondent's Exhibit 186.

A comparison between the $20.25 and the $15.90 price is the excess of cost differential over price differential or $3.90 in Respondent's Exhibit 170 and $5.96 in Respondent's Exhibit 186.

The comparison between the $20.25 price and the $15.35 price per set of oil burners shown is $4.04 in Respondent's Exhibit 170 and $5.94 in Respondent's Exhibit No. 186.

In column 9 there is a comparison of all lower prices with the $17.35 price bracket. The comparison there between that price and the $16.45 price per set, that is, the excess of cost differential over price differential is $2.18 in Respondent's Exhibit 170 as compared with $1.42 in Respondent's Exhibit 186.

A comparison of the $17.35 price per set with the $15.90 price per set shows an excess of cost differential over price differential of $2.52 per set in Respondent's Ex-
2792 hibit 170 as compared with $1.76 per set in Respondent's Exhibit 186.

A comparison of the $17.35 price with the $15.35 price shows an excess of cost differential over price differential in Respondent's Exhibit 170 of $2.66 as compared with $1.74 in Respondent's Exhibit 186.

Going over to column 10, there is a comparison with the $16.45 price per set with the lower prices, that is, prices per set; and the comparison of the $16.45 price with the $15.90 price, there is an excess cost differential over price differential of 34 cents per set in Respondent's Exhibit 170 as compared with 34 cents, the same figure, of course, or same amount, in Respondent's Exhibit 186.

The comparison between the $16.45 price and the $15.35 price shows an excess of cost differential over price differential of 48 cents per set in Respondent's Exhibit 170 as compared with 32 cents per set in Respondent's Exhibit No. 186.

Now, we will move over to column 11 and we have a comparison of the $15.90 with the $15.35 price per set and there is shown an excess of cost differential over price differential of 14 cents per set in Respondent's Exhibit No. 170 as compared with an excess of price differential over cost differential of 2 cents per set in Respondent's Exhibit 186.

2793 Q. Now, have you made any check of this Exhibit 186 so that you can testify as to the reason for the changes of the differences that appear in the new exhibit as compared to the old?

A. Yes.

The reason for those changes, are, in fact, the results of a recasting of the original report, that is, Respondent's Exhibit 170, whereby customers were classified according to the quantity price brackets in which their quantity purchases fell in the year 1940.

Mr. Gilpatric: 1941.

The Witness: 1941.

By Mr. Haycraft:

Q. Was that recasting done along the line you said was necessary in your testimony at the time you testified before?

A. Yes, sir; in my opinion it was.

Q. And have you checked to see—have you made any check or study of the work sheets used by the accountants in making the recasting?

A. Yes, sir. We made a field check of that data, as just previously stated, at the offices of Ernst & Ernst in Minneapolis. It was that firm of accountants which prepared this document, Respondent's Exhibit 186.

Q. Now, then, I will ask you whether or not, as a result of that check, you are satisfied that the recasting

2794 has been properly done?

A. In my opinion it has, yes, sir.

Q. From an accounting standpoint?

A. Yes, sir.

Q. Now, from the standpoint of excess of cost over price—in other words, which would be the justification? Can you calculate from this Exhibit 170 the percentage of the total sales of Minneapolis-Honeywell to fall within the brackets or the price ranges which are not justified, in other words, where the price exceeds the cost distribution?

A. I can give you the manufacturing cost of those controls which fall in the group where there is indicated excess cost differential over price differential and the manufacturing cost where the result was just the other way.

Q. All right. Will you do that at this time?

A. There is shown on the page marked Exhibit B in Respondent's Exhibit 186, a total of $1,266,947.49 repre-

senting manufacturing costs applicable to products sold to oil burner manufacturers.

Trial Examiner Sheppard: This is in 1941 also?

The Witness: Yes, sir, all this is for 1941, your Honor.

A. (Continuing.) It is shown in the upper right hand part of that page, a figure of $677,545.10 representing the cost of those controls sold to customers whose quan-
2795 tity purchases would fall within the 4, 4-A and 5 brackets, the brackets of the respondent.

Now, we have there the relationship of $677,545.10 to $1,266,937.49, or approximately 50 per cent or a little over. Now, if we add to the $677,545.10 the production cost of the instruments sold to customers falling within the 3-A quantity bracket, that is, quantities of 7500 units to 1499 units, and the figure there is $236,476.68, you will have a total of approximately $914,000.

When we relate this total to the total cost of all the instruments sold to the oil burner manufacturers of $1,266,947.49, we will have a percentage of around 75 per cent.

The reason that I brought in that manufacturing cost figure for 3-A was because there was a slight extent of price differential over cost differential of 2 cents per set as shown on Exhibit A of Respondent's Exhibit 186.

By Mr. Haycraft:

Q. Is that cost figure that you give there a fair measuring stick of the value of the products that fall into those various classifications for the purpose of making comparison?

A. Which cost figure do you mean?

Q. Cost figures that you used, $1,266,000 and something.

A. Well, that was the cost figure—that is the manufacturing cost of all of the oil burners sold and that
2796 was used—that is, that total figure is separated by the quantity price brackets. That is the annual volume of quantity price brackets.

Q. You said oil burners. Do you mean burners or controls?

A. Controls, I mean. It was related to the distribution cost figures arrived at by respondent's accountants to determine percentage, that is, the relationship, the distribution cost to the manufacturing cost in arriving at percentages in comparison of this and that appears to be satisfactory.

Q. So that roughly speaking, then, the 75 per cent, or at least between 70 and 75 per cent of the business done in controls cannot be justified from the standpoint of cost distribution?

A. Yes. That would be indicated by this Exhibit 186. Of course, bearing in mind that in the 3-A there is a 2 cents failure between the $15.90 price and the $15.35 price. Of course, respondent doesn't claim cost justification for the 4, 4-A and 5 brackets, that is, the prices applicable to those brackets.

Trial Examiner Sheppard: Let me see if I understand you there. Do you mean that in respondent's high brackets, say, 4, 4-A and 5, the differential between the bracket is not justified on account of it being too high; is that what I understand you to say?

The Witness: Yes, your Honor, and that state-
2797 ment is made by the respondent that in Respond-
ent's Exhibit 170 it didn't justify by differences in cost the prices given in those three brackets.

Mr. Haycraft: This Exhibit 186, then, according to the testimony of the witness, Mr. Johannsen, has a 3-A in that group.

Trial Examiner Sheppard: I was going to ask him about that. Then you deduct from the last report and that same statement applies to the 3-A bracket?

The Witness: To the extent of 2 cents per set, yes, sir.

Mr. Gilpatric: Which is one-seventh of one per cent of the cost.

Trial Examiner Sheppard: I see. That is true of the lower brackets. I take it, conversely, that the spread between the brackets would be justified by showing that?

The Witness: Yes, sir. In each of those instances there is an excess of the cost differential over the price differential.

Trial Examiner Sheppard: Do you know or do the figures indicate, Mr. Warmack, what percentage of respondent's business falls within those lower brackets?

The Witness: Yes, sir. As I have just testified, approximately 75 per cent of the company's business falls in the 3, 3-A, 4, 4-A and 5 price brackets.

2798 By Mr. Haycraft:

Q. Just a minute. Did you include Bracket 3?

A. Yes.

Q. As well as 3-A?

A. As well as 3-A. That represents approximately 75 per cent of the company's business and, of course, there would remain 25 per cent which would fall in the brackets, discount Bracket 1, and Bracket 2 and Brackets—1, 2 and 3.

In my statement awhile ago I didn't intend to include Bracket 3. I intended to include Brackets 3-A, 4, 4-A and 5.

Trial Examiner Sheppard: That represents the 75 per cent?

The Witness: Yes, sir.

A. (Continuing.) Now, bear in mind, of course, in that connection that there is included in that figure 3-A manufacturing costs of $236,476.68, which would be something like 20 per cent of the total business.

Now, if we take that away from the 75 per cent we would have around 55 per cent not justified and about 45 per cent justified; and in that Bracket 3-A, the comparison of the cost between the 3 bracket and the 3-A bracket shows an excess of price differential over cost differential of 2 cents per set and that is shown on page marked Exhibit A of Respondent's Exhibit 186.

2799 Trial Examiner Sheppard: That would be negligible, wouldn't it? That 2 cent differential?

Mr. Freeman: That is 1/7th of 1 per cent and I don't think the Commission is going to complain much on that for accuracy.

The Witness: Well, of course, that is for the Commission to decide.

Mr. Gilpatric: We take the position that is substantial justification. When we get that close we are practically home.

Trial Examiner Sheppard: All right.

By Mr. Haycraft:

Q. Now, Mr. Warmack, the last time you were on the witness stand you expressed in the record a further objection to Exhibit 170 than the wrong assignment of the various items in the respective bracket columns, which, according to your testimony today, has been cured by the recasting of that exhibit.

Have you changed your opinion or do you still hold the same opinion with respect to your other objection that you have to your exhibit?

Mr. Freeman: I suggest you read from the record as to what his other objection was.

Mr. Haycraft: If the witness does not have a recollection of what it was, I will be glad to.

2800 Trial Examiner Sheppard: I don't remember it, myself. Tell us what the other objection was, Mr. Warmack.

Mr. Freeman: Well, I suggest we read from the record.

Trial Examiner Sheppard: Well, it is right before you there.

By Mr. Haycraft:

Q. Well, I will read, starting from the top of page 2468:

"I understand that respondent is not manufacturing and i not merchandising its regular line of products at the present time as it would under normal peace-time conditions. This means that the respondent's accountants could not inaugurate a study when they started this thing of the time and effort expended by individuals engaged in the normal selling activities in order to develop the most accurate measuring factors for the separation of these distribution costs, which were used in the company's cost report. Therefore, they had to develop measuring factors as stated above.

. . . . . .

Respondent, as I understand it, had never made time studies during prior years when they were operating normally to develop what I would consider to be the most accurate measuring factors which could be used in the separation of distribution costs. That is, based, as

2801 far as it could be based, on effort expended. I feel that respondent's accountants made an honest and diligent effort to analyze their distribution costs and I think that they probably established the best measuring factors possible for use in the separation of costs under the existing circumstances. That is, they had a job here that they had to do in retrospect. I have always contended in previous cases before the Commission that nothing short of time studies of selling activities and related activities should be considered as proper support for measuring factors to be used in separating those costs which are closely related to effort expended by the separate employees. Now, as I stated, my principal objec-

tion is the classifying of the costs according to the prices in view of the fact that there was extensive off-scale selling.

"The next thing that is questionable, of course, is the measuring factors, or at least some of the measuring factors used for the separation of the costs by respondent's accountants. The correctness of some of the measuring factors is questionable and this is in view of the fact that the company did not avail itself of past opportunities, as I just stated, during years of normal operations to develop the most accurate measuring factors pos-
2802 sible. I feel, however, from a review of the studies and efforts made by respondent's accountants in their attempt to separate the costs that they probably did the best job that they could. I rather think that the procedure followed was probably he best that could be followed under existing war-time conditions, except for the fact that I certainly do not subscribe to the separation of costs to the quantity brackets on the basis of prices paid, in view of the off-scale selling."

Trial Examiner Sheppard: All right.

By Mr. Haycraft:

Q. How, he follows on to give examples of that following that opinion and now I am asking whether or not the new exhibit, 170,—whether or not Exhibit 170 with the new Exhibit 186 you wish to change your opinion that you gave in that respect with respect to 170?

Trial Examiner Sheppard: Have you got anything to add to that?

The Witness: I have this, your Honor:

A. Respondent's Exhibit 186 represents a complete recasting of the data set forth in Respondent's Exhibit 170 and gives effect to the placing in the proper quantity price brackets all of the customers that were sold at what we called—when we were talking about in that testimony just read—off-scale selling.

2803 In my opinion that has been corrected in Respondent's Exhibit 186 and although there might be some little point that might be questionable, I think it would be quite trivial and we don't make a point out of it or an issue out of it and I think Respondent's Exhibit 186 is the best job or represents the best job that the respondent's accountants, Ernst & Ernst, could do under existing war-time circumstances.

My testimony with respect to all of the other points is given. I believe that was on January 10, 1945, in Minneapolis. My testimony on all other points given remains the same.

Trial Examiner Sheppard: All right.

Mr. Haycraft: I think that is all, Mr. Examiner.

Trial Examiner Sheppard: Any cross?

Cross-Examination by Mr. Freeman.

Q. Mr. Warmack, then are we to understand that your criticism as of today with respect to Respondent's Exhibits 170 and 186 is that it was made in retrospect?

A. Well, the only criticism that I have runs to that point, and it is necessarily so, the only questions that I believe that were raised, aside from the question of off-scale selling, which, of course, has been cured in the preparation of Respondent's Exhibit 186, had to do with the establishing of measuring factors for the separation of certain
2804 classes of expenses, in which considerable estimating had to be done, Mr. Freeman, and the respondent's accountants had to resort to some manner of estimating.

There naturally would be a question of going back and estimating where costs would fall some years after the fact. I rather think in that connection that Ernst & Ernst accountants, and Mr. Johannsen, and whoever else in that company were engaged in this, did probably the best job that they could do in retrospect.

I wonder if that answers your question.

Q. No, it does not.

A. I am sorry.

Q. I am trying to pin down, so that we can understand just what your objection is, I gathered from your last answer that it was partially because the accountants, in making their study, had to make estimates as distinguished from concrete time studies. Is that one of your criticisms?

A. To some extent, yes, sir, I wouldn't hold entirely and rigidly to that question of time studies, which involves executives, particularly. Sometime analyses, tests and checks might be just as good as that. They lose their value to some extent, that is, the estimates resulting from these analyses, tests and checks, when they have to be made, some few years or some several years after the fact.

Q. Well, then so that we get at the point of your criti-

cism, estimates are permissible, except that it is your
2805 position that age or the lapse of time may have some bearing on the accuracy of the estimates; is that correct?

A. Well, reasonably so, but I should like to add this. Estimates should be reasonably supported by something and I don't think they should be just open guesses.

Now, with respect to the lapse of time, people leave the employment of a company occasionally, sometimes a man dies, and those things, and the longer the time from the happening of the thing, the harder it is to get down and establish an estimate.

Q. Now, you have read Respondent's Exhibit 170 and you do know the facts and the documents and the data that were used by Ernst & Ernst in making their studies; so that what you said now about death and leaving the employ and so forth is not a factor in connection with Exhibit 170, is it? In other words, I am talking about Exhibit 170 and not what may generally be the case.

A. Well, I thought you were speaking generally a bit ago.

Q. Well, I am talking about your criticism of our Exhibit 170.

A. I think if you will kind of refer to my testimony given—and I will be happy to look it up and re-read it into the record if you would like—

Q. We don't want to hear you for the second time. It is just as well at page 1485 as it is at 1263.

2806 A. The answers to all these questions are all in the record and I will be happy to look them up and give them to you.

Q. Will you answer my question as to whether or not you have checked Exhibit 170 to determine the basis upon which the accountants made their analysis, the factual basis?

A. Yes, sir, and I think that was also testified to on January 10.

Mr. Freeman: I move the last portion of that answer be stricken as not responsive. He has already answered the question.

Trial Examiner Sheppard: Well, what is your other question there?

Mr. Freeman: Will you read the question?

(The question was read as follows:

"Will you answer my question as to whether or not you

have checked Exhibit 170 to determine the basis upon which accountants made their analysis, the factual basis?")

Mr. Freeman: Now, that can be answered yes or no. Either has or he hasn't.

Trial Examiner Sheppard: I will let him answer if he wants to answer.

Mr. Haycraft: He answered yes, that it is in his testimony of such and such a date. Now, it is perfectly proper.

2807 Trial Examiner Sheppard: I don't see what it is all about at all. I just want to let Mr. Warmack testify as he sees fit.

Q. Go ahead.

A. The answer is yes, and that answer was likewise given in detail and expanded upon on and around page 2434 of the record. That is the testimony given in this case on January 6, 1945, in Minneapolis.

By Mr. Freeman:

Q. Now, with respect to time study, did I understand you to say that executives need not, in accordance with your opinion, keep time records with respect to each of their duties or time spent on a given job?

A. That is entirely up to the executives or the management of the company as to whether they want them to keep time records or whether they do not. It is wholly within the discretion of the company.

Q. Well, now, in connection with making out prices and establishing price differentials, you understand from a practical standpoint that prices are extended for a year period and that the prices are established as of the first of each year?

A. In which instance, sir?

Q. In the industry here involved.

A. That is my understanding.

2808 Q. Now, in connection with establishing a price by way of example as of January 1, 1941, for the year 1941, how would you determine in advance how much time any salesman was going to spend on any one customer in order to take that into consideration in establishing different price brackets?

A. Assuming that I want that information, sir?

Q. What was that?

A. Assuming that I would want that information as of January 1, 1941?

Q. Well, put yourself in the same position as this respondent.

A. Yes, sir?

Q. Who has to make its prices on January 1 in order to tell its customers what the price of a set of controls is going to be for the ensuing year.

A. That is based on cost differentials.

Q. Yes.

A. I would set it up in the preceding period, which would be considered, according to my knowledge, if I were the respondent, as representative of a year's business and I would collect and assemble cost data which, as of January 1, 1941, would show me what the cost differential had been up to that point or for some reasonable time or for some reasonably recent representative time of selling these controls; and I would have that information available on
2809 that date or soon thereafter to furnish to the management.

Q. Then that wouldn't be actual time studies at all, would it? That would be time studies in connection with other transactions, would it not?

A. Well, I think you confuse the issue entirely. You can set up a time study, Mr. Freeman, in 1939, 1940 or 1945 if you are operating under normal conditions. Now you say it wouldn't be a time study. The data I just spoke of could be arrived at by the use of time studies if the company elected to inaugurate and put into effect the gathering of such data.

Q. That isn't your position, from your last answer, that in order to determine price on January 1, 1941, for the ensuing year you would have to go back and take time studies which were made in 1940 or some representative period preceding January 1, 1941, for fixing your price for the year 1941?

A. The answer to that question would be this, that you couldn't possibly know, as a matter of fact, or know of your own knowledge, Mr. Freeman, exactly what it is going to cost you in 1941 before those costs are incurred. You can only base your facts upon what it has cost you and what the cost differentials are for what they might consider a representative period in the past.

Q. So that when you say you would go back and determine what it has cost you—and I am using the words
2810 that you used—in the past for a representative period,

you used that as a basis for determining on January 1 what the probable costs are going to be for 1941, correct?

A. I will have to inquire with reference to that question. Do you mean to assume that as of January 1, 1941, you have made no cost surveys?

Q. I am talking about making time studies and all of the nice things you said should have been done in the year 1940 and then we come to January 1, 1941, where we have to establish prices for the year 1941.

Now, I am asking you, is it your position that we should use the 1940 cost experiences in setting forth the prices as of January 1, 1941 and those prices that are to follow for the full year of 1941?

A. It is my opinion that that would be the only thing you could do, assuming, of course, in giving that answer, that you would properly establish those costs before having set your prices on your quantity price brackets applicable to each of the prices.

Q. So that we definitely understand, then, it is your position that having made the studies complete for the year 1940, kept time records, proper allocations, accounting methods all accurate, then you could use that subject matter accumulated from actual experience in the year 1941 for establishing your 1941 prices and cost differentials?

2811 A. It is my opinion that cost differentials established by the use of time studies, analyses, tests and checks and the fact thereby, if established properly, that the costs may be reasonably accurate, that cost may be used to show what cost differential exists or may be expected to exist in future operations.

And it would be that on which I should think prices might be set and consideration be given for the setting of prices.

And I would like to go one step further on that point, Mr. Freeman. Suppose that you made a proper cost analysis for the year 1940 and the year 1941 you didn't make one, that is, such an analysis. And maybe the year 1942 you didn't; and assume that we are continuously operating under normal conditions. It is my notion that unless there is something that the management knows which would make or alter those costs by the way of merchandising, that they probably could use it for 1945, even, giving effect to any changes that the company would naturally know came about.

Occasionally I think the company should make a cost study but I certainly don't mean to sit here and state that

they ought to make one every day or every year or every month.

Q. Well, now, your thought just expressed—and I am glad to say we agree with you—is that having made a cost study in 1940 that you could use that as the basis for
2812 your 1941 prices, possibly for your 1943 prices in the absence of some abnormal situation?

A. Yes.

Q. And right on down?

A. That's right, and when those abnormal situations arise, give effect to them; if necessary, maybe make some little supplemental study or something, if necessary, if it is of material import.

But I certainly do not, Mr. Freeman, advocate making an extensive cost survey too often because those things cost a lot of money.

Q. So that in respect to just what you have said, using the 1940 study—

A. Yes, sir.

Q. —for fixing prices in 1943 or 1942—

A. Well, that should be considered; that cost should be considered.

Q. Yes. When you consider the 1940 study for your 1942 prices, aren't you then fixing your 1942 prices in retrospect?

A. You are having to fix them based upon past experience, but there is a lot of difference in setting a price based upon sound material which is brought up to date and going back and bringing the material up to date about four years after it happened.

Q. Well, then, you didn't quite mean in retrospect, did you?

2813 A. I don't know what you mean.

Q. What did you mean by retrospect when you used that word in connection with Respondent's Exhibit 170?

A. Where did I use it?

Q. Are you telling us now that you never used the term retrospect in connection with your criticism of Respondent's Exhibit 170?

A. No, sir. I just thought you might point in the record to where the word was used and we will see exactly how it was used.

Q. Will you answer my question?

Mr. Haycraft: He answered it, Mr. Examiner. He said no.

Trial Examiner Sheppard: Is that right, Mr. Warmack?

The Witness: Yes, sir. Counsel for the respondent spoke with reference to the previous testimony given by me and I think that I should like to look at that and see just what questions were asked me with respect to this question of retrospect. I don't see the connection exactly and if he could show me that I would be happy.

Mr. Freeman: I wonder if the reporter would read my question.

(The reporter read as follows:

"Q. Are you telling us now that you never used
2814 the term retrospect in connection with your criticism of Respondent's Exhibit 170?")

A. I will answer that and say I certainly am not saying I never used the term retrospect.

Mr. Freeman: That is an answer to the question.

A. (Continuing.) I only inquired where it was used.

Mr. Haycraft: See, Mr. Examiner, it was an earlier question asking whether or not he meant what he said when he used the word "retrospect." He was entitled, I submit, to ask counsel to find in the record where he used it.

Mr. Freeman: That wasn't what I asked him. I just asked him if he used the term. That is all.

Mr. Haycraft: In an earlier question you asked him.

Trial Examiner Sheppard: If everybody is satisfied, the Examiner is. Show a little recess.

(A brief recess was taken.)

Mr. Haycraft: That is all.

Trial Examiner Sheppard: Any other questions?

Mr. Haycraft: Well, the Commission rests.

Trial Examiner Sheppard: Is there anything further?

Mr. Freeman: No.

Trial Examiner Sheppard: Off the record.

(Discussion off the record.)

Trial Examiner Sheppard: On the record again.
2815 The Examiner closes the taking of testimony in the Minneapolis-Honeywell case as of this date, and I will formally and finally close the case by order, gentlemen, sending all of you a copy of the order when I do close it. Now we stand adjourned.

(Whereupon, at 11:45 a. m., October 4, 1945, the hearing in the above-entitled matter was adjourned.)

BEFORE FEDERAL TRADE COMMISSION.

* * (Caption—4920) * *

ORDER CLOSING TAKING OF TESTIMONY.

The taking of testimony in the above-entitled proceeding is closed as of this date.

W. W. Sheppard,
Trial Examiner.

United States Court of Appeals

For the Seventh Circuit

No. 9584

MINNEAPOLIS-HONEYWELL REGULATOR COMPANY,

Petitioner,

vs.

FEDERAL TRADE COMMISSION,

Respondent.

On Petition for Review of an Order to Cease and Desist Entered by the Federal Trade Commission.

INDEX.

Certificate of Secretary 1
Complaint, dated Feb. 24, 1943 2
Answer, filed Apr. 17, 1943 12
Substitute order re Examiner, etc., entered Aug. 10, 1943 27

TRANSCRIPT OF PROCEEDINGS.

Colloquy 29, 1209, 1366
Hearing before the Commission 1192

WITNESSES FOR THE COMMISSION.

Testimony of:

Bork, George H. 655
Brown, Harry 593
Crawford, T. A. 347
Gannon, John 635
Gillis, Herbert 520
Hart, Al 612
Herr, F. E. 663
Hodges, Charles H., Jr. 378
Johnson, H. S. 717
Lang, Harrison M. 551
Lockrae, Arthur H. 32, 112, 291
Luthe, Julius K. 208
Max, Charles A. 487
McCabe, Ira Emmett 163
O'Brien, J. L. 424
Owens, James William 145, 205
Pauling, J. W. 301
Peters, Samuel Louis 495, 553

102 COMMISSION'S EXHIBIT NO. 1.

FEDERAL TRADE COMMISSION.

Minneapolis-Honeywell Regulator Company. } Docket No. 4920.

STIPULATION AS TO FACTS.

103 August 6, 1943.

UNITED STATES OF AMERICA.

BEFORE FEDERAL TRADE COMMISSION.

In the Matter of
Minneapolis-Honeywell Regulator Company. } Docket No. 4920.

STIPULATION AS TO THE FACTS.

Pursuant to the provisions of the Federal Trade Commission Act and of the Act of Congress of October 15, 1914, commonly known as the Clayton Act as amended by the Robinson-Patman Act, approved June 19, 1936, the Federal Trade Commission on February 23, 1943, issued its complaint against respondent and caused such complaint to be served as required by law, in which it was charged that said respondent was and had been using unfair methods of competition in commerce in violation of the provisions of said Federal Trade Commission Act and in acts, practices and methods resulting in a substantial lessening of competition between respondent and its competitors and tending to create a monopoly in respondent in commerce in violation of the provisions of the said Clayton Act. The respondent, having filed its answer to the complaint herein and being desirous of expediting said proceeding and avoiding the expense incident to the taking of testimony and solely for the purpose of this proceeding and without making any
104 admission of fact for any other purpose whatsoever;

It Is Hereby Stipulated And Agreed by and between W. T. Kelley, Chief Counsel for the Federal Trade Commission, and Messrs. Cravath, de Gersdorff, Swaine & Wood of New York City and Messrs. Bair & Freeman of Chicago, Illinois, attorneys for respondent, that subject to the approval of the Federal Trade Commission, the statements of agreed facts contained herein may be made and taken as a part of the record herein and may be taken as facts in this proceeding, the same as and with the same effect as if evidence to such effect had been adduced at hearings in the usual course, and reserving the right of the parties to object to the materiality or relevancy, but not the competency, of anything herein contained; and that the Commission may proceed upon said statements of facts and such additional proofs as the parties may produce to make its report stating its findings as to the facts (including inferences which it may draw from such statements of agreed facts and its conclusions based thereon) with the right of the parties to produce additional proofs and to present oral arguments and file briefs.

Paragraph One: When used in this Stipulation, the following terms shall have the meanings respectively assigned to them below:

(a) "Oil burners" means automatically operated and controlled oil burners only of the pressure and rotary types for domestic heating plants, and does not include any other types of oil burners, such as vaporizing, pot and distillage types and industrial or commercial oil burners;

(b) "Automatic temperature controls" means automatic temperature controls for oil burners of the kind herein defined.

Paragraph Two: Respondent Minneapolis-Honeywell Regulator Company is a corporation organized, existing and doing business under and by virtue of the laws of the State of Delaware, with its general office and principal place of business in the City of Minneapolis, State of Minnesota. It is now and for more than three years last past has been engaged in the manufacture of automatic controls for oil, gas and coal heating plants and certain industrial operations and in the sale of automatic temperature controls for oil burners principally to oil burner manufacturers and also to wholesalers (who are sometimes called jobbers) and dealers in oil burners and automatic temperature con-

trols located in the various states of the United States, territories thereof and in the District of Columbia. Respondent causes its automatic temperature controls when sold to be transported from the places of manufacture by respondent in the States of Minnesota and Indiana and through distribution points in certain other states of
106 the United States to the purchasers thereof located in states other than the States of Minnesota and Indiana. Prior to the year 1942 there was a constant current of trade and commerce in automatic temperature controls between and among the various states of the United States, territories thereof and in the District of Columbia, and respondent in the course and conduct of its said business was in substantial competition in the sale of automatic temperature controls in commerce between and among the various states of the United States, territories thereof and in the District of Columbia, with other corporations, persons, firms and partnerships. Respondent is one of the principal manufacturers of automatic temperature controls in the United States, the total volume of its sales of said products annually during the years 1939, 1940 and 1941, constituting approximately 60% of the total number of automatic temperature controls sold annually in the United States to manufacturers of oil burners and to wholesalers, contractors and dealers in oil burners and automatic temperature controls. The total volume of respondent's sales of said products annually during the years of 1939, 1940, and 1941, constituted approximately 25% of the total number of automatic temperature controlling devices (including but not limited to automatic temperature controls as herein before defined) sold annually in the United States to manufacturers of all types of burners of oil for domestic heat-
107 ing plants, including vaporizing, pot, and distillate types, and to contractors, dealers and wholesalers in such burners and controls.

Paragraph Three: Respondent, in the sale of automatic temperature controls as aforesaid, during the years 1936 to 1941, inclusive, entered into annual contracts or agreements with manufacturers of oil burners for numbers of sets or units of automatic temperature controls. The number of manufacturers of oil burners having such contracts with said respondent during said years constituted more than 50% of all the manufacturers of oil burners within the United States.

Paragraph Four: In the operation of oil burners, three types of automatic temperature controls are required and used and are usually, but not necessarily, sold in sets consisting of:

(1) A thermostat, which is a control device placed in the room or space to be heated;

(2) A limit control, which is a control device placed on the heating plant to prevent the temperature or pressure in the heating plant from exceeding a certain safe level, such devices manufactured and sold by respondent including an Airstat for warm air heating plants, an Aquastat for hot water heating plants, and a Pressuretrol or a
108 Vaporstat for steam and vapor heating plants; and

(3) A primary control, which is a control device controlling the cycle of operation of the oil burner so as to start and stop it when heat is needed or no longer needed (as governed by the thermostat) and to prevent a hazardous condition from occurring when there is a failure of combustion, the primary controls manufactured and sold by respondent being called Protectorelays.

In addition some manufacturers of oil burners make installations employing a fan control which controls the operation of a fan for driving warm air to the space to be heated, and also make installations employing several thermostats, the thermostats being then used as zone controls in the heating of multiple spaces. The primary control, sometimes referred to as a combustion control, master control or safety control, is an essential element in every oil burner installation (but is not an essential element in oil burner installations of other types, such as vaporizing, pot and distillate types).

Paragraph Five: Respondent's primary controls for oil burners as defined in Paragraph One hereof, and known as Type RA 116A and RA 117A, which constitute the great majority of the primary controls sold by respondent and
Installation Instructions for which are attached hereto
109 as Exhibits A and B, are covered, in whole or in part, by the following patents owned or controlled by respondent:

Number	Name	Date
Re. 18,771	Phelan et al.	March 21, 1933
No. 1,847,033	Phelan et al.	Feb. 23, 1932
1,883,245	Bogle	Oct. 18, 1932
1,893,875	Aldrich	Jan. 10, 1933

Number	Name	Date
1,908,493	Bogle	May 9, 1933
1,946,598	Taylor	Feb. 13, 1934
1,969,961	Bogle	Aug. 14, 1934
1,969,967	Dever	Aug. 14, 1934
1,969,968	Dever	Aug. 14, 1934
1,969,974	Erickson	Aug. 14, 1934
1,990,813	Bower	Feb. 12, 1935

2,022,188	Denison	Nov. 26, 1936
2,196,671	Gille et al.	April 9, 1940
2,241,838	Wilson	May 13, 1941
2,257,439	Wilson	Sept. 30, 1941
2,274,177	Wilson	Feb. 24, 1942
2,290,399	Wilson	July 21, 1942

Paragraph Six: Respondent's thermostats for oil burners as defined in Paragraph One hereof, and known as Type T-11, which constitute the great majority of thermostats sold by respondent and Installation Instructions for which are attached hereto as Exhibit C, are covered, in whole or in part, by the following patents owned or controlled by respondent:

Number	Name	Date
Des. 96,822	Dreyfuss	Sept. 10, 1935
No. 1,818,697	Denison	Aug. 11, 1931
2,170,310	Shivers	Aug. 22, 1939
2,171,272	Kronmiller	Aug. 29, 1939
2,171,273	Cunningham	Aug. 29, 1939

110 Paragraph Seven: Respondent manufactures and sells thermostats and primary controls for a particular and distinctive control circuit for electrically controlling the operation of an oil burner, and such thermostats and primary controls of its manufacture are designed especially to work one with the other in that circuit for bringing about such electrical control of the oil burner. Respondent furnishes oil burner manufacturers and other customers with such electrical circuit layouts for controlling the operation of an oil burner and its thermostats and primary controls are particularly designed to work one with the other in a proper cooperative relationship for electrically bringing about the sequence of operation and control of an oil burner as set out in such electrical circuit layouts. Some

of the thermostats manufactured and sold by the respondent may be used with limit controls and primary controls manufactured and sold by competitors. Also some of the primary controls manufactured and sold by the respondent may be used with limit controls and thermostats manufactured and sold by competitors. Thermostats and primary controls manufactured by respondent for use with oil burners give more satisfactory and efficient performance in the ordinary installation where the proper primary control of respondent's manufacture and the proper thermostat of respondent's manufacture are used in the same installation than where improper primary controls and
111 thermostats made by different manufacturers are mixed in the same installation. From the point of view of the user the most satisfactory and efficient operation of an oil burner as customarily installed is attained

(a) either when it is equipped with a proper primary control and proper thermostat manufactured by the same manufacturer (the limit control of the proper type may be of another's manufacture), or

(b) where it is equipped with a proper primary control, proper thermostat and proper limit control manufactured by different reliable manufacturers;

and it has been for many years the practice of many manufacturers of oil burners to equip their burners with sets of automatic temperature controls in such fashion that all controls (primary, thermostat and limit control) on a single burner are made by the same manufacturer, whether they be controls manufactured by respondent or by one of its competitors. On the other hand, some manufacturers of oil burners have equipped their oil burners with sets of automatic temperature controls in such fashion that some of the controls on a single burner were made by different manufacturers.

Thermostats and limit controls of the proper type manufactured and sold by a number of competitors of the
112 respondent could be and are satisfactorily and safely used by some manufacturers of oil burners, furnace manufacturers and contractors interchangeably for thermostats and limit controls of the same type sold by respondent on installations where respondent's primary controls are used.

Paragraph Eight: Respondent in the course and conduct of its said business in December, 1936, entered into or

attempted to enter into written agreements for the year 1937 with certain of its oil burner manufacturer customers, which agreements contained the following provisions:

"The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract ..... sets of the Company's automatic temperature controls, each set consisting of one Thermostat, and one Limit Control, and one Primary Control. It is specifically agreed that other control equipment is not to be considered as a part of a set within the terms of this contract. Because the Company's costs are figured to cover a complete set of controls, and the following breakdown prices are purely for invoicing purposes, it is agreed that the Purchaser's yearly purchases will consist of at least 90% as many Room Thermostats and 100% (but at the Company's option not more than 125%) as many Limit Controls as Primary Controls."

In the blank space between the words "contract" and "sets" the number of sets was usually inserted, but with the following customers the words—"season requirements," "estimated requirements" or a similar phrase—were inserted:

Automatic Burner Corp.
Chicago, Illinois
Gould Oil Burner Corp.
Cambridge, Massachusetts
Wayne Oil Burner Corp.
Fort Wayne, Indiana
Wisconsin Oil Burner Co.
Madison, Wisconsin
113 Malleable Iron Fitting Co.
Branford, Connecticut
York Oil Burner Co. Inc.
York, Pennsylvania
Reif-Rexoil Inc.
Buffalo, New York

In addition to the foregoing, the 1937 contracts with the following manufacturers of oil burners (constituting 79 of the 165 manufacturers of oil burners with whom the respondent entered into contracts for the year 1937):

Acme Tool & Gage Co.,
Pawtucket, R. I.
Alida Mfg. Co.
Brooklyn, N. Y.

Arcweld Mfg. Co.
Seattle, Washington
Auburn Burner Corp.,
Auburn, Ind.

York Oil Burner Co. Inc.
York, Pa.

contained the following provision:

"The Purchaser agrees that at least ninety-five (95) percent of his control requirements, consisting of Thermostats, Primary Controls and Limiting Devices, will be purchased from the Company."

116 On January 28, 1937, the respondent sent the following letter to customers with whom contracts had been made containing the said provision:

"A revision is being made in our 1937 contract form eliminating the following paragraph:

"'The Purchaser agrees that at least ninety-five (95) percent of his control requirements, consisting of Thermostats, Primary Controls and Limiting Devices, will be purchased from the Company.'

"We are sure that you will have no objection to this elimination and will request, therefore, that you have it stricken from your copy.

Yours very truly,

Minneapolis-Honeywell Regulator Co.
C. E. Swanson—
Original Equipment Div."

CES:MB

Respondent in the year 1938 entered into agreements with 131 oil burner manufacturer customers, which included the following provision:

"The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract ..... sets of the Company's automatic temperature controls, each set consisting of one Thermostat, and one Limit Control, and one Primary Control. It is specifically agreed that other control equipment is not to be considered as a part of a set within the terms of this contract. Because the Company's costs are figured to cover a complete set of controls, and the following breakdown prices are purely for invoicing purposes, it is agreed that the Purchaser's yearly purchases will consist of at least 90% as many Room Thermostats and 100% (but at the Company's option not more than 125%) as many Limit Controls as Primary Controls."

117 In the blank space between the words "contract" and "sets" the number of sets or estimated number of sets was usually inserted, but with the following customers the words—"season requirements", "estimated requirements" or a similar phrase—were inserted:

Bedard & Johnson
Minneapolis, Minn.
Berggren Engr. Co.
Brooklyn, N. Y.
Book Corp.
Madison, Wisc.
Cleveland Steel Prod. Corp.
Cleveland, Ohio.
Diesel Burners, Inc.
Moosup, Conn.
Electrol, Inc.
Clifton, N. J.
Gould Eng. Corp.
Cambridge, Mass.
The Heil Co.
Milwaukee, Wisc.
Hi-Point Corp.
Bellefontaine, Ohio.
Petroleum Heat and Power Co.
Stamford, Conn.
Scott-Newcomb, Inc.
St. Louis, Mo.
Williams Oil-O-Matic Heating Corporation,
Bloomington, Ill.

Respondent in the year 1939 in 132 of its agreements with its oil burner manufacturer customers included the following provision:

"The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract ..... sets or more of the Company's automatic temperature controls. Because the Company's thermostats and primary controls are specifically designed to operate one with the other, it is unsatisfactory and often dangerous to mix controls made by different manufacturers in the same installation, and to avoid any such difficulty and divided service responsibility, it is agreed that each set shall consist of but one Thermostat, one Primary Control, and one Limit Control, and that the Purchaser will buy at least 90% as many Room Thermostats and 100% as many Limit Controls as Primary Controls at the following prices."

Respondent in the year 1940 in 132 of its agreements with its oil burner manufacturer customers included the 118 following provision:

"The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract ..... sets or more of the Company's automatic temperature controls. Because the Company's thermostats and primary controls are specifically designed to operate one with the other, it is unsatisfactory and often dangerous to mix controls made by different manufacturers in the same installation, and the Company does not give any assurance of satisfactory operation nor assume any service responsibility if its controls are used with other makes. It is, therefore, further agreed that each set shall consist of but one Thermostat, one Primary Control, and one Limit Control, and that the Purchaser will buy at least 90% as many Room Thermostats and 100% as many Limit Controls as Primary Controls at the following prices."

Respondent in the year 1941 in 122 of its agreements with its oil burner manufacturer customers included the following provision:

"The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this agreement ..... sets or more of the Company's automatic temperature controls. Because the Company's thermostats and primary controls are specifically designed to operate one with the other, it is unsat-

factory and often dangerous to mix controls made by different manufacturers in the same installation, and the Company does not give any assurance of satisfactory operation or assume any service responsibility if its controls are used with other makes. It is, therefore, further agreed that each set shall consist of but one Thermostat, one Primary Control, and one Limit Control, and that the Purchaser will buy at least 90% as many Room Thermostats and 100% as many Limit Controls as Primary Controls at the following prices."

Respondent in the normal course of its business during the years 1936 through 1941 also entered into contracts with certain manufacturers of oil burners, other than those contracting with respondent as aforesaid, which contracts 119 contained substantially the following provision (which is the exact language contained in such contracts for the year 1941):

"The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this agreement ..... units or more of the Company's automatic temperature controls. The Company's thermostats and primary controls are specifically designed to operate one with the other, and because it is unsatisfactory and often dangerous to mix controls made by different manufacturers in the same installation, the Company does not give any assurance of satisfactory operation nor assume any service responsibility if its controls are used with other makes."

Since 1938 no contracts have been entered into by respondent with its oil burner manufacturer customers, which included in the blank space between the words "contract" or "agreement", and "sets" or "units" as the case may be the words "seasons requirements", "estimated requirements" or a similar phrase.

Paragraph Nine: Respondent in the sale of its said automatic temperature controls for oil burners has recognized three channels of trade and distribution in the heating trade, to-wit, (1) manufacturers of heating equipment who ordinarily sell their products, including controls as original equipment therewith, to wholesalers, (2) wholesalers or jobbers who ordinarily sell such heating units and also separate controls to dealers, and (3) dealers who are retailers selling such heating units and separate controls to the ultimate user. Respondent has sold automatic temperature controls to manufacturers of oil burners for use

as original equipment therewith, to wholesalers for re-
sale to dealers and to dealers for resale to the ulti-
120 mate user. Such controls are ordinarily sold by whole-
salers and dealers for repair, replacements or as auxiliary equipment beyond that furnished by the original oil burner manufacturers as part of their original equipment.

Respondent during the years 1936 through 1941 has been selling its automatic temperature controls of like grade and quality to some of its customers at lower prices than it sells said products of like grade and quality to other of its customers, and many of its oil burner manufacturer customers who pay different prices for such controls are competitively engaged one with another in the sale of oil burners, including the accompanying controls as original equipment therewith, within the United States. Respondent publishes list prices for its said products with discounts or net prices regularly allowed to oil burner manufacturers, wholesalers or jobbers and to dealers. Said discounts to dealers and to wholesalers or jobbers vary from 25% to 43.75% (or 25% and 25%), depending on or varying with the trade channel in which the purchaser is engaged, such as dealer, and wholesaler or jobber. In the case of the wholesaler said discount also varies with the quantity purchased and the service rendered to the respondent.

Respondent does not recognize as an oil burner manufacturer any purchaser who will not agree to buy at least
50 sets or 150 units annually, although it sells a few con-
121 trols to purchasers not belonging in any of the aforesaid trade channels, such customers who buy less than 50 units annually receiving a discount of 25% and 15% from list, and such customers agreeing to purchase at least 50 units annually receive a discount of 25% and 25% from list.

Respondent's several manufacturers' quantity brackets determining its net prices for automatic temperature controls sold to manufacturers of oil burners and such net prices in the years 1937, 1938, 1939, 1940 and 1941, together with the discount equivalent of the lower prices to such manufacturers purchasing in larger quantities, are set forth in the following table:

Commission's Exhibit No. 1.

MINNEAPOLIS-HONEYWELL REGULATOR COMPANY.

Statement showing annual volume and price brackets for sets[1] and discount equivalent off highest net prices to manufacturers for each year—1937 to 1941, inclusive.

	1937			1938			1939			
Bracket Number	Annual Volume (Sets)[1]	Net Price Scale[2]	Discount Equivalent off highest net price to manufacturers of $23.85	Annual Volume (Sets)[1]	Net Price Scale[2]	Discount Equivalent off highest net price to manufacturers of $21.05	Annual Volume (Sets)[1]	Net Price Scale[2]	Discount Equivalent off highest net price to manufacturers of $18.10	Annual Volume (Sets)[1]
1	50– 99	$23.85	—	50– 749	$21.05	—	50– 349	$18.10	—	50– 349
2	100– 349	22.60	5.24%	750– 2,999	19.35	8.08%	350– 999	17.25	4.70%	350– 999
3	350– 3,999	21.30	10.69%	3,000– 7,499	18.35	12.83%	1,000– 4,999	16.65	8.01%	1,000– 2,499
3A	— – —	—	—	— – —	—	—	— – —	—	—	2,500– 4,999
4	4,000– 7,499	19.85	16.77%	7,500–14,999	17.25	18.05%	5,000– 9,999	15.95	11.88%	5,000– 7,499
4A	— – —	—	—	— – —	—	—	— – —	—	—	7,500– 9,999
5	7,500–14,999	17.85	25.16%	15,000–up	16.25	22.80%	10,000–up	14.90	17.67%	10,000–up
6	15,000-up	16.55	30.61%	15,000–up[3]	14.90	29.22%	— – —	—	—	— – —

1. Volumes shown hereon are for "Sets" only and are not for separate "Units". Respondent's automatic temperature controls in all five years w units or by sets, and the several manufacturers' price brackets were similar for those contracting to purchase sets and those contracting to purcha particular bracket being three times the minimum number of sets necessary to reach that bracket. For example, Bracket 1 prices applied to a c

2. The prices set forth above are in each case the sum of the respective net prices in the particular year of a primary control, limit control and t ing the discount of 25% and 25%, the prices of the same sets were as follows: 1939—$20.82; 1940—$20.82; 1941—$20.25. Customers in this class $25.65, and during 1938 a discount of 45%, making a net price of $27.23.

3. A special concession in price was offered to 4 customers under condition that they place order for 10,000 sets prior to September 1, 1938.

Table No. 1

MPANY.

nd discount equivalent
to 1941, inclusive.

	1940			1941		
ers	Annual Volume (Sets)[1]	Net Price Scale[2]	Discount Equivalent off highest net price to manufacturers of $18.10	Annual Volume (Sets)[1]	Net Price Scale[2]	Discount Equivalent off highest net price to manufacturers of $17.35
	50– 349	$18.10	—	50– 349	$17.35	—
	350– 999	17.25	4.70%	350– 999	16.45	5.19%
	1,000– 2,499	16.65	8.01%	1,000– 2,499	15.90	8.36%
	2,500– 4,999	16.25	10.22%	2,500– 4,999	15.35	11.33%
	5,000– 7,499	15.85	12.43%	5,000– 7,499	14.90	14.12%
	7,500– 9,999	15.15	16.30%	7,500– 9,999	14.25	17.87%
	10,000–up	14.65	19.06%	10,000–up	13.75	23.05%

s in all five years were priced on a unit basis irrespective of whether purchased by
ntracting to purchase units, the minimum number of units necessary to reach a
prices applied to a customer contracting to purchase either 50 sets or 150 units.

l, limit control and thermostat making up a representative set. For customers receiv-
stomers in this class received during 1937 a discount of 40-5%, making a net price of

tember 1, 1938.

123 Some manufacturers paying higher prices for respondent's automatic temperature controls were able to, and often did, sell their oil burners complete with controls at prices below those which other similar manufacturers paying lower prices for respondent's automatic temperature controls sold their oil burners.

Some manufacturers paying lower prices for respondent's automatic temperature controls were able to, and often did, sell their oil burners complete with controls at prices below those which other similar manufacturers paying higher prices for respondent's automatic temperature controls sold their oil burners.

The prices for standard primary controls, limit controls and thermostats for oil burners charged by respondent to any wholesaler who contracts with respondent to purchase annually $750 worth of its controls and to place an initial order for and maintain in its inventory controls in the amount of $200, were 7.5% of the list price less than the prices to wholesalers who did not elect so to contract.

Dated this 6th day of August, 1943.

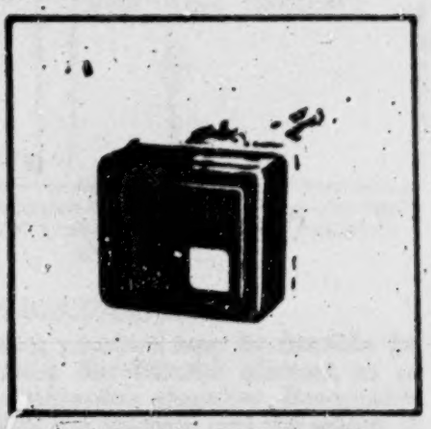
STIPULATION - EXHIBIT A



INSTALLATION INSTRUCTIONS

TYPE [redacted] PROTECTORELAY*

This Protectorelay is designed primarily for [redacted] mounting and will operate quickly and reliably in low [redacted] temperatures. It is normally installed in a horizontal position, but can be mounted at an angle if necessary. The new type bimetal element imparts straight-line action to the simplified Pyrostat mechanism. The terminal block and conduit spuds facilitate wiring.

Failure of the burner to ignite and properly maintain combustion will cause the safety switch to trip and shut down the burner preventing any abnormal discharge of oil. The Protectorelay will "lock out" necessitating manual reset before the burner may again be started. The safety switch is compensated for varying basement temperature and its timing is unaffected by varying motor loads since the heating element of the safety switch is in series with the relay coil.

The Protectorelay recycles on power or flame failure and is for use on constant ignition burners.

SPECIFICATIONS

TYPE—
R4116A for constant ignition oil burners

VOLTAGE AND FREQUENCY—115 volts, 60 cycle standard. Other A C voltages and frequencies at extra cost. For D C specify R4116A Protectorelay and T498A Thermostat.

ELECTRICAL RATING—½ H P A C

IGNITION RATING—3 amps @ 115 volts.

SAFETY SWITCH TIMING—Approximately 90 seconds.

ELEMENT INSERTION LENGTH (with mounting plate screwed)—Adjustable, 3½" to 6½" standard. Special insertion lengths available 2½" to 5" at no extra cost, 2½" to 10½" at extra cost.

CASE DIMENSIONS—Height 8¼", width 4¼", depth 3½".

WHEN ORDERING SPECIFY:
1. Type Number.
2. Voltage and frequency.
3. Special insertion length, if required.

HEATERS THAT MUST BE USED IN HEAT ACCELERATED THERMOSTATS FOR THIS PROTECTORELAY		
	115, 230 Volts 50, 60 Cycle	115, 230 Volts 25 Cycle
T11A, T109A T111A, T179A	Green Coded Heater	Black & Green Coded Heater
T108A	Black & Green Coded Heater	Blue & Brown Coded Heater

INSTALLATION

If special mounting provisions are supplied by the furnace, boiler or burner manufacturer follow their recommendations carefully. Where no special instructions are furnished, proceed as follows:

LOCATION IN STACK:

Select a location for the Protectorelay in the stack as near as possible to the boiler or furnace. The bimetal element should be in the direct path of the hot stack gases. However, the element must not be located where its temperature will exceed 1000° F.—and if a draft regulator is used, the location of the Protectorelay must always be between it and the furnace or boiler. (See Fig. 1). The Protectorelay should preferably be installed with the element tube horizontal.

(See "SPECIAL APPLICATIONS"—next page).

MOUNTING:

1. At the proper location drill a 1¾" hole. Then, using the mounting bracket as a template, mark the location of the mounting screw holes.
2. Drill the holes and securely fasten the bracket to the stack with the screws furnished.
3. Slide the protecting tube into the stack until the bimetal element is in the center. (See Fig. 2). It is important that the element be located in the center of the stack in order that it will be in the direct path of the hot flue gases.

If the Protectorelay is to be mounted in an elbow it is very important to locate the element so that it is positioned not farther into the stack than the center of the elbow. In fact a location farther toward the outside of the elbow is preferable since that is the hottest part of the gas flow.

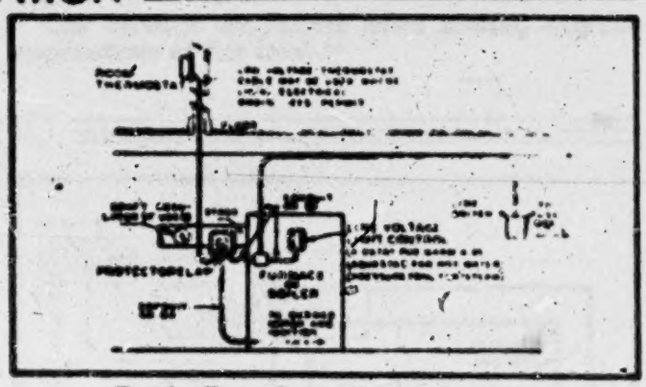


Fig. 1—Typical installation diagram.

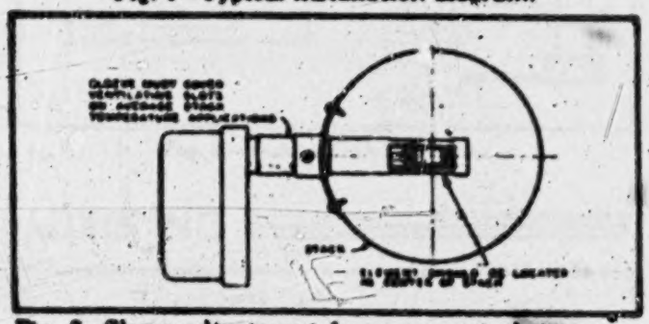

Fig. 2—Sleeve adjustment for average stack temperatures. (ventilating slots completely covered).

It will be noted that the protecting tube is equipped with a movable sleeve covering the ventilating slots in the tube. If an average stack temperature is expected, be sure the ventilating slots are covered by the sleeve. (See Fig. 2). Then tighten the lock screw in the mounting bracket.

*Trade Mark.

March 6, 1941
Obsolete Form 95-1219A
Dated January 16, 1941

(P.1664)

Note: In a few stack mounted applications where unusually high stack temperatures are encountered, it may be necessary to open or partially open the ventilating slots in the tube to safeguard the element. To open ventilating slots, loosen bracket lock screw and slide sleeve away from case. Be sure that mounting bracket does not cover slots. (See Fig. 3). Then retighten bracket lock screw.

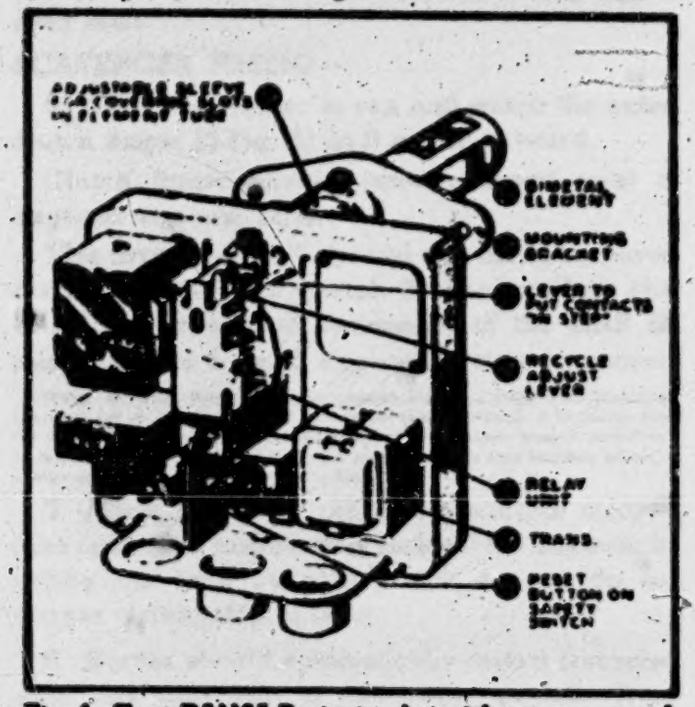

Fig. 4—Type RA116A Protectorelay with cover removed.

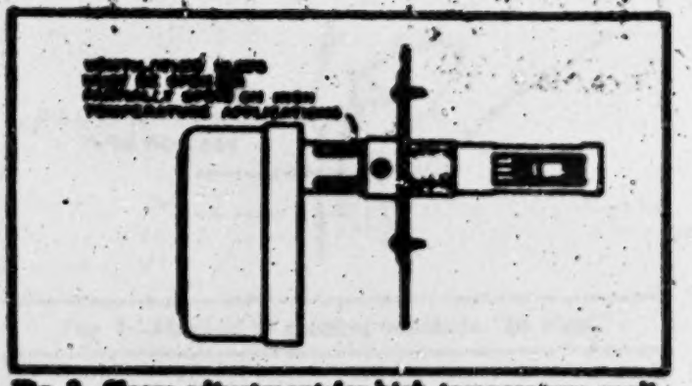

Fig. 3—Sleeve adjustment for high temperature applications, (ventilating slots partially or completely open).

SPECIAL APPLICATIONS:

On some heating plants it may be feasible (or necessary) to locate the bimetal element in or adjacent to the combustion chamber. Reasonable temperature tests of the element and the effects of radiant energy should be carefully determined on these applications.

The ventilating slots in the tube should be opened to cool the element and some form of shield to protect the element from radiant heat should be provided. These measures will prolong the life of the element. To open ventilating slots, slide sleeve away from case—be sure mounting bracket does not cover slots.

Our services are invited when making original applications of this kind.

WIRING

Important: All wiring must be done in accordance with local electrical ordinances.

Use No. 14 rubber covered wire for all line voltage wiring. Flexible cable, if used should have enough slack to permit removal of the Protectorelay for servicing. Standard thermostat cable may be used between the thermostat and the Protectorelay where local codes permit. We recommend placing the high limit control in the "hot" line to terminal No. 1 as shown. However, it may be connected in the low voltage white wire to the thermostat.

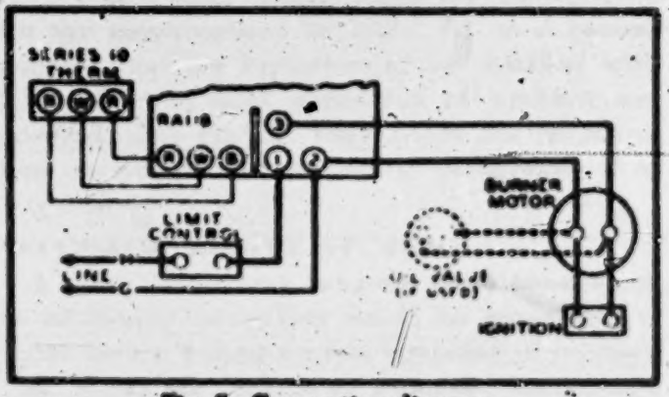

Fig. 5—Connection diagram.

TESTING AND ADJUSTING

It is very important that the Protectorelay be tested and adjusted in actual operation.

ADJUSTMENTS FOR AVERAGE STACK TEMPERATURES:

(a) Leave the recycling stop lever at the factory setting—"inward (minimum) position". (See Fig. 6).

(b) Be sure that the ventilating slots are covered by the sleeve. (See Fig. 2).

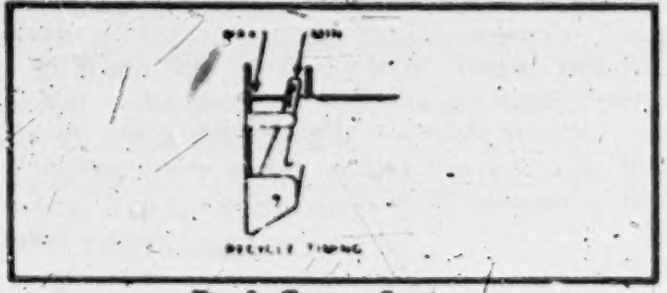

Fig. 6—Factory Setting.

(P. 1167)

TO START BURNER—

1. **Place Protectorelay Contacts in Starting Position: (See Fig. 7).**

2. **Depress and release reset button (5-Fig. 4).**

3. **Open the hand valve in the oil supply line.**

4. **Move the indicator on the high limit control and room thermostat to the high end of the scale.**

5. **Close the line switch. Burner should immediately start.**

SCAVENGER TIMING—

6. **Allow the burner to run and watch the outer clutch finger (3-Fig. 8) as it moves outward.**

Clutch finger should move outward until it engages stop arm (2).

The drive shaft (4) should continue to move outward after the clutch finger reaches the stop. This continued movement of the shaft (it need only be a small amount) is very important.

Note: If clutch finger does not engage stop arm (with recycling stop lever (1) set at "minimum" and ventilating slots covered), it indicates that the bimetal element is not getting enough heat to insure proper operation. In this event the Protectorelay should be moved to a new location where a higher element temperature will be found.

7. **Allow burner to run a few minutes more—then open (and immediately reclose) the line switch, noting the time by your watch as you do so. Burner should stop at once.**

8. **Burner should automatically restart (recycle) after this shutdown or scavenger period. Time the restart.**

9. **Too Fast Recycling:**

(w) If the burner restarts too soon (we recommend not less than 1 minute), open the line switch and wait 5 minutes for the heating plant to cool.

(x) Move stop lever (1) outward one notch. Then close the line switch. Burner should start immediately.

(y) Watch clutch finger (3) as it moves outward. Clutch finger should move outward until it engages stop arm (2). The drive shaft (4) should continue to move outward after the clutch finger reaches the stop. This continued movement of the shaft (it need only be a small amount) is very important. Then open (and immediately reclose) the line switch noting the time by your watch as you do so. Burner should stop at once.

(z) Burner should automatically restart and the time should be noted. If the scavenger period is still too short, repeat tests (paragraphs "w, x and y") until a suitable recycling time is obtained. Move stop lever only one notch at a time.

Fig. 7—Method of placing contacts "in step."

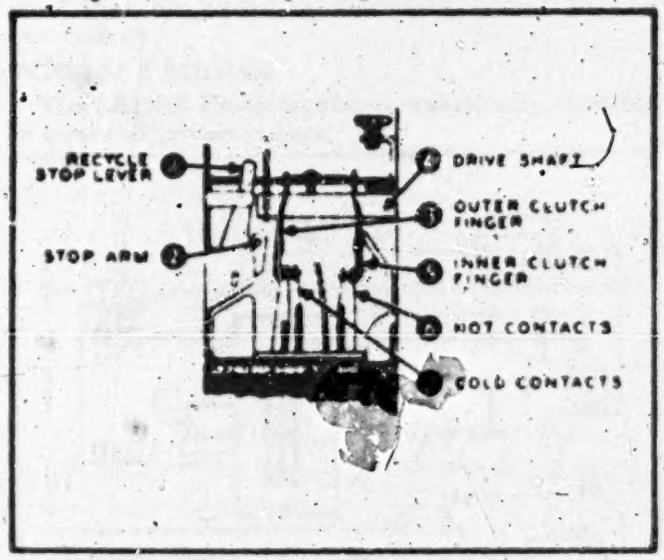

Fig. 8 – Recycling time adjustment.

ADJUSTMENTS FOR HIGH TEMPERATURE CONDITIONS:

1. **Where high temperatures are encountered (in the neighborhood of 1000° F.), it is recommended that the Protectorelay be installed with the ventilating slots uncovered or partially uncovered. (See Fig. 3). Then check the recycling time as outlined in preceding paragraphs 1 to 9 inclusive.**

TO CHECK SAFETY SWITCH:

1. **With the burner running, close hand valve in oil supply line. (This would be equivalent to flame failure during normal operation of burner).**

2. **When the flame is extinguished hot contacts (6-Fig. 8) should open, after a slight drop in stack temperature and stop the burner.**

3. **The burner should remain off until the stack cools enough so that the "cold contacts" (7-Fig. 8) make.**

4. **When the "cold contacts" make, and the burner motor starts up with the oil supply valve closed, check the timing of the safety switch.**

5. **The safety switch should trip and stop the burner motor in approximately 90 seconds at the rated voltage.**

(P. 1666)

OPERATION—CIRCUIT

OPERATION (Refer to Fig 9)

When burner is idle, cold contacts "6" and "7" (Fig 9) are closed, hot contact "8" is open, safety switch contact "5" is closed and the relay is "out".

When thermostat calls for heat, relay pulls in, closing contact "12" starting the burner motor and bringing on the ignition. Contacts "9", "10" and "11" are also closed, thereby establishing a holding circuit.

On the initial rise in stack temperature hot contact "8" makes shunting out the safety switch heater. A further rise in stack temperature causes cold contacts "6 and 7" to break. The burner is now in normal operation.

The initial rise in room temperature will open thermostat contact "B". The relay will remain in through a holding circuit established through "R" and "W" thermostat contacts and contacts "9" and "11" of the relay. Opening of contact "B" sends all of the current through the thermostat heater thereby causing an accelerated shutdown.

When the thermostat is satisfied contact "W" will open causing the relay to drop out stopping the burner.

IGNITION FAILURE:

If combustion fails to take place on startup, hot contact "8" will not make—thus current continues to flow to the safety switch heater and in approximately 90 seconds the safety switch contact "5" will open, stopping burner. The reset button (8-Fig 4) must then be manually depressed before restart is permitted.

FLAME FAILURE:

If a flame failure occurs when burner is running normally, hot contact "8" will open on the initial drop in stack temperature. The relay will immediately drop out stopping the burner. At the expiration of the scavenger period (normally about one minute), cold contacts "6" and "7" will make, restarting the burner. If combustion takes place, burner will continue to run—but if oil fails to ignite, a safety shutdown will occur in approximately 90 seconds. The reset button (8-Fig 4) must then be manually depressed before burner can restart.

POWER FAILURE:

The RA116A Protectorelay automatically recycles in event of power failure.

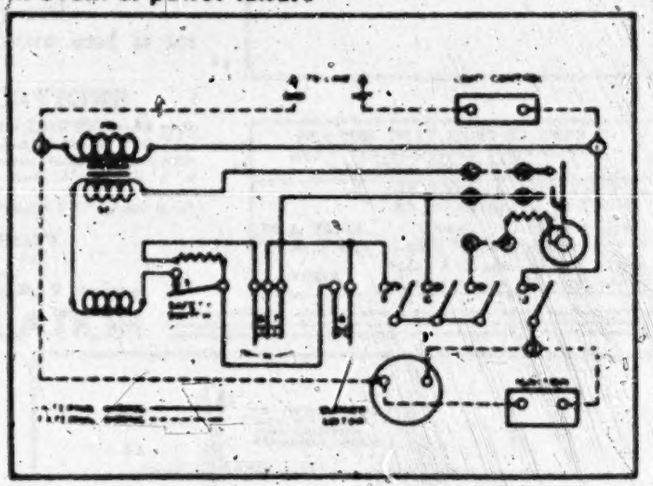

Fig. 9—Schematic circuit of RA116A.

SERVICE SUGGESTIONS

CAUTION: Do not under any circumstances use oil on this Protectorelay.

It is important that the cover be left on the Protectorelay to protect it from dust and mechanical injury.

If the Protectorelay Fails to Operate after the line switch is closed, and with the high limit control and thermostat calling for heat, depress and release reset button (8-Fig 4). Burner motor should start immediately. If burner does not start, place the Protectorelay contacts in the starting position—See Fig 7. Burner motor should immediately start. If combustion does not take place open the line switch. Check power supply, wiring, ignition and oil supply.

Note: If it is necessary to place the contacts "in step" (Fig 7) in order to start the burner, refer to heading "TESTING AND ADJUSTING" and carefully check the complete operating cycle as outlined.

If the burner motor does not start when the contacts are placed "in step" (Fig 7), place a jumper across the red, white and blue terminals of the Protectorelay. If the relay does not pull in (with current "on" and with cold contacts (7-Fig 8) closed), the Protectorelay is defective and should be replaced. If the relay does pull in, remove the jumper and check all connections between the thermostat and Protectorelay and examine the contacts of the thermostat (and low voltage limit control if used) to make sure they are closed. Finally, check the low voltage cable if necessary.

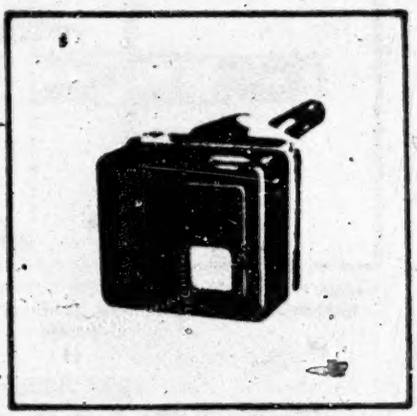
Chattering operation (rapid opening and closing) of the relay indicates an open "red" wire circuit or interchanging of the blue with either the red or white wire somewhere in the low voltage circuit.

If the Protectorelay Goes On Safety, after the burner has started up normally, the trouble may be due to any one or more of the following: Down drafts or air leaks in the smoke pipe, slow temperature rise of the flue gas where the Protectorelay element is located, plugged oil line, ignition failure, or accumulation of soot on the bimetal element.

(P-1667)

STIPULATION - EXHIBIT B

INSTALLATION INSTRUCTIONS



MINNEAPOLIS-HONEYWELL REGULATOR COMPANY

TYPE RA117A PROTECTORELAY

This Protectorelay is designed primarily for stack mounting and will operate quickly and reliably in low stack temperatures. It is normally installed in a horisontal position, but can be mounted at an angle if necessary. The new type bimetal element imparts straight-line action to the simplified Pyrostat mechanism. The terminal block and conduit spuds facilitate wiring.

Failure of the burner to ignite and properly maintain ignition will cause the safety switch to trip and shut down the burner preventing any abnormal discharge of oil. The Protectorelay will "lock out" necessitating manual reset before the burner may again be started. The safety switch is compensated for varying basement temperature and its timing is unaffected by varying motor loads since the heating element of the safety switch is in series with the relay coil.

The Protectorelay recycles on power or flame failure and is for use on intermittent ignition burners.

SPECIFICATIONS

TYPE
RA117A for intermittent ignition oil burners

VOLTAGE AND FREQUENCY – 115 volts, 60 cycle standard. Other A.C. voltages and frequencies at extra cost. For D.C. specify R417A Lightswitch and T46A Thermostat

ELECTRICAL RATING – 1, R.P.A.C.

IGNITION RATING – 1 amps. @ 115 volts

SAFETY SWITCH TIMING – Approximately 90 seconds

ELEMENT INSERTION LENGTH (with ventilating slots covered) – Adjustable, 2 1/2" to 6 1/2" standard. Special insertion lengths available 2 1/2" to 9" at no extra cost, 2 1/2" to 10 1/2" at extra cost

CASE DIMENSIONS – Height 5 1/2", width 6 1/2", depth 3 1/2"

WHEN ORDERING SPECIFY
1. Type Number
2. Voltage and frequency
3. Special insertion length, if required.

HEATERS THAT MUST BE USED IN HEAT ACCELERATED THERMOSTATS FOR THIS PROTECTORELAY		
	115, 2.00 Volts 50, 60 Cycle	115, 2.35 Volts 25 Cycle
T11A, T108A, T111A, T178A	Green Coded Heater	Black & Green Coded Heater
T108A	Black & Green Coded Heater	Blue & Brown Coded Heater

INSTALLATION

If special mounting provisions are supplied by the furnace, boiler or burner manufacturer follow their recommendations carefully. Where no special instructions are furnished, proceed as follows:

LOCATION IN STACK:

Select a location for the Protectorelay in the stack as near as possible to the boiler or furnace. The bimetal element should be in the direct path of the hot stack gases. However, the element must not be located where its temperature will exceed 1000° F.—and if a draft regulator is used, the location of the Protectorelay must always be between it and the furnace or boiler. (See Fig. 1). The Protectorelay should preferably be installed with the element tube horisontal.

(See "SPECIAL APPLICATIONS"—next page).

MOUNTING:

1. At the proper location drill a 1⅝" hole. Then, using the mounting bracket as a template, mark the location of the mounting screw holes.
2. Drill the holes and securely fasten the bracket to the stack with the screws furnished.
3. Slide the protecting tube into the stack until the bimetal element is in the center. (See Fig. 2). It is important that the element be located in the center of the stack in order that it will be in the direct path of the hot flue gases.

If the Protectorelay is to be mounted in an elbow it is very important to locate the element so that it is positioned not farther into the stack than the center of the elbow. In fact a location farther toward the outside of the elbow is preferable since that is the hottest part of the gas flow.

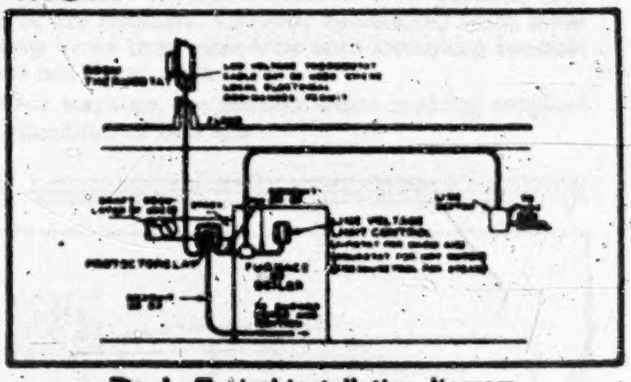


Fig. 1—Typical installation diagram.

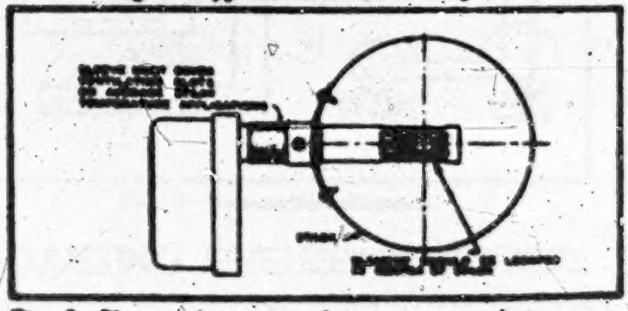

Fig. 2—Sleeve adjustment for average stack temperatures, (ventilating slots completely covered).

It will be noted that the protecting tube is equipped with a movable sleeve covering the ventilating slots in the tube. If an average stack temperature is expected, be sure the ventilating slots are covered by the sleeve. (See Fig. 2). Then tighten the lock screw in the mounting bracket.

(P. 1168)

Note: In a few stack mounted applications where unusually high stack temperatures are encountered, it may be necessary to open or partially open the ventilating slots in the tube to safeguard the element. To open ventilating slots, loosen bracket lock screw and slide sleeve away from case. Be sure that mounting bracket does not cover slots. (See Fig. 3). Then retighten bracket lock screw.

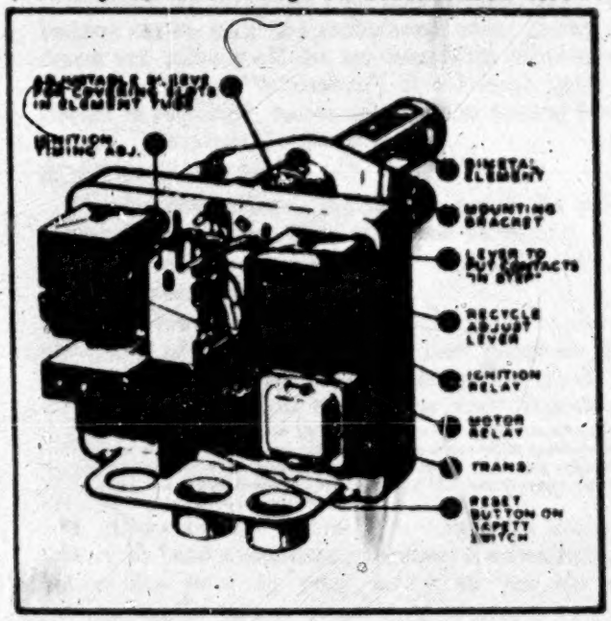

Fig. 4—Type RA117A Protectorelay with cover removed.

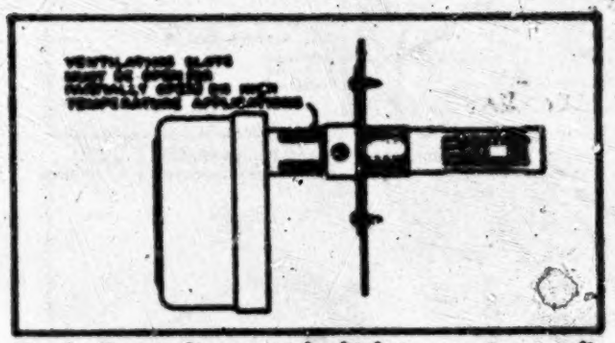

Fig. 3—Sleeve adjustment for high temperature applications. (ventilating slots partially or completely open).

SPECIAL APPLICATIONS:

On some heating plants it may be feasible (or necessary) to locate the bimetal element in or adjacent to the combustion chamber. Reasonable temperature tests of the element and the effects of radiant energy should be carefully determined on these applications.

The ventilating slots in the tube should be opened to cool the element and some form of shield to protect the element from radiant heat should be provided. These measures will prolong the life of the element. To open ventilating slots, slide sleeve away from case—be sure mounting bracket does not cover slots.

Our services are invited when making original applications of this kind.

WIRING

Important: All wiring must be done in accordance with local electrical ordinances.

Use No. 14 rubber covered wire for all line voltage wiring. Flexible cable, if used should have enough slack to permit removal of the Protectorelay for servicing. Standard thermostat cable may be used between the thermostat and the Protectorelay where local codes permit. We recommend placing the high limit control in the "hot" line to terminal No. 1 as shown. However, it may be connected in the low voltage white wire to the thermostat.

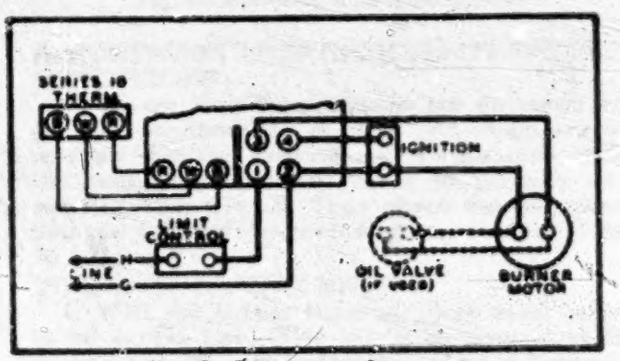

Fig. 5—Connection diagram.

TESTING AND ADJUSTING

It is very important that the Protectorelay be tested and adjusted in actual operation.

ADJUSTMENTS FOR AVERAGE STACK TEMPERATURES:

(a) Leave the recycling stop lever at the factory setting—"inward (minimum) position". (See "B" Fig. 6).

(b) Leave the ignition timing lever at the factory setting—"outward (minimum) position". (See "A" Fig. 6).

(c) Be sure that the ventilating slots are covered by the sleeve. (See Fig. 2).

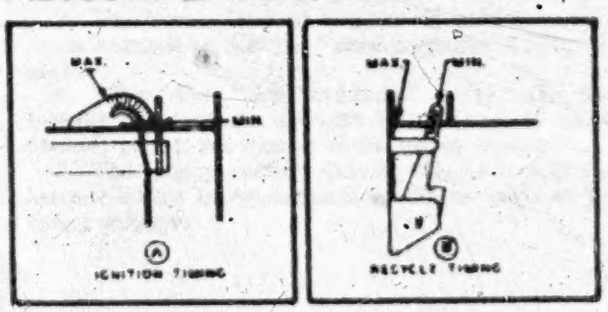

Fig. 6—Factory Settings.

(P. 1669)

TO START BURNER—

1. Place Protectorelay Contacts in Starting Position: (See Fig. 7).
2. Depress and release reset button (8-Fig. 4).
3. Open the hand valve in the oil supply line.
4. Move the indicator on the high limit control and room thermostat to the high end of the scale.
5. Close the line switch. Burner should immediately start.

IGNITION TIMING—

6. Note the length of time that elapses, after the burner starts, until the right hand relay (5-Fig. 4) drops out cutting off the ignition. This adjustment is factory set at "minimum". If a longer ignition period is required, move the ignition timing lever toward "maximum". (See Fig. 8).

SCAVENGER TIMING—

7. Allow the burner to run and watch the outer clutch finger (3-Fig. 9) as it moves outward.

Clutch finger should move outward until it engages stop arm (2).

The drive shaft (4) should continue to move outward after the clutch finger reaches the stop. This continued movement of the shaft (it need only be a small amount) is very important.

Note: If clutch finger does not engage stop arm (with recycling stop lever (1) set at "minimum" and ventilating slots covered), it indicates that the bimetal element is not getting enough heat to insure proper operation. In this event, the Protectorelay should be moved to a new location where a higher element temperature will be found.

8. Allow burner to run a few minutes more—then open (and immediately reclose) the line switch, noting the time by your watch as you do so. Burner should stop at once.

9. Burner should automatically restart (recycle) after this shutdown or scavenger period. Time the restart.

10. Too Fast Recycling:

(w) If the burner restarts too soon (we recommend not less than 1 minute), open the line switch and wait 5 minutes for the heating plant to cool.

(x) Move stop lever (1) outward one notch. Then close the line switch. Burner should start immediately.

(y) Watch clutch finger (3) as it moves outward. Clutch finger should move outward until it engages stop arm (2). The drive shaft (4) should continue to move outward after the clutch finger reaches the stop. This continued movement of the shaft (it need only be a small amount) is very important. Then open (and immediately reclose) the line switch noting the time by your watch as you do so. Burner should stop at once.

(z) Burner should automatically restart and the time should be noted. If the scavenger period is still too short, repeat tests (paragraphs "w, x and y") until a suitable recycling time is obtained. Move stop lever only one notch at a time.

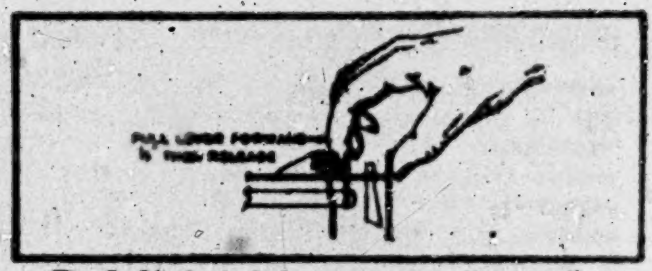

Fig. 7—Method of placing contacts "in step."

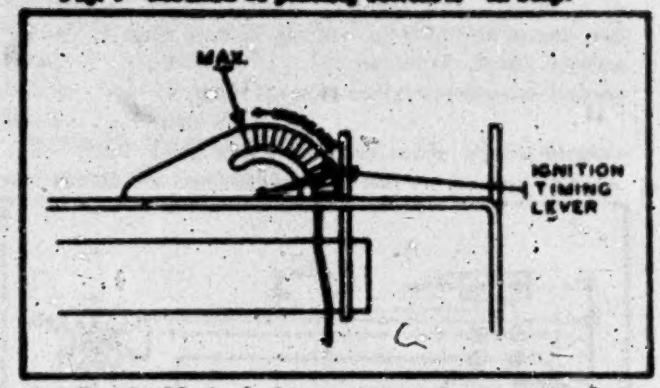

Fig. 8—Method of increasing ignition timing.

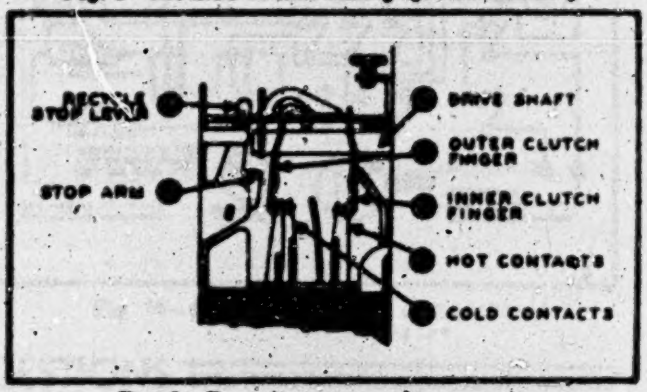

Fig. 9—Recycling time adjustment.

ADJUSTMENTS FOR HIGH TEMPERATURE CONDITIONS:

1. Where high temperatures are encountered (in the neighborhood of 1000° F.), it is recommended that the Protectorelay be installed with the ventilating slots uncovered or partially uncovered. (See Fig. 3). Then check the recycling time as outlined in preceding paragraphs 1 to 10 inclusive.

TO CHECK SAFETY SWITCH:

1. With the burner running, close hand valve in oil supply line. (This would be equivalent to flame failure during normal operation of burner).
2. When the flame is extinguished hot contacts (6-Fig. 9) should open after a slight drop in stack temperature and stop the burner.
3. The burner should remain off until the stack cools enough so that the "cold contacts" (7-Fig. 9) make.
4. When the "cold contacts" make, and the burner motor starts up with the oil supply valve closed, check the timing of the safety switch.
5. The safety switch should trip and stop the burner motor in approximately 90 seconds at the rated voltage.

Cameraman's Note:

This is poor copy, but

184

(A-1670)

OPERATION—CIRCUIT

OPERATION (Refer to Fig. 10)

When burner is idle, cold contacts "6" and "7" are closed, hot contact "8" is open, safety switch contact "5" is closed and both relays are "out".

When thermostat calls for heat, right hand relay pulls in, closing contact "15" bringing on ignition. Contacts "9", "10" and "11" are also closed, thereby completing circuit to left hand relay starting up burner motor through contact "16". On initial rise in stack temperature hot contact "8" makes, shunting out safety switch heater. The continued rise in stack temperature causes cold contacts "7" and "6" to break in that order, dropping out right hand relay, cutting off ignition. The burner is now in normal operation.

The initial rise in room temperature will open thermostat contact "B". Left hand relay will remain "in" through holding circuit completed through "R" and "W" thermostat contacts. Opening of contact "B" sends all the current through thermostat heater.

When thermostat is satisfied contact "W" will open causing left hand relay to drop out stopping burner.

IGNITION FAILURE: If combustion fails to take place on start-up, hot contact "8" will not make—thus current continues to flow to safety switch heater and in approximately 90 seconds safety switch contact "5" will open, shutting down burner. Reset button (8-Fig. 4) must then be manually depressed before restart is permitted.

FLAME FAILURE: If a flame failure occurs when burner is running normally, hot contact "8" will open on the initial drop in stack temperature. Left hand relay will drop out stopping burner immediately. At the expiration of the scavenger period (normally about 1 minute), cold contacts "6" and "7" will make, starting the burner. If combustion takes place, burner will continue to run—but if oil fails to ignite, a safety shutdown will occur in approximately 90 seconds. Reset button (8-Fig. 4) must then be manually depressed before burner can start up.

POWER FAILURE: The RA117A Protectorelay automatically recycles in event of power failure.

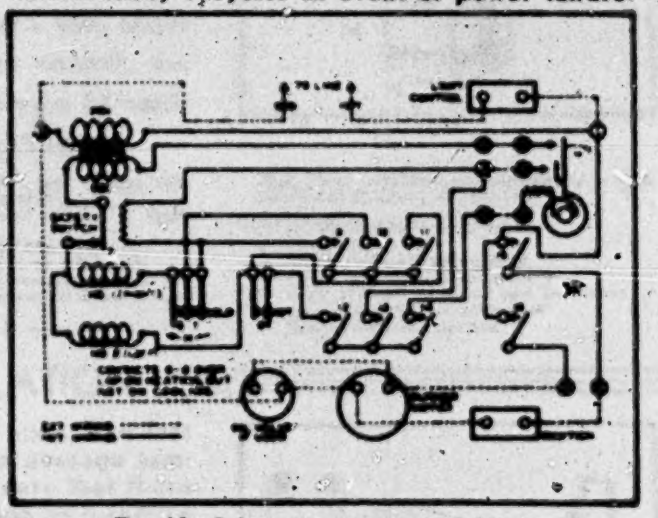

Fig. 10—Schematic circuit of RA117A.

SERVICE SUGGESTIONS

CAUTION: Do not under any circumstances use oil on this Protectorelay.

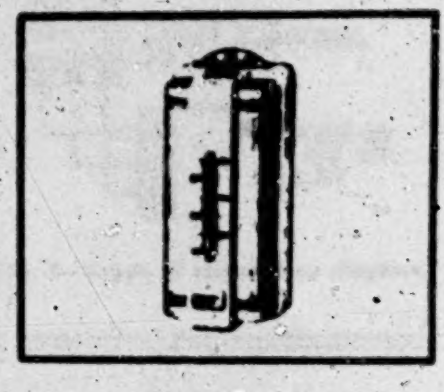
It is important that the cover be left on the Protectorelay to protect it from dust and mechanical injury.

If the Protectorelay Fails to Operate after the line switch is closed, and with the high limit control and thermostat calling for heat, depress and release reset button (8-Fig. 4). Burner motor should start immediately. If burner does not start, place the Protectorelay contacts in the starting position—See Fig. 7. Burner motor should immediately start. If combustion does not take place open the line switch. Check power supply, wiring, ignition and oil supply.

Note: If it is necessary to place the contacts "in step" (Fig. 7) in order to start the burner, refer to heading "TESTING AND ADJUSTING" and carefully check the complete operating cycle as outlined.

If the burner motor does not start when the contacts are placed "in step" (Fig. 7), place a jumper across the red, white and blue terminals of the Protectorelay. If the relay does not pull in (with current "on" and with cold contacts (7-Fig. 9) closed), the Protectorelay is defective and should be replaced. If the relay does pull in, remove the jumper and check all connections between the thermostat and Protectorelay and examine the contacts of the thermostat (and low voltage limit control if used) to make sure they are closed. Finally, check the low voltage cable if necessary.

Chattering operation (rapid opening and closing) of the relay indicates an open "red" wire circuit or interchanging of the blue with either the red or white wire somewhere in the low voltage circuit.



If the Protectorelay Goes On Safety, after the burner has started up normally, the trouble may be due to any one or more of the following: Down drafts or air leaks in the smoke pipe, slow temperature rise of the flue gas where the Protectorelay element is located, plugged oil line, ignition failure, or accumulation of soot on the bimetal element.

INSTALLATION INSTRUCTIONS

TYPE T11A ACRATHERM*

The Acratherm is a bi-metal actuated room temperature controller, equipped with open contacts of platinum iridium. It should be used only in conjunction with other Series 10 devices such as Series 10 Protectorelays, Gas Valves, etc.

The T11A Acratherm contains an "Accelerator" (artificial heating element) which operates to prevent "overshooting" of room temperatures by accelerating shutdown of the burner after a very slight rise in the room temperature. To obtain satisfactory control, the correct "heater plug" for the device controlled must always be used.

SPECIFICATIONS

TYPES—
T11A Acratherm (Heat Accelerated).

FINISH—Silver. (Special finishes available at extra cost. Submit sample.)

RANGE 50 to 85° F. (Special range of 13 to 30° C available at no extra cost. Other ranges available 35 to 60°, 40 to 75°, 65 to 98° F or their centigrade equivalents at extra cost.

DIFFERENTIAL—Adjustable.

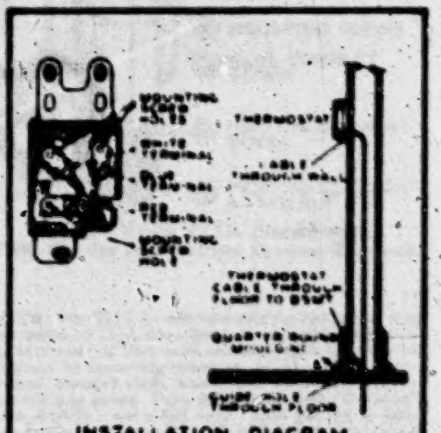
ELECTRICAL RATING—Low voltage only. Type T11A not applicable to D.C.

DIMENSIONS—Height 4 ¼", width 1 ⅝", depth 1 ⅛".

SPECIAL FEATURES AVAILABLE
Locking Cover available at no extra cost.
Blank Cover (less thermometer) at no extra cost.
Pointer "make" at high end of scale at extra cost.
Night Shut-off available at no extra cost.

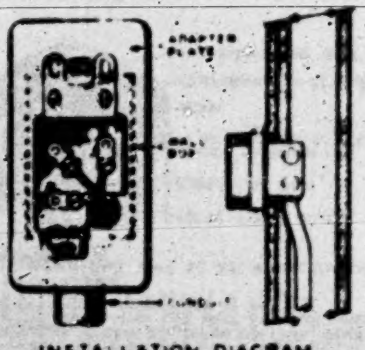
Wall Plate (1-2390) for adapting to a wall switch box available at extra cost.

WHEN ORDERING SPECIFY
1. Type Number.
2. Finish if other than standard.
3. Range if other than 50 to 85° F.
4. Type Number, voltage and frequency of device Acratherm is to control.
5. Special features required.



INSTALLATION

LOCATION: The Acratherm should be mounted about five feet above the floor where it will be affected only by the average temperature of the room (not on an outside wall). Make sure that there will be free circulation of air at this location unobstructed by furniture or doors. Do not mount the Acratherm where it may be affected by drafts, hot or cold air from water pipes or ducts, radiant heat from the sun or fireplace, etc.



TO INSTALL THERMOSTAT CABLE proceed as follows:

1. Remove quarter round from the base board directly beneath the Acratherm location, and drill a small guide hole through the floor and basement ceiling on an angle. (See diagram).
2. At the point where the guide hole pierced the basement ceiling, drill a ½" hole up through the floor into the space between the walls of the partition.
3. Insert a stiff wire at least 6 ft. long through this hole and up into the partition to determine whether any obstruction is present. If there is, a new location for the Acratherm should be selected.
4. Bore a ½" hole through the plaster about five feet above the floor where the Acratherm is to be mounted.
5. Attach a short length of chain to the end of a strong cord and insert it into the hole in the plaster, allowing it to drop to the floor inside the partition.
6. From the basement insert a stiff wire, the end of which is formed into a hook, up through the ceiling into the partition and draw the chain down into the basement.
7. Fasten the end of a thermostat cable to the cord securely. Then from the room above draw the cord and cable up through the hole in the plaster.
8. Leave about 6" of cable to make connections and then plug up the hole in the plaster to prevent drafts from the basement affecting the operation of the Acratherm.

FOR LOW VOLTAGE WIRING IN CONDUIT, the Acratherm should be mounted on a standard wall switch box as shown in the diagram, using standard adapter plate available for that purpose.

INSTALLATION DIAGRAM FOR LOW VOLTAGE CABLE

INSTALLATION DIAGRAM FOR LOW VOLTAGE WIRING IN CONDUIT

Trade Mark.

(P. 1672)

MOUNTING

TO REMOVE COVER AND WALL PLATE: Loosen the screw at the bottom end of the Acratherm, and pull outward and upward on the lower end of the cover. Loosen three mounting screws (9-Figs. 1 and 3) and separate the wall plate from thermostat base.

Fasten wall plate firmly to the wall with wood screws, making sure that the screws enter the lath, and that the plate is vertical. The cut away corner of the wall plate should be adjacent to the hole in the plaster as shown in the diagram. Connect the three wire cable to the terminals "color to color", after skinning the ends of the wires. Be sure that no bare wire touches any other bare wire or any part of the Acratherm except the terminal screw. Replace base and cover.

CAUTION: All wiring must comply with local ordinances.

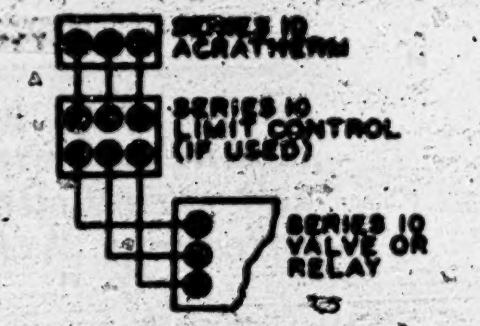


Fig. 2—Series 10 connection diagram

SETTING AND ADJUSTING

TO SET THE ACRATHERM it is only necessary to turn the temperature dial to the point at which the room temperature is to be maintained.

The T11A Acratherm is adjusted to turn on the burner when the room temperature drops to the point at which the temperature dial is set. When the room temperature rises a fraction of a degree above this point, the artificial heater will function and allow an accelerated shutdown of the burner.

When the artificial heater is not used the thermostat should be adjusted to turn off the burner when the room temperature rises to the point at which the temperature dial is set, and to turn on the burner when the room temperature drops 1½ degrees below this point. (See note under Fig. 3).

DIFFERENTIAL: The differential dial on the white contact screw (7-Fig. 3) is adjusted at the factory so that satisfactory operation will be obtained with the average warm air, vapor, or two pipe steam systems. For one pipe systems we recommend that the differential (only when an artificial heater is used) be increased slightly by turning the differential dial counter-clockwise about one half of one division until the differential pointer is midway between numerals 3 and 4. This will increase the length of the "on" period.

If the duration of burner operation provided by the factory adjustment of the T11A Acratherm is too long or too short it may be lengthened by turning the differential dial (on the white contact screw) counter-clockwise about one half division, or shortened by turning the dial clockwise about one half division.

CALIBRATION: The Acratherm is an extremely sensitive instrument and is therefore affected almost immediately by the heat from your body or breath while you stand close to it. For this reason the factory adjustment should not be changed unless the Acratherm is found to be out of calibration after it has actually been in operation under normal conditions. If the Acratherm is out of calibration it can be readjusted by following the instructions given in Figure 4.

CLEANING: When dust or dirt accumulates on the contacts of the Acratherm, remove it by drawing a piece of hard finish paper (such as a common business card with a hard smooth surface) between the contacts. Never use emery cloth or abrasives.

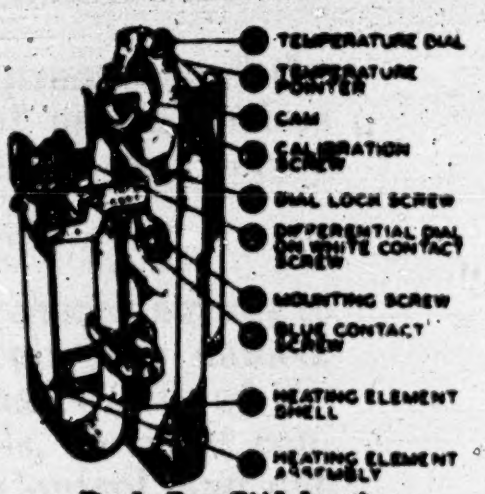

Fig. 3—Type T11A Acratherm
(T10A Similar but without Heating Element)

NOTE: The T11A Acratherm may be converted to a non-resistance T10A Acratherm by removing the heating element (11). The shell assembly (12) can then be removed by removing screw on inside end of bottom of shell. Discard shell, heater and insulating washer and replace screw. Turn differential dial (7) clockwise slightly—not a full turn—until pointer is midway between numerals 1 and 2. Tighten lock screw (3) and then turn calibration screw (5) counter-clockwise so that "mark" on cam moves about ½ of one division (one and one-half degrees)

TO CALIBRATE
SET TEMPERATURE DIAL AT 55° AND TIGHTEN DIAL LOCK SCREW
IF ACRATHERM MAINTAINS A LOWER TEMPERATURE THAN THE DIAL SETTING TURN CALIBRATION SCREW SO "MARK ON CAM" MOVES CLOCKWISE (1 DIVISION FOR EACH 2 DEGREES)
IF ACRATHERM MAINTAINS A HIGHER TEMPERATURE THAN THE DIAL SETTING TURN CALIBRATION SCREW SO "MARK ON CAM" MOVES COUNTER-CLOCKWISE (1 DIV FOR EACH 2°)
LOOSEN DIAL LOCK SCREW AND RESET TEMPERATURE DIAL AT DESIRED ROOM TEMPERATURE

Fig. 4

134 COMMISSION'S EXHIBIT NO. 2.

Minneapolis-Honeywell Regulator Company.

Manufacturers Control Contract.

Purchaser: Submitted January 3rd, 1938.

This Agreement, entered into between Minneapolis-Honeywell Regulator Company, a Delaware corporation, hereinafter called the Company, and Automatic Burner Corporation of Chicago, Illinois, 1823 Carroll Ave., hereinafter called the Purchaser, Witnesseth:

That whereas the Company manufactures and sells a complete line of automatic temperature controls; and, whereas, the purchaser has use for such devices in conjunction with products of his manufacture, and for the sale of such devices to his dealers;

Now, therefore, in consideration of the premises, of the mutual covenants herein contained and of special prices extended the Purchaser by the Company, the parties hereto agree as follows:

Quantity.

The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract 7500 Estimated sets of the Company's automatic temperature controls, each set consisting of one Thermostat, and one Limit Control, and one Primary Control. It is specifically agreed that other control equipment is not to be considered as a part of a set within the terms of this contract. Because the Company's costs are figured to cover a complete set of controls, and the following breakdown prices are purely for invoicing purposes, it is agreed that the Purchaser's yearly purchases will consist of at least 90% as many Room Thermostats and 100% (but at the Company's option not more than 125%) as many Limit Controls as Primary Controls.

Prices on Material Shipped From Factory.

C. O. D. Shipments of Materials from Factory.

If the Purchaser requests C. O. D. shipment of standard devices or devices purchased at the odd model discount to his dealer from factory the Company will add a handling charge of 5%. There will be no charge for dealer shipments made on an open account basis from factory.

Prices from Branch Stocks.

All prices herein are predicated on delivery from factory, and are f. o. b. factory. The Company maintains limited stocks at its various branch offices and emergency shipments of standard equipment made the manufacturer therefrom will be invoiced at the prices shown herein, plus 5% to cover transportation, handling, warehousing, etc., but no handling charge will apply to instruments shipped at the odd model discount shown below.

C. O. D. Shipments of Materials from Branch Stocks.

If a Company branch makes a C. O. D. shipment of standard equipment to the Purchaser's dealer a charge of 10% will be made. Open account shipments will carry only the 5% charge mentioned above. Devices sold at odd model discount shipped the dealer on a C. O. D. basis will carry a 5% charge, but if shipped on an open account basis no added charge will be made.

Miscellaneous Control Prices.

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4, 5, Form SA 573-....., which are hereby made a part of this agreement, will be furnished at list prices stated less discount of 25-15-10% unless otherwise shown on the price sheets.

136 Conditions.

The Company agrees to render invoices to the Purchaser in accordance with the prices listed in the schedule above for the actual number of units shipped to the Purchaser by the Company, f. o. b. point of manufacture.

Prices relating to relay or motor operated devices and/or to magnetic valves are for 110 volt, 50 or 60 cycle specifications only, unless otherwise specified. Prices pertaining to Chronotherms and Electric Clock Thermostats are for 110 volt, 60 cycle specifications only. When ordered in lots of less than fifty units, the Company will add net extra charge for other voltages and frequency combination shown below, according to following schedule: Relay operated devices, excepting Type R153 and R83, $2.00 net each. Motor operated devices (excepting Type D and special industrial motors), Magnetic and Diaphragm valves, and Electric Clock Thermostats $1.00 net each. For current specification not shown, charges will be governed by the development work required.

110 volt, 40 cycle	220 volt, 30 cycle
110 volt, 30 cycle	220 volt, 25 cycle
110 volt, 25 cycle	110 volt, D. C.
220 volt, 60 cycle	220 volt, D. C.
220 volt, 50 cycle	32 volt, D. C.
220 volt, 40 cycle	

The extra charges outlined above will not be made for special alternating current voltage and frequency specifications when units are ordered in quantities of 50 or more of one device all of the same voltage and frequency and all to be shipped at one time. The extra charges outlined above will, however, apply to direct current devices in all quantities.

Net extra charges will be made for the following special requirements: Special range pressuretrols 2 to 50 lbs., or 5 to 150 lbs., $1.25 net each; special scales open contact thermostat 100° or less $2.00 net each, over 100°, $5.00 net each; special scales Airstats and Furnacestats $2.00 net each; special scales to 440° F. Immersion Aquastat $3.00 net each; special scales over 440° F. Immersion Aquastats $5.00 net each. Net extra charges on other special requirements quoted on request.

The Company is not obligated under the terms of this contract to supply instruments for current specifications or special constructions which in its opinion are impractical.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser.

Prices shown do not include thermostat cable or fittings.

Terms.

Shipments shall be made f.o.b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee.

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f.o.b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent.

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will pay such

137 award, but shall not be responsible, or any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchasers' place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business.

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment of Contract and Resale Agreement.

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except in conjunction with such products, and violation of this, or other conditions of this agreement gives the Company the right to immediately cancel same.

Deliveries.

It is agreed that this contract shall not be subject to cancellation except by the consent of the Company, and that serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filing orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designated in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Service Responsibility.

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings conducted by the Purchaser's field men.

Period of Contract.

This contract shall become effective at the accepted date, and expire on Dec. 31, 1938 unless sooner cancelled as hereinabove provided. The validity, enforceability and inter-

pretation of all of the provisions of this contract shall be determined and governed by the laws of the State of Illinois.

138 COMMISSION'S EXHIBIT NO. 3.

Minneapolis-Honeywell Regulator Company.

Manufacturers' Control Contract.

Purchaser: Submitted January 3rd, 19....

This Agreement, entered into between Minneapolis-Honeywell Regulator Company, a Delaware corporation, hereinafter called the Company, and Quiet Heet Manufacturing Corporation of 125 Green Street, Newark, New Jersey, hereinafter called the Purchaser, Witnesseth:

That whereas the Company manufactures and sells a complete line of automatic temperature controls; and, whereas, the purchaser has use for such devices in conjunction with products of his manufacture, and for the sale of such devices to his dealers;

Now, therefore, in consideration of the premises, of the mutual covenants herein contained and of special prices extended the Purchaser by the Company, the parties hereto agree as follows:

Quantity.

The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract 7500 sets of the Company's

automatic temperature controls, each set consisting of one Thermostat, and one Limit Control, and one Primary Control. It is specifically agreed that other control equipment is not to be considered as a part of a set within the terms of this contract. Because the Company's costs are figured to cover a complete set of controls, and the following breakdown prices are purely for invoicing purposes, it is agreed that the Purchaser's yearly purchases will consist of at least 90% as many Room Thermostats and 100% (but at the Company's option not more than 125%) as many Limit Controls as Primary Controls.

139 C. O. D. Shipments of Materials from Factory.

If the Purchaser requests C. O. D. shipment of standard devices or devices purchased at the odd model discount to his dealer from factory the Company will add a handling charge of 5%. There will be no charge for dealer shipments made on an open account basis from factory.

Prices from Branch Stocks.

All prices herein are predicated on delivery from factory, and are f. o. b. factory. The Company maintains limited stocks at its various branch offices and emergency shipments of standard equipment made the manufacturer therefrom will be invoiced at the prices shown herein, plus 5% to cover transportation, handling, warehousing, etc., but no handling charge will apply to instruments shipped at the odd model discount shown below.

C. O. D. Shipments of Materials from Branch Stocks.

If a Company branch makes a C. O. D. shipment of standard equipment to the Purchaser's dealer a charge of 10% will be made. Open account shipments will carry only the 5% charge mentioned above. Devices sold at odd model discount shipped the dealer on a C. O. D. basis will carry a 5% charge, but if shipped on an open account basis no added charge will be made.

Miscellaneous Control Prices.

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4, 5, Form SA 573-....., which are hereby made a part of this agreement, will be furnished at list prices stated less discount of 25-15-10% unless otherwise shown on the price sheets.

140 Conditions.

The Company agrees to render invoices to the Purchaser in accordance with the prices listed in the schedule above for the actual number of units shipped to the Purchaser by the Company, f.o.b. point of manufacture.

Prices relating to relay or motor operated devices and/or to magnetic valves are for 110 volt, 50 or 60 cycle specifications only, unless otherwise specified. Prices pertaining to Chronotherms and Electric Clock Thermostats are for 110 volt, 60 cycle specifications only. When ordered in

lots of less than fifty units, the Company will add net extra charge for other voltages and frequency combination shown below, according to following schedule: Relay operated devices, excepting Type R153 and R83, $2.00 net each. Motor operated devices (excepting Type D and special industrial motors). Magnetic and Diaphragm valves, and Electric Clock Thermostats $1.00 net each. For current specification not shown, charges will be governed by the development work required.

110 volt, 40 cycle	220 volt, 30 cycle
110 volt, 30 cycle	220 volt, 25 cycle
110 volt, 25 cycle	110 volt, D. C.
220 volt, 60 cycle	220 volt, D. C.
220 volt, 50 cycle	32 volt, D. C.
220 volt, 40 cycle	

The extra charges outlined above will not be made for special alternating current voltage and frequency specifications when units are ordered in quantities of 50 or more of one device all of the same voltage and frequency and all to be shipped at one time. The extra charges outlined above will, however, apply to direct current devices in all quantities.

Net extra charges will be made for the following special requirements: Special range pressuretrols 2 to 50 lbs., or 5 to 150 lbs., $1.25 net each; special scales open contact thermostat 100° or less $2.00 net each, over 100°, $5.00 net each; special scales Airstats and Furnacestats $2.00 net each; special scales to 440° F. Immersion Aquastat $3.00 net each; special scales over 440° F. Immersion Aquastats $5.00 net each. Net extra charges on other special requirements quoted on request.

The Company is not obligated under the terms of this contract to supply instruments for current specifications or special constructions which in its opinion are impractical.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser.

Prices shown do not include thermostat cable or fittings.

Terms.

Shipments shall be made f.o.b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee.

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f.o.b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent.

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will
141 pay such award, but shall not be responsible for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchasers' place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business.

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such product, and the Purchaser agrees

upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment of Contract and Resale Agreement.

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except in conjunction with such products, and violation of this, or other conditions of this agreement gives the Company the right to immediately cancel same.

Deliveries.

It is agreed that this contract shall not be subject to cancellation except by the consent of the Company, and that serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designated in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Service Responsibility.

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of cooperating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings conducted by the Purchaser's field men.

Period of Contract.

This contract shall become effective at the accepted date, and expire on Dec. 31, unless sooner cancelled as hereinabove provided. The validity, enforceability and interpretation of all of the provisions of this contract shall be determined and governed by the laws of the State of New Jersey.

143 C. O. D. Shipments of Materials from Factory.

If the Purchaser requests C. O. D. shipment of standard devices or devices purchased at the odd model discount to his dealer from factory the Company will add a handling charge of 5%. There will be no charge for dealer shipments made on an open account basis from factory.

Prices from Branch Stocks.

All prices herein are predicated on delivery from factory, and are f. o. b. factory. The Company maintains limited stocks at its various branch offices and emergency shipments of standard equipment made the manufacturer therefrom will be invoiced at the prices shown herein, plus 5% to cover transportation, handling, warehousing, etc., but no handling charge will apply to instruments shipped at the odd model discount shown below.

C. O. D. Shipments of Materials from Branch Stocks.

If a Company branch makes a C. O. D. shipment of standard equipment to the Purchaser's dealer a charge of 10% will be made. Open account shipments will carry only the 5% charge mentioned above. Devices sold at odd model discount shipped the dealer on a C. O. D. basis will carry a 5% charge, but if shipped on an open account basis no added charge will be made.

Miscellaneous Control Prices.

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4, 5, Form S A 573-....., which are hereby made a part of this agreement, will be furnished at list prices stated less discount of 25-15-10% unless otherwise shown on the price sheets.

144 Conditions.

The Company agrees to render invoices to the Purchaser in accordance with the prices listed in the schedule above for the actual number of units shipped to the Purchaser by the Company, f. o. b. point of manufacture.

Prices relating to relay or motor operated devices and or to magnetic valves are for 110 volt, 50 or 60 cycle specifications only, unless otherwise specified. Prices pertaining to Chronotherms and Electric Clock Thermostats are for 110

volt, 60 cycle specifications only. When ordered in lots of less than fifty units, the Company will add net extra charge for other voltages and frequency combination shown below, according to following schedule: Relay operated devices, excepting Type R153 and R83, $2.00 net each. Motor operated devices (excepting Type D and special industrial motors), Magnetic and Diaphragm valves, and Electric Clock Thermostats $1.00 net each. For current specification not shown, charges will be governed by the development work required.

110 volt, 40 cycle	220 volt, 30 cycle
110 volt, 30 cycle	220 volt, 25 cycle
110 volt, 25 cycle	110 volt, D. C.
220 volt, 60 cycle	220 volt, D. C.
220 volt, 50 cycle	32 volt, D. C.
220 volt, 40 cycle	

The extra charges outlined above will not be made for special alternating current voltage and frequency specifications when units are ordered in quantities of 50 or more of one device all of the same voltage and frequency and all to be shipped at one time. The extra charges outlined above will, however, apply to direct current devices in all quantities.

Net extra charges will be made for the following special requirements: Special range pressuretrols 2 to 50 lbs., or 5 to 150 lbs., $1.25 net each; special scales open contact thermostat 100° or less $2.00 net each, over 100°, $5.00 net each; special scales Airstats and Furnacestats $2.00 net each; special scales to 440° F. Immersion Aquastat $3.00 net each; special scales over 440° F. Immersion Aquastats $5.00 net each. Net extra charges on other special requirements quoted on request.

The Company is not obligated under the terms of this contract to supply instruments for current specifications or special constructions which in its opinion are impractical.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser.

Prices shown do not include thermostat cable or fittings.

Terms.

Shipments shall be made f. o. b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee.

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f. o. b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent.

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will pay such
145 award, but shall not be responsible, or any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchasers' place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business.

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the

sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment of Contract and Resale Agreement.

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except in conjunction with such products, and violation of this, or other conditions of this agreement gives the Company the right to immediately cancel same.

Deliveries.

It is agreed that this contract shall not be subject to cancellation except by the consent of the Company, and that serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designated in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Service Responsibility.

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings conducted by the Purchaser's field men.

Period of Contract.

This contract shall become effective at the accepted date, and expire on Dec. 31, 1938, unless sooner cancelled as hereinabove provided. The validity, enforceability and interpretation of all of the provisions of this contract shall be determined and governed by the laws of the State of New Jersey.

146 COMMISSION'S EXHIBIT NO. 5.

Minneapolis-Honeywell Regulator Company.

Manufacturers' Control Contract.

Purchaser: Submitted January 3, 1938.

This Agreement, entered into between Minneapolis-Honeywell Regulator Company, a Delaware corporation, hereinafter called the Company, and May Oil Burner Corporation of Baltimore, Md., hereinafter called the Purchaser, Witnesseth:

That whereas the Company manufactures and sells a complete line of automatic temperature controls; and, whereas, the purchaser has use for such devices in conjunction with products of his manufacture, and for the sale of such devices to his dealers;

Now, therefore, in consideration of the premises, of the mutual covenants herein contained and of special prices extended the Purchaser by the Company, the parties hereto agree as follows:

Quantity.

The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract 7500 sets of the Company's automatic temperature controls, each set consisting of one Thermostat, and one Limit Control, and one Primary Control. It is specifically agreed that other control equipment is not to be considered as a part of a set within the terms of this contract. Because the Company's costs are figured to cover a complete set of controls, and the following breakdown prices are purely for invoicing purposes, it is agreed that the Purchaser's yearly purchases will consist of at least 90% as many Room Thermostats and 100% (but at the Company's option not more than 125%) as many Limit Controls as Primary Controls.

C. O. D. Shipments of Materials from Factory.

If the Purchaser requests C. O. D. shipment of standard devices or devices purchased at the odd model discount to his dealer from factory the Company will add a handling charge of 5%. There will be no charge for dealer shipments made on an open account basis from factory.

Prices from Branch Stocks.

All prices herein are predicated on delivery from factory, and are f. o. b. factory. The Company maintains limited stocks at its various branch offices and emergency shipments of standard equipment made the manufacturer therefrom will be invoiced at the prices shown herein, plus 5% to cover transportation, handling, warehousing, etc., but no handling charge will apply to instruments shipped at the odd model discount shown below.

C. O. D. Shipments of Materials from Branch Stocks.

If a Company branch makes a C. O. D. shipment of standard equipment to the Purchaser's dealer a charge of 10% will be made. Open account shipments will carry only the 5% charge mentioned above. Devices sold at odd model discount shipped the dealer on a C. O. D. basis will carry a 5% charge, but if shipped on an open account basis no added charge will be made.

Miscellaneous Control Prices.

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4, 5, Form SA 573-....., which are hereby made a part of this agreement, will be furnished at list prices stated less discount of 25-15-10% unless otherwise shown on the price sheets.

148 Conditions.

The Company agrees to render invoices to the Purchaser in accordance with the prices listed in the schedule above for the actual number of units shipped to the Purchaser by the Company, f.o.b. point of manufacture.

Prices relating to relay or motor operated devices and/or to magnetic valves are for 110 volt, 50 or 60 cycle specifications only, unless otherwise specified. Prices pertaining to Chronotherms and Electric Clock Thermostats are for 110

volt, 60 cycle specifications only. When ordered in lots of less than fifty units, the Company will add net extra charge for other voltages and frequency combination shown below, according to following schedule: Relay operated devices, excepting Type R153 and R83, $2.00 net each. Motor operated devices (excepting Type D and special industrial motors), Magnetic and Diaphragm valves, and Electric Clock Thermostats $1.00 net each. For current specification not shown, charges will be governed by the development work required.

110 volt, 40 cycle	220 volt, 30 cycle
110 volt, 30 cycle	220 volt, 25 cycle
110 volt, 25 cycle	110 volt, D. C.
220 volt, 60 cycle	220 volt, D. C.
220 volt, 50 cycle	32 volt, D. C.
220 volt, 40 cycle	

The extra charges outlined above will not be made for special alternating current voltage and frequency specifications when units are ordered in quantities of 50 or more of one device all of the same voltage and frequency and all to be shipped at one time. The extra charges outlined above will, however, apply to direct current devices in all quantities.

Net extra charges will be made for the following special requirements: Special range pressuretrols 2 to 50 lbs., or 5 to 150 lbs., $1.25 net each; special scales open contact thermostat 100° or less $2.00 net each, over 100°, $5.00 net each; special scales Airstats and Furnacestats $2.00 net each; special scales to 440° F. Immersion Aquastat $3.00 net each; special scales over 400° F. Immersion Aquastats $5.00 net each. Net extra charges on other special requirements quoted on request.

The Company is not obligated under the terms of this contract to supply instruments for current specifications or special constructions which in its opinion are impractical.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser.

Prices shown do not include thermostat cable or fittings.

Terms.

Shipments shall be made f.o.b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee.

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired free of charge, f.o.b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent.

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will pay such
149 award, but shall not be responsible for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchasers' place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business.

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees

to give written notice to the Purchaser to discontinue the sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment of Contract and Resale Agreement.

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except in conjunction with such products, and violation of this, or other conditions of this agreement gives the Company the right to immediately cancel same.

Deliveries.

It is agreed that this contract shall not be subject to cancellation except by the consent of the Company, and that serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designated in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Service Responsibility.

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings conducted by the Purchaser's field men.

Period of Contract.

This contract shall become effective at the accepted date, and expire on Dec. 31, 1938 unless sooner cancelled as hereinabove provided. The validity, enforceability and interpretation of all of the provisions of this contract shall be determined and governed by the laws of the State of Maryland.

therefrom will be invoiced at the prices shown herein, plus 5% to cover transportation, handling, warehousing, etc., but no handling charge will apply to instruments shipped at the odd model discount shown below.

C. O. D. Shipments of Materials from Branch Stocks.

If a Company branch makes a C. O. D. shipment of standard equipment to the Purchaser's dealer a charge of 10% will be made. Open account shipments will carry only the 5% charge mentioned above. Devices sold at odd model discount shipped the dealer on a C. O. D. basis will carry a 5% charge, but if shipped on an open account basis no added charge will be made.

Miscellaneous Control Prices.

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4, 5, Form SA 573-....., which are hereby made a part of this agreement, will be furnished at list prices stated less discount of 25-15-10% unless otherwise shown on the price sheets.

152 Conditions.

The Company agrees to render invoices to the Purchaser in accordance with the prices listed in the schedule above for the actual number of units shipped to the Purchaser by the Company, f. o. b. point of manufacture.

Prices relating to relay or motor operated devices and/or to magnetic valves are for 110 volt, 50 or 60 cycle specifications only, unless otherwise specified. Prices pertaining to Chronotherms and Electric Clock Thermostats are for 110 volt, 60 cycle specifications only. When ordered in lots of less than fifty units, the Company will add net extra charge for other voltages and frequency combination shown below, according to following schedule: Relay operated devices, excepting Type R153 and R83, $2.00 net each. Motor operated devices (excepting Type D and special industrial motors), Magnetic and Diaphragm valves, and Electric Clock Thermostats $1.00 net each. For current specification not shown, charges will be governed by the development work required.

110 volt, 40 cycle	220 volt, 30 cycle
110 volt, 30 cycle	220 volt, 25 cycle
110 volt, 25 cycle	110 volt, D. C.
220 volt, 60 cycle	220 volt, D. C.
220 volt, 50 cycle	32 volt, D. C.
220 volt, 40 cycle	

The extra charges outlined above will not be made for special alternating current voltage and frequency specifications when units are ordered in quantities of 50 or more of one device all of the same voltage and frequency and all to be shipped at one time. The extra charges outlined above will, however, apply to direct current devices in all quantities.

Net extra charges will be made for the following special requirements; Special range pressuretrols 2 to 50 lbs., or 5 to 150 lbs., $1.25 net each; special scales open contact thermostat 100° or less $2.00 net each, over 100°, $5.00 net each; special scales Airstats and Furnacestats $2.00 net each; special scales to 440° F. Immersion Aquastat $3.00 net each; special scales over 440° F. Immersion Aquastats $5.00 net each. Net extra charges on other special requirements quoted on request.

The Company is not obligated under the terms of this contract to supply instruments for current specifications or special constructions which in its opinion are impractical.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser.

Prices shown do not include thermostat cable or fittings.

Terms.

Shipments shall be made f.o.b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee.

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f.o.b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations, or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent.

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will pay such

153 award, but shall not be responsible for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchasers' place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business.

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment of Contract and Resale Agreement.

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except in conjunction with such products, and violation of this, or other conditions of this agreement gives the Company the right to immediately cancel same.

Deliveries.

It is agreed that this contract shall not be subject to cancellation except by the consent of the Company, and that serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designated in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Service Responsibility.

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings conducted by the Purchaser's field men.

Period of Contract

This contract shall become effective at the accepted date, and expire on Dec. 31, 193[illegible] unless sooner cancelled as hereinabove provided. The validity, enforceability and interpretation of all of the provisions of this contract shall be determined and governed by the laws of the State of Illinois.

Minneapolis-Honeywell Regulator Company,
By Chas. L. Saunders.

154 COMMISSION'S EXHIBIT NO. 7.

Minneapolis-Honeywell Regulator Company.

Manufacturers' Control Contract.

Purchaser: Submitted January 3rd, 1938.

This Agreement, entered into between Minneapolis-Honeywell Regulator Company, a Delaware corporation, hereinafter called the Company, and Herco Oil Burner Corp. of Lancaster, Pa., hereinafter called the Purchaser, Witnesseth:

That whereas the Company manufactures and sells a complete line of automatic temperature controls; and, whereas, the purchaser has use for such devices in connection with products of his manufacture, and for the sale of such devices to his dealers;

Now, therefore, in consideration of the premises, of the mutual covenants herein contained and of special prices extended the Purchaser by the Company, the parties hereto agree as follows:

Quantity.

The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named,

during the life of this contract Est. at 500 sets of the Company's automatic temperature controls, each set consisting of one Thermostat, and one Limit Control, and one Primary Control. It is specifically agreed that other control equipment is not to be considered as a part of a set within the terms of this contract. Because the Company's costs are figured to cover a complete set of controls, and the following breakdown prices are purely for invoicing purposes, it is agreed that the Purchaser's yearly purchases will consist of at least 90% as many Room Thermostats and 100% (but at the Company's option not more than 125%) as many Limit Controls as Primary Controls.

Company's Copy

See Page 2 for Prices from Branch Stocks and C. O. D. Shipments.

x Royalty fee of 50¢ net will be added if Purchaser is not licensed under the Zoro Estate group of patents.

155 Retroactive Clause:

In the event that the purchaser accepts and pays for 750 control sets during the life of this contract, a material credit, to be absorbed by future purchases will be issued, amounting to 5% of the net sales to the purchaser, and future shipments during the life of the contract will be invoiced at the prices then in effect for 750 control sets.

C. O. D. Shipments of Materials from Factory

If the Purchaser requests C. O. D. shipment of standard devices or devices purchased at the odd model discount to his dealer from factory the Company will add a handling charge of 5%. There will be no charge for dealer shipments made on an open account basis from factory.

Prices from Branch Stocks—

All prices herein are predicated on delivery from factory, and are f. o. b. factory. The Company maintains limited stocks at its various branch offices and emergency shipments at standard equipment made the manufacturer therefrom will be invoiced at the prices shown herein, plus 5% to cover transportation, handling, warehousing, etc., but no handling charge will apply to instruments shipped at the odd model discount shown below.

C. O. D. Shipments of Materials from Branch Stocks

If a Company branch makes a C. O. D. shipment of standard equipment to the Purchaser's dealer a charge of 10% will be made. Open account shipments will carry only the 5% charge mentioned above. Devices sold at odd model discount shipped the dealer on a C. O. D. basis will carry a 5% charge, but if shipped on an open account basis no added charge will be made.

Miscellaneous Control Prices

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4, 5, Form SA 573-....., which are hereby made a part of this agreement, will be furnished at list prices stated less discount of 25-15% unless otherwise shown on the price sheets.

156 Conditions

The Company agrees to render invoices to the Purchaser in accordance with the prices listed in the schedule above for the actual number of units shipped to the Purchaser by the Company, f.o.b. point of manufacture.

Prices relating to relay or motor operated devices and/or to magnetic valves are for 110 volt, 50 or 60 cycle specifications only, unless otherwise specified. Prices pertaining to Chronotherms and Electric Clock Thermostats are for 110 volt, 60 cycle specifications only. When ordered in lots of less than fifty units, the Company will add net extra charge for other voltages and frequency combination shown below, according to following schedule: Relay operated devices, excepting Type R153 and R83, $2.00 net each. Motor operated devices (excepting Type D and special industrial motors), Magnetic and Diaphragm valves, and Electric Clock Thermostats $1.00 net each. For current specification not shown, charges will be governed by the development work required.

110 volt, 40 cycle	220 volt, 30 cycle
110 volt, 30 cycle	220 volt, 25 cycle
110 volt, 25 cycle	110 volt, D. C.
220 volt, 60 cycle	220 volt, D. C.
220 volt, 50 cycle	32 volt, D. C.
220 volt, 40 cycle	

The extra charges outlined above will not be made for special alternating current voltage and frequency specifications when units are ordered in quantities of 50 or more of one device all of the same voltage and frequency and all to be shipped at one time. The extra charges outlined above will, however, apply to direct current devices in all quantities.

Net extra charges will be made for the following special requirements: Special range pressuretrols 2 to 50 lbs., or 5 to 150 lbs., $1.25 net each; special scales open contact thermostat 100° or less $2.00 net each, over 100°, $5.00 net each; special scales Airstats and Furnacestats $2.00 net each; special scales to 440° F. Immersion Aquastat $3.00 net each; special scales over 440° F. Immersion Aquastats $5.00 net each. Next extra charges on other special requirements quoted on request.

The Company is not obligated under the terms of this contract to supply instruments for current specifications or special constructions which in its opinion are impractical.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser.

Prices shown do not include thermostat cable or fittings.

Terms

Shipments shall be made f.o.b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f.o.b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired or

replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will pay such
157 award, but shall not be responsible for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchasers' place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment of Contract and Resale Agreement

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except in conjunction with such products, and violation of this, or other conditions of this agreement gives the Company the right to immediately cancel same.

Deliveries

It is agreed that this contract shall not be subject to cancellation except by the consent of the Company, and that serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designated in said orders.

Price Revisions

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30)

days of the date of said price change. It is further agreed that the Purchaser will not order more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Service Responsibility

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings conducted by the Purchaser's field men.

Period of Contract

This contract shall become effective at the accepted date, and expire on Dec. 31, 1938 unless sooner cancelled as hereinabove provided. The validity, enforceability and interpretation of all of the provisions of this contract shall be determined and governed by the laws of the State of Pennsylvania.

Minneapolis-Honeywell Regulator Company

Manufacturers' Control Contract

Purchaser: Submitted January 3rd, 1938

This Agreement, entered into between Minneapolis-Honeywell Regulator Company, a Delaware corporation, hereinafter called the Company, and Paragon Oil Company of 15 Bridgewater Street, Brooklyn, New York, hereinafter called the Purchaser, Witnesseth:

That whereas the Company manufactures and sells a complete line of automatic temperature controls; and, whereas, the purchaser has use for such devices in conjunction with products of his manufacture, and for the sale of such devices to his dealers;

Now, therefore, in consideration of the premises, of the mutual covenants herein contained and of special prices extended the Purchaser by the Company, the parties hereto agree as follows:

Quantity.

The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract Est. at 1500 sets of the Company's automatic temperature controls, each set consisting of one Thermostat, and one Limit Control, and one Primary Control. It is specifically agreed that other control equipment is not to be considered as a part of a set within the terms of this contract. Because the Company's costs are figured to cover a complete set of controls, and the following breakdown prices are purely for invoicing purposes, it is agreed that the Purchaser's yearly purchases will consist of at least 90% as many Room Thermostats and 100% (but at the Company's option not more than 200%) as many Limit Controls as Primary Controls.

159 C. O. D. Shipments of Materials from Factory.

If the Purchaser requests C. O. D. shipment of standard devices or devices purchased at the odd model discount to his dealer from factory the Company will add a handling charge of 5%. There will be no charge for dealer shipments made on an open account basis from factory.

Prices from Branch Stocks.

All prices herein are predicated on delivery from factory, and are f. o. b. factory. The Company maintains limited stocks at its various branch offices and emergency shipments of standard equipment made the manufacturer there-

x Royalty fee of 50¢ net will be added if Purchaser is not licensed under the Zoro Estate group of patents.

from will be invoiced at the prices shown herein, plus 5% to cover transportation, handling, warehousing, etc., but no handling charge will apply to instruments shipped at the odd model discount shown below.

C. O. D. Shipments of Materials from Branch Stocks.

If a Company branch makes a C. O. D. shipment of standard equipment to the Purchaser's dealer a charge of 10% will be made. Open account shipments will carry only the 5% charge mentioned above. Devices sold at odd model discount shipped the dealer on a C. O. D. basis will carry a 5% charge, but if shipped on an open account basis no added charge will be made.

Miscellaneous Control Prices.

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4, 5, Form SA 573-....., which are hereby made a part of this agreement, will be furnished at list prices stated less discount of 25-15-5% unless otherwise shown on the price sheets.

160 Conditions.

The Company agrees to render invoices to the Purchaser in accordance with the prices listed in the schedule above for the actual number of units shipped to the Purchaser by the Company, f.o.b. point of manufacture.

Prices relating to relay or motor operated devices and/or to magnetic valves are for 110 volt, 50 or 60 cycle specifications only, unless otherwise specified. Prices pertaining to Chronotherms and Electric Clock Thermostats are for 110 volt, 60 cycle specifications only. When ordered in lots of less than fifty units, the Company will add net extra charge for other voltages and frequency combination shown below, according to following schedule: Relay operated devices, excepting Type R153 and R83, $2.00 net each. Motor operated devices (excepting Type D and special industrial motors), Magnetic and Diaphragm valves, and Electric Clock Thermostats $1.00 net each. For current specification not shown, charges will be governed by the development work required.

110 volt, 40 cycle	220 volt, 30 cycle
110 volt, 30 cycle	220 volt, 25 cycle
110 volt, 25 cycle	110 volt, D. C.
220 volt, 60 cycle	220 volt, D. C.
220 volt, 50 cycle	32 volt, D. C.
220 volt, 40 cycle	

The extra charges outlined about will not be made for special alternating current voltage and frequency specifications when units are ordered in quantities of 50 or more of one device all of the same voltage and frequency and all to be shipped at one time. The extra charges outlined above will, however, apply to direct current devices in all quantities.

Net extra charges will be made for the following special requirements: Special range pressuretrols 2 to 50 lbs., or 5 to 150 lbs., $1.25 net each; special scales open contact thermostat 100° or less $2.00 net each, over 100°, $5.00 net each; special scales Airstats and Furnacestats $2.00 net each; special scales to 440° F. Immersion Aquastat $3.00 net each; special scales over 440° F. Immersion Aquastats $5.00 each. Net extra charges on other special requirements quoted on request.

The Company is not obligated under the terms of this contract to supply instruments for current specifications or special constructions which in its opinion are impractical.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser.

Prices shown do not include thermostat cable or fittings.

Terms.

Shipments shall be made f.o.b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee.

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f.o.b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent.

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will pay such

161 award, but shall not be responsible for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchasers' place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business.

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment of Contract and Resale Agreement.

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except in conjunction with such products, and violation of this, or other conditions of this agreement gives the Company the right to immediately cancel same.

Deliveries.

It is agreed that this contract shall not be subject to cancellation except by the consent of the Company, and that serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designated in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Service Responsibility.

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings conducted by the Purchaser's field men.

Period of Contract.

This contract shall become effective at the accepted date, and expire on Dec. 31, 1938, unless sooner cancelled as hereinabove provided. The validity, enforceability and interpretation of all of the provisions of this contract shall be determined and governed by the laws of the State of New York.

162 COMMISSION'S EXHIBIT NO. 9.

Minneapolis-Honeywell Regulator Company.

Manufacturers' Control Contract

Purchaser: Submitted Jan. 3, 1938

This Agreement, entered into between Minneapolis-Honeywell Regulator Company, a Delaware corporation, hereinafter called the Company, and Petroleum Heat & Power Co., of Stamford, Conn., hereinafter called the Purchaser, Witnesseth:

That whereas the Company manufactures and sells a complete line of automatic temperature controls; and, whereas, the purchaser has use for such devices in conjunction with products of his manufacture, and for the sale of such devices to his dealers;

Now, therefore, in consideration of the premises, of the mutual covenants herein contained and of special prices extended the Purchaser by the Company, the parties hereto agree as follows:

Quantity.

The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract the Purchaser's requirements estimated at 7500 sets of the Company's automatic temperature controls, each set consisting of one Thermostat, and one Limit Control, and one Primary Control. It is specifically agreed that other control equipment is not to be considered as a part of a set within the terms of this contract. Because the Company's costs are figured to cover a complete set of controls, and the following breakdown prices are purely for invoicing purposes, it is agreed that the Purchaser's yearly purchases will consist of at least 90% as many Room Thermostats and 100% (but at the Company's option not more than 125%) as many Limit Controls as Primary Controls.

C. O. D. Shipments of Materials from Factory.

If the Purchaser requests C. O. D. shipment of standard devices or devices purchased at the odd model discount to his dealer from factory the Company will add a handling charge of 5%. There will be no charge for dealer shipments made on an open account basis from factory.

Prices from Branch Stocks.

All prices herein are predicated on delivery from factory, and are f. o. b. factory. The Company maintains limited stocks at its various branch offices and emergency shipments of standard equipment made the manufacturer therefrom will be invoiced at the prices shown herein, plus 5% to cover transportation, handling, warehousing, etc., but no handling charge will apply to instruments shipped at the odd model discount shown below.

C. O. D. Shipments of Materials from Branch Stocks.

If a Company branch makes a C. O. D. shipment of standard equipment to the Purchaser's dealer a charge of 10% will be made. Open account shipments will carry only the 5% charge mentioned above. Devices sold at odd model discount shipped the dealer on a C. O. D. basis will carry a 5% charge, but if shipped on an open account basis no added charge will be made.

Miscellaneous Control Prices.

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4, 5, Form SA 573-...., which are hereby made a part of this agreement, will be furnished at list prices stated less discount of 25-15-10% unless otherwise shown on the price sheets.

164 Conditions.

The Company agrees to render invoices to the Purchaser in accordance with the prices listed in the schedule above for the actual number of units shipped to the Purchaser by the Company, f.o.b. point of manufacture.

Prices relating to relay or motor operated devices and/or to magnetic valves are for 110 volt, 50 or 60 cycle specifications only, unless otherwise specified. Prices pertaining to Chronotherms and Electric Clock Thermostats are for 110 volt, 60 cycle specifications only. When ordered in lots of less than fifty units, the Company will add net extra charge for other voltages and frequency combination shown below, according to following schedule: Relay operated devices, excepting Type R153 and R83, $2.00 net each. Motor operated devices (excepting Type D and special industrial motors), Magnetic and Diaphragm valves, and Electric Clock Thermostats $1.00 net each. For current specification not shown, charges will be governed by the development work required.

110 volt, 40 cycle	220 volt, 30 cycle
110 volt, 30 cycle	220 volt, 25 cycle
110 volt, 25 cycle	110 volt, D. C.
220 volt, 60 cycle	220 volt, D. C.
220 volt, 50 cycle	32 volt, D. C.
220 volt, 40 cycle	

The extra charges outlined above will not be made for special alternating current voltage and frequency specifications when units are ordered in quantities of 50 or more of one device all of the same voltage and frequency and all to be shipped at one time. The extra charges outlined above will, however, apply to direct current devices in all quantities.

Net extra charges will be made for the following special requirements: Special range pressuretrols 2 to 50 lbs., or 5 to 150 lbs., $1.25 net each; special scales open contact thermostat 100° or less $2.00 net each, over 100°, $5.00 net each; special scales Airstats and Furnacestats $2.00 net each; special scales to 440° F. Immersion Aquastat $3.00 net each; special scales over 440° F. Immersion Aquastats $5.00 net each. Net extra charges on other special requirements quoted on request.

The Company is not obligated under the terms of this contract to supply instruments for current specifications or special constructions which in its opinion are impractical.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser.

Prices shown do not include thermostat cable or fittings.

Terms.

Shipments shall be made f.o.b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee.

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f.o.b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent.

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the

165 Company will pay such award, but shall not be responsible for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchasers' place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business.

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment of Contract and Resale Agreement.

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except in conjunction with such products, and violation of this, or other conditions of this agreement gives the Company the right to immediately cancel same.

Deliveries.

It is agreed that this contract shall not be subject to cancellation except by the consent of the Company, and that serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designated in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Service Responsibility.

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings conducted by the Purchaser's field men.

Period of Contract.

This contract shall become effective at the accepted date, and expire on Dec. 31, 1938 unless sooner cancelled as hereinabove provided. The validity, enforceability and interpretation of all of the provisions of this contract shall be determined and governed by the laws of the State of Connecticut.

Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent.

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any

combination of other apparatus, devices and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will pay such
169 award, but shall not be responsible for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchasers' place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business.

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment of Contract and Resale Agreement.

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except in conjunction with such products, and violation of this, or other conditions of this agreement gives the Company the right to immediately cancel same.

Deliveries.

It is agreed that this contract shall not be subject to cancellation except by the consent of the Company, and that serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designated in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Service Responsibility.

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will

welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings conducted by the Purchaser's field men.

Period of Contract.

This contract shall become effective at the accepted date, and expire on Dec. 31, 1938, unless sooner cancelled as hereinabove provided. The validity, enforceability and interpretation of all of the provisions of this contract shall be determined and governed by the laws of the State of Ohio.

Company's Copy.

179 Miscellaneous Control Prices.

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4, 5, Form SA 573-....., which are hereby made a part of this agreement, will be furnished at list prices stated less discount of ..... unless otherwise shown on the price sheets.

180 Conditions.

The Company agrees to render invoices to the Purchaser in accordance with the prices listed in the schedule above for the actual number of units shipped to the Purchaser by the Company, f. o. b. point of manufacture.

Prices relating to relay or motor operated devices and/or to magnetic valves are for 110 volt, 50 or 60 cycle specifications only, unless otherwise specified. Prices pertaining to Chronotherms and Electric Clock Thermostats are for 110 volt, 60 cycle specifications only. When ordered in lots of less than fifty units, the Company will add net extra charge for other voltages and frequency combination shown below, according to following schedule: Relay operated devices, excepting Type R153 and R83, $2.00 net each. Motor operated devices (excepting Type D and special industrial motors), Magnetic and Diaphragm valves, and Electric Clock Thermostats $1.00 net each. For current specification not shown, charges will be governed by the development work required.

110 volt, 40 cycle	220 volt, 30 cycle
110 volt, 30 cycle	220 volt, 25 cycle
110 volt, 25 cycle	110 volt, D. C.
220 volt, 60 cycle	220 volt, D. C.
220 volt, 50 cycle	32 volt, D. C.
220 volt, 40 cycle	

The extra charges outlined above will not be made for special alternating current voltage and frequency specifications when units are ordered in quantities of 50 or more of one device all of the same voltage and frequency and all to be shipped at one time. The extra charges outlined above will, however, apply to direct current devices in all quantities.

Net extra charges will be made for the following special requirements: Special range pressuretrols 2 to 50 lbs., or 5 to 150 lbs., $1.25 net each; special scales open contact thermostat 100° or less $2.00 net each, over 100°, $5.00 net

each; special scales Airstats and Furnacestats $2.00 net each; special scales to 440° F. Immersion Aquastat $3.00 net each; special scales over 440° F. Immersion Aquastats $5.00 net each. Net extra charges on other special requirements quoted on request.

The Company is not obligated under the terms of this contract to supply instruments for current specifications or special constructions which in its opinion are impractical.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser.

Prices from Branch Stocks.

Prices shown do not include thermostat cable or fittings.

Emergency shipments of equipment to the Purchaser from a Branch Office of the Company shall be billed with discounts in effect at such Branch Office.

Terms.

Shipments shall be made f. o. b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee.

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the

Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f. o. b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent.

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will pay such
181 award, but shall not be responsible for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchasers' place of business with non-infringing devices or apparatus, or modify said device or apparatus so that its becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business.

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment of Contract and Sales Agreement.

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except in conjunction with his products.

Prices contained in this agreement cover shipments made to the Purchaser, and the Company will add a handling charge of 10% to cover shipments that the Purchaser requests be made to his dealers. All shipments are F. O. B. factory.

Deliveries.

It is agreed that this contract shall not be subject to cancellation except by the consent of the Company, and that serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designated in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Service Responsibility.

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings conducted by the Manufacturer's field men.

182 COMMISSION'S EXHIBIT NO. 14.

Minneapolis-Honeywell Regulator Company.

Manufacturers' Control Contract.

Submitted....., 19....

Purchaser:

This Agreement, entered into between Minneapolis-Honeywell Regulator Company, a Delaware corporation, hereinafter called the Company, and ..... of ....., hereinafter called the Purchaser, Witnesseth:

That whereas the Company manufactures and sells a complete line of automatic temperature controls; and, whereas, the purchaser has use for such devices in conjunction with products of his manufacture, and for the sale of such devices to his dealers;

Now, therefore, in consideration of the premises, of the mutual covenants herein contained and the prices extended the Purchaser by the Company, the parties hereto agree as follows:

Quantity.

The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract..... sets or more of the Company's automatic temperature controls. Because the Company's thermostats and primary controls are specifically designed to operate one with the other, it is unsatisfactory and often dangerous to mix controls made by different manufacturers in the same installation, and to avoid any such difficulty and divided service responsibility, it is agreed that each set shall consist of but one Thermostat, one Primary Control, and one Limit Control, and that the Purchaser will buy at least 90% as many Room Thermostats and 100% as many Limit Controls as Primary Controls at the following prices.

Prices on Material Shipped From Factory.
1939.

Company's Copy

Caution!

Important!

It is always unsatisfactory—often dangerous—to use mixed controls on the same installation, and it is of mutual interest to avoid this. The Company can give no assurance of satisfactory operation, or assume any service responsibility, if its controls are used with other makes.

183 Waiver of Special Terms.

It is contemplated that during the life of this contract the Purchaser may submit orders under this contract on its own purchase order forms and that such forms may contain statements, clauses, or conditions modifying, adding to, repugnant to, or inconsistent with the terms and provisions of this contract. It is the intention of the parties, however, and it is expressly agreed that notwithstanding any such statements, clauses or conditions contained in any of the order forms of the Purchaser the liabilities of the Company shall be determined solely by this contract, and in accepting and consummating any such order the Company shall be deemed not to have in any way changed, enlarged, or modified its liabilities or obligations as fixed by this contract.

Direct Dealer Shipments.

If the Purchaser requests C. O. D. or open account shipment of standard devices from Branch stock to his dealer, the Company will add ten percent to the prices shown herein to cover transportation, warehousing, etc. Five percent will be added to devices purchased at the Odd Model discount and shipped from Branch stock on a C. O. D. or open account basis to the dealer.

There will be no added charge for dealer shipments made on an open account basis from factory, but C. O. D. shipments to the dealer from factory will carry a five percent charge.

Purchaser's Prices from Branch Stock.

All prices herein are f.o.b. factory and are predicated on the fact that the Purchaser will buy in representative quantities and carry sufficient stock to serve his dealers. The Company maintains only limited stocks at its stocking Branch offices, and emergency shipments of standard equipment made to the Purchaser therefrom will be invoiced at the prices shown herein, f.o.b. Branch, plus five percent to cover transportation, handling, warehousing, etc. There will be no added charge for instruments shipped at the Odd Model discount.

Miscellaneous Control Prices.

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4, 5, Form SA 573-....., which are hereby made a part of this agreement, will be furnished at list prices stated less Odd Model discount of ..... unless otherwise shown on the price sheets.

184 Conditions.

The Company agrees to render invoices to the Purchaser in accordance with the prices listed in the schedule above for the actual number of units shipped to the Purchaser by the Company, f.o.b. point of manufacture.

Prices relating to relay or motor operated devices and/or to magnetic valves are for 110 volt, 50 or 60 cycle specifications only, unless otherwise specified. Prices pertaining to Chronotherms and Electric Clock Thermostats are for 110

volt, 60 cycle specifications only. When ordered in lots of less than fifty units, the Company will add net extra charge for other voltages and frequency combination shown below, according to following schedule: Relay operated devices, excepting Type R153, R154 and R183, $2.00 net each. Motor operated devices (excepting Type D and special industrial motors), Magnetic and Diaphragm valves, and Electric Clock Thermostats $1.00 net each. For current specification not shown, charges will be governed by the development work required.

110 volt, 40 cycle	220 volt, 30 cycle
110 volt, 30 cycle	220 volt, 25 cycle
110 volt, 25 cycle	110 volt, D. C.
220 volt, 60 cycle	220 volt, D. C.
220 volt, 50 cycle	32 volt, D. C.
220 volt, 40 cycle	

The extra charges outlined above will not be made for special alternating current voltage and frequency specifications when units are ordered in quantities of 50 or more of one device all of the same voltage and frequency and all to be shipped at one time. The extra charges outlined above will, however, apply to direct current devices in all quantities.

Net extra charges will be made for the following special requirements: Special range pressuretrols 2 to 50 lbs., or 5 to 150 lbs., $1.25 net each; special scales open contact thermostat 100° or less $2.00 net each, over 100°, $5.00 net each; special scales Airstats and Furnacestats $2.00 net each; special scales to 440° F. Immersion Aquastat $3.00 net each; special scales over 440° F. Immersion Aquastats $5.00 net each. Net extra charges on other special requirements quoted on request.

The Company is not obligated under the terms of this contract to supply instruments for current specifications or special constructions which in its opinion are impractical.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser.

Prices shown do not include thermostat cable or fittings.

Terms.

Shipments shall be made f.o.b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee.

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f.o.b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent.

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will pay such
185 award, but shall not be responsible for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchasers' place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business.

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees

to give written notice to the Purchaser to discontinue the sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment and Cancellation of Contract.

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except for use in conjunction with such products.

It is agreed that this contract shall be subject to cancellation by the Company without cause upon thirty (30) days written notice.

Deliveries.

Serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designed in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Service Responsibility.

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings.

1940.

Company's Copy.

187 Waiver of Special Terms.

It is contemplated that during the life of this contract the Purchaser may submit orders under this contract on its own purchase order forms and that such forms may

contain statements, clauses, or conditions modifying, adding to, repugnant to, or inconsistent with the terms and provisions of this contract. It is the intention of the parties, however, and it is expressly agreed that notwithstanding any such statements, clauses or conditions contained in any of the order forms of the Purchaser the liabilities of the Company shall be determined solely by this contract, and in accepting and consummating any such order the Company shall be deemed not to have in any way changed, enlarged, or modified its liabilities or obligations as fixed by this contract.

Purchaser's Price from Branch Stock.

All prices herein are f. o. b. point of manufacture and are predicated on the fact that the Purchaser will carry sufficient stocks to serve his dealers, and that emergency pick-ups only will be made from the Company's stocking Branch offices or warehouses. Standard equipment from Branch or warehouse stocks will carry a 5% charge to cover transportation, handling, warehousing, etc., but there will be no added charge for devices sold at the Odd Model Discount.

Direct Dealer Shipments.

Direct dealer shipments of standard devices from Branch or warehouse stocks; C. O. D. or open account, will add 10% to the prices shown herein or 5% if pick-up is made at the Branch. Direct dealer shipments of devices sold at the Odd Model Discount, C. O. D., or open account, and shipped, or picked up, from Branch stock will carry a 5% charge. Shipments made to dealers from Factory on open account will carry no added charges, but C. O. D. shipments will carry a 5% charge.

Conditions.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser. Prices on devices shown herein employing relay, motor or magnetic principle of operation are for 110 Volt, 60 Cycle specifications, unless otherwise specified. Chronotherm prices cover 110 Volt, 60 Cycle only. An extra charge will

be made for other voltages and frequencies not shown above, and also for special scales, extensions and other deviations from standard.

Prices do not include thermostat cable or fittings.

Terms.

Shipments shall be made f. o. b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with tthe Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee.

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f. o. b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired, or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied

by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent.

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices, and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will pay such award, but shall not be responsible for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

188 In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchaser's place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business.

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for

the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment and Cancellation of Contract.

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except for use in conjunction with such products.

It is agreed that this contract shall be subject to cancellation by the Company without cause upon thirty (30) days' written notice.

Deliveries.

Serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designed in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order, or that the Company will not be obligated to fill any orders including blanket orders outstanding, calling for a total

of more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Miscellaneous Control Prices.

Control equipment of the Company's manufacture not previously shown, but listed on sheets ..... Form SA 573....., which are hereby made a part of this agreement, will be furnished at list prices stated less Odd Model discount of ..... unless otherwise shown on the price sheets.

Service Responsibility.

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. Purchaser's Price from Warehouse Stock.

All prices herein are f. o. b. point of manufacture and are predicated on the fact that the Purchaser will carry sufficient stocks to serve his dealers, and that emergency pick-ups only will be made from the Company's New York or Chicago warehouse door or other stocking points. Standard equipment purchased from these stocks will carry a 5% charge to cover transportation, handling, warehousing, etc., but there will be no added charge for devices sold at the Odd Model discount.

Direct Dealer Shipments.

Direct C. O. D. dealer emergency shipments of standard devices from New York or Chicago warehouse door or other stocking points will add 10% to the prices shown herein, and open account dealer shipments will add 5%. Direct dealer shipments of devices from warehouse, factory, or other stocking points sold at the Odd Model discount C. O. D. will carry a 5% charge. Shipments made to dealers from factory on open account will carry no added charge.

Conditions.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser. Prices on devices shown herein employing relay, motor or magnetic principle of operation are for 110 Volt, 60 Cycle specifications, unless otherwise specified. Chronotherm prices cover 110 Volt, 60 Cycle only. An extra charge will be made for other voltages and frequencies not shown above, and also for special scales, extensions and other deviations from standard. Pilotstats and Metaphrams are not to be considered as units toward the fulfillment of this agreement.

Terms.

Prices do not include thermostat cable or fittings.

Shipments shall be made f. o. b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee.

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f. o. b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired, or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent.

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this agreement provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices, and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will pay such award, but shall not be responsible for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

191 In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchaser's place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business.

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to

discontinue the sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment and Cancellation of Agreement.

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except for use in conjunction with such products.

It is agreed that this agreement shall be subject to cancellation by the Company without cause upon thirty (30) days' written notice.

Deliveries.

Serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designed in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the agreement providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order, or that the Company will not be obligated to fill any orders including blanket orders outstanding, calling for a total of more than one-twelfth of the amount of this agreement during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this agreement.

Miscellaneous Control Prices.

Control equipment of the Company's manufacture not previously shown, but listed on sheets ..... Form SA 573....., which are hereby made a part of this agreement, will be furnished at list prices stated less Odd Model discount of 25 and 25% unless otherwise shown on the price sheets.

Service Responsibility.

The prices shown in this agreement do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings.

Period of Agreement.

192 COMMISSION'S EXHIBIT NO. 17-A.

Sept. 16, 1936.

Cleveland Steel Products Corp.,
Cleveland, Ohio.

Att.: Mr. J. L. O'Brien—Torridheet Div.

Dear J. L.:

When I was in Cleveland recently, W. J. told me that your shipments this year so far exceeded last by something over 60% and when I received our September 1st figures I was somewhat concerned to learn that to Sept. 1st this year we had shipped you a total of 2612 instruments whereas in 1935 for the same period we had shipped you 2638. In other words, while your business has increased materially yet our shipments to you remain about on a par with last year.

You will recall that I chatted just briefly with you with reference to Mercoid's control situation and you advised you were still using the balance of the order which you placed last year, and which if I remember correctly represented a balance of approximately 500 sets of controls.

We are getting letters from our salesmen and branches who are calling on your dealers to the effect that you are encouraging them to use Mercoid controls on the gun type job—and we have replied in each instance stating that you were trying to use up your inventory of Mercoid devices and not in any manner to attempt to disrupt the situation.

Your dealers have told us that you have a price difference between our controls and Mercoid's, whereas W. J. told me no such price difference existed—and if you don't mind I would like to have the story of this control situation as it exists today so that we won't be giving out any erroneous information to our men in the field that might later prove embarrassing.

Another incident that just came to my attention yesterday concerned the Detroit Michigan Stove Co. These people have been customers of ours for a long time and our salesman in calling noted Mercoid controls on their job naturally asked why they were not using Minneapolis-Honeywell. They replied that it was your policy to ship

Mercoid controls with the gun burner—and again we find ourselves in the position where we must tell the Detroit branch the status of your dealings with Detroit Michigan Stove Co. because they expressed a preference for our controls and would no doubt standardize on them if they could do so.

193 I just cite this as another incident where we would like to be in a position to give our field men instructions as to what to do.

Yours very truly,
Minneapolis-Honeywell Regulator Co.
A. H. Lockrae—Asst. Mgr. of Sales,
AHL:DR Original Equipment Division.

194 COMMISSION'S EXHIBIT NO. 18-A.

October 19, 1936.

File No. 1-11923

W. L. Huff Exhibit No. 8-B
I. D. Royal, Attorney
Federal Trade Commission

Mr. J. L. O'Brien,
Toridheet Division,
Cleveland Steel Products Corp.,
Cleveland, Ohio.

Dear J. L.:

I was in Cleveland Tuesday, and was awfully sorry you were out of town—but I did have a nice visit with W. J.

Among other things, he told me that your gun type burners were running about three to one for the rotary—and your control purchases this year from us are just about on a par with 1935.

The last time I saw you we talked briefly with reference to the Mercoid control situation and you advised you were still using the balance of the order which you placed last year, and which if I remember correctly represented a balance of between 500 and 1000 sets of controls. Inasmuch as we have shipped you about 1200 sets thus far, and the gun type burners running three to one against the rotary, this would mean you have used between 3000 and 4000 gun type controls and we have not enjoyed this business

as we were led to believe. I would like awfully well to discuss this situation with you—not that it really matters now that it is so late in the season but I am curious to know why your plans were changed.

The matter of immediate interest is being created from reports we are getting from our salesmen and branches to the effect that you are encouraging your dealers to use competitive controls on the gun type burner—in fact some dealers reported their reluctance to use anything but M-H controls and then had your assurance that if the competitive control was not satisfactory in every way our control would be furnished without charge. We have replied in each instance advising you were trying to use up your inventory of Mercoid controls and we have instructed our men in no manner to attempt to disrupt the situation.

On my previous visit to Cleveland, W. J. made the statement that our controls and the competitive controls were being offered the dealer at the same price—and if you don't mind I'd like to know just what your dealer prices are, or the difference between the price of our controls and competitive controls to the dealer so that we won't be giving further erroneous information to our men in the field that might prove embarrassing.

195 We will be very pleased indeed to hear from you regarding the above, and with kindest personal regards, and again regretting that I missed you, we are

Yours most truly,

Minneapolis-Honeywell Regulator Co.,
A. H. Lockrae—Asst. Mgr. of Sales,

196 COMMISSION'S EXHIBIT NO. 19-A.

(Letterhead of Cleveland Steel Products Corporation.)

November 5, 1936.

File No. 1-11923

W. H. Huff Exhibit 8-C
I. D. Royal, Attorney
Federal Trade Commission

Minneapolis-Honeywell Regulator Co.,
Minneapolis, Minn.

Attention Mr. A. H. Lockrae.

Dear Lock:

When I returned from the East I found your letter of October 19 and I am sorry that I was not here when you arrived, as I think possibly there would not have been quite as much of a misunderstanding as there seems to be at the present time. I think we can straighten this matter out to your complete satisfaction the first time you are in Cleveland. However, in the meantime I will simply say that we have not yet taken the 1,000 controls referred to at the time I talked to you last winter.

Concerning the reports which you are getting from your salesmen and branches to the effect that we are urging our dealers to use competitive controls on the gun type burner; I of course cannot answer this very definitely without having more concrete information, except that I will say that as near as I know we have not made any effort to encourage our dealers to use competitive controls, unless the fact that our burner with competitive controls at a lower price than with Minneapolis Honeywell controls might be interpreted in that way. We have freely offered our burners with Minneapolis controls but at a higher price, and I am sure that I know of no case where we have ever urged a dealer to take competitive controls with the assurance that if competitive controls were not satisfactory in every way, Minneapolis Honeywell controls would be furnished without charge.

I don't like to have a statement of this kind in your minds and I realize that a mere statement by me that it is not so will not carry conviction, therefore, I would

suggest that you give me specific instances where this has happened and I will follow it up and find out whether some of our field men may have done such a thing without recommendation or authority from this office.

I note in your letter that you say that W. J. made a statement that your controls and the competitive controls were being offered the dealer at the same price, but this of course, is not so and W. J. did not intend to be understood in that way, as our price sheet very definitely
197 carries a difference between the two controls and there is no secret about this price sheet. The difference between your controls and the competitive controls being published at $5.00.

If the information that I have asked for is something which you do not care to write to me, I of course will wait for an opportunity to talk to you personally, but I hope you will feel free to write to me fully in regard to the statement made in your letter so that I can follow the matter up. In the meantime my kindest personal regards and will await seeing you on your next trip to Cleveland.

Sincerely,

J. L. O'Brien,
Toridheet Division, Cleveland Steel Products Corporation.

Att.: Mr. J. L. O'Brien—Toridheet Division.

Dear J. L.:

I have been away from the office so much that this is the first opportunity I have had to acknowledge your letter of Nov. 5, and as I am planning to be in Cleveland within the next couple of weeks I am not going into detail now.

I just want to say that your letter certainly satisfies us, and with kindest personal regards beg to remain

Yours very truly,
Minneapolis-Honeywell Regulator Co.,

DETAILS OF INTERVIEW

WHAT DID YOU SAY? | WHAT WAS THEIR REACTION?

After some wait during which I provided Farnsworth to send him a supply of leaflets, Mr Ernest came in and we had no difficulty in getting together on the 1002 set contract after I followed the 2 instruction and eliminated the 75% clause. Ernest told me that with the exception of Reynolds burners he would use our controls exclusively this season. He showed me an order for 400 burners from Reynolds, so I guess the report I had about getting Reynolds burners for Boston was true. Ernest has just been elected Vice President of the Boston Oil Burners Association

Minneapolis-Honeywell Regulator Company.

Branch Inter-Office Memorandum.

Date January 14, 1937
In Reply Quote File mk

To Minneapolis—A. H. Lockrae

From Philadelphia—J. C. Dorsey

Subject R.-S. Products Contract

We have a newly written contract in the first bracket for the above company. We notice it has the 95% clause in it. I am positive they will not sign it with this existing clause as they recently told me they expect to stick with Mercoid this year, but had high hopes of using more of our controls than they did.

With the increased price in this year's contract it is quite questionable whether or not they will sign the contract. I realize that we can not give them a lower price but I am writing to ask your permission to eliminate the 95% clause should they hesitate to sign the contract on this account.

1-18-37

Thanks for the above. There is no objection at all to eliminating the 95% clause. Just mark it out with a pen and sign your name to it. This should be done on both the white and blue copies.

A. H. Lockrae.

201 COMMISSION'S EXHIBIT NO. 23-A.

Minneapolis-Honeywell Regulator Company.

Manufacturers' Control Contract.

Purchaser: Submitted December 2, 1936.

This Agreement, entered into between Minneapolis-Honeywell Regulator Company, a Delaware corporation, hereinafter called the Company, and Cleveland Steel Products Corp. of Cleveland, Ohio, hereinafter called the Purchaser, Witnesseth:

That whereas the Company manufactures and sells a complete line of automatic temperature controls; and, whereas, the purchaser has use for such devices in conjunction with products of his manufacture, and for the sale of such devices to his dealers;

Now, therefore, in consideration of the premises, of the mutual covenants herein contained and of special prices extended the Purchaser by the Company, the parties hereto agree as follows:

Quantity.

The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract 1000 sets of the Company's automatic temperature controls, each set consisting of one Thermostat, and one Limit Control, and one Primary Control. It is specifically agreed that other control equipment is not to be considered as a part of a set within the terms of this contract. Because the Company's costs are figured to cover a complete set of controls, and the following breakdown prices are purely for invoicing purposes, it is agreed that the Purchaser's yearly purchases will consist of at least 90% as many ~~Room~~ Thermostats and 100% (but at the Company's option not more than 125%) as many Limit Controls as Primary Controls.

Prices on Material Shipped From Factory.

T10 or T11 Acratherm	3.80
T100 Time-O-Stat	5.45
7710 Clock Type Thermostat	19.95

T105 Heat Accelerated Chronotherm	19.50
T45 Thermostat	4.30
R121 Protectorelay (R117-3 until available)	13.30
R122 Protectorelay (R116-4 until available)	11.90
R417 Lockswitch for DC	12.95
L402-1 Low Water Curoff (L620-3 until available)	11.50
L622-1 Low Water Curoff 150# Pressure	13.00
L627-2 Low Water Curoff	10.60

Limit Controls.

L401-3 Combination Control	6.60
P404-2 Pressuretrol (L404 until available)	3.35
L408 Vaporstat	5.00
L409 Surface Aquastat	3.35
L411, Vacuumstat	5.00
L415 Airstat	4.30
L419 Airstat	3.35
B6510 Immersion Aquastat	5.25
L416 Immersion Aquastat	5.25

Deduct 50¢ net from the Limit Control prices for shipment of 10 or more of the same type at one time.

COMMISSION'S EXHIBIT NO. 23-B.

Company's copy.

.202 ~~*The Purchaser agrees that at least ninety-five (95) percent of his control requirements consisting of Thermostats, Primary Controls and Limiting Devices will be purchased from the Company.*~~ Deleted 1/15/37. AHS.

Miscellaneous Control Prices.

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4, 5, Form SA 573-....., which are hereby made a part of this agreement, will be furnished at list prices stated less discount of 25-15-5% unless otherwise shown on the price sheets.

203 COMMISSION'S EXHIBIT NO. 23-C.

Conditions.

The Company agrees to render invoices to the Purchaser in accordance with the prices listed in the schedule above for the actual number of units shipped to the Purchaser by the Company, f.o.b. point of manufacture.

Prices relating to relay or motor operated devices and/or to magnetic valves are for 110 volt, 50 or 60 cycle specifications only, unless otherwise specified. Prices pertaining to Chronotherms and Electric Clock Thermostats are for 110 volt, 60 cycle specifications only. When ordered in lots of less than fifty units, the Company will add net extra charge for other voltages and frequency combination shown below, according to following schedule: Relay operated devices, excepting Type R153 and R83, $2.00 net each. Motor operated devices (excepting Type D and special industrial motors), Magnetic and Diaphragm valves, and Electric Clock Thermostats $1.00 net each. For current specification not shown, charges will be governed by the development work required.

110 volt, 40 cycle	220 volt, 60 cycle
110 volt, 30 cycle	220 volt, 50 cycle
110 volt, 25 cycle	220 volt, 40 cycle
220 volt, 30 cycle	220 volt, D. C.
220 volt, 25 cycle	32 volt, D. C.
110 volt, D. C.	

The extra charges outlined above will not be made for special alternating current voltage and frequency specifications when units are ordered in quantities of 50 or more of one device all of the same voltage and frequency and all to be shipped at one time. The extra charges outlined above will, however, apply to direct current devices in all quantities.

Net extra charges will be made for the following special requirements: Special range pressuretrols 2 to 50 lbs., or 5 to 150 lbs., $1.25 net each; special scales open contact thermostat 100° or less $2.00 net each, over 100°, $5.00 net each; special scales Airstats and Furnacestats $2.00 net each; special scales to 440° F. Immersion Aquastat $3.00 net each; special scales over 440° F. Immersion Aquastats $5.00 net each. Net extra charges on other special requirements on request.

The Company is not obligated under the terms of this contract to supply instruments for current specifications or special constructions which in its opinion are impractical. Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser.

Prices from Branch Stocks.

Prices shown do not include thermostat cable or fittings.

Emergency shipments of equipment to the Purchaser from a Branch Office of the Company shall be billed with discounts in effect at such Branch Office.

Terms.

Shipments shall be made f.o.b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee.

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory return to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or

material, it will be replaced or repaired, free of charge, f.o.b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent.

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will pay such
204 award, but shall not be responsible for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

COMMISSION'S EXHIBIT NO. 23-D.

In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchasers' place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business.

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment of Contract and Sales Agreement.

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except in conjunction with his products.

Prices contained in this agreement cover shipments made to the Purchaser, and the Company will add a handling charge of 10% to cover shipments that the Purchaser requests be made to his dealers. All shipments are F. O. B. factory.

Deliveries.

It is agreed that this contract shall not be subject to cancellation except by the consent of the Company, and that serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designated in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Service Responsibility.

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings conducted by the Manufacturer's field men.

Period of Contract.

This contract shall become effective at the accepted date, and expire on 12-31-37 unless sooner cancelled as hereinabove provided. The validity, enforceability and interpretation of all of the provisions of this contract shall be determined and governed by the laws of the State of Ohio.

Accepted at Cleveland, Ohio.

205 COMMISSION'S EXHIBIT NO. 24A.

(Letterhead of The Timken Silent Automatic Company, Detroit, Michigan.)

December 24, 1936

Mr. Harold Sweatt, President
Minneapolis-Honeywell Company
Minneapolis, Minn.

Dear Mr. Sweatt:

This letter is being addressed to you personally as it covers a subject that I think perhaps would be better to discuss with you across the table, but in view of the difficulty of our arranging such a conference I am in hopes it will be treated confidentially and that your reply will be addressed to me, personally.

Mr. Pauling paid us a visit last week and I was sorry that I did not get to see him as I was out of town, but I understand that he talked to Mr. Crawford and Mr. Goldie. Mr. Pauling seems to have forgotten an agreement reached with Mr. Roberts early this year, which agreement was the basis for our favoring you with our business during 1936. I believe our purchases from you during this year will

exceed $300,000.00. Mr. Pauling told Mr. Roberts, who later conveyed the information to me in his own handwriting on a note which I still possess, that he would give us a $1.00 reduction on each set of controls purchases for our GC burners up to a total of 7500 burners.

This concession was apparently made to persuade us to drop another make of control which we were then using on this burner and to standardize on your controls, which we did with the exception of some few that were bought for experimental purposes and some small quantities that were purchased because of the customers specifying another make of control than yours. Now, Mr. Sweatt, we feel that we are entitled to this reduction which we have earned, and we know that you will see to it that we get it.

The other subject we wish to discuss is the prices for 1937. Mr. Pauling presented us with figures which he claimed to be the lowest available and we have given these some study. He states that these are now based on the cost of individual instruments rather than an arbitrary break-down of a set price, and if such is the case I am rather surprised to find some of them increased over your 1936 schedule. It would appear from information obtained from other sources that you have reduced prices on instruments that are competitive and on others you have increased the price. This would appear to show that prices are being revised in respect to competition instead of cost.

We are not making any rash statements as to how 206 many sets of controls we will buy during 1937. We feel, however, that we will maintain our position and that our business will be very attractive to even as large a company as yours. We are in hopes the we can continue to purchase material from you, but we first must be certain that we have obtained the best possible price on this important part of our equipment. We naturally are giving considerable thought to other makes of controls and therefore hope you will submit your best proposition to us shortly so that we can give it careful consideration before the final decision is reached. I would appreciate it if you would write me personally about both of these matters.

Very truly yours,

Walter F. Rockwell

Vice President

H

207 COMMISSION'S EXHIBIT NO. 25.

December 29, 1936

Timken Silent Automatic Company,
100—400 Clark Avenue,
Detroit, Michigan.

Att: Walter F. Rockwell, Vice-President

Dear Mr. Rockwell:

Inasmuch as Mr. H. W. Sweatt is away on his vacation and will not return for several weeks, I am taking the liberty of answering your letter of Dec. 24.

I am indeed sorry that you were not in Detroit last week when Mr. Pauling was there as I am very sure that this whole matter could have been cleared up in very short space of time, as I well remember Mr. Pauling's discussion of this matter at the time it was up.

Mr. Roberts went over with Mr. Pauling a plan which he had in mind for increasing the sale of the gun type burner by offering it as a private brand burner to various companies such as Reynolds, Mueller, etc. At the time of this conversation the Reynolds Co. had specified a competitive type of control and Mr. Roberts was in hopes that he would be able to get them to standardize on our controls along with the balance of the production. The exact proposition which Mr. Pauling made to Mr. Roberts was that if he was successful in putting this over and you were able to standardize on our controls for this burner he would grant him a reduction in price on our R116 constant ignition relay of $1.00 per burner up to a maximum of 7500 burners, and this relay was to be furnished with a special nameplate for the Triangle burner—not the standard Timken nameplate.

From the above you will note that this was purely a tentative proposition based on a special program, utilizing a special relay, and, as you know, this program Mr. Roberts found impossible to carry out, and none of these relays were furnished to you by us.

In reference to prices for 1937. To completely clarify this matter I feel that we must perhaps go back and review our 1936 setup. In 1936 we had two types of contracts to offer; one to a concern not desiring to incorporate our

boiler controls in their contract and the other for concerns such as yourselves who contracted to purchase boiler controls along with their Thermostats and primary controls. In the latter case a deduction of 65¢ was made on the primary controls while as a matter of fact it was actually a reduction on the price of the boiler controls, altho the deduction was made from the price of the primary control rather than the boiler control. In setting up our schedule for 1937 we unscrambled this rather complicated setup as it worked to the disadvantage of certain of our customers who thru their methods of distribution were unable to sell boiler controls along with their burners. Hence, in our
1937 set up, an equalization was made on boiler con-
208 trols and primary controls to reflect this change. In other words, Mr. Rockwell, if you had not purchased our boiler controls last year you would have paid us $9.65 for the primary control. This year the 65¢ which I have referred to above has been deducted from your boiler control prices and the relay reduced from $9.65 to $9.45. You will further note from the contract which was left with you last week that there are quite substantial reductions on many of the accessory items not covered in a standard set of controls, of which you purchase a substantial quantity.

We are extremely gratified in the face of the increased costs during the past year that we are able to offer our customers an actual reduction in their costs at the present time.

We wish to again express our appreciation of the very nice volume of business that we have enjoyed from your company during the past year and our sincere hope that these mutually pleasant relationships will continue in 1937. Mr. Pauling is planning on being in Detroit next week and I would appreciate it very much if you advise us what day or days you will be in Detroit, as he is extremely anxious not to miss you on his next visit.

Very truly yours,
Minneapolis-Honeywell Regulator Co.,
C. B. Sweatt,
Vice President.

209 COMMISSION'S EXHIBIT NO. 26.

Minneapolis-Honeywell Regulator Company.

Branch Inter-Office Memorandum.

Date April 12, 1938.

To A. H. Lockrae—Minneapolis

From J. C. Todd—San Francisco

Subject Williams Oil-O-Matic Heating Corp.

I have followed up your bulletin on subject dated 3/29/38, and in talking with George Sweeney of E. A. Cornely Company, I find that his latest price information from Williams is to the effect that our set of controls cost dealer $7.30 more than competitive controls. It is, of course, possible that Cornely Company have overlooked recent price information from Williams, however, we have contacted two of William's dealers in this territory and they have assured us they will order Minneapolis-Honeywell controls.

Jim
J. C. Todd.

JCT:FK

4-18-38

Referring to the above. Cornely is certainly looking at last year's price list. The new Williams' price list which he must have plainly shows the burners are available with the Acratherm and R117 or the Acratherm and R116 at $2.50 extra.

A. H. Lockrae.

210 COMMISSION'S EXHIBIT NO. 27

D. E. Sall—Peoria
Chas. L. Saunders—Chgo
A. H. Lockrae—Mpls.

Wholesale Salesmen
Chas. C. Cochran—Chicago
Special Drive On Oil-O-Matic Outlets.

All of you have Art Lockrae's bulletin of March 29th on the Williams-Oil-O-Matic price set up and now that we definitely have something to work on, let's put every possible bit of push back of this and see how good a job we can do in selling our Oil-O-Matic dealers on M-H equipment over the merchandise that is normally shipped with their burners.

You will note that there is a $2.50 net extra charge to the dealers on either the constant or intermittent relay as compared with some competitive equipment. The chronotherm, as you will note, is priced at $21.00 extra over the acratherm, and is approximately 25-15% from list. The same thing holds true on our boiler controls. For example, on a pressure control we could figure $5.10 against a net of $4.50 on the Mercoid control which we know is not comparable to ours due to the bourdon type construction. The Penn pressure control will be shown at 30-15% off of list which is $8.00 making a net of $4.76 to the dealer, but there again we have a very definite advantage in that Penn offers the open contact switch which does not compare with our mercury switch.

Therefore, you can see that on a complete set of M-H controls the dealer's cost will run in the neighborhood of $3.00 extra. On those accounts that hesitated last year due to the $7.50 extra charge they certainly should be interested now, and the job is up to us to get them to follow through and be in a position to follow the same talking points most of their competitors now have. It will also enable their salesmen to devote their time to selling the burner and not unselling the customer on M-H in order to sell the burner with Penn or Mercoid equipment.

A few suggestions to improve our relationship with these dealers is to show them our available literature and build up our service schools, arrange educational sales meetings, and anything else that will tie us up a little closer to the Williams' dealers in every way.

Malleable Iron & Fitting Co.

Dear Chap:

I agree with you that it would be a good gesture on our part to set Malleable Iron into #3 bracket if there is any change whatever of their anyway near approaching the quantity. How many burners do you think they will sell this year? Give me your thoughts as to their future prospects and your reason for thinking they will earn a better price by increased volume, or is it your thought just to extend them the 3rd bracket for the reason stated in your memo.

We made this call with Mr. Fiegenbaum of the Hartford Office.

Mr. Gillis complained that business was very poor and that he did not see any prospects for better business this fall, stating that the hurricane and flood had affected business badly.

I do know Mr. Gillis has been rather very bitter in his denunciation of LaPlous and his price, and has censured us severely for selling this class of business. He is of the opinion that if we could get about 15 good sized manufacturers (oil burner) together, that we could put enough pressure on us and other accessory manufacturers, so that we and others would discontinue selling LaPlous this class of business. Of course we told Mr. Gillis that there were certain laws and legal complications, but he said that these barriers were certainly not insurmountable as far as we were concerned.

213 COMMISSION'S EXHIBIT NO. 30.

November 24, 1939

Boston

Miss Copeland
H. L. Chapler—NY

J. Feigenbaum—Hartford
C. E. Swanson—Minneapolis
Malleable Iron Fittings Co.

I wrote you on Nov. 6th that we would check the above company's purchases again to see if they had purchased a sufficient number of controls to be entitled to Br. II prices. In checking on this again, we find that while there was an invoice on Nov. 8th, this only involved one limit control so it hasn't changed the picture appreciably.

Do you expect that this company will require 250 more primary controls and 128 more thermostats before the end of the year so that they will be entitled to Br. III prices? In view of the lateness of the season, we are not going ahead and checking any further on this retroactive credit unless we hear from you.

h

214 COMMISSION'S EXHIBIT NO. 31.

Miss Copeland: Will you check this about Nov. 20th?

H. E. Chapler NYC
Art Lockrae with file
Miss Copeland

John Feigenbaum—Hartford
C. E. Swanson—Minneapolis
Malleable Iron Fittings Co.

Regarding your contact report of the 27th on the above company, our records which are as of Oct. 17th, show the following purchases:

851	Plain Thermostats
21	Clock "
54	L165
302	L170
809	Misc. Limit Controls
31	Combustion Controls
112	Misc. Controls
5	R100
24	R103
725	R117

This breaks itself down to 872 thermostats, 1164 limit controls, and 754 primary controls so you see they are quite a bit short of the required pyrostat purchases, even though their total purchases are 2934. They still must go 250 more primary controls and 128 more thermostats to be entitled to the retroactive credit to Br. III.

By copy of this memo, I am asking Miss Copeland to check this account again in another two weeks, thinking that at that time, they might have purchased a sufficient quantity of controls to be entitled to the next higher bracket.

Enclosed is a friendly message from Herbert Gillis of the Malleable Iron Fittings Company, manufacturers of the Branford Burner, for your information. This bulletin was sent to all their dealers the first part of last week.

We are sending copies of same to J. E. Pauling, J. Feigenbaum and H. E. Chapler.

216 COMMISSION'S EXHIBIT NO. 32-B.

Branford Bulletins.

Malleable Iron Fittings Co.

Announcement.

Mercoid Controls Optional.

To Branford Dealers:

We are pleased to announce a change in policy with respect to the controls furnished as standard equipment with Branford oil burners. Heretofore we have furnished Minneapolis Honeywell controls exclusively as standard equipment, but for several months past when an immersion aquastat has been called for we have shipped that made by Mercoid. This was done because of the superior performance we have obtained from the Mercoid aquastat.

We shall hereafter equip the Branford burner with either Mercoid or Minneapolis-Honeywell controls as standard equipment, according to the preference of the dealer, so in the future when you order please specify the make of controls you prefer. There will be an allowance of

$2.00 from the prices on all models when Mercoid controls are specified, which is the difference in our cost, and we are passing that difference along to you. The enclosed folder describes the Mercoid controls most commonly required, all of which we shall carry in stock for immediate shipment.

Reasons for New Policy.

First: After numerous tests over a long period of time we are convinced that Mercoid controls are superior in design and construction to any other controls on the market, and that the principle of the mercury tube switch has distinct advantages over the open contact type. While offered at a reduced price we consider the Mercoid controls actually worth more, and we would prefer them at equal prices. In burner applications in our own factory we are using Mercoid controls almost exclusively, on the basis of better performance.

Second: The less service work you have on controls, and the fewer replacements, the less inconvenience and expense we have, and therefore we prefer to have you specify the controls which are nearest to trouble-free. In our opinion changes made in the past year or two in the controls we have been furnishing, presumably to reduce cost of production, have been detrimental to their performance. We were called upon for more replacements of controls during 1938 than ever before, and wish to correct this condition.

Third: A number of our dealers prefer Mercoid controls and we wish to allow them to exercise their preference.

217 Fourth: Every rag-tag cheap assembled burner on the market is trying to ride on the coat tails of Minneapolis Honeywell and their national advertising, claiming their burners are just as good as any other because they have the same controls. These burners have shown such miserable performances in the field that we consider the association of the M-H name with our product to be a liability instead of an asset as it used to be considered before it was allowed to be kicked around in such bad company.

Fifth: We can conscientiously recommend Mercoid controls and will assume full responsibility for their performance.

From our long experience we are convinced that the consumer neither knows nor cares anything about the controls

furnished with his burner. That they operate satisfactorily is his only concern. The belief that their national advertising has created a popular demand for M-H controls is a straw man set up by the dealer himself, and he will find that if he recommends any other on a basis of superior performance the consumer will almost invariably accept his recommendation.

Then Mercoid controls are specified we shall furnish as standard equipment the Type H Sensatherm (thermostat), the KMI relay, and the DA31 limit control for steam or the Fig. 35 for hot water or M-51 for warm air. We shall also carry in stock the immersion aquastat for summer hot water control, and will always furnish this make unless otherwise specified for reasons given you in a previous bulletin.

We strongly urge you to specify Mercoid controls with your next few burners so you can see for yourself their performance and be guided accordingly on future orders.

Yours very truly,
Oil Burner Division,
Malleable Iron Fittings Company,
Herbert Gillis,
Manager Sales Promotion.

W. G. Jennings—Boston
H. E. Chapler, New York

Dear John:

Your letter of the 13th received with reference to Malleable Iron Fittings, and I have had a digest made of their purchases during 1939. The figures clearly indicate Mr. Gillis' contention and yours to be right—for we actually sold them 926 thermostats and 791 relays. We don't question Malleable Iron's carrying over a substantial stock or that they sold over 1000 sets of our controls last year.

The new third bracket contract is being sent you herewith.

Minneapolis-Honeywell Regulator Company
District Office

Inter-Office Memorandum

Minneapolis Office—Original Equipment Dept.
From Hartford Office—J. J. Feigenbaum
Subject: Malleable Iron Fittings Co.
Branford, Conn.

Date January 13, 1940

C. C. to C. S. Hoyt
H. E. Chapler

A bracket # 2 contract for the subject company was mailed to this office to be presented for signature.

We called upon Mr. Gillis and found him very much disturbed that contract was not made out for more attractive prices. His argument is that they had quite an

inventory of our equipment at the end of 1938. As near as we can ascertain, they purchased about 800 sets of controls from us in 1939. Gillis claims that this amount plus what they had on hand means that they used close to 1000 sets in 1939.

Our relations with Malleable Iron Fittings were somewhat strained during the early part of 1939 and we are still on thin ice. "Mercoid" managed to get in there during the past year with their Vis-a-flame on core-oven applications and were also successful in selling a few sets of controls for other purposes. It is my understanding that Mercoid's setup with M.I.F. is based on the number of burners they manufacture a year and not on the number of sets of controls they purchase from them.

We have discussed this matter with Mr. H. E. Chapler and with Mr. Jennings and we all feel that in view of the above circumstances it will be advisable to make out a new contract placing them on a Bracket # 3 basis. Please forward same to this office.

John.

Air Mail

Dear Chap:

I thought John was arranging to stop at Baltimore on his way south, but I just found out that he didn't do this. I don't think we should let the Anchor Post situation dangle until the Oil Burner Convention, and feel that it would be very good business for you to make an appointment with Bill Brannan and get onto this job quickly.

I think you have talked to John, but at any rate, he told me that he met Brannan at Detroit not long ago and that he seemed to be very receptive. Of course, price has been the stumbling block, and John and I agreed that we would be willing to go to a Bracket V basis if Anchor Post would assure us of the business.

A visit from you would at least start the ball rolling.

If Anchor is going to adopt a policy of splitting their business, I don't think we are going to be able to get very far with them, but I think a visit from you would bring a lot of things to light, and I think you will agree that we ought not to postpone this thing any longer.

Best regards.

Anchor Post Fence

Dear Chap:

Thank you for your memo of March 4th, and with the information contained therein I am able to reconcile some prices that I believe are about right and will cover the Perfex quotations to Anchor.

I think Perfex have dropped their prices to Anchor to their low price basis, and they were not carrying them on that basis last year. As near as I can figure, Perfex is quoting them $12.70 on the constant ignition set of controls as against our $13.00 in the fifth bracket. On the intermittent ignition set I think the Perfex price to Anchor would be $13.20 as against our price of $13.75.

It does seem to me that if these differences are correct we still ought to be able to make a deal with Anchor whereby they would make our controls optional at no price difference—so I am sending John a copy of this in the event he stops at Baltimore on his way north, and he will have the whole story.

Best regards.

AHL:NLA

John Pauling:

I assume you got Chap's memo on this, for my copy showed he had sent one to you, and it did not come into the office here.

I learned that Kingsland and Hansen were in Baltimore recently, and what I was fearful of actually did happen, for it's apparent they gave Anchor their lowest price.

I still think there is a chance for us to get a goodly share of this business if we want to go to fifth bracket.

Best regards, and I sure hope you are having a good time.

A.H.L.

Minneapolis-Honeywell Regulator Company

This Communication Receives Same Handling As A Telegram

Air-Mail-O-Gram

Date March 4, 1941

HEC:HL

To Home Office—A. H. Lockrae

From New York Office—H. E. Chapler

Subject: Anchor Post Fence

cc: J. W. Pauling
J. Dorsey—Phila.

Dear Lock:

When we arrived home last night we got your Air Mail letter of March 1st concerning the above.

Ardis and I got back to Baltimore on Sunday and we spent the evening with Joe Hauf and his wife. On Monday we met John Dorsey in Baltimore and went out to Anchor Post and showed Bill Brannon and Donahue our Advertising Campaign. After going through this we talked to Brannon about controls for 1941 and he told us that they intended to go along about the same as they did last year. He pointed out to us that last year the difference between our Price and Perfex's was about 40¢ while this

year the difference had increased to about $1.00. This is applying Perfex's price against our Bracket 4-A. We asked Brannon if Perfex's price had changed from last year and he said they had been quoted this new price recently. We assume that this was done when Kingsland and Hansen were in Baltimore recently. Joe Hauf said they had been in to May a short time ago and we believe that these two gents have been all through the eastern territory with their new prices.

Brannon said their lowest price on their burner was $53.50 and that they sold a lot of them at $55.00 and on these jobs he said there was not enough margin to take care of $1.00 difference in controls. On the other hand, he said where they were getting $60.00 or $65.00 for a burner, the $1.00 difference was not too serious and that he had no doubt that they would supply quite a few Minneapolis-Honeywell controls on these jobs. He reported that the Fluid Heat dealers had had less trouble with Perfex than Minneapolis-Honeywell controls. He also said that he felt he would like to have two sources of supply for controls, as well as motors, transformers, pumps, etc. In view of all the above I do not believe that our fifth Bracket prices will get this business 100% because we will still have a 50¢ higher price than Perfex and I do not believe that on these lower priced burners they will spend the 50¢ extra unless their dealers put the heat on for Minneapolis-Honeywell controls.

Another thing Brannon brought up was that we were in competition with them on our own controls and brought up the subject of our having quoted a manufacturers price to the Morton Oil Co. of Malden, Mass. on an R157 Protectorelay. He got out a copy of Ted Smoot's letter to you and your reply regarding this transaction, and also had Hobb's letter explaining that we did not quote them any price. Brannon took exception to the statement that we had sold Morton Oil 47 units at 25% off, stating that Anchor Post gave Morton 25-15% and it would just not be logical for Morton to be paying us a higher price. Brannon said we might be selling Morton under some other firm name at a price better than 25%. We assured him that this was not the case and we are writing Charlie Hoyt, asking that he send us invoices made out to
224 Morton Oil for 1940 and will show them to Brannon at the first opportunity.

Brannon's reaction to our Advertising Campaign was that it should do us a lot of good. However, Donahue was very complimentary about it and felt that it would do the automatic heating industry a lot of good.

We are sending a copy of this memorandum to J. W. Pauling so he can have this information if he stops to see Brannon on his way north. Brannon is going to be at the Oil Burner Show on Thursday and we told him we surely wanted to have a little session with him there. Of course you know Anchor Post Fence is not exhibiting at this Show.

Ted Smoot, Frank Harbin and Bishop were all out of town and of course we could not see them.

We did not press Brannon for his signature of the Bracket 4-A contract which was there and believe this thing will have to wait until we see Brannon at the Oil Burner Show and get lined up on some basis.

Inter-Office Memorandum

To Home Office * A. H. Lockrae

From New York Office * H. E. Chapler

Subject Anchor Post Fence

Date March 12, 1941

C. C. to: HEC:FK Dic: 3/10

Replying to your memorandum of March 7th concerning competitive, and our prices to the above concern, we believe that you have got about the right dope because in the 4A price, we were about $1.00 out of line according to Brannan and our fifth bracket price would be about 50c on intermittent controls.

Regarding your air mail letter of the 4th, we talked to John Dorsey on the phone this morning and suggest that he put in a call for Ted Smoot to find out about the 100 burners for the Government order on which we believe,

they are going to use Perfex. John told us that Ted Smoot is not expected back until the latter part of this week and then we told him we thought it might be a good idea to get hold of Brannon on the 'phone and see what could be done or what he could find out about this particular order and report directly back to you. In other words, we thought we had better get after this thing right away even though Ted Smoot was not back because we felt that the order might go out between now and that time. You should hear from John very shortly on this proposition.

Brannon told us that he would be in Philadelphia on Thursday of the Show and we certainly should make it a point to get together with him if we are able to give them fifth Bracket prices. They are having a Meeting of their dealers and representatives on Monday, Tuesday and Wednesday of the Show week, and most of them will attend the Show in Philadelphia after that.

233 COMMISSION'S EXHIBIT NO. 54.

Mr. Gene Galdabini — Frederick D. Hansen/es

Price on 475 Series Controls — April 18, 1939

Effective within thirty days from date, the prices on the 475 Series Controls are increased as shown below. You will note that an increase is effective in each bracket, except Bracket 25.

	575D-D4		475D2-D6	
	Net Less Than 12	Net 12 or More	Net Less Than 12	Net 12 or More
Bracket 25	5.80	5.55	6.20	5.95
Bracket 26	5.65	5.40	6.05	5.80
Bracket 27	5.55	5.30	5.95	5.70
Bracket 28	5.50	5.25	5.90	5.65
	Net Less Than 24	Net 24 or More	Net Less Than 24	Net 12 or More
Bracket 28A	5.50	5.25	5.90	5.65
Bracket 29	5.50	5.25	5.90	5.65

The reason for this price change is because we have entered into a license agreement with the Minneapolis-Honeywell Regulator Co., who own some patents on com-

bination fan and warm air controls. Under this agreement they have the right to set up a minimum price and we have to adhere to it.

Will you please advise all of your customers with whom you have contracts, in writing, of this price change, and that the provision in the Purchase Agreement, headed "Price Changes" will apply to this change.

In the event that for some reason you want us to write letters direct to your customers from here, please advise and we will do so.

Please correct your price book in accordance with the prices listed above.

---

252 COMMISSION'S EXHIBIT NO. 66-A.

Minneapolis-Honeywell Regulator Company

Manufacturers' Control Contract

Purchaser: Submitted December 2, 1935

This Agreement, entered into between Minneapolis-Honeywell Regulator Company, a Delaware corporation, hereinafter called the Company, and Timken Silent Automatic Co., of Detroit, Michigan, hereinafter called the Purchaser, Witnesseth:

That whereas the Company manufactures and sells a complete line of automatic temperature controls; and, whereas, the purchaser has use for such devices in conjunction with products of his manufacture, and for the sale of such devices to his dealers;

Now, therefore, in consideration of the premises, of the mutual covenants herein contained and of special prices extended the Purchaser by the Company, the parties hereto agree as follows:

Quantity.

The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract 10,000 or more sets of the Company's automatic temperature controls, each set con-

sisting of one Thermostat, and one Limit Control, and one Primary Control. It is specifically agreed that other control equipment is not to be considered as a part of a set within the terms of this contract. Because the Company's costs are figured to cover a complete set of controls, and the following breakdown prices are purely for invoicing purposes, it is agreed that the Purchaser's yearly purchases will consist of at least 90% as many Room Thermostats and 90% (but at the prices named not more than 125%) as many Limit Controls as Primary Controls. $.50 net will be added to all Limit Control prices on orders calling for shipment of less than 10 of the same type at one time.

Prices on Material Shipped From Factory.

T10 or T11 Aeratherm	3.35

It is understood that until the R121 Protectorelay and R421 Lockswitch are available for shipment that the R117 Protectorelay will be invoiced at $9.00 net and the R417 Lockswitch will be invoiced at $8.45 net.

In view of the special prices listed in this agreement, it understood that the Purchaser will standardize on and use Company's products exclusively, except for field test or when other makes are specified by dealer.

Miscellaneous Control Prices

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4, 5, Form SA 573-....., which are hereby made a part of this agreement, will be furnished at list prices stated less discount of 25-15-10% unless otherwise shown on the price sheets.

254 Conditions.

The Company agrees to render invoices to the Purchaser in accordance with the prices listed in the schedule above for the actual number of units shipped to the Purchaser by the Company, f.o.b. Minneapolis, Minnesota; Wabash, Indiana.

Prices relating to relay or motor operated devices and/or to magnetic valves are for 110 volt, 50 or 60 cycle specifications only, unless otherwise specified. Prices pertaining to Chronotherms and Electric Clock Thermostats are for 110 volt, 60 cycle specifications only. When ordered in lots of less than fifty units, the Company will add net extra charge for other voltages and frequency combination shown below, according to following schedule: Relay operated devices, excepting Type R-153, $2.00 net each. Motor operated devices (excepting Type D and special

industrial motors), Magnetic and Diaphragm valves, and Electric Clock Thermostats $1.00 net each. For current specification not shown, charges will be governed by the development work required.

110 volt, 40 cycle	220 volt, 30 cycle
110 volt, 30 cycle	220 volt, 25 cycle
110 volt, 25 cycle	110 volt, D. C.
220 volt, 60 cycle	220 volt, D. C.
220 volt, 50 cycle	32 volt, D. C.
220 volt, 40 cycle	

The extra charges outlined above will not be made for special alternating current voltage and frequency specifications when units are ordered in quantities of 50 or more of one device all of the same voltage and frequency and all to be shipped at one time. The extra charges outlined above will, however, apply to direct current devices in all quantities.

Net extra charges will be made for the following special requirements: Special range pressuretrols 2 to 50 lbs., or 5 to 150 lbs., $1.25 net each; special scales open contact thermostat 100° or less $2.00 net each, over 100°, $5.00 net each; special scales Airstats and Furnacestats $2.00 net each; special scales to 440° F. Immersion Aquastat $3.00 net each; special scales over 440° F. Immersion Aquastats $5.00 net each. Net extra charges on other special requirements quoted on request.

The Company is not obligated under the terms of this contract to supply instruments for current specifications or special constructions which in its opinion are impractical.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser.

Prices shown do not include thermostat cable or fittings.

Prices from Branch Stocks.

Emergency shipments of equipment to the Purchaser from a Branch Office of the Company shall be billed with discounts in effect at such Branch Office.

Terms.

Shipments shall be made f.o.b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee.

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f.o.b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent.

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will
255 pay such award, but shall not be responsible for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchasers' place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business.

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the

sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment of Contract and Sales Agreement.

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company. In consideration of the special prices listed in this contract, the Purchaser agrees to use the controls listed herein in conjunction with his products only and that such controls will not be sold separately to other manufacturers or vendors.

Deliveries.

It is agreed that this contract shall not be subject to cancellation except by the consent of the Company, and that serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designated in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Service Responsibility.

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings conducted by the Manufacturer's field men.

Period of Contract.

This contract shall become effective at the accepted date, and expire on Dec. 31, 1936 unless sooner cancelled as hereinabove provided. The validity, enforceability and interpretation of all of the provisions of this contract shall be determined and governed by the laws of the State of Michigan.

Minneapolis Honeywell Regulator Company
Minneapolis, Minn.

Attention John Pauling.

Dear John:

In discussing prices on burner controls yesterday with Mr. Roberts, the question arose as to what you could or would do if we were to give you a firm order for 5000 sets to be produced at your convenience. By this I mean that if you have a few slow weeks, it might be very nice to have such an order to work on, and the material shipped as produced. The entire question in placing such an order of course is the price, and we shall be interested in your reaction.

Of course, we would not want the material rushed thru the plant so as to cause extremely large expenditures on our part—we are merely referring to regular steady production.

Yours very truly,

H. C. Shafer,
Purchasing Agent.

TJS.

257 COMMISSION'S EXHIBIT NO. 68.

June 18, 1935.

Timken Silent Automatic Co.,
Detroit, Michigan.

Att.: H. C. Shafer, P. A.

Dear Mr. Shafer:

Replying to your letter of June 11th regarding prices on a firm order for 5000 sets of controls.

The present prices you are enjoying on our equipment are the very lowest that we are in a position to give you at this time. This price setup, as you understand, is based on your purchasing from us this year 40,000 units. You will recall at the end of last year we also permitted you to take advantage of this price on shipments made after we announced the 1935 price setup. Frankly, in view of your recent decision to divide your control requirements with another manufacturer the writer wonders, even in view of your increased sales, if your requirements from us will reach the total of 40,000 units on which your present price is based.

As explained to you on my recent visit in your office, we are very anxious to build controls and have them ready for you before the fall rush. Judging from indications and the hesitancy on the part of most manufacturers to stock in advance at this time, it looks to us as tho this is going to be one of those years when we will be working night and day during the fall months. As I stated to you, we are particularly anxious to have your controls ready and if possible in your hands before this rush as we know we can build you a much better product when we are not working our factory under pressure.

You say that the entire question in placing a quantity order is price. I cannot help but believe that you agree with us that another good consideration is the advisability of having controls produced under normal conditions, so as to avoid delays and possible imperfections that creep in when controls are manufactured with extra help working overtime.

Considering the last paragraph of your letter, it certainly is not our desire to rush thru large shipments of con-

trols that would cause you unduly large expenditures before the controls are actually needed. On the other
258 hand, however, if we could ship you an order of 5000 sets this would make a carload and the saving in freight to you, as you can appreciate, would be quite a factor. Therefore, permit me to suggest this proposition which I think is a profitable one for you and us.

Give us an order for 5000 sets of controls to be produced during the early part of July. We will ship these to you in one car shipment and accept our trade acceptance for the shipment subject to 2% discount Oct. 10, 1935.

If such an arrangement meets with your approval, we would like to have you wire on or before the 21st of this month as the writer is leaving the office on that date for about ten days and would like to personally see that this order is properly executed.

Yours very truly,
Minneapolis-Honeywell Regulator Co.,
J. W. Pauling,
Vice President.

JWP:DR

In checking with the Traffic Department I find that on a carload of 5000 sets of controls you would effect a saving in freight over less than carload of approximately $175.00. You also would save the labor of uncrating as we do not crate carload shipments.

I have just checked with the Production Department also and find that we are so far back-ordered that on a normal production basis it would be the latter part of July before we could make shipment of 5000 R117 Protectorelays.

259 COMMISSION'S EXHIBIT NO. 69.

Minneapolis, Minn.
Sept. 27, 1935.

Mr. M. J. Powers,
c/o Timken Silent Automatic Co.,
100—400 Clark,
Detroit, Mich.

Dear Milt:

I want to thank you very much for the information you gave me over the phone the other day regarding the Pressuretrol picture. This matter has been discussed with our various executives and we are taking steps to develop a cheaper Pressuretrol. This confidential and for your information only.

I of course would be very much interested to know who the two companies are you mentioned coming into the market with a $2.50 unit. As I told you over the phone, the cost of our present Pressuretrol does not permit us selling it much below our present $3.50 price.

I would like to have you give me the following information. Can we sell a Pressuretrol with a fixed differential and if so what should the differential be? We, of course, feel that in any event it would be necessary, even with a fixed differential, to have an adjustable scale for the setting, both up and down.

I would certainly appreciate your writing me, outlining the minimum refinements in a Pressuretrol that could be sold at a low price.

Any information you can give me I shall consider a personal favor.

Sincerely,

260 COMMISSION'S EXHIBIT NO. 70.

(Letterhead of The Timken Silent Automatic Company, Detroit, Michigan.)

September 30, 1935.

Mr. John Pauling
Minneapolis-Honeywell Regulator Company
Minneapolis, Minnesota

Dear John:

This will acknowledge your letter of September 27 regarding the redesign of your Pressuretrol to enable you to supply it to us at a much reduced price. Lock was in to see me on Wednesday and we discussed this same matter at considerable length. From our point of view the Pressuretrol is merely a safety device as applied on the great majority of domestic installations and consequently does not need the wide range of adjustments now provided.

As I have discussed with you previously, I feel that a steam pressure control arranged to cut off at pressures up to 10 pounds and with the fixed differential of approximately 2 pounds adjustable over the 10 pound range is all that is ordinarily required. In fact if there would be any material advantage in reduced cost, the pressure range might be reduced from 10 pounds to 5 pounds.

I regret that I am unable to tell you the names of the companies who are proposing to supply us pressure controls at reduced prices. I might mention that, counting our own unit, there are now four reputable sources who expect to be able to supply us a suitable pressure control, the price in any case being not to exceed $2.50 and ranging down to as low as $2.00. I am giving you this information because I know it will be of value to you and at the same time I am certain in my own mind that the price on Pressuretrols and other instruments, even including furnace switches, will be well under the $2.50 price before another season passes.

Kindest regards,

Very truly yours,

Milton A. Powers,
Vice President & Chief Engineer.

DR.

262 COMMISSION'S EXHIBIT NO. 72.

(Letterhead of The Timken Silent Automatic Company, Detroit, Michigan.)

November 26, 1935.

Mr. J. W. Pauling
Minneapolis-Honeywell Regulator Company
Minneapolis, Minnesota

Dear John:

Am sorry I missed you the last time you were here but had expected to see you before this as I met Lockrae for a few minutes at the airport and he said he thought you would be back last week.

Incidentally, we have completed the campaign for chronotherm clock sales in the various branches, and the total amount of prizes given out was $290.58. The total sales of chronotherm clocks amounted to 101. This was a little disappointing, but I believe it was largely due to the fact that we had a slump in sales in October, on account of the warm weather continuing. Sales seem to have picked up since we have had this cold spell, but I believe in turn that

you will find there will be an increase in chronotherm orders as the salesmen now find it very good business for their pocket books, to go after that type of sale. A little stimulation like that once in a while reminds them that they actually do have chronotherms in their list of appliances to sell. At least you have definitely made a sale of 101 chronotherms, and I trust you will have a check for this amount sent to Mr. Soyster, who has been handling the matter, in order that he may clean up same.

Mr. Powers gave me the price set-up which you have submitted as a tentative proposition and I wish you would check this over and see if you haven't made an error—possibly a misplaced decimal point—as I can tell you now that on those prices you are kissing yourself out of a lot of nice business, for we are getting a good volume on boiler business, which is sold largely on price. We have taken a substantial reduction ourselves, and other vendors of different parts have come along with us. Naturally, we expect the same from you.

Kindly advise me as soon as you know when you will be in Detroit again, in order that I may make arrangements to be here. We expect to have a sales meeting in the East in about ten days or two weeks, for our various sales managers, and would like to have definite price schedules before this meeting.

Best personal regards.

Very truly yours,
M. J. Roberts,
Vice President & General Mgr.

Mr. Myron Ellis - Assistant to Mr. Crawford

John Pauling and I contacted this organization with the idea of getting their 1939 contract lined up. They wish to have their contract changed to a unit contract rather than sets and this was agreed upon. Timkin is planning to use Perfex limit controls and have already started sending these out to their dealers without asking the dealers' consent and I have checked with Jack Sloan, the Timken dealer in Wilmette, and the last five burners have had three Perfex limit controls and two Minneapolis-Honeywell limit controls. The Minneapolis-Honeywell L404 pressuretrol was $7.50 net to Jack Sloan and the Perfex was $6.25 net to him, making a difference of $1.25 advantage for Perfex limit controls to the dealer.

When we were in Detroit Mr. Crawford stated that they were going to use our list prices and give the dealers a 33⅓ discount off our list which will bring our pressure controls down to $6.00. We did not get any indication of what they were going to charge for the Perfex limit controls, but the dealer Jack Sloan stated that he would rather have all Minneapolis-Honeywell equipment even though the price of $1.25 existed.

It is very evident that the Timken crowd expected to get a $1.00 credit on seven or eight thousand gun-type burners when they all ganged up at lunch time, but John Pauling was able to satisfactorily kill this idea in Walter Rockwell's mind, during the return ride from lunch in the car

and it was not mentioned in the discussion on the contract.

Timken is very definite in wanting to have their name on the controls this year and they wish to change the looks of our T31 thermostat to a point where it will give them an individual thermostat. Bill Powers is planning on leaving Detroit Thursday on the 4:25 and I am meeting him in Chicago and we will come on up to Minneapolis together.

265 COMMISSION'S EXHIBIT NO. 74-A.

February 3, 1936.

Cleveland Steel Products Corp.,
Cleveland, Ohio.

Att.: Mr. J. L. O'Brien—Toridheet Division.

Dear J. L.:

With reference to our phone conversation this morning, I am enclosing contract covering your requirements and you will find therein the prices we discussed.

In analyzing the estimated quantity of the contract, you will remember our last discussion wherein we pointed out that insofar as quantity was concerned your sale to Fox, Westinghouse, Kelvinator or other manufacturers we might be selling direct would be credited against your contract.

The net price being extended you on the R117 Protectorelay set, including the T11 Acratherm and Limit Control in lots of 10 is 18.35. The price on the R116 set is $17.00. Providing your purchases and our sales to your associated manufacturers total 7500 sets of controls before the expiration of the contract, the purchases of Cleveland Steel Products Corp. would become retroactive and a credit memo equivalent to 3% of your total net purchases would be issued. Then, your subsequent purchases would be invoiced at the new bracket price, which is $17.25 on the R117 set and $16.05 on the constant ignition set.

Just what the balance of the year will bring forth neither you nor we can clearly predict, but I did want to place the above information in your hands for I feel if you could arrange to give us a larger portion of your constant ignition control business there would be little doubt but what you could earn the retroactive credit and the lower price.

If you could standardize on our constant ignition controls it would go a long way toward obtaining the lower prices—but failing that, then if you can see your way to place as nominal a price difference as possible between your burner equipped with our controls and our competitors, it would be extremely beneficial.

I wanted to discuss all the above with you—as a matter of fact phoned you from Syracuse only to learn that you

would be out of town yesterday so I did not stop. Present indications are that I will be in Cleveland week after next and I am looking forward with a lot of pleasure to seeing you. Sorry we didn't make connections in New York.

266 Kindest regards from the writer, we are

Attention: Mr. J. R. Johnson, President.

Dear Mr. Johnson:

I have your letter of February 10th and regret the devil of a time you are having with our New York Office. I cannot, however, censure them as they are simply following our standard company policies which, briefly, are that we are willing to extend to any manufacturer a contract for the

quantity of controls he has purchased in the previous year. If, however, a customer due to developments, circumstances, etc., desires to contract for a larger quantity of controls than his previous performance has indicated, then in such case we require a bona-fide order for one-third of the minimum specified in the contract to be shipped within a period of sixty days from the acceptance of the contract. If the manufacturer does not wish to do this, he always has the benefit of our retro-active policy so that if he reaches his estimated greater quantity, he receives a retro-active discount in the form of a merchandise credit which gives him exactly the same results as if he had signed the larger contract and taken out the sixty-day requirements.

This being our general policy, it must be applied to all alike. As you realize, we cannot discriminate among our many good friends and customers. From the above you will see, Mr. Johnson, that under our system a manufacturer always receives the price which his quantity entitles him to.

In reference to your remark about your tour of Maryland and Delaware and oil burner dealers there enjoying a price of $18.50 per set, I wonder, Mr. Johnson, if you have really obtained the exact facts and if these dealers have not made a statement which you interpret one way, but in reality is not exactly the truth.

The majority of burner manufacturers price their burners complete with a set of controls. Some control manufacturers have not pursued the policy of protecting the manufacturer, but have gone directly to dealers offering the dealer prices on controls only slightly in excess of their manufactured prices, endeavoring to persuade the dealer to purchase his burner without controls and purchase their controls direct from the manufacturer in question. To eliminate such a practice, the majority of manufacturers pursue the policy of allowing the dealer a deduction from the price of the burner complete with controls if the dealer does not take the controls. Some manufacturers make this deduction approximately the price that they pay for controls; others quote a far smaller allowance to discourage the dealer from buying his burners without controls. This sometimes unfortunately creates the impression in the dealer's mind that he is buying his controls at such and such a figure; whereas this is not actually the price he is paying, but purely the allowance he receives if he

269

does not buy. If the dealer desires to purchase, for example, an extra set of controls from the manufacturer, he does not receive this allowance price. Hence you will generally find, if the dealer is actually pinned down, he will acknowledge that he cannot buy controls at the price he has mentioned, but that price is actually is deduction if he does not take controls.

This practice of soliciting dealer business direct by the control manufacturer has also resulted in the following happening. A dealer, for example, receives an allowance from a manufacturer of $18.50 if he does not purchase the control with the burner. A control manufacturer will offer him a set of controls for say $17.00. (the figures used are purely hypothetical). The dealer will sell his burner with the $17.00 set of controls and have on his hands a set of standard controls which he figures cost him $18.50. He will add a couple of dollars to this and go out and offer to sell this set of standard controls for $20.00 or $21.00 and think he is making money, when, as a matter of fact, he is operating on a dead loss because the controls have probably been figured in his complete burner price at $25.00 or $26.00 and he is just out this difference.

I enjoyed very much the very courteous interview which you gave me at the recent show. I realize what an imposition it was to talk to you at that time when you were so very busy, and I trust that you expectations for 1938 will be more than fulfilled and that we will have the pleasure of doing business with you.

Very sincerely yours,

Minneapolis-Honeywell Regulator Co.,

C. B. Sweatt,

Vice-President.

CBS/s

270 COMMISSION'S EXHIBIT NO. 75-B.

(Letterhead of Fairfield Oil Heating Co., Inc.,
Greenwich, Conn.)

February 10, 1938.

Mr. C. B. Sweatt
Minneapolis-Honeywell Reg. Co.
Minneapolis, Minnesota

Dear Mr. Sweatt:

I am having one "devil" of a time with your New York office in regard to your contract which is enclosed. After signing up for seven hundred fifty sets of controls, they informed me that it will be necessary to take two hundred fifty sets within a period of sixty days in order to make the contract valid.

Now, we cannot possibly do this at this time of year as it is our slow period and would involve approximately $5000.00 and we do not desire to tie up this amount at this time in controls.

I have just returned from a tour of Maryland and Delaware and find there that oil burner dealers are enjoying a price of $18.50 per set and it does not seem fair that we, as manufacturers, should have to pay more than they do.

It is utterly impossible to sell controls at the $21.50 bracket and unless we can enjoy the $19.85 price, without taking the two hundred fifty sets, we will have to forget Minneapolis Controls, but if you do allow us this price, we will go one hundred percent with you, and eliminate the other two makes of controls that we have been selling.

We expect to sell between two and three thousand burners this year.

Please let me hear from you.

Yours very truly,
Fairfield Oil Heating Co., Inc.,
J. R. Johnson,
Pres.

JRJ:M

271 COMMISSION'S EXHIBIT NO. 76.

C L Peterson:

John is out of town and won't return until the fore part of February, so I have answered as follows. Of course, there are some other accounts on the West Coast buying at the same price as Hayward, but their quantities entitle them to that price. I hope Nelson earns his retroactive credit.

A. H. Lockrae.

Ray Oil Burner Co.,
401 Bernal,
San Francisco, Cal.

Att: Nelson Hayward, Vice-President

Dear Nelson:

Just received a letter from Mr. Peterson of our San Francisco office advising that our 1938 contract had been accepted—and we wish to extend our sincere thanks for your cooperation in this matter.

As Pete pointed out to you, a retroactive credit of 3% will be extended providing you purchase 3000 sets of controls prior to the expiration of the contract, the amount of the credit to be 3% of your net purchases. Our standard retroactive policy is outlined below:

"In the event that the purchaser accepts and pays for 2999 control sets during the life of this contract, a material credit to be absorbed by future purchases, will be issued amounting to 3% of the net sales to the Purchaser, and future shipments during the life of the contract will be invoiced at the prices then in effect for 3000 control sets."

For example, after the retroactive credit is earned a set of controls consisting of the Thermostat, standard Limit Control and R117 Relay would be invoiced you at $18.35 net instead of $19.35 net as outlined in your contract.

In considering the relay parts which you purchase from us, we construe two of the relay units and the safety switch as constituting a primary control and I wanted you to know this so that you would understand we are giving you credit against your contract quantity for the parts you are purchasing.

The splendid progress your company has made under

your able management in the past two or three years makes me feel personally confident that your purchases this year will earn you the retroactive credit. As you know, we have no alternative except to extend prices commensurate with the quantity of controls the customer purchases, and you, of course, are buying at prices commensurate with the volume of business given us last year.

I am just wondering if you are going to be at the
272 Heating & Ventilating Show in New York next week.

For some reason or other I doubt it, but I hope I am wrong for I certainly would enjoy spending some time with you.

I don't know what John's plans will be later in the season, or mine, but I am in hopes one or the other of us will be able to spend some time with you.

Kindest regards, and please remember me to Mrs. Hayward.

Yours most truly,
Minneapolis-Honeywell Regulator Co.,
A. H. Lockrae,
Asst. Mgr. of Sales, Original Equipment Division.

AHL:DR

273 COMMISSION'S EXHIBIT NO. 77.

January 21, 1937.

Century Engineering Inc.,
Cedar Rapids, Ia.

Att: B. J. Lattner, Pres.

Dear Jack:

We have had our Branch Managers at the office all week and I have just had an opportunity of discussing your requirements as per our phone conversation a couple of days ago with the management.

1. We will be glad to extend you our 5th bracket contract reading for 7500 sets of controls but in order to do so it would necessitate an order for 3750 sets to be delivered prior to July 1st; shipments to be in approximately equal monthly lots.

It would be impossible to accept your order for 2000 sets of controls because if we did this it would be necessary to revise our pre-season commitment orders that we now

have on our books and unfortunately that is out of the question.

2. In analyzing prices, it would seem to me that your best bet would be to accept our 5th bracket contract calling for 7500 sets on the above basis and standardize on the R110-4 low voltage constant ignition controls. Your price would be as follows: R116-4 Relay, $9.40; T11 Acratherm $3.00, Standard Limit Control $2.65—total $15.25.

It would mean that this set of controls would cost you approximately $1.25 more than the figure you mentioned at which you could obtain low voltage competitive controls and if this amount of dealer difference in price could be set we know that we would get our share of the business, for all our efforts with your dealers thus far have been on the line voltage controls.

3. When I visited you, you asked if it would not be possible to use the T44 Thermostat without the heating element. Since my return I have investigated this device and find it tests just as good as similar devices of competitive makes but is no where near as accurate as the T11 Acratherm, and this is another point that should be considered in making your decision on low voltage vs. high voltage controls because the T11 Acratherm is used with the R116-4 Protectorelay.

4. Another point that you brought up was to determine if it would be possible for us to title the re-designed R116 relay so that we could call it the Type R422—(something or other). This would be possible.

274 5. I hope you will consider the suggestion to use the low voltage control seriously, Jack, for if you make a price difference to your dealers that approximates your difference in cost between our controls and those of competitive makes, I am quite confident that we will get our share of the business. We would plan to make a concerted drive on your dealers immediately and with the selling features we have in our low volt control system I think we could go to town in a big way.

I am leaving on my vacation Wednesday of next week, so I will be awfully glad to hear from you regarding the above by mail—or better yet will appreciate a phone call when you have arrived at a decision.

Yours very truly,
Minneapolis-Honeywell Regulator Co.
A. H. Lockrae,

Gentlemen:

We are enclosing herewith manufacturer's control contract submitted December 2, 1936.

This contract has been signed and we are forwarding it to you at this time so that your records will show this contract to be in effect on all orders shipped after this date.

In accordance with the terms of the contract, we are now making up an order for 3750 complete sets of controls which are to be shipped to us prior to July 1st. We expect to have this order ready for mailing the early part of next week and trust that this will be satisfactory to you.

Yours very truly,
Century Engineering Corporation

Attention Mr. E. D. Holvenstot.

Gentlemen:

Thank you for your letter of January 29th, to which you attached the accepted 1937 price agreement. This has now been executed by our Mr. Buckland and we are returning your copy to you.

Thank you for your advice concerning the order for 3750 sets of controls to be shipped prior to July 1st in accordance with the contract. We shall be pleased to receive this so that we can make plans to schedule our production to meet the shipping dates you specify.

Thank you for acceptance of our 1937 contract, and trust that we can continue to merit your confidence.

Very truly yours,
Minneapolis-Honeywell Regulator Co.,
C. E. Swanson—Original Equipment Div.

September 22, 1941

Mr. E. J. Lattner, President
Century Engineering Corporation
Cedar Rapids, Iowa

Dear Jack:

Have we made some enemies in your organization, or gotten our foot off base in some manner? I ask this because of reports we have received pretty generally to the effect that your organization is pushing our competitors' controls wherever possible—and as an instance of this, I quote a report from one of our men:

"Century want him to use Penn controls. Told him they have had a lot trouble with M-H and had to return over 200 sets to us. Mr. Swanson has had no trouble with M-H and refuses to accept Penn, so Century shipped him five burners without controls, and told him he would have to wait for the M-H controls.

"He needs these controls and asked me if we had controls in stock at New York. I explained that manufacturers' prices were f. o. b. factory and that there was an extra charge for branch pick up. He said he would call Century in New York and demand M-H controls and said he would pay the extra cost."

I would certainly appreciate your comments—and with best regards, we are

(Letterhead of Timken Silent Automatic Division of Detroit, Michigan.)

May 19, 1936

Minneapolis-Honeywell Regulator Company
Minneapolis, Minnesota

Attention—Mr. J. W. Pauling

Dear John:

We have a deal on to supply burners to L. J. Mueller Furnace Company and are up against a proposition on which you can give us some help.

They are anxious to supply their own controls—first, because they feel they will not be penalized on price, and, second, because their direct purchase of controls will probably put them in a lower price bracket for the year and favorably affect costs on all of the controls they buy from you.

They wish to use your R-126 primary control, and if it is not inconsistent with your policy I would appreciate advice as to the prices you are charging them, the price you would recommend we charge them, and whether you would be willing to give them credit on their quantity purchase arrangements for controls bought through us.

Appreciating your cooperation, I am

Cordially yours,
T. A. Crawford,
General Sales Manager.

TAC:ML

(Pencil notation: T11. Thermostats 4.50. 4th 12.00. 3rd Bracket 12.30. Timken price 9.15.)

286 COMMISSION'S EXHIBIT NO. 86.

May 22, 1936.

Timken Silent Automatic Division,
Timken-Detroit Axle Company,
Detroit, Michigan.

Att. T. A. Crawford, General Sales Mgr.

Dear Al:

Replying to yours of the 19th. We see no reason why you cannot sell L. J. Mueller Furnace Co. their controls if the difference between your prices and the prices we charge them justifies.

Our contract with Mueller is somewhat unusual. As you know, Mueller have been buying gas equipment from us for a number of years and we have been selling them in what we call our 4th bracket, which entitles them to a price of $4.50 on Thermostats. On oil burner controls we have given them prices in our 3rd bracket, exclusive of the Thermostat, as that is a unit they use with the gas equipment and it would be rather difficult for us to discriminate and charge them a higher price for Thermostats on their oil burners. Our price to them on the R124 primary control in 3rd bracket is $12.30. As you know we have not been able as yet to make delivery of this unit and until such time as we can make delivery are giving the manufacturers the benefit of the R124 price on the R126 unit.

Mueller feel that they will be able to reach the 4th bracket prices on primary controls this year in the oil burner line and have approached us on the basis of giving them a retroactive contract. In view of our past very satisfactory business relations with Mueller we may be obliged to do this. In that case the price on the R126 would be $12.00. Your price on the R126 is $9.15. The boiler controls and other accessories to Mueller are in the same bracket as for Timken providing they order in carton lots.

I shall be very glad to cooperate with you in swinging

this business thru your company. However, we want to be very careful and not get Mueller too conscious of a large price differential between your company and theirs as we fear a lot of pressure from this end.

Sincerely,

Minneapolis-Honeywell Regulator Co.
J. W. Pauling,
Vice President.

JWP:DR

287 ° COMMISSION'S EXHIBIT NO. 87.

(Letterhead of Timken Silent Automatic Division of Detroit, Michigan.)

January 15, 1937

Minneapolis Honeywell Regulator Company
Minneapolis, Minn.

Gentlemen:

In accordance with conversation held in our office to-day, you have agreed to extend to us the prices of the controls sold in your contract dated Dec. 2, 1936, if we comply with the following provisions:

(1) Place an order with you for 51% of our approximate annual requirements estimated at 45,000 units or, in other words, 23,000 units. Shipments of the 23,000 units to be in approximate equal monthly lots, prior to July 1, 1937.

(2) Terms: invoices 1 to 15th subject to 2% cash discount on 25th, due net and payable on 10th of following month. Invoices 16-31st, subject to 2% cash discount on 10th of following month, due net and payable on 25th next month. All shipments f. o. b. Minneapolis, Minn.

(3) Prices on the 23,000 units ordered to be shipped before July 1 to be guaranteed by you and you further agree that if during the year 1937 you reduce the prices on the units on this order to any other customers, you will credit us with this reduction on the undelivered balance.

Your Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writ-

ing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

(4) It will not be necessary to order the controls in sets.

This agreement to expire December 31, 1937.

Yours very truly,

H. C. Shafer,
Purchasing Agent.

Accepted:
J. W. Pauling.

327 COMMISSION'S EXHIBIT NO. 105.

(Letterhead of Minneapolis-Honeywell Regulator Co., Minneapolis, Minn., U. S. A.)

January 20, 1937.

Cleveland Steel Products Corp.,
Cleveland, Ohio.

Att: Mr. J. L. O'Brien

Dear J. L.:

As per our phone conversation today, I am returning herewith the contract which you executed, and this has been signed by Mr. Rodgers of our Cleveland office, so everything is in order.

As I told you over the phone, the correct quantity in our 3rd bracket is 1000 sets of controls and in view of the fact you are sending us your order for this quantity I have made out the contract on that basis—and I'm sure this will meet your approval.

Now that the proper credit for the controls can be given you, I hope you can see your way clear to accepting our 4000 set proposition, and—if so please advise us and we'll be glad to get in touch with you promptly.

With kindest regards from the writer, we are

Yours most truly,
Minneapolis-Honeywell Regulator Co.,
A. H. Lockrae,
Asst. Mgr. of Sales, Original Equipment Division.

(Letterhead of Minneapolis-Honeywell Regulator Co., Minneapolis, Minn.)

April 13, 1939

Cleveland Steel Products Corporation
Madison at West 74th Street
Cleveland, Ohio

Attention: Mr. W. J. Smith, Vice-President,
General Manager

Dear Bill:

I am mailing you herewith a contract as per our agreement in your office April 5th.

McGoldrick is writing you regarding delivery on the special relay which will be known as type R134A. Mac is also sending a relay to Underwriters made from temporary tools, and advises that he will leave nothing unturned to expedite production on this relay so we can start shipping them as soon as possible.

You surely know, Bill, how much I appreciate this opportunity to work with you again, and may I assure you that we here at Minneapolis are going to exert our utmost to serve you.

I thoroughly enjoyed my visit with you and J. L. last week, and left with anticipation of years of mutually pleasant and profitable business relations. The setup you have and the completeness of your line, along with your present sales policy, impresses one most favorably as to your future position in the automatic heating industry.

Again I want to thank you for your favorable decision in this matter, and assure you that I am looking forward to another visit with you in the near future.

Yours very truly,
Minneapolis-Honeywell Regulator Company,
J. W. Pauling,
Vice-President.

330 COMMISSION'S EXHIBIT NO. 107-B.

April 18, 1939
Dict. April 17

Mr. J. W. Pauling, Vice-President
Minneapolis-Honeywell Regulator Co.
Minneapolis, Minnesota

Dear John:

I acknowledge your letter of April 13th along with copy of contract sent for our signature.

It is needless to say that we appreciate very much your very fine expressions of satisfaction because we have decided to place our business with your good company and we also appreciate your expressions of desire to co-operate to your fullest extent.

In checking the contract, however, I wish to call to your

attention some errors which have occurred, apparently due to the speed we were making in order to help you make your plane. We have a habit here of keeping an absolute record of all conferences when they start to deal with prices or contracts and Mr. O'Brien during our conversation made his usual record of our discussions of price. His record tallied exactly with mine and we, therefore, followed our usual custom and put it in typewritten form.

The price of the thermostats is correct, the prices on the various protectorelays are correct, including the new R134A relay, which is the constant ignition non-recycling special job built for us, however, on our limit switches we were to receive a price of $2.65 each with an order of 500 of them, which order was promptly given to Mr. McGoldrick as you were forced to leave on account of the departure time of your plane.

Your contract does not include the price of the special line voltage relay which is to be used on our hot water heater. The price you agreed on for that item was $6.70. We have that notation and both Mr. O'Brien and the writer very definitely remember you and Mr. McGoldrick discussing it and saying that you could very easily do it. This is the relay that we understand will be hurried along as soon as possible.

In order to further clarify the situation, you will probably remember that our price of the three pieces came out exactly $14.05 per set and when one of our clerks was writing up the order, you will remember, I was standing in the doorway of my office and suggested that perhaps we could make it an even $14.00 and you said, "no", it had to be $14.05. So, that proves our contention of the price of $8.45 for the protectorelay, $2.65 for the limit switch and $2.95 for the thermostat, the total of which is $14.05.

331

Will you, therefore, kindly have new contracts made up and include also the $6.70 line voltage constant ignition relay that we will use on our little rotary burner in our hot water heater? Then our understanding and contract will coincide and no further discussion about prices would be necessary in regards to your last visit.

You understand, of course, that we have gone with you paying a higher price, in fact, considerably higher, but with our eyes turned to the future because of your assurance that our prices beginning with 1940 will be the equal of the

lowest prices quoted in the Oil Burner Industry and, in return for this, we anticipate giving you our business 100% and doing all within our power to greatly increase our volume of business with you as a whole.

Yours very truly,
Cleveland Steel Products Corporation,
W. J. Smith,
Vice-President and General Manager.

WJS:AS

332 COMMISSION'S EXHIBIT NO. 108.

(Letterhead of Minneapolis-Honeywell Regulator Company, Minneapolis, Minn.)

April 24, 1939.

Mr. W. J. Smith, Vice-Pres. & Gen. Mgr.,
Cleveland Steel Products Corp.,
Madison at W. 74th St.,
Cleveland, Ohio.

Dear Bill:

Sorry a delay occurred in replying to your letter of April 18th—but John, Mac, and I were all at a New York meeting, and I was the first to return.

I have carefully read your letter of April 18th, and while we would be glad to type up another contract for you, under the circumstances I don't believe it will be necessary, for you can take this letter as authority for confirmation of the prices omitted from the contract.

The price on the set of controls including the R134A as shown on the contract is $14.15 per set—but as John told you, the standard L404 Pressuretrol, L409 Surface Aquastat, or L419 Airstat is reduced to $2.65 net when orders for each type are placed in lots of 500. Deliveries against the 500 orders for each type can be taken out to suit your convenience. The 10¢ reduction in limit control prices thus obtained brings the set price down to $14.05, as per your understanding.

The line voltage stack control for use with your hot water heater will be $6.75 net, as John quoted. This device was not shown on the contract because we had not assigned a type number—as a matter of fact, it will probably be a few days yet before the new type number is set up.

In other words, Bill, the above data confirms your understanding of the prices, and you may consider this letter as a part of your contract if you so desire. The information contained herein is being passed on to our Order Department so that their pricing records will be in accord.

We certainly do appreciate your decision with reference to our controls, and I can most certainly assure you that we will be glad to extend our cooperation in every possible way. I thought perhaps J.L. or you would be in New York so that I could express my appreciation in person—but I'll do it the next time I am in Cleveland, and I hope that will be soon.

Kindest personal regards,

Yours very truly,
Minneapolis-Honeywell Regulator Co.,
A. H. Lockrae,
Asst. Mgr. of Sales, Original Equipment Division.

April 21, 1939.

Personal
Mr. W. J. Smith,
Cleveland Steel Products Corporation,
Madison at W. 74th Street,
Cleveland, Ohio.

Dear Bill:—

When I returned to the office, after having been South and East for a couple of weeks, I was very happy indeed to hear that your good company was going to standardize on M-H controls during the coming year.

This was one of the best pieces of news that I have had in a long time, and I wanted to drop you this personal note to tell you how much I appreciate the consideration that you and your associates have given to John, Lock and Bill McGoldrick.

I sincerely hope that this year may be one of the best for you.

I had hoped that I might see you in New York this week at the time of the meetings there. I expect my path will be bringing me through Cleveland before long, and I am looking forward to a visit with you.

Sincerely yours,

Harold.

Apr 24 A.M.

336 COMMISSION'S EXHIBIT NO. 110-B.

(Letterhead of Minneapolis-Honeywell Regulator Company, Minneapolis, Minn.)

April 11, 1939.

Cleveland Steel Products Corp.,
Madison at W. 74th Street,
Cleveland, Ohio

Att: Mr. W. J. Smith, Vice-Pres. & Gen. Mgr.

Dear W. J.:

Thanks very much for your communication of April 7th. I must apologize for not writing you before this to thank you for the very kind reception you gave us while at your plant last week.

Bill, I want you to know that everyone here in Minneapolis is extremely happy in having Cleveland Steel Products come so wholeheartedly with us, and you may be assured that we will do everything possible in our power to make and keep you happy in this connection, and now that we are together, it is my personal hope that you will get behind us and give us a little boost wherever you have the opportunity.

No doubt, it will take a little time for us to get squared around where we are meeting your requirements with the promptness that we hope to attain, and ask that you bear with us during this period.

Drawings were completed today and tooling started for your special relay, which will be known as the R134A, and we expect production parts to be available one week from today, which means that we should be able to start shipping within two weeks.

For your information, we are jumping the gun as far as Underwriters are concerned, and are sending them a relay made from temporary tools in the Model Shop for their examination and approval, so you see everything is being done to facilitate putting your program into effect with the least possible delay.

Enclosed are sample nameplates and prints, showing the dimensions of our standard aquastat nameplate, and the size nameplate that we will use on your special line voltage hot water stack control, which will serve as a guide for your design. You will note that our part #8962 has the lettering running the short way of the plate, but in your application it will be necessary for the lettering to run the long way on the 2" dimension.

337 COMMISSION'S EXHIBIT NO. 110-C.

April 13 P. M.

Referring now specifically to your communication of the 7th, I shall be very happy to receive the electric fence timer, and will let you have a report after it has been put into operation.

With reference to the transformer relay combination and monkey control, as you call it, with a cold contact, parts are now being prepared, and these will get to you with the least possible delay.

I am afraid that you misunderstood us on the new chronotherm clock thermostat, as sample models on this will not be ready until early fall, and we shall be very happy to see that you receive one as soon as they are ready. It is just possible that you confused this with the item of a new chronotherm to replace the defective one you now have in your office, and for your information, one is going forward to you tomorrow which has been check tested, together with two additional heaters which may, or may not, help you out on this particular installation. This chronotherm is being billed to you on a "will credit" basis, and full credit will be allowed when the one you now have has been returned to us.

I certainly shall not forget you on the mercury switches, and it is my opinion that we may have a few of these available by early fall.

So far I have been entirely faithful in the use of the razor, and shall continue to be so until either I lick it or it licks me. However, I shall give you a further report from time to time on my progress in this direction.

I again want to assure you that if at any time we here in Minneapolis can be of any service to you on any of your control problems, we shall welcome the opportunity of working with you.

Sincerely yours,

Minneapolis-Honeywell Regulator Co.,

W. J. McGoldrick,

Chief Engineer of Product.

WJM-AS
Ene.

Apr 13 P.M.

340 COMMISSION'S EXHIBIT NO. 111.

June 26, 1939.

Mr. A. H. Lockrae,
Asst. Mgr. of Sales
Original Equipment Division
Minneapolis-Honeywell Regulator Co.
Minneapolis, Minn.

Dear Mr. Lockrae:

Kindly pardon my delay in replying to yours of the 9th but I have been away and just recently returned.

I am terribly sorry to hear about Mac being in the hospital and I sincerely hope that you will be able to tell me that he is completely out of danger and that his trouble has been corrected. Give him my very best regards and if he is going to be confined to a hospital any length of time let me have his address.

In regards to the Domestic Hot Water Lockswitch, until we get worked out a better mounting than you have and some kind of a flange or other idea to fit it to our jacket we will have to continue using Perfex.

I dislike saying this because since we have gone to the controls 100% for the future we perhaps do not set so well with Perfex and, then again, we want to standardize on controls and prefer to use yours for that reason.

We are deciding on a color for a new stamped name plate for our water heaters and air conditioners so perhaps it would be better for us to wait for such a time as we have it developed and then we can make up separate plates for trial on your controls.

It was my understanding that you would supply the plates with our name on them, including a little decal, on the thermostat without any additional charge.

We will endeavor to settle this question as promptly as possible, but in bringing out two or three new burners and a line of new air conditioners in addition to our changes in the water heater we have been kept busy beyond the point of endurance and I hope you will bear with us until we are able to get to this name plate item.

Kindest personal regards.

Yours very truly,
Cleveland Steel Products Corporation,
W. J. Smith,
Vice-President & General Mgr.

WJS:AS

341 COMMISSION'S EXHIBIT NO. 112-A.

Aug. 9, 1939.

Mr. A. H. Lockrae
Minneapolis Honeywell Regulator Co.,
Minneapolis, Minn.

Dear Lock:

On July 20 you wrote me about your contact with Boulevard Oil Burner Company. Since then we have received an order from them for 25 burners which they accepted with your controls, but I would keep your man in touch with these people because he told Mercoid the same thing, namely, that all his burners would come with their controls. I would like to have you keep this confidential because I don't want to become involved, but there has been no order for a carload of burners from him, only the 25. I imagine he will split his control business unless you can keep your man contacting him regularly.

Yours very truly,
Cleveland Steel Products Corporation,
W. J. Smith,
Vice President and General Manager.

342 COMMISSION'S EXHIBIT NO. 112-B.

(Letterhead of Minneapolis-Honeywell Regulator Company, Minneapolis, Minn.)

July 20, 1939.

Mr. W. J. Smith, Vice-Pres. & Gen. Mgr.,
Cleveland Steel Products Corp.,
Madison at W. 74th St.,
Cleveland, Ohio.

Dear Bill:

When I left your office the other day I immediately wrote a letter to our New York office with reference to Boulevard Oil Burner Co.—and if the information I have just received is correct, then your efforts and ours are bearing fruit.

I have just received a letter from Arnold Michelson in

New York wherein he states that he has been in contact with Mack Holden; during the visit he was advised that Mack had ordered out a carload of burners and boiler-burner-units and that M-H controls had been specified throughout.

I don't know whether Holden would order this carload direct from you, or through Westinghouse—but I assume that you do have some means whereby you could check on the carload and determine if our controls were specified as Holden stated, if you care to do so.

Michelson advised that Mack told him unequivocally, and said he would prove it if we wanted him to, that all the controls in the carload were ours.

Best regards.

Yours very truly,
Minneapolis-Honeywell Regulator Co.,
A. H. Lockrae,
Asst. Mgr. of Sales, Original Equipment Division.

343 COMMISSION'S EXHIBIT NO. 113.

September 1, 1939.

Mr. W. J. McGoldrick
Minneapolis-Honeywell Regulator Co.
Minneapolis, Minn.

Dear Mac:

I am writing you because I am afraid Mr. Lockrae may be away and I have to have an answer here by Tuesday morning, September 5th.

When we decided to take on Minneapolis-Honeywell controls as standard equipment throughout our complete line we arrived at a price of $14.05, net, for a set of three controls. These are, of course, the constant ignition controls.

Previous to our price reduction there was not a tremendous difference between the intermittent and constant ignition relay prices and we have sold them to our jobbers and Westinghouse at very little difference in price.

We have a few dealers who demand intermittent ignition and Westinghouse are now closing a large account that demands it and they are asking us for this relay at the same price as the constant ignition.

We have endeavored to explain to them that it cannot be

done but in checking our prices we find that there is a difference of $1.80 between our cost of the constant ignition job as compared to the intermittent and this is entirely too much for us to try to get Westinghouse to pay. It might even hinder them getting this large account.

I am not trying to get you down on your prices, but perhaps we did not get a good enough deal on intermittent ignition.

I have to call Springfield, Mass., Tuesday so would you please wire me immediately if there can be any change made in that price, bearing in mind that they demand it from us at exactly the same price as the constant ignition? An immediate reply will be greatly appreciated.

Yours very truly,
W. J. Smith,
Vice-Pres. & Gen. Mgr.
Cleveland Steel Products Corporation.

September 5, 1939.

Mr. W. J. Smith, Vice-Pres. & Gen. Mgr.,
Cleveland Steel Products Corp.,
Cleveland, Ohio.

Dear Bill:

We are awfully sorry it was necessary to wire that we could not revise price on the intermittent ignition control.

We held session on this subject for at least an hour and a half this afternoon, and it all boiled down to the fact that if we made a concession to you we would have to make a comparable concession to others involving an amount that just isn't possible—especially in view of the condition we are already facing in the cost of raw materials and what may happen in the labor market.

Kindest regards—and again I regret we could not find a way out for you.

Yours very truly,
Minneapolis-Honeywell Regulator Co.,

Attention Mr. A. H. Lockrae

Dear Lock:

Answering your letter of Nov. 13th, regarding the matter of quoting control prices to Westinghouse. It is to be expected that Westinghouse will want you to quote them prices and we cannot expect you to jeopardize your position because of us and I, therefore, expect that you should quote them whatever prices they may be entitled to on the basis of their volume, company standing or whatever may be the basis upon which you would quote them, assuming that we were not in the picture at all.

For your private information I will tell you that their volume will run this year, approximately 1500 burners. A big percentage of which were equipped with M.H. controls. We have, up to the advent of the new RA series controls given them a price of ten percent over our costs and we believe that they have always agreed that was a very fair basis considering that we had the handling and that a very considerable part of their shipments are single units. We have not given them the benefit of the reduction on the new RA series because they have insisted upon our shipping the old R series to several of their customers and knowing their feeling toward a non-recycling control I thought it best not to give them the idea that this new control was a cheaper control until we got over the problems that have confronted us at the start with this control. However, I do expect to give them the same basis on this new control in our set-up for next year and I feel that is the best we can do. I would like to continue handling their controls and feel quite strongly that it is much more satisfactory to handle the controls right with the burners and that they will want to continue doing so as long as they are having their burners shipped direct from some outside manufacturer to their customers.

Again I want to say that we do not expect you to jeopard-

ize the use of your controls while trying to work with us so you go ahead and quote them whatever prices you feel they are entitled to and we will try to work out our problem with them so that every body will be happy.

Kindest regards.

Yours very truly,

J. L. O'Brien.

Nov. 13, 1940.

Mr. J. L. O'Brien, Toridheet Div.,
Cleveland Steel Products Corp.,
Cleveland, Ohio.

Dear J. L.:

We have just had a letter from our Boston office, and they point out that it won't be long before we should be in a position to name Westinghouse Electric Manufacturing Co. prices on our controls. They state that our competitors have already quoted, and you undoubtedly know what all the "shooting" is about.

We do not want to do anything at all that would interfere with your interests or profit on controls you have been shipping Westinghouse, but from the information we have gotten, Westinghouse is going to insist that we name prices, and we would like to be as consistent as possible and yet not lose this business to competition. I know the prices you were extending Westinghouse a couple of years ago, but I don't know the prices you are giving them on our controls at the moment. This information would be extremely helpful—and many thanks.

Kindest personal regards.

Yours v y truly,

Minneapolis-Honeywell Regulator Co.,

350 COMMISSION'S EXHIBIT NO. 118-A.

March 5, 1942.

Mr. J. W. Pauling
Minneapolis-Honeywell Regulator Co.,
Minneapolis, Minn.

Dear John:

Bill has given me your letter of February 25, which has reference to a recent price reduction which your company has voluntarily put into effect at the suggestion of OPA. Also, in reference to the necessity of priorities on all future shipments.

We were not particularly disturbed by the price increase and felt that if the increase was justified and everybody had to pay it, we were quite willing to do so. However, we are very glad to get the controls at the lower price if your company feel that they are in position to furnish them on that basis.

Regarding the priority situation, I will say that this has put us in a rather tough spot. We do not have any appreciable amount of business carrying priorities because of the nature of the particular job or sale. The only priorities we have been able to get covering any appreciable volume of business were priorities which we got from OPM on the basis of inventory adjustment, and the priorities given us there were limited to the month of March. Because of the fact that we were badly pinched for controls, I will tell you that we have bought some controls and are buying some more of another make—not because we wanted to and I want to tell you that we still want to standardize on Minneapolis-Honeywell controls and will do so just as far as it is possible for us to do so. We will make every effort to get priorities and do what ever else may be indicated to get as many M-H controls as possible.

There is no suggestion of a criticism of your policy in this matter of requiring priorities from us as we understand your situation and realize that you have no other course to follow. We will be very glad to see you any time you are in this neighborhood.

My kindest regards.

Yours very truly,
Cleveland Steel Products Corporation,
J. L. O'Brien,
Toridheet Division.

(Minneapolis, Minn.)

February 25, 1942

Mr. W. J. Smith
c/o Cleveland Steel Products Corp.
Madison at W. 74th St.
Cleveland, Ohio

Dear Bill:

I am writing you personally as a general letter sent to our customers last week may not have come to your attention. The letter announced that on February 19, we were reducing our prices to those in effect last fall.

This price reduction was requested from the Office of Price Administration. It was not a formal order for ruling. We had no hesitancy in doing this on a voluntary basis though our increased cost of both labor and material did not justify this reduction. We were willing to cooperate with the Government in its efforts to avoid inflation and changed our prices within forty-eight hours after their request was received.

Some time ago when we were requested by the Priorities Division of OPM to limit our shipments of controls to orders carrying Preference Ratings of A-10 or better, we did so; and though it was apparent our company was being penalized, as in the case of this price reduction, our action was questioned by a few of our customers. Most of these, however, have now come to realize the soundness of our decision, and I am sure that in the long run, these policies will prove sound from your standpoint as well as ours.

More changes affecting you and us are likely to follow. Certain services which are normally expected of us are bound to be curtailed.

I shall continue to call on you frequently for a personal discussion of our mutual problems, and I am sure with your continued cooperation, we will be able to render our services in a better degree than you could expect from other sources.

Kind regards.

Sincerely yours,

Minneapolis-Honeywell Regulator Co.

John

Dear J. L.:

Your favor of the 24th enclosing signed copies of contract is greatly appreciated, and we are returning herewith, the original with our acceptance signature.

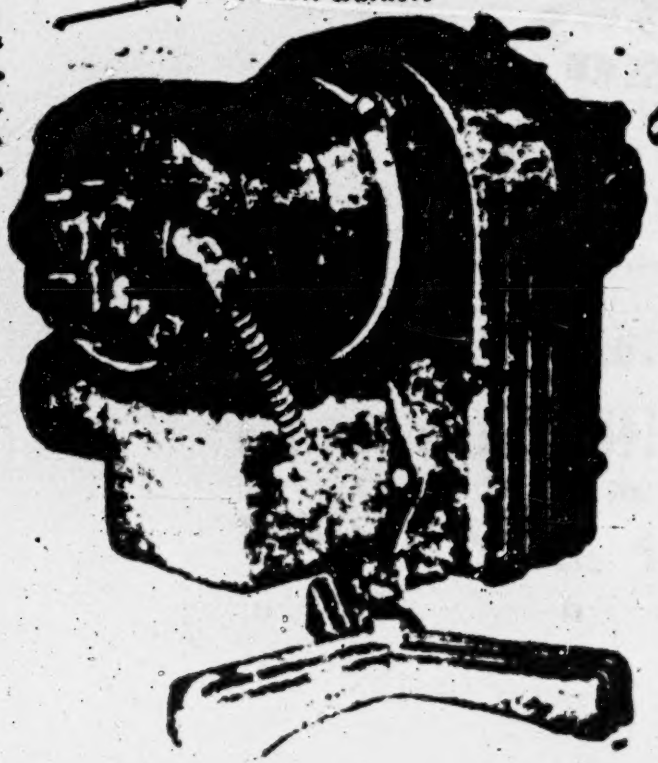
We hope that you are right and that we may look forward to receiving a considerable portion of your control business during the present year.

Shall get in touch with Mr. Fisher and have him follow Mr. Hildreth with an idea of getting a definite commitment for 1,000 Sensatherms, so that we may go ahead and make these up with their name on cover.

I shall be in New York for the April 18 Oil Burner Meeting, at which time I understand the final discussion on the Bureau of Standards' Code will take place. Hope to see you at that time.

With kindest regards, remain,

Sincerely,



Jim

361 COMMISSION'S EXHIBIT NO. 132.

Minneapolis Honeywell Regulator Company.

Manufacturers' Control Contract.

Submitted December 2, 1936

Purchaser:

This agreement, entered into between Minneapolis-Honeywell Regulator Company, a Delaware corporation, hereinafter called the Company, and Malleable Iron Fittings Company of Branford, Conn., hereinafter called the Purchaser, Witnesseth:

That whereas the Company manufactures and sells a complete line of automatic temperature controls; and, whereas, the purchaser has use for such devices in conjunction with products of his manufacture, and for the sale of such devices to his dealers;

Now, therefore, in consideration of the premises, of the mutual covenants herein contained and of special prices extended the Purchaser by the Company, the parties hereto agree as follows:

Quantity.

The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract Season's Requirements sets of the Company's automatic temperature controls, each set consisting of one Thermostat, and one Limit Control, and one Primary Control. It is specifically agreed that other control equipment is not to be considered as a part of a set within the terms of this contract. Because the Company's costs are figured to cover a complete set of controls, and the following breakdown prices are purely for invoicing purposes, it is agreed that the Purchaser's yearly purchases will consist of at least 90% as many Room Thermostats and 100% (but at the Company's option not more than 125%) as many Limit Controls as Primary Controls.

Prices on Material Shipped From Factory.

T10 or T11 Acratherm	3.80
T100 Time-O-Stat	5.45
7710 Clock Type Thermostat	19.95
T105 Heat Accelerated Chorontherm	19.50
T45 Thermostat	4.30
R121 Protectorelay (R117-3 until available)	13.30
R122 " (R116-4 " ")	11.90
R417 Lockswitch for DC	12.95
C402-1 Low Water Cutoff (L620-3 until available)	11.50
L622-1 " " " 150# pressure	13.00
L627-2 " " "	10.60

Limit Controls.

L401-3 Combination Control	6.60
P404A Pressuretrol (L404 until available)	3.35
L408 Vaporstat	5.00
L 409 Surface Aquastat	3.35
L411 Vacuumstat	5.00
L415 Airstat	4.30
L419 "	3.35
B6510 Immersion Aquastat	5.25
L416 " "	5.25

Deduct 50¢ net from the Limit Control prices for shipment of 10 or more of the same type at one time.

Purchaser's Copy.

362 The Purchaser agrees that at least ninety-five (95) percent of his control requirements consisting of Thermostats, Primary Controls and Limiting Devices will be purchased from the Company.

Miscellaneous Control Prices.

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4, 5, Form SA 573-...., which are hereby made a part of this agreement, will be furnished at list prices stated less discount of 25-15-5% unless otherwise shown on the price sheets.

363 Conditions

The Company agrees to render invoices to the Purchaser in accordance with the prices listed in the schedule above for the actual number of units shipped to the Purchaser by the Company, f.o.b. point of manufacture.

Prices relating to relay or motor operated devices and/or to magnetic valves are for 110 volt, 50 or 60 cycle specifications only, unless otherwise specified. Prices pertaining to Chronotherms and Electric Clock Thermostats are for 110 volt, 60 cycle specifications only. When ordered in lots of less than fifty units, the Company will add net extra charge for other voltages and frequency combination shown below, according to following schedule: Relay operated devices, excepting Type R153 and R83, $2.00 net each. Motor operated devices (exception Type D and special industrial motors), Magnetic and Diaphragm valves, and Electric Clock Thermostats $1.00 net each. For current specification not shown, charges will be governed by the development work required.

110 volt, 40 cycle	220 volt, 30 cycle
110 volt, 30 cycle	220 volt, 25 cycle
110 volt, 25 cycle	110 volt, D. C.
220 volt, 60 cycle	220 volt, D. C.
220 volt, 50 cycle	32 volt, D. C.
220 volt, 40 cycle	

The extra charges outlined above will not be made for special alternating current voltage and frequency specifications when units are ordered in quantities of 50 or more of one device all of the same voltage and frequency and all to be shipped at one time. The extra charges outlined above will, however, apply to direct current devices in all quantities.

Net extra charges will be made for the following special requirements: Special range pressuretrols 2 to 50 lbs., or 5 to 150 lbs., $1.25 net each; special scales open contact thermostat 100° or less $2.00 net each, over 100°, $5.00 net each; special scales Airstats and Furnacestats $2.00 net each; special scales to 440° F. Immersion Aquastat $3.00 net each; special scales over 440° F. Immersion Aquastats $5.00 net each. Net extra charges on other special requirements quoted on request.

The Company is not obligated under the terms of this contract to supply instruments for current specifications or special constructions which in its opinion are impractical.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser.

Prices from Branch Stocks

Prices shown do not include thermostat cable or fittings. Emergency shipments of equipment to the Purchaser from a Branch Office of the Company shall be billed with discounts in effect at such Branch Office.

Terms

Shipments shall be made f.o.b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f.o.b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired

or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will pay such
364 award, but shall not be responsible for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchasers' place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment of Contract and Sales Agreement

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except in conjunction with his products.

Prices contained in this agreement cover shipments made to the Purchaser, and the Company will add a handling charge of 10% to cover shipments that the Purchaser requests be made to his dealers. All shipments are F. O. B. factory.

Deliveries

It is agreed that this contract shall not be subject to cancellation except by the consent of the Company, and that serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designated in said orders.

Price Revisions

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period.

If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Service Responsibility

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings conducted by the Manufacturer's field men.

Period of Contract

This contract shall become effective at the accepted date, and expire on 12-31-37 unless sooner cancelled as hereinabove provided. The validity, enforceability and interpretation of all of the provisions of this contract shall be determined and governed by the laws of the State of Connecticut.

Accepted at Branford, Connecticut,

COMMISSION'S EXHIBIT NO. 133.

June 8, 1937.

Minneapolis-Honeywell Reg. Co.,
801 Second Avenue,
New York.

Attention: Mr. Chapler.

Gentlemen:

As you know, there are a number of people assembling oil burners from standard parts and flooding the market at ridiculously low prices. This is detrimental to every industry connected with the oil burner industry, your own included. The ability of these firms to purchase equipment at minimum prices helps them to demoralize the oil burner industry and we believe your company should do something to curb one of their practices.

A salesman for the Quiet Heat Oil Burner Co. called on one of our dealers recently and when he could not interest him in the oil burner he wanted to know if he could not sell him the Minneapolis-Honeywell controls. He quoted $22.50 to this dealer on the Chronotherm and $5.50 on Immersion Aquastats. Undoubtedly they are offering these controls to dealers at their cost in order to get the volume and therefore the maximum discount on those they use themselves.

Allowing this practice does your company no good. It makes the legitimate manufacturer, who offers your controls to his dealer at the standard dealer price, look like a robber. If firms like this can offer controls at such prices, naturally the dealer thinks we purchase them for considerably less than that and are demanding an exorbitant profit, when as a matter of fact the prices quoted are almost if not quite at our cost.

The writer saw the memorandum of the prices quoted and if you are desirous of doing anything about it, we can give you the name and address of the dealer who has actu-
366 ally purchased some controls from the Quiet Heat Company at these prices.

We believe it is an obligation of your company to your many legitimate manufacturer customers to do everything possible to stop this practice and there is one way that this

can surely be stopped and that is—have trouble with deliveries to this type of person.

Yours very truly,
Oil Burner Division,
Malleable Iron Fittings Company,
Herbert Gillis,
Manager Sales Promotion.

367 COMMISSION'S EXHIBIT NO. 134.

June 23, 1937.

Minneapolis-Honeywell Reg. Co.,
801 Second Ave.
New York.

Attention: Mr. Chapler.

Dear Mr. Chapler:

I saw the Philadelphia dealer to whom Quiet Heat Oil Burner Company had quoted prices on your controls about equal to our cost, but he informs me that he did not actually purchase any controls. He simply had the memorandum of the prices that were quoted.

I am sorry we cannot assist in getting more definite evidence but I understood your own representative in one of the larger cities actually purchased controls from this Company, which should be sufficient grounds for action.

Yours very truly,
Oil Burner Division,
Malleable Iron Fittings Co.,

HG/MJ

368 COMMISSION'S EXHIBIT NO. 135.

Dec. 22, 1937

Minneapolis-Honeywell Reg. Co.,
801 Second Ave.,
New York

Att: Mr. Chapler

Gentlemen:

Sometime ago, we informed you that we had heard of some oil burner manufacturers offering your controls to dealers at manufacturers' prices. Obviously, this practice would make it next to impossible for manufacturers to sell controls to their dealers at legitimate dealer prices.

You told us at the time that you had been endeavoring to get positive evidence of the practice, but had been unable to do so. The writer has just seen a postcard sent out by Westchester Home Equipment Company, offering to all and sundry, Minneapolis-Honeywell controls, specifying the various items by your model numbers, at prices which are approximately what we are paying. If you want evidence that the practice is being carried on, you should easily be able to get one of these postcards, which are printed with the prices they are offering.

We firmly believe that you owe it to your customers, who are endeavoring to do an ethical and legitimate business, to protect them from this kind of competition. Evidently, the purpose is to unload a quantity of controls at cost in order to reach a lower price bracket.

Does not your Company feel under any obligation to protect the largest proportion of your customers against this practice? If not, certainly they will not continue to feel so friendly toward you.

Yours very truly,
Oil Burner Division,
Malleable Iron Fittings Company,
Herbert Gillis,
Manager Sales Promotion.

369 COMMISSION'S EXHIBIT NO. 136.

(Letterhead of
Minneapolis-Honeywell Regulator Company (Inc.)
New York City, N. Y.)

December 30, 1937.
(Dict. 12/23)

Malleable Iron Fittings Company,
Oil Burner Division,
Branford, Conn.
Attention: Mr. Herbert Gillis,

Manager Sales Promotion.

Dear Mr. Gillis:—

Thank you for your letter of December 22nd, and we do not blame you at all for being somewhat exercised due to the fact that an oil burner manufacturer sent out post cards advertising very low prices on Minneapolis-Honeywell Controls. We got ahold of this particular proposition shortly after the cards went into the field and called on the manufacturer in question, and told him that according to our contract we could not enter into a jobbing proposition with him and that if he wanted to job controls we would classify him under our jobber's discount. After going over this matter the manufacturer agreed to, and did send out cards to the same list to whom he had circularized the low prices and advised these people that there had been an error and that the prices that were sent out would not be available.

Replying to the third and fourth paragraphs of your letter, first we want to say that we are doing everything possible to maintain the agreements that are set up in our manufacturers' contract—one agreement being that the oil burner manufacturer agrees to supply our Controls only with or as a part of his burner, and that the oil burner manufacturer agrees not to do a jobbing business.

There is a great deal more to this story and we will be glad to discuss it further with you some time right after the 1st of the year, since we expect to be in Branford at that time. In the meantime, please be assured that we want to do everything possible to keep matters of this kind in line, and we believe that the above explanation as to how

we handled this particular matter that you brought up will show that it is our desire to maintain a policy which is beneficial to, as you say, the largest proportion of our customers.

Wishing you the Compliments of the Season, and looking forward to seeing you before long, we are

Very truly yours,
Minneapolis-Honeywell Regulator Company,
H. E. Chapler.

H.E.Chapler/MM

370 COMMISSION'S EXHIBIT NO. 137-A.

January 14, 1938

Mr. H. W. Sweat,
Minneapolis-Honeywell Reg. Co.,
Minneapolis, Minn.

Dear Mr. Sweat:

During the past year some very bad practices in the handling of your oil burner controls have sprung up and in order to protect the interests of your older and more dependable customers, whose patronage built up your business for you, you should take definite steps to stop these practices.

Each year we, and your other dependable manufacturer customers, sign a contract to purchase your controls. Where we resell to dealers, we agree to sell at the dealers' discounts, which you have established. We have been keeping that agreement to the letter. However, we have frequently run across cases where your controls have been offered to our dealers at exactly the price which we pay you, which indicates that the people offering those controls are selling them to dealers at their cost or are being given a concession in price, which permits them to make a profit at these prices.

This bootlegging, we might call it, is being done by a small group who have done more to demoralize the oil burner industry in the past two years than anything else that has ever occurred. The members of this group are well known to your representatives and we presume to you. We have repeatedly written to your branch offices, whose representatives contact us, and called this to their attention. The

first explanation was that they had tried in vain to procure tangible evidence that such practices were being followed. That was obviously an alibi, as your representatives in private conversation admitted knowledge of the practice and of the people following it.

We recently informed your New York office that if evidence was wanted, they had only to procure a copy of a printed postcard mailed broadcast by the Westchester Home Equipment Company, offering Minneapolis-Honeywell controls to all and sundry at exactly the same prices which appear on your contract before the writer now, awaiting signature, for 1938. This postcard had the prices printed on it, so there could be no claim for typographical error.

We believe that it is an obligation on your part to legiti-
mate oil burner manufacturers to protect their inter-
371 ests by stopping this practice, even to the extent of
refusing to sell to those who are doing it. We have always been loyal to Minneapolis-Honeywell controls, as have many other manufacturers, but your failure, or refusal to insist upon ethical business practices where you can enforce it, is causing the good will of your older patrons to rapidly dwindle, and makes them more receptive to the stories of your competitors.

From the conversations with other manufacturers, we believe that if you do nothing to remedy this condition, they will, and the resulting action will not be pleasant. It is a very live subject among manufacturers now whenever they get together and in their conversations, you can be sure that no laurels are placed on the brow of Minneapolis-Honeywell Company.

We feel that you have failed us, and will continue to feel that way unless you take some drastic action in place of the alibis that your field representatives have been giving us.

Yours very truly,

Oil Burner Division,
Malleable Iron Fittings Company,
Herbert Gillis,
Manager Sales Promotion.

Branford, Conn.

Attention: Mr. Herbert Gillis,
Manager Sales Promotion

Dear Mr. Gillis:—

This will acknowledge receipt of and thank you for your letter of June 8th, regarding the sale of Controls by oil burner manufacturers to dealers other than their own, and we are certainly glad to have the specific information which you have given us.

As you know, our contract with the manufacturer definitely states that the Controls which he purchases are to be used on or in conjunction with his own burners, and are not to be jobbed to dealers other than his own, at any price. We have done everything we possibly could to stop the practice which you speak of. We have limited the number of burner controls which the manufacturer can buy as regards to the number of primary controls which he buys, and in nearly every case we have been able to control this part of the proposition. We have had complaints from other good customers besides yourself but it has been terribly hard to get any real evidence that we could use to confront the manufacturer who has been accused of bootlegging. However, you state in your letter that one of your dealers has purchased Controls from the source which you speak of, and we are wondering if he would be willing to let us have the invoices on which these Controls were shipped. If you do not desire to try to get these invoices, if you will give us the name and address of your dealer we will be glad to see what we can do, because we are certainly interested in having the terms of our contract lived up to, and if you can furnish these invoices it will help us materially to do this.

We have been trying to get up to Branford to see you for some time and hope that we can make it within the next ten days. We hope that you are feeling good again and that everything is going along in good shape.

With kindest personal regards, and awaiting your reply to this letter with very much interest, we are

Very truly yours,
Minneapolis-Honeywell Regulator Co.,
H. E. Chapler,
M.M.
Eastern Factory Representative.

HEC:MM Dict.6/10

374 COMMISSION'S EXHIBIT NO. 140A.

Oct. 28, 1938.

Mr. H. W. Swett,
Minneapolis-Honeywell Regulator Co.,
Minneapolis, Minn.

Dear Sir:-

There are things happening in this control business about which you may be able to enlighten us. We think we know the answer, but may be wrong.

We understand that a 25% discount from your list is the standard trade price to a contractor or dealer. Do you stipulate that this must be the resale price?

Also, what discount is a plumbing supply jobber given beyond this?

We are no longer able to sell your controls to our dealers at the standard discount, because they can purchase them considerably cheaper than that at any number of plumbing supply jobbers. Also the plumbing supply jobber can purchase your controls at almost the price we pay you, ordering in any quantity, and not committing himself to purchase any given quantity during the year as we are required to do.

Our dealer in Waterbury, Conn., only recently purchased some of your controls (a stock order), paying $15.00 for R-117 Protectorelays and 50% off list on all other items. He was quoted 50% off on any quantity and on any standard controls.

This is not one of those rumors which reached us tenth handed, for our own representative saw the carbon copy of the order giving the prices, and we confirmed the fact that delivery was made. The order was solicited by a salesman, (not your representative), the order placed, and delivery made. We know the purchaser well, and know the name of the salesman; but do not know whom he represented. The buyer, however, believes that the controls came from Providence, Rhode Island.

In New York City area a similar condition exists. We quote from a letter just received from our New York distributor:

375 "Your letter of the 27th regarding the price of Chronotherms did not require a reply since you plainly

stated that unless we could sell these clocks at your price you prefer to have us buy them elsewhere. However, the facts are as follows: clocks are being sold by most of the plumbing supply houses at $24.00 flat, in which case they buy the burner from us without the thermostat, we allow them $4.05, and that amount deducted from $24.00 means that the clocks cost the dealers $19.95. Frankly, why should they pay $24.00 if they can buy them for $19.95?

Regarding the immersion aquastats, ... supply houses sell them for $5.50. I would like to have you tell me the answer to all this."

We cannot tell him the answer, but if anyone can you ought to be the one. Having your products kicked around bargain basement style means that competing oil burner manufacturers are able to sell to our dealers because we live up to the spirit and the letter of our contract agreement and they do not. We cannot escape the conviction that these things are happening with your knowledge.

Since anyone, even a stranger, can walk into a supply house and purchase a single control for 23% less than your standard trade price it is common knowledge that it is being done, despite the not very convincing denials of your representatives. The only way your controls can be sold at such prices at a profit is for the seller to get a preferential price.

We cannot believe that your products and your prestige are being used as darts to disable or destroy the ethical manufacturers by whom your business was built, unless you lack the desire or the ability to stop it. To attribute the condition to either will be a confession of moral or mental delinquency.

If you condone such practices then we believe you should place these manufacturers who are living up to their contract agreements with you in a position to protect the trade they have built up by placing them on an equal price basis. You owe your oldest patrons that consideration.

We believe that one or more of the fair trade practices acts passed in recent years are designed to prevent preferential buying, and consequent cut price selling, and there is a question in our mind as to whether or not one of these acts is not being violated either by your company, your bootlegging friends, or by the jobbers or dealers who take advantage of the opportunity.

If you will not or cannot do anything to protect the majority of your patrons, then we ourselves

will trace such specific cases as we hear of to their sources, submit the facts that we find to the Oil
376 Burner Institute, and endeavor to have them instruct their legal counsel to ascertain if any law is being violated. It is our belief that there is a violation of the very law behind which you hide in endeavoring to explain why you cannot do anything to correct the condition.

We are simply looking for information and advice so we can figure out some way to successfully build a business along ethical lines, and are first going to the logical place to get it. Can the contract respecting manufacturers depend upon your cooperation, and if so in just what way will it be manifested?

Do you know that your controls are being sold to jobbers and dealers at prices in some cases equal to those charged manufacturers?

Do you care whether they are or not, or would you rather have the bootleggers purchase your product and demoralize the market than to do it with someone else's?

Can you suggest any way in which a manufacturer who lives up to his agreement can protect his trade in your product against these bargain peddlers other than turning the merchandise over at cost and thus investing capital and labor for you without compensation?

Our distributors are asking us the answer and we are passing it along to you before seeking the answer elsewhere.

Any help you can give us will be appreciated.

Yours very truly,
Oil Burner Division

Malleable Iron Fittings Company,
Branford, Connecticut.

Dear Mr. Gillis:

In Mr. Sweatt's absence I am acknowledging receipt of your letter of October 28th. Upon his return to the office toward the end of next week, I am sure that Mr. Sweatt will want to reply fully to the points raised in your letter.

In the meantime, I should like to tell you that we are fully aware of these unsatisfactory conditions which you describe, and that we are planning on certain fundamental changes in our policies for next year which will go a long way, if not all the way, in clearing up these bad practices.

May I suggest that you bear with us just a little while longer as we are confident that the policy changes which we have in mind will meet with your approval when announced.

Yours very truly,
Minneapolis-Honeywell Regulator Co.,
W. L. Huff,

378 COMMISSION'S EXHIBIT NO. 142.

Nov. 4, 1938.

Mr. H. W. Swett,
Minneapolis-Honeywell Reg. Co.,
Minneapolis, Minn.

Dear Sir:—

With reference to our conversation of last night, the suggestions made were just new thoughts, but the more I think of them, the better I like them. I would like to amplify a little the principal suggestions made.

First, we believe it would be advantageous to make all controls which will sell to manufacturers as standard equipment for their oil burners, etc., with covers of a different design or a different color from those which you will sell through jobbers and dealers and over the counter sales.

Since you state you prefer to have the greater part of your distribution through manufacturers, and we believe this would be a great advantage to you, we suggest that you have all over the counter material of the same black color and design that you now have, and that each year some little change either in color shade or other wise be made in the original equipment sold to the manufacturers. The working parts of the controls would of course be the same, but this would encourage the purchase of controls from their manufacturers by dealers, because they could always tell from the color, or whatever other characteristics of design you decide upon, that they are getting the latest up-to-date instrument. Whereas, if the over the counter sales were always of the same design, they would never be quite sure that what they were getting was new stock. Manufacturers themselves could work out a way to capitalize on this system.

We believe that if this is adopted, that the holes in the instrument to attach the cover should be spotted a little differently also, so that the cover of one class of material could not be changed to another.

379 If this were adopted, one half of your detective work would be done as soon as you see a control, if a stray one is being traced to its source.

A second suggestion is that the price differential between the various brackets be reduced. This would take away the incentive for the bootleggers to buy more than they need,

as the profit would not be sufficient to make it attracti[illegible]. Secondly, it would reduce the temptation of the more [illegible] ethical manufacturers to sell burners to favorite customers at approximately cost in order to get sufficient volume to place them in the next lower price bracket.

Thirdly, if a test case were ever made, I do not believe that under the Robinson-Patman Act present differential would be allowed to stand.

We sincerely hope that your efforts to stop this precarious bootlegging of your controls are successful.

Yours very truly,
Oil Burner Division,
Malleable Iron Fittings Company,
Herbert Gillis,
Manager Sales Promotion.

380 COMMISSION'S EXHIBIT NO. 143.

Minneapolis-Honeywell Regulator Company

Manufacturers' Control Contract

Purchaser: Submitted January 3, 1938.

This Agreement, entered [illegible]to between Minneapolis-Honeywell Regulator Company, a Delaware corporation, hereinafter called the Company, and Malleable Iron Fittings Co. of Branford, Conn., hereinafter called the Purchaser, Witnesseth:

That whereas the Company manufactures and sells a complete line of automatic temperature controls; and, whereas, the purchaser has use for such devices in conjunction with products of his manufacture, and for the sale of such devices to his dealers;

Now, therefore, in consideration of the premises, of the mutual covenants herein contained and of special prices extended the Purchaser by the Company, the parties hereto agree as follows:

Quantity.

The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract Est. at 1200 sets of the

Company's automatic temperature controls, each set consisting of one Thermostat, and one Limit Control, and one Primary Control. It is specifically agreed that other control equipment is not to be considered as a part of a set within the terms of this contract. Because the Company's costs are figured to cover a complete set of controls, and the following breakdown prices are purely for invoicing purposes, it is agreed that the Purchaser's yearly purchases will consist of at least 90% as many Room Thermostats and 100% (but at the Company's option not more than 125%) as many Limit Controls as Primary Controls.

Prices on Material Shipped From Factory.

Deduct 50¢ net from Limit Control prices for shipment of 10 or more of the same type at one time.

Purchaser's Copy

See Page 2 for Prices from Branch Stocks and C. O. D. Shipments.

x Royalty fee of 50¢ net will be added if Purchaser is not licensed under the Zoro Estate group of patents.

381 C. O. D. Shipments of Materials from Factory.

If the Purchaser requests C. O. D. shipment of standard devices or devices purchased at the odd model discount to his dealer from factory the Company will add a handling charge of 5%. There will be no charge for dealer shipments made on an open account basis from factory.

Prices from Branch Stocks.

All prices herein are predicated on delivery from factory, and are f. o. b. factory. The Company maintains limited stocks at its various branch offices and emergency shipments of standard equipment made the manufacturer therefrom will be invoiced at the prices shown herein, plus 5% to cover transportation, handling, warehousing, etc., but no handling charge will apply to instruments shipped at the odd model discount shown below.

C. O. D. Shipments of Materials from Branch Stocks.

If a Company branch makes a C. O. D. shipment of standard equipment to the Purchaser's dealer a charge of 10% will be made. Open account shipments will carry only the 5% charge mentioned above. Devices sold at odd model discount shipped the dealer on a C. O. D. basis will carry a 5% charge, but if shipped on an open account basis no added charge will be made.

Miscellaneous Control Prices.

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4, 5, Form SA 573-__, which are hereby made a part of this agreement, will be furnished at list prices stated less discount of 25-15-5% unless otherwise shown on the price sheets.

382 Conditions.

The Company agrees to render invoices to the Purchaser in accordance with the prices listed in the schedule above for the actual number of units shipped to the Purchaser by the Company, f.o.b. point of manufacture.

Prices relating to relay or motor operated devices and/or to magnetic valves are for 110 volt, 50 or 60 cycle specifications only, unless otherwise specified. Prices pertaining to Chronotherms and Electric Clock Thermostats are for

110 volt, 60 cycle specifications only. When ordered in lots of less than fifty units, the Company will add net extra charge for other voltages and frequency combination shown below, according to following schedule: Relay operated devices, excepting Type R153 and R83, $2.00 net each. Motor operated devices (excepting Type D and special industrial motors), Magnetic and Diaphragm valves, and Electric Clock Thermostats $1.00 net each. For current specification not shown, charges will be governed by the development work required.

110 volt, 40 cycle	220 volt, 30 cycle
110 volt, 30 cycle	220 volt, 25 cycle
110 volt, 25 cycle	110 volt, D. C.
220 volt, 60 cycle	220 volt, D. C.
220 volt, 50 cycle	32 volt, D. C.
220 volt, 40 cycle	

The extra charges outlined above will not be made for special alternating current voltage and frequency specifications when units are ordered in quantities of 50 or more of one device all of the same voltage and frequency and all to be shipped at one time. The extra charges outlined above will, however, apply to direct current devices in all quantities.

Net extra charges will be made for the following special requirements: Special range pressuretrols 2 to 50 lbs., or 3 to 150 lbs., $1.25 net each; special scales open contact thermostat 100° or less $2.00 net each, over 100°, $5.00 net each; special scales Airstats and Furnacestats $2.00 net each; special scales to 440° F. Immersion Aquastat $3.00 net each; special scales over 440° F. Immersion Aquastats $5.00 net each. Net extra charges on other special requirements quoted on request.

The Company is not obligated under the terms of this contract to supply instruments for current specifications or special constructions which in its opinion are impractical.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser.

Prices shown do not include thermostat cable or fittings.

Terms.

Shipments shall be made f.o.b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee.

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f.o.b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent.

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will pay such
383 award, but shall not be responsible for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchasers' place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business.

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the

sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment of Contract and Resale Agreement.

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of it, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except in conjunction with such products, and violation of this, or other conditions of this agreement gives the Company the right to immediately cancel same.

Deliveries.

It is agreed that this contract shall not be subject to cancellation except by the consent of the Company, and that serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filing orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designated in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Service Responsibility.

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings conducted by the Purchaser's field men.

Period of Contract.

This contract shall become effective at the accepted date, and expire on Dec. 31, 1938 unless sooner cancelled as hereinabove provided. The validity, enforceability and interpretation of all of the provisions of this contract shall be determined and governed by the laws of the State of Connecticut.

Minneapolis-Honeywell
Regulator Company

Manufacturers' Control Contract

Submitted December 15, 1938

Purchaser:

This Agreement, entered into between Minneapolis-Honeywell Regulator Company, a Delaware corporation, hereinafter called the Company, and Malleable Iron Fittings Co. of Branford, Conn. hereinafter called the Purchaser, Witnesseth:

That whereas the Company manufactures and sells a complete line of automatic temperature controls; and, whereas the purchaser has use for such devices in conjunction with products of his manufacture, and for the sale of such devices to his dealers;

Now, therefore, in consideration of the premises, of the mutual covenants herein contained and the prices extended the Purchaser by the Company, the parties hereto agree as follows:

Quantity

The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract 350 sets or more of the Company's automatic temperature controls. Because the Company's thermostats and primary controls are specifically designed to operate one with the other, it is unsatisfactory and often dangerous to mix controls made by different manufacturers in the same installation, and to avoid any such difficulty and divided service responsibility, it is agreed that each set shall consist of but one Thermostat, one Primary Control, and one Limit Control, and that the Purchaser will buy at least 90% as many Room Thermostats and 100% as many Limit Controls as Primary Controls at the following prices.

Prices on Material Shipped From Factory

T11 Acratherm, T44 or T45 Thermostat	3.75
T109 DaNite Acratherm	7.90
T105 Chronotherm	18.00

Purchaser's Copy

x Royalty fee of 50¢ net will be added if Purchaser is not licensed under the Zoro Estate group of patents.
z New models will be shipped against all orders as soon as available.

Caution! Important!

It is always unsatisfactory—often dangerous—to use mixed controls on the same installation, and it is of mutual interest to avoid this. The Company can give no assurance of satisfactory operation, or assume any service responsibility, if its controls are used with other makes.

388 Direct Dealer Shipments

If the Purchaser requests C. O. D. or open account shipment of standard devices from Branch stock to his dealer, the Company will add ten percent to the prices shown herein to cover transportation, warehousing, etc. Five percent will be added to devices purchased at the Odd Model discount and shipped from Branch stock on a C. O. D. or open account basis to the dealer.

There will be no added charge for dealer shipments made on an open account basis from factory, but C. O. D. shipments to the dealer from factory will carry a five percent charge.

Purchaser's Prices from Branch Stock

All prices herein are f. o. b. factory and are predicated on the fact that the Purchaser will buy in representative quantities and carry sufficient stock to serve his dealers. The Company maintains only limited stocks at its stocking Branch offices, and emergency shipments of standard equipment made to the Purchaser therefrom will be invoiced at the prices shown herein, f. o. b. Branch, plus five percent to cover transportation, handling, warehousing, etc. There will be no added charge for instruments shipped at the Odd Model discount.

Miscellaneous Control Prices

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4, 5, Form SA 573....., which are hereby made a part of this agreement, will be furnished at list prices stated less Odd Model discount of 25-20% unless otherwise shown on the price sheets.

389 Conditions

The Company agrees to render invoices to the Purchaser in accordance with the prices listed in the schedule above for the actual number of units shipped to the Purchaser by the Company, f. o. b. point of manufacture.

Prices relating to relay of motor operated devices and/or to magnetic valves are for 110 volt, 50 or 60 cycle specifications only, unless otherwise specified. Prices pertaining to Chronotherms and Electric Clock Thermostats are for 110 volt, 60 cycle specifications only. When ordered in lots of less than fifty units, the Company will add net extra charge for other voltages and frequency combination shown below, according to following schedule: Relay operated devices, excepting Type R153, R154 and R183, $2.00 net each. Motor operated devices (excepting Type D and special industrial motors), Magnetic, and Diaphragm valves, and Electric Clock Thermostats $1.00 net each. For current specification not shown, charges will be governed by the development work required.

110 volt, 40 cycle	220 volt, 30 cycle
110 volt, 30 cycle	220 volt, 25 cycle
110 volt, 25 cycle	110 volt, D. C.
220 volt, 60 cycle	220 volt, D. C.
220 volt, 50 cycle	32 volt, D. C.
220 volt, 40 cycle	

The extra charges outlined above will not be made for special alternating current voltage and frequency specifications when units are ordered in quantities of 50 or more of one device all of the same voltage and frequency and all to be shipped at one time. The extra charges outlined above will, however, apply to direct current devices in all quantities.

Net extra charges will be made for the following special requirements: Special range pressuretrols 2 to 50 lbs., or 5 to 150 lbs., $1.25 net each; special scales open contact thermostat 100°, or less $2.00 net each, over 100°, $5.00 net each; special scales Airstats and Furnacestats $2.00 net each; special scales to 440° F. Immersion Aquastat $3.00 net each; special scales over 440° F. Immersion Aquastats $5.00 net each. Net extra charges on other special requirements quoted on request.

The Company is not obligated under the terms of this contract to supply instruments for current specifications or special construction which in its opinion are impractical.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser.

Prices shown do not include thermostat cable or fittings.

Terms.

Shipments shall be made f. o. b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f. o. b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will

390 pay such award, but shall not be responsible for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchasers' place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment and
Cancellation of Contract

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein, as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except for use in conjunction with such products.

It is agreed that this contract shall be subject to can-

cellation by the Company without cause upon thirty (30) days written notice.

Deliveries

Serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designed in said orders.

Price Revisions

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Service Responsibility

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings.

Period of Contract

This contract shall become effective at the accepted date, and expire on Dec. 31, 1939 unless sooner cancelled as hereinabove provided. The validity, enforceability and interpretation of all of the provisions of this contract shall be determined and governed by the laws of the State of Connecticut.

391 COMMISSION'S EXHIBIT NO. 146.

(Letterhead of Minneapolis-Honeywell Regulator Company, Boston, Mass.)

January 9, 1939

Malleable Iron Fittings Co.
Branford, Conn.
Attention: Mr. Herbert Gillis

Gentlemen:

Our contracts with oil burner manufacturers are automatically retroactive if the manufacturer qualifies for the next succeeding bracket price.

As this will affect your company, you will receive a retroactive credit to apply against future purchases as soon as you have reached 1000 sets of controls. The sets consist of three units, primarily being determined by the number of primary oil burner relays purchased.

Upon your reaching 1000 sets, the credit will be figured on the basis of the net difference in price between second bracket and third bracket prices and any succeeding invoices on our controls will be priced on the basis of the third bracket prices then in force.

I believe that this explains quite completely the working of our retroactive contract plan.

Very truly yours,

Minneapolis-Honeywell Regulator Co.,
Per C. S. Hoyt.

Minneapolis-Honeywell Regulator Company.

Manufacturers' Control Contract.

Submitted December 15, 1939

Purchaser:

Agreement, entered into between Minneapolis-Honeywell Regulator Company, a Delaware corporation, hereinafter called the Company, and Malleable Iron Fittings of Branford, Connecticut, hereinafter called the Purchaser,

Wherein it is mutually agreed as follows:

Quantity.

The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named,

during the life of this contract 350 sets or more of the Company's automatic temperature controls. Because the Company's thermostats and primary controls are specifically designed to operate one with the other, it is unsatisfactory and often dangerous to mix controls made by different manufacturers in the same installation, and the Company does not give any assurance of satisfactory operation nor assume any service responsibility if its controls are used with other makes. It is, therefore, further agreed that each set shall consist of but one Thermostat, one Primary Control, and one Limit Control, and that the Purchaser will buy at least 90% as many Room Thermostats and 100% as many Limit Controls as Primary Controls at the following prices.

Prices on Material Shipped From Factory.

* Royalty fee of 50¢ net will be added if Purchaser is not licensed under the Zoro Estate group of patents.

Purchaser's Copy.

398 Waiver of Special Terms.

It is contemplated that during the life of this contract the Purchaser may submit orders under this contract on its own purchase order forms and that such forms may contain statements, clauses, or conditions modifying, add-

ing to, repugnant to, or inconsistent with the terms and provisions of this contract. It is the intention of the parties, however, and it is expressly agreed that notwithstanding any such statements, clauses or conditions contained in any of the order forms of the Purchaser the liabilities of the Company shall be determined solely by this contract, and in accepting and consummating any such order the Company shall be deemed not to have in any way changed, enlarged, or modified its liabilities or obligations as fixed by this contract.

Purchaser's Price from Branch Stock.

All prices herein are f.o.b. point of manufacture and are predicated on the fact that the Purchaser will carry sufficient stocks to serve his dealers, and that emergency pick-ups only will be made from the Company's stocking Branch offices or warehouses. Standard equipment from Branch or warehouse stocks will carry a 5% charge to cover transporation, handling, warehousing, etc., but there will be no added charge for devices sold at the Odd Model Discount.

Direct Dealer Shipments.

Direct dealer shipments of standard devices from Branch or warehouse stocks, C. O. D. or open account, will add 10% to the prices shown herein or 5% if pick-up is made at the Branch. Direct dealer shipments of devices sold at the Odd Model Discount, C. O. D., or open account, and shipped, or picked up, from Branch stock will carry a 5% charge. Shipments made to dealers from Factory on open account will carry no added charges, but C. O. D. shipments will carry a 5% charge

Miscellaneous Control Prices.

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4 Form SA 573 Oil, which are hereby made a part of this agreement, will be furnished at list prices stated less Odd Model discount of 25-20% unless otherwise shown on the price sheets.

Conditions.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any

particular may not be returned by the Purchaser. Prices on devices shown herein employing relay, motor or magnetic principle of operation are for 110 Volt, 60 Cycle specifications, unless otherwise specified. Chronotherm prices cover 110 Volt, 60 Cycle only. An extra charge will be made for other voltages and frequencies not shown above, and also for special scales, extensions and other deviations from standard.

Prices do not include thermostat cable or fittings.

Terms.

Shipments shall be made f.o.b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee.

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f.o.b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the

loyees or others. A defect in the mean-
ty in any part of said equipment shall
t is capable of being renewed, repaired
ate to condemn such equipment. This
sly in lieu of all other warranties, guar-
or liabilities, expressed or implied by
s representatives. All statutory or im-
other than title, are hereby expressly
uded.

/

grees that it will at its own expense de-
may be instituted by any party against
lleged infringement of patents relating
or apparatus of its own manufacture
haser under this contract provided such

said devices and/or apparatus are, in
onstitute infringement and their use is
any, if unable within a reasonable time
rchaser the right to continue using such
either by suspension of the injunction,
purchaser a license, or otherwise, will,
either replace said device or apparatus
place of business with non-infringing
us, or modify said device or apparatus
non-infringing, or accept the return of

the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business.

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment and Cancellation of Contract.

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except for use in conjunction with such products.

It is agreed that this contract shall be subject to cancellation by the Company without cause upon thirty (30) days' written notice.

Deliveries.

Serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designed in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period.

If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order, or that the Company will not be obligated to fill any orders including blanket orders outstanding, calling for a total of more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Service Responsibility.

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings.

Period of Contract.

This contract shall become effective at the accepted date, and expire on 12-31-40 unless sooner cancelled as hereinabove provided. The validity, enforceability and interpretation of all of the provisions of this contract shall be determined and governed by the laws of the State of Massachusetts.

Accepted at Branford, Connecticut.

Malleable Iron Fittings.

Minneapolis-Honeywell Regulator Company.

400 Waiver of Special Terms

It is contemplated that during the life of this contract the Purchaser may submit orders under this contract on its own purchase order forms and that such forms may contain statements, clauses, or conditions modifying, adding to, repugnant to, or inconsistent with the terms and provisions of this contract. It is the intention of the parties, however, and it is expressly agreed that notwithstanding any such statements, clauses or conditions contained in any of the order forms of the Purchaser the liabilities of the Company shall be determined solely by this contract, and in accepting and consummating any such order the Company shall be deemed not to have in any way changed, enlarged, or modified its liabilities or obligations as fixed by this contract.

Purchaser's Price from Branch Stock

All prices herein are f.o.b. point of manufacture and are predicated on the fact that the Purchaser will carry sufficient stocks to serve his dealers, and that emergency pick-ups only will be made from the Company's stocking Branch offices or warehouses. Standard equipment from Branch or warehouse stocks will carry a 5% charge to cover transportation, handling, warehousing, etc., but there will be no added charge for devices sold at the Odd Model Discount.

Direct Dealer Shipments

Direct dealer shipments of standard devices from Branch or warehouse stocks, C.O.D. or open account, will add 10% to the prices shown herein or 5% if pick-up is made at the Branch. Direct dealer shipments of devices sold at the Odd Model Discount, C.O.D., or open account, and shipped, or picked up, from Branch stock will carry a 5% charge. Shipments made to dealers from Factory on open account will carry no added charges, but C.O.D. shipments will carry a 5% charge.

Miscellaneous Control Prices

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4 Form SA 573 Oil, which are hereby made a part of this agreement, will be furnished at list prices stated less Odd Model discount of 25-20% unless otherwise shown on the price sheets.

Conditions

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser. Prices on devices shown herein employing relay, motor or magnetic principle of operation are for 110 Volt, 60 Cycle specifications, unless otherwise specified. Chronotherm prices cover 110 Volt, 60 Cycle only. An extra charge will be made for other voltages and frequencies not shown above, and also for special scales, extensions and other deviations from standard.

Prices do not include thermostat cable or fittings.

Terms

Shipments shall be made f.o.b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f.o.b. Company's factory. The Company assumes no lia-

bility for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired, or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices; and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the
401 Company to do so, and thereupon in case of a final award of damages in any such suit the Company will pay such award, but shall not be responsible for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchaser's place of business with non-infringing

devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment and Cancellation of Contract

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except for use in conjunction with such products.

It is agreed that this contract shall be subject to cancellation by the Company without cause upon thirty (30) days' written notice.

Deliveries.

Serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designed in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser

reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order, or that the Company will not be obligated to fill any orders including blanket orders outstanding, calling for a total of more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Service Responsibility.

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings.

Period of Contract.

This contract shall become effective at the accepted date, and expire on 12-31-40 unless sooner cancelled as herein-above provided. The validity, enforceability and interpretation of all of the provisions of this contract shall be determined and governed by the laws of the State of Massachusetts.

402 COMMISSION'S EXHIBIT NO. 150.

Minneapolis-Honeywell Regulator Company.

Manufacturers' Control Contract.

Submitted January 2, 1940.

Purchaser:

Agreement, entered into between Minneapolis-Honeywell Regulator Company, a Delaware corporation, hereinafter called the Company, and Malleable Iron Fittings Company of Branford, Connecticut, hereinafter called the Purchaser, Wherein it is mutually agreed as follows:

Quantity.

The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract 1,000 sets or more of the Company's automatic temperature controls. Because the Company's thermostats and primary controls are specifically designed to operate one with the other, it is unsatisfactory and often dangerous to mix controls made by different manufacturers in the same installation, and the Company does not give any assurance of satisfactory operation nor assume any service responsibility if its controls are used with other makes. It is, therefore, further agreed that each set shall consist of but one Thermostat, one Primary Control, and one Limit Control, and that the Purchaser will buy at least 90% as many Room Thermostats and 100% as many Limit Controls as Primary Controls at the following prices.

Prices on Material Shipped From Factory.

	Approx. 55% off
T11A Acratherm, T44A or T45A Thermostat	3.30

Purchaser's Copy.

403 Waiver of Special Terms.

It is contemplated that during the life of this contract the Purchaser may submit orders under this contract on its own purchase order forms and that such forms may contain statements, clauses, or conditions modifying, adding to, repugnant to, or inconsistent with the terms and provisions of this contract. It is the intention of the parties, however, and it is expressly agreed that notwithstanding any such statements, clauses or conditions contained in any of the order forms of the Purchaser the liabilities of the Company shall be determined solely by this contract, and in accepting and consummating any such order the Company shall be deemed not to have in any way changed, enlarged, or modified its liabilities or obligations as fixed by this contract.

Purchaser's Price from Branch Stock.

All prices herein are f.o.b. point of manufacture and are predicated on the fact that the Purchaser will carry sufficient stocks to serve his dealers, and that emergency pick-ups only will be made from the Company's stocking Branch offices or warehouses. Standard equipment from Branch or warehouse stocks will carry a 5% charge to cover transportation, handling, warehousing, etc., but there will be no added charge for devices sold at the Odd Model Discount.

Direct Dealer Shipments.

Direct dealer shipments of standard devices from Branch or warehouse stocks, C.O.D. or open account, will add 10% to the prices shown herein or 5% if pick-up is made at the Branch. Direct dealer shipments of devices sold at the Odd Model Discount, C.O.D., or open account, and shipped, or picked up, from Branch stock will carry a 5% charge. Shipments made to dealers from Factory on open account will carry no added charges, but C.O.D. shipments will carry a 5% charge.

Conditions.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser. Prices on devices shown herein employing relay, motor or magnetic principle of operation are for 110 Volt, 60 Cycle specifications, unless otherwise specified. Chronotherm prices cover 110 Volt, 60 Cycle only. An extra charge will be made for other voltages and frequencies not shown above, and also for special scales, extensions and other deviations from standard.

Prices do not include thermostat cable or fittings.

Terms.

Shipments shall be made f.o.b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee.

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f.o.b. Company's factory. The Company assumes no liability for consequential damages of any kind, and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired, or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent.

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices, and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will pay such award, but shall not be

responsible for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

404 In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchaser's place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business.

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment and Cancellation of Contract.

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except for use in conjunction with such products.

It is agreed that this contract shall be subject to cancellation by the Company without cause upon thirty (30) days' written notice.

Deliveries.

Serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designed in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order, or that the Company will not be obligated to fill any orders including blanket orders outstanding, calling for a total of more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Miscellaneous Control Prices.

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4, Form SA 573 Oil, which are hereby made a part of this agreement, will be furnished at list prices stated less Odd Model discount of 25-25% unless otherwise shown on the price sheets.

Service Responsibility.

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company

will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings.

Period of Contract.

This contract shall become effective at the accepted date, and expire on 12-31-40 unless sooner cancelled as hereinabove provided. The validity, enforceability and interpretation of all of the provisions of this contract shall be determined and governed by the laws of the State of Massachusetts.

Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee.

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f. o. b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equip-

ment shall not, when such part is capable of being renewed, repaired, or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent.

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this agreement provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any combination of other apparatus, devices, and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will pay such award, but shall not be responsible for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

407 In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchaser's place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined devices or apparatus and refund the sums paid therefor.

Conduct of Business.

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment and Cancellation of Agreement.

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except for use in conjunction with such products.

It is agreed that this agreement shall be subject to cancellation by the Company without cause upon thirty (30) days' written notice.

Deliveries.

Serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filing orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designed in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the agreement providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order, or that the Company will not be obligated to fill any orders including blanket orders outstanding, calling for a total of

more than one-twelfth of the amount of this agreement during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this agreement.

Miscellaneous Control Prices.

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4 Form SA 573 Oil, which are hereby made a part of this agreement, will be furnished at list prices stated less Odd Model discount of 25 and 25% unless otherwise shown on the price sheets.

Service Responsibility.

The prices shown in this agreement do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and proper installation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings.

Period of Agreement.

This agreement shall become effective at the accepted date, and expire on 12-31-41 unless sooner cancelled as hereinabove provided. The validity, enforceability and interpretation of all of the provisions of this agreement shall be determined and governed by the laws of the State of Massachusetts.

Automatic Home Appliance Company
109-11 Jamaica Avenue
Jamaica, New York
Attention: Mr. Hart

Dear Mr. Hart:

I believe that you appreciate that it is impossible for any manufacturer to build you this burner and to deliver it to you in small quantities at the price you have specified.

You will also recall that I advised you we had, at that time, between 75 and 80 of these burners on hand. Now the price quoted you of $42.50 each without controls, f.o.b. Lancaster, Penna., is a very low price and as you stated you had use for them we gave you an opportunity to purchase the whole lot at a low price. Today, we have between 50 and 60 of these units. If you desire to purchase them at a price of $42.50 each without controls or at a price of $59.00 with three Mercoid controls, we must have your order for the whole 50 at once, otherwise, we will not have them to ship, as they are starting to move out very rapidly.

Yours very truly,
Herco Oil Burner Corporation,
F. E. Herr,
President.

Minneapolis-Honeywell Regulator Company

Manufacturers' Control Contract

Submitted December 15, 1938.

Purchaser:

This Agreement, entered into between Minneapolis-Honeywell Regulator Company, a Delaware corporation, hereinafter called the Company, and Burner Parts & Service Corporation of Lancaster, Pa., 328 N. Arch Street, hereinafter called the Purchaser, Witnesseth:

That whereas the Company manufactures and sells a complete line of automatic temperature controls; and, whereas the purchaser has use for such devices in conjunction with products of his manufacture, and for the sale of such devices to his dealers;

Now, therefore, in consideration of the premises, of the mutual covenants herein contained and the prices extended the Purchaser by the Company, the parties hereto agree as follows:

Quantity.

The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract 50 sets or more of the Company's automatic temperature controls. Because the Company's thermostats and primary controls are specifically designed to operate one with the other, it is unsatisfactory and often dangerous to mix controls made by different manufacturers in the same installation, and to avoid any such difficulty and divided service responsibility, it is agreed

that each set shall consist of but one Thermostat, one Primary Control, and one Limit Control, and that the Purchaser will buy at least 90% as many Room Thermostats and 100% as many Limit Controls as Primary Controls at the following prices.

Prices on Material Shipped From Factory.

T11 Acratherm, T44 or T45 Thermostat	3.95
T109 DaNite Acratherm	8.55
T105 Chronotherm	18.50
R116 and R124 Protectorelays	9.85 x
R117 and R123 Protectorelays	11.10 x
R416 Lockswitch for DC	11.85 x
R417 Lockswitch for DC	13.10 x
L404 Pressuretrol	3.05 z
L409 Surface Aquastat	3.05 z
L419 Airstat	3.05 z
L415 Airstat	3.50 z
L412 Furnacestat	4.00 z
L465 Immersion Aquastat	3.50 z
L416 Immersion Aquastat	3.50 z
L401A Combination Control	5.50
L408 Vaporstat	5.25
L411 Vacuumstat	5.25
C402 Low Water Cutoff	8.60
C622A High Pressure low Water Cutoff	9.85

x Royalty fee of 50¢ net will be added if Purchaser is not licensed under the Zoro Estate group of patents.

z New models will be shipped against all orders as soon as available.

Purchaser's Copy.

Caution! Important.

It is always unsatisfactory—often dangerous—to use mixed controls on the same installation, and it is of mutual interest to avoid this. The Company can give no assurance of satisfactory operation, or assume any service responsibility, if its controls are used with other makes.

455 Direct Dealer Shipments.

If the Purchaser requests C. O. D. or open account shipment of standard devices from Branch stock to his dealer, the Company will add ten percent to the prices

shown herein to cover transportation, warehousing, etc. Five percent will be added to devices purchased at the Odd Model discount and shipped from Branch stock on a C. O. D. or open account basis to the dealer.

There will be no added charge for dealer shipments made on an open account basis from factory, but C. O. D. shipments to the dealer from factory will carry a five percent charge.

Purchaser's Prices from Branch Stock.

All prices herein are f. o. b. factory and are predicated on the fact that the Purchaser will buy in representative quantities and carry sufficient stock to serve his dealers. The Company maintains only limited stocks at its stocking Branch offices, and emergency shipments of standard equipment made to the Purchaser therefrom will be invoiced at the prices shown herein, f.o.b. Branch, plus five percent to cover transportation, handling, warehousing, etc. There will be no added charge for instruments shipped at the Odd Model discount.

Miscellaneous Control Prices.

Control equipment of the Company's manufacture not previously shown, but listed on sheets 1, 2, 3, 4, 5, Form SA 573-_____, which are hereby made a part of this agreement, will be furnished at list prices stated less Odd Model discount of 25-15% unless otherwise shown on the price sheets.

456 Conditions.

The Company agrees to render invoices to the Purchaser in accordance with the prices listed in the schedule above for the actual number of units shipped to the Purchaser by the company, f. o. b. point of manufacture.

Prices relating to relay or motor operated devices and/or to magnetic valves are for 110 volt, 50 or 60 cycle specifications only, unless otherwise specified. Prices pertaining to Chronotherms and Electric Clock Thermostats are for 110 volt, 60 cycle specifications only. When ordered in lots of less than fifty units, the Company will add net extra charge for other voltages and frequency combination shown below, according to following schedule: Relay operated devices, excepting Type R153, R154 and R183, $2.00 net each. Motor operated devices (excepting Type D and special in-

dustrial motors), Magnetic and Diaphragm valves, and Electric Clock Thermostats $1.00 net each. For current specification not shown, charges will be governed by the development work required.

110 volt, 40 cycle	220 volt, 30 cycle
110 volt, 30 cycle	220 volt, 25 cycle
110 volt, 25 cycle	110 volt, D. C.
220 volt, 60 cycle	220 volt, D. C.
220 volt, 50 cycle	32 volt, D. C.
220 volt, 40 cycle	

The extra charges outlined above will not be made for special alternating-current voltage and frequency specifications when units are ordered in quantities of 50 or more of one device all of the same voltage and frequency and all to be shipped at one time. The extra charges outlined above will, however, apply to direct current devices in all quantities.

Net extra charges will be made for the following special requirements: Special range pressuretrols 2 to 50 lbs., or 5 to 150 lbs., $1.25 net each; special scales open contact thermostat 100° or less $2.00 net each, over 100°, $5.00 net each; special scales Airstats and Furnacestats $2.00 net each; special scales to 440° F. Immersion Aquastat $3.00 net each; special scales over 440° F. Immersion Aquastats $5.00 net each. Net extra charges on other special requirements quoted on request.

The Company is not obligated under the terms of this contract to supply instruments for current specifications or special constructions which in its opinion are impractical.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser.

Prices shown do not include thermostat cable or fittings.

Terms.

Shipments shall be made f.o.b. Factory Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from the date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Depart-

ment of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alteration of terms of payment and of determining Purchaser's limit of credit.

Guarantee.

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, f.o.b. Company's factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Patent.

The Company agrees that it will at its own expense defend any suits that may be instituted by any party against the Purchaser for alleged infringement of patents relating to specific devices or apparatus of its own manufacture furnished the Purchaser under this contract provided such alleged infringement shall consist only in the use of such specific device or apparatus itself and not as a part of any

combination of other apparatus, devices and/or parts and provided the Purchaser shall have made all payments then due upon any order including such device or apparatus and gives the Company immediate notice in writing of any such alleged infringement and of the institution of any such suit and permits the Company, through its counsel, to defend such suits, and provided the Purchaser gives all needed information, assistance and authority to enable the Company to do so, and thereupon in case of a final award of damages in any such suit the Company will pay such
457 award, but shall not be responsible, for any compromise made without its written consent, nor shall the Company be bound to defend any suit or to pay any damages therein which may arise directly or indirectly by reason of the use of parts, devices and/or apparatus not furnished by the Company.

In the event that said devices and/or apparatus are, in any suit, held to constitute infringement and their use is enjoined, the Company, if unable within a reasonable time to secure for the Purchaser the right to continue using such device or apparatus, either by suspension of the injunction, by securing for the Purchaser a license, or otherwise, will, at its own expense, either replace said device or apparatus at the Purchasers' place of business with non-infringing devices or apparatus, or modify said device or apparatus so that it becomes non-infringing, or accept the return of the enjoined device or apparatus and refund the sums paid therefor.

Conduct of Business.

Whenever the Company deems it necessary or expedient for the protection of the Company's patent rights for the prevention of patent litigation, infringement or accounting suits, or for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such product, and the Purchaser agrees upon receipt of such notice to make no further sales or installations of any such product unless or until authorized so to do in writing by the Company.

Assignment and Cancellation of Contract.

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except for use in conjunction with such products.

It is agreed that this contract shall be subject to cancellation by the Company without cause upon thirty (30) days written notice.

Deliveries.

Serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designed in said orders.

Price Revisions.

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change. It is further agreed that the Purchaser will not order more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Service Responsibility.

The prices shown in this contract do not provide a margin for free field service to the Purchaser's customers, dealers or distributors by the Company, the Company's Branch offices, or distributors. However, the Company will welcome the opportunity of co-operating with the Purchaser in educating his factory personnel in the servicing and

proper insfallation of the Company's controls and in educating the dealers at the request of the Purchaser through group meetings.

Period of Contract.

This contract shall become effective at the accepted date, and expire on 12-31-39 unless sooner cancelled as herein-above provided. The validity, enforceability and interpretation of all of the provisions of this contract shall be determined and governed by the laws of the State of Pennsylvania.

	1½" Flow Valve, Angle, Flanged	7.00	3.75
	2" Flow Valve, Angle, Flanged	8.50	4.55
V561A	1" Flow Valve, Straight Thru, Screwed	7.50	4.00
	1½" Flow Valve, Straight Thru, Screwed	10.50	5.60
	2" Flow Valve, Straight Thru, Screwed	12.00	6.40
	3" Flow Valve, Straight Thru, Flanged	18.00	9.65
	4" Flow Valve, Straight Thru, Flanged	24.00	12.85

For odd voltages and frequencies write for special quotation.

Note: The above Circulators and Flow Valves will be priced Net as shown above.

Damper Motors

Type No.	Description	List Price
M26A	Electric Janitor Motor	$15.00
M26C	Zone Control Motor, Series 20	20.00
M87A	Spring Return Elec. Jan. Motor, Series 80	19.00

Note: The above controls will be invoiced at the list prices shown, less the odd model discount shown on page 2 of the attached contract.

Warm Air Zone Control Packages

Type No.	Description	List Price
Y12A	Zone Package for First Zone	$40.00
Y13A	Zone Package for Additional Zones	28.00
Y14A	Relief Zone Package	34.00
W1A	Power Box	12.00
W2A	Power Box (for Da-Nite operation)	25.00

Note: The above controls will be invoiced at the list prices shown, less the odd model discount shown on page 2 of the attached contract.

K204A Motorized Flow Valves

K204 Motorized Flow Valve consists of M204A Modutrol Motor, Z101 Linkage, and B561 Flow Valve (straight through type)

M204A	Modutrol Motor	$36.00 list less 25-15%
Z101A	Linkage	5.00 list less 25-15%
V561A	Flow Valves (straight through type) see tabulation in first column for list and net prices	

Modutrol Equipment

This type of equipment requires engineering service if satisfactory results are to be obtained. The general classifications of Modutrol Equipment are as follows: Remote Bulb Temperature Controllers, Motorized Valves, Modutrol Motors, and Series 90 Modulating Thermostats, Limit Controls and Relays.

Note: In limited quantities the above controls will be invoiced at the list prices shown, less 25-15% discount. Manufacturers using these devices as standard equipment in quantities will be quoted net prices upon application.

Extra Charges for Special Features

Thermostat Extra Charges	List	Net
Special scale, open or mercury switch type thermostats, add	$ 4.00	$ 2.00
Centigrade scale equivalent to Fahrenheit scale—T11, T19, T21, T29, T44, T45, T109, T209, T42, T43, T62	N.C.	N.C.
All other types, add	4.00	2.00
Standard special finishes, add	4.00	2.00
Locking Devices, T11, T21, T42, T43, T62, T44, T45	N.C.	N.C.
T19, T29 (locks on day and night dial), add.	1.00	.50
T105, T109, T205, T209, add	2.00	1.00
T105, T205 Chronotherms Special Voltages—220/25, 50, 60 110/25, 50, add	2.00	1.00
Week-end shutoff, week-end and holiday shut-off, add	4.00	2.00
Six tripping hands (where available), add	4.00	2.00
T42, T62, T43, less thermometer, deduct	.50	.25
Positive Nite shutoff (where available)	N.C.	N.C.
Reverse action—		
Open contact types, add	4.00	2.00
Mercury switch types	N.C.	N.C.
Special mercury switch, add	2.00	1.00

(Plus any extra charges for special building required.)

Water Valve Extra Charges	List	Net
For voltages and frequencies other than 110 volt, 50 or 60 cycles, add	$ 2.00	$ 1.00

Limit Control Extra Charges	List	Net
Special Ranges:		
L116, L216, L416, L165, L265, L428, L628 To 440° F. or 227° C., add	$ 6.00	$ 3.00
Over 440° F. or 227° C., add	10.00	5.00
L101, L201, L401, L109, L209, L409, L115, L215, L415, L134, L234, L434, L431, L412A, add	4.00	2.00
Standard Ranges in Centigrade, add	1.00	.50

L134, L234, L434		
Standard Ranges in Centigrade on both dials, add	2.00	1.00
L104, L204, L404, Special Ranges		
2 to 50#, 5 to 150#, add	2.50	1.25
10 to 300#, add	6.00	3.00
Special Lengths:		
L116, L216, L416, L165, L265		
Extra length up to and including 6" over standard, add	2.00	1.00
Over 6" and to 12" over standard, add	4.00	2.00
12", 18", and 24" over standard, add	6.00	3.00
36" over standard, add	8.00	4.00
Reverse Action:		
Open contact type devices, add	4.00	2.00
Mercury switch type devices	N.C.	N.C.
Special mercury switch, add	2.00	1.00

(Plus any extra charge for special building required.)

Low Water Cutoff Extra Charges	List	Net
C402, C602, for gauge glasses longer than 12", add	$ 1.00	$ .50
For manual reset except on C622B and C627A, add	1.00	.50
Manual reset C622B and C627A	N.C.	N.C.

Relays Extra Charges	List	Net
For voltages other than 110 or 220 volt, 50 or 60 cycles (and for D.C., where available), add	$ 4.00	$ 2.00

Damper Motor Extra Charges	List	Net
For voltages and frequencies other than 110 volts, 50 or 60 cycles, add	$ 2.00	$ 1.00

Prices subject to change without notice.

Manufacturers Confidential Price List

Protectorelays and Combustion Safety Controls

New Type No.	Description	List Price
R101A	Protectorelay — Intermittent type — recycling. D. C. only. Requires line voltage thermostat	$35.00
R114A	Protectorelay—Intermittent ignition—non-recycling	29.00
R116A	Protectorelay—Stack mounting—Constant ignition—recycling	20.00
R117A	Protectorelay—Stack mounting—Intermittent ignition—recycling	23.00
R118A	Protectorelay—Stack mounting—Intermittent ignition—delayed oil valve timing—recycling	31.00
R123A	Protectorelay—Burner mounting—Intermittent ignition—recycling—New design	23.00
R124A	Protectorelay—Burner mounting—Constant ignition—recycling—New design	20.00
R157A	Industrial Protectorelay. Intermittent ignition, delayed oil valve, timed ignition, timed recycling. Supersedes R105, R109, R113	35.00
R161A	Industrial Protectorelay—Intermittent ignition, delayed oil valve. Timed ignition, timed recycling. Used 2-wire combustion contact (available for D. C.)	43.00
R416A	D. C. Lockswitch—Stack mounting—Constant ignition—recycling—2-wire line voltage. Available for direct current only	24.00
R417A	D. C. Lockswitch—Stack mounting—Intermittent ignition—recycling—2-wire line voltage. Available for direct current only	27.00

Extra Charge Schedule

(Use Net Extra charges for controls having net prices. For controls priced at list subject to discount, use extra charges subject to same discount)

Feature	List	Net
Protectorelays and Lockswitches		
Standard 110-115 V. 50 or 60 Cy.	N. C.	N. C.
Other A. C. voltages and frequencies and D. C. (when available) add	$4.00	$2.00

Feature	List	Net
Alarm circuit in safety switch, add	$2.00	$1.00

Quantities of 50 or more specials of one type, at one time, are subject to special quotations except no extra charge is made for standard odd voltage and frequencies (other than D. C.)

Combustion Safety Controls

New Type No.	Description	List Price
C40A	Pyrostat—single contact	$13.50
C56A	Pyrostat—double contact—overlapping on heating	16.00
C57A	Protectostat—single contact	16.00
48H	Stackswitch—3-wire—overlapping	16.00
48R	Stackswitch—2-wire—make on temperature rise	16.00
48MR	Stackswitch—same as 48R except with manual rest	17.50

Extra Charge Schedule

(Use Net Extra charges for controls having net prices. For controls priced at list subject to discount, use list extra charge subject to same discount)

Feature	List	Net
Double length Pyrostat elements and shaft, add	$4.00	$2.00

Magnetic Oil Valves and Gas Pilot Valves

New Type No.	Description	List Price
V446A	Series 40 Magnetic Gas Valve with by-pass. $\frac{3}{8}$" pipe size	$ 7.00
V474A	Series 40 Magnetic Shut-off Oil Valve. $\frac{3}{8}$" size	11.50

Extra Charge Schedule

(Use Net Extra charges for controls having net prices. For controls priced at list subject to discount, use list extra charges subject to same discount)

Feature	List	Net
Standard voltages 110 V./50 or 60 Cy.	N. C.	N. C.
For other voltages and frequencies, add	$2.00	$1.00

Note: The above controls are priced net and will be invoiced according to price bracket being extended purchaser. Prices subject to change without notice.

462 COMMISSION'S EXHIBIT NO. 201.

Manufacturers Control Contract

Automatic Controls MH

Minneapolis-Honeywell Regulator Company

463 Minneapolis, Minn., Wabash, Ind., Chicago, Ill.

Minneapolis-Honeywell Regulator Company
Manufacturers' Control Contract

Submitted January 2, 1940.

Purchaser

Agreement, entered into between Minneapolis-Honeywell Regulator Company, a Delaware corporation, hereinafter called the Company, and Penn Boiler and Burner Manufacturing Corp. (Burner Parts and Service) of 359 N. Market St., Lancaster, Pennsylvania, hereinafter called the Purchaser.

Wherein It Is Mutually Agreed As Follows:

Quantity and Discounts

The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract 50 or more of the Company's automatic temperature controls.

The Company's thermostats and primary controls are specifically designed to operate one with the other and because it is unsatisfactory and often dangerous to mix controls made by different manufacturers in the same installation, the Company does not give any assurance of satisfactory operation or assume any service responsibility if its controls are used with other makes.

A discount of 25-25% from the list prices as shown in the attached price list form SA818-Pgs. 1, 2, 3, 4 Oil dated January 2, 1940 will be extended F. O. B. Company's Stocking Branch, Warehouse or Factory making shipment, or at the equivalent net prices shown below. The Odd Model discount will be 25-15%.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Retroactive Credit

A retroactive credit, to be absorbed by future purchases, will be issued to the Purchaser if during the period of this contract one hundred and fifty (150) units of the Company's manufacture are shipped to the Purchaser and paid for. The amount of credit will be determined by the difference between the price paid and the price the purchaser would have paid, had he purchased under the Company's No. 1 manufacturers bracket contract.

Direct Dealer Shipments

If the Purchaser requests C. O. D. or open account shipment of standard devices from Branch stock to his dealer, the Company will add 10% to the prices shown herein, or 5% if pick-up is made at the Branch to cover transportation, warehousing, etc. 5% will be added to devices purchased at the Odd Model discount and shipped from Branch stock on a C. O. D. or open account basis to the dealer. There will be no added charge for dealer shipments made on an open account basis from factory, but C. O. D. shipments to the dealer from factory will carry a 5% charge.

464 Waiver of Special Terms

It is contemplated that during the life of this contract the Purchaser may submit orders under this contract on its own purchase order forms and that such forms may contain statements, clauses, or conditions modifying, adding to, repugnant to, or inconsistent with the terms and provisions of this contract. It is the intention of the parties, however, and it is expressly agreed that notwithstanding any such statements, clauses or conditions contained in any of the order forms of the Purchaser the liabilities of the Company shall be determined solely by this contract, and in accepting and consummating any such order the Company shall be deemed not to have in any way changed, enlarged, or modified its liabilities or obligations as fixed by this contract.

Conditions

The Company agrees to render invoices to the Purchaser in accordance with the prices listed in the schedule above for the actual number of units shipped to the Purchaser by the Company, f. o. b. the Company's stocking Branch or Factory making shipment. Prices relating to relay or motor operated devices, magnetic valves or Electric Clock Thermostats and Chronotherms are for 110 volt 60 cycle specifications only.

For devices for other standard commercial A. C. voltages and frequencies, or for D. C. where available, and for other than standard specifications, list extra charges will be in accordance with attached price list. For other special requirements not listed, list extra charges will be quoted on request.

Approval of the Company must be secured by the Purchaser prior to the return of any equipment for credit. Instruments or equipment which are specially made in any particular may not be returned by the Purchaser.

Prices shown do not include thermostat cable or fittings.

Terms

Shipments shall be made f. o. b. the Company's stocking Branch, Warehouse or Factory making shipment Sight Draft attached to Bill of Lading, the Company to have the option as to point of shipment. If the Draft is paid within ten days from date of the invoice a special cash discount of two per cent will be allowed. Open account terms may be arranged by the Purchaser with the Treasury Department of the Company. If such terms are arranged, invoices 1st to 15th are subject to 2% cash discount on 25th, due net and payable on 10th of following month; invoices 16th to 31st are subject to 2% cash discount on 10th following month, due net and payable on 25th next. Remittances must be mailed on the 10th and 25th and cover entire purchases for period designated. All bills are payable to the Company. Credit and delivery of all equipment are subject to the approval of the Company which reserves the right of alterations of term of payment and of determining Purchaser's limit of credit.

Guarantee

The Company warrants all equipment manufactured by it and bearing its name plate to be free from defects in workmanship or material under normal use and service. If any part of the equipment herein described, and sold by the Company proves to be defective in workmanship or material, and if such part is within eighteen months from date of shipment from the Company's factory returned to such factory, transportation charges prepaid, and if the same is found by the Company to be defective in workmanship or material, it will be replaced or repaired, free of charge, F. O. B. Company's Factory. The Company assumes no liability for consequential damages of any kind and the Purchaser by acceptance of this equipment will assume all liability for the consequences of its use or misuse by the purchaser, his employees or others. A defect in the meaning of this warranty in any part of said equipment shall not, when such part is capable of being renewed, repaired or replaced, operate to condemn such equipment. This warranty is expressly in lieu of all other warranties, guaranties, obligations or liabilities, expressed or implied by the Company or its representatives. All statutory or implied warranties, other than title, are hereby expressly negatived and excluded.

Deliveries

Serious fires, strikes, differences with workmen, accidents to machinery, or other unavoidable cause or causes beyond the control of the Company, will excuse the Company from any delay in filling orders, provided, however, that the Company shall, in every case, use its best efforts to manufacture, ship and supply the equipment designed in said orders.

Price Revisions

The Company reserves the right to revise the prices contained herein provided thirty (30) days' notice in writing is given the Purchaser. Revised prices will apply to all unfilled orders, including blanket orders, in the Company's possession at the expiration of the thirty day notice period. If the revised prices are not agreeable, the Purchaser reserves the right to cancel the remainder of the contract providing the Company is notified in writing within thirty (30) days of the date of said price change.

It is farther agreed that the Purchaser will not order, or that the Company will not be obligated to fill any orders including blanket orders outstanding, calling for a total of more than one-twelfth of the amount of this contract during the thirty day price change notification period, or at the Company's option, the equivalent number of controls shipped during the same period of the previous year.

It is agreed that any sales, excise, or other Government taxes or assessments will be added to the prices contained in this contract.

Assignment of Contract and Resale Agreement

The Purchaser shall have no right to assign this agreement or any interest therein without the written consent of the Company.

The Purchaser agrees to use the controls listed herein as a part of, or in conjunction with, his products only and that such controls will not be sold or quoted separately to other manufacturers or vendors except for use in conjunction with such products. It is agreed that this contract shall be subject to cancellation by the Company without cause upon thirty (30) days' written notice.

Period of Contract

This contract shall become effective at the accepted date, and expire on December 31, 1940.

Accepted at Lancaster, Pennsylvania.
Penn Boiler and Burner Mfg. Corp.,
By E. C. Griffin,
Purchaser.

Dated Dec. 28, 1939.

Minneapolis-Honeywell Regulator Company,
J. C. Dorsey,
Its Dist. Mgr.,

Dated at Phila, Pa., 1/2 40,
J. C. Dorsey,
Salesman.

January 2, 1940

Minneapolis Honeywell Regulator Company.

Automatic Controls MH

Manufacturers' Confidential Price List

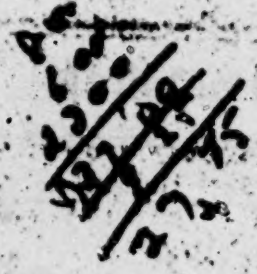
Manufacturers are often called upon to furnish miscellaneous controls of our manufacture, and the devices shown on the following pages cover those most commonly used, together with list prices now in effect but subject to change without notice.

Controls of our manufacture will be furnished at prices in effect covering the kind and quantities involved. To avoid misunderstandings, we urge the manufacturer to request quotations on all special items, and if this course is not followed it is agreed that our invoice prices will be accepted. This policy is necessary due to the hundreds of different types of controls we are manufacturing.

Other more specialized controls such as those used for Industrial Process control and those comprising our Modutrol System for Air Conditioning and large building temperature control normally require engineering service and installation supervision and are not contemplated in this contract. It is recommended that such problems be referred to the Minneapolis-Honeywell representative or office nearest the proposed installation for direct handling.

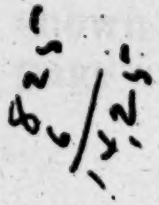
Dealer and Specialty Wholesalers' Prices

In order that manufacturers will have a clear understanding of our prices to the trade, we are outlining our schedule of discounts applying to standard heating controls.

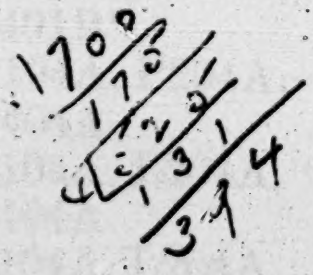


All controls listed under this section, SA-818, may be purchased by the dealer or specialty wholesaler, but orders will not be solicited for the M-H controls that are supplied as standard equipment by the manufacturer. This stipulation is definitely stated in all specialty wholesaler contracts.

Dealer Classification



A dealer is a firm engaged in trade associated with the heating, air conditioning, or refrigeration industries purchasing for resale to users.



Discount in all quantities, 25%.

(P. 1969)

LA119A, LA219A, LA419A	Airstats	6.00

Type No.	Description	List Price
LA119B, LA219B, LA419B	Airstats with Adj. Diff.	7.00
L121A*, L221A*, L421A*	Combination Multispeed Fan Controller	12.50
L134A, L434A	Combination Controls (open contact)	11.00
L144A, L244A, L444A	Immersion Aquastats	7.00
L145A*, L245A*, L445A*	Combination Limit and 2-Speed Fan Control	16.00
L445B*	2-Speed Fan Control	11.50
L147A	Summer-Winter Controller	14.50

(For special voltage see extra charge schedule for relays on reverse side.)

L157A, L454A	Vertical Type Immersion Aquastat	10.00
L170A, L270A	Immersion Aquastats (open contact)	7.00
L411A	Vacuumstat	11.00
LA412A, L431A	Furnacestat	7.00
L417A	2-Speed Fan Control	24.50
L428A, L428B	Immersion Aquastat	11.50
L628A	Immersion Aquastat	10.00

* The items so indicated are those which will shortly be replaced by new models.

Note: The above controls will be invoiced at the list prices shown subject to the contract discount indicated on page one of attached contract.

Humidity Controls

Type No.	Description	List Price
H41A	Humidity Controller	$25.00
H63A	Humidity Controller	15.00

Note: In limited quantities the above controls will be invoiced at the list prices shown, less odd model discount.

Magnetic Water Valves

Type No.	Description	List Price
V437A	Series 40	$7.00
V837A	Low Voltage, two-wire	9.00

Note: In limited quantities the above controls will be invoiced at the list prices shown, less odd model discount.

Lo-Water Cutoffs

Type No.	Description	List Price
C402A	Gauge Glass Series 40, SPST	$17.00
C602A	Gauge Glass Series 60, SPDT	18.50
C622A	150# per sq. inch	21.50
C622B	Double Circuit, 150# per sq. inch	25.50
C627A	1-inch Pipe Size, 25# per sq. inch., SPDT	18.00
C401A	Boiler mounted, screwed type, SPST	12.00
C601A	Boiler mounted, screwed type, SPDT	13.00

Note: The above controls will be invoiced at the list prices shown subject to the contract discount indicated on page one of attached contract.

Relays

Type No.	Description	List Price
R12A	Series 10, DPDT Switching	$14.00
R14A	Series 10, SPDT Switching	10.00
R14B (D.C.)	Series 10, SPDT Switching	14.00
R15A (D.C.)	Series 40, SPST Switching	12.00
R19A	Series 10, SPST Switching	8.00
R32A	Series 30, SPDT Switching	15.00
R33A	Series 30, DPDT Switching	19.00
R39A	Series 30, SPST Switching	10.00
R41A	Series 40, 3PST Switching	16.00
R48A	Series 40, SPST Switching	6.50
R48B	Series 40, SPDT Switching	7.50
R48C	Series 40, DPDT Switching	8.00
R132A	Summer-Winter Relay	9.00
R155A	Warm Air Program Relay	16.50
R155B	Same as R155A, except with extra contact for cooling	18.00
R156A	Warm Air Program Relay for 2-Speed Fan	26.00

Note: The above controls (excluding the R19A, R132, R155 and R156A which will be invoiced at list prices less contract discount) will be invoiced at list prices shown, less odd model discount shown on page 1 of the attached contract.

Thermostat Guards

Type No.	Description	List Price
W50A	Thermostat Guard	$16.00
W51A	Cast Aluminum Guard for plain thermostat.	5.50

Note: The above Controls will be invoiced at list prices, less the odd model discount shown on the attached contract.

Prices subject to change without notice.

See reverse side for extra charge schedule.

Type No.	Description	List Price
M403A&B	Circulator, 1″, Screwed	$34.00
	Circulator, 1½″, Flanged	39.50
	Circulator, 2″, Flanged	44.00
M401A	Circulator, 3″, Flanged	64.50
M401B	Circulator, 3″, w/4″ Impeller, Flanged	79.00
V563A	1″ Flow Valve, Angle, Screwed	4.50
	1½″ Flow Valve, Angle, Flanged	7.00
	2″ Flow Valve, Angle, Flanged	8.50
V561A	1″ Flow Valve, Straight Thru, Screwed	7.50
	1½″ Flow Valve, Straight Thru, Screwed	10.50
	2″ Flow Valve, Straight Thru, Screwed	12.00
	3″ Flow Valve, Straight Thru, Flanged	18.00
	4″ Flow Valve, Straight Thru, Flanged	24.00

For odd voltages and frequencies write for special quotation.

Note: The above controls will be invoiced at the list prices shown subject to the contract discount indicated on page one of attached contract.

Damper Motors

Type No.	Description	List Price
M26A	Electric Janitor Motor, Series 20	$15.00
M26C	Zone Control Motor, Series 20	20.00
M87A	Spring Return Elec. Jan. Motor, Series 80	19.00

Note: The above controls will be invoiced at the list prices shown, less the odd model discount shown on page 1 of the attached contract.

Warm Air Zone Control Packages

Type No.	Description	List Price
Y12A	Zone Package for First Zone	$40.00
Y13A	Zone Package for Additional Zones	28.00
Y14A	Relief Zone Package	34.00
W1A	Power Box	12.00
W2A	Power Box (for Da-Nite operation)	25.00

Note: The above controls will be invoiced at the list prices shown, less the odd model discount shown on page 1 of the attached contract.

K204A Motorized Flow Valves

K204 Motorized Flow Valve consists of M204A Modutrol Motor, Z101 Linkage, and V561 Flow Valve (straight through type)

M204A Modutrol Motor...$37.00 list less 25—15%
Z101A Linkage ..... 6.00 list less 25—15%
V561A Flow Valves (straight through type) see tabulation in first column for list and net prices.

Modutrol Equipment

This type of equipment requires engineering service if satisfactory results are to be obtained. The general classifications of Modutrol Equipment are as follows: Remote Bulb Temperature Controllers, Motorized Valves, Modutrol Motors, and Series 90 Modulating Thermostats, Limit Controls and Relays. Refrigeration Equipment is also included in this classification.

Note: In limited quantities the above controls will be invoiced at the list prices shown, less 25-15% discount. Manufacturers using these devices as standard equipment in quantities will be quoted net prices upon application.

Metaphram Equipment

In limited quantities, controls in this classification will be invoiced at list prices less the odd model discount shown on page 1 of attached contract.

Extra Charges for Special Features

Use same discount on extra charges as on controls to which special features apply.

Thermostat Extra Charges	List
Special scale, open or mercury switch type thermostats, add	$4.00
Centigrade scale equivalent to Fahrenheit scale—T11, T19, T21, T29, T44, T45, T109, T209, T42, T43, T62	N.C.
All other types, add	4.00
Standard special finishes, add	4.00
Locking Devices, T11, T21, T42, T43, T62, T44, T45	N.C.
T105, T109, T205, T209, add	2.00
T105, T205 Chronotherms	
Special Voltages—220/25, 50, 60	
110/25, 50, add	2.00
Week-end shutoff, week-end and holiday shutoff, add	4.00
Six tripping hands (where available), add	4.00
T42, T62, T43, less thermometer, deduct	.50
Positive Nite shutoff, T11, T21, T44, T45	N.C.
Reverse action—	
Open contact types, add	4.00
Mercury switch types	N.C.
Special mercury switch, add	2.00

(Plus any extra charges for special building required.)

Low Water Cutoff Extra Charges	List
C402, C602, for gauge glasses longer than 12", add	$1.00
For manual reset except on C622B and C627A, add	1.00
Manual reset C622A and C627A	N.C.

Water Valve Extra Charges	List
For voltages and frequencies other than 110 volt, 50 or 60 cycles add	$2.00

Limit Control Extra Charges	List	Net
Special Ranges:		
L144, L244, L444, L170, L270		
To 400° F. or 204° C., add	$6.00	
Standard Ranges in Centigrade, add	1.00	
L157, L454, L428, L628, Special Ranges	6.00	
Standard Ranges to Centigrade	1.00	

	List	Net
LA109, LA209, LA409		
Special Range, 140—240	2.00	
Standard Ranges in Centigrade	1.00	
L101, L201, L401, LA119, LA219, LA419A, LA412A, L431, Special Ranges, add	6.00	
Standard Ranges in Centigrade, add	1.00	
L134, L434		
Standard Ranges in Centigrade on both dials add	2.00	
Special Lengths:		
L144, L244, L444, L170, L270		
Special lengths well 4½" and 6" or special nut 2¼" on L170, L270, add	2.00	
Other special extension up to 12"	6.00	
Over 12" extension	Special quotation	
L628, L428, L157, L454, special length well	Special quotation	
LA119, LA219, LA419, LA412A, LA222		
Special length insertion, 8" surface mounting or 18" ball mounting	2.00	
Other special lengths, 24" max.	6.00	
L101, L201, L401, L121, L221, L421, L145, L445		
8" insertion	N.C.	
Other special lengths	6.00	
Reverse Action:		
Open contact type devices, add	4.00	
Mercury switch type devices	N.C.	
Special mercury switch, add	2.00	

(Plus any extra charge for special building required.)

Relays Extra Charges	List
For voltages other than 110 or 220 volt, 50 or 60 cycles (and for D.C., where available), add	$4.00

Damper Motor Extra Charges	List
For voltages and frequencies other than 110 volts, 50 or 60 cycles, add	$2.00

Prices subject to change without notice.

Manufacturers Confidential Price List

Protectorelays and Combustion Safety Controls

New Type No.	Description	List Price
R101A	Protectorelay — Intermittent type—recycling. D.C. only. Requires line voltage thermostat	$35.00
R114A	Protectorelay — Intermittent ignition—non-recycling	29.00
R116A	Protectorelay — Stack mounting—Constant ignition—recycling	20.00
R117A	Protectorelay—Stack mounting—Intermittent ignition—recycling	23.00
R118A	Protectorelay—Stack mounting—Intermittent ignition—delayed oil valve timing—recycling	31.00
R123A	Protectorelay — Burner mounting—Intermittent ignition — recycling—New design	23.00
R124A	Protectorelay—Burner mounting—Constant ignition—recycling—New design	20.00
R157A	Industrial Protectorelay. Intermittent ignition, delayed oil valve, timed ignition, timed recycling	35.00
R161A	Industrial Protectorelay—Intermittent ignition, delayed oil valve. Timed ignition, timed recycling. Uses 2-wire combustion contact (available for D.C.)	43.00
R161B	Industrial Protectorelay—Intermittent ignition, delayed oil valve and ignition timing, non-recycling. Uses 2-wire combination control (available for D.C.)	43.00
R161C	Industrial Protectorelay—Same specifications as R161B except constant ignition	43.00

New Type No.	Description	List Price
R416A	D.C. Lockswitch — Stack mounting — Constant ignition—recycling—2-wire line voltage. Available for direct current only	24.00
R417A	D.C. Lockswitch—Stock mounting—Intermittent ignition—recycling—2-wire line voltage. Available for direct current only	27.00
R416A, B, C	Same as R161A, B, C, except for D.C. only	47.00

Extra Charge Schedule

Use same discount on extra charges as on controls to which special features apply.

Feature	List
Protectorelays and Lockswitches	
Standard 110-115 V. 50 or 60 Cy.	N.C.
Other A.C. voltages and frequencies and D.C. (when available) add	$4.00
Alarm circuit in safety switch, add	2.00

Quantities of 50 or more specials of one type, at one time, are subject to special quotations except no extra charge is made for standard odd voltage and frequencies (other than D.C.)

Combustion Safety Controls

New Type No.	Description	List Price
C40A	Pyrostat—single contact	$18.50
C56A	Pyrostat — double contact — overlapping on heating	16.00
C57A	Protectostat—single contact	16.00
C503A (48H)	Stackswitch—3-wire—overlapping	16.00
C403A (48R)	Stackswitch—2-wire—make on temperature rise	16.00
C403C (48)	Stackswitch—2-wire—break on temperature rise	16.00
C403B (48MR)	Stackswitch—same as 48R except with manual reset	17.50

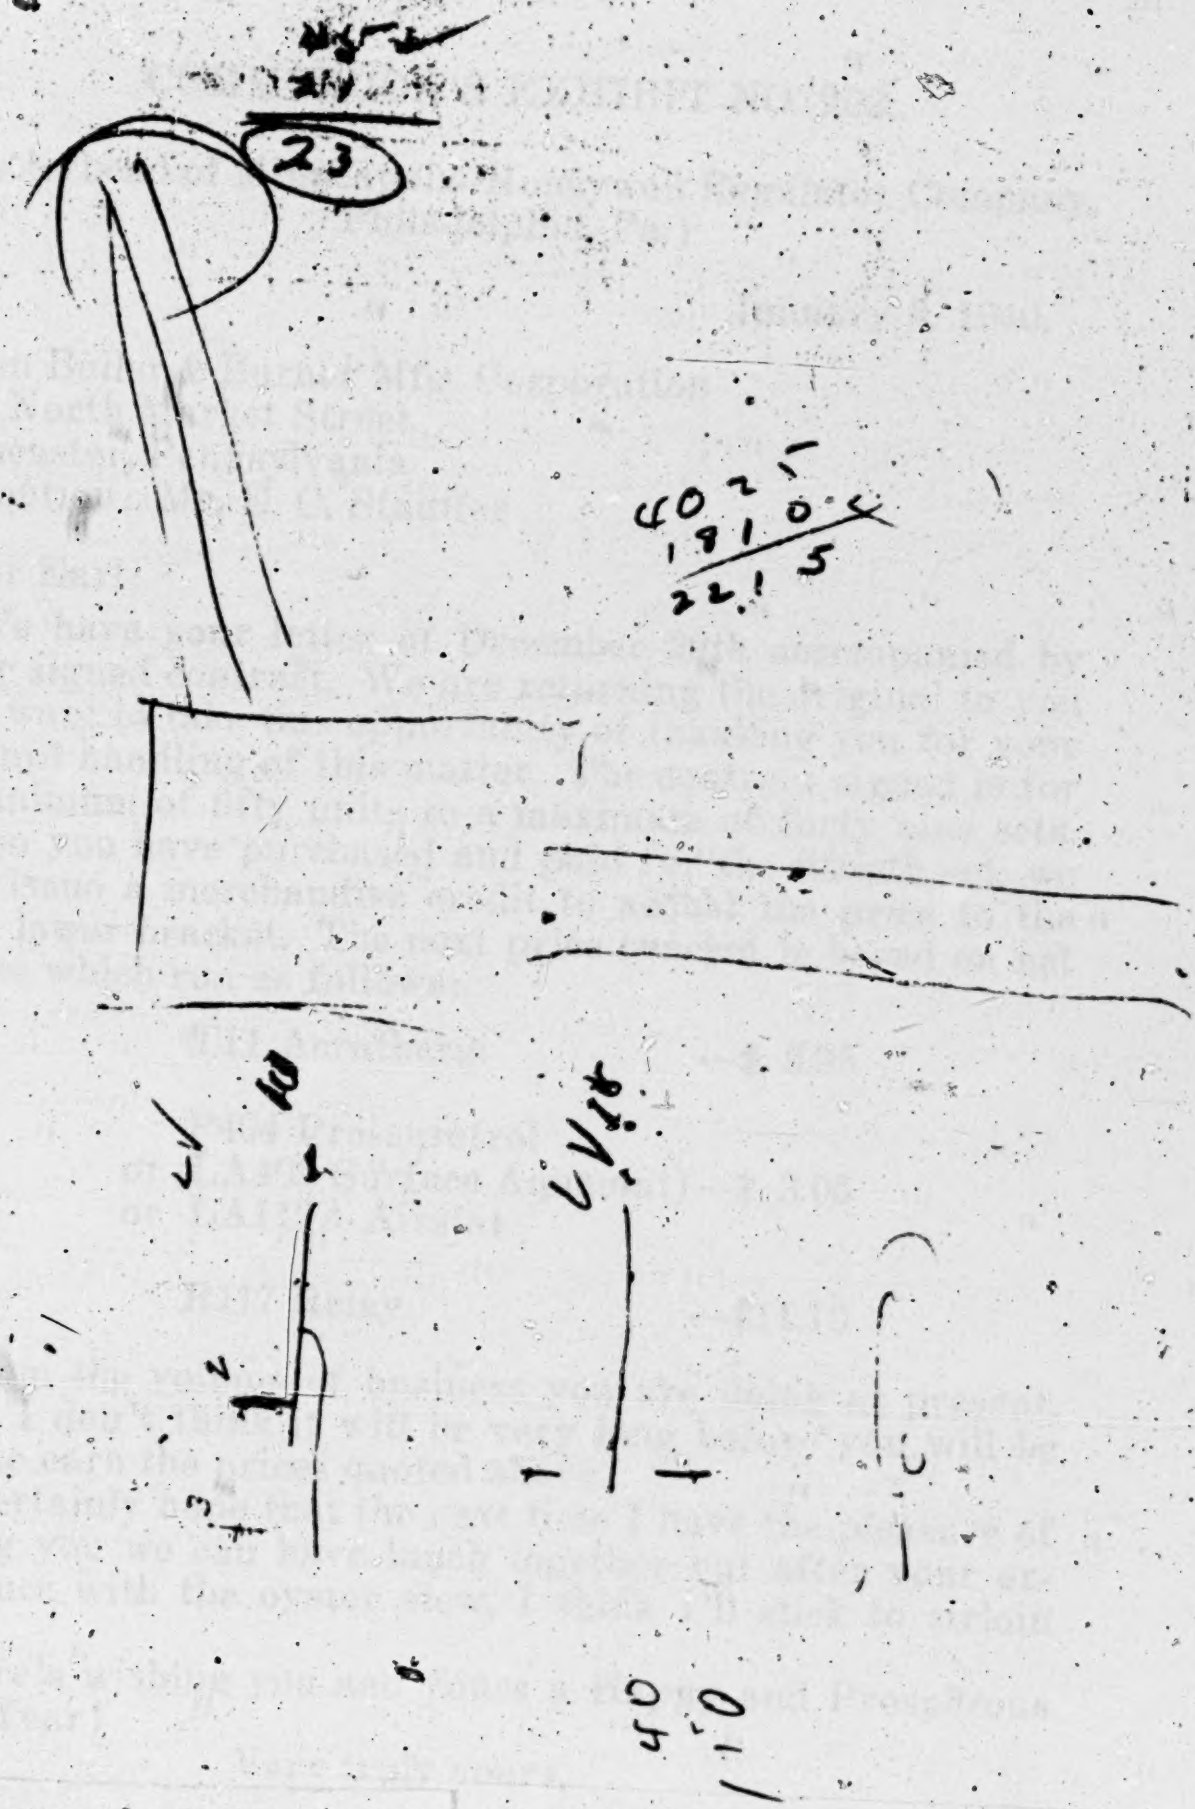
Extra Charge Schedule

Use same discount on extra charges as on controls to which special features apply.

Feature	List
Double length Pyrostat elements and shaft, add....	$4.00

Magnetic Oil Valves and Gas Pilot Valves

New Type No.	Description	List Price
V446A	Series 40 Magnetic Gas Valve with by-pass. ⅜" pipe size	$7.00
V474A	Series 40 Magnetic Shut-off Oil Valve. ⅜" size	11.50



Extra Charge Schedule

Use same discount on extra charges as on controls to which special features apply.

Feature	List
Standard voltages 110 V./50 or 60 Cy.....	N.C.
For other voltages and frequencies, add.....	$2.00

Note: The above controls will be invoiced at the list prices shown subject to the contract discount indicated on page one of attached contract.

Prices subject to change without notice.

471 COMMISSION'S EXHIBIT NO. 202.

(Letterhead of Minneapolis-Honeywell Regulator Company, Philadelphia, Pa.)

January 3, 1940.

Penn Boiler & Burner Mfg. Corporation
359 North Market Street
Lancaster, Pennsylvania
Attention: Mr. E. C. Stauffer

Dear Earl:

We have your letter of December 29th accompanied by your signed contract. We are returning the original to you and want to take this opportunity of thanking you for your prompt handling of this matter. The contract signed is for a minimum of fifty units to a maximum of forty nine sets. When you have purchased and paid for the fiftieth set, we will issue a merchandise credit to adjust the price to the next lower bracket. The next price bracket is based on net prices which run as follows:

T11 Acratherm —$ 3.95

P404 Pressuretrol
or LA409 Surface Aquastat)—$ 3.05
or LA119A Airstat

R117 Relay —$11.10

From the volume of business you are doing at present, Earl, I don't think it will be very long before you will be able to earn the prices quoted above.

I certainly hope that the next time I have the pleasure of seeing you we can have lunch together but after your experience with the oyster stew, I think I'll stick to sirloin steak.

Here's wishing you and yours a Happy and Prosperous New Year!

Very truly yours,

Minneapolis-Honeywell Regulator Co.
John
J. C. Dorsey.

September 5, 1940.

Minneapolis-Honeywell Regulator Co.
Minneapolis, Minnesota

Gentlemen:

We have an order from one of our customers for Minneapolis Honeywell controls type 793X01 marked transformer relays and #254L immersion aquastats.

We have made a careful search and cannot determine what controls are meant. We do know that they are Minneapolis controls and that they are special numbers that have been made up, we have been told, for the Detroit Lubricator Company.

What we would like to learn is what controls are desired by our customer so that we can give his order prompt attention.

Very truly yours,
Penn Boiler & Burner Mfg. Corp.
A. S. Kimmel:rh Per E. C. Stauffer.

Air Mail

(Letterhead of Minneapolis-Honeywell Regulator Company, Minneapolis, Minn.)

September 9, 1940.

Penn Boiler & Burner Mfg. Corp.,
Lancaster, Pennsylvania.

Attention: Mr. A. S. Kimmel

Gentlemen:

Thank you very much for your letter of September 5th. The type 793 relay is a control manufactured by the Penn Electric Switch Co., and the type 254 Immersion Aquastat is manufactured by the Detroit Lubricator Co.

Inasmuch as your customer specifies Minneapolis-Honeywell controls, we are enclosing installation leaflets on con-

trols that may be used in place of those mentioned in your letter. The R19A relay may be used in place of the type 793 relay, and the L444A Immersion Aquastat may be used in place of the type 254 Immersion Aquastat. Figure 4, page 2, of the enclosed installation leaflet on our Series 10 relays will show you a typical hook-up incorporating the use of the R19A relay, and the installation leaflet on the L444 Immersion Aquastat will give you the complete specifications and installation data of that control.

In the event that you may have any further questions on either the R19A relay or the L444 Immersion Aquastat in your customer's particular application, please don't hesitate to call on us here in Minneapolis, or more conveniently for you, our Harrisburg office, located at 6 N. 5th St. They regularly serve your territory, and we assure you that they will be glad to be of any assistance possible.

Yours very truly,
Minneapolis-Honeywell Regulator Co.
W. H. Christensen,
Original Equipment Division.

478 COMMISSION'S EXHIBIT NO. 205.

January 30, 1940.

Minneapolis-Honeywell Regulator Co.
Wayne & Roberts Ave.
Philadelphia, Pa.

Attention: Mr. John Dorsey, Manager

Dear John:

I am very sorry that we could not conclude our difficulties pertaining to costs, etc. while at the Cleveland Show, but as I explained to you we are now paying your company $6 more for controls; whereas, last year we paid $4. However, I have found a source of supply for controls where I actually can buy a set of controls that you charge me $21 for at a price of $13. Therefore, as soon as I can complete the multigraph work, I am sending a bulletin to my dealers in which we will quote $12 for M-H controls when such controls are purchased direct from the M-H factory and one dollar less when such purchases are made through a com-

petitive manufacturer using Mercoid as our base price and standard equipment.

You see, I can't help but see that you are so justified in making the $6 extra charge that I must do likewise, hence the $12 additional cost. I find now that I can buy oil burners to use in my Units with an oil burner at approximately $13 per set and since my Mercoid price in the former case is $6 lower than your price or in the latter case $1 more it will be necessary for me to make this distinction in my price brackets and I am accordingly sending out a bulletin of which I will submit you a copy within a few days. With kind personal and trusting that you got over the Show alright, I am

Very truly yours,

Penn Boiler & Burner Mfg. Corp.
Per E. C. Stauffer.

ECS:RH

479 COMMISSION'S EXHIBIT NO. 206-A.

May 10, 1940.

Mr. John Dorsey
Minneapolis-Honeywell Regulator Co.
Wayne & Roberts Ave.
Philadelphia, Pa.

Dear John:

Since going over our agreement and discussion which we had on your last visit here, I wish to advise you that I don't believe it will be necessary for us to sign any contract or purchase any controls directly from you as a manufacturer.

The set up is such that we can purchase them at considerably lower price from various sources competitive to us and since we carry in our heart a great sympathy for competitors, we would much rather help them out than the manufacturer as well as the fact that we desire to buy at prices commensurate with our competition.

In checking over the prices quoted some dealers who handle our boilers and competitive burners, we find that they can buy oil burner controls cheaper than we can with the results that on this basis it would be practically hopeless

for us to sell them controls. In fact comparing our dealers' prices with your prices to us, we could still purchase controls cheaper from our own dealers than from you.

In order to be logical, the set up should be such that we could sell our dealers controls at a profit.

Very truly yours,

Penn Boiler & Burner Mfg. Corp.
Per E. C. Stauffer.

487 COMMISSION'S EXHIBIT NO. 210-A.

(Letterhead of Penn Electric Switch Co., Goshen, Ind.)

Malcolm E. Henning
Vice President

December 2, 1943

Major W. W. Shepard,
Federal Trade Commission,
Washington, D. C.

Dear Major Shepard:

I have been able to obtain the information which you require sooner that I anticipated. Under the circumstances, I see no reason why I should not forward this to you in Chicago by way of Mr. Freeman, who I hope will be good enough to pass it on to you.

The tabulation is as follows:

Penn's Sales of Oil Burner Controls, Consisting of Thermostats, Stack Switches and Limit Switches During the years 1940 and 1941.

	1940	1941
Thermostats	40,629	54,513
Stack Switches	39,428	43,029
Limit Controls	61,073	72,441
	141,130	169,963

It will be noted that we sold 141,130 controls for oil burners in 1940 and 169,963 in 1941. This excludes all miscellaneous controls, such as clocks, relays, transformers, and a wide assortment of accessory items of this kind which likewise are chargeable to the oil burner heating industry. I have excluded these since they were excluded in the information given to Mr. Royal by Albert Penn for the years 1937, 1938 and 1939.

The average price for a thermostat is a little more than $3.00, a limit switch $2.50, and a stack switch a little better than $9.00. If you total these and divide by three, you will arrive at an average price per piece of very close to $5.00 each. Now, if you will multiply this by the number of units we sold in 1941, you can understand why I stated the Penn Co. was doing a $1,000,000 business in the heating field for oil burners alone. I say this because, as stated previously, many accessories we have excluded to make this tabulation coincide with that which we furnished Mr. Royal for 1937, 1938, and 1939.

Had the Penn Co. not moved its plant in July 1937, swelling its sales for the first six months to prevent tying up of its customers for the following six months, there would have been no difference in our sales curve in

any of the years in question. That is why I contend it is reasonable to say that our growth has been steadily upward.

I hope you will pardon me for injecting more than you asked for, but it has not been our policy to hurt a competitor by any abuse or misuse of facts, and I am sure this is the way you would prefer to have it.

It was a pleasure to make your acquaintance, and I am going to give you a ring the first time I am in Washington.

Sincerely yours,

Malcolm E. Henning.

Major W. W. Sheppard,
Trial Examiners' Division,
Federal Trade Commission,
Washington, D. C.

Re:—Minneapolis-Honeywell Regulator Co.
Docket No. 4920

Dear Major Sheppard:

In connection with my testimony before you in the above matter on behalf of the Penn Electric Switch Co. on November 30, 1943, there was introduced in evidence as Respondent's Ex. 102, a schedule showing for the years 1937 through 1941 the bracket prices at which Penn Electric primary controls, limit controls and thermostats were offered and sold to oil burner manufacturers.

Subsequently it was brought to my attention that the schedule did not set forth the quantities applicable to each bracket, and I have now been asked by Counsel for the Respondent to supplement Respondent's Exhibit 102 by furnishing the quantities applicable to the price brackets shown by that schedule. Such supplemental information is attached hereto for inclusion in the record.

Very truly yours,
Malcolm E. Henning.

512 RESPONDENT'S EXHIBIT NO. 8.

Manufacturers' Purchase Contract

The Mercoid Corporation
4201 Belmont Ave. Chicago, Ill.

This Agreement, entered into between The Mercoid Corporation, a Delaware corporation, hereinafter called the "Company," and Cleveland Steel Products Co. of Cleveland, Ohio, hereinafter called the "Purchaser,"

Witnesseth:

Whereas the Company is engaged in manufacturing automatic electric controls for heating, refrigerating, air conditioning and other apparatus, machinery and equipment, and

Whereas the Purchaser is desirous of purchasing such controls for use in connection with products of the Purchaser's own manufacture,

Now, Therefore, in consideration of the premises and of the mutual covenants hereinafter set forth the parties hereto agree as follows:

Quantity

Subject to the terms and provisions hereinafter contained, the Company agrees to sell and the Purchaser agrees to purchase, during the term of this agreement, ... units of the Company's automatic controls (each unit consisting of one of the controls listed herein), at the prices shown.

Miscellaneous Controls and Control Equipment

Miscellaneous automatic controls and control equipment of the Company's manufacture, not listed herein but shown in the Company's catalogue attached hereto, will be furnished at the catalogue list prices less the discounts shown on the manufacturers' discount sheet attached hereto. The list prices and discounts shall be subject to change at any time and from time to time, without notice. All orders for such miscellaneous controls and control equipment shall be subject to acceptance and approval by the Company.

Term of Agreement

This agreement shall become effective on the date of acceptance by the Company and shall continue to and including December 31, 1938, unless sooner terminated as herein provided.

Terms of Payment

All shipments shall be made f.o.b. the point of shipment with Factory Sight Draft attached to the Bill of Lading, the Company to have the right to designate the point of shipment. If the draft is paid within 10 days from the date of the invoice a special cash discount of two per cent (2%) will be allowed. If Purchaser desires open account credit accommodation arrangements therefor should be made with the Company's credit department. If such arrangements are made invoices will be due net thirty days after the date of the invoice and a cash discount of two per cent. (2%) will be allowed if payment is made within 10 days from the invoice date. Credit terms and delivery of all equipment are subject to the Company's approval and the Company shall have the right at all times to change or alter the terms of payment and to fix, change or alter such credit accommodations as may be extended to Purchaser. Sales, excise and other taxes will be added to all prices and the amount of such taxes shall not be subject to discount. Invoices covering emergency shipments from a Branch Office of the Company shall be subject to such discounts as are in effect at such Branch Office at the time of shipment, anything herein contained to the contrary notwithstanding.

Use of Controls by Purchaser

This agreement is made upon the understanding and condition that Purchaser, who is a manufacturer, will not use or sell the controls or appliances purchased pursuant hereto except as a part of or in conjunction with machinery or equipment of Purchaser's own manufacture. If Purchaser shall use or sell such controls or appliances otherwise than as above specified the Company shall have the right to immediately terminate this agreement without notice.

Impossibility of Performance

The Company agrees that it will, in good faith and to the best of its ability, promptly fill all orders received from Purchaser and deliver the same to the carrier for shipment; provided, however, that the Company shall not be obliged to fill orders in the event and to the extent that it may become impossible to do so because of war conditions, governmental regulations, strikes, labor disturbances, fires, floods, tornados, acts of God, mechanical breakdowns, short-

ages of raw materials, delays in receipt of raw materials and any other causes or conditions beyond the control of the Company.

Assignment of Contract

The Purchaser shall not assign this contract or any interest therein without the written consent of the Company.

Price Revisions

The Company reserves the right to change and revise the prices listed herein upon thirty (30) days' written notice to Purchaser. Revised prices shall apply to all orders received by the Company after the expiration of the thirty (30) day notice period and also to all unfilled orders, including blanket orders, in the Company's possession at the expiration of such period. If the revised prices are not satisfactory to Purchaser the Purchaser may terminate this agreement by written notice received by the Company within fifteen (15) days from the expiration of the aforesaid thirty (30) day period; provided, however, that such termination shall not affect completion of any orders received by the Company prior to the Company's receipt of the Purchaser's notice of termination. During the aforesaid thirty (30) day price change notice period the Purchaser may not order more than one-twelfth of the number of control units herein agreed to be purchased, or, at the Company's option, more than an equivalent number of control units shipped to Purchaser during the same period of the previous year.

Guarantee and Returns

The Company guarantees all control units and equipment manufactured by it and bearing its name or mark to be free from defects in workmanship and material. The Company will, without charge, replace or repair within one year from date of shipment from the Company's factory any control unit or equipment that may be found to be defective upon inspection at the Company's factory. This guarantee does not obligate the Company in any manner in cases where control units or equipment have been subjected to careless handling, improper application or faulty installation. In all cases the Company's liability on the guarantee herein expressed shall be limited to the repair or replacement of the defective control or equipment and in no event shall its liability extend to indirect or consequential damages. The guarantee herein expressed is made in lieu of all other warranties, guaranties, obligations, or liabilities expressed or implied by the Company or its representatives. All statutory or implied warranties, other than of title, are hereby expressly negatived and excluded.

Returns must not be made without the Company's consent and in all cases the returned controls or equipment must be carefully handled, properly packed and shipped prepaid. If credit is allowed for returns the Company will deduct ten per cent. (10%) to cover handling and inspection charges and a further deduction will be made where recalibrating or refinishing is necessary. Specially made controls may not be returned for credit except at what the Company determines is a fair value for the same.

Patent Warranty

The Company agrees that it will, at its own expense, defend any suit or proceeding that may be instituted against the Purchaser based upon a claim that any apparatus of the Company's manufacture furnished by the Company to the Purchaser constitute an infringement of any Letters Patent of the United States, provided, that the Purchaser shall not be in default hereunder and shall cause the Company to be promptly notified in writing of such suit and shall give the Company authority to defend such suit through the

Company's counsel and shall furnish to the Company all needed information and assistance for the defense of such suit. The Company will pay all damages and costs awarded against Purchaser in any suit defended by the Company, provided notice of such suit and authority, information and assistance shall have been given to the Company as aforesaid, and in the event the device or apparatus furnished by the Company, or any part thereof, is held to constitute infringement and its use is enjoined the Company will, at its own expense and at the Company's option, either: procure for the Purchaser the right to continue using the infringing devices or apparatus; or replace the same with non-infringing devices or apparatus; or modify the infringing devices or apparatus so that they become non-infringing; or accept the return of the infringing devices or apparatus and refund the purchase price thereof. The foregoing constitutes the Company's only liability in connection with patent infringement by devices or apparatus furnished by the Company.

Whenever the Company deems it necessary for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such products, and the Purchaser agrees, upon receipt of such notice, to make no further sales or installations of any such products unless or until authorized so to do in writing by the Company.

Termination

In addition to any and all other provisions herein contained relating to termination or cancellation of this agreement, the following circumstances are hereby agreed to be and shall be deemed to be conclusive evidence of the breach of this agreement by either of the parties hereto, and in any of these events the other party hereto may, at its election, without prejudice to any other remedy it may have, terminate all further obligations on the part of such non-defaulting party made and to be performed under this agreement:

(a) The breach of or the failure to comply with any or all of the terms, covenants, conditions and provisions of this agreement, and a continuance of such breach for thirty or more days after receipt by the defaulting party of written notice thereof.

(b) The adjudicated bankruptcy, either voluntary or in-

voluntary or the adjudicated insolvency of either party hereto, or the making of an assignment for the benefit of creditors or the appointment of a trustee or receiver for either of the parties hereto.

(c) The repudiation of this agreement, in whole or in part, by either party hereto.

Field Service

The Company will welcome the opportunity of cooperating with the Purchaser in educating the Purchaser's factory personnel in the servicing and the proper installation of the Company's controls but the Company does not agree or bind itself to render any such service.

The foregoing constitutes the entire agreement between the parties hereto and no change, alteration or modification of this agreement shall be binding unless reduced to writing and signed by the respective parties hereto. The validity, enforceability and interpretation of this agreement shall be determined and governed by the laws of the State of Illinois.

516 RESPONDENT'S EXHIBIT NO. 9-A.

Dec. 14, 1939

Mr. J. W. Owens
The Mercoid Corporation
4201 Belmont Ave.,
Chicago, Ill.

Dear Jim:

In answer to your letter of December 8, regarding information received from your Philadelphia office to the effect that the Eastern Light Company, Allentown, Penna., had some difficulty in securing Toridheet burners with Mercoid controls, will say that I have checked up and I cannot find

any order received from that company calling for Mercoid controls. I will say very postively that they can secure Mercoid controls with any of our pressure burners without any difficulty. We will be very glad to furnish them if they are specified.

With kindest regards.

Yours very truly,

J. L. O'Brien.

JLO:EP

517 RESPONDENT'S EXHIBIT NO. 9-B.

(Letterhead of The Mercoid Corporation
Chicago, U. S. A.)

December 8, 1939

Mr. J. L. O'Brien
Toridheet Division
Cleveland Steel Products Corp.
Madison at W. 74th Street
Cleveland, Ohio

Dear J. L.:

It has been called to the writer's attention by our Philadelphia Office that Eastern Light Corporation of Allentown, Pennsylvania, have had some difficulty in securing Toridheet Burners with Mercoid Controls.

It is possible that this Company might have been referring to the rotary burner when they voiced this complaint to our representative. However, the writer would sincerely appreciate it if you would check into this matter, as I am confident from past experience that wherever any of your trade specify Mercoid that you are only too glad, indeed, to supply our controls. I have, from time to time, impressed this upon our various representatives, and any information that you give to me on this particular account will be appreciated.

With kindest regards, remain,

Sincerely,

Jim.

Sales Force

From A. N. S.

To

Jan. 14, 1938.

Sales Bulletin No. 41.

1938 Contract Prices.

New contract forms are being printed at the present time and will be submitted to oil burner and stoker manufacturers within the next week. The various items, as well as net prices, will be printed on the face of the contracts so that it will merely be necessary to type in customer's name. Please retain all blank 1937 contract forms, as these will be used in making up special contracts to other than oil burner or stoker manufacturers.

Oil burner manufacturers are to be divided into five groups, depending upon the number of burners manufactured. Each contract will bear a Form No., for ready identification, which corresponds to the Form No. shown on attached mimeographed schedules of prices. One contract only (Form ST 1-5) is to be submitted to all stoker manufacturers regardless of their requirements.

Important.

Contracts Will Not Be Accepted by the Company, Nor Will Contract Prices Become Effective, Unless Signed Contract Is Accompanied by an Order, for Immediate Delivery, in Amounts Not Less Than Those Listed Below:

Contract Form	Min. Order Requirement
No. 11	25 Units
No. 22	50 Units
No. 33	75 Units
No. 44	100 Units
No. 55	250 Units
No. ST 1-5	100 Units

Our sales force should make every possible effort to obtain order at the time customer accepts our contract. If contract is accepted by the customer but the required order not placed with us, any purchases made by the customer will be billed at list and discount, up until such time as required order is received. There are to be no exceptions made to this policy.

Discount Changes.

Distributors have become a very important factor in the sale of our controls to dealers. In order to meet the competitive situation, it has been necessary to change our discount structure from 33⅓% to 25% base or trade discount. Attached mimeographed schedule covers new discounts, to all trade classifications, effective February 1, 1938. With this new discount structure, distributors have a higher profit rate than heretofore, which should be immediately called to the attention of all distributors in your territory.

UNITED STATES DISTRICT COURT
Northern District of Illinois,
Eastern Division.

In the Matter of
Minneapolis-Honeywell Regulator
Company.

Sirs:

Please take notice that upon the attached Petition verified November 30, 1943, the undersigned, Minneapolis-Honeywell Regulator Company, will apply to the Honorable John P. Barnes, one of the Judges of this Court, at Room 653, Federal Court House, Chicago, Illinois, on Wednesday, December 1, 1943, at ten o'clock in the forenoon, for an order under Section 9 of the Federal Trade Commission Act (15 USCA 49), requiring Mr. James William Owens, Executive Vice President of The Mercoid Corporation, to appear before Mr. W. W. Sheppard, Trial Examiner for the Federal Trade Commission, at Room 1118 New Post Office Building, Chicago, Illinois, on the 3d day of December, 1943, at ten o'clock in the forenoon, to testify in a proceeding now pending before the Federal Trade Commission entitled—"In the Matter of Minneapolis-Honeywell Regulator Company, Docket 4920"—and to produce the documentary evidence specified in the subpoena duces tecum issued by the Federal Trade Commission on November 2, 1943, and served on said James William Owens on November 5, 1943.

869 Respectfully,
Minneapolis-Honeywell Regulator Company
By (Sgd) Bair & Freeman
and
(Sgd) Cravath, deGersdorff, Swaine & Wood,

(Sgd) Will Freeman,
Of Counsel.

Copy to
Mr. Everett F. Haycraft
Attorney for Federal Trade Commission
1118 New Post Office Building
Chicago, Illinois

2022 *Respondent's Exhibit No. 112.*

870 UNITED STATES DISTRICT COURT

Northern District of Illinois,

Eastern Division.

In the Matter of the Petition of
Minneapolis-Honeywell Regulator
Company.

PETITION FOR ORDER REQUIRING JAMES WILLIAM OWENS TO APPEAR TO TESTIFY AND TO PRODUCE DOCUMENTARY EVIDENCE BEFORE THE FEDERAL TRADE COMMISSION.

Minneapolis-Honeywell Regulator Company, a Delaware Corporation, of Minneapolis, Minnesota, (hereinafter called the Petitioner), hereby petitions this Court and shows as follows:

1. The Petitioner, a manufacturer of automatic temperature controls for use on domestic oil burners, is the Respondent in a proceeding instituted by the Federal Trade Commission, (hereinafter called the Commission), entitled "In the Matter of Minneapolis-Honeywell Regulator Company, Docket No. 4920", under Section 5 of the Federal Trade Commission Act and Sections 2 and 3 of the Clayton Act as amended. The Complaint in said proceeding sets forth, among other things, the following charges:

A. Count I of the Complaint alleges that the Petitioner has entered into annual contracts with oil burner manufacturers which obligated them to purchase their requirements of controls from the Petitioner and that, as result of
871 such contracts, competitors of the Petitioner have been prevented from selling their makes of controls to such oil burner manufacturers.

B. Count III of the Complaint alleges that the Petitioner has discriminated in prices between different purchasers of controls and that the effect of such discriminations has been substantially to lessen competition in that line of commerce.

2. In support of the above-described allegations, Counsel for the Commission called Mr. James William Owens (hereinafter called Owens), Vice President of The Mercoid Corporation, a manufacturer of automatic temperature con-

trols, whose principal office and place of business is at 4201 Belmont Avenue, Chicago, Illinois, and which is a competitor of the Petitioner, and from Owens elicited testimony as to the sale of controls by The Mercoid Corporation to various oil burner manufacturers. There was also introduced during the Commission's case evidence that The Mercoid Corporation had entered into contracts with oil burner manufacturers which at the same time had contracts with Petitioner (Commission Ex. 53, Pages 765 and following, and Respondent's Ex. 7), and evidence as to the prices charged by Mercoid Corporation for certain types of its controls (R. 328-31).

3. In order to substantiate its defenses to the allegations in the Complaint referred to under Paragraph 1
872 hereof, the Petitioner has endeavored to introduce as evidence in said proceeding

A. The names of the oil burner manufacturers who entered into contracts for the purchase of controls with competitors of the Petitioner, as well as the Petitioner, and copies of such contracts; and

B. Statements of the various prices at which competitors of the Petitioner have sold controls to oil burner manufacturers;

which evidence, Petitioner believes and alleges would show that competitors have not been prevented from selling their makes of controls, and that the alleged price discrimination has not substantially lessened competition. To obtain such evidence, on October 27, 1943, the Petitioner applied to the Commission under Rule XV of its Rules of Practice for the issuance of subpoenas duces tecum directed to the officers of the Petitioner's competitors, including Owens, as an officer of The Mercoid Corporation. As required by that Rule, the Petitioner's application specified the documents desired and showed their competency, relevancy and materiality. The Commission granted the Petitioner's application and on November 2, 1943 issued the subpoenas applied for, including a subpoena duces tecum addressed to and received by Owens on November 5, 1943. A photostatic copy of that subpoena with proof of service is attached hereto as Exhibit A.

873 4. On November 29, 1943, the return date of the subpoenas, Owens appeared as directed before Mr. W. W. Sheppard, a Trial Examiner for the Commission, at Room 1118 in the New Post Office Building, Chicago, Illinois, but refused to produce the documents specified in the

subpoena or to testify concerning them on the ground that the information called for by the subpoena was confidential and of a nature not required to be divulged to competitors (R. 1189-90). The Petitioner is advised and believes that the refusal of Owens to comply with the subpoena was unjustified and not in good faith for the following reasons, inter alia:

A. The information called for by the subpoena is not confidential. Similar information has already been introduced into evidence both with respect to the Petitioner and its other two principal competitors, Perfex Corporation and Penn Electric Switch Co., officers of the latter two Corporation appearing and testifying in response to subpoenas identical to that served upon Owens. Moreover, information as to Mercoid's contracts with oil burner manufacturer has already become part of the record as stated above in Paragraph 2 hereof. Indeed, The Mercoid Corporation, in another proceeding before this Court, itself introduced copies of its own contracts with a certain oil burner manufacturer, who also had entered into contracts with the Petitioner. Information as to Mercoid's prices has, 874 according to Owens' own testimony, already been made available to a considerable number of third parties, i. e., oil burner manufacturers (R. 1204, 1208). The information in question can not therefore be properly considered confidential.

B. Whether or not rightfully regarded by The Mercoid Corportion as confidential, the information called for by the subpoena served on Owens can not be withheld in a proceeding such as that brought by the Commission against the Petitioner, in which the basic issue is the existence of competition, to show which the Petitioner is entitled to bring out the prices and trade practices of its competitors. Particularly is this so where the Petitioner is seeking to avail itself of the defense afforded by Section 2(b) of the Clayton Act, as amended, under which a respondent may rebut the charge of price discrimination by showing that this lower prices were made in good faith to meet competition.

C. The confidential nature of information required to be produced in response to a subpoena issued by the Commission does not excuse a failure to produce such information. Nothing in the Federal Trade Commission Act supports the position taken by Owens. Indeed under Section 9 of that Act, no person may be excused from producing, in obedi-

ence to a subpoena of the Commission, evidence that
875 may tend to incriminate him or subject him to penalty or forfeiture. A fortiori, there can be no excuse under the Act for not producing information which the person served with the subpoena may, according to his own lights, consider confidential.

5. Upon the refusal of Owens to comply with the subpoena of the Commission, Counsel for the Petitioner advised him that an application would be made to this Court for an Order directing obedience, and pending a ruling thereon, Owens has been kept subject to the jurisdiction of the Commission and the call of the Trial Examiner. This application is made returnable on short notice in view of the statement of Owens (R. 1227) that he will be in town the rest of this week and available on thirty minutes notice, but will be away all next week.

6. This application is made pursuant to Section 9 of the Federal Trade Commission Act (15 USCA 49), which provides in part as follows:

"Any of the district courts of the United States within the jurisdiction of which such inquiry is carried on may, in case of contumacy or refusal to obey a subpoena issued to any corporation or other person, issue an order requiring such corporation or other person to appear before the commission, or to produce documentary evidence if so ordered, or to give evidence touching the matter in question; and any failure to obey such order of the court may be punished by such court as a contempt thereof."

876 Wherefore, the Petitioner prays that this Court issue an Order requiring Owens to appear before the Trial Examiner in the above-mentioned proceeding before the Commission and there to produce the documentary evidence specified in the subpoena of the Commission heretofore served upon him.

FEDERAL TRADE COMMISSION

To Mr. James Williams Owens, Executive Vice President,
Mercoid Corporation,
4201 Belmont,—Chicago, Illinois.

You are hereby required to appear before Mr. William W. Sheppard, a Trial Examiner for the Federal Trade Commission, at 1118 New Post Office Bldg., in the City of Chicago, Illinois on the 29th day of November, 1943, at 10:30 o'clock a. m. E.S.T. (i.e.) E.W.T. of that day, to testify on behalf of the respondent, in the matter of Minneapolis-Honeywell Regulator Company, Docket 4920, and you are hereby required to bring with you and produce at said time and place the following books, papers, and documents:

Fail not at your peril.

In testimony whereof, the undersigned, a member of the Federal Trade Commission, has hereunto set his hand and caused the seal of said Federal Trade Commission to be affixed at Washington, D. C., this 2nd day of November, 19.....

Garland S. Ingerson,
Commissioner.

Industry Bows To Mars

Equipment Sales Hit Mid-Depression Levels

OILHEATING DEALERS sold 99,914 domestic oilburners and units during 1942, the least since 1933, when depression fear held the market by the throat. War was responsible for the 70% decrease in the industry's domestic burner business from the 1941 level. Sales of commercial heating burner sales increased more than 99% during last year to 11,360 burners.

Prohibition against new oilburner installations (except under rigid regulations on replacements), a concerted governmental campaign to convert existing installations to coal, and actual fuel oil shortages in eastern areas late in the year, all contributed to a chaotic statistical picture in the industry. These pressures during 1942 conspired to change the oil burner from an instrument of emancipation in the minds of two million American families, to a machine of doubtful utility; a hero whose virtue had been besmirched. In spite of threats of dire consequences, owners defended their burners and resisted pressure to convert. Tardy prospects asked the connivance of dealers to get burners installed after the deadline, and in general showed a considerable affection for their burners, actual or prospective.

Like the year before, 1942 got away to a flying start compared with the doldrums of the later months. Dealers made 47.4% of their domestic oilburner sales in the first quarter of 1942, against a normal 14.2% in the preceding five years, but the prohibitions against new installations at the start of the second and third quarters reduced domestic sales to a pitiful trickle by the end of the year. Replacements in non-convertible heating plants was the only installation business left at the end of the second quarter.

For the first time since 1929, the industry registered an actual decline in the number of domestic oilburners operating. There were 19,770 fewer domestic installations at the end of 1942 than the year before, in spite of 66,270 new installations during the year. Conversions to coal and other fuels totalled 82,040, or 3.9% of the burners operating in the rationed area. Domestic installations operating at the end of 1942 were down 2% to 2,386,290 from the all-time high of 2,402,060 at the first of the year (See Table 1). Continued pressure to effect conversions, and actual fuel oil shortages that have developed in the East, probably will increase domestic conversions before spring. Commercial and industrial burners are being removed under government orders, though the number and extent has not been fully determined. It is estimated there were 293,120 commercial heating installations (exclusive of industrial) still operating at the end of the year, though many of these had been given fuel oil rations only through Period 2, and were slated for early removal.

Though the domestic oilburner industry ended the year with fewer burners in operation, oil still is the most popular automatically fired fuel by a margin of more than two-to-one over gas. Best estimates of domestic automatic heating equipment in operation are:

Oil	2,386,290—53.9%
Gas	1,098,000—24.9%
Stoker	938,319—21.2%

The oilburner industry as a whole sold about 20,000 more burners than were accounted for by dealer sales last year. These sales by manufacturers were made to government agencies for uses other than domestic heating, and many of them were shipped out of the country for use in foreign operations. This number, however, was almost exactly offset by withdrawals from dealer stocks for replacement purposes and such other installations as were permitted.

Present programs for the use of many

TABLE 2

Domestic Conversion Oilburners

Sales	Retail Value	Factory Value	Year	No. in Use (End of Year)
136,829	$43,373,900	$13,408,900	1935	1,119,129
197,430	59,229,000	18,918,600	1936	1,281,309
184,920	54,181,600	17,903,100	1937	1,446,299
193,890	60,462,600	12,154,200	1938	1,599,679
200,020	48,004,800	14,601,600	1939	1,719,940
238,849	57,641,900	18,152,200	1940	1,933,609
237,969	59,490,200	19,279,200	1941	2,113,160
71,698	16,592,700	6,090,900	1942	2,073,260

facturer and dealer stocks of burners in the immediate future probably will slow oilburner manufacturing during 1943, though the demand at present is for about 6,000 burners a month. A large part of this demand was manufactured each month during 1942.

Domestic Burner Types

The trend of oilfiring in domestic sizes of conversion burners and units last year was toward the high pressure type of burner. The reason for this is not entirely clear, though it may be that this was the type of burner most heavily pushed by dealers, since 77,660 of these burners were used, representing 78.1% of total domestic burner sales. Sales of domestic burners by types last year compared to the previous five-year average is shown in the table below:

	1942	Five-Year Average
High Pressure	77,660—78.1%	71.7%
Low Pressure	3,874— 3.4%	6.2%
Vertical Rotary	7,648— 7.7%	11.0%
Vaporizing	10,553—10.6%	10.8%
Miscellaneous	279— .2%	.3%

High pressure oilburners were manufactured by 248 firms at the first of 1942, and stocks were reasonably heavy, anticipating a good year ahead. Many of these companies were small, but continued to manufacture as long as materials were available. Low pressure burners, on the other hand, were made principally by only two large manufacturers, both of which were in war work by the first of 1942, and had rather limited stocks available. There were only 18 manufacturers of all types of vertical rotary burners. Eighty-five makers of vaporizing burners started the year, and contributed largely to the new building that was oilfired early in the year. Miscellaneous types are principally horizontal rotary burners of the "Pup" type that were used for domestic installations. Thousands of other small horizontal rotaries have been sold to civilian, military and naval establishments for commercial cooking, water heating, steam raising and other industrial uses.

New sources of oilburner statistics became available during the year, giving an official and more recent check than before has been available. These sources, their limitations, and how they were used, is described briefly in the text that accompanies the breakdown of oilburners operating by states. Where possible, all tables appearing in this issue have been revised to give a more accurate picture of the industry's past performance.

Domestic Conversion Burners

Conversion oilburners continued to lead the products parade in 1942, according to preliminary estimates, accounting for 71,618 or 72% of the 99,514 total domestic burners and units sold. This represents a decline of little less than 70% from the 237,969 conversion burners sold in 1941 (See Table 2). Since more conversions to coal were made during operating conversion burners, the total conversions operating declined more sharply than the grand total for all burners and units. The decline to 2,073,260 conversion burners is 1.9%, while the decrease in total domestic units was only 0.6% to 2,386,290.

A third of all burners and units were installed last year to replace other oilburners, but 42% of all conversion burners went for replacements, or 30,100 of the 71,618 conversion burners sold. Conversion burner replacements and reconversions to coal have been deducted from the totals in Table 2.

Conversion burner installed prices stiffened in 1942 to an average of $267, up 6.8% from the $250-average of the year before. Better demand against the growing shortage of materials pushed up the average minimum retail prices 8.4% to $245 for the price leaders of the conversion business. Average conversion prices are shown in Table 5.

Factory prices for all conversion burners increased 4.9% to an average of $85 from the $81-average of 1941. Minimum price burners, however, increased 12.3% to average $73. This higher average for the lower price burners reflects buying in smaller quantities during the year as well as the uncertain supply of parts and accessories.

Average wholesales and retail prices for each type of conversion burner in 1942 and 1941 were as follows:

Retail 1942	Retail 1941		Wholesale 1942	Wholesale 1941
$293	$244	High Pressure	$ 84	$ 80
278	273	Low Pressure	109	103
303	332	Vert. Rotary	114	126
176	162	Vaporizing	98	94

Average retail price for replacement burners only was $161 last year. Where

18,743	8,029,100	5,099,300	1942	149,990

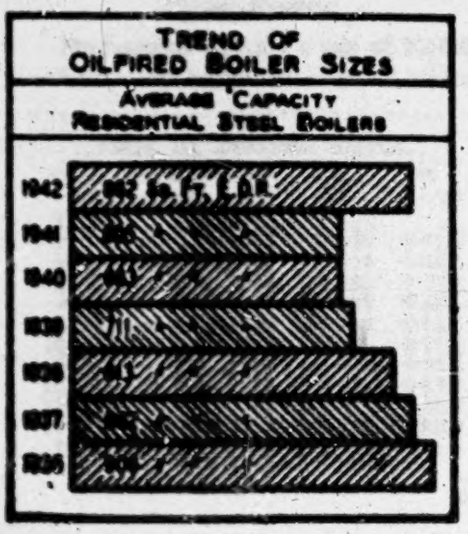
new controls and accessories were supplied with replacements the average is estimated to have been $181.

Retail dollar volume of conversion burner business was off 65.7% from the 1941 sales volume. The $16,552,700 retail conversion burner volume was 55.4% of the total industry retail burner and unit business, compared with 52.4% in the year before.

Factory sales of conversion burners last year amounted to $6,090,900, 31.8% of 1941 dollar volume. This factory income represented only 43.3% of the total 1942 value of all burners and units, against the 45.9% of total income represented by conversion burner sales in 1941. Both retail value and wholesale value of conversion burner business is given for recent years in Table 2.

Integral Boiler-Burner Units

Sales of integral, factory-assembled oil-fired boiler-burner units were off 76.7% to 9,313 last year compared to 1941, reflecting the stoppage of new construction, and the prohibition against replacements of heating plants for oilfiring. This unit volume represented only 9.4% of the total domestic oilburner sales in 1942, compared to 12% in 1941. Only 1.5% of these integral boiler units were used for replacement.



Integral boiler units in operation increased 4.7% to total 163,040 at the end of last year. Figures on sales and boiler units in use for the last eight years are shown in the first and last columns of Table 3.

Retail and wholesale prices of boiler units increased substantially during the year to register an average retail rise of 3.8% to $168, and a wholesale increase of 27.1% to an average of $309. The average minimum prices at retail were up 25.1% at retail to $473, and rose 13.4% wholesale to $229, as shown in Table 6.

Retail value of integral boiler units last year was only $1,289,800, a decrease of 75.8% from the year before. This dollar volume represented 17.9% of the total domestic oilburner business at retail, compared to 19.2% in 1941.

Factory value of integral boiler units last year was only 29.6% of the 1941 wholesale value, off to $2,877,700, representing 20.4% of the total factory value of all domestic burners and units. Totals of retail and wholesale values of integral boiler units in recent years are shown in Table 3.

In addition to integral, factory-assembled domestic boiler-burner units, there were an estimated 8,690 units assembled in the field by dealers who used a new boiler with a conversion burner. Of these dealer-assembled units, 1650, or 19% were steel, and 8040 were cast iron. Combining all boiler units, there were an indicated 18,003 total installed last year.

All Boiler Sales

Total heating boiler sales in 1942 for all fuels amounted to 124,875, of which only 18,003, or 14.4% were oilfired. As shown in Table 7, 111,875 of these were cast iron, of which only 9.6% were oilfired last year, against 45% in 1941. The 13,000 steel boiler total included 7,238 that were oilfired, or 55.7%, against 94.2% in the year before.

Boiler sizes and weight increased during 1942, reflecting the stoppage of small building. Average sizes of residential steel boilers in recent years is shown graphically in the accompanying chart. The increase in steel boiler size during 1942 was 25.8%, and the average weight of cast iron boilers increased 20.8% during the same time. More than 10% of the nearly 200-million tons of boiler castings last year was for "repairs," in which is included new grates and cast parts necessary for conversion to coal. Only 8.4% of the tonnage was for repairs in 1941.

Domestic Furnace-Burner Units

Integral, factory-assembled furnace-burner units totalled 18,743 last year, a

slump of 66.1% from the 55,295 integral units sold in 1941. Furnace unit sales accounted for 18.6% of the total burners in 1942, compared with 10.6% of the 1941 total. Figures on annual sales and units operation at the end of each of the last eight years are shown in the first and last columns of Table 4.

Both retail and wholesale prices of furnace units increased last year. Average prices, and average minimum prices, both wholesale and retail, are given for recent years in Table 8. The relatively larger increase in factory prices, compared to retail reflects the increasing manufacturing difficulties, as well as the buying in smaller quantities. Wholesale buying for development work, common in recent years, has all but stopped.

Retail and factory value of furnace units last year compared with preceding years, is shown in Table 4.

In addition to the integral furnace units sold last year, there were an estimated 2,777 dealer-assembled units installed with conversion burners and new furnaces. These represent 13% of the new oilfired furnaces sold, compared to 11,105, or 16.7% in 1941.

Table 9 gives a break-down of furnace sales by types for all fuels in 1942 and 1941.

Competitive Firing

Sales of domestic and small commercial stokers (Classes 1 and 2) last year totalled 96,420, of which 14,325, or 14.8%, were anthracite, and 82,095 were bituminous. Small stokers in operation at the end of the year had increased 11.3% to 938,319, as shown in Table 10.

Gas burner sales for residential central heating are estimated at 46,465 last year, off to only 41.8% of the 1941 record of

Table 9. Warm Air Furnace Sales

	1942 Cast Iron	Steel	1941 Cast Iron	Steel
Coal	7,120	11,430	8,720	25,445
Gas	7,370	16,580	32,265	91,670
Oil	1,060	14,810	3,100	47,100
Total	15,910	46,820	44,085	124,215
GRAVITY				
Coal	118,800	46,570	181,780	76,210
Gas	9,730	13,590	17,085	14,190
Oil	400	9,090	3,100	13,100
Total	124,930	69,210	201,965	143,500

101,340. Total central heating gas installations at the end of the year were estimated at 1,098,000, up 2.1% for the year. Pressure to convert gas heating installations has not yet been organized, though no new installations are allowed, effective September 1, 1942. It is possible that an effort to reconvert some gas installations may be made in some areas, if supplies of gas become more critical.

Commercial Burners

The 11,360 commercial burners sold last year represent an increase of 59% over the 1941 mark, and bring the total in operation at the end of 1942 to 293,120, up less than 2%. As explained earlier, many of these burners are scheduled to be removed, and the exact number that had been actually converted at the year-end is difficult to establish. Table 11 shows commercial burner sales and the number operating at the end of recent years.

Space Heaters

Oilheating dealers sold 27,100 oilfired space heaters during 1942, a decrease of 37.8 from the 43,590 space heaters these dealers sold in 1941. Oilheating dealers are believed to have sold about 20% of the total space heater output last year.

Total space heaters in operation at the end of the year numbered 1,861,860.

Water Heaters

Field reports indicate a sale of 20,760 oilfired water heaters in 1942, of which

Table 10. Domestic Stokers

Sales	% change		No. in use	% change
11,961	..	1931	20,811	..
11,144	— 1.9	1932	31,917	+53.9

198,341	+24.3	1941	845,315	+20.9
96,420	—51.3	1942	938,319	+11.3

Table 11. Commercial Oilburners

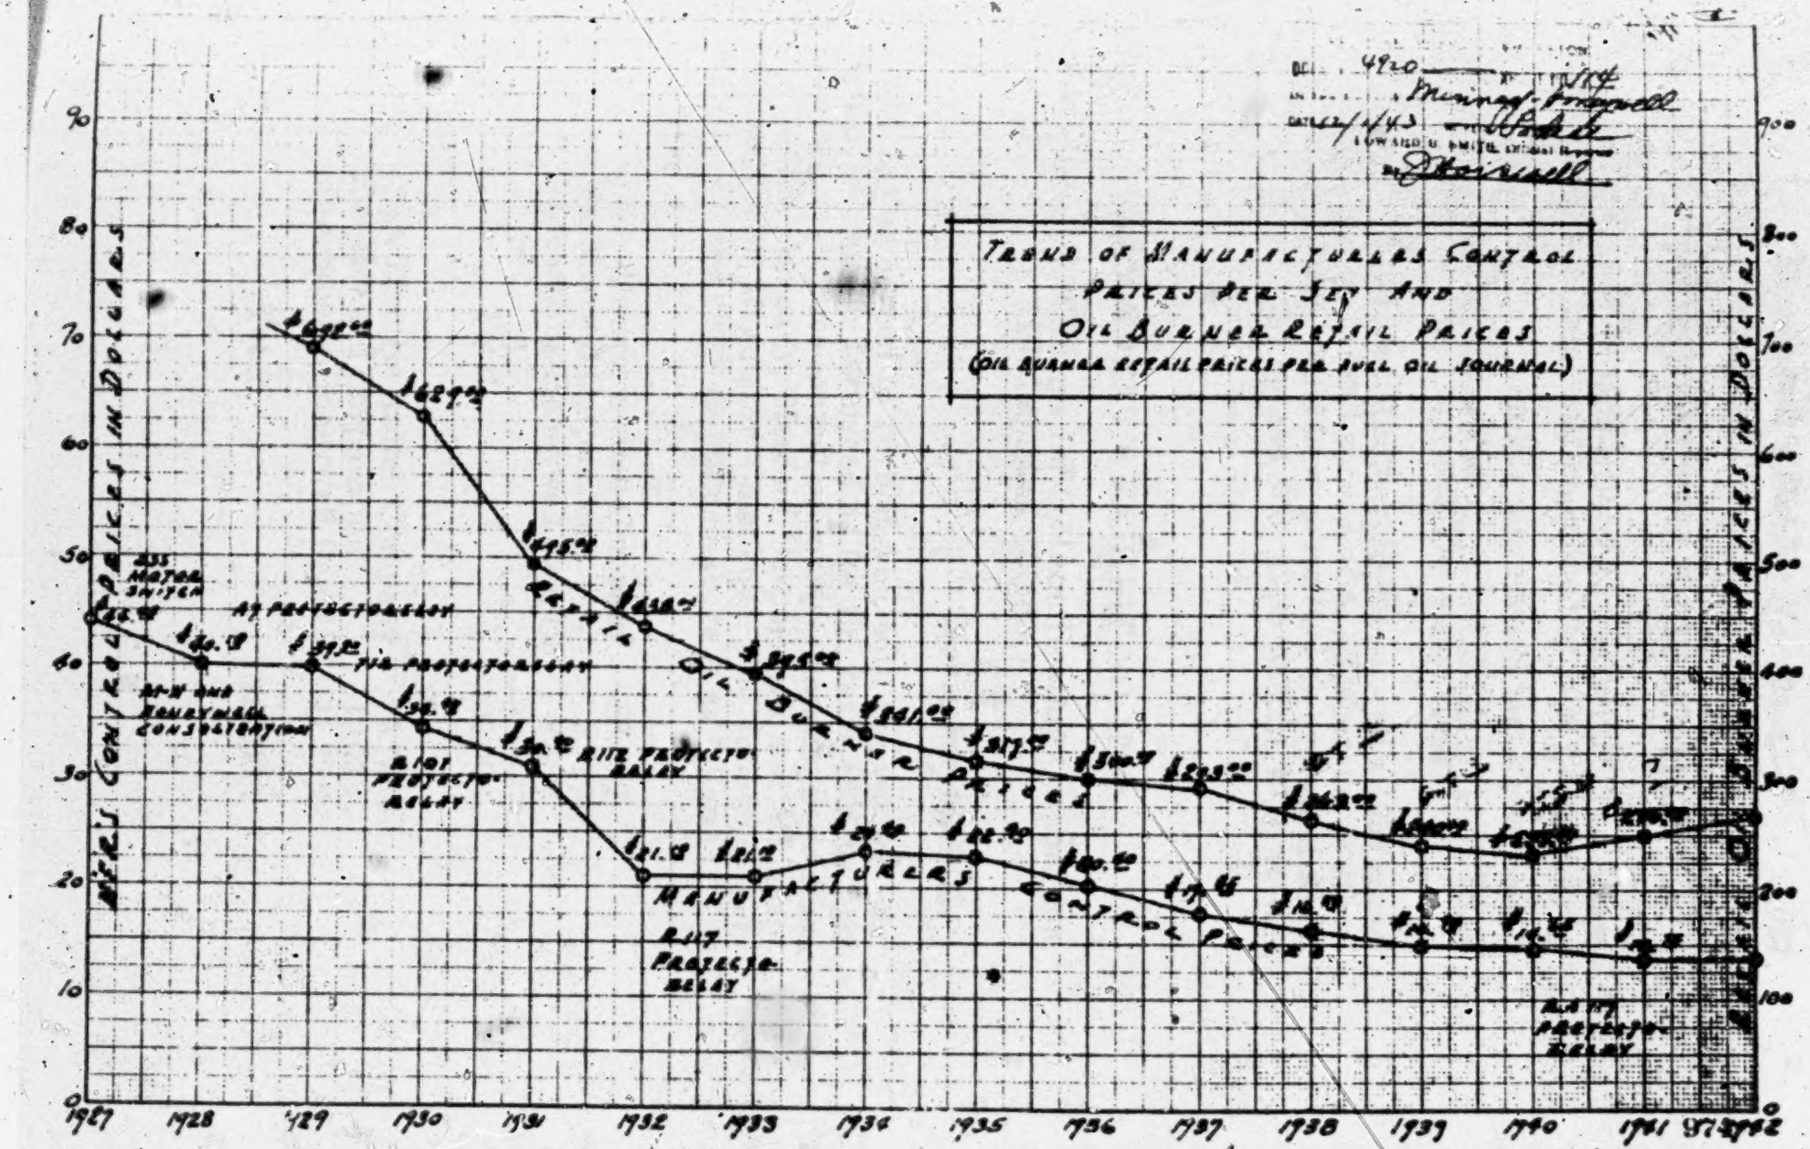
Sales		COMMERCIAL OILBURNERS No. Operating (End of year)
14,990	1935	178,240
18,435	1936	192,830
19,380	1937	210,275
13,995	1938	222,880
16,445	1939	237,680
20,710	1940	256,320
34,750	1941	287,595
11,360	1942	293,120

4,995, or 24.1% were fired by mechanical burners, contrasted to 28.7% in 1941. There were 15,750 vaporizing type burners used in water heaters, or 75.9% of the total water heaters. Average price at retail for mechanically fired water heaters was $224, and for vaporizing type burners, the price was $105.

Summary

Total dealer product sales at retail during 1942 amounted to slightly more than $40-million, exclusive of fuelOil sales and service charges. Accessory sales for heating plants and oilburners alone totalled $3-million; water heaters brought in $2,772,000; space heaters, $1,755,000.

It is probable that dealers will lean more heavily on their oil and service income as parts and accessories become more scarce, but considering the problems that confronted dealers in 1942, and the need for speedy adjustment, the year ended with a surprisingly large total dollar volume of business.



◆

Eric L. Kohler has been named executive officer of the Petroleum Administration for War, to handle organizational and administrative problems.

W. P. Hopkins has been appointed purchasing agent of Tuthill Pump Co., Chicago. Mr. Hopkins formerly was assistant purchasing agent for the Ordnance plant at Marion, Ohio, and formerly for the Illinois Central system.

James T. Buckley, president of Philco Corp., Philadelphia, is celebrating his 30th anniversary with the company. He started at the age of 16 years, as a laboratory clerk and assistant.

Dr. Albert W. Davison, formerly head of industrial engineering at Rensselaer Polytechnic Institute, has joined Owens-Corning Fiberglas Corp. as scientific director of its research laboratories at Newark, Ohio.

1007 COMMISSION'S EXHIBIT NO. 153-A.

Manufacturers' Purchase Contract

The Mercoid Corporation
4201 Belmont Ave., Chicago, Ill.

Date Submitted .....

This Agreement, entered into between The Mercoid Corporation, a Delaware corporation, hereinafter called the "Company", and ..... of .....; ..... hereinafter called the "Purchaser,"

Witnesseth:

Whereas the Company is engaged in manufacturing automatic electric controls for heating, refrigerating, air conditioning and other apparatus, machinery and equipment and

Whereas the Purchaser is desirous of purchasing such controls for use in connection with products of the Purchaser's own manufacture,

Now, Therefore, in consideration of the premises and of the mutual covenants hereinafter set forth the parties hereto agree as follows:

Quantity

Subject to the terms and provisions hereinafter contained, the Company agrees to sell and the Purchaser agrees to purchase, during the term of this agreement, their requirements of the Company's automatic controls. The special net prices extended herewith by the Company are based on the Purchaser's 1939 control requirements estimated to be ..... units.

Miscellaneous Controls and Control Equipment

Miscellaneous automatic controls and control equipment of the Company's manufacture, not listed herein but shown in the Company's catalogue attached hereto, will be furnished at the catalogue list prices less the discounts shown on the manufacturers' discount sheet attached hereto. The list prices and discounts shall be subject to change at any time and from time to time, without notice. All orders

for such miscellaneous controls and control equipment shall be subject to acceptance and approval by the Company.

Term of Agreement

This agreement shall become effective on the date of acceptance by the Company and shall continue to and including December 31, 1939, unless sooner terminated as herein provided.

Terms of Payment

All shipments shall be made f. o. b. the point of shipment with Factory Sight Draft attached to the Bill of Lading, the Company to have the right to designate the point of shipment. If the draft is paid within 10 days from the date of the invoice a special cash discount of two per cent. (2%) will be allowed. If Purchaser desires open account credit accommodation arrangements therefor should be made with the Company's credit department. If such arrangements are made invoices will be due net thirty days after the date of the invoice and a cash discount of two per cent. (2%) will be allowed if payment is made within 10 days from the invoice date. Credit terms and delivery of all equipment are subject to the Company's approval and the Company shall have the right at all times to change or alter the terms of payment and to fix, change or alter such credit accommodations as may be extended to Purchaser. Sales, excise and other taxes will be added to all prices and the amount of such taxes shall not be subject to discount. Invoices covering emergency shipments from a Branch Office of the Company shall be subject to such discounts as are in effect at such Branch Office at the time of shipment, anything herein contained to the contrary notwithstanding.

Use of Controls by Purchaser

This agreement is made upon the understanding and condition that Purchaser, who is a manufacturer, will not use or sell the controls or appliances purchased pursuant hereto except as a part of or in conjunction with machinery or equipment of Purchaser's own manufacture. If Purchaser shall use or sell such controls or appliances otherwise than as above specified the Company shall have the right to immediately terminate this agreement without notice.

Impossibility of Performance

The Company agrees that it will, in good faith and to the best of its ability, promptly fill all orders received from Purchaser and deliver the same to the carrier for shipment; provided, however, that the Company shall not be obliged to fill orders in the event and to the extent that it may become impossible to do so because of war conditions, governmental regulations, strikes, labor disturbances, fires, floods, tornados, acts of God, mechanical breakdowns, shortages of raw materials, delays in receipt of raw materials and any other causes or conditions beyond the control of the Company.

Assignment of Contract

The Purchaser shall not assign this contract or any interest therein without the written consent of the Company.

Price Revisions

The Company reserves the right to change and revise the prices listed herein upon thirty (30) days' written notice to Purchaser. Revised prices shall apply to all orders received by the Company after the expiration of the thirty (30) day notice period and also to all unfilled orders, including blanket orders, in the Company's possession at the expiration of such period. If the revised prices are not satisfactory to Purchaser the Purchaser may terminate this agreement by written notice received by the Company within fifteen (15) days from the expiration of the aforesaid thirty (30) day period; provided, however, that such termination shall not affect completion of any orders received by the Company prior to the Company's receipt of the Purchaser's notice of termination. During the aforesaid thirty (30) day price change notice period the Purchaser may not order more than one-twelfth of the number of control units herein agreed to be purchased, or, at the Company's option, more than an equivalent number of control units shipped to Purchaser during the same period of the previous year.

1010 Special Units and Prices

Guarantee and Returns

The Company guarantees all control units and equipment manufactured by it and bearing its name or mark to be free from defects in workmanship and material. The Company will, without charge, replace or repair within one year from date of shipment from the Company's factory any control unit or equipment that may be found to be defective upon inspection at the Company's factory. This guarantee does not obligate the Company in any manner in cases where control units or equipment have been subjected to careless handling, improper application or faulty installation. In all cases the Company's liability on the guarantee herein expressed shall be limited to the repair or replacement of the defective control or equipment and in no event shall its liability extend to indirect or consequential damages. The

guarantee herein expressed is made in lieu of all other warranties, guaranties, obligations, or liabilities expressed or implied by the Company or its representatives. All statutory or implied warranties, other than of title, are hereby expressly negatived and excluded.

Returns must not be made without the Company's consent and in all cases the returned controls or equipment must be carefully handled, properly packed and shipped prepaid. If credit is allowed for returns the Company will deduct ten per cent. (10%) to cover handling and inspection charges and a further deduction will be made where recalibrating or refinishing is necessary. Specially made controls may not be returned for credit except at what the Company determines is a fair value for the same.

Patent Warranty

The Company agrees that it will, at its own expense, defend any suit or proceeding that may be instituted against the Purchaser based upon a claim that any apparatus of the Company's manufacture furnished by the Company to the Purchaser constitute an infringement of any Letters Patent of the United States, provided, that the Purchaser shall not be in default hereunder and shall cause the Company to be promptly notified in writing of such suit and shall give the Company authority to defend such suit through the Company's counsel and shall furnish to the Company all needed information and assistance for the defense of such suit. The Company will pay all damages and costs awarded against Purchaser in any suit defended by the Company, provided notice of such suit and authority, information and assistance shall have been given to the Company as aforesaid, and in the event the device or apparatus furnished by the Company, or any part thereof, is held to constitute infringement and its use is enjoined the Company will, at its own expense and at the Company's option, either: procure for the Purchaser the right to continue using the infringing devices or apparatus; or replace the same with non-infringing devices or apparatus; or modify the infringing devices or apparatus so that they become non-infringing; or accept the return of the infringing devices or apparatus and refund the purchase price thereof. The foregoing constitutes the Company's only liability in connection with patent infringement by devices or apparatus furnished by the Company.

Whenever the Company deems it necessary for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such products, and the Purchaser agrees, upon receipt of such notice, to make no further sales or installations of any such products unless or until authorized so to do in writing by the Company.

Termination

In addition to any and all other provisions herein contained relating to termination or cancellation of this agreement, the following circumstances are hereby agreed to be and shall be deemed to be conclusive evidence of the breach of this agreement by either of the parties hereto, and in any of these events the other party hereto may, at its election, without prejudice to any other remedy it may have, terminate all further obligations on the part of such nondefaulting party made and to be performed under this agreement:

(a) The breach of or the failure to comply with any or all of the terms, covenants, conditions and provisions of this agreement, and a continuance of such breach for thirty or more days after receipt by the defaulting party of written notice thereof.

(b) The adjudicated bankruptcy, either voluntary or involuntary or the adjudicated insolvency of either party hereto, or the making of an assignment for the benefit of creditors or the appointment of a trustee or receiver for either of the parties hereto.

(c) The repudiation of this agreement, in whole or in part, by either party hereto.

Field Service

The Company will welcome the opportunity of cooperating with the Purchaser in educating the Purchaser's factory personnel in the servicing and the proper installation of the Company's controls but the Company does not agree or bind itself to render any such service.

The foregoing constitutes the entire agreement between the parties hereto and no change, alteration or modification of this agreement shall be binding unless reduced to writing and signing by the respective parties hereto. The validity,

enforceability and interpretation of this agreement shall be determined and governed by the laws of the State of Illinois.

1011 RESPONDENT'S EXHIBIT NO. 153-B.

Manufacturers' Purchase Contract

The Mercoid Corporation
4201 Belmont Ave. Chicago, Ill.

Date Submitted .....

This Agreement, entered into between The Mercoid Corporation, a Delaware corporation, hereinafter called the "Company," and ..... of ....., ... hereinafter called the "Purchaser,"

Witnesseth:

Whereas the Company is engaged in manufacturing automatic electric controls for heating, refrigerating, air conditioning and other apparatus, machinery and equipment, and

Whereas the Purchaser is desirous of purchasing such controls for use in connection with products of the Purchaser's own manufacture,

Now, Therefore, in consideration of the premises and of the mutual covenants hereinafter set forth the parties hereto agree as follows:

Quantity

Subject to the terms and provisions hereinafter contained, the Company agrees to sell and the Purchaser agrees to purchase, during the term of this agreement, their requirements of the Company's automatic controls. The special net prices extended herewith by the Company are based on the Purchaser's 1939 control requirements estimated to be ..... units.

Miscellaneous Controls and Control Equipment

Miscellaneous automatic controls and control equipment of the Company's manufacture, not listed herein but shown in the Company's catalogue attached hereto, will be furnished at the catalogue list prices less the discounts shown on the manufacturers' discount sheet attached hereto. The list prices and discounts shall be subject to change at any time and from time to time, without notice. All orders for such miscellaneous controls and control equipment shall be subject to acceptance and approval by the Company.

Term of Agreement

This agreement shall become effective on the date of acceptance by the Company and shall continue to and including December 31, 1939, unless sooner terminated as herein provided.

Terms of Payment

All shipments shall be made f.o.b. the point of shipment with Factory Sight Draft attached to the Bill of Lading, the Company to have the right to designate the point of shipment. If the draft is paid within 10 days from the date of the invoice a special cash discount of two per cent. (2%) will be allowed. If Purchaser desires open account credit accommodation arrangements therefor should be made with the Company's credit department. If such arrangements are made invoices will be due net thirty days after the date of the invoice and a cash discount of two per cent. (2%) will be allowed if payment is made within 10 days from the invoice date. Credit terms and delivery of all equipment are subject to the Company's approval and the Company shall have the right at all times to change or alter the terms of payment and to fix, change or alter such credit accommodations as may be extended to Purchaser. Sales, excise and other taxes will be added to all prices and the amount of such taxes shall not be subject to discount. Invoices covering emergency shipments from a Branch Office of the Company shall be subject to such discounts as are in effect at such Branch Office at the time of shipment, anything herein contained to the contrary notwithstanding.

Use of Controls by Purchaser

This agreement is made upon the understanding and condition that Purchaser, who is a manufacturer, will not use

or sell the controls or appliances purchased pursuant hereto except as a part of or in conjunction with machinery or equipment of Purchaser's own manufacture. If Purchaser shall use or sell such controls or appliances otherwise than as above specified the Company shall have the right to immediately terminate this agreement without notice.

Impossibility of Performance

The Company agrees that it will, in good faith and to the best of its ability, promptly fill all orders received from Purchaser and deliver the same to the carrier for shipment; provided, however, that the Company shall not be obliged to fill orders in the event and to the extent that it may become impossible to do so because of war conditions, governmental regulations, strikes, labor disturbances, fires, floods, tornadoes, acts of God, mechanical breakdowns, shortages of raw materials, delays in receipt of raw materials and any other causes or conditions beyond the control of the Company.

Assignment of Contract

The Purchaser shall not assign this contract or any interest therein without the written consent of the Company.

Price Revisions

The Company reserves the right to change and revise the prices listed herein upon thirty (30) days' written notice to Purchaser. Revised prices shall apply to all orders received by the Company after the expiration of the thirty (30) day notice period and also to all unfilled orders, including blanket orders, in the Company's possession at the expiration of such period. If the revised prices are not satisfactory to Purchaser the Purchaser may terminate this agreement by written notice received by the Company within fifteen (15) days from the expiration of the aforesaid thirty (30) day period; provided, however, that such termination shall not affect completion of any orders received by the Company prior to the Company's receipt of the Purchaser's notice of termination. During the aforesaid thirty (30) day price change notice period the Purchaser may not order more than one-twelfth of the number of control units herein agreed to be purchased, or, at the Company's option, more than an equivalent number of control units shipped to Purchaser during the same period of the previous year.

Special Units and Prices

1014 Guarantee and Returns

The Company guarantees all control units and equipment manufactured by it and bearing its name or mark to be free from defects in workmanship and material. The Company will, without charge, replace or repair within one year from date of shipment from the Company's factory any control unit or equipment that may be found to be defective upon inspection at the Company's factory. This guarantee does not obligate the Company in any manner in cases where control units or equipment have been subjected to careless handling, improper application or faulty installation. In all cases the Company's liability on the guarantee herein expressed shall be limited to the repair or replacement of the defective control or equipment and in no event shall its liability extend to indirect or consequential damages. The

guarantee herein expressed is made in lieu of all other warranties, guaranties, obligations, or liabilities expressed or implied by the Company or its representatives. All statutory or implied warranties, other than of title, are hereby expressly negatived and excluded.

Returns must not be made without the Company's consent and in all cases the returned controls or equipment must be carefully handled, properly packed and shipped prepaid. If credit is allowed for returns the Company will deduct ten per cent. (10%) to cover handling and inspection charges and a further deduction will be made where recalibrating or refinishing is necessary. Specially made controls may not be returned for credit except at what the Company determines is a fair value for the same.

Patent Warranty

The Company agrees that it will, at its own expense, defend any suit or proceeding that may be instituted against the Purchaser based upon a claim that any apparatus of the Company's manufacture furnished by the Company to the Purchaser constitute an infringement of any Letters Patent of the United States, provided, that the Purchaser shall not be in default hereunder and shall cause the Company to be promptly notified in writing of such suit and shall give the Company authority to defend such suit through the Company's counsel and shall furnish to the Company all needed information and assistance for the defense of such suit. The Company will pay all damages and costs awarded against Purchaser in any suit defended by the Company, provided notice of such suit and authority, information and assistance shall have been given to the Company as aforesaid, and in the event the device or apparatus furnished by the Company, or any part thereof, is held to constitute infringement and its use is enjoined the Company will, at its own expense and at the Company's option, either: procure for the Purchaser the right to continue using the infringing devices or apparatus; or replace the same with non-infringing devices or apparatus; or modify the infringing devices or apparatus so that they become non-infringing; or accept the return of the infringing devices or apparatus and refund the purchase price thereof. The foregoing constitutes the Company's only liability in connection with patent infringement by devices or apparatus furnished by the Company.

Whenever the Company deems it necessary for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such products, and the Purchaser agrees, upon receipt of such notice, to make no further sales or installations of any such products unless or until authorized so to do in writing by the Company.

Termination

In addition to any and all other provisions herein contained relating to termination or cancellation of this agreement, the following circumstances are hereby agreed to be and shall be deemed to be conclusive evidence of the breach of this agreement by either of the parties hereto, and in any of these events the other party hereto may, at its election, without prejudice to any other remedy it may have, terminate all further obligations on the part of such non-defaulting party made and to be performed under this agreement:

(a) The breach of or the failure to comply with any or all of the terms, covenants, conditions and provisions of this agreement, and a continuance of such breach for thirty or more days after receipt by the defaulting party of written notice thereof.

(b) The adjudicated bankruptcy, either voluntary or involuntary or the adjudicated insolvency of either party hereto, or the making of an assignment for the benefit of creditors or the appointment of a trustee or receiver for either of the parties hereto.

(c) The repudiation of this agreement, in whole or in part, by either party hereto.

Field Service

The Company will welcome the opportunity of cooperating with the Purchaser in educating the Purchaser's factory personnel in the servicing and the proper installation of the Company's controls but the Company does not agree or bind itself to render any such service.

The foregoing constitutes the entire agreement between the parties hereto and no change, alteration or modification of this agreement shall be binding unless reduced to writing and signed by the respective parties hereto. The validity,

enforceability and interpretation of this agreement shall be determined and governed by the laws of the State of Illinois.

1015 RESPONDENT'S EXHIBIT NO. 153-C.

Manufacturers' Purchase Contract

The Mercoid Corporation

4201 Belmont Ave. Chicago, Ill.

Date Submitted .....

This Agreement, entered into between The Mercoid Corporation, a Delaware corporation, hereinafter called the "Company," and ..... of ....., hereinafter called the "Purchaser,"

Witnesseth:

Whereas the Company is engaged in manufacturing automatic electric controls for heating, refrigerating, air conditioning and other apparatus, machinery and equipment, and

Whereas the Purchaser is desirous of purchasing such controls for use in connection with products of the Purchaser's own manufacture,

Now, Therefore, in consideration of the premises and of the mutual covenants hereinafter set forth the parties hereto agree as follows:

Quantity

Subject to the terms and provisions hereinafter contained, the Company agrees to sell and the Purchaser agrees to purchase, during the term of this agreement, their requirements of the Company's automatic controls. The special net prices extended herewith by the Company are based on the Purchaser's 1939 control requirements estimated to be ..... units.

Miscellaneous Controls and Control Equipment

Miscellaneous automatic controls and control equipment of the Company's manufacture, not listed herein but shown in the Company's catalogue attached hereto, will be furnished at the catalogue list prices less the discounts shown on the manufacturers' discount sheet attached hereto. The list prices and discounts shall be subject to change at any time and from time to time, without notice. All orders for such miscellaneous controls and control equipment shall be subject to acceptance and approval by the Company.

Term of Agreement

This agreement shall become effective on the date of acceptance by the Company and shall continue to and including December 31, 1939, unless sooner terminated as herein provided.

Terms of Payment

All shipments shall be made f.o.b. the point of shipment with Factory Sight Draft attached to the Bill of Lading, the Company to have the right to designate the point of shipment. If the draft is paid within 10 days from the date of the invoice a special cash discount of two per cent. (2%) will be allowed. If Purchaser desires open account credit accommodation arrangements therefor should be made with the Company's credit department. If such arrangements are made invoices will be due net thirty days after the date of the invoice and a cash discount of two per cent. (2%) will be allowed if payment is made within 10 days from the invoice date. Credit terms and delivery of all equipment are subject to the Company's approval and the Company shall have the right at all times to change or alter the terms of payment and to fix, change or alter such credit accommodations as may be extended to Purchaser. Sales, excise and other taxes will be added to all prices and the amount of such taxes shall not be subject to discount. Invoices covering emergency shipments from a Branch Office of the Company shall be subject to such discounts as are in effect at such Branch Office at the time of shipment, anything herein contained to the contrary notwithstanding.

Use of Controls by Purchaser

This agreement is made upon the understanding and condition that Purchaser, who is a manufacturer, will not use

or sell the controls or appliances purchased pursuant hereto except as a part of or in conjunction with machinery or equipment of Purchaser's own manufacture. If Purchaser shall use or sell such controls or appliances otherwise than as above specified the Company shall have the right to immediately terminate this agreement without notice.

Impossibility of Performance

The Company agrees that it will, in good faith and to the best of its ability, promptly fill all orders received from Purchaser and deliver the same to the carrier for shipment; provided, however, that the Company shall not be obliged to fill orders in the event and to the extent that it may become impossible to do so because of war conditions, governmental regulations, strikes, labor disturbances, fires, floods, tornadoes, acts of God, mechanical breakdowns, shortages of raw materials, delays in receipt of raw materials and any other causes or conditions beyond the control of the Company.

Assignment of Contract

The Purchaser shall not assign this contract or any interest therein without the written consent of the Company.

Price Revisions

The Company reserves the right to change and revise the prices listed herein upon thirty (30) days' written notice to Purchaser. Revised prices shall apply to all orders received by the Company after the expiration of the thirty (30) day notice period and also to all unfilled orders, including blanket orders, in the Company's possession at the expiration of such period. If the revised prices are not satisfactory to Purchaser the Purchaser may terminate this agreement by written notice received by the Company within fifteen (15) days from the expiration of the aforesaid thirty (30) day period; provided, however, that such termination shall not affect completion of any orders received by the Company prior to the Company's receipt of the Purchaser's notice of termination. During the aforesaid thirty (30) day price change notice period the Purchaser may not order more than one-twelfth of the number of control units herein agreed to be purchased, or, at the Company's option, more than an equivalent number of control units shipped to Purchaser during the same period of the previous year.

Special Units and Prices

1018 Guarantee and Returns

The Company guarantees all control units and equipment manufactured by it and bearing its name or mark to be free from defects in workmanship and material. The Company will, without charge, replace or repair within one year from date of shipment from the Company's factory any control unit or equipment that may be found to be defective upon inspection at the Company's factory. This guarantee does not obligate the Company in any manner in cases where control units or equipment have been subjected to careless handling, improper application or faulty installation. In all cases the Company's liability on the guarantee herein expressed shall be limited to the repair or replacement of the defective control or equipment and in no event shall its liability extend to indirect or consequential damages. The

guarantee herein expressed is made in lieu of all other warranties, guaranties, obligations, or liabilities expressed or implied by the Company or its representatives. All statutory or implied warranties, other than of title, are hereby expressly negatived and excluded.

Returns must not be made without the Company's consent and in all cases the returned controls or equipment must be carefully handled, properly packed and shipped prepaid. If credit is allowed for returns the Company will deduct ten per cent. (10%) to cover handling and inspection charges and a further deduction will be made where recalibrating or refinishing is necessary. Specially made controls may not be returned for credit except at what the Company determines is a fair value for the same.

Patent Warranty

The Company agrees that it will, at its own expense, defend any suit or proceeding that may be instituted against the Purchaser based upon a claim that any apparatus of the Company's manufacture furnished by the Company to the Purchaser constitute an infringement of any Letters Patent of the United States, provided, that the Purchaser shall not be in default hereunder and shall cause the Company to be promptly notified in writing of such suit and shall give the Company authority to defend such suit through the Company's counsel and shall furnish to the Company all needed information and assistance for the defense of such suit. The Company will pay all damages and costs awarded against Purchaser in any suit defended by the Company, provided notice of such suit and authority, information and assistance shall have been given to the Company as aforesaid, and in the event the device or apparatus furnished by the Company, or any part thereof, is held to constitute infringement and its use is enjoined the Company will, at its own expense and at the Company's option, either: procure for the Purchaser the right to continue using the infringing devices or apparatus; or replace the same with non-infringing devices or apparatus; or modify the infringing devices or apparatus so that they become non-infringing; or accept the return of the infringing devices or apparatus and refund the purchase price thereof. The foregoing constitutes the Company's only liability in connection with patent infringement by devices or apparatus furnished by the Company.

Whenever the Company deems it necessary for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such products, and the Purchaser agrees, upon receipt of such notice, to make no further sales or installations of any such products unless or until authorized so to do in writing by the Company.

Termination

In addition to any and all other provisions herein contained relating to termination or cancellation of this agreement, the following circumstances are hereby agreed to be and shall be deemed to be conclusive evidence of the breach of this agreement by either of the parties hereto, and in any of these events the other party hereto may, at its election, without prejudice to any other remedy it may have, terminate all further obligations on the part of such nondefaulting party made and to be performed under this agreement:

(a) The breach of or the failure to comply with any or all of the terms, covenants, conditions and provisions of this agreement, and a continuance of such breach for thirty or more days after receipt by the defaulting party of written notice thereof.

(b) The adjudicated bankruptcy, either voluntary or involuntary or the adjudicated insolvency of either party hereto, or the making of an assignment for the benefit of creditors or the appointment of a trustee or receiver for either of the parties hereto.

(c) The repudiation of this agreement, in whole or in part, by either party hereto.

Field Service

The Company will welcome the opportunity of cooperating with the Purchaser in educating the Purchaser's factory personnel in the servicing and the proper installation of the Company's controls but the Company does not agree or bind itself to render any such service.

The foregoing constitutes the entire agreement between the parties hereto and no change, alteration or modification of this agreement shall be binding unless reduced to writing and signing by the respective parties hereto. The validity,

enforceability and interpretation of this agreement shall be determined and governed by the laws of the State of Illinois.

1019 RESPONDENT'S EXHIBIT NO. 153-D.

Manufacturers' Purchase Contract

The Mercoid Corporation

4201 Belmont Ave. Chicago, Ill.

Date Submitted .....

This Agreement, entered into between The Mercoid Corporation, a Delaware corporation, hereinafter called the "Company," and ..... of ....., ..., hereinafter called the "Purchaser."

Witnesseth:

Whereas the Company is engaged in manufacturing automatic electric controls for heating, refrigerating, air conditioning and other apparatus, machinery and equipment, and

Whereas the Purchaser is desirous of purchasing such controls for use in connection with products of the Purchaser's own manufacture,

Now, Therefore, in consideration of the premises and of the mutual covenants hereinafter set forth the parties hereto agree as follows:

Quantity

Subject to the terms and provisions hereinafter contained, the Company agrees to sell and the Purchaser agrees to purchase, during the term of this agreement, their requirements of the Company's automatic controls.

The special net prices extended herewith by the Company are based on the Purchaser's 1939 control requirements estimated to be ..... units.

Miscellaneous Controls and Control Equipment

Miscellaneous automatic controls and control equipment of the Company's manufacture, not listed herein but shown in the Company's catalog attached hereto, will be furnished at the catalogue list prices less the discounts shown on the manufacturers' discount sheet attached hereto. The list prices and discounts shall be subject to change at any time and from time to time, without notice. All orders for such miscellaneous controls and control equipment shall be subject to acceptance and approval by the Company.

Term of Agreement

This agreement shall become effective on the date of acceptance by the Company and shall continue to and including December 31, 1939, unless sooner terminated as herein provided.

Terms of Payment

Al shipments shall be made f.o.b. the point of shipment with Factory Sight Draft attached to the Bill of Lading, the Company to have the right to designate the point of shipment. If the draft is paid within 10 days from the date of the invoice a special cash discount of two per cent. (2%) will be allowed. If Purchaser desires open account credit accommodation arrangements therefor should be made with the Company's credit department. If such arrangements are made invoices will be due net thirty days after the date of the invoice and a cash discount of two per cent. (2%) will be allowed if payment is made within 10 days from the invoice date. Credit terms and delivery of all equipment are subject to the Company's approval and the Company shall have the right at all times to change or alter the terms of payment and to fix, change or alter such credit accommodations as may be extended to Purchaser. Sales, excise and other taxes will be added to all prices and the amount of such taxes shall not be subject to discount. Invoices covering emergency shipments from a Branch Office of the Company shall be subject to such dis-

counts as are in effect at such Branch Office at the time of shipment, anything herein contained to the contrary notwithstanding.

Use of Controls by Purchaser

This agreement is made upon the understanding and condition that Purchaser, who is a manufacturer, will not use or sell the controls or appliances purchased pursuant hereto except as a part of or in conjunction with machinery or equipment of Purchaser's own manufacture. If Purchaser shall use or sell such controls or appliances otherwise than as above specified the Company shall have the right to immediately terminate this agreement without notice.

Impossibility of Performance

The Company agrees that it will, in good faith and to the best of its ability, promptly fill all orders received from Purchaser and deliver the same to the carrier for shipment; provided, however, that the Company shall not be obliged to fill orders in the event and to the extent that it may become impossible to do so because of war conditions, governmental regulations, strikes, labor disturbances, fires, floods, tornados, acts of God, mechanical breakdowns, shortages of raw materials, delays in receipt of raw materials and any other other causes or conditions beyond the control of the Company.

Assignment of Contract

The Purchaser shall not assign this contract or any interest therein without the written consent of the Company.

Price Revisions

The Company reserves the right to change and revise the prices listed herein upon thirty (30) days' written notice to Purchaser. Revised prices shall apply to all orders received by the Company after the expiration of the thirty (30) day notice period and also to all unfilled orders, including blanket orders, in the Company's possession at the expiration of such period. If the revised prices are not satisfactory to Purchaser the Purchaser may terminate this agreement by written notice received by the Company within fifteen (15) days from the expiration of the aforesaid thirty (30) day period; provided, how-

ever, that such termination shall not affect completion of any orders received by the Company prior to the Company's receipt of the Purchaser's notice of termination. During the aforesaid thirty (30) day price change notice period the Purchaser may not order more than one-twelfth of the number of control units herein agreed to be purchased; or, at the Company's option, more than an equivalent number of control units shipped to Purchaser during the same period of the previous year.

Special Units and Prices

1022 Guarantee and Returns

The Company guarantees all control units and equipment manufactured by it and bearing its name or mark to be free from defects in workmanship and material. The Company will, without charge, replace or repair within one year from date of shipment from the Company's factory any control unit or equipment that may be found to be defective upon inspection at the Company's factory. This guarantee does not obligate the Company in any manner in cases where control units or equipment have been subjected to careless handling, improper application or faulty installation. In all cases the Company's liability on the guarantee herein expressed shall be limited to the repair

or replacement of the defective control or equipment and in no event shall its liability extend to indirect or consequential damages. The guarantee herein expressed is made in lieu of other warranties, guaranties, obligations, or liabilities expressed or implied by the Company or its representatives. All statutory or implied warranties, other than of title, are hereby expressly negatived and excluded.

Returns must not be made without the Company's consent and in all cases the returned controls or equipment must be carefully handled, properly packed and shipped prepaid. If credit is allowed for returns the Company will deduct ten per cent. (10%) to cover handling and inspection charges and a further deduction will be made where recalibrating or refinishing is necessary. Specially made controls may not be returned for credit except at what the Company determines is a fair value for the same.

Patent Warranty

The Company agrees that it will, at its own expense, defend any suit or proceeding that may be instituted against the Purchaser based upon a claim that any apparatus of the Company's manufacture furnished by the Company to the Purchaser constitute an infringement of any Letters Patent of the United States, provided, that the Purchaser shall not be in default hereunder and shall cause the Company to be promptly notified in writing of such suit and shall give the Company authority to defend such suit through the Company's counsel and shall furnish to the Company all needed information and assistance for the defense of such suit. The Company will pay all damages and costs awarded against Purchaser in any suit defended by the Company, provided notice of such suit and authority, information and assistance shall have been given to the Company as aforesaid, and in the event the device or apparatus furnished by the Company, or any part thereof, is held to constitute infringement and its use is enjoined the Company will, at its own expense and at the Company's option, either: procure for the Purchaser the right to continue using the infringing devices or apparatus; or replace the same with non-infringing devices or apparatus; or modify the infringing devices or apparatus so that they become non-infringing; or accept the return of the infringing devices or apparatus and refund the purchase price thereof. The foregoing constitutes the Company's only liability in connection with patent in-

fringement by devices or apparatus furnished by the Company.

Termination

Whenever the Company deems it necessary for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such products, and the Purchaser agrees, upon receipt of such notice, to make no further sales or installations of any such products unless or until authorized so to do in writing by the Company.

In addition to any and all other provisions herein contained relating to termination or cancellation of this agreement, the following circumstances are hereby agreed to be and shall be deemed to be conclusive evidence of the breach of this agreement by either of the parties hereto, and in any of these events the other party hereto may, at its election, without prejudice to any other remedy it may have, terminate all further obligations on the part of such non-defaulting party made and to be performed under this agreement:

(a) The breach of or the failure to comply with any or all of the terms, covenants, conditions and provisions of this agreement, and a continuance of such breach for thirty or more days after receipt by the defaulting party of written notice thereof.

(b) The adjudicated bankruptcy, either voluntary or involuntary or the adjudicated insolvency of either party hereto, or the making of an assignment for the benefit of creditors or the appointment of a trustee or receiver for either of the parties hereto.

(c) The repudiation of this agreement, in whole or in part, by either party hereto.

Field Service

The Company will welcome the opportunity of cooperating with the Purchaser in educating the Purchaser's factory personnel in the servicing and the proper installation of the Company's controls but the Company does not agree or bind itself to render any such service.

The foregoing constitutes the entire agreement between the parties hereto and no change, alteration or modification of this agreement shall be binding unless reduced to writing and signed by the respective parties hereto. The

validity, enforceability and interpretation of this agreement shall be determined and governed by the laws of the State of Illinois.

Manufacturers' Purchase Contract

The Mercoid Corporation
4201 Belmont Ave. Chicago, Ill.

Date Submitted .....

This Agreement, entered into between The Mercoid Corporation, a Delaware corporation, hereinafter called the "Company," and ..... of ....., ..., hereinafter called the "Purchaser."

Witnesseth:

Whereas the Company is engaged in manufacturing automatic electric controls for heating, refrigerating, air conditioning and other apparatus, machinery and equipment, and

Whereas the Purchaser is desirous of purchasing such controls for use in connection with products of the Purchaser's own manufacture,

Now, Therefore, in consideration of the premises and of the mutual covenants hereinafter set forth the parties hereto agree as follows:

Quantity

Subject to the terms and provisions hereinafter contained, the Company agrees to sell and the Purchaser agrees to purchase, during the term of this agreement, their requirements of the Company's automatic controls. The

special net prices extended herewith by the Company are based on the Purchaser's 1939 control requirements estimated to be ..... units.

Miscellaneous Controls and Control Equipment

Miscellaneous automatic controls and control equipment of the Company's manufacture, not listed herein but shown in the Company's catalogue attached hereto, will be furnished at the catalogue list prices less the discounts shown on the manufacturers' discount sheet attached hereto. The list prices and discounts shall be subject to change at any time and from time to time, without notice. All orders for such miscellaneous controls and control equipment shall be subject to acceptance and approval by the Company.

Term of Agreement

This agreement shall become effective on the date of acceptance by the Company and shall continue to and including December 31, 1939, unless sooner terminated as herein provided.

Terms of Payment

All shipments shall be made f.o.b. the point of shipment with Factory Sight Draft attached to the Bill of Lading, the Company to have the right to designate the point of shipment. If the draft is paid within 10 days from the date of the invoice a special cash discount of two per cent. (2%) will be allowed. If Purchaser desires open account credit accommodation arrangements therefor should be made with the Company's credit department. If such arrangements are made invoices will be due net thirty days after the date of the invoice and a cash discount of two per cent. (2%) will be allowed if payment is made within 10 days from the invoice date. Credit terms and delivery of all equipment are subject to the Company's approval and the Company shall have the right at all times to change or alter the terms of payment and to fix, change or alter such credit accommodations as may be extended to Purchaser. Sales, excise and other taxes will be added to all prices and the amount of such taxes shall not be subject to discount. Invoices covering emergency shipments from a Branch Office of the Company shall be subject to such

discounts as are in effect at such Branch Office at the time of shipment, anything herein contained to the contrary notwithstanding.

Use of Controls by Purchaser

This agreement is made upon the understanding and condition that Purchaser, who is a manufacturer, will not use or sell the controls or appliances purchased pursuant hereto except as a part of or in conjunction with machinery or equipment of Purchaser's own manufacture. If Purchaser shall use or sell such controls or appliances otherwise than as above specified the Company shall have the right to immediately terminate this agreement without notice.

Impossibility of Performance

The Company agrees that it will, in good faith and to the best of its ability, promptly fill all orders received from Purchaser and deliver the same to the carrier for shipment; provided, however, that the Company shall not be obliged to fill orders in the event and to the extent that it may become impossible to do so because of war conditions, governmental regulations, strikes, labor disturbances, fires, floods, tornados, acts of God, mechanical breakdowns, shortages of raw materials, delays in receipt of raw materials and any other causes or conditions beyond the control of the Company.

Assignment of Contract

The Purchaser shall not assign this contract or any interest therein without the written consent of the Company.

Price Revisions

The Company reserves the right to change and revise the prices listed herein upon thirty (30) days' written notice to Purchaser. Revised prices shall apply to all orders received by the Company after the expiration of the thirty (30) day notice period and also to all unfilled orders, including blanket orders, in the Company's possession at the expiration of such period. If the revised prices are not satisfactory to Purchaser the Purchaser may terminate this agreement by written notice received by the Company within fifteen (15) days from the expiration of the afore-

said thirty (30) day period; provided, however, that such termination shall not affect completion of any orders received by the Company prior to the Company's receipt of the Purchaser's notice of termination. During the aforesaid thirty (30) day price change notice period the Purchaser may not order more than one-twelfth of the number of control units herein agreed to be purchased, or, at the Company's option, more than an equivalent number of control units shipped to Purchaser during the same period of the previous year.

Special Units and Prices.

1026 Guarantee and Returns

The Company guarantees all control units and equipment manufactured by it and bearing its name or mark to be free from defects in workmanship and material. The Company will, without charge, relace or repair within one year from date of shipment from the Company's factory any control unit or equipment that may be found to be defective upon inspection at the Company's factory. This guarantee does not obligate the Company in any manner in cases where control units or equipment have been subjected to careless handling, improper application or faulty installation. In all cases the Company's liability on the guarantee herein expressed shall be limited to the rapair or replacement of the defective control or equipment and in no event shall its liability extend to indirect or consequential damages. The guarantee herein expressed is made in lieu of other warranties, guaranties, obligations, or liabilities expressed or implied by the Company or its representatives. All statutory or implied warranties, other than of title, are hereby expressly negatived and excluded.

Returns must not be made without the Company's consent and in all cases the returned controls or equipment must be carefully handled, properly packed and shipped prepaid. If credit is allowed for returns the Company will deduct ten per cent. (10%) to cover handling and inspection charges and a further deduction will be made where recalibrating or refinishing is necessary. Specially made controls may not be returned for credit except at what the Company determines is a fair value for the same.

Patent Warranty.

The Company agrees that it will, at its own expense, defend any suit or proceeding that may be instituted against the Purchaser based upon a claim that any apparatus of the Company's manufacture furnished by the Company to the Purchaser constitute an infringement of any Letters Patent of the United States, provided, that the Purchaser shall not be in default hereunder and shall cause the Company to be promptly notified in writing of such suit and shall give the Company authority to defend such suit through the Company's counsel and shall furnish to the Company all needed information and assistance

for the defense of such suit. The Company will pay all damages and costs awarded against Purchaser in any suit defended by the Company, provided notice of such suit and authority, information and assistance shall have been given to the Company as aforesaid, and in the event the device or apparatus furnished by the Company, or any part thereof, is held to constitute infringement and its use is enjoined the Company will, at its own expense and at the Company's option, either: procure for the Purchaser the right to continue using the infringing devices or apparatus; or replace the same with non-infringing devices or apparatus; or modify the infringing devices or apparatus so that they become non-infringing; or accept the return of the infringing devices or apparatus and refund the purchase price thereof. The foregoing constitutes the Company's only liability in connection with patent infringement by devices or apparatus furnished by the Company.

Whenever the Company deems it necessary for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such products, and the Purchaser agrees, upon receipt of such notice, to make no further sales or installations of any such products unless or until authorized so to do in writing by the Company.

In addition to any and all other provisions herein contained relating to termination or cancellation of this agreement, the following circumstances are hereby agreed to be and shall be deemed to be conclusive evidence of the breach of this agreement by either of the parties hereto, and in any of these events the other party hereto may, at its election, without prejudice to any other remedy it may have, terminate all further obligations on the part of such non-defaulting party made and to be performed under this agreement:

Termination

(a) The breach of or the failure to comply with any or all of the terms, covenants, conditions and provisions of this agreement, and a continuance of such breach for thirty or more days after receipt by the defaulting party of written notice thereof.

(b) The adjudicated bankruptcy, either voluntary or

involuntary or the adjudicated insolvency of either party hereto, or the making of an assignment for the benefit of creditors or the appointment of a trustee or receiver for either of the parties hereto.

(c) The repudiation of this agreement, in whole or in part, by either party hereto.

The Company will welcome the opportunity of cooperating with the Purchaser in educating the Purchaser's factory personnel in the servicing and the proper installation of the Company's controls but the Company does not agree or bind itself to render any such service.

Field Service

The foregoing constitutes the entire agreement between the parties hereto and no change, alteration or modification of this agreement shall be binding unless reduced to writing and signed by the respective parties hereto. The validity, enforceability and interpretation of this agreement shall be determined and governed by the laws of the State of Illinois.

1027 RESPONDENT'S EXHIBIT NO. 153-F.

Manufacturers' Purchase Contract.

The Mercoid Corporation.
4201 Belmont Ave. Chicago, Ill.

Date Submitted .....

This Agreement, entered into between The Mercoid Corporation, a Delaware corporation, hereinafter called the "Company," and ..... of ....., ..., hereinafter called the "Purchaser."

Witnesseth:

Whereas the Company is engaged in manufacturing automatic electric controls for heating, refrigerating, air conditioning and other apparatus, machinery and equipment, and

Whereas the Purchaser is desirous of purchasing such controls for use in connection with products of the Purchaser's own manufacture,

Now, Therefore, in consideration of the premises and of the mutual covenants hereinafter set forth the parties hereto agree as follows:

Quantity.

Subject to the terms and provisions hereinafter contained, the Company agrees to sell and the Purchaser agrees to purchase, during the term of this agreement, their requirements of the Company's automatic controls. The special net prices extended herewith by the Company are based on the Purchaser's 1939 control requirements estimated to be ..... units.

Miscellaneous Controls and Control Equipment.

Miscellaneous automatic controls and control equipment of the Company's manufacture, not listed herein but shown in the Company's catalogue attached hereto, will be furnished at the catalogue list prices less the discounts shown on the manufacturers' discount sheet attached hereto. The list prices and discounts shall be subject to change at any time and from time to time, without notice. All orders for such miscellaneous controls and control equipment shall be subject to acceptance and approval by the Company.

Term of Agreement.

This agreement shall become effective on the date of acceptance by the Company and shall continue to and including December 31, 1939, unless sooner terminated as herein provided.

Terms of Payment.

All shipments shall be made f. o. b. the point of shipment with Factory Sight Draft attached to the Bill of Lading, the Company to have the right to designate the point of shipment. If the draft is paid within 10 days from the date of the invoice a special cash discount of two per cent. (2%) will be allowed. If Purchaser desires open account credit accommodation arrangements therefor should be made with the Company's credit department. If such arrangements are made invoices will be due net thirty days after the date of the invoice and a cash discount of two per cent. (2%) will be allowed if payment is made within 10 days from the invoice date. Credit terms and delivery of all equipment are subject to the Company's approval and the Company shall have the right at all times to change or alter the terms of payment and to fix, change or alter such credit accommodations as may be extended to Purchaser. Sales, excise and other taxes will be added to all prices and the amount of such taxes shall not be subject to discount. Invoices covering emergency shipments from a Branch Office of the Company shall be subject to such discounts as are in effect at such Branch Office at the time of shipment, anything herein contained to the contrary notwithsfanding.

Use of Controls by Purchaser.

This agreement is made upon the understanding and condition that Purchaser, who is a manufacturer, will not use or sell the controls or appliances purchased pursuant hereto except as a part of or in conjunction with machinery or equipment of Purchaser's own manufacture. If Purchaser shall use or sell such controls or appliances otherwise than as above specified the Company shall have the right to immediately terminate this agreement without notice.

Impossibility of Performance.

The Company agrees that it will, in good faith and to the best of its ability, promptly fill all orders received from

Purchaser and deliver the same to the carrier for shipment; provided, however, that the Company shall not be obliged to fill orders in the event and to the extent that it may become impossible to do so because of war conditions, governmental regulations, strikes, labor disturbances, fires, floods, tornados, acts of God, mechanical breakdowns, shortages of raw materials, delays in receipt of raw materials and any other causes or conditions beyond the control of the Company.

Assignment of Contract.

The Purchaser shall not assign this contract or any interest therein without the written consent of the Company.

Price Revisions.

The Company reserves the right to change and revise the prices listed herein upon thirty (30) days' written notice to Purchaser. Revised prices shall apply to all orders received by the Company after the expiration of the thirty (30) day notice period and also to all unfilled orders, including blanket orders, in the Company's possession at the expiration of such period. If the revised prices are not satisfactory to Purchaser the Purchaser may terminate this agreement by written notice received by the Company within fifteen (15) days from the expiration of the aforesaid thirty (30) day period; provided, however, that such termination shall not affect completion of any orders received by the Company prior to the Company's receipt of the Purchaser's notice of termination. During the aforesaid thirty (30) day price change notice period the Purchaser may not order more than one-twelfth of the number of control units herein agreed to be purchased, or, at the Company's option, more than an equivalent number of control units shipped to Purchaser during the same period of the previous year.

Other standard or odd model controls at list price less prevailing manufacturers discounts. Net price controls listed above may be included in single shipment orders to obtain quantity discounts on the list price items specified.

Prices relating to all controls are for standard ranges as listed in catalog, and for 115 volt, 60 cycle specifications only, unless otherwise specified.

Special Units and Prices.

1030 Guarantee and Returns.

The Company guarantees all control units and equipment manufactured by it and bearing its name or mark to be free from defects in workmanship and material. The Company will, without charge, replace or repair within one year from date of shipment from the Company's factory any control unit or equipment that may be found to be defective upon inspection at the Company's factory. This guarantee does not obligate the Company in any manner in cases where control units or equipment have been subjected to careless handling, improper application or faulty installation. In all cases the Company's liability on the guarantee herein expressed shall be limited to the repair or replacement of the defective control or equipment and in no event shall its liability extend to indirect or consequential damages. The guarantee herein expressed is made in lieu of

all other warranties, guaranties, obligations, or liabilities expressed or implied by the Company or its representatives. All statutory or implied warranties, other than of title, are hereby expressly negatived and excluded.

Returns must not be made without the Company's consent and in all cases the returned controls or equipment must be carefully handled, properly packed and shipped prepaid. If credit is allowed for returns the Company will deduct ten per cent. (10%), to cover handling and inspection charges and a further deduction will be made where recalibrating or refinishing is necessary. Specially made controls may not be returned for credit except at what the Company determines is a fair value for the same.

Patent Warranty.

The Company agrees that it will, at its own expense, defend any suit or proceeding that may be instituted against the Purchaser based upon a claim that any apparatus of the Company's manufacture furnished by the Company to the Purchaser constitute an infringement of any Letters Patent of the United States, provided, that the Purchaser shall not be in default hereunder and shall cause the Company to be promptly notified in writing of such suit and shall give the Company authority to defend such suit through the Company's counsel and shall furnish to the Company all needed information and assistance for the defense of such suit. The Company will pay all damages and costs awarded against Purchaser in any suit defended by the Company, provided notice of such suit and authority, information and assistance shall have been given to the Company as aforesaid, and in the event the device or apparatus furnished by the Company, or any part thereof, is held to constitute infringement and its use is enjoined the Company will, at its own expense and at the Company's option, either: procure for the Purchaser the right to continue using the infringing devices or apparatus; or replace the same with non-infringing devices or apparatus; or modify the infringing devices or apparatus so that they become non-infringing; or accept the return of the infringing devices or apparatus and refund the purchase price thereof. The foregoing constitutes the Company's only liability in connection with patent infringement by devices or apparatus furnished by the Company.

Whenever the Company deems it necessary for any rea-

son whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such products, and the Purchaser agrees, upon receipt of such notice, to make no further sales or installations of any such products unless or until authorized so to do in writing by the Company.

Termination.

In addition to any and all other provisions herein contained relating to termination or cancellation of this agreement, the following circumstances are hereby agreed to be and shall be deemed to be conclusive evidence of the breach of this agreement by either of the parties hereto, and in any of these events the other party hereto may, at its election, without prejudice to any other remedy it may have, terminate all further obligations on the part of such non-defaulting party made and to be performed under this agreement:

Termination

(a) The breach of or the failure to comply with any or all of the terms, covenants, conditions and provisions of this agreement, and a continuance of such breach for thirty or more days after receipt by the defaulting party of written notice thereof.

(b) The adjudicated bankruptcy, either voluntary or involuntary or the adjudicated insolvency of either party hereto, or the making of an assignment for the benefit of creditors or the appointment of a trustee or receiver for either of the parties hereto.

(c) The repudiation of this agreement, in whole or in part, by either party hereto.

Field Service

The Company will welcome the opportunity of cooperating with the Purchaser in educating the Purchaser's factory personnel in the servicing and the proper installation of the Company's controls but the Company does not agree or bind itself to render any such service.

The foregoing constitutes the entire agreement between the parties hereto and no change, alteration or modification of this agreement shall be binding unless reduced to writing and signed by the respective parties hereto. The valid-

ity, enforceability and interpretation of this agreement shall be determined and governed by the laws of the State of Illinois.

1031 RESPONDENT'S EXHIBIT NO. 154.

May 16, 1939.

Mr. S. L. LaPidus
Quiet Heet Mfg. Corp.
125 Green Street
Newark, New Jersey

Dear Mr. LaPidus:

We are returning herewith, signed acceptance of our contract proposal of May 5.

You will note that we have changed the price of the Type KMW Pyratherm, constant ignition type, to $7.75 each net instead of $8.00 each net. This is in accordance with our conversation at the time of the writer's last visit to New York.

We trust that our action meets with your approval, and with kindest regards, remain,

Very truly yours,

Executive Vice-President.

JWO:C
Enc.

1032 RESPONDENT'S EXHIBIT NO. 155.

(Letterhead of The Mercoid Corporation—Chicago, U.S.A.)

January 10, 1940.

Gentlemen:

As is our custom at this time of the year, we are pleased to present our annual contract covering Mercoid prices and terms of sale. This year we are able to offer, and will outline in this letter, an unusual opportunity which we think will appeal to you and merit your careful consideration.

Signed contracts in their aggregate are of great assistance to us. A manufacturer must act largely on faith in anticipating future inventory needs. With assurance from his trade, however, he can take a greater advantage of favorable buying situations and more accurately arrange production during the off-peak period. This co-operation enables Mercoid, in the face of rising costs, to keep its prices down and do a greater volume.

This improved volume makes possible reductions in the selling prices of many standard control units, as you will note on the attached contract. Furthermore, additional savings can be effected in the manufacture of Primary Controls and Thermostats during the off-peak season just ahead, in view of which we are now prepared to make the offer stated below:

On a blanket order covering 100 or more sets of Primary Controls and Thermostats, with definite dates for shipment throughout the year, specified on the order, we will extend the following special net prices:

Type JM Pyratherm	$8.70 Ea. Net
Type JMI Pyratherm	9.20 Ea. Net
Type H Sensatherm	2.85 Ea. Net

May we urge that you place your orders promptly, as the above stated net prices are subject to withdrawal without notice and will not extend beyond May 15, 1940. Whether or not you take advantage of them, we look forward to your acceptance of the enclosed contract by signing and returning both copies, the original of which will then be signed and returned for your files.

And, a final request. Check your experience with Mercoid Controls and Mercoid's policy of prompt handling of transactions. Check both against the field, and if they are

important to you, 1940 will see a further increase in your Mercoid purchases. If you are not a Mercoid Control user take advantage of our 1940 merchandising program and equip your product with controls that will, by their outstanding performance, bring you greater good will—less service costs—more dollar income.

Very truly yours,

JWO:C *Executive Vice-President.*

Other Standard or Odd Model Controls at List Price Less 25-25% Discount.

Prices Relating to All Controls Are for Standard Ranges as Listed in Catalog, and for 115 Volt, 60 Cycle Specifications Only, Unless Otherwise Specified.

Special Units and Prices.

1058 Terms of Payment

All prices are F.O.B. point of shipment. Terms 2%—10 days, net 30 days on approved credit.

Sales, excise and other taxes will be added to all prices, and the amount of such taxes shall not be subject to discount.

Emergency shipments from Branch Office stocks shall be invoiced at prices in effect at such Branch Office at time of shipment.

Trade Customs

Orders entered upon our books cannot be countermanded except with our consent and terms that will indemnify us against loss.

All orders are accepted with the understanding that we

shall not be obliged to fill such orders in the event that it may become impossible to do so because of war conditions, governmental regulations, strikes, labor disturbances, fires, floods, tornadoes, acts of God, mechanical breakdowns, shortage of raw materials, delays in receipt of raw materials and any other causes or conditions beyond our control.

Price Revision

Prices listed herein are subject to change on thirty (30) day written notice. Revised prices shall apply to all orders received after the thirty (30) day notice period and also to all unfilled orders, including blanket orders, in our possession at the expiration of such period. During the thirty (30) day price change notice period, we reserve the right to limit the quantity on orders placed with us to the equivalent of the number of control units shipped buyer during the previous thirty (30) day period.

Special prices are extended, herewith, with the understanding that the manufacturer will not use or sell the controls purchased pursuant hereto except in conjunction with machinery or equipment of their own manufacture. If the manufacturers sells such controls otherwise than as specified, we reserve the right to immediately withdraw all prices.

Guarantee and Returns

We guarantee Mercoid products to be free from defects in workmanship or material, and will, without charge, replace or repair within one year from date of shipment from our factory any product that may be found defective upon inspection at our factory. This guarantee does not obligate us where products have been subjected to careless handling, improper application or faulty installation, and we expressly disclaim any obligation, guaranty or liability whatsoever except as above stated.

Returns must not be made without our consent and goods must in all cases be carefully handled, properly packed, and shipped prepaid. If credit is allowed we deduct 10% for handling and inspection, with further deduction for recalibrating or refinishing if necessary. Specially made instruments cannot be credited except at what we determine is fair value to us.

Patent Warranty

We will defend any suit or proceeding brought against our customer so far as based on a claim that any apparatus, or any part thereof, furnished by us, constitutes an infringement of any patent of the United States, provided, that the customer causes us to be notified promptly in writing and given authority, information and assistance, (at our expense), for the defense of same, and we will pay all damages and costs awarded therein against such customer in any action of which said notice and authority and information were given to us. In case the apparatus or any part thereof is in such suit held to constitute infringement and its use is enjoined, we will, at our expense, either: procure for the customer the right to continue using said apparatus; or replace same with non-infringing apparatus; or modify it so it becomes non-infringing; or remove said apparatus and refund the purchase price thereof. The foregoing states our entire liability for patent infringement by said apparatus or any part thereof.

Type 72 Low Water Cut-Out, 300 lb. Max.	35.00	18.00

Other Standard or Odd Model Controls at List Price Less 25-25% Discount.

Prices relating to all controls are for Standard ranges as listed in catalog, and for 115 volt, 60 cycle specifications only, unless otherwise specified.

Special Units and Prices

1062 Terms of Payment

All prices are F. O. B. point of shipment. Terms 2%—10 days, net 30 days on approved credit.

Sales, excise and other taxes will be added to all prices, and the amount of such taxes shall not be subject to discount.

Emergency shipments from Branch Office stocks shall be invoiced at prices in effect at such Branch Office at time of shipment.

Trade Customs

Orders entered upon our books cannot be countermanded except with our consent and upon terms that will indemnify us against loss.

All orders are accepted with the understanding that we shall not be obliged to fill such orders in the event that it may become impossible to do so because of war conditions, governmental regulations, strikes, labor disturbances, fires, floods, tornadoes, acts of God, mechanical breakdowns, shortage of raw materials, delays in receipt of raw materials and any other causes or conditions beyond our control.

Price Revision

Prices listed herein are subject to change on thirty (30) day written notice. Revised prices shall apply to all orders received after the thirty (30) day notice period and also to all unfilled orders, including blanket orders, in our possession at the expiration of such period. During the thirty (30) day price change notice period, we reserve the right to limit the quantity on orders placed with us to the equivalent of the number of control units shipped buyer during the previous thirty (30) day period.

Special prices are extended, herewith, with the understanding that the manufacturer will not use or sell the controls purchased pursuant hereto except in conjunction with machinery or equipment of their own manufacture. If the manufacturer sells such controls otherwise than as specified, we reserve the right to immediately withdraw all prices.

Guarantee and Returns

We guarantee Mercoid products to be free from defects in workmanship or material, and will without charge, replace or repair within one year from date of shipment from our factory any product that may be found defective upon inspection at our factory. This guarantee does not obligate us where products have been subjected to careless handling, improper application or faulty installation, and we expressly disclaim any obligation, guaranty or liability whatsoever except as above stated.

Returns must not be made without our consent and goods must in all cases be carefully handled, properly packed, and shipped prepaid. If credit is allowed we deduct 10% for handling and inspection, with further deduction for recalibrating or refinishing if necessary. Specially made instruments cannot be credited except at what we determine is fair value to us.

Patent Warranty

We will defend any suit or proceeding brought against our customer so far as based on a claim that any apparatus, or any part thereof, furnished by us, constitutes an infringement of any patent of the United States, provided, that the customer causes us to be notified promptly in writing and given authority, information and assistance, (at our expense), for the defense of same, and we will pay all damages and costs awarded therein against such customer in any action of which said notice and authority and information were given to us. In case the apparatus or any part thereof is in such suit held to constitute infringement and its use is enjoined, we will, at our expense, either: procure for the customer the right to continue using said apparatus; or replace same with non-infringing apparatus; or modify it so it becomes non-infringing; or remove said apparatus and refund the purchase price thereof. The foregoing states our entire liability for patent infringement by said apparatus or any part thereof.

Guarantee and Returns

We guarantee Mercoid products to be free from defects in workmanship or material, and will, without charge, replace or repair within one year from date of shipment from our factory any product that may be found defective upon inspection at our factory. This guarantee does not obligate us where products have been subjected to careless handling, improper application or faulty installation, and we expressly disclaim any obligation, guaranty or liability whatsoever except as above stated.

Returns must not be made without our consent and goods must in all cases be carefully handled, properly packed, and shipped prepaid. If credit is allowed we deduct 10% for handling and inspection, with further deduction for recalibrating or refinishing if necessary. Specially made instruments cannot be credited except at what we determine is fair value to us.

Patent Warranty

We will defend any suit or proceeding brought against our customer so far as based on a claim that any apparatus, or any part thereof, furnished by us, constitutes an infringement of any patent of the United States, provided, that the customer causes us to be notified promptly in writing and given authority, information and assistance, (at our

expense), for the defense of same, and we will pay all damages and costs awarded therein against such customer in any action of which said notice and authority and information were given to us. In case the apparatus or any part thereof is in such suit held to constitute infringement and its use is enjoined, we will, at our expense, either: procure for the customer the right to continue using said apparatus; or replace same with non-infringing apparatus; or modify it so it becomes non-infringing; or remove said apparatus and refund the purchase price thereof. The foregoing states our entire liability for patent infringement by said apparatus or any part thereof.

135 South LaSalle Street,
Chicago, Illinois.

Re: Docket No. 4920

Minneapolis-Honeywell Regulator Company

Dear Mr. Freeman:

Replying to your letter of June 7, I think I made my position clear during our telephone conversation.

For your further information, however, I enclose copy of my letter of this date to Mr. Dinnen, our attorney in charge of the Chicago office. As you see, our general position is that the matter now being before the Court we should enter into no arrangements which would embarrass the Court in entering such order or obtaining such assurances in lieu thereof as the Court may see fit.

Very truly yours,

W. T. Kelley,
Chief Counsel.

1076 RESPONDENT'S EXHIBIT NO. 168-B.

25

June 9, 1944.

Mr. William F. Dinnen,
Attorney in Charge,
1118 New Post Office Building,
433 West Van Buren,
Chicago 7,
Illinois.

Re: Docket No. 4920

Minneapolis-Honeywell Regulator Company

Dear Mr. Dinnen:

Referring to and supplementing the third paragraph of my letter to you dated June 3 and also referring to Mr. Chadwell's letter of May 31, our position before the Court and with Mr. Chadwell should be that if Mr. Chadwell will personally and directly assure the Court that the subpena will be fully complied with, then we would have no objection to a dismissal of the petition. On the other hand, it is entirely possible that the Court even then would wish to enter an order that the subpena be complied with and to which order, of course, we would not want to offer any objection. With the matter in the hands of the Court I do not think we should entertain any proposal from Mr. Chadwell to dismiss the petition without some satisfactory form of commitment on his part to the Court.

I assume that you have permitted Mr. Freeman to see a copy of Mr. Chadwell's letter of May 31. That would be in keeping with my suggestion in my letter of June 3 to you.

I have informed Mr. Freeman of the attitude of this office as above described.

Very truly yours,

W. T. Kelley,
Chief Counsel.

1181 **RESPONDENT'S EXHIBIT NO. 171.**

Report to

Minneapolis Honeywell Regulator Company

Summary by Brackets

February 21, 1944

Ross Federal Research Corporation

1182 **Ross Federal Research Corporation**

Minneapolis Honeywell Regulator Company
Minneapolis, Minnesota

Gentlemen:

In July, 1943, Ross Federal Research Corporation was engaged by Minneapolis Honeywell Regulator Company to make a survey of domestic household oil burner manufacturers, wholesalers and dealers to obtain information as to the price structure prevailing in the year 1941 throughout the industry as it affected wholesalers and retail dealers, that is, installers, of domestic household oil burners. The survey was made as it concerns domestic household oil burners of a capacity of 2½ gallons, or less, per hour.

The method by which this survey was to be done was left entirely up to Ross Federal Research Corporation. The only instructions given us was the type of information to be obtained. The selection of manufacturers, wholesalers and dealers was left entirely up to Ross Federal.

After a conference on the subject of method of procedure in this survey on the part of Ross Federal executives, it was decided by Ross Federal that the survey should be conducted in fifteen areas throughout the country which would logically be the greatest market for domestic household oil burners. The fifteen areas appearing in the summary of the study were, therefore, selected as being typical of the domestic household oil burner market.

Inasmuch as no pre-selection of calls had been made, Donald J. Gould, Minneapolis Research Manager of Ross Federal, personally visited all of the markets selected with the exception of Waterloo, Cedar Rapids, Iowa; Milwaukee, Wisconsin, and Seattle, Washington, and set up the survey

with the Ross Federal Supervisor in those areas and examined the first days work in each city before leaving to be sure that the method of doing the survey was properly understood.

In Waterloo, Cedar Rapids, and Milwaukee, the survey was set up by Mr. B. V. Bray, Research Supervisor of the Minneapolis office of Ross Federal, following the same method. Mr. Bray was assigned to do this work due to the fact that Mr. Gould was unable to get away at the time the survey in these towns was started. In Seattle the survey was set up by Mr. Ken Derby, Seattle manager for Ross Federal Research. Selection of the oil burner wholesale dealers and manufacturers was made by consulting the classified index of the telephone book and taking all of the names which appeared under the classification of oil burner wholesalers, dealers and manufacturers, and calling on them.

With the exception of Waterloo, Cedar Rapids, and Milwaukee, the areas selected were the metropolitan areas and included the important towns immediately adjacent to the cities concerned, and therefore, the districts used are designated as areas rather than as cities. This was done to afford as large a sample as possible and to give the best possible statistical stability to the report.

In selecting the persons on whom to call after the list was made up from the classified section of the telephone book in each area, in cases where there was a Minneapolis Honeywell district office in this area, Mr. Gould visited the district manager of Minneapolis Honeywell and requested that the salesmen's call books be turned over to him for examination, and these call books were checked against the telephone list to be sure that no names were missed. This check was made entirely without any assistance or suggestion from any employee or member of Minneapolis Honeywell Regulator Company.

1183 In all 535 calls were made upon domestic household oil burner manufacturers, wholesalers, dealers and installers. When the questionnaire had been returned to the Minneapolis office of Ross Federal from the various districts surveyed, these were compiled into a preliminary report, under direction of Mr. Gould, listing the complete information obtained in the interviews and this was examined by Mr. Gould before the compilation of the final report.

The preliminary examination of these results showed that in numerous cases the wholesalers and dealers had

given information on domestic household oil burners other than the 2½ gallon per hour capacity burner for which the questionnaire was designed, and due to the fact that inquiry was made on prices which prevailed two years prior (1941) to the making of these calls and in a number of cases, records had been destroyed, prices were quoted from memory, and it was felt that obviously some of these prices were not to be accepted without further checking and verification.

Therefore, Mr. Gould wrote to the eighty-three manufacturers of domestic household oil burners whose outlets had been contacted by the Ross Federal representatives in the study, asking for verification of the wholesale prices given by the wholesalers and dealers. He explained to the manufacturers that this survey had been made and that prices, some of which had been quoted from memory or from inadequate records, were not to be accepted without verification, and asked that these manufacturers verify these prices or give the correct price to which the dealers and wholesalers concerned were sold in 1941. Sixty-four of the eighty-three manufacturers cooperated and returned the price schedules either corrected or verified. All of the figures used in the compiled report setting high or low limits within the various brackets are verified figures from the manufacturers, and are, therefore, reliable and acceptable data.

An examination of the data obtained showed that a chaotic price condition existed throughout the industry in 1941 and that the prices given varied from one geographic section to another, and likewise varied within the geographic section itself, and that there was no definite pattern of either wholesaler or dealer oil burner prices.

The data from which our report has been compiled is a part of our records and available for checking at any time.

The following results are a true compilation of a summary of the findings in this survey without outside assistance or suggestion from any source.

Respectfully submitted,

Ross Federal Research Corporation,

Donald J. Gould,

Minneapolis Research Manager.

Subscribed and sworn to before me this 21st day of February, 1944.

Donald E. Cameron,

(Seal) *Notary Public, County of Hennepin, State of Minnesota.*

My Commission Expires June 8th, 1948.

Job #23-18

Instructions to Field Representatives

Purpose of the Survey:

The purpose of this survey is to obtain information for a manufacturer for use in making post-war plans.

All information in this study is to be on the basis of prices in the industry as they were in 1941, before there were any war restrictions on this equipment.

Household oil burners with a capacity from one gallon to 2½ gallons per hour are to be studied in this survey. Be sure to see that the information you get is on installations of this size and not larger.

How the Information Is to Be Obtained:

Information in this is to be obtained by the personal interview method.

Where the Information Is to Be Obtained:

Information in this study is to be obtained at offices of firms manufacturing, selling at wholesale, or installing domestic heating oil burners as described above.

When the Information Is to Be Obtained:

Information in this study is to be obtained during business hours.

Who Is a Qualified Respondent:

The manager or responsible employee of the firm called on is a qualified respondent in this study.

Introduction:

In introducing yourself to the respondent use the following approach: "Mr. ..... I am with the Ross Federal Research Corporation. We are making a National survey of the domestic oil burner dealer and manufacturer market for the Minneapolis Honeywell Regulator Co. of Minneapolis, to determine information for them with which

to build up a nation-wide chart of dealer, wholesaler, and installed burner and heating equipment prices as they were in 1941. I would like to have you read this letter from Minneapolis Honeywell with regard to it."

Specific Instructions Covering Each Question on the Questionnaire:

Type of Contract: This information will be obtained from the dealer by talking to him about the type of business he does. He will fall into one of the following classifications:

Manufacturer:

a. The manufacturer who sells at wholesale only, either through wholesalers, who in turn sell to dealers or who eliminate the wholesaler and sells to the dealer. This type of manufacturer does no retail installed business of his own. This manufacturer should be designated by a check mark as a "manufacturer: wholesale".

1193 b. The manufacturer who sells the majority of his output on a retail installed basis, but also has a wholesale price which he uses to sell burners to dealers usually not in the same town but in the outlying territory. This should be designated by checking both "manufacturer: wholesale and retail, showing a check after each classification.

c. The manufacturer who sells all of his output on a retail installed basis, and does no wholesale business. There will probably be only a few of those. Merely check "manufacturer-retail".

Wholesaler:

There are two types of wholesaler:

a. The wholesaler who sells at wholesale only to dealers.

b. The wholesaler, usually called a distributor, who has his own installation department and sells installed directly to the user, usually in the city in which he is located, and sells at wholesale to dealers, usually within a certain territory such as the majority of a State or possibly two or three states. This for the purposes of filling out the questionnaire should be marked under "dealer wholesale" for both classifications of wholesaler.

Dealer:

The dealer sells directly installed to the home owner or user. This type of merchandiser should be marked under "dealer retail."

Question #1 (a) "What do you think are the prospects of the domestic oil burner sales after the war?" Merely check which classification respondents answer falls into.

Question #1 (b) "What is the reason for your opinion?" Write a full narrative answer as to just why the respondent has this opinion.

Question #2. "What makes of oil burners did you sell in 1941. What models of each?" Impress the respondent that we are interested only in the small domestic burner which uses from one to 2½ gallons per hour and no other models. They will be familiar with the terms used as they use them daily in their business.

Under "single or two stage pump" merely write the words "single" or "two stage."

On controls we want the make or brand of controls with which the burner is regularly equipped.

"Wholesale price—Complete with controls but without accessories", means as they sell it to the retailer without pipe or tank.

"Installed price—complete with usual size tank (..... gallons). As there are different sized tanks used by installing dealers and in different localities size used is different fill in the size of tank regularly used. Information wanted is for installed price of burner only and should not include cost of furnace, but merely burner installation only.

"Manufacturers List Price—Discount Given—%". Please have the respondent give you the list price and if any quantity discount is given specify that percent. If more than one for different quantities get them all.

Question #3. (a) "If different controls were used than those specified above, was there a difference in price?" The information wanted on this questions is was the cost of the dealer different, if he used controls other than the ones he usually put on the burners, did they cost him more, and how much more or less.

1194 Question #3. (b) If "Yes" ask: How much difference? We want to know the difference more or less it cost the dealer or manufacturer to use controls other than those regularly furnished with the burner.

Question #4. "In selling against competition it is sometimes necessary to cut the price. What was the lowest-selling price you would give on the above burners to most competition?" Generally in this business they had an asking and a selling price, if they were up against competition. What we want here is the price they would stop at if they were up against a situation of this kind.

Question #5. "Do you consider you are in active, or direct competition in the domestic househeating oil burner field with dealers handling distillate oil burners, or oil burning furnaces of the shell or bowl type such as illustrated on this page?" The two pages of photostats furnished are for the purpose of illustrating just what is meant by this type of burner. In asking the question you might for purposes of clarification add, such burners as made by Motor Wheel Co. and Perfection Stove.

Question #6. "Do you have any old 1941 price lists giving manufacturers prices, or your installed prices which we can have to study?" We wish to pick up as many of those as possible. Please staple them to the questionnaire so that they will not become lost.

Question # 7. (a) "What company or dealer in your territory, sets the competition from a price standpoint?" Usually in a community there is some dealer or wholesaler who sells at a low price and it is necessary for other dealers in the market to meet or come near those prices. These prices may be set by the mail order houses, small manufacturers, wholesalers or dealers. Get the name of the firm or party they consider sets the competitive prices.

Question #7. (b) "What burner(s) do they handle?" Merely record the name of the burner, or burners this firm handles.

Any remarks which the respondent may have in addition to the answers to the questions should be recorded on the reverse side of the blank as quite often valuable information is contained in those comments.

If there is any doubt in the mind of any one you interview as to our authority to obtain this information for Minneapolis-Honeywell ask him to call up the local manager of this company, as the managers have been informed of this survey and will tell the inquiring party that it is o'k to give you the information.

Before you turn in your questionnaire look it over to be sure you have not missed anything.

If you have a few interviews on which there is a lot of difficulty finding the party in skip those and turn in the study without them. On the basis of the price of this survey the average time has to be considerably less than two hours per interview. If however there are a number of such calls in your territory write Air Mail to Donald J. Gould, Ross Federal Research Corp., 460 Rand Tower, Minneapolis and state the number of calls that have been made, how many hours have been consumed, the number to be made and how long you think it will take to complete the job.

When you have finished your portion of the survey, sent it by first class Mail to Donald J. Gould, Ross Federal Research Corp., 460 Rand Tower, Minneapolis. Confirmation and job time sheet will be sent from New York to be returned to them.

1207 RESPONDENT'S EXHIBIT NO. 181-A.

Manufacturers' Purchase Contract

The Mercoid Corporation
4201 Belmont Ave. Chicago, Ill.

Date Submitted Feb. 18, 1939

This Agreement, entered into between The Mercoid Corporation, a Delaware corporation, hereinafter called the "Company," and Cleveland Steel Products Co. of Madison at W. 74th Street, Cleveland, Ohio, hereinafter called the "Purchaser,"

Witnesseth:

Whereas the Company is engaged in manufacturing automatic electric controls for heating, refrigerating, air conditioning and other apparatus, machinery and equipment, and

Whereas the Purchaser is desirous of purchasing such controls for use in connection with products of the Purchaser's own manufacture,

Now, Therefore, in consideration of the premises and of the mutual covenants hereinafter set forth the parties hereto agree as follows:

Quantity

Subject to the terms and provisions hereinafter contained, the Company agrees to sell and the Purchaser agrees to purchase, during the term of this agreement, their requirements of the Company's automatic controls. The special net prices extended herewith by the Company are based on the Purchaser's 1939 control requirements estimated to be 15,000 units.

Miscellaneous Controls and Control Equipment

Miscellaneous automatic controls and control equipment of the Company's manufacture, not listed herein but shown in the Company's catalogue attached hereto, will be furnished at the catalogue list prices less the discounts shown on the manufacturers' discount sheet attached hereto. The list prices and discounts shall be subject to change at any time and from time to time, without notice.

All orders for such miscellaneous controls and control equipment shall be subject to acceptance and approval by the Company.

Term of Agreement

This agreement shall become effective on the date of acceptance by the Company and shall continue to and including December 31, 1939, unless sooner terminated as herein provided.

Terms of Payment

All shipments shall be made f. o. b. the point of shipment with Factory Sight Draft attached to the Bill of Lading, the Company to have the right to designate the point of shipment. If the draft is paid within 10 days from the date of the invoice a special cash discount of two per cent (2%) will be allowed. If Purchaser desires open account credit accommodation arrangements therefor should be made with the Company's credit department. If such arrangements are made invoices will be due net thirty days after the date of the invoice and a cash discount of two per cent. (2%) will be allowed if payment is made within 10 days from the invoice date. Credit terms and delivery of all equipment are subject to the Company's approval and the Company shall have the right at all times to change or alter the terms of payment and to fix, change or alter such credit accommodations as may be extended to Purchaser. Sales, excise and other taxes will be added to all prices and the amount of such taxes shall not be subject to discount. Invoices covering emergency shipments from a Branch Office of the Company shall be subject to such discounts as are in effect at such Branch Office at the time of shipment, anything herein contained to the contrary notwithstanding.

Use of Controls by Purchaser

This agreement is made upon the understanding and condition that Purchaser, who is a manufacturer, will not use or sell the controls or appliances purchased pursuant hereto except as a part of or in conjunction with machinery or equipment of Purchaser's own manufacture. If Purchaser shall use or sell such controls or appliances otherwise than as above specified the Company shall have the right to immediately terminate this agreement without notice.

Impossibility of Performance

The Company agrees that it will, in good faith and to the best of its ability, promptly fill all orders received from Purchaser and deliver the same to the carrier for shipment; provided, however, that the Company shall not be obliged to fill orders in the event and to the extent that it may become impossible to do so because of war conditions, governmental regulations, strikes, labor disturbances, fires, floods, tornados, acts of God, mechanical breakdowns, shortages of raw materials, delays in receipt of raw materials and any other causes or conditions beyond the control of the Company.

Assignment of Contract

The Purchaser shall not assign this contract or any interest therein without the written consent of the Company.

Price Revisions

The Company reserves the right to change and revise the prices listed herein upon thirty (30) days' written notice to Purchaser. Revised prices shall apply to all orders received by the Company after the expiration of the thirty (30) day notice period and also to all unfilled orders, including blanket orders, in the Company's possession at the expiration of such period. If the revised prices are not satisfactory to Purchaser the Purchaser may terminate this agreement by written notice received by the Company within fifteen (15) days from the expiration of the aforesaid thirty (30) day period; provided, however, that such termination shall not affect completion of any orders received by the Company prior to the Company's receipt of the Purchaser's notice of termination. During the aforesaid thirty (30) day price change notice period the Purchaser may not order more than one-twelfth of the number of control units herein agreed to be purchased, or, at the Company's option, more than an equivalent number of control units shipped to Purchaser during the same period of the previous year.

Prices Relating to all Controls Are for Standard Ranges as Listed in Catalog, and for 115 Volt, 60 Cycle Specifications only, unless otherwise specified.

RESPONDENT'S EXHIBIT NO. 181-B

The special quantity net prices extended on contract to which this rider is attached are based on reasonable quantity releases against the Purchaser's estimated total 1939 control requirements. In consideration of the special net prices extended, the Purchaser agrees to place with the Company, prior to June 1st, 1939, orders in an amount of not less than 1,000 Mercoid Control units. Unless orders are placed as specified, contract becomes null and void.

This rider becomes part of contract dated February 18, 1939.

Guarantee and Returns

The Company guarantees all control units and equipment manufactured by it and bearing its name or mark to be free from defects in workmanship and material. The

Company will, without charge, replace or repair within one year from date of shipment from the Company's factory any control unit or equipment that may be found to be defective upon inspection at the Company's factory. This guarantee does not obligate the Company in any manner in cases where control units or equipment have been subjected to careless handling, improper application or faulty installation. In all cases the Company's liability on the guarantee herein expressed shall be limited to the repair or replacement of the defective control or equipment and in no event shall its liability extend to indirect or consequential damages. The guarantee herein expressed is made in lieu of all other warranties, guaranties, obligations, or liabilities expressed or implied by the Company or its representatives. All statutory or implied warranties, other than of title, are hereby expressly negatived and excluded.

Returns must not be made without the Company's consent and in all cases the returned controls or equipment must be carefully handled, properly packed and shipped prepaid. If credit is allowed for returns the Company will deduct ten per cent. (10%) to cover handling and inspection charges and a further deduction will be made where recalibrating or refinishing is necessary. Specially made controls may not be returned for credit except at what the Company determines is a fair value for the same.

Patent Warranty

The Company agrees that it will, at its own expense, defend any suit or proceeding that may be instituted against the Purchaser based upon a claim that any apparatus of the Company's manufacture furnished by the Company to the Purchaser constitute an infringement of any Letters Patent of the United States, provided, that the Purchaser shall not be in default hereunder and shall cause the Company to be promptly notified in writing of such suit and shall give the Company authority to defend such suit through the Company's counsel and shall furnish to the Company all needed information and assistance for the defense of such suit. The Company will pay all damages and costs awarded against Purchaser in any suit defended by the Company, provided notice of such suit and authority, information and assistance shall have been given to the Company as aforesaid, and in the event the device or apparatus furnished by the Company, or any

part thereof, is held to constitute infringement and its use is enjoined the Company will, at its own expense and at the Company's option, either: procure for the Purchaser the right to continue using the infringing devices or apparatus; or replace the same with non-infringing devices or apparatus; or modify the infringing devices or apparatus so that they become non-infringing; or accept the return of the infringing devices or apparatus and refund the purchase price thereof. The foregoing constitutes the Company's only liability in connection with patent infringement by devices or apparatus furnished by the Company.

Whenever the Company deems it necessary for any reason whatsoever to discontinue the sale of any of the products of the Company, the Company agrees to give written notice to the Purchaser to discontinue the sale of such products, and the Purchaser agrees, upon receipt of such notice, to make no further sales or installations of any such products unless or until authorized so to do in writing by the Company.

Termination

In addition to any and all other provisions herein contained relating to termination or cancellation of this agreement, the following circumstances are hereby agreed to be and shall be deemed to be conclusive evidence of the breach of this agreement by either of the parties hereto, and in any of these events the other party hereto may, at its election, without prejudice to any other remedy it may have, terminate all further obligations on the part of such non-defaulting party made and to be performed under this agreement:

(a) The breach of or the failure to comply with any or all of the terms, covenants, conditions and provisions of this agreement, and a continuance of such breach for thirty or more days after receipt by the defaulting party of written notice thereof.

(b) The adjudicated bankruptcy, either voluntary or involuntary or the adjudicated insolvency of either party hereto, or the making of an assignment for the benefit of creditors or the appointment of a trustee or receiver for either of the parties hereto.

(c) The repudiation of this agreement, in whole or in part, by either party hereto.

Field Service

The Company will welcome the opportunity of cooperating with the Purchaser in educating the Purchaser's factory personnel in the servicing and the proper installation of the Company's controls but the Company does not agree or bind itself to render any such service.

The foregoing constitutes the entire agreement between the parties hereto and no change, alteration or modification of this agreement shall be binding unless reduced to writing and signed by the respective parties hereto. The validity, enforceability and interpretation of this agreement shall be determined and governed by the laws of the State of Illinois.

1224 UNITED STATES OF AMERICA.

Before Federal Trade Commission.

* * (Caption—4920) * *

TRIAL EXAMINER'S REPORT, FINDINGS, CONCLUSIONS AND RECOMMENDATIONS.

The Federal Trade Commission, stating its reason to believe that Minneapolis-Honeywell Regulator Company, the respondent herein, has violated the provisions of Section 5 of the Federal Trade Commission Act, and that a proceeding in respect thereof would be in the public interest, and the said Commission, stating its reason to believe that said respondent had violated Section 3 of the Clayton Act as amended by the Robinson-Patman Act (U. S. C. Title 15, Sec. 13), and had violated Section 2 of the Act last named and cited, issued its complaint against said respondent on the 23rd day of February, 1943, alleging in Count I, Count II and Count III, as of the said date and prior thereto, substantially as follows:

Synopsis of Complaint.

Count I (Sec. 5, F. T. C. Act.)

I (a) Respondent Minneapolis-Honeywell Regulator Company (Honeywell) is a Delaware Corporation with principal office at 2747 Fourth Avenue, South, Minneapolis, Minnesota.

I (b) Respondent manufactures automatic temperature controls for oil, gas and coal heating plants, and sells the same to oil burner manufacturers, jobbers, wholesalers and dealers in oil burner equipment throughout the United States. It sells more than 60% of said controls re-
1225 quired by burner manufacturers, contractors and dealers in domestic automatic heating equipment, and sells under annual contracts, to a majority of the manufacturers of oil burners for domestic heating plants, automatic temperature controls equal approximately to their annual requirements.

I (c) Respondent sells and ships the aforesaid products from its places of manufacture in Minnesota, Indi-

ana, Pennsylvania and through distribution points in other states, to the said purchasers located in various states other than the states of manufacture, maintaining a constant current of trade and commerce between said states and the District of Columbia.

I (d) Respondent, in the sale of automatic temperature controls in commerce, as aforesaid, is in substantial competition with approximately six other concerns likewise engaged.

II (a) Three types of controls are used in automatic burners, to-wit:

(1) A thermostat placed in the space to be heated;

(2) A limit control on the heating plant to control temperature or pressure therein; and

(3) A primary control to prevent explosions, which is sometimes augmented by a fan control.

Many manufacturers purchase thermostats and primary controls for use as zone controls in the heating of large spaces. The primary control, sometimes called a combustion control, a master control, or a safety control, is an essential element in every domestic oil burner.

II (b) Respondent owns most of the patents on said primary controls (Protectorelay), but there are many thermostats and limit controls made or sold by its competitors which are satisfactory and safe to use and 1226 are interchangeable with the thermostats and limit controls made and sold by respondent.

III In 1936 and prior thereto, respondent agreed, or attempted to agree, in writing with all its domestic oil burner manufacturer-customers that they would purchase their requirements of automatic temperature controls from it in sets of one thermostat, one limit control, and one primary control at a combination price per set, and that at least 95% of the customers' requirements would be so purchased from it; but the 95% provision was omitted from these contracts from January, 1937.

In all its said agreements the customer must buy in sets, taking 90% as many room thermostats and 100% as many limit controls as primary controls (patented), and it was agreed that it was unsatisfactory and often dangerous to mix controls made by different manufacturers, and that respondent would not assure satisfaction or assume any service responsibility if its controls were used with other makes.

IV The foregoing practices have induced a substantial number of manufacturers to purchase all or the larger part of their automatic temperature controls from respondent and have prevented its competitors from selling substantial quantities of thermostats and limit controls to said manufacturers.

V Respondent acquired a system patent covering "furnace control" under which was made and sold a combination furnace control system consisting of the limit control, a fan control, and a thermostat, none of which were covered by patent, but all were operated under the said system patent. It granted or attempted to grant, under threat of infringement suit, non-exclusive licenses to certain competitors to make and sell this combination furnace control on payment of a royalty of 50¢ per unit and on the further consideration that the sets were not to be sold at prices and on terms more favorable to the customer than those contained in respondent's price schedules issued from time to time. The price schedule also contained minimum prices to be observed by jobbers, wholesalers, and dealers. Respondent's sales of said combination have increased substantially since 1930.

1227 VI Respondent made and sold combustion stoker switches to customers under so-called exclusive license agreements to use and sell it in combination with other devices manufactured under a system patent, and under respondent as exclusive licensee, which product was known by respondent not to be covered by said patent.

VII The aforesaid acts and practices are to the prejudice of the public and of respondent's competitors, and have the tendency and effect of hindering and preventing competition in commerce and of restraining trade, all in violation of Section 5 of the Federal Trade Commission Act.

Count II (Sec. 3, Clayton Act.)

I, II, III, IV adopt the corresponding paragraphs of Count I.

V Respondent in the conduct of its business as aforesaid has made sales and contracts for the sale of automatic temperature controls for heating plants on condition, agreement or understanding that the purchasers thereof should not deal in or use any automatic temperature controls for heating plants of its competitors, and the effect of said

contracts, sales, and agreements may be and has been to lessen competition substantially or tend to create monopoly in this line of commerce.

VI The aforesaid acts and practices constitute a violation of Section 3 of the Clayton Act.

Count III (Clayton: Robinson-Patman.)

I, II adopt the corresponding paragraphs of Count I.

III In the conduct of its business as alleged, respondent discriminates in price between different purchasers of automatic temperature controls of like grade and quality by selling the same to some customers at lower prices than to others competitively engaged with each other in the
1228 resale of said products within the United States, by the following practices and methods:

III (1) Classified customers as (a) oil burner manufacturers, (b) oil burner jobbers, (c) oil burner wholesalers, Class A, (d) oil burner wholesalers, Class B, and E dealers; and

III (2) Publishes price lists for its said products, giving different discounts, varying from 25 to 45 per cent to its customers according to the foregoing classification, the maximum discount of 45% being given on minimum quantities to oil burner manufacturers who purchase approximately 95% of its temperature controls;

III (3) Selling thermostats, primary controls, or limit controls in units and sets to manufacturers under contracts providing for annual discount arrangements for seven separate price brackets with net prices proportioned to quantity requirements;

III (4) Sells contract customers buying 50 sets annually at approximately 45% less than the list price in effect, and making discriminatory discounts according to quantity bracket quotations to those buying more than 50 sets per year, said discounts varying from 45% in 1938 to 30% in 1940.

IV The effect of said discriminations has been and may be substantially to lessen, injure, prevent and destroy competition between respondent's customers and to create monopoly in the line of commerce in which respondent and its competitors are engaged.

V The foregoing acts and practices are in violation of Section 2 of the Clayton Act as amended by the Robinson-Patman Act as heretofore cited.

The Answer.

Count I.

Respondent, in its answer to the complaint admits certain allegations, while denying other allegations contained therein. Respondent filed its answer to the complaint 1229 on April 17, 1943, in which it admits the facts as to its corporate name, its location, business engaged in, and interstate commerce features, and that it is engaged in competition with numerous competitors.

Respondent admits Paragraph 1 of Count I except respondent is without knowledge as to certain averments set forth therein; respondent admits Paragraph 2 of Count I but denies there are many thermostats being manufactured and sold by competitors which could be safely or satisfactorily used interchangeably with thermostats sold by respondent; respondent admits Paragraph 3 of Count I that in January of 1937 it discontinued the provision at that time in some of its contracts with oil burner manufacturers with respect to the 95% customer-controlled requirements with its domestic oil burner manufacturer-customers, and since that time has not entered into contracts containing said provisions; respondent denies Paragraph 4 of Count I except respondent admits that a substantial number of oil burner manufacturers have purchased from respondent the majority of their requirements of automatic temperature controls; respondent made answer to Paragraphs 5 and 6 of Count I and reference thereto will be made hereafter in connection with a stipulation entered into between counsel in reference thereto; respondent denies the allegations of Paragraph 7 of Count I.

Answer to Count II.

Respondent denies the violation of Section 3 of the Clayton Act.

Answer to Count III.

Respondent admits certain allegations contained in Paragraphs 3 to 5 of Count III of the complaint, but denies that it has violated Section 2 of the Clayton Act as amended by the Robinson-Patman Act.

Appearances.

The Commission was represented in this proceeding by Attorney Everett F. Haycraft of the Chief Counsel's Staff, and the respondent was represented by the law firms
1230 of Cravath, Swaine & Moore, located at 15 Broad Street, New York, New York, and the firm of Bair & Freeman, located at 135 South La Salle Street, Chicago, Illinois, and at the trial appeared as counsel in person Will Freeman and R. L. Gilpatric. Pursuant to the order and designation of the Federal Trade Commission, the undersigned Trial Examiner of the Commission, heretofore duly appointed, proceeded to take testimony and receive evidence in the case beginning in Chicago, Illinois, August 10, 1943, followed by other hearings in New York City and other cities throughout the country. The taking of testimony was closed at Chicago, Illinois, after the termination of the respondent's case and rebuttal testimony on the part of the Commission on the 4th day of October 1945, and the case later closed by order of the Examiner dated the 14th day of February 1946. All the testimony and evidence and exhibits adduced at the several hearings held in the trial of the case were duly filed in the office of the Federal Trade Commission in Washington, D. C.

Under the Rules of Practice of the Commission, respondent's counsel and counsel for the Commission filed with the Examiner suggested findings which were duly considered by the Examiner in the preparation of his Report.

Foreword.

When used in this Report (a) "oil burners" means automatically operated and controlled oil burners of the pressure and rotary types for domestic heating plants, and does not include any other type of oil burner such as vaporizing, pot and distillage types, and industrial or commercial oil burners; (b) "automatic temperature controls" means automatic temperature controls for oil burners of the kind set forth above. (CX 1, pp. 2-3.)

Report Upon the Facts.

I.

(a) Respondent Minneapolis-Honeywell Regulator Company (hereinafter referred to as "M-H") is a corporation organized and doing business under and by virtue of the laws of the State of Delaware, having its general offices and principal place of business at 2747 Fourth Avenue, South, in the City of Minneapolis, State of Minnesota. (CX 1—Answer.)

1231 (b) Respondent is now, and for more than three years last past has been engaged in the manufacture of automatic temperature controls for oil, gas and coal heating plants and industrial operations, and in the sale thereof to oil burner manufacturers, to jobbers, wholesalers and dealers in oil burner equipment located throughout the several States of the United States, the Territories thereof, and in the District of Columbia. Respondent is the principal manufacturer (Record 718) of automatic temperature controls in the United States, the total volume of its sales of controls annually during the years 1939, 1940 and 1941, constituting approximately 60% of the total number of automatic temperature controls sold annually in the United States to manufacturers of oil burners, and to wholesalers, contractors, and dealers in oil burners and automatic controls. Respondent, in the sale of automatic temperature controls, has entered into annual contracts or agreements with manufacturers of oil burners for domestic heating plants since prior to 1943, and the number of manufacturers of oil burners having such contracts with respondent during said years, constituted more than 50% of all the manufacturers of oil burners within the United States. (CX 1, Par. 3.)

(c) When sales of respondent's automatic temperature controls are made respondent causes such products to be transported from the place of manufacture in the States of Minnesota and Indiana, and through distributing points in other States of the United States, to the purchasers thereof located in states other than the state of manufacture, and there is now a constant current of trade and commerce in such products within and between the various States of the United States, the Territories thereof, and in the District of Columbia. (CX—Answer.)

(d) Respondent, in the sale of automatic temperature

controls from 1935 through 1941, had a number of competitors, among whom were (1) The Penn-Electric Switch Company, hereafter referred to as "Penn", located at Goshen, Indiana; (2) Mercoid Corporation, hereafter referred to as "Mercoid", located in Chicago, Illinois; (3) Perfex Corporation, hereafter referred to as "Perfex", located at Milwaukee, Wisconsin; (4) General Electric Company, hereafter referred to as "General Electric", which company manufactures thermostats, limit and primary controls used on oil burners, which said company manufactures, and which compete with respondent's controls (Record 43). The General Electric Company [per se] did not solicit the oil burner manufacturing trade (Record 44-45). Competitors of respondent from 1936 1232 through 1941, in the case of temperature controls (individual devices) were as follows: (a) White-Rogers Company of St. Louis, Missouri which sold thermostats and limit controls and fan controls but did not sell primary controls (Record 46); (b) General Control of Los Angeles, California, which manufactured thermostats and limit controls but made no attempt to sell the controls in the oil heating field (Record 46); (c) Detroit Lubricator Company of Detroit, Michigan, which makes thermostats but purchases its primary controls from "Penn"; (d) The Spencer Thermostat Company of Atterbury, Massachusetts, which sells thermostats and limit controls; (e) and several others, such as the Newark Boiler Regulator Company of Newark, New Jersey, The Bendix Warwick Company of Detroit, and The Donlor-Milton Company of Chicago. Respondent's principal competitors are in the order of their size, first, Perfex and Penn, and second Mercoid and Detroit Lubricator (Record 43 to 53; 197-198; 376-377; 381; 720). All of said competitors of respondent manufacture controls for use on oil burners, some of which controls, made by each are comparable to controls made by respondent and other companies. (Record 232; 858-862; 1454-1456.)

(e) The Record discloses that all manufacturers of temperature controls such as Mercoid, Perfex, Penn and Detroit Lubricator, and respondent "M-H" are all in competition with each other in the sale of such temperature controls, and the Record shows that during the years stated there has existed a very keen competitive situation in the sale of temperature controls between the manufacturers thereof, throughout the entire country. (Record

2226-2228; 355; 671-674; 1284). During the years from 1936 to 1941 there was a general era of prosperity among all the manufacturers of automatic temperature controls except during the year 1938 when there was a general let-up in the industry, in the sale of controls, the effect of which was felt by nearly all the manufacturers thereof. (Record 1457.)

(f) Respondent "M-H" was organized in the year 1927 and was an amalgamation or consolidation of two predecessor companies (a) the Minneapolis Regulator Company which had been organized in 1885, and (b) the Honeywell Heating Specialties Company, which company had been organized about 1906, and both companies had been engaged in the same line of business (Record 1463-1464). After the consolidation of the two companies and in 1931, they acquired the assets of Time-O-Stat Controls
1233 Company of Elkhart, Indiana. This company was operated for a short period after the purchase and was later sold. A number of years ago before the oil burner was introduced, temperature controls were very simple and few in number. Respondent, "M-H", at that time manufactured two basic types of room thermostats, three basic types of limit controls, and three types of primary controls (Record 1919-1920), all multi-operated devices. After the oil burner came into use controls changed greatly, becoming more complex and complicated. (Record 1473.) The first concern to manufacture oil burner controls were the American Nokol Company, The Williams Oilomatic and Kleen-Heat, back in 1920. The Doble Car Company made a burner back in 1917 but this company was absorbed by American-Nokol Company (Record 1513). The Record contains a description of some of the earlier types of controls and those which have followed in due course of development up to the present time (Record 1515-1548; RX 107-108-109).

(g) Harold W. Sweatt and Charles B. Sweatt, now President and Vice-President respectively of respondent "M-H" are sons of William R. Sweatt, who was one of the officers of respondent company back in 1899 (Record 1496-1497). Respondent "M-H" had outstanding in 1939 in round numbers 622,000 shares of common stock of no par value (Record 1496). About 80% of respondent's business is devoted to the manufacture of automatic temperature controls (Record 1497).

(h) Respondent "M-H", and its predecessor companies have been extensive advertisers of their line of controls and have, for many years, utilized in their advertising of controls the nationally known magazines published in the United States, and since the formation of the respondent corporation in 1927, and through 1941, respondent has spent on national advertising the sum of, $3,948,000.; in the year 1931, respondent spent approximately $277,000. in advertising its products (Record 1467). Respondent has always, throughout the years, been a leader in the field of controls manufactured, and in the development and betterment of new and better controls, and respondent, throughout the years has spent extensive sums of money in engineering and development work, not only creative engineering of new devices, but in the constant redesigning and improving of its products, and in the lowering of costs. It is shown that respondent spent almost as much in research and engineering work as in advertising its controls (Record 1469). Respondent, since 1935, has 1234 maintained branches throughout the United States in the major centers of population (Record 19-21; Exhibit 104); at each branch respondent has a branch manager, a sales manager, and a number of salesmen. Respondent maintains in its business 39 branch and district offices throughout the United States, 5 such located in Canada, and respondent maintains a foreign subsidiary in both England and Sweden. (Record 1471-1472.) Respondent operates two major plants for the manufacture of its products, one located at Philadelphia, Pennsylvania, and the other in Minneapolis, Minnesota. Respondent's branch offices have three main functions: (1) they carry a complete line of respondent's controls; (2) they are the headquarters for respondent's sales groups who cover the surrounding territory selling to manufacturers, jobbers, dealers, architects, heating engineers, and home owners; (3) there is maintained at branch offices a complete service set-up of specializing service engineers (Record 1474-1475). Respondent maintains service schools for the training of its personnel in contacting customers and in performing all the duties of salesmen and the maintaining of service (Record 1475).

II.

(a) The term "Automatic Temperature Control" means automatic temperature control for use on domestic oil burners of the gun or pressure type and rotary type of oil burner. Respondent has manufactured, for many years, automatic temperature controls which it sells to oil burner manufacturers, equipment manufacturers and to the trade in oil burners. Respondent's business in the sale of its controls to oil burner manufacturers and equipment manufacturers, since 1928, has been larger than in the gas and stoker field (Record 12). Respondent has always stressed its sales to manufacturers of oil burners and endeavors to sell said manufacturers first (Record 1487-1488). The main types of oil burners involved in this case and with which respondent's controls are used, are of two types, principally, (a) the gun type or pressure type (the words "pressure" and "gun" in this type are used interchangeably), and (b) the rotary type of burner. In the operation of oil burners there are three types of temperature controls required, (a) the room thermostat, (b) the limit control, and (c) the primary control (Record 13-14). The thermostat controls the temperature within the enclosure in which it is located (the room in which it is placed); the limit control is a device used on the heating plant whether it be steam, hot water, or warm air, and it performs a safety function. It is set to keep
1235 the heating plant at a certain temperature or pressure limit. The limit controls which are used with warm air furnaces are called aerostats; that used with the hot water heating system is called an aquastat and that used with a steam boiler is called a pressuretrol; this is referred to as a vaporstat, when a vapor heating system is involved (Record 14). The primary control is an actuating device which starts and stops the oil burner at the direction of the room thermostat. It stops the oil burner in the event the limit control misses its setting, and it also performs the duty of controlling the abnormal discharge of oil within the furnace or heating plant (Record 15); this control is called a protectorelay (Record 15). Illustrations of these devices are shown in the Record (CX 1; Record 15). In addition to the controls described above some oil burners have an installation employing a fan control, used for driving warm air to the space to be

heated, and operates to prevent the fan from starting until the right temperature has been reached (Record 15-16).

The primary control, referred to above, was sometimes called a master control or combustion control, or a safety control, and it is an essential element in every oil burner installation (CX-1; p. 17).

(b) It is shown that respondent owns most of the patents on primary controls (protectorelays), (CX-1; RX 72-103-169-183-185). For many years manufacturers of automatic temperature controls have been selling their makes of standard controls in sets (Record 31, 225; 1261-1262; 1376; 2143). It is shown, however, that some of the thermostats manufactured and sold by the respondent may be used with limit controls and primary controls manufactured and sold by competitors of respondent (CX-1, p. 8); further, that some of the primary controls manufactured and sold by respondent may be used with limit controls and thermostats manufactured and sold by competitors of respondent (CX-1, p. 8). The Record shows that thermostats and primary controls manufactured by respondent for use with oil burners, give greater satisfaction, and more efficient performance in the ordinary installation than when controls of similar kinds, manufactured by other manufacturers, are mixed in the same installation. The evidence shows that it is not a good practice to use controls of respondent "M-H" with controls of different makes; that the thermostat of respondent "M-H" has a special co-ordinating and cooperating function with primary controls, and for safety and to keep down costs and field troubles, to mix controls of different manufacturers, in the same installation is not a good practice (Record 818-820; 1265-1266).

1236 (c) The Record shows that because of the extensive national advertising of respondent "M-H", for many years, of its automatic temperature controls, and the reputation for such controls as to good performance and efficiency in operation in installments, there has developed a large customer demand for and public acceptance of respondent's line of automatic temperature controls (Record 1247-1248; 1711-1713; 1800); that respondent's controls now and for a number of years past have been sold at higher prices than controls of other makes (Record 1150; 1492; 1690; 1787; 1868; 1963; 1979). The evidence shows that the demand for respondent's automatic tem-

perature controls gives dealers an opportunity to charge more and obtain a higher price for burners equipped with respondent's controls than when controls of competitors are used (Record 1247), and that there are some dealers who would not purchase burners without "M-H" controls (Record 1247).

III.

(a) Respondent "M-H" during the years from 1936 to 1941 inclusive, made sales of its automatic temperature controls to approximately 150 to 200 oil burner manufacturers throughout the United States (Record 1948); the Record contains a list of oil burner manufacturers, customers of respondent, showing purchases from 1937 to 1939 (Record 494; CX-84-A,D). It has been the policy of respondent from 1936 to 1941 to enter into individual sales agreements. (contracts) with oil burner manufacturer-customers. These agreements are usually written on a calendar year basis. The agreements are prepared in early December of the previous year in Minneapolis, Minnesota, for submittal of the following year's business (Record 25). Respondent's sales agreements are also at the branch offices of respondent throughout the United States, where meetings are held of the various personnel involved and where current problems of the various oil burner manufacturers are discussed. Sales agreements are given after preparation and discussion, to the salesmen who interview said manufacturers of oil burner equipment and secure the manufacturers' signatures to said agreements. They are then submitted to the home office in Minneapolis (or branch office manager in the field) for approval and signature (Record 27). Managers are authorized to sign agreements on behalf of the respondent; however, sales agreements are usually signed at the home office of respondent by one of its Vice-Presidents (Record 28-29). Respondent, in December 1936, entered into, or attempted to enter into written agreements for the year 1939, with

1237 certain of its oil burner manufacturer-customers, under the terms of which the customer was obligated to purchase his requirements of controls from respondent, such controls to be purchased in sets consisting of a thermostat, a limit control and a primary control at a combination price per set. Said sales agreements contained the following language:

"It is specifically agreed that other control equipment is not to be considered as part of a set within the terms of this contract because the Company's costs are figured to cover a complete set of controls and the following breakdown prices are purely for enforcing purposes. It is agreed that the purchasers' yearly purchases will consist of at least 90% as many thermostats and 100% (but at the company's option not more than 125%) as many limit controls as primary controls. * * * The Purchaser agrees that at least 95% of his control requirements consisting of thermostats, primary controls and limiting devices will be purchased from the Company."

(CX-1; 11-A to B; 17-A tl B; 18-A,B; 19A,B; 21,22; 23-A to B; 24-A to B; 25-A to B; 66-A to B; 87; 132; Record 25, 27-29; 98-99; 110-111; 115; 142-147; 248-249; 572-577; 608; 863-864.)

On January 28, 1937, respondent eliminated the 95% clause from its existing contracts with its oil burner manufacturer-customers and released said manufacturer customers therefrom. (CX 1, p. 14; 21-23; Record 110-111-115.) The 95% provision in respondent's 1936 sales agreement never became operative and no customer was required to comply therewith (Record 109-111).

In respondent's 1937 sales agreement with 79 of the 165 manufacturers of oil burners with whom respondent entered into contracts for the year 1937 were the following provisions:

"The Purchaser agrees that at least ninety-five (95) percent of his control requirements consisting of Thermostats, Primary Controls and Limit Devices, will be purchased from the Company." (CX-1, pp. 10-13.)

1238 Respondent's sales agreements entered into with its oil burner manufacturer-customers for the year 1939 and subsequent thereto, contain the following language:

"The Company agrees to sell, and the purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract ..... sets or more of the Company's automatic temperature controls. Because the Company's thermostats and primary controls are specifically designed to operate one with the other, it is unsatisfactory and often dangerous to mix controls made by different manufacturers in the same installation, and the Company does not give any assurance of satisfactory operation nor assume any service responsibility

if its controls are used with other makes. It is, therefore, further agreed that each set shall consist of but one Thermostat, one Primary Control, and one Limit Control, and that the Purchaser will buy at least 90% as many Room Thermostats and, 100% as many Limit Controls as Primary Controls at the following Prices." (CX-1, 14-16, 145-149-151; 200; Record 906, 909-911, 903-916, 1162-1164, 1245-1246.)

In the above sales agreement, between the words "contract" and "sets" respondent's customers for 1937 were to give the number of sets to be purchased, but with certain of respondent's customers the words "season requirements", or the words "estimated requirements" were inserted.

(b) The evidence shows that the three largest manufacturers of automatic temperature controls competing with respondent "M-H" in the sale of said controls to purchasers thereof are (1) Perfex; (2) Penn, and (3) Mercoid; all three of said companies compete in the sale of controls with each other and with respondent "M-H". The Perfex Company began its controls business in 1935, starting from scratch, and has increased its position in the controls field until now it occupies the position of second in the sale of controls (Record 342; 349). One of the reasons assigned for the growth of Perfex, as stated by a witness, is the fact that this company endeavored to sell its controls to large, nationally known companies; and to approach their customers with the idea of putting the customer's name on their burners, instead of the manufacturer's name (Record 381). It is shown that each year from the beginning of the Perfex Company, its business has shown an increase in volume up to 1941 (Record 431). The Mercoid Corporation began manufacturing automatic temperature controls in 1920, selling the same to oil burner manufacturers; Mercoid prior to 1928, was known as The Federal Gauge Company (Record 223). This company manufactures primary controls, limit controls and thermostats. The majority of the controls of Mercoid are sold in sets. However, there are occasions when sales of thermostats and primary controls, and not limit controls, are made; such is the case where a customer furnishes only two controls with the burner, allowing the dealer to furnish his limit control (Record 225-226). Penn started to manufacture and sell automatic controls for domestic oil burners in 1932 (Record 1368), and thereafter

1239

was in active competition with other controls manufacturers such as respondent "M-H", "Mercoid", and later with "Perfex" (Record 1417); the testimony shows that by 1941 Penn was considered by some to be the second largest controls manufacturer in the industry (Record 1370; 1417-18; CX 207-A, B). Another competitor engaged in the manufacture of automatic controls which it sells to oil burner manufacturers is the Detroit Lubricator Company which began business about 1933 (Record 643); this company did not make and sell a complete line of controls until 1939 (Record 648); it did not develop its limit control until 1939, however, it made sales up to that time of its thermostat, its customers buying limit controls on the open market, and this company purchased its primary controls from respondent "M-H" (Record 649).

(c) It is shown that all manufacturers of automatic temperature controls such as "Perfex", "Mercoid", "Penn-Electric" and "Detroit-Lubricator" followed in the main, the same procedure and practices in the sale of thermostats, limit and primary controls to oil burner manufacturer-customers; (a) they all travel salesmen calling on prospective customers; (b) they all maintain branch offices and distributing points at various places throughout the United States; (c) they all have bracket prices and recognize different trade channels such as manufacturers, jobbers and dealers (CX 55; RX 78; Record 1361); (d) they all sold controls in sets and quoted varying price brackets (Record 225; 704; 1362-63; 2139-40).

(d) The term "oil burners" in this proceeding, means automatically operated and controlled oil burners for domestic heating plants, and in this case those specially involved are the gun or pressure type and rotary type although there are other types of oil burners such as vaporizing and pot types (CX-1, pp. 203). Respondent's automatic temperature controls are used mainly on the gun or pressure type burner and the rotary type burner (CX-1, p. 6; Record 116-117). Some of respondent's controls however, are sold for use on vaporizing and pot type burners (Record 1736). The Record contains an explanation of the rotary and gun type oil burners and how said burners operate mechanically (Record 728-736). The pressure or gun type burner (in brief) operates by delivering the oil under pressure through an atomizing

nozzle which breaks the oil down to a fine spray, 1240 which is then ignited (Record 728; RX 106). The rotary type burner sprays oil across the hearth so that it burns at the wall of the heater with a gaseous flame; the oil is thrown with centrifugal force (Record 727-728; RX 106-E, F).

(e) There are many oil burner manufacturers doing business in the United States, numbering approximately 300 in 1941 (CX-1, p. 5; Record 1658); some of these have been in business for many years (Record 1899-1900); others did not begin business until latter years (Record 850). The large majority of oil burner manufacturers "assemble" rather than "fabricate" the burners they sell. Such oil burner manufacturers purchase in the open market the elements that go to make up an oil burner, such as pumps, motors, transformers, blower wheels, and automatic temperature controls, and assemble these in the plant of the manufacturer into the completed oil burner (Record 995-96). However, there are other oil burner manufacturers who themselves manufacture some of the parts that go into the completed oil burner. Certain furnace manufacturers sell complete boiler burner units, and such manufacturers usually buy the burner units from oil burner manufacturers and the automatic temperature controls for both the burners and the furnaces, direct from manufacturers of automatic temperature controls.

There are only a few manufacturers who make the rotary type of burner. These are Timken, Cleveland Steel Products, Silent Glow, Petroleum Heat & Power Co., Anchor Post Fence Co., ABC Automatic Burner Corporation (Record 116). All others are gun type burners (Record 117).

IV.

(a) Respondent "M-H", during the period from 1936 to 1941 inclusive, attempted, through its sales force, and negotiations with everyone of its oil burner manufacturer-customers, to have said customers standardized on respondent's automatic temperature control (Record 69; 71 to 78; 176-179; CX 26-27). When an oil burner manufacturer standardizes on a particular type of automatic temperature control, it means that such oil burner manufacturer will buy, use and sell such controls as standard equipment on its own oil burner (Record 71-72). During

the time mentioned a substantial number of oil burner manufacturers, prospective customers of respondent, have been induced to purchase from respondent either all 1241 or the larger part of their annual requirements of automatic temperature controls (CX-1, pp. 13 to 17). During the time mentioned 50% of the manufacturers of oil burners in the United States had contracts or sales agreements with respondent "M-H" for the purchase of their automatic temperature controls (CX-1, p. 3). It is shown that some oil burner manufacturer-customers of respondent are reluctant to sign contracts or sales agreements for temperature controls but wish to be free to buy controls from whatever source they see fit (Record 1393). It is shown that there are other oil burner manufacturers who have signed sales agreements or contracts for designated numbers of sets of automatic temperature controls with respondent "M-H" who testified that, notwithstanding their said agreement, they feel free to purchase controls from whomsoever they please, and in fact did purchase from whatever controls manufacturer they wished (Record 1394; 1612; 1684; 1695; 1714; RX 118; Record 1838-40; 1967; 1963; 1979-80); however, respondent "M-H" solicited the controls business of the Timken Silent Automatic Company (hereafter referred to as "Timken") for its 1936 controls business. Timken first engaged in the manufacture of oil burners in 1927 or 1928, making a gun type burner; later this company made a rotary type burner (Record 556); Timken had been purchasing its automatic temperature controls from two different controls manufacturers and mixing said controls in the same set (Record 51; 444). Timken refused to enter into a sales agreement with respondent at the time mentioned, until a qualifying clause was placed in the contract, which clause left Timken free to purchase other controls from other sources as the Timken Company required (CX 66; Record 575-577). An official of Timken's stated that the company did not wish to sign a contract the company did not intend to live up to and the qualifying clause (CX 66) was placed in the contract so that Timken could purchase from other controls manufacturers; that Timken had no intention of buying all of their controls from respondent and purchased controls from both Perfex and Penn-Electric (Record 582-583). It was shown by the evidence that Timken wanted more than one source of supply in purchasing controls so that if their

dealers wished controls of another type than respondent's ("M-H"), Timken would be free to supply this demand (Record 1650). The Record discloses that Timken purchased controls from respondent to 1937, by a letter order but had no signed contract (CX 11-D; 12-A, B, C; CX 87; Record 579; 1650). There were no sales agreements 1242 or confracts between Timken and respondent in the years 1938 to 1941 (Record 579). The Malleable Iron Fittings Company of Stamford, Connecticut, an oil burner customer of respondent, understood the words "Season's Requirements" contained in the contract this company had with respondent, to mean that its requirements of controls were to be purchased from respondent exclusively, and for several years fulfilled the terms of its contract in accordance with such understanding. It was shown that up until 1939 the Malleable Iron Fittings Company bought controls from respondent only (Record 896), and that the provisions of the sales agreement with respect to the number of thermostats and limit controls to be purchased were adhered to during the life of the agreement (Record 893-896; CX 132; 133; 142; Record 993-4). There is testimony that certain of competitors of respondent experienced difficulty in making sales of their limit controls to oil burner manufacturers who had entered into sales agreements or contracts with "M-H" and which manufacturers questioned their moral or legal right to buy automatic temperature controls from another source after such oil burner manufacturers had entered into written contracts with respondent (Record 346); the effect of respondent's contract, with its oil burner manufacturer-customers, was, in the words of a witness: "Temporarily it sort of tied up our contracts with such manufacturers who had signed such an agreement." (Record 348.) (CX 2-12, 31-35, 31, 33-C, 34, 66-A to D, 67-68, 74-A, 75-A and B, 76-78, 81, 84-A to D, 86-87, 105-06, 107-B and C, 108, 109-B, 110-B and C, 111, 113, 116-A, 118-A, 132, 139, 140-A to C; Record 806-07, 831, 864-65, 895-98; 906-07, 910-12, 928-29, 941, 1094-95, 1127, 1140-41, 1156, 1162-64, 1230, 1245-46.)

V-VI.

(a) Respondent is the owner of the Freeman and Cross patents under which patents respondent manufactures its primary controls and thermostats involved and referred to as charged in Paragraphs 5 and 6 of the complaint in this case (RX 183; Record 2277-2279).

The Record discloses that at the time respondent made answer to the complaint in this case, respondent had a favorable decision with respect to respondent's practices in reference to the Freeman and Cross patents, from the United States Circuit Court of Appeals for the 7th Judicial Circuit. Subsequently, however, two cases involving said patents went before the United States Supreme Court, in December 1943, and were decided by the Court on January 3, 1944, the Supreme Court reversing respondent's favorable decision from the 7th Circuit, 1243 above referred to. Later, on February 7, 1944, the Supreme Court denied a petition for re-hearing (*Mercoid Corporation* v. *Mid-Continental Investment Co., et al.*, 320 U. S. 661 (1944) and *Mercoid Corporation* v. *Minneapolis-Honeywell Regulator Co.*, 320 U. S. 680 (1944) reversing 133 F. (2d) 802 (1942) and 133 F. (2d) 811 (1942). (Record 2278-2279.)

Promptly upon the denial of the petition for re-hearing the Record discloses, respondent in this proceeding, (Docket No. 4920) terminated all its agreements of every kind involving either the Freeman patent or the Cross patent; all of respondent's practices condemned by the United States Supreme Court, had been eliminated and respondent's counsel stated that all of the practices complained of in connection with the Cross patent and the Freeman patent had now been ended, and are not now being carried on in any way by respondent Minneapolis-Honeywell Regulator Company (Record 2279).

VII.

The allegations of Paragraph VII as to prejudice to competitors and to the public, having a dangerous tendency to hinder and prevent competition in the sale of automatic temperature controls, and other allegations set forth in said Paragraph, as violations of Section 5 of the Federal Trade Commission Act, will be considered hereafter under Conclusions.

Count II.

I, II, III, IV adopt the corresponding paragraphs of Count I.

V.

(a) Respondent in the course of its business from December 1936 to 1941, inclusive, entered into sales agreements or contracts with a substantial number of oil burner manufacturer-customers for either all or a majority of their annual requirements of automatic temperature controls, in sets consisting of thermostats, limit controls and primary controls (CX-1). Such contracts contained the following language:

1244 "The Purchaser agrees that at least ninety-five (95) percent of his control requirements consisting of Thermostats, Primary Controls and Limit Devices, will be purchased from the Company." (CX-1, pp. 10-13.)

Some of respondent's oil burner manufacturer-customers entering into such contracts, did so with the understanding that they would use respondent's ("M-H") controls exclusively (Record 344-349; 894-898; 906; CX 107B, C). Other oil burner manufacturer-customers of respondent agreed to use respondent's automatic temperature controls as standard equipment on their oil burners, but some of said customers refused to sign sales agreements with respondent unless said agreements contained a qualifying clause placed in the contract to allow said oil burner manufacturer to be free to purchase competitive controls if such were requested by oil burner manufacturer-customers. In the contract (CX 66) entered into by Timken with respondent "M-H", such qualifying clause which was added to said contract by the officials of Timken was as follows:

"In view of the special price listed in this agreement it is understood that the Purchaser will standardize on and use Company's products exclusively, except for field tests or when other makes are specified by dealers." (CX-66; CX 11-A to C; CX 18-A, B; CX 19-A, B; Record 71 to 76; 96-99.)

Respondent entered into a sales agreement with the Cleveland Steel Products Company of Cleveland, Ohio, on December 2, 1936 (for 1937 business), under the terms of which respondent agreed to sell and the purchaser agreed to purchase, 1000 sets (3000 units) of respondent's

automatic temperature controls, each set consisting of one thermostat, one limit control, and one primary control; and it was agreed (in said contract) that the purchaser's yearly purchases "will consist of at least 90% as many Room Thermostats and 100% (but at the Company's option not more than 125%) as many Limit Controls as Primary Controls."

Under the terms of said contract entered into by the Cleveland Company with respondent, it was provided that the purchaser should take at least as many limit controls as primary controls; in this case respondent was obligated to purchase 1000 limit controls and 1000 primary controls, and was required to buy 900 ther-
1245 mostats in order to fulfill the requirements of the contract (CX-1; CX 23-A, B), there remaining for the competitive market 10% of room thermostat sales, and no opportunity for sales by competitors of respondent of either limit or primary controls (CX-A, B).

The Record discloses that the contract made by the Cleveland Company with respondent, referred to above (CX 23-A, B), was cancelled by the respondent January 15, 1937. The Record further shows that on January 28, 1937, all of respondent's contracts which contained the 95% clause were cancelled by the respondent, and oil burner manufacturer-customers who had entered into such sales agreements or contracts with the respondent were released from the terms and requirements of said sales agreements; that excepting a short period in early January of 1937, the provisions of said sales agreements were not required by respondent to be fulfilled by those who had signed such agreements (CX-1, pp. 10-15; Record 109-111).

VI.

The allegations as to the effect of respondent's sales and contracts for sale as charged in Paragraph V will be considered hereafter under Conclusions.

Count III.

Paragraphs I, II adopt the corresponding paragraphs of Count I.

III.

(a) Respondent admits that in the course of its business prior to 1936 and through 1941, it has made sales of its automatic temperature controls of like grade and quality to some of its oil burner manufacturer-customers, at lower prices than respondent sold its automatic temperature controls of like grade and quality to others of its oil burner manufacturer-customers, many of whom are competitively engaged, one with another, in the resale of such products (controls) within the United States (CX-1, p. 18). Respondent denies, however, (Answer) that its practices, in the sale of its automatic temperature controls to oil burner manufacturers has lessened competition between respondent and its competitors or between respondent's cus-
1240 tomers and their competitors. The practices and methods followed by the respondent during the time mentioned, are:

(1) Respondent recognized three channels of trade and distribution in selling its automatic temperature controls, and respondent has classified its customers accordingly, as follows: (a) oil burner manufacturers, (b) wholesalers and jobbers (Class A and Class B), and (c) dealers. For the purposes of its business, respondent defines an oil burner manufacturer as a concern which manufactures and fabricates heating equipment, and includes in this classification (1) oil burner manufacturers; (2) furnace manufacturers; (3) boiler manufacturers; (4) stoker manufacturers, and (5) gas burner manufacturers. Respondent makes an investigation to determine whether or not a manufacturer is really a legitimate manufacturer or a fabricator of a product. There are numerous concerns throughout the United States that buy a completely packaged outfit in their own name, and, in turn, resell it with their name on it; respondent has never regarded such concerns as manufacturers, unless they have manufacturing facilities and actually do manufacture oil burners or some closely allied product such as boilers or furnaces (Record 23-24; 54 to 59; 200; 206-209; 1179-1180; 1486).

(2) Respondent publishes list prices for its automatic temperature controls with discounts or net prices regularly allowed to oil burner manufacturers, wholesalers or jobbers, and to dealers. Respondent's prices to dealers and to wholesalers or jobbers vary from 25% to 43.75%

(25% and 25%) varying with the trade channels in which the purchasers are engaged (CX-1, p. 18). Wholesalers or jobbers are located generally throughout the country, and their places of business are equipped with stock consisting of electrical wire, copper tubing, tanks, and automatic temperature controls. They do a general business with dealers in their locality (Record 59); they sell oil burners complete, and carry stock of respondent's controls and competing controls (Record 60); respondent's salesmen in the course of their field duty selling respondent's automatic temperature controls call on manufacturers, jobbers, and dealers, and send in reports as to their activities (Record 64); in these reports they report on competitive conditions in their territory (Record 65). Respondent's salesmen, in calling on oil burner manufacturers, prospective customers, stress sales to manufacturers (Rec-
1247 ord 1487-1488). A dealer is defined by respondent as a concern which sells to the ultimate consumer and makes complete installations (Record 1487). Respondent allows a base discount to dealers in its automatic temperature controls and when respondent makes sales of its said controls to wholesalers, who in turn sell to dealers, a margin of profit is provided to cover the wholesaler's service (Record 1575).

(3) Oil burner manufacturers, who purchase the great majority of automatic temperature controls, are sold said controls by respondent at net prices, which in turn allow a margin of profit to said manufacturers, and such prices vary as between the quantity brackets into which the annual volume of their purchases brings them (CX-1, p. 19; Record 1575). Respondent's manufacturers' price brackets for the year 1941 were as follows (CX-1, Table No. 1):

"Bracket	Annual Volume	Sets	Net Price Per Set
1	50—	349	$17.35
2	350—	999	16.45
3	1,000—	2,499	15.90
3A	2,500—	4,999	15.35
4	5,000—	7,499	14.90
4A	7,500—	9,999	14.25
5	10,000 up		13.65"

Respondent's prices (above) are based on quantity of controls purchased by a customer in a year (Record 30). The

table above shows the annual volume in sets according to the bracket and the net price per set used by respondent during the year 1941. Respondent's schedule of price brackets is determined by respondent's officials at the home office of respondent at Minneapolis, Minnesota, for respondent's three controls, thermostats, limit controls and primary controls. Respondent's prices are set up on each model (control), and that model carries its price in respondent's various price brackets. The instrument is priced the same according to quantity, to any oil burner manufacturer, and respondent allows to furnace manufacturers the same discount that it gives to furnace manufacturers who have burners manufactured for them (Record 204-205). Respondent, during the years from 1937 to 1941, had six price brackets (Record 1750). The evidence shows that slight changes in the number of said brackets have taken place according to competitive conditions. Changes in brackets and prices are sometimes made to meet a particular competitive situation, a condition in the 1248 trade which is fluctuating all the time. (Record 1763; 1773-1774). To illustrate: In 1940 respondent instituted a couple of new brackets (3-A and 4-A) making eight brackets, which change was caused by a competitive situation which was causing respondent to lose business, and changing the bracket and adjusting the price was an effort by respondent to try to recapture such lost business (Record 1653 to 1658; 1774-1775). Respondent's General Manager, in speaking of the arrangement of bracket prices stated that competition is the principal cause of the changing of bracket prices from time to time in accordance with the competitive situation as it developes (Record 1774-1775; RX 124; 125; Record 1777-1778). The evidence discloses that the quantity bracket method of pricing controls begun as early as 1924 by the predecessor company of respondent, had been continued by the respondent since said time (Record 1752-1753). The operation of respondent's price brackets was as follows: Respondent's practice was to reduce its price as a customer increased his purchases of automatic temperature controls, thus going from one quantity bracket (price) into the next higher bracket, which amounted to a reduction in price. Therefore, the more temperature controls a customer purchased from respondent, the lower was the price for the controls. If a customer failed to purchase a sufficient quantity of

controls to carry such a customer from one bracket to another, such a customer did not get the reduction in price (Record 1694). Competitive prices have also been an important factor when respondent came to arrange its price brackets for any given year. It has always been the custom of respondent to collect and correlate all competitor prices for automatic temperature controls that it was possible to obtain. Respondent's salesmen are instructed to collect all the competitor information they can find in the field bearing on the competitive situation and the prices at which competitors are selling their controls, and by correlating this information respondent arrives at some indication of what its competitors' prices are (Record 1576; 1759-1776; 2579-2580). The evidence shows that respondent places its oil burner manufacturer-customers in the particular quantity bracket to which the volume of automatic temperature controls actually purchased by them from respondent entitles them (Record 1600-1602). However, there was a significant difference between the pricing practices of respondent and its competitors in the sale of automatic temperature controls in brackets, in that respondent's competitors quoted on the basis of the oil burner manufacturers' over-all controls "potential", or total controls purchased rather than on the basis of an oil burner manufacturer's actual purchases from the particular
1249 controls manufacturer placing the contract or quoting the price (Record 1296-1298; 1363; 1415; 2136-2137).

(4) Respondent does not recognize as an oil burner manufacturer any purchaser who will not agree to buy at least 50 sets or 150 units of automatic temperature controls annually, although respondent sells a few automatic temperature controls to purchasers not belonging in any of the aforementioned trade channels, such customers, who buy less than 50 units anually receive a discount of 25% and 15% from list, and such customers who agree to purchase at least 50 units annually receive a discount of 25% and 25% from list (CX-1, pp. 18, 19).

(b) It has been the practice of respondent and the controls industry generally, to enter into sales agreements with oil burner manufacturer-customers for a particular year, either during December of said year, or early in January of the following year, for said year's business. It is necessary for oil burner manufacturers to know what prices they are to pay for oil burner parts before said oil

burner manufacturers begin to figure their costs and put out their own price lists (Record 2569); Thus, controls manufacturers have to be able to inform their oil burner customers what they will have to pay for controls (Record 2569). Respondent, in making its sales agreements (contracts) with its oil burner manufacturer-customers has always taken into consideration the quantity of controls each customer purchased in the previous year, which gave an indication, or measuring rod of the needs of each customer for the current year (Record 41; 1660; 1759). These matters were, on occasion, discussed with prospective purchasers by salesmen and officials of respondent, some of whose customers were of long standing, and others had been, or were, at the time, using competitive controls (Record 42); other cases were those where a customer used some of respondent's controls, and controls of a competitor of respondent. If an oil burner manufacturer-customer of respondent exceeds his contract quantity of controls in the course of a year and earns a better price, respondent's General Manager testifies that in all fairness to such customer respondent gives such customer the benefit of his larger volume through what is called a "retroactive credit", and such customer is placed in the next price bracket which gives him the benefit of a lower price bracket which gives him the benefit of a lower price (Record 1596; 1616; 2570). It has also been the practice of respondent to give an oil burner manufacturer quantity or volume credit, refererd to as a "dual transaction" on controls which are sold direct to a furnace manu-
1250 facturer, provided such controls are used in conjunction with the burners manufactured by the oil furnace manufacturer (Record 1600; 1670-1671). An illustration of a "dual transaction" is given in the Record when the Cleveland Steel Products Corporation received volume credit for automatic temperature controls shipped by respondent directly to the Fox Furnace Company to whom the Cleveland Steel Products Corporation sold its burners without controls (Record 1602).

IV.

(a) Respondent is the oldest and largest of the controls manufacturers, its principal competitors, Penn, Perfex, Mercoid and Detroit Lubricator entering the controls field at various dates during the 1930s. The evidence shows

that each controls manufacturer made and sold automatic temperature controls at different prices, and the keenest type of competition, especially for the large volume buyers of controls, existed between respondent and its competitors, in the effort of each to sell its controls, performing in the main the same functions, to the large number of oil burner manufacturers throughout the country (CX-1, Table 1; RX-182; 23; 43; 70; 73; 78; 149-C; 152-A-E; 153; 155; 166), (Record 93; 1284-1285; 1375-1376). The evidence shows that automatic temperature controls manufactured by respondent are sold and offered for sale at a higher price than comparable controls manufactured and sold by competitors of respondent (Record 615; 742; 747; 1111; 1127; 1150-1151; 1240; 1660; 1577; 1713; 1725); that oil burners equipped with respondent's automatic temperature controls, in many instances are sold by oil burner customers of respondent, as well as customers of competitors of respondent, at higher prices than oil burners equipped with controls manufactured by the competitors of respondent (Record 742; 1111; 1150-1151; 1677; 1725). Respondent's bracket prices (Paragraph 4) for any given contract year were set up according to information respondent had at the time in reference to the general business situation, trends in the market, information as to prices of competitors gathered by respondent from its salesmen, and in other ways, and the general competitive situation existing at the time (Record 1757-1759; 2671; 3689). Respondent's practice was to keep records year after year of its oil burner customers, and this knowledge is used in
1251 making up the sales agreements of its oil burner customers; also taking into consideration the quantity of controls each customer purchased in the previous year (Record 41; 1660; 1759; 2702-2703). From this information respondent classified each customer on a basis of the volume or quantity of controls purchased by said oil burner customer during the year (Record 2689).

(b) The Record discloses from a study made by respondent in 1941, which respondent gathered for its own information and the information of its sales force, that respondent, in a number of instances during the years prior to 1941, had lost the accounts of a number of oil burner manufacturers who had standardized on respondent's controls or given to respondent the larger part of their controls business, and thereafter purchased substantial quantities of competitive automatic temperature controls (Record 1654-

1658; 2733). Among such former accounts of respondent, as shown by evidence, are the following: Respondent "M-H" lost 95% of the business of Braden Ever-Ready to Mercoid; 80% of the Chalmers Oil Burner Company to Perfex; 40% of Easton Oil Company to Mercoid; 25% of National Airol to Perfex; 10% of Pan-American to Mercoid; 25% of Sundstrand Engineering Company to Mercoid; 5% of Vortex to Penn-Electric; 20% of Gold Star to Perfex; 75% of Herco to Mercoid; 10% of Lynn Products to Perfex and a number of other customers of respondent appeared in the record, amounting to 31 oil burner accounts (Record 1654 to 1658); the records of respondent pertaining to said 31 accounts lost by respondent to its competitors in the years prior to 1941 gave to said competitors, in full or in part, 53% of their business, as stated by respondent's General Manager, according to the estimated figures compiled by respondent (Record 1658-1659).

The evidence is that respondent "M-H", during the years 1938, 1939, 1940 and 1941, gave the Williams Automatic Company a large volume purchaser of automatic temperature controls, its best prices, as testified to by respondent's General Manager, because "we had to give them our best prices to come close to the competitive controls prices that we encountered at Williams's" (Record 1666); it is shown that the competitive controls prices for the business of the Williams Automatic Company were from Mercoid and Penn (Record 1666); it is further shown that respondent's prices made to the Williams Automatic Company never did actually go down to the prices charged said company by respondent's competitors (Record 1666).

It is shown (Paragraph II) that respondent's automatic temperature controls were well and favorably known because of respondent's reputation in the controls
1252 field, and many oil burner manufacturers, customers of respondent, preferred respondent's controls notwithstanding respondent's controls were higher in price, and often commanded premium prices (Record 1247-1248; 1711-1713; 1800). However, there were other oil burner manufacturers who were attracted by the lower prices offered by manufacturers of competing controls (Record 2733; 2744), and the Record shows that in 1941 and prior thereto, 126 oil burner manufacturers who at one time had standardized on respondent's controls were purchasing controls of competitors of respondent, and at lower prices

than respondent's controls were sold at (Record 1658; 2737; 2744).

(c) Samuel Peters, during 1936, began the manufacture of oil burners under the name "Quiet Heet". His places of business were at Newark, New Jersey, and Baltimore, Maryland. He purchased his pumps, motors and other equipment from others, assembling his oil burner, and purchasing automatic temperature controls from respondent and Mercoid, but did not standardize on either (Record 852). By practicing certain economies, such as traveling only one salesman, selling C.O.D., and having no charge accounts, and advertising by mailing out thousands of postcards, "Quiet Heet" enjoyed a large volume business in the sale of its oil burners, and in 1939 was in respondent's Bracket No. 5, receiving respondent's lowest bracket price for the controls purchased (Record 866-888; 976-980; CXs 126 to 131). The oil-burners assembled and sold by "Quiet Heet", with automatic temperature controls, was the lowest priced burner on the market (Record 950-951). "Quiet Heet", while receiving respondent's lowest bracket price, was able to drop the price on its oil burners from a high of $70.00 to a low of $40.00 (Record 871; 956), and thereby caused a considerable competitive situation in the oil burner field (Record 1005-1008; 1129-1131). Other oil burner manufacturer-customers of respondent who could not purchase respondent's controls at as low a price as "Quiet Heet" stated that their business had suffered from such competition (Record 634; 924; 1154; 1158); however, it is shown that it was the cutting of its oil burner price, and not the price paid for controls by "Quiet Heet", that was the cause of the competitvie situation referred to at that time (Record 1007; 1009; 1021; 1128-1129). Many oil burner manufacturers buy competitive controls because they are lower in price than respondent's (Record 2737; 2740), but buy respondent's controls in addition to competitive controls because their dealer-customers often specify respondent's controls on the oil burners they purchase (Record 2740). Automatic temperature controls are only one item in an oil burner assembly amounting to approximately one-third of the cost of the oil burner (Record 1087); the manufacturing cost of oil burners is affected

by the prices of other items entering into the manu-1253 facturing or assembling of oil burners, such as motors, transformers, pumps, and fans, the price of which items, varies according to quantity of such items purchased

by oil burner manufacturers (Record 1618; 1619; 1865; 2013-2015). The testimony of a number of oil burner manufacturers was to the effect that although they knew that "Quiet Heet" enjoyed a lower price for its controls purchased from the respondent because of "Quiet Heet's" volume purchases, that this did not affect their business (Record 1634-1636; 1719; 1871; 1965; 1981).

(d) The cost accounting report prepared and submitted by Ernst & Ernst (CX 170; 186) shows that on the basis of the manufacturing cost of respondent's controls, sold at the various bracket prices, about 45% of respondent's controls business falls within the five brackets beginning with the discount bracket and extending through Bracket 3-A, and appear to be justified by said report. (Record 2798; 2568 to 2663; 2664 to 2787; 2169). The remaining 55% of respondent's business falling in the three higher brackets (4-4A-5), respondent does not claim cost justification (Record 2796). Comparison of cost between Bracket 3 and Bracket 3-A shows an excess of price differential over cost differential of two cents per set (Record 2798; RX 186). In Bracket 3-A there are included manufacturing costs of $236,476.68, which is about 20% of the total business of respondent (RX 186).

Respondent's General Manager gave a detailed description and analysis of the 77 (one erroneously included) (Record 2660) off-scale accounts as reported in the Record (RX 170), and gave a picture of the competitive situation in reference to each account, and respondent's actions in meeting each competitive situation as such developed, and it was shown that in each of said accounts respondent's price had been always and consistently higher than any of its competitors (Record 2568-2663; 2664-2787). Of the 76 off-scale accounts mentioned, 22 were sold on a competitive basis, that is, the difference in respondent's prices and its competitors' prices in each case was based upon competition (Record 2665), respondent shifting its bracket prices in its higher brackets (4-4A-5) to meet the lower prices of competitors. Respondent's prices often came within a narrow margin of less than $2.00 per set in meeting its competitors' prices, and in several instances within 50¢ per set, and in one case respondent's price was within 20¢ a set of its competitor's price (Record 2620; 2745-2747; 2759-2762). It often happened that respondent had several customers located in the same locality, such a case being the Quiet Heet Company of Brooklyn, New York.

Respondent gave this company a Bracket 1 price in 1254 1940 because said company purchased 679 instruments; another customer in Brooklyn was also given a Bracket 1 price although said customer purchased only 187 instruments (Record 2688; 2592). Both of these accounts, it is shown, had purchased the required number of controls under Bracket 1, and both received the same price from respondent, though one customer purchased substantially more controls than the other (Record 2689).

It is shown that in the 22 competitive accounts referred to (RX 186), respondent extended better prices to such customers by placing said customers in higher price brackets (giving a lower price) than the quantity controls actually purchased by said customers during 1940 or 1941 justified. By lowering its prices to said 22 oil burner manufacturer-customers respondent attempted to meet the lower price competition offered by its competitors, but in no case does the Record show that respondent's price ever equalled the lower price paid by the competitor, and oil burner manufacturers were always able, if they desired, to purchase controls from respondent's competitors at lower prices than respondent's price (Record 2662-2765-2766). In some cases respondent had knowledge of its competitors' prices which respondent had learned from its salesmen or through some trade channels (Record 2684); in other cases, respondent may not have known which competitor was quoting or the competitive price offered (Record 2668; 2670; 2680; 2681, 2687; 2743). The Record discloses, however, that respondent's prices for its automatic controls were, to all of its customers, always and consistently above its competitors' prices, and that in each of the cases where respondent shifted its bracket prices, it was to approach the lower price made by one or more of its competitors (Record 2765; 2568; 2663; 2664 to 2787).

V.

The allegations as to the acts and practices of respondent, as charged under Sec. 2 of the Clayton Act, will be considered under Conclusions.

1255

VI.

Conclusions of Fact and Law.

As To Count I:

1. Respondent "M-H" is a Delaware corporation having its principal place of business in Minneapolis, Minnesota. Respondent manufactures automatic temperature controls for oil, gas and coal heating plants, and sells the same to oil burner manufacturers, jobbers, wholesalers and dealers in oil burner equipment throughout the United States; respondent is the principal manufacturer of temperature controls in the United States, and the total volume of its sales of controls, annually, during the years from 1939 to 1941, constituted approximately 60% of the total amount of automatic temperature controls sold annually throughout the United States to manufacturers of oil burners, and to wholesalers, contractors, and dealers in oil burners and automatic controls. Respondent, in the sale of its controls, has entered into annual contracts or agreements with manufacturers of oil burners, since prior to 1936, and the number of such manufacturers having such contracts with respondent constitute more than 50% of all the manufacturers of oil burners within the United States. When sales of respondent's automatic temperature controls are made respondent causes such products to be shipped from the place of manufacture in the States of Minnesota and Indiana, to the purchasers thereof located in states other than the state of manufacture, and there is now and has been a constant current of trade and commerce in such products between the various states of the United States, and in the District of Columbia. Respondent has numerous competitors in the manufacture and sale of automatic temperature controls, its principal competitors being The Perfex Company, Penn-Electric, Mercoid, and Detroit-Lubricator, and it is shown that from 1936 to 1941, in the sale of temperature controls by respondent and its competitors there has existed an exceedingly keen competitive situation throughout the United States. (Par. I-a, b, c, d.)

Respondent was organized in the year 1927 and is an amalgamation or consolidation of two predecessor companies, the first company having been organized in 1885 and the Honeywell Company in 1906; both respondent

"M-H" and its predecessor companies have been
1256 extensive advertisers of their lines of controls for many years, and large sum have been spent on national advertising; it is shown that respondent has always, throughout the years, been a leader in the field of controls manufacture, and in the development and betterment of new and better controls; respondent has spent large sums of money in engineering and development work and in the redesigning and improvement of its product (Par. I, e to h).

2. There are three types of controls used in oil burners, principally of the gun pressure type, and the rotary type; they are (a) thermostats; (b) limit controls, and (c) primary controls. The thermostat controls the temperature within the enclosure within which it is located; the limit control is a device used on the heating plant, whether it be steam, hot water, or warm air, and it performs a safety function. The primary control is an actuating device which starts and stops the oil burner at the direction of the room thermostat. The primary control is sometimes called a "Master" control or "Combustion" control, or "Safety" control, and it is an essential element in every oil burner installation. It is shown that respondent owns most of the patents on primary controls (protectorelay). However, some of the thermostats manufactured and sold by respondent may be used with limit and primary controls manufactured and sold by competitors of respondent, and further that some of the primary controls manufactured and sold by respondent may be used with limit controls and thermostats manufactured and sold by competitors of respondent. The evidence shows that thermostats and primary controls manufactured by respondent give more efficient performance in the ordinary installation than when controls of similar kind manufactured by other manufacturers are mixed in the same installation. The thermostat of respondent has a special co-ordinating and co-operating function with primary controls, and for safety, to mix controls of different manufacturers in the same installation is not a good practice. It is shown that because of the extensive national advertising of respondent for many years, of its automatic temperature controls, there has developed a large customer demand for, and public acceptance of respondent's line of automatic temperature controls (Par. II a, b, c).

3. Respondent, during the years prior to 1936, made

sales of its automatic temperature controls to approximately 150 to 200 oil burner manufacturers throughout the United States; during said time respondent agreed, or attempted to agree, in writing, with all of its domestic oil burner manufacturers-customers, that they would
1257 purchase their requirements of automatic temperature controls in sets of one thermostat, one limit control, and one primary control, at a combination price per set, and that at least 95% of the customer's requirements would be so purchased from respondent. In all of respondent's said agreements, the oil burner manufacturer-customer was required to buy in sets, taking 90% as many room thermostats, and 100% as many limit controls as primary controls, and it was agreed that it was unsatisfactory, and often dangerous, to mix controls made by different manufacturers, and that respondent would not assure satisfaction or assume any service responsibility as to controls when used with other makes. On January 23, 1937, respondent eliminated the 95% clause from its existing contracts with its oil burner manufacturer-customers and released said manufacturer-customers therefrom. The 95% provision in respondent's 1936 sales agreement never became operative and no customer was required to comply therewith. (Par. III, a, b, c, d, e).

4. As a result of the acts and practices of respondent set forth above (Par. 3), a substantial number of manufacturers of domestic oil burners have been induced to purchase from respondent either all, or a majority of their requirements of domestic temperature controls and competitors of respondent have thereby been prevented from selling thermostats and limit controls in substantial quantities to such customers purchasing primary controls from respondent (Par. IV, a).

5-6. (a) It is shown that respondent is the owner of the Freeman and Cross primary controls and thermostats involved and referred to as charged in Paragraph 5 and 6 of the complaint in this case. The Record discloses in reference to the charges contained in the complaint (Par. V-VI) that at the time respondent made answer to the complaint in this case, respondent had a favorable decision with respect to respondent's practices in reference to the Freeman and Cross patents, from the United States Circuit Court of Appeals for the 7th Judicial Circuit. Subsequently, however, two cases involving said patents went before the United States Supreme Court, in December

1943, and were decided by the Court on January 3, 1944, the Supreme Court reversing respondent's favorable decision from the 7th Circuit, above referred to. Later, on February 7, 1944, the Supreme Court denied a petition for re-hearing. Promptly upon the denial of the petition for re-hearing, respondent in this proceeding, (Docket No. 4929) terminated all its agreements of every
1258 kind involving either the Freeman patent or the Cross patent, and all of respondent's practices, condemned by the United States Supreme Court, complained of in connection with the Cross patent and the Freeman patent have now been ended, and are not now being carried on in any way by respondent. (Pars. V-VI, a.) (*Mercoid Corporation* v. *Mid-Continental Investment Co., et al.*, 320 U. S. 661 (1944) and *Mercoid Corporation* v. *Minneapolis-Honeywell Regulator Co.*, 320 U. S. 680 (1944) reversing 133 F. (2d) 802 (1942) and 133 F. (2d) 811 (1942).

7. The aforesaid acts and practices of the respondent are to the prejudice of the public and of respondent's competitors, and have the tendency and effect of hindering and preventing competition in commerce, and of restraining trade, all in violation of Section 5 of the Federal Trade Commission Act.

As To Count II:

(Pars. 1, 2, 3, 4 of Conclusions (Count I) adopted.)

5. Respondent, from prior to 1936 to 1941 inclusive, in the course of its business in the production and the sale and distribution of automatic temperature controls, in commerce, has made sales, and contracts for sale, of such products, on the condition, or with the agreement or understanding, that the purchaser thereof shall not use, or deal in, similar products of competitors of respondent; the effect of such sales, or contracts for sale, or such condition, agreement or understanding has been, or may be to substantially lessen competition, or tend to create a monopoly in the sale and distribution in commerce of automatic temperature controls. (Par. V-a.)

6. The aforesaid acts and practices constitute a violation of Section 3 of the Clayton Act.

As To Count III:

(Pars. 1, 2 of Conclusions (Count I) adopted.)

3. Respondent, in the course of its business prior to 1936 and through 1941, has made sales of its temperature

controls of like grade and quality to some of its oil burner manufacturer-customers at lower prices than respondent sold its automatic temperature controls of like grade and quality to others of its oil burner manufacturer-
1259 customers, many of whom are competitively engaged one with another in the resale of such products within the United States, by the following practices and methods: (1) Respondent recognizes three channels of trade and distribution in selling its automatic temperature controls, and respondent has classified its customers accordingly, as: (a) oil burner manufacturers, (b) wholesalers and jobbers (Class A and Class B), and (c) dealers; (2) respondent publishes list prices for its automatic temperature controls with discount or net prices regularly allowed to oil burner manufacturers, wholesalers or jobbers, and to dealers. Respondent's prices to dealers and to wholesalers or jobbers vary from 25% to 43.75% (25% and 25%), varying with the trade channels in which the purchasers are engaged; (3) respondent has sold its automatic temperature controls, thermostats, limit controls and primary controls in units, and in sets, to oil burner manufacturers under contracts providing for annual discount arrangements, including separate and distinct price brackets varying in number from 6 to 8, and with net prices fixed in accordance with the quantity requirements of the customer under contract; (4) respondent does not recognize as an oil burner manufacturer any purchaser who will not agree to buy at least 50 sets or 150 units of automatic temperature controls annually, although respondent sells a few automatic temperature controls to purchasers not belonging to any of the aforesaid trade channels; such customers who buy less than 50 units annually receive a discount of 25 and 15 from list, and such customers as agreed to purchase at least 50 units, received a discount of 25% and 25% from list. (Par. III-a, b.)

4. It is shown from the evidence that respondent's selling of its automatic temperature controls, of like grade and quality, to certain of its oil burner manufacturer-customers at lower prices than respondent sells its automatic temperature controls of like grade and quality to others of its oil burner manufacturer-customers, has not tended to substantially lessen, injure, prevent or destroy competition between respondent's customers, or create a monopoly in the line of commerce in which respondent and its competitors are engaged. It appears from the evidence that respondent's problem was to sell its automatic tem-

perature controls in a competitive field where controls of competitors of respondent were sold at lower prices than controls manufactured and sold by respondent; respondent found by canvassing its business that prior to 1941 it was losing a large percentage of 31 of its oil burner accounts, and that 126 of its customers who had standardized 1260 on respondent's controls were purchasing controls of competitors of respondent. The Record discloses that respondent's bracket prices as represented by the first five brackets from the discount bracket to and including Bracket 3-A were found to be justified by a cost accounting survey. In respondent's higher brackets (4-4A-5) respondent has lowered its prices in making sales of its controls to 22 of its oil burner customers, to meet the lower price competition of competitors; however, it is shown that competitors' prices have always and consistently remained under the prices of respondent, and oil burner manufacturers were always able, if they desired, to purchase controls from respondent's competitors at prices lower than respondent's prices. (Par. IV-a, b, c, d)

Conclusions of Law.

5. From the circumstances of this case (as charged in Count III), it does not appear that respondent has violated Section 2 of the Clayton Act as amended by the Robinson-Patman Act.

Recommendations for Appropriate Action by the Commission.

It is recommended (A) that an order issue and be served upon respondent requiring said respondent to cease and desist from the acts and practices charged under Count I and Count II of the Complaint; it is recommended further (B) that the charges of the Complaint as set forth in Count III be dismissed without prejudice.

Respectfully submitted,

W. W. Sheppard,
Trial Examiner.

Dated: February 21, 1946.

Note: "The Trial Examiner's Report is not a Report or Finding of the Commission. Such Report is advisory only and is not binding upon the Commission."

RESPONDENT'S EXCEPTIONS TO TRIAL EXAMINER'S REPORT.

In accordance with Rule XXI of the Commission's Rules of Practice and the order of the Commission dated March 1, 1946, whereby the time within which to file exceptions to the Report of the Trial Examiner herein was extended to April 8, 1946, the respondent, Minneapolis-Honeywell Regulator Company (hereinafter sometimes called M-H), states the following as its exceptions to the Trial Examiner's Report in the above-entitled proceeding:

Synopsis of Complaint and Answer.

1. Exception is taken to the statements on pages 1-6 of the Trial Examiner's Report under the above heading
in which the Trial Examiner purports to summarize
1262 the allegations of the Complaint and the contention
in the Answer thereto filed by M-H, and the Commission is referred to the Complaint and the Answer for a complete and correct statement of said allegations and contentions.

Report Upon the Facts.

As to Count I

2. Exception is taken to the failure of the Trial Examiner, in connection with the statements in the second sentence in paragraph I(b) of his Report upon the Facts as to Count I, to find that the total volume of M-H's sales of automatic temperature controls, including the controls sold to manufacturers of pot type burners—in installations of which primary controls other than of M-H design are an essential element (R. 694*) and which in turn are sold in direct competition with both the gun and rotary type burners (R. 692)—constitute approximately 25% of the total number of automatic temperature control devices sold annually in the United States to manufacturers of all types of burners (CX 1, par. Two).

* "R" refers to page in stenographic transcript; "CX" refers to Commission's Exhibit; "RX" refers to Respondent's Exhibit.

3. Exception is taken to the statement in the last sentence of paragraph I(b) of the Trial Examiner's Report upon the Facts as to Count I in that the reference
1263 to "prior to 1943" should be to "during the years 1936 to 1941, inclusive" (CX 1, par. Three).

4. Exception is taken to the statement in the third sentence of paragraph I(d) of the Trial Examiner's Report upon the Facts as to Count I that Detroit Lubricator Company purchased its primary controls from "Penn", on the ground that such statement is not supported by evidence and none is cited therefor.

5. Exception is taken to the statement in the sixth sentence of paragraph I(f) of the Trial Examiner's Report upon the Facts as to Count I that American Nokol Company was the first concern to manufacture oil burner controls on the ground that the evidence shows that such Company was the first concern to manufacture automatic oil burners (R. 1900-1).

6. Exception is taken to the statement in the first sentence of paragraph II(b) of the Trial Examiner's Report upon the Facts as to Count I that M-H "owns most of the patents on primary controls" on the ground that such statement is unsupported by and contrary to the evidence which is to the effect that M-H owns but 18 patents relating to primary controls while its principal competitors in the control industry and others own altogether approximately 100 patents relating to primary controls (CX 1, par. Seven; RX 72, 103, 137, 169, 183).

7. Exception is taken to the failure of the Trial
1264 Examiner, in connection with the statement in the first sentence of paragraph II(b) of his Report upon the Facts as to Count I, to find that it has not been necessary for M-H's competitors to obtain licenses under any of M-H's patents in order to compete with M-H in the manufacture and sale of primary controls (R. 327, 443, 720).

8. Exception is taken to the failure of the Trial Examiner, in connection with the statement in the second sentence of paragraph II(b) of his Report upon the Facts as to Count I, to find that the practice of control manufacturers in selling their makes of standard controls in sets was originated in 1926 by an oil burner manufacturer, American Nokol Company, which started to include limit controls along with primary controls and thermostats as part of the original equipment on the oil burner in order

to get the profit markup on the limit controls which had previously gone to the dealers (R. 1908-9).

9. Exception is taken to the failure of the Trial Examiner, in connection with the statement in the second sentence of paragraph II(b) of his Report upon the Facts as to Count I, to find that, when M-H controls are sold in sets, its set price is equal to the prices of the three individual control units (R. 31-32), whereas at least two of M-H's competitors sometimes sell sets of their controls at a price less than the prices of the individual con-
1265 trol units comprising the sets (R. 1262; 2143).

10. Exception is taken to the failure of the Trial Examiner, in connection with the statements in the third, fourth and fifth sentences of paragraph II(b) of his Report upon the Facts as to Count I, to find that control manufacturers other than M-H also recognized the risk of "mixing" different makes of primary controls and thermostats (R. 369-71; 704-5).

11. Exception is taken to the failure of the Trial Examiner, in connection with the statements in paragraph II(c) of his Report upon the Facts as to Count I, to find that the cost to a large volume oil burner manufacturer of a set of M-H's controls was reduced from $39.00 in 1929 to $13.75 in 1941, or a decrease of 66% (R. 1564-6), as compared to a 64% decrease in price of oil burners over the same period (R. 1568-70).

12. Exception is taken to the statement in the ninth sentence of paragraph III(a) of the Trial Examiner's Report upon the Facts as to Count I to the effect that under the terms of M-H's contracts with certain of its oil burner manufacturer customers for the year 1937, the customer was obligated to purchase its requirements of controls from M-H, on the ground that, as the evidence cited in support thereof shows, the customer's obligation was limited to the purchase from M-H of 95% of its control requirements (CX 1, pp. 10-12) and that
1266 such 95% clause was eliminated from M-H's contracts and never became operative and no customer was required to comply therewith (R. 109-11).

13. Exception is taken to the first quotation from M-H's contracts with oil burner manufacturers contained in paragraph III(a) of the Trial Examiner's Report upon the Facts as to Count I, viz.:

"It is specifically agreed that other control equipment is not to be considered as part of a set within the terms

of this contract because the Company's costs are figured to cover a complete set of controls and the following breakdown prices are purely for enforcing purposes. It is agreed that the purchasers' yearly purchases will consist of at least 90% as many thermostats and 100% (but at the company's option not more than 125%) as many limit controls as primary controls. * * *"

on the ground that, as the evidence cited therefor shows, such quotation should read as follows:

"It is specifically agreed that other control equipment is not to be considered as part of a set within the terms of this contract. Because the Company's costs are figured to cover a complete set of controls and the following breakdown prices are purely for invoicing purposes, it is agreed that the purchasers' yearly purchases will consist of at least 90% as many thermostats and 100% (but at the company's option not more than 125%) as many limit controls as primary controls. * * *"

14. Exception is taken to the statement in the third paragraph of paragraph III(a) of the Trial Examiner's Report upon the Facts as to Count I with reference to the so-called 95% clause, on the ground that the Trial
1267 Examiner fails to state in that connection, as he did in the earlier part of said paragraph III(a), that the 95% clause was eliminated from M-H's sales agreements for 1937 and never became operative (see Exception 12, *supra*).

15. Exception is taken to the statement in the next to last paragraph of paragraph III(a) of the Trial Examiner's Report upon the Facts as to Count I to the effect that the language quoted therein was contained in M-H's sales agreements with its oil burner manufacturer customers for the years 1939 and subsequent thereto, whereas such language was only contained in M-H's contracts for the years 1940 and 1941 (CX 1, pp. 15-16).

16. Exception is taken to the failure of the Trial Examiner to find (i) that none of the contract provisions mentioned in paragraph III(a) of his Report upon the Facts as to Count I was shown to have been interpreted either by M-H or the oil burner manufacturers who signed contracts containing such provisions as prohibiting the latter from purchasing controls from competitors of M-H or has in fact had any such effect; (ii) that M-H's contracts with oil burner manufacturers have always been voluntarily entered into by the purchasers (R. 1594) and

do not, by their terms, limit or in any way, directly or indirectly, preclude such customers from dealing in or using such controls made by M-H's competitors
1268 (CX 13-16); and (iii) that M-H's customers regularly purchase from its competitors and very often have similar contracts with one or more of such competitors at the same time, and none of them was ever prevented by its contract with M-H from buying other makes of controls. (Acme Oil Burner Co.—RX 158, R. 1610; Aldrich Co.—R. 1838-39; Automatic Burner Corp.—RX 25, 118, 119, 161, R. 1683; Cleveland Steel Products Corp.—RX 7, 8, 27, 114, 150, 151, 181A, R. 1806-9; Goodrich Oil Burner Mfg. Co.—R. 1244-45; Harvey-Whipple, Inc.—RX 31, 45, 55, 63, R. 1126; Herco Oil Burner Corp.—R. 1159; Korth Oil Burner Corp.—R. 2011; Malleable Iron Fittings Co.—RX 10, 11; Mercoid Corporation—R. 2151; Penn Boiler & Burner Mfg. Co.—RX 53, R. 1713-14; Penn Electric Switch Co.—R. 1395; Perfex Corporation—R. 375; Petroleum Heat & Power Co.—R. 1909-10, 1927; Quiet Heet Mfg. Co.—RX 12, 13, 154, R. 863; Timken Silent Automatic Co.—RX 21, 149A-C; Joseph Toker Co.—R. 1952; Wayne Oil Burner Co.—RX 40, 51, 60, 68, 134, 135, 136, R. 1867; Williams Oil-O-Matic Heating Corp.—RX 126, 176A, R. 177-78; Wisconsin Oil Burner Co.—RX 22, 42, R. 1713-14; York Oil Burner Co.—R. 1979-80).

17. Exception is taken to the statement in the last sentence of paragraph III(b) of the Trial Examiner's Report upon the Facts as to Count I that Defroit Lubricator Company purchased its primary controls from
1269 M-H, on the ground that such statement is contrary to the evidence cited therefor (R. 649) and the statement on the same subject in paragraph I(d) of his Report. (See Exception 4, *supra.*)

18. Exception is taken to the statement in the third sentence of paragraph IV(a) of the Trial Examiner's Report upon the Facts as to Count I to the effect that a substantial number of oil burner manufacturers, prospective customers of M-H, has been induced to purchase from it either all or the larger part of their annual requirements of automatic temperature controls, on the ground that such statement is not supported by the evidence cited therefor, or any other evidence.

19. Exception is taken to the statement in the fifth sentence of paragraph IV(a) of the Trial Examiner's

Report upon the Facts as to Count I to the effect that some oil burner manufacturer customers of M-H are reluctant to sign contracts or sales agreements for temperature controls but wish to be free to buy controls from whatever source they see fit, on the ground that the evidence cited for such statement shows that the statement refers to Penn Electric Switch Company and not to M-H (R. 1393).

20. Exception is taken to the failure of the Trial Examiner to find, in connection with the statements with reference to M-H's sales agreement with Timken
1270 Silent Automatic Company mentioned in paragraph IV(a) of the Trial Examiner's Report upon the Facts as to Count I, that the clause requiring Timken to standardize on M-H's products was suggested by M-H in order to insure that Timken would purchase its contract quantity from M-H and hence be entitled to M-H's best price (R. 1647-8).

21. Exception is taken to the statement at the end of paragraph IV(a) of the Trial Examiner's Report upon the Facts as to Count I regarding the effect of M-H's contract with its oil burner manufacturer customers, on the ground that the testimony cited in support of such statement related specifically to the so-called 95% clause inserted for a short period in M-H's control contracts for the year 1937 and not to the contract as a whole (R. 348).

As to Count II

22. Exception is taken to the statement in the first sentence of paragraph V(a) of the Trial Examiner's Report upon the Facts as to Count II that M-H in the course of its business from December 1939 to 1941, inclusive, entered into sales agreements or contracts with a substantial number of oil burner manufacturer customers for either all or a majority of their annual requirements of automatic temperature controls, on the ground that, as shown by the evidence cited in support there-
1271 of, such contracts related solely to automatic temperature controls manufactured by M-H, except for the short period ending January 28, 1937, when certain of M-H's contracts contained the so-called 95% clause.

23. Exception is taken to the statement in the third sentence of paragraph V(a) of the Trial Examiner's Report upon the Facts as to Count II that "some" of M-H's oil burner manufacturer customers entered into

contracts with it on the understanding that they would use M-H's controls exclusively, on the ground that, as shown by the evidence cited in support thereof, such statement is only true with respect to one particular customer of M-H, namely Malleable Iron Fittings Company.

24. Exception is taken to the statements in the penultimate paragraph of paragraph V(a) of the Trial Examiner's Report upon the Facts as to Count II to the effect that M-H's contract with Cleveland Steel Products Company was to leave for the competitive market only 10% of Cleveland Steel's requirements of room thermostats and no opportunity for sales to Cleveland Steel by competitors of M-H of either limit or primary controls, on the ground that such conclusion is unsupported by and contrary to the evidence.

1272 Conclusions of Fact and Law.

As to Count I

25. Exception is taken to the statement in the fifth sentence of paragraph 2 of the Trial Examiner's Conclusions of Fact and Law as to Count I that the respondent owns most of the patents on primary controls, on the ground that such statement is not supported by and is contrary to the evidence. (See Exception 6, *supra.*)

26. Exception is taken to the statement in the first sentence of paragraph 3 of the Trial Examiner's Conclusions of Fact and Law as to Count I to the effect that, during the years prior to 1936, the respondent agreed, or attempted to agree, in writing, with all of its domestic oil burner manufacturer customers, that at least 95% of the customers' requirements of automatic temperature controls would be purchased from the respondent, on the ground that such statement is not supported by evidence and is contrary to the evidence which is to the effect that said so-called 95% clause was only in effect for a short period in January of 1937 and was stricken out of the respondent's contracts with its customers on January 28, 1937. (See Exception 12, *supra.*)

27. Exception is taken to the statements in paragraph 4 of the Trial Examiner's Conclusions of Fact and
1273 Law as to Count I on the ground that such statements are unsupported and are contrary to the evidence. (See Exceptions 2-21, inclusive.)

28. Exception is taken to the statements in paragraph 7 of the Trial Examiner's Conclusions of Fact and Law as to Count I, on the ground that such statements are not supported by the facts or the law except with respect to the following practices of the respondent

(a) the practice, referred to in the first sentence of paragraph 3 of the Trial Examiner's Conclusions of Fact and Law as to Count I, whereby, for a short period in 1937 but discontinued within 30 days, the respondent required certain of its oil burner manufacturer customers to contract with it that at least 95% of their control requirements would be purchased from the respondent;

(b) the practice, referred to in the second sentence of paragraph 3 of the Trial Examiner's Conclusions of Fact and Law as to Count I, of providing that the yearly purchases of respondent's controls by oil burner manufacturers would consist of at least 100% as many limit controls as primary controls; and

(c) the practice, referred to in paragraphs 5-6 1274 of the Trial Examiner's Conclusions of Fact and Law as to Count I, engaged in by the respondent with respect to the Freeman and Cross patents which were eliminated by the respondent after the inception of this proceeding.

29. Exception is taken to the failure of the Trial Examiner to state as a conclusion of law that, except for the practices mentioned above under (a), (b) and (c) of Exception 28, none of the acts and practices referred to in the Trial Examiner's Report as to Count I constituted unfair methods of competition in commerce within the intent and meaning of Section 5 of the Federal Trade Commission Act.

As to Count II

30. Exception is taken to the statement in paragraph 5 of the Trial Examiner's Conclusions of Fact and Law as to Count II, on the ground that such statements are unsupported by and are contrary to the evidence. (See Exceptions 22-24, inclusive.)

31. Exception is taken to the statement in paragraph 6 of the Trial Examiner's Conclusions of Fact and Law as to Count II on the ground that such statement is not supported by the facts or the law except with respect

to the practice of the respondent mentioned above under (h) of Exception 28, *supra.*

1275 32. Exception is taken to the failure of the Trial Examiner to state as a conclusion of law that, except for the practice mentioned above in Exception 31, none of the acts and practices of the respondent set forth in the Trial Examiner's Report as to Count II constituted violations of Section 3 of the Clayton Act.

Dated, April 5, 1946.

Respectfully submitted,
Craveth, Swaine & Moore,
Bair & Freeman,
Attorneys for Minneapolis-Honeywell Regulator Company.

1277 UNITED STATES OF AMERICA,

BEFORE FEDERAL TRADE COMMISSION.

(Caption—4920)

EXCEPTIONS OF COUNSEL FOR THE COMMISSION TO THE TRIAL EXAMINER'S REPORT.

Now Comes Counsel for the Commission to take exception to the Trial Examiner's report upon the evidence as follows:

Exception is specifically taken to the following statements and conclusions of fact contained in said report.

I.

Statement of Fact, page 8, paragraph (d), lines 8-12:

"(4) General Electric Company, hereafter referred to as 'General Electric', which company manufactures thermostats, limit and primary controls used on oil burners, which said company manufactures, and which compete with respondent's controls (Record 43)."

The last clause of this finding should have been omitted for the reason that General Electric did not solicit the business of oil burner manufacturers and was not in competition with respondent in the sale of controls, but competed with oil burner manufacturers, customers of respondent in the sale of completed burners. (R. 45.)

II.

Statement of Fact, page 9, lines 7-9:

"(c) Detroit Lubricator Company of Detroit, Michigan, which makes thermostats but purchases its primary controls from 'Penn';"

The above finding should have been substantially as follows:

"The Detroit Lubricator Company of Detroit, 1278 Michigan, which manufactured thermostats, and in 1939 began production of competitive limit controls, but did not manufacture primary controls. This Company sold the majority of its controls to its parent company, the American Radiator Company, which was its only customer for primary controls (R. 53, 645, 648, 673, 677-689, 1363)."

III.

Statement of fact, page 10, lines 10-13:

"The first concerns to manufacture oil burner controls were the American Nokol Company, the Williams Oilmatic and Kleen Heat, back in 1920."

These companies did not manufacture controls, but were producers of oil burners and the above finding should have been so modified. (R. 1513.)

IV.

Statement of fact page 12, paragraph (b), lines 12-24:

"The Record shows that thermostats and primary controls manufactured by respondent for use with oil burners, give greater satisfaction, and more efficient performance in the ordinary installation than when controls of similar kinds, manufactured by other manufacturers, are mixed in the same installation. The evidence shows that it is not a good practice to use controls of respondent 'M-H' with controls of different makes; that the thermostat of respondent 'M-H' has a special co-ordinating and cooperating function with primary controls, and for safety and to keep down costs and field troubles, to mix controls of different manufacturers, in the same installation is not a good practice (R. 818-820; 1265-1266)."

It is submitted that the foregoing statement of fact is

not in accord with the evidence and that the Trial Examiner should have found in substance as follows:

"Many thermostats and limit controls manufactured by competitors of respondent could be and are used interchangeably with respondent's thermostats and limit controls and operate safely and satisfactorily (CX 1)."

1279 V.

Statement of fact, page 13, paragraph (a), last 3 lines:

"Respondent, in December 1936, entered into, or attempted to enter into, written agreements for the year 1939, * * *."

The year "1939" referred to in the above finding should have been "1937" since respondent usually contracted with its customers near the end of a given calendar year for the succeeding years business.

VI.

Statement of Fact, page 14, first paragraph following first quotation:

"On January 28, 1937, respondent eliminated the 95% clause from its existing contracts with its oil burner manufacturer-customers and released said manufacturer-customers therefrom. (CX 1, p. 14; 21-23; Record 110-111-115.) The 95% provision in respondent's 1936 sales agreement never became operative and no customer was required to comply therewith (R. 109-111)."

It is submitted that the aforesaid finding of fact does not in our opinion entirely reflect an accurate description of the subject matter to which it purports to relate and we feel that the said finding should have been substantially as follows:

"Respondent eliminated the 95% clause from its existing contracts with oil burner manufacturers on January 28, 1937. Prior to this date, however, several of such customers had objected to the said clause being in their contracts (CX 21, 23 A-D; 66 A-D; R. 96-99, 109-115, 374)."

VII.

Statement of Fact bottom page 14:

"In respondent's 1937 sales agreement with 79 of the 165 manufacturers of oil burners with whom respondent

entered into contracts for the year 1937, were the following provisions:

'The Purchaser agrees that at least ninety-five (95) percent of his control requirements consisting of Thermostats, Primary Controls and Limit Devices, will be purchased from the Company.' (CX-1, pp. 10-13.)"

Commission's Exhibit 1 supports the above mentioned finding of fact but it is submitted that the statement should also include the following quotation from the said agreements:

"The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract ..... sets of the Company's automatic temperature controls, each set consisting of one Thermostat, and one Limit Control, and one Primary Control. It is specifically agreed that other control equipment is not to be considered as a part of a set within the terms of this contract. Because the Company's costs are figured so as to cover a complete set of controls, and the following breakdown prices are purely for invoicing purposes, it is agreed that the Purchasers yearly purchases will consist of at least 90% as many Room Thermostats and 100% (But at the Company's option not more than 125%) as many Limit Controls as Primary Controls". (CX-1.)

VIII.

Statement of Fact, page 15, paragraph (b), lines 6-9:

"The Perfex Company began its controls business in 1935, starting from scratch, and has increased its position in the controls field until it now occupies the position of second in the sale of controls (R. 342; 349)."

In lieu of the above statement of fact, it is submitted that the Trial Examiner should have found substantially as follows:

"The Perfex Company began the sale of controls in 1935 or 1936 and its position in the business has increased until it is now considered to be second in volume in the industry (R. 342, 376-377). However, the Perfex Company, when it first began the production and sale of controls, was a producer of limit controls only and did not manufacture thermostats or primary controls (R. 344)."

IX.

Statement of Fact, page 15, paragraph (b), lines 10-14:

1281 "One of the reasons assigned for the growth of Perfex, as stated by a witness, is the fact that this Company endeavored to sell its controls to large, nationally known companies, and to approach their customers with the idea of putting the customer's name on their burners, instead of the manufacturer's name (R. 381)."

It is submitted that the aforesaid finding of fact is in accord with the evidence with the exception of the last six words thereof, which should be changed and extended as follows:

"accessories, instead of the accessory manufacturer's name. Perfex, therefore, took the burner manufacturer's name in such instances, and affixed that name to Perfex controls (R. 372, 381)."

X.

Statement of Fact, page 16, lines 13-22:

"Another competitor engaged in the manufacture of automatic controls which it sells to oil burner manufacturers is the Detroit Lubricator Company which began business about 1933 (Record 643); this company did not make and sell a complete line of controls until 1939 (Record 648); it did not develop its limit control until 1939, however, it made sales up to that time of its thermostat, its customers buying limit controls on the open market, and this Company purchased its primary controls from respondent 'M-H' (Record 649)."

It is submitted that the aforesaid finding should be eliminated from the report for the reason that evidence does not show the Detroit Lubricator Company to have been in competition with respondent in the production and sale of a complete line of controls to oil burner manufacturers in general (R. 53, 645, 648-49, 671). Automatic temperature controls, represented only 25 or 30% of Detroit Lubricator's total business (R. 715-716). It did not sell primary controls to anyone other than its parent company, the American Radiator Company (R. 1363). Furthermore, during the years 1939 through 1941, Detroit Lubricator did not enter into any contracts for the sale of controls with any oil burner manufacturers, and did not sell

any controls to any of the oil burner manufacturers named by Counsel for the Commission as having had con-
1282 tracts for the purchase of respondent's controls (R. 1359-60, 1363-64).

XI.

Statement of Fact, page 16, paragraph (c), lines 1 through 5:

"It is shown that all manufacturers of automatic temperature controls such as 'Perfex,' 'Mercoid,' 'Penn-Electric' and 'Detroit Lubricator' followed in the main, the same procedure and practices in the sale of thermostats, limit and primary controls to oil burner manufacturer-customers; * * *."

We think that the Detroit Lubricator Company should not have been included as a competitor for reasons heretofore stated on Page 5 of this report of exceptions, and that the foregoing finding is otherwise inconsistent with the evidence and should have been substantially as follows:

"It is shown that all manufacturers of automatic temperature controls, such as, 'Perfex,' 'Mercoid,' 'Penn-Electric' and the respondent, who were selling a complete line of controls to the oil burner manufacturing trade, followed the same general pattern in the sale of such controls (R. 222-223, 225-226, 228-229, 370, 1261, 1285, 1375, 1376, 1378, 1393, 2255)."

XII.

Statement of Fact, paragraph (c), page 16, lines 11 and 12:

"They all sold controls in sets and quoted varying price brackets (Record 225; 704; 1362-63; 2139-40)."

The Trial Examiner, we think, should have found instead of the statement quoted above, substantially as follows:

"and since 1936 they all sold, or endeavored to sell, their controls in sets of three units (R. 225, 370, 1376)."

XIII.

Statement of Fact, page 18, lines 2-4:

"During the time mentioned 50% of the manufacturers of oil burners in the United States had contracts or sales agreements with respondent 'M-H' * * *."

1283 In conformity with the evidence on the point the Trial Examiner should have inserted after the word "mentioned" in the above finding, the words "more than" (CX 1, page 5).

XIV.

Statements of Fact on page 20 incorporated by reference to corresponding paragraphs of Count I:

The above referred to Statements of Fact to which exception is taken at this point, have been the subject of exceptions previously set forth on pages 1 to 7 of this memorandum of exceptions, and are applicable here with equal force.

XV.

Statement of Fact, quotation at top, page 21:

"'The Producer agrees that at least ninety-five (95) percent of his Control requirements consisting of Thermostats, Primary Controls and Limit Devices, will be purchased from the Company' (CX 1, pp. 10-13)."

The foregoing quotation did not appear in respondent's contracts during the entire period from December '36 to 1941 inclusive, but was abandoned by respondent in January, 1937 as the Trial Examiner so found on page 14 of his report. It is submitted that either the aforementioned quotation should be deleted or the time period set forth at the bottom of page 20 of the Trial Examiner's report should be changed to read "December 1936 to January 1937" instead of "December, 1936, to 1941, inclusive" as it now appears.

XVI.

Statement of Fact, page 21, Lines 17 to 26:

"In the contract (CX 66) entered into by Timken with respondent 'M-H', such qualifying clause which was added to said contract by the officials of Timken was as follows:

'In view of the special price listed in this agreement it is understood that the Producer will standardize on, and use Company's products exclusively, except for field tests or when other makes are specified by dealers.' (CX-66, CX 11-A to C; CX 18-A, B; CX 19-A, B; Record 71 to 76; 96-99.)"

The record discloses that the qualifying language added to the Timken contract (CX 66) by Timken officials did not

embrace the entire quotation set forth above but be-
1284 gan with the word "except" and included the remainder of the last clause. That part of the quotation preceding the word "except" was placed by officials of respondent in the contract prior to its presentation to Timken for acceptance (R. 1646, 1649).

XVII.

Statement of Fact, page 22, first complete paragraph:

"The Record discloses that the contract made by the Cleveland Company with respondent, referred to above (CX 23-A, B), was cancelled by the respondent on January 15, 1937. The Record further shows that on January 28, 1937, all of respondent's contracts which contained the 95% clause, were cancelled by the respondent, and oil burner-manufacturer customers who had entered into such sales agreements or contracts with the respondent were released from the terms and requirements of said sales agreements; that excepting a short period in early January of 1937, the provisions of said sales agreements were not required by respondent to be fulfilled by those who had signed such agreements (CX-1, pp. 10-15; Record 109-111)."

It is submitted that the foregoing finding of fact is not in accord with the evidence, since the contracts were not cancelled but only the 95% clause, which was but one provision of the contracts, was cancelled in January, 1937. The Trial Examiner should have found therefore as follows:

"The record discloses that the 95% clause, included in respondent's contract with the Cleveland Company, (CX 23-A-B) was cancelled by the respondent on January 15, 1937. The record further shows that on January 28, 1937, all of respondent's contracts, which contained said 95% clause, were modified to the extent of the exclusion of such clause and oil burner manufacturer customers, who had entered into such contracts with respondent, were released from the requirements of said clause; and with the exception of that short period of time in January, 1937, respondent did not require its contract customers to adhere to the provisions of such clause (CX-1; R. 109-110)."

XVIII.

Statements of Fact, on page 22, incorporated by reference to corresponding paragraphs of Count I:

1285 Those findings of the Trial Examiner as to paragraphs I and II of Count I and to which exception has heretofore been specifically taken at pages 1 and 2 of this memorandum of exceptions, are subject to the same exceptions at this point and for the same reasons already shown.

XIX.

Reference to the record pages in the Trial Examiner's report at page 23 (paragraph 1) should include in addition to page 1486, the following pages: 1483 through 1485.

XX.

Statement of Fact, page 23, paragraph (2), lines 18 to 20:

"* * * Respondent's salesmen, in calling on oil burner manufacturers, prospective customers, stress sales to manufacturers. (Record 1487-1488.) * * *"

The above statement of fact does not, in our opinion, conform to the record and we feel that the finding should have been as follows; citing the record pages used by the Trial Examiner in support thereof:

"* * * Respondent, in the sale and distribution of its controls, stresses its sales to oil burner manufacturers and endeavors to sell such manufacturers in the first instance, because it tends to simplify the job of selling to a certain extent."

XXI.

Statement of Fact, page 24, paragraph (3), lines 3 and 4:

"* * *, which in turn allow a margin of profit to said manufacturers, * * *."

In our view, the foregoing finding is not a precise restatement of the record on the point and the Trial Examiner should have found in substance as follows:

"* * * which were designed to provide a margin of profit to such manufacturers who resold to wholesalers, * * * (R. 1575)."

XXII.

Statement of Fact, page 24, paragraph (3), line 6, the word "purchases" should be preceded by the word
1286 "estimated" for the reason that respondent extended its price to any given contract customer at the beginning of the contract period. Therefore, the quantity of controls which such customer ultimately purchased from respondent during the ensuing year could not be definitely ascertained until the contract period had actually expired (CX-1).

XXIII.

Statement of Fact, page 24, tabulation; the word "(sets)" appearing in said table should have been placed under the words "Annual Volume", which words should have been extended to relate to both columns 2 and 3. The price applicable to bracket 5 should have been "13.75" instead of "13.65" and furthermore, the Trial Examiner should have included in the table similar information relative to respondent's highest price bracket as follows:

"Discount 1-49 $20.25" (RX 186).

XXIV.

Statement of Fact, page 24, lines 24 and 25:

"Respondent's prices (above) are based on quantity of controls purchased by a customer in a year (Record 30) * * *."

We are opposed to this finding for the reason that because of the nature of respondent's contractural relationship with its customers, it could not have been known until the expiration of the contract year, exactly how many controls a given customer would purchase from respondent. Therefore, we submit that the Trial Examiner should have made the following statement in lieu of the aforementioned:

"Respondent's prices were usually based upon quantity of controls which each customer agreed to purchase during the ensuing contract year, such prices in some instances being based upon each customer's previous year's performance." (CX 75-A; R. 41, 925, 929, 1622-1623.)

XXV.

Statement of Fact, page 24, lines 35 to 38:

"* * *, and respondent allows to furnace manufacturers the same discount that it gives to furnace manufacturers who have burners manufactured for them (Record 204-205). Respondent, during the years from 1937 to 1941, had six price brackets (Record 1750)."

1287 We take the position that the above finding is somewhat inaccurate and misleading and that the Trial Examiner should have made the following finding in lieu thereof:

"* * *, and respondent allowed furnace manufacturers, who had burners manufactured for them, discounts equivalent to those granted to burner manufacturers (R. 204-205). Respondent, during the years 1937 to 1941 established price brackets varying in numbers from 6 to 8 (CX-1, 73, 76; R. 39-41, 212, 753, 924-926, 1086, 1159)."

XXVI.

Statement of Fact, page 25, lines 22-25:

"* * *. If a customer failed to purchase a sufficient quantity of controls to carry such a customer from one bracket to another, such a customer did not get the reduction in price (Record 1694) * * *."

We submit that the foregoing finding is not in accord with the evidence for the reason that many of respondent's customers received the benefit of a lower price, although they were not buying in quantities which corresponded to the minimum established for such lower price by respondent. (R. 2366-2387). The Trial Examiner's finding, therefore, merely states what respondent contends, but we submit that the record failed to prove such contention and therefore the entire statement of the Trial Examiner should be stricken from the report.

XXVII.

Statement of Fact, page 25, lines 36 to 39:

"* * *. The evidence shows that respondent places its oil burner manufacturer-customers in the particular quantity bracket to which the volume of automatic temperature controls actually purchased by them from respondent entitles them. (Record 1600-1602)."

It is submitted that the above statement is not consistent with the evidence on the point and that the Trial Examiner should have made the following finding:

"The evidence shows that respondent usually placed its oil burner manufacturer customers in the particular quantity bracket corresponding to the number of controls which such customers agreed to subsequently purchase from respondent. (CX 75-A; R. 1622-1623)."

XXVIII.

Statement of Fact, page 25, lines 40 to 46; page 26, lines 1 and 2:

"However, there was a significant difference between the pricing policies of respondent and its competitors in the sale of automatic temperature controls in brackets, in that respondent's competitors quoted on the basis of the oil burner manufacurers' over-all controls 'potential', or total controls purchased rather than on the basis of oil burner manufacturer's actual purchases from the particular controls manufacturer placing the contract or quoted the price (Record 1296-1298; 1363; 1415; 2136-2137)."

It is submitted that the above finding is not consistent with the evidence for the reason that many of respondent's contracts with its oil burner manufacturer customers included the words "seasons requirements" or "total requirements" or some other similar term connoting the customer's over-all potential; furthermore such language does not disclose any definite quantity of actual purchases and as pointed out in the exception last taken the actual purchases of any given customer were not known until the end of the contract year (CX-1). Also, the evidence as to practices of competitors of respondent is irrelevant and immaterial to the issues in this case and was received over the objection of counsel for the Commission. For these reasons we contend that the foregoing statement of the Trial Examiner should have been eliminated.

XXIX.

Statement of Fact, page 26, paragraph (b), lines 11 to 14:

"* * * Respondent, in making its sales agreements (contracts) with its oil burner manufacturer-customers has always taken into consideration the quantity of controls

each customer purchased in the previous year, * * *."

1289 The above finding implies that respondent consistently placed its contract customers in the quantity bracket corresponding to the purchases of such customers in previous years but the record discloses that such practice was not uniformly so (R. 2573-2574, 2577-2578, 2582, 2585-2588). We therefore take exception to the above finding and suggest that the Trial Examiner should have found as follows:

"Respondent considered, among other things, in entering into sales contracts with oil burner manufacturers for a particular year, the quantity of controls purchased by the customer during the previous year, * * * (CX-75-A)."

XXX.

Statement of Fact, page 27, line 2; the word "furnace" should be replaced by the word "burner" (R. 1600).

XXXI.

Statement of Fact, page 27, paragraph (a), lines 1 to 4:

"Respondent is the oldest and largest of the controls manufacturers, its principal competitors, Penn, Perfex, Mercoid and Detroit Lubricator entering the controls field at various dates during the 1930s."

We are in accord with the above finding insofar as it relates to the first three competitors named therein, but as to Detroit Lubricator the record does not show that this company was a competitor of the respondent in regards to all types of controls. Furthermore, the record shows that the Detroit Lubricator sold a large volume of its production of controls to its parent company, the American Radiator Company and to the etxent of such sales it was clearly not in competition with respondent. Detroit Lubricator Company also at times purchased primary controls from other manufacturers and did not offer for sale any primary controls to any other customer than its parent company (R. 51-53, 645, 1363). For these reasons we feel that the Trial Examiner should have excluded the Detroit Lubricator as a competitor of respondent.

1290 XXXII.

Statement of Fact, page 27, paragraph (a), lines 29 to 31; page 28, lines 1 to 6:

"Respondent's practice was to keep records year after year of its oil burner customers, and this knowledge is used in making up the sales agreements of its oil burner customers; also taking into consideration the quantity of controls each customer purchased in the previous year (Record 41; 1660; 1759; 2702-2703). From this information respondent classified each customer on a basis of the volume or quantity of controls purchased by said oil burner customer during the year (Record 2689)."

It is submitted that the above finding is not entirely supported by the evidence and that the Trial Examiner should have found in substance as follows:

"Respondent maintained records of its sales in previous years to its oil burner manufacturer customers and its policy with respect to its contracts with such customers was said to be in effect that respondent extended a contract for the quantity of controls purchased by the customer in the previous year. If a customer due to developments, circumstances, etc. desired to contract for a larger quantity of controls than his previous performance indicated then respondent required a bona fide order for 1/3 of the minimum quantity of controls specified in the contract to be shipped within a period of sixty days from the acceptance of such contract (CX-75-A)."

XXXIII.

Statement of Fact, page 28, paragraph (b) lines 1 to 24:

"(b) The Record discloses from a study made by respondent in 1941, which respondent gathered for its own information and the information of its sales force, that respondent, in a number of instances during the years prior to 1941, had lost the accounts of a number of oil burner manufacturers who had standardized on respondent's controls or given to respondent the larger part of their controls business and thereafter purchased sub-
1291 stantial quantities of competitive automatic temperature controls (Record 1654-1658; 2733). Among such former accounts of respondent, as shown by evidence, are

the following: Respondent 'M-H' lost 95% of the business of Braden Ever Ready to Mercoid; 80% of the Chalmers Oil Burner Company to Perfex; 40% of Easton Oil Company to Mercoid; 25% of National Airoil to Perfex; 10% of Pan-American to Mercoid; 25% of Sunstrand Engineering Company to Mercoid; 5% of Vortex to Penn-Electric; 20% of Gold Star to Perfex; 75% of Herco to Mercoid; 10% of Lynn Products to Perfex and a number of other customers of respondent appeared in the record amounting to 31 oil burner accounts (Record 1654 to 1658); the records of respondent pertaining to said 31 accounts lost by respondent to its competitors in the years prior to 1941 gave to said competitors, in full or in part, 53% of their business as stated by respondent's General Manager, according to the estimated figures compiled by respondent (Record 1658-1659).

We object to the above Statement of Facts since the study referred to was shown to have been made in the year 1943 and relating to business transactions occurring in the year 1941. There is nothing in the record other than the unsubstantiated statements of respondent's Sales Manager to support the estimated percentages of the quantity of business said to have been lost by respondent in each instance. In addition references to years prior to 1941 were not supported by any study but merely the testimony of respondent's sales manager. The entire statement should be eliminated as being merely a series of unsupported statements of respondent's sales manager to which objections were interposed. In our opinion this line of testimony represents nothing more than pure conjecture and is of no consequence to the real issues involved. There is nothing to show the volume of business of the particular customers referred to in the finding and in the circumstances we feel that the entire statement is wholly incompetent, irrelevant and immaterial and not the basis for a proper finding of fact.

1292 XXXIV.

Statement of Fact, page 28, lines 32, 38 and 40; the word "Automatic" should be "Oilomatic".

XXXV.

Statement of Fact, page 28, line 42; the reference to the record should be page "1787" instead of "1666".

XXXVI.

Statement of Fact, page 29, lines 7 to 11;

"* * *, and the Record shows that in 1941 and prior thereto, 126 oil burner manufacturers who at one time had standardized on respondent's controls were purchasing controls of competitors of respondent and at lower prices than respondent's controls were sold at (Record 1658; 2737; 2744)."

There is no sound basis in fact for the above statement and we submit that it should be completely eliminated. The apparent basis for the statement concerning the 126 oil burner manufacturers is the testimony of respondent's sales manager, who referred to such manufacturers as also using competitive equipment in addition to that of respondent. There was no indication as to the identity of such oil burner manufacturers, no reference to the volume of their purchases from either the respondent or its competitors, and no information pertaining to price (R. 1658).

XXXVII.

Statement of Fact, page 29, paragraph (c), lines 2 and 3:

"His places of business were in Newark, New Jersey, and Baltimore, Maryland."

It is submitted that the above-mentioned statement of fact is somewhat misleading and should be as follows:

"His place of business since in or about 1934 has been located at Newark, New Jersey and, for approximately 4 years prior to that time, at Baltimore, Maryland. (R. 851)."

1293 XXXVIII.

Statement of Fact, page 29, paragraph (c), lines 24 to 28:

"* * * however, it is shown that it was the cut of its oil burner price, and not the price paid for controls by 'Quiet Heet', that was the cause of the competitive situation referred to at that time (Record 1007; 1009; 1021; 1128-1129)."

We submit that the above finding is not in accord with the evidence, which in our view shows that the low prices extended to Quiet Heet Company by respondent had a

very definite effect upon the business of oil burner manufacturers who were competing with Quiet Heet and unable to obtain the low prices which were extended to Quiet Heet (R. 918-919, 921, 924-925, 1154-1155, 1166-1169). The said finding therefore should be eliminated from the Trial Examiner's report.

XXXIX.

Statement of Fact, bottom of page 29, top of page 30.

"Automatic temperature controls are only one item in an oil burner assembly amounting to approximately one-third of the cost of the oil burner (Record 1087); the manufacturing cost of oil burners is affected by the prices of other items entering into the manufacturing or assembling of oil burners, such as motors, transformers, pumps, and fans, the price of which items, varies according to quantity of such items purchased by oil burner manufacturers (Record 1618; 1619; 1865; 2013-2015)."

In our opinion the foregoing finding of the Trial Examiner does not accurately reflect the situation as disclosed by the record and we contend that the following statement of fact should be substituted in lieu thereof;

"A set of automatic temperature controls represent the largest single item of material cost (in some cases as much as 40% of the total material cost) among the various parts of a completed oil burner (R. 1617-1623, 1721-1725). Changes in the price of controls to oil burner manufacturers resulted in many instances in corresponding changes in the price of completed burners (CX-19-A-B, 26, 35-B-C, 72; R. 916, 1150, 1169, 1166-1169, 1232, 1241, 1661-1294 1665, 1704, 1782-1789, 1800-1801, 1828-1834, 1868-1869, 1953-1954, 1979, 2005, 2656, 2715, 2780)."

XL.

Statement of Fact, page 30, lines 4 to 9:

"The testimony of a number of oil burner manufacturers was to the effect that although they knew that 'Quiet Heet' enjoyed a lower price for its controls purchased from the respondent because of 'Quiet Heet's' volume purchases, that this did not affect their business (Record 1634-1636; 1719; 1871; 1965; 1981)."

We submit that the above finding of the Trial Examiner is incomplete and immaterial and does not accurately reflect the relevant and material testimony to the contrary.

Based upon testimony of competent witnesses he should have found as follows:

"Oil burner manufacturer customers of respondent testified to the effect that the question of price was important in the purchase of automatic temperature controls and that they had lost business to certain competitors included Quiet Heet, who received lower control prices from respondent, although the exact volume of such lost business could not be calculated (R. 918-919, 921, 927, 1154-1155, 1158-1159, 1166-1169, 1170-1180)."

XLI.

Statement of Fact, page 30, paragraph (d), lines 1 to 15:

"The cost accounting report prepared and submitted by Ernest & Ernest (CX-170; 186) shows that on the basis of the manufacturing cost of respondent's controls, sold at the various bracket prices, about 45% of respondent's controls business falls within the five brackets beginning with the discount bracket and extending through Bracket 3-A, and appear to be justified by said report, (Record 2798; 2568 to 2663; 2664 to 2787; 2169). The remaining 55% of respondent's business falling in the three higher brackets (4-4A-5), respondent does not claim cost justification (Record 2796). * * * In Bracket 3-A there are included manufacturing cost of $236,476.68, which is about 20% of the total business of respondent (RX 186)."

1295 We submit that the foregoing finding is not in accord with the evidence and the Trial Examiner should have rejected the study as being incompetent to prove justification on the basis of differences in cost of distribution for the reason that it was prepared several years after the transactions, to which it relates, had occurred. Respondent did not maintain any current analysis of distribution costs for the year 1941, and the measuring factors employed in determining and allocating costs necessarily were the result of unusual conjecture (R. 2305, 2339, 2410, 2445, 2468-2470). However, in the event cost study is allowed to stand, we feel that the Trial Examiner should have found in substance, as follows:

"Respondent's cost study shows that the price differentials applicable to its sales to customers within the four highest price brackets, representing about 25% of the total

volume of business, appears to have been justified on the basis of differences in distribution costs (RX 186; R. 2464-2465, 2796). This result however, depends upon respondent's adherence to the bracket prices applicable to the first four brackets which was not the case (R. 2366-2381). The remaining volume of respondent's business to which costs were allocated in the study, came within the four largest quantity brackets namely, 3-A, 4, 4-A, and 5. Respondent made no effort to allocate the cost differentials between and among brackets 4, 4-A, and 5, and therefore, does not contend that its price differentials, applicable to those brackets were justified by differences in cost of distribution (R. 2796). The result, from respondent's study, is that between 70% and 75% of the total volume of respondent's business included in the study cannot be justified by differences in cost (RX 186; R. 2464-2465, 2796)."

XLII.

Statement of Fact, page 30, last paragraph, lines 3 to 8.

1296 "* * * and gave a picture of the competitive situation in reference to each account, and respondent's actions in meeting each competitive situation as such developed, and it was shown that in each of said accounts the respondent's price had been always and consistently higher than any of its competitors (Record 2568-2663, 2664-2787)."

This finding by the Trial Examiner is not, in our opinion, in accord with evidence on the point. The testimony referred to was to the effect that respondent did not, in every instance, know the exact identity of its competition or the exact competitive price, but that its conclusion on this point was estimated upon many occasions and was the product of mere speculation. It is submitted, therefore, that the Trial Examiner should have found instead of the statement quoted above, substantially, as follows:

"* * * and gave a picture of the competitive situation in reference to a number of these accounts, and respondent's action in meeting such competitive situations. Respondent's prices to each of the said accounts, about which respondent had knowledge as to prices quoted by its competitors, were always higher than those of its competitors (R. 2568-2786). Relative to competitive prices, respondent in many instances, had no specific information at the time

it extended its prices to those accounts involved (R. 2621, 2668, 2676-2677, 2680-2681, 2745-2747, 2757-2758, 2763, 2765, 2768-2773, 2779-2780)."

XLIII.

Statement of Fact, page 30, last paragraph, lines 9-14:

"Of the 76 off-scale accounts mentioned, 22 were sold on a competitive basis, that is, the difference in respondent's prices and its competitors' prices in each case was based upon competition (Record 2665), respondent shifting its bracket prices in its higher brackets, (4-4A-5) to meet the lower prices of competitors. * * *"

The record discloses, in our opinion, that the aforesaid finding is not consistent with the evidence and that the Trial Examiner should have found, in substance, as follows:

1297 "Among the 76 off-scale accounts mentioned, it was claimed by respondent that 22 were given low prices as a result of competition (R. 2665-2667, 2687). Six of the 22 accounts were in respondent's price brackets 1 to 3A, 8 being in bracket 4, 1 in bracket 4A, and the remaining 7 accounts in bracket 5 (R. 2366, 2375, 2379-2380, 2383-2384, 2386-2392, 2665-2667). In many instances respondent did not know the competitive prices extended to these accounts and, in some cases, did not know exactly which competitor was involved (R. 498, 2573, 2575-2576, 2593-2595, 2606-2621, 2623-2651, 2653-2659, 2680-2684, 2704-2708, 2715, 2718-2720, 2747-2749, 2755-2756, 2779-2781)."

XLIV.

Statement of Fact, page 30, last 4 lines, page 31, lines 1 to 6:

"* * * It ~~often~~ happened that respondent had several customers located in the same locality, such a case being the Quiet Heet Company of Brooklyn, New York. Respondent gave this company a Bracket 1 price in 1940 because said company purchased 679 instruments; another customer in Brooklyn was also given a Bracket 1 price although said customer purchased only 187 instruments (Record 2688; 2592). Both of these accounts, it is shown had purchased the required number of controls under Bracket 1, * * *".

We are of opinion that the above statement does not

clearly represent the situation involved and that the Trial Examiner should have made the following finding:

"* * * It often happened that respondent had several customers located in the same city, for example the Quiet Heet Company and Seal-O-Strain Corporation, in Brooklyn, New York. Respondent gave each of these companies a bracket 1 price in 1941 although the former purchased only 96 instruments and the latter 109 instruments during that year (R. 2370-2371, 2375). Neither of these companies, therefore, purchased respondent's controls in 1941, in quantities sufficient to meet the minimum of bracket 1, and neither was required to pay any additional amount for failing to so meet the required minimum. The basis upon which respondent was said to have given a 1298 bracket 1 price was the 1940 purchases of these two companies, Quiet Heet taking 679 units and Seal-O-Strain buying 187 units (R. 2577-2578, 2592). Their 1940 purchases, therefore, were equivalent to the requirements of respondent's bracket 1 quantities, * * *".

XLV.

Statement of Fact, page 31, lines 9 to 22:

"It is shown that in the 22 competitive accounts referred to (RX 186), respondent extended better prices to such customers by placing said customers in higher price brackets (giving a lower price) than the quantity controls actually purchased by said customers during 1940 or 1941 justified. By lowering its prices to said 22 oil burner manufacturer-customers respondent attempted to meet the lower price competition offered by its competitors, but in no case does the Record show that respondent's price ever equalled the lower price paid by the competitor, and oil burner manufacturers were always able, if they desired, to purchase controls from respondent's competitors at lower prices than respondent's price (Record 2662-2765-2766)."

In our opinion the foregoing finding of fact is not entirely supported by the evidence and the Trial Examiner should have found as follows:

"The record shows that for the year 1941 the 22 accounts referred to were extended lower prices by respondent by being placed in brackets requiring the purchase of larger quantities of controls than the quantities actually

purchased by these accounts, according to quantity standards established by respondent. Respondent, in lowering its prices to these 22 customers was said to have done so in order to attempt to meet lower prices offered by its competitors, but as previously stated, respondent did not know the prices which most of these accounts had been given by its competitors until after respondent had given its firm price to the same accounts (R. 2621, 2668, 2676-2677, 2680-2681, 2745-2747, 2757-2758, 2763, 2765, 2768-2773, 2779-2780).

1299 XLVI.

Statement of Fact, page 31, lines 25 to 27:

"* * * in other cases, respondent may not have known which competitor was quoting or the competitive price offered (Record 2668; 2670; 2680; 2681; 2687; 2743)".

We are of opinion that the nature of the evidence on this point requires a more absolute statement and that the Trial Examiner should have found, in substance, as follows:

"* * * in other cases, respondent did not know, at the time it agreed as to price, the exact identity of its competitors or the price offered by such competitors (R. 2573, 2575-2576, 2593, 2595, 2608-2610, 2612-2616, 2619, 2621, 2627-2628, 2634, 2635, 2638, 2640, 2649, 2668, 2670)."

XLVII.

Statement of Fact, page 31, lines 30 to 34:

"* * * and that in each of the cases where respondent shifted its bracket prices, it was to approach the lower price made by one or more of its competitors (Record 2765; 2568; 2663; 2664 to 2787)."

We submit that the above statement of the Trial Examiner is not supported by the evidence, and that he should have found in substance as follows:

"* * * and respondent's sales manager testified that in each of the 22 instances referred to above in which respondent placed such customers in lower price brackets, it did so for the purpose of approaching still lower prices made to such customers by one or more of respondent's competitors, and that these 22 accounts were the only one where off-scale prices were made to meet competition (R. 2687, 2765-2766). In respect of at least 54 other accounts

respondent granted lower prices than those applicable to its various brackets, because of reasons other than the approachment of lower competitive prices (R. 2569, 2661, 2766)."

XLVIII.

Conclusions of Fact and Law, page 33, lines 33 to 35:

"* * * and for safety, to mix controls of different manufacturers in the same installation is not a good practice."

1300 We submit that the above conclusion of the Trial Examiner is contrary to the evidence for reasons heretofore referred to on page 2 of this memorandum of Exceptions.

XLIX.

Statement of Facts, page 34, lines 5 to 12:

"In all of respondent's said agreements, the oil burner manufacturer-customer was required to buy in sets, taking 90% as many room thermostats, and 100% as many limit controls as primary controls, and it was agreed that it was unsatisfactory, and often dangerous, to mix controls made by different manufacturers, and that respondent would not assure satisfaction or assume any service responsibility as to controls when used with other makes."

The record discloses that all agreements, to which the aforesaid finding refers, did not include a provision to the effect that the mixing of controls of different makes was unsatisfactory and dangerous (CX 1) and for this reason we contend that the foregoing statement of the Trial Examiner should be modified to that extent and that after the word "agreements" in the above statement the following phrase should be inserted:

"for the year 1939 and subsequent thereto,"

L.

Statement of Fact, page 34, line 13:

"On January 23, 1937, the respondent eliminated the 95% clause * * *"

The date on which respondent eliminated the 95% clause from its contracts was "January 28" instead of "January 23" (CX 1).

LI.

Statement of Fact, page 34, lines 15 to 17:

"The 95% provision in respondent's 1936 sales agreement never became operative and no customer was required to comply therewith."

1301 The above statement of the Trial Examiner we feel should be eliminated in its entirety for reasons heretofore stated at page 3 of this memorandum of Exceptions.

LII.

Statement of Fact, page 34, paragraph (a), lines 1 to 4:

"It is shown that respondent is the owner of the Freeman and Cross primary controls and thermostats involved and referred to as charged in Paragraphs 5 and 6 of the complaint in this case."

The aforesaid finding of fact is not in accord with the evidence in the case and we submit that the Trial Examiner should have found in substance as follows:

"It is shown that respondent is the owner of the Freeman system patent covering a furnace control comprising a limit control, a fan control and a thermostat, none of which units is patented. Respondent was the holder of an exclusive license to make, use and sell and to sub-license others to make, use and sell the Cross combination patent, covering a domestic heating system and composed of three main elements, a motor driven stoker, a room thermostat, and combustion stoker switch (CX 52, 53)."

LIII.

Statement of Fact, page 37, lines 2 to 8:

"The Record discloses that respondent's bracket prices as represented by the first five brackets from the discount bracket to and including Bracket 3-A were found to be justified by a cost accounting survey. In respondent's higher brackets (4, 4 A-5) respondent has lowered its prices in making sales of its controls to 22 of its oil burner customers, to meet the lower price competition of competitors; * * *."

The aforementioned conclusion of the Trial Examiner is not in our opinion consistent with the evidence and we feel that he should have concluded substantially, as follows:

"Respondent's cost study (RX 186) discloses that for the first 4 brackets beginning with the discount bracket to and including bracket 3 the differences in the cost of
1302 distribution exceeded the differences in prices applicable to such brackets and therefore appeared to be justified on the basis of differences in cost."

In addition to the foregoing exceptions we are of opinion that the record supports further findings not set forth in the Trial Examiner's report. Such additional findings are as follows:

LIV.

Page 24, paragraph (3), between lines 6 and 7, insert the following:

"The evidence discloses a number of oil burner manufacturer customers of respondent were charged prices for its controls which afforded little, if any, margin of profit on the resale of such controls, in competition with other customers of respondent who were granted lower prices (CX 206-A; R. 925-927, 1080, 1095, 1159, 1166-1167, 1174, 1178-1179)."

LV.

Page 25, line 22; the following clause should have been added to the sentence ending with the word "controls": "until such customer reached the lowest price bracket after which any increase in purchases did not affect the price (CX-1)."

LVI

Page 26, paragraph (b), line 30, the following statement should have been inserted preceding the word "It":

"Respondent did not increase its prices, however, in cases where a customer failed to purchase the minimum quantity of controls established for the bracket to which his price applied (R. 2569-2570)."

1303 LVII.

Page 27, paragraph (a), line 19; the word "manufacturing" should have been inserted before the word "customers" so as to read "oil burner manufacturing customers."

LVIII.

Page 30, last paragraph, line 14, before word "Respondent's" insert the following:

"It is further shown that of the remaining 54 off-scale accounts approximately 48 were granted prices for 1941 which were less than the price applicable to the quantity actually purchased in each instance during that year (R. 2366-2388, 2660-2661). Respondent's prices to these 48 customers were not—extended in order to meet competitive prices and were not so claimed (R. 2568-2569). Four of these 48 customers were extended prices lower than those established for the quantities actually purchased merely because such customers were supplying oil burners without controls to furnace manufacturers who bought controls for such incomplete burners direct from respondent. Such instances previously referred to as "dual transactions," operated so as to enable the burner manufacturer to get a price from respondent based upon the combined quantities of controls purchased by him and by those furnace manufacturers who obtained their burners without controls from the said burner manufacturer (R. 2561, 2574, 2610-2611, 2616-2617, 2649-2651, 2660-2662). Furthermore, 40 of the 48 aforementioned accounts were given contracts for 1941 purchases at prices said to have been extended on the basis of past performances, or future prospects, or both (R. 2661, 2569). As to past performances in some of these 40 instances, respondent reached a simple average between the quantity of controls purchased during the years 1939 and 1940 and classified the customer in the bracket to which his average purchases conformed (R. 2573-2574, 2588, 2594-2597, 2611, 2615, 2700-2703). Others of these 40 accounts did not buy in sufficient quantities either in 1940, or by averaging the 1939 and 1940 purchases, but were given a lower price, nevertheless due to anticipated business (R. 2577-2578, 2587-2589, 2601-2603). For example, the
1304 Milwaukee Oil Burner Corporation was given a bracket #1 price for 1941 although its 1940 purchases had not met the quantity required by respondent for that established price. The lower price to this customer was given on the grounds that its 1940 purchases had been within 10% of the required minimum quantity and furthermore because of the better business outlook at the beginning of 1941 (R. 2577).

"Another of these customers Swirling Heat, Incorporated, was given a bracket #2 price in 1940 but only purchased 122 instruments. There is nothing in the record to show the extent of this company's 1939 purchases from respondent and despite the fact that the quantity purchased in 1940 did not meet the required minimum established for bracket 1, respondent nevertheless gave this customer a bracket #1 price for 1941 and with no explanation as to the reason therefor (R. 2580-2581).

"The Columbia Boiler Company, also among the 40 accounts previously referred to, signed a bracket 1 contract with respondent late in August 1941 and purchased 121 units through the end of the year, insufficient to meet the quantity requirements for the No. 1 price according to respondent's standards. There is no evidence to show that that customer bought any controls from respondent prior to that time. The reason given in justification of the price to this company could not, by its very nature, have been a factor in the granting of this price, for it was merely that had this customer been purchasing throughout the whole year it would have equalled or exceeded the bracket quantity (R. 2582-2584).

"Another of the 40 accounts, Kienzle & Merrick, bought 124 of respondent's controls during the last 8 months of 1940 although being given a bracket #1 price. This account was given a bracket #1 price for 1941 also, on the grounds that had it purchased during the entire 12 months of 1940 at the same quantity rate per month as it actually had purchased during the last 8 months of that year, it would have exceeded the quantity required by respondent for its bracket 1 price (R. 2585-2587).

"In at least 3 other instances among the 40 accounts, respondent granted prices lower than those established for the quantities actually purchased, for the reason that respondent believed such customers would acquire sufficient business during 1941 to reach the minimum quantity required for such low prices (R. 2587-2589, 2601-2603)."

1305 LIX.

Page 31, line 8, add following:

"Another of respondent's customers located in Brooklyn, the Atlas Manufacturing Company, was given a bracket 3 price for 1941 despite the fact that its 1940 purchases from respondent amounted to only 1258 units or slightly

above the minimum quantity required for bracket 2 (R. 2690; CX-1). According to respondent this bracket 3 price was extended in anticipation of an increase in Atlas' business for 1941 (R. 2690). However, this company actually purchased only 819 units in 1941 and according to respondent's price brackets should have paid $17.35 per set instead of $15.90 per set (R. 2712-2713; CX-1). The record contains no evidence tending to show that respondent gave Atlas the lower price in order to meet a competitive price, and furthermore, there was nothing to show that Atlas was buying any competitive equipment (R. 2601-2603, 2690, 2712-2713)."

FINDINGS AS TO THE FACTS AND CONCLUSION.

Pursuant to the provisions of the Federal Trade Commission Act, and pursuant to the provisions of an Act of Congress entitled "An Act to supplement existing laws against unlawful restraints and monopolies, and for other

purposes," approved October 15, 1914 (Clayton Act), as amended by an Act of Congress approved June 19, 1936 (Robinson-Patman Act), and by virtue of the authority vested in the Federal Trade Commission by the aforesaid Acts, the Federal Trade Commission on February 23, 1943, issued and subsequently served its complaint in this proceeding upon the respondent, Minneapolis-Honeywell Regulator Company, charging it with the use of unfair methods of competition in commerce in violation of the provisions of the Federal Trade Commission Act and also charging it with violation of the provisions of subsection (a) of Section 2 and Section 3 of said Act of Congress entitled "An Act to supplement existing laws against unlawful restraints and monopolies, and for other purposes." After the issuance of said complaint and the filing of respondent's answer thereto, testimony and other evidence in support of and in opposition to the allegations of said complaint were introduced before a trial examiner of the Commission theretofore duly designated by it, and said
1307 testimony and other evidence were duly recorded and filed in the office of the Commission. Thereafter, this proceeding regularly came on for final hearing before the Commission on said complaint and answer thereto, testimony and other evidence, report of the trial examiner upon the evidence and exceptions filed thereto, briefs filed in support of and in opposition to the complaint, and oral argument of counsel; and the Commission, having duly considered the matter and being now fully advised in the premises, makes this its findings as to the facts and its conclusion drawn therefrom:

Findings as to the Facts.

Paragraph One: Respondent, Minneapolis-Honeywell Regulator Company, is a corporation organized, existing, and doing business under and by virtue of the laws of the State of Delaware, with its general office and principal place of business at 2747 Fourth Avenue, South, in the City of Minneapolis, State of Minnesota. Respondent is now, and for several years last past has been, engaged in the manufacture of automatic controls for oil, gas, and coal heating plants and certain industrial operations and in the sale of automatic temperature controls for oil burners, principally to oil-burner manufacturers and also to wholesalers and dealers in oil burners and automatic tem-

perature controls located in the various states of the United States, the Territories thereof, and in the District of Columbia. Respondent causes its automatic temperature controls, when sold, to be transported from the places of manufacture in the States of Minnesota and Indiana and through distribution points in certain other states of the United States to the purchasers thereof located in states other than the State of Minnesota and Indiana or other points of origin of said shipments. Respondent maintains, and during all times mentioned herein has maintained, a course of trade in commerce in said products between and among the various states of the United States, the Territories thereof, and in the District of Columbia.

Paragraph Two: In the course and conduct of its aforesaid business, the respondent has been, and is now, engaged in active and substantial competition with other manufacturers and sellers engaged in the sale and distribution of automatic temperature controls in commerce between and among the various states of the United States, the Territories thereof, and in the District of Columbia.

Paragraph Three: The respondent, Minneapolis-
1308 Honeywell Regulator Company, was organized in 1927 as result of the combination of the Minneapolis Heat Regulator Company of Minneapolis and the Honeywell Heating Specialties Company of Wabash, Indiana. Since that time, said respondent has manufactured and sold the greater part of the automatic temperature controls used in the United States. The total volume of sales of said products by the respondent annually during the years 1939, 1940, and 1941 constituted approximately sixty percent of the total number of automatic temperature controls sold annually in the United States to manufacturers of oil burners and to wholesalers, contractors, and dealers in oil burners and automatic temperature controls.

Respondent, in the sale of its automatic temperature controls during the years 1936 to 1941, inclusive, entered into annual contracts or agreements with manufacturers of oil burners for the purchase of sets or units of automatic temperature controls. The number of manufacturers of oil burners having such contracts with said respondent during said years constituted more than fifty percent of all the manufacturers of oil burners within the United States.

Paragraph Four: "Automatic temperature controls" as the term is used in this proceeding means automatic temperature controls for domestic oil burners of the gun and

rotary types. The automatic temperature controls used on domestic oil burners are usually, but not necessarily, sold in sets of three units each, comprising a room thermostat, a limit control, and a primary control. Some manufacturers of domestic oil burners also use an extra limit control, referred to as a "fan control," and many manufacturers, particularly those who also produce furnaces, use several thermostats and primary controls as zone controls for the heating of large spaces.

The primary control, sometimes referred to as a "stack switch," "Combustion control," "master control," or "safety control," is an essential element in every oil-burner installation of the gun or rotary type. Respondent owns and controls many of the existing patents relating to primary controls. There are many thermostats and limit controls being manufactured and sold by competitors of respondent which could be, and are, satisfactorily and safely used interchangeably with thermostats and limit controls of the respondent. The primary control sold by the respondent is sold under the trade name of "Protec-
1309 torelay." The limit controls of the respondent are known as the "Airstat" for warm-air heating plants, "Aquastat" for hot-water heating plants, and "Pressuretrol" or "Vaporstat" for steam and vapor heating plants.

Paragraph Five: The respondent has developed and established a definite public acceptance for its automatic temperature controls through and by use of extensive advertising of its controls and since the formation of the respondent corporation in 1927, through 1941, respondent has spent on national advertising the sum of $3,948,000. As a result of such advertising there has been developed a large customer demand for, and public acceptance of, respondent's line of automatic temperature controls, with the result that the respondent has been able at all times to sell its automatic temperature controls at prices higher than those charged by its competitors. In many instances manufacturers of oil burners have charged from $2.50 to $5 more for such burners equipped with respondent's automatic controls than for the same burners equipped with controls of respondent's competitors.

Paragraph Six: The principal competitors of the respondent are the Penn-Electric Switch Company of Goshen, Indiana, Mercoid Corporation of Chicago, Illinois, and the Perfex Corporation of Milwaukee, Wisconsin, all of whom manufacture and sell the three types of temperature con-

trols, usually in sets. In addition, there are other competitors of the respondent who manufacture controls other than the primary control. All of said competitors of respondent manufacture controls for use on oil burners, some of which controls made by each are comparable to controls made by respondent and other companies.

I.

Paragraph Seven: During the years from 1936 to 1941, the respondent, in the course of its said business, entered or attempted to enter into written agreements with all of its customers manufacturing domestic oil burners to purchase controls from respondent, such controls to be purchased in sets consisting of a thermostat, a limit control, and a primary control at a combination price per set. It was customary for the respondent to prepare these agreements on a calendar-year basis. The agreements were usually prepared and submitted in the month of Decem-
1310 ber for the following year. These agreements were prepared either by the home office at Minneapolis or by one of its several branch offices, subject to the approval of the home office. Contracts entered into between the respondent and its customers for the years 1936 and 1937 contained, among other things, the following provisions:

"The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract ..... sets of the Company's automatic temperature controls, each set consisting of one Thermostat, and one Limit Control, and one Primary Control. It is specifically agreed that other control equipment is not to be considered as a part of a set within the terms of this contract. Because the Company's costs are figured to cover a complete set of controls, and the following breakdown prices are purely for invoicing purposes, it is agreed that the Purchaser's yearly purchases will consist of at least 90% as many Room Thermostats and 100% (but at the Company's option not more than 125%) as many Limit Controls as Primary Controls."

In one instance, in a contract for the year 1936, the following additional agreement was inserted:

"In view of the special prices listed in this agreement, it is understood that the Purchaser will standardize on and use the Company's products exclusively, except for field test or when other makes are specified by dealer."

In seven of its contracts or agreements for the year 1937, the respondent inserted in the blank space between the word "contract" and "sets," the words "season requirements," "estimated requirements," or a similar phrase. In addition, in 79 of the 165 contracts executed for the year 1937, the respondent inserted the additional proviso:

"The Purchaser agrees that at least ninety-five (95) percent of his control requirements, consisting of Thermostats, Primary Controls and Limiting Devices, will be purchased from the Company."

1311 The respondent, on January 28, 1937, sent a letter to all the customers with whom contracts had been made containing the above provision, notifying them that said provision should be eliminated and stricken from the contract, and as a result this provision never became operative during said year.

In the year 1938 the respondent entered into agreements with 131 oil-burner manufacturer-customers which included the following provision:

"The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract ..... sets of the Company's automatic temperature controls, each set consisting of one Thermostat, and one Limit Control, and one Primary Control. It is specifically agreed that other control equipment is not to be considered as a part of a set within the terms of this contract. Because the Company's costs are figured to cover a complete set of controls, and the following breakdown prices are purely for invoicing purposes, it is agreed that the Purchaser's yearly purchases will consist of at least 90% as many Room Thermostats and 100% (but at the Company's option not more than 125%) as many Limit Controls as Primary Controls."

In the blank space between the words "contract" and "sets" the number of sets or estimated number of sets was usually inserted but in the case of contracts with twelve of its customers the words "season requirements," "estimated requirements," or a similar phrase was inserted. Subsequent to the year 1938 the phrases "season requirements," "estimated requirements," or similar phrases were omitted from said contracts.

In the year 1939 the respondent entered into agreements with 132 of its oil-burner manufacturer-customers which included the following proviso:

"The Company agrees to sell, and the Purchaser agrees

to purchase, subject to the reservations hereinafter named, during the life of this contract ..... sets or more of the Company's automatic temperature controls. Be-
1312 cause the Company's thermostats and primary controls are specifically designed to operate one with the other, it is unsatisfactory and often dangerous to mix controls made by different manufacturers in the same installation, and to avoid any such difficulty and divided service responsibility, it is agreed that each set shall consist of but one Thermostat, one Primary Control, and one Limit Control, and that the Purchaser will buy at least 90% as many Room Thermostats and 100% as many Limit Controls as Primary Controls at the following prices."

In the year 1940 the respondent entered into agreements with 132 of its oil-burner manufacturer-customers which included the following proviso:

"The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this contract ..... sets or more of the Company's automatic temperature controls. Because the Company's thermostats and primary controls are specifically designed to operate one with the other, it is unsatisfactory and often dangerous to mix controls made by different manufacturers in the same installation, and the Company does not give any assurance of satisfactory operation nor assume any service responsibility if its controls are used with other makes. It is, therefore, further agreed that each set shall consist of but one Thermostat, one Primary Control, and one Limit Control, and that the Purchaser will buy at least 90% as many Room Thermostats and 100% as many Limit Controls as Primary Controls at the following prices."

In the year 1941 respondent entered into agreements with 122 of its oil-burner manufacturer-customers which included the following provision:

"The Company agrees to sell, and the Purchaser agrees to purchase, subject to the reservations hereinafter named, during the life of this agreement ..... sets or more of the Company's automatic temperature controls. Because the Company's thermostats and primary controls are specifi-
cally designed to operate one with the other, it is
1313 unsatisfactory and often dangerous to mix controls made by different manufacturers in the same installation, and the Company does not give any assurance of sat-

isfactory operation or assume any service responsibility if its controls are used with other makes. It is, therefore, further agreed that each set shall consist of but one Thermostat, one Primary Control, and one Limit Control, and that the Purchaser will buy at least 90% as many Room Thermostats and 100% as many Limit Controls as Primary Controls at the following prices."

Paragraph Eight: The Commission finds that the various provisions of respondent's contracts, as hereinabove described, which require the purchaser to purchase at least 90 percent as many room thermostats and 100 percent as many limit controls as primary controls have had the tendency to induce a substantial number of manufacturers of domestic oil burners to purchase from respondent all or substantially all of their requirements of thermostats and limit controls used with respondent's primary controls, and competitors of respondent have thereby been prevented from selling thermostats and limit controls in substantial quantities to such customers purchasing primary controls from respondent.

Paragraph Nine: The Commission further finds that by reason of the dominant position of the respondent in the sale and distribution of automatic temperature controls, the use by the respondent of the acts and practices as herein described has substantially injured competition in the sale of automatic temperature controls, has unduly and unreasonably hindered, obstructed, restrained, and lessened competition in the manufacture and sale of said automatic temperature controls, and has a tendency to deprive purchasers and the general public of the benefit of free and active competition in the manufacture and sale of automatic temperature controls.

Paragraph Ten: The Commission further finds that the contracts made by the respondent with various oil-burner manufacturers which required that such manufacturers purchase at least 90 percent as many room thermostats and 100 percent as many limit controls as primary controls constituted, in effect, contracts for the sale of goods on the condition, and with the agreement and
1314 understanding, that such oil-burner manufacturers should not use or deal in automatic temperature controls of competitors of the respondent.

Since the primary control is an essential element in every domestic oil-burner installation, respondent employed the method of using such control as a gauge for determin-

ing the number of sets of controls a customer would agree to purchase. Such provisions in respondent's contracts with its oil-burner manufacturer-customers operated to preclude the sale of limit controls by competitors of respondent to such manufacturers under contract with respondent at least to the extent of the number of respondent's primary controls purchased by these manufacturers. These provisions also confined the sale of thermostats by competitors of respondent to respondent's contract customers to quantities not exceeding one-tenth of the quantity of primary controls which such customers purchased from respondent.

By reason of the dominant position held by respondent in the sale and distribution of automatic temperature controls and the number of contracts negotiated by the respondent, the effects of such contracts were substantially to lessen competition and tend to create a monopoly in the respondent in automatic temperature controls.

II.

Paragraph Eleven: The respondent is the owner of the Freeman Patent No. 1,813,732, which covers systems of hot-air furnace control in which, upon rise in the temperature of a furnace or like heating device, the source of heat is reduced or shut down but the blower or other circulating means is permitted to operate, and in which, upon fall of such temperature, the blower or other circulating device is stopped but the source of heat is permitted to heat the furnace or other heating device. In the course and conduct of its business for several years prior to 1943, the respondent granted, under threat of infringement suit is necessary, nonexclusive licenses to cer-
1315 tain of its competitors, namely, Perfex Corporation, Penn-Electric Switch Corporation, White-Rodgers Electric Company, Cook Electric Company, and Bendix Aviation Corporation, under said Freeman Patent to make, use, and sell a "combination furnace control," which is defined as a thermostatic switch specially designed for carrying out the system of the Freeman Patent to control the fan and limit circuits. The use of the "combination furnace control" carries with it a license for one installation employing the sequence of operation of the Freeman Patent. Such licensing agreements provided that a royalty of twenty-five cents be paid on each combination furnace

control sold by the licensee and also required the licensee to maintain certain specified minimum selling prices for the combination furnace controls sold by them. Such licenses were granted by the respondent on the express condition that the licensee would sell "combination furnace controls" only at prices and on terms not more favorable to the customer than those fixed by the respondent for its own products embodying the invention covered by said license agreement.

Paragraph Twelve: During the times herein mentioned, the respondent was also the exclusive licensee of the Cross Patent No. 1,758,146. This was a combination or system patent composed of three main elements—(1) a motor-driven stoker, (2) a room thermostat, and (3) a combustion stoker switch. The respondent did not manufacture or install heating systems under the Cross combination patent. Respondent did, however, manufacture and sell the controls necessary for installations under this patent, including a combination stoker switch, which is an unpatented article. In making sales of the combination stoker switch, the respondent granted a license to the purchaser of such stoker switch to install the Cross system of furnace control. In this manner the respondent has precluded the use of combustion stoker switches as an element in the assembly covered by the Cross Patent unless such switches were manufactured by the respondent and purchased from it or from its sub-licensees.

Paragraph Thirteen: Two proceedings, one involving the Cross Patent (*Mercoid Corp.* v. *Midcontinent Co., et al.*, 320 U. S. 661) and the second involving the Freeman Patent (*Mercoid Corp.* v. *Minneapolis-Honeywell Regulator Co.*, 320 U. S. 680), came before the Supreme Court of the United States, and that Court in January 1944 held in both cases that the practices of the respondent con-
1316 stituted an extension of the patents to embrace unpatented devices and that the competition which was sought to be controlled was not competition in the sale of the patented combinations but merely competition in the sale of unpatented combustion stoker switches and "combination furnace controls." The conduct of the respondent under said patents was therefore measured in the light of the standards imposed by the anti-trust laws and the Court held that respondent may not obtain from any court of equity any decree which directly or indirectly helps to

subvert the public policy which underlies the grant of its patents.

Paragraph Fourteen: The Commission finds that the acts and practices of the respondent in connection with its attempt to require users of the furnace control system under the Cross Patent to purchase automatic stoker switches for use in said system only from the respondent and in connection with the attempt to exclude competitors from supplying "combination furnace controls" for use in systems covered by the Freeman Patent unless such competitors hold a sublicense from the respondent, pay the respondent a royalty on each "combination furnace control" sold, and maintain prices for such controls established by the respondent, all have a tendency and capacity to restrain, restrict, and lessen competition in the manufacture and sale of controls in heating systems employing the Cross or Freeman combination of controls.

III.

Paragraph Fifteen: The respondent recognized three channels of trade in distribution and sale of its automatic temperature controls—(a) oil-burner manufacturers, who ordinarily sell their products, including the accompanying controls, as original equipment therewith to wholesalers; (b) wholesalers or jobbers, who ordinarily sell both complete heating units and also separate automatic temperature controls to dealers; and (c) dealers, who are retailers selling to the ultimate user.

Respondent published list prices for its automatic temperature controls with discounts or net prices regularly allowed to oil-burner manufacturers, wholesalers, or jobbers and to dealers. Respondent's prices to dealers and to wholesalers or jobbers varied from 25 percent off list price to 43.75 percent (25 percent and 25 percent) off list price, and varied with the trade channels in which the pur-
1317 chasers are engaged. The sales of controls by the respondent to wholesalers and dealers have generally been for resale rather than as original equipment on any domestic oil burners they may resell. Such controls were ordinarily sold by wholesalers and dealers for repair, replacement, or auxiliary equipment beyond that furnished by the original oil-burner manufacturer as part of the original equipment.

Paragraph Sixteen: In addition to the acts and prac-

tices hereinabove described, the respondent, in the course and conduct of its business since June 19, 1936, in connection with the sale and distribution of its automatic temperature controls, has discriminated in price between different purchasers buying such controls of like grade and quality by selling its controls to some of such purchasers at lower prices than it sells its controls of like grade and quality to other of its customers who are competitively engaged with the former in the sale of such controls within the United States.

An example of the discriminations in price made by the respondent is the various discounts allowed to oil-burner manufacturers, who purchase the great majority of automatic temperature controls sold by the respondent. Such oil-burner manufacturers were engaged in competition with each other in the sale of oil burners to wholesalers, dealers, and other users of oil burners.

The respondent has sold its said automatic temperature controls, particularly thermostats, limit controls, and primary controls, in sets of three, comprising one each of said controls. The respondent did not recognize as an oil-burner manufacturer any manufacturers who did not purchase a minimum of 50 sets of controls, or 150 units, annually. However, to such oil-burner manufacturers who had contracts with the respondent, the respondent allowed its maximum discount of 25 percent and 25 percent off list price. Such oil-burner manufacturers were generally designated as "discount customers."

The price per set of controls to oil-burner manufacturers who purchased in excess of 50 sets annually was determined by the annual volume of sets which such oil-burner manufacturers purchased or agreed to purchase. For this purpose the respondent established a series of price brackets based upon volume. Each bracket covered 1318 an annual volume and determined the price per set for the controls purchased by the customer in the particular volume bracket. The volume included in each bracket and the price per bracket varied from year to year. Respondent's several manufacturer quantity brackets determining its net prices for automatic temperature controls sold to the manufacturers of oil burners in the years 1937, 1938, 1939, 1940, and 1941, together with a discount equivalent to the lower prices to such manufacturers purchasing in larger quantities, are set forth in the following table:

MINNEAPOLIS-HONEYWELL REGULATOR COMPANY

STATEMENT SHOWING ANNUAL VOLUME AND PRICE BRACKETS FOR SETS[1] AND DISCOUNT EQUIVALENT OFF HIGHEST NET PRICES TO MANUFACTURERS FOR EACH YEAR—1937 TO 1941, INCLUSIVE.

Bracket Number	Annual Volume (Sets)[1]	Net Price Scale[2]	Discount Equivalent Off Highest Net Price to Manufacturers of $23.85
	1937		
1	50 - 99	$23.85	—
2	100 - 349	22.60	5.24%
3	350 - 3,999	21.30	10.69%
3A	— —	—	—
4	4,000 - 7,499	19.85	16.77%
4A	— —	—	—
5	7,500 - 14,999	17.85	25.16%
6	15,000 - up	16.55	30.61%
	1938		
1	50 - 749	$21.05	—
2	750 - 2,999	19.35	8.08%
3	3,000 - 7,499	18.35	12.83%
3A	— —	—	—
4	7,500 - 14,999	17.25	18.05%
4A	— —	—	—
5	15,000 - up	16.25	22.80%
6	15,000 - up[3]	14.90	29.22%

1. Volumes shown hereon are for "Sets" only and are not for separate "Units." Respondent's automatic temperature controls in all five years were priced on a unit basis irrespective of whether purchased by units or by sets, and the several manufacturers' price brackets were similar for those contracting to purchase sets and those contracting to purchase units, the minimum number of units necessary to reach a particular bracket being three times the minimum number of sets necessary to reach that bracket. For example, Bracket 1 prices applied to a customer contracting to purchase either 50 sets or 150 units.

2. The prices set forth above are in each case the sum of the respective net prices in the particular year of a primary control, limit control, and thermostat making up a representative set. For customers receiving the discount of 25% and 25%, the prices of the same sets were as follows: 1939—$20.82; 1940—$20.82; 1941—$20.25. Customers in this class received during 1937 a discount of 40-5%, making a net price of $25.65, and during 1938 a discount of 45%, making a net price of $27.23.

3. A special concession in price was offered to 4 customers under condition that they place order for 10,000 sets prior to September 1, 1938.

1319

Bracket Number	Annual Volume (Sets)[1]	Net Price Scale[2]	Discount Equivalent Off Highest Net Price to Manufacturers of $18.10
	1939		
1	50 - 349	$18.10	—
2	350 - 999	17.25	4.70%
3	1,000 - 4,999	16.65	8.01%

6	— —	—	—

1320 As indicated by the foregoing table, respondent discriminated in price in favor of customers buying in larger quantities as against those customers buying in smaller quantities. A set of automatic temperature controls represents the largest single item of cost (in some cases approximately 40 percent of total material cost) among the various parts of a finished oil burner. Changes

in the price of controls to oil-burner manufacturers resulted in many instances in corresponding changes in the price of completed oil burners and necessarily affected sales and profits. In some instances customers of respondent lost business to certain of their competitors who enjoyed lower control prices from the respondent.

The quantity or bracket prices were usually based upon the quantity set out in contract executed by the oil-burner manufacturers at the beginning of the year. The execution of a contract was not, however, essential, as bracket prices were allowed to some customers who did not execute contracts. The quantity set out in the contract was based either upon number of controls purchased the previous year, the average of two or more prior years, or the estimated quantity which the manufacturer expected to use during the year. If the manufacturer failed to purchase sufficient sets of controls to entitle him to the bracket price allotted, the respondent did not require additional payment because of the lesser quantity purchased. If, however, the manufacturer purchased a greater quantity of controls than estimated or set out in the contract and if such quantity was sufficient to place the manufacturer in a larger quantity bracket, the respondent allowed such manufacturer the larger quantity bracket price on all purchases during the year and issued refund or rebate to the manufacturer covering the difference in the bracket prices.

1321 Paragraph Seventeen. In an effort to justify its various price brackets, respondent, after the issuance of the complaint herein, and during the pendency of this proceeding, employed a recognized accounting firm to prepare a study of costs. This study was based upon the bracket prices adopted and used by respondent during the year 1941, which were as follows:

Bracket	Unit Volume	Set Volume	Price Per Set
Discount Bracket	1 - 149	1 - 49	$20.25
Bracket #1	150 - 1,049	50 - 349	17.35
" #2	1,050 - 2,999	350 - 999	16.45
" #3	3,000 - 7,499	1,000 - 2,499	15.90
" #3A	7,500 - 14,999	2,500 - 4,999	15.35
" 4	15,000 - 22,499	5,000 - 7,499	14.90
" 4A	22,500 - 29,999	7,500 - 9,999	14.25
" 5	30,000 and over	10,000 and over	13.75

The original study was completed on February 7, 1944, and supplemental study, May 16, 1945. Respondent did not

maintain any current analysis of distribution cost for the year 1941, and the controlling factors used in the aforesaid study in allocating costs necessarily had to be estimated.

In this cost study, no attempt was made to allocate costs as between each of the three lowest price brackets (4, 4A, and 5), since the difference in price was greater than the amount of unallocated costs and it was deemed impractical to allocate additional items of cost which were excluded from the study. More than 55 percent of respondent's total volume of controls sold to oil-burner manufacturers was sold at prices applicable to brackets 4, 4A, and 5, the three lowest price brackets. Prices for each of the first five brackets, namely, the discount bracket and brackets 1 to 3A, inclusive, appear to have been justified by the study on the basis of cost differentials applicable in each case. Respondent, however, did not know the cost of selling and distributing to any particular customer within any of the price brackets, and no attempt was made to analyze its cost of distribution on an order basis.

Testimony concerning respondent's cost report disclosed that approximately 43 percent of the total cost
1322 of manufacturing used in the study was applicable to customers who paid more or less than the bracket price to which their purchases ostensibly entitled them. These were known as "off-scale sales."

In order to allocate costs to the proper quantity brackets, respondent had its accountants recast its cost study and prepare a supplemental study. In recasting the off-scale sales for the supplemental study, the costs applicable in each instance were transferred from the particular price bracket to the bracket consistent with the number of units purchased. The supplemental report did not change any of the accounting principles or measuring factors used for allocating costs, the latter being based upon estimates arrived at several years subsequent to the transactions to which they referred, but the recasting did change the distribution costs, the discount bracket being increased, while brackets 1 through 3-A were decreased. It also caused a change in the cost differential between brackets 3 and 3-A so that the reduction in price between those two brackets exceeded the reduction in cost by two cents, whereas the original study shows a cost reduction of fourteen cents in excess of the price reduction between the same two brackets.

Paragraph Eighteen: The Commission finds that the price differences allowed by the respondent in the sale of its automatic temperature controls, based upon quantities as set out in respondent's various bracket prices, constituted discriminations in price between purchasers of commodities of like grade and quality.

Based upon the cost studies introduced by the respondent and the testimony in connection therewith, the Commission finds that only the quantity prices included in the discount bracket and brackets 1 to 3-A, inclusive, make due allowance for differences in cost of manufacture, sale, or delivery resulting from the differing quantities in which respondent's automatic temperature controls were sold or delivered to purchasers. The Commission further finds that respondent's price differences based upon quantity purchases under respondent's price brackets 4, 4-A, and 5 have not been shown to be justified by reason of differences in the cost of manufacture, sale, or delivery resulting from differing methods or quantities in which respondent's automatic temperature controls were sold or delivered to its various oil-burner manufacturer-customers.

1323 The Commission further finds that oil-burner manufacturers who received the benefit of the various discriminatory prices, discounts, or rebates granted by the respondent have a substantial advantage in selling oil burners equipped with respondent's controls in competition with other oil-burner manufacturers purchasing and using respondent's controls who do not receive the benefit of such discriminatory prices, discounts, or rebates and who are obliged to pay respondent's higher cost bracket price. In order to sell their oil burners equipped with respondent's automatic temperature controls in competition with customers of the respondent who receive the benefit of respondent's discriminations in price, oil-burner manufacturers who pay respondent's discount or higher bracket price or who are denied discounts or rebates allowed to such favored customers must either sell at competitive prices and, in so doing, reduce their possible profits by the amounts of discriminations against them or attempt to sell at higher prices than those which the favored customers of respondent charge for oil burners equipped with respondent's automatic temperature controls, with the result of inability to secure business and a reduction in the volume of their sales.

By respondent's method of selling and the use of the

price discriminations hereinabove described, customers paying a higher price are discriminated against with respect to all other customers paying a lower price, while the customers paying a lower price are given the benefit of discrimination as against the other customers of the respondent who pay a higher price.

Paragraph Nineteen: The Commission further finds that the price discriminations based upon quantity purchases as set out in its various bracket prices and particularly in brackets 4 to 6, inclusive, have the capacity and tendency to induce the purchase of respondent's automatic temperature controls by various oil-burner manufacturers and have tended to, and do, divert trade to the respondent from its competitors and have had a substantial injurious effect upon competition in the sale and distribution of automatic temperature controls in commerce among and between the various states of the United States.

Paragraph Twenty: The Commission further finds that the price differences allowed by the respondent to its customers on so-called off-scale sales constituted a discrimination in price. In 1941 there were 76 customers 1324 who were classified as "off-scale sales." In the cost report submitted by the respondent, approximately 43 percent of the total cost of manufacturing was applicable to such off-scale customers. The cost study introduced by the respondent dealt principally with an effort to justify differentials in respondent's quantity or bracket prices. This study did not justify the price differentials to any particular customer. Consequently, so far as such off-scale sales are concerned, there has been no justification submitted.

These off-scale sales involve almost entirely sales to customers at a bracket price lower than the customer was entitled to by reason of the quantity purchased by him. For example, a customer might be allowed a bracket 4 or 5 price on estimated purchases for the year when in fact his yearly purchases were such as to entitle him only to a bracket 3 or 3-A price. In so doing, the respondent discriminated in price in favor of such off-scale customer as against other customers who were paying a higher price for automatic temperature controls, including customers who were in fact purchasing substantially as many automatic temperature controls as such off-scale customer but

who were not granted the higher bracket price enjoyed by such off-scale customer.

Paragraph Twenty-one: The Commission further finds that the respondent engaged in further discriminations in price by allowing an oil-burner manufacturer to count for bracket price purposes automatic temperature controls purchased by the customer or furnace manufacturer buying from such oil-burner manufacturer. In this manner, while the furnace manufacturer obtained a discount based upon his purchase of controls from the respondent, the oil-burner manufacturer who supplied the oil burner without controls to such furnace manufacturer obtained credit on total purchases for not only the quantity of controls purchased by him from the respondent but also the controls purchased by the furnace manufacturer to whom he had sold, thereby entitling such oil-burner manufacturer to be included in a lower price bracket. This was known as a "dual transaction."

For example, Automatic Burner Corporation in the year 1939 purchased 21,753 units from the respondent, and its customer the Holland Furnace Company purchased 10,224 for the same year. Although the 10,224 controls were shipped directly to the Holland Furnace Com-
1325 pany, the Automatic Burner Corporation received credit for the purchase of the total volume of both. This practice on the part of the respondent also constituted a discrimination in price in that it allowed a lower bracket price to a customer whose purchases were not sufficient to bring it within such price bracket except when combined with automatic temperature controls purchased by its customer.

Paragraph Twenty-two: The respondent, in effect, accepted the cost justification shown by its cost study as to brackets 1 to 3-A, inclusive, but as to brackets 4, 4-A, and 5 it contended that the quantity prices shown in those latter brackets were made to meet competition. There was a total of 76 accounts upon which off-scale prices had been allowed to the various customers in the year 1941. The respondent selected 22 accounts from these off-scale accounts and claimed that the prices allowed to those customers were lower prices made to meet competitive prices. Since there were 76 off-scale accounts and no such contention made as to the remaining 54, this defense or contention of meeting competitive prices cannot be considered as justifying respondent's practice of off-scale

selling. The respondent attempted to use these accounts to prove a defense of meeting an equally low price of a competitor under Section 2(b) of the Clayton Act, not only as to the off-scale sales but also as a defense to the lower quantity prices in brackets 4, 4-A, and 5, which were not justified by its cost study.

The trial examiner in his conclusions of fact and of law has accepted the contention of the respondent that the quantity prices shown in brackets 4, 4-A, and 5 were made to meet competitive prices and has found that—

"In respondent's higher brackets (4, 4A, -5) respondent has lowered its prices in making sales of its controls to 22 of its oil burner customers, to meet the lower price competition of competitors."

Since all of the 22 oil-burner-customer accounts do not come within the classification of brackets 4, 4-A, and 5 and do not constitute all the customers of the respondent who received the lower prices provided for in brackets 4, 4-A, and 5, this conclusion by the trial examiner cannot be accepted. The record shows that of these 22 accounts, only four—Cleveland Steel Products Company, 1326 Delco Appliance Division of General Motors, Gilbert & Barker Manufacturing Company, and Williams Oil-O-Matic Heating Corporation—purchased in sufficient quantities in 1941 to entitle them to the quantity prices provided for in brackets 4, 4-A, and 5. The remaining 18 fell within the discount bracket and brackets 1 to 3-A and were so recast by respondent's supplemental cost study.

In the Williams Oil-O-Matic transaction, the meeting of a lower price of a competitor was not involved. In 1936 Williams Oil-O-Matic purchased 3,527 units from the respondent. During that year Williams was charging $2.50 more for burners equipped with respondent's controls. Based upon 1936 purchases, the respondent gave Williams the 3,000 price for controls for 1937. This was a price higher than previously charged. Williams immediately retaliated by charging $7.50 more for burners equipped with respondent's controls. For the purpose of inducing Williams to reduce this price differential respondent gave Williams its best price for 1938, and the differential charged by Williams was reduced to $2.50 for 1938, no price difference for 1939, $2.50 for 1940, and no price difference for 1941.

The Cleveland Steel Products Company transaction also

involved an effort to reduce the price differential of $5 charged by Cleveland for burners equipped with respondent's controls. Also this account fell within the classification of a dual transaction in that Cleveland was allowed credit for purchases of controls made by Fox Furnace Division, American Radiator Company, for whom Cleveland was furnishing burners without controls.

The Delco Appliance Division of General Motors transaction did not involve meeting the price of a competitor. This company made its own thermostats and primary controls and purchased only limit controls from respondent with the exception of some items for replacement. Units purchased brought Delco within the 4-A bracket, but it was accorded the bracket 5 price by respondent.

In the Gilbert & Barker Manufacturing Company transaction, this company began the development and sale of a low-priced burner equipped with Penn Switch controls in 1939. On the basis of information that this company had sold 3,000 Penn-equipped burners in 1939, respondent gave Gilbert & Barker its lowest price, or bracket 5 price, for 1940. It was not until six months later that respond-
1327 ent was informed that the price of the Penn relay switch was 50 cents under respondent's price on relay switch. No further reduction was made by respondent for 1941. Consequently, respondent's price to Gilbert & Barker Manufacturing Company was based entirely on potential output and was not made to meet the price of Penn Switch or any other competitor.

Consequently, the respondent has failed to prove that any customer whose quantity purchases placed him in brackets 4, 4-A, and 5 received a lower price, off-scale or otherwise, to meet an equally low price of a competitor. As a matter of fact, in practically all of the 22 accounts listed by the respondent, it followed its regular practice of submitting a contract in December for the following year at a time when it had no knowledge as to what the following-year price of its competitors would be.

Even if it be considered that respondent did in fact meet an equally low price of a competitor in the above-mentioned transactions, this would not constitute a justification either for respondent's practice of allowing off-scale prices or for respondent's prices for the quantities provided in brackets 4, 4-A, and 5, which have been found not to be justified under the provisos of Section 2(a) of the Clayton Act. In making his conclusion of fact and

of law based upon these transactions, the trial examiner has made his own interpretation of the Clayton Act, which interpretation is contrary to the express provisions of the Act and contrary to the decisions of the Supreme Court construing said Act.

"Section 2(b) of the Clayton Act does not concern itself with pricing systems or even with all the seller's discriminatory prices to buyers. This Section speaks only of the seller's 'lower' price and of that only to the extent that it is made 'in good faith to meet an equally low price of a competitor.' The act thus places emphasis on individual competitive situations rather than upon a general system of competition." (*F. T. C.* v. *Staley Mfg. Co.*, 324 U. S. 746, 753.)

The trial examiner has also erroneously concluded that the price discriminations given by the respondent have not tended to substantially lessen, injure, prevent, or
1328 destroy competition between respondent's customers.

This conclusion is not supported by the greater weight of the evidence in this record. The great majority of automatic temperature controls for domestic oil burners sold by the respondent were purchased by oil-burner manufacturers. Since a set of temperature controls represents the largest single item of cost among the various parts of a finished oil burner, changes in the price of controls to oil-burner manufacturers resulted in many instances in corresponding changes in the price of completed oil burners and necessarily affected sales and profits. Furthermore, oil-burner manufacturers testified that the question of price was important in the purchase of automatic temperature controls and that they had lost business to certain competitors, including Quiet-Heet, who enjoyed lower control prices from respondent, although the exact volume of such lost business could not be calculated.

Conclusion.

The acts and practices of the respondent of incorporating various provisions in its contracts as hereinabove found, such as agreements which require the purchaser to purchase at least 90 percent as many room thermostats and 100 percent as many limit controls as primary controls, have the tendency and capacity to induce a substantial number of manufacturers of domestic oil burners

to purchase from respondent all or substantially all of their requirements of thermostats and limit controls used with respondent's primary controls; have substantially injured competition in the sale in commerce of automatic temperature controls; have unduly and unreasonably hindered, obstructed, restrained, and lessened competition in the manufacture and sale in commerce of respondent's automatic temperature controls; and constitute unfair methods of competition in commerce within the intent and meaning of Section 5 of the Federal Trade Commission Act.

The acts and practices of the respondent in attempting to require users of the furnace control system under the Cross Patent to purchase automatic stoker switches for use in said system only from the respondent and in attempting to exclude competitors from supplying "combination furnace controls" for use in systems covered by the Freeman Patent unless such competitors hold a sublicense from the respondent, pay the respondent a royalty on each "combination furnace control" sold, and maintain prices for such controls established by the re-
1329 spondent, have a tendency and capacity to restrain, restrict, and lessen competition in the manufacture and sale of controls and heating systems employing the Cross and Freeman combination of controls and constitute unfair methods of competition in commerce within the intent and meaning of the Federal Trade Commission Act.

The acts and practices of the respondent as hereinabove found of entering into contracts with various oil-burner manufacturers which required the purchase of at least 90 percent as many room thermostats and 100 percent as many limit controls as primary controls constituted, in effect, contracts for the sale of goods on the condition, and with the agreement and understanding, that such oil-burner manufacturers should not use or deal in automatic temperature controls of competitors of the respondent and constituted a violation of the provisions of Section 3 of the Act of Congress entitled "An Act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," commonly known as the Clayton Act.

The aforesaid discriminations in price by the respondent, as hereinabove found, constitute violations of subsection (a) of Section 2 of an Act of Congress entitled

"An Act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," approved October 15, 1914 (the Clayton Act), as amended by an Act of Congress approved June 19, 1936 (Robinson-Patman Act).

By the Commission.

R. E. Freer,
Chairman.

ORDER TO CEASE AND DESIST.

This proceeding having been heard by the Federal Trade Commission upon the complaint of the Commission, answer of the respondent, testimony and other evidence in support of and in opposition to the allegations of said complaint taken before a trial examiner of the Commission theretofore duly designated by it, report of the trial examiner upon the evidence and exceptions filed thereto, briefs filed in support of the complaint and in opposition thereto, and oral argument of counsel; and the Commission having made its findings as to the facts and its conclusion that said respondent has violated the provisions of the

Federal Trade Commission Act and has violated the provisions of Section 3 of that certain Act of Congress of the United States entitled "An Act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," approved October 15, 1914, commonly known as the Clayton Act, and subsection (a) of Section 2 of said Clayton Act as amended by an Act of Congress approved June 19, 1936, commonly known as the Robinson-Patman Act:

I. It Is Ordered that the respondent, Minneapolis-Honeywell Regulator Company, a corporation, and its officers, agents, representatives, and employees, directly or through any corporate or other device in connection with the offering for sale, sale, and distribution of 1331 automatic temperature controls and other furnace controls in commerce as "commerce" is defined in the Federal Trade Commission Act, do forthwith cease and desist from—

1. Selling or making any contract for the sale of automatic temperature controls on the condition, agreement, or understanding that the purchaser shall purchase as many limit controls as primary controls.

2. Selling or making any contract for the sale of automatic temperature controls on the condition, agreement, or understanding that the purchaser thereof shall purchase 90 percent as many thermostats as primary controls.

3. Entering into, continuing, or carrying out any agreement or understanding which requires a purchaser to buy any number of limit controls or thermostats with the purchase of respondent's primary controls; provided, however, that nothing herein contained shall prohibit the respondent from selling its automatic temperature controls in sets at a specified price per set.

4. Licensing or otherwise authorizing the use of the furnace control system covered by the Cross Patent on the condition, agreement, or understanding that only automatic stoker switches manufactured or sold by the respondent shall be used in such combination.

5. Licensing or otherwise authorizing the use of the furnace control system covered by the Freeman Patent on the condition, agreement, or understanding that the combination furnace control or any other control used in such system be sold at the price established by the respondent.

6. Using any patent covering a system of furnace controls to require the purchase from respondent of any unpatented control used in said system or requiring the maintenance of prices established by the respondent for any such unpatented control.

1332 II. It Is Further Ordered that the respondent, Minneapolis-Honeywell Regulator Company, a corporation, and its officers, agents, representatives, and employees, directly or through any corporate or other device in connection with the sale or the making of any contract for the sale of automatic temperature controls or other furnace controls in commerce as "commerce" is defined in that Act of Congress entitled "An Act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," approved October 15, 1914 (Clayton Act), do forthwith cease and desist from—

1. Selling or making any contract for the sale of primary controls on the condition, agreement, or understanding that the purchaser thereof shall not use with such primary controls any limit controls or thermostats other than those acquired from respondent or from some source authorized by respondent.

III. It Is Further Ordered that respondent, Minneapolis-Honeywell Regulator Company, a corporation, and its officers, representatives, agents, and employees, directly or through any corporate or other device in the sale of automatic temperature controls or other furnace controls in commerce as "commerce" is defined in the aforesaid Clayton Act, do forthwith cease and desist from discriminating, directly or indirectly, in the price of such products of like grade and quality as among oil-burner manufacturers purchasing said automatic temperature controls and other furnace controls—

1. By selling such controls to some oil-burner manufacturers at prices materially different from the prices charged other oil-burner manufacturers who in fact compete in the sale and distribution of such furnace controls, when the differences in price are not justified by differences in the cost of manufacture, sale, or delivery resulting from differing methods or quantities in which such products are sold or delivered.

1333 IV. It Is Further Ordered that the respondent shall, within sixty (60) days after service upon it

of this order, file with the Commission a report in writing, setting forth in detail the manner and form in which it has complied with this order.

By the Commission.

(Seal) Otis B. Johnson,
Secretary.

Opinion of the Commission attached.

Dissenting Opinion of Commissioner Mason attached.

1334 Opinion of the Commission

In the Matter of
Minneapolis-Honeywell Regulator Co.

Docket No. 4920.

Ayres, Commissioner.

The Complaint is directed against practices by respondent in connection with the sale of automatic temperature controls manufactured by it which are used in connection with oil burners of the pressure and rotary types for domestic heating plants. Respondent's sales of such products annually during 1939, 1940 and 1941 represented approximately 60% of the total number of such controls sold during those years in the United States.

Count I of the complaint alleges, among other things, that respondent sells controls in sets of three units consisting of a thermostat, a limit control and a primary control, and that its annual contracts with manufacturers of oil burners or furnaces provide, in part, "that the purchaser will buy at least 90 percent as many room thermostats and 100 percent as many limit controls as primary controls," or contain substantially similar provisions. It also alleges that some of respondent's contracts contain provisions which require its customers to buy respondent's controls exclusively or which limit the extent to which they may buy controls from respondent's competitors.

The evidence disclosed that a number of contracts which respondent entered into with its manufacturer-customers near the end of 1936 for 1937 business required such customers to purchase "at least 95 per cent" of their control requirements from respondent. On advice of counsel the

contracts were amended on January 28, 1937, by deleting that provision and respondent's customers were advised that they were not bound by it. That provision never had any substantial effect and has not been repeated. It was abandoned by respondent in recognition of its illegality and there is no reason to believe that it will be resumed. Accordingly, the order does not include any prohibition with respect to it.

Respondent, in effect, concedes that the provision of its contracts requiring customers to purchase from it as many limit controls as primary controls was improper. It contends, however, that it should not be prohibited from requiring its customers to purchase from it 90 per cent
1335 as many thermostats as primary controls. (It should be explained that the purpose of this provision is to require the use of respondent's thermostats exclusively with its primary controls. The provision for 90 per cent instead of 100 per cent as many thermostats as primary controls is due to the fact that on some installations a second limit control is used to perform the function of the thermostats and also that on replacement sales the old thermostat can sometimes be continued in use.) Respondent asserts that its thermostats and primary controls differ from those of its competitors in certain scientifically important respects and are designed to operate together. It is urged by respondent that it is inefficient and dangerous to use respondent's primary controls in the same installation with thermostats of other makes.

It is stipulated in the record, among other things, that

> "Thermostats and limit controls of the proper type manufactured and sold by a number of competitors of the respondent could be and are satisfactorily and safely used by manufacturers of oil burners, furnace manufacturers and contractors interchangeably for thermostats and limit controls of the same type sold by respondent on installations where respondent's primary controls are used."

This provision of the stipulation is also supported by evidence appearing elsewhere in the record.

In *Thomson Manufacturing Company* v. *F. T. C.*, 150 F. (2nd) 952, the respondent leased its rivet-setting machines and required that rivets used in them be purchased from it. The Court said that the evidence indicates that the best results are obtained when the machines and rivets of one

manufacturer are used together, and that if improper rivets are used, repairs to the machines and interruptions in the work might ensue. After citing *United States Shoe Machinery Corp.* v. *U. S.*, 258 U. S. 451, and *International Business Machines Corp.* v. *U. S.*, 298 U. S. 131, the Court stated:

> "The open market not the court should be the forum for the presentation of claims as to the merits of tied articles. The lessees are quite capable of judging
> 1336 for themselves in an atmosphere of competition whether or not rivets of one manufacturer will work in the machines of another. That decision involves considerations of economy and efficiency that will likely vary from lessee to lessee."

In the present case, oil burner manufacturers should be left free to judge for themselves in an atmosphere of competition whether or not thermostats of one manufacturer will work with the primary controls of another. Since the use of proper type thermostats and primary controls of different makes in the same installation is safe, we must leave for local regulation the problem of hazardous conditions which may result from the improper mixing of controls.

Respondent's annual contracts with oil burner manufacturers contain a blank space intended for the insertion of the number of sets of controls which the manufacturers agree to buy from respondent during the life of the contract. In 1937 and 1938 the blank space in some of these contracts carried the words "season's requirements" or "estimated requirements" in lieu of a specific number. It is argued on one hand that such language committed the oil burner manufacturer to purchase all of its automatic control requirements during the life of the contract from the respondent; and, on the other hand, that it committed the oil burner manufacturer to purchase from respondent only that number of respondent's controls which the customer might need during the season, and that it did not limit the right of the customer to purchase controls from others. Respondent apparently recognized the questionable nature of this language and discontinued its use. It does not appear necessary, therefore, to include in the order any specific prohibition with respect to this point.

Count I of the complaint also charges misuse of two system patents, the details of which are set out in the find-

ings. In two decisions in January, 1944, involving private litigants, the Supreme Court held that both of the system patents were being improperly used by respondent (*Mercoid Corp.* v. *Mid-Continent Investment Company and Minneapolis-Honeywell Regulator Co.*, 320 U. S. 661; and *Mercoid Corporation* v. *Minneapolis-Honeywell Regulator Co.*, 320 U. S. 680). Respondent urged without contradiction that promptly after the decisions of the Supreme
1337 Court all of its agreements of every kind involving the two patents were terminated and that "all of the practices condemned by the Supreme Court have been eliminated and are not now being carried on in any way by M-H."

The decisions of the Supreme Court were in private litigation. It is difficult to appraise the scope and effect of those decisions in correcting the practices insofar as they may affect parties not involved in those proceedings. The misuse of the patents was redressable in the courts by private litigants, but the unfair practices involved in such misuse also substantially affected the public. Such unfair practices were, therefore, properly included in the complaint. The allegations with respect to them were sustained by the record, and such practices have accordingly been prohibited by the order. Insofar as there is no intention to resume the practices or insofar as they are restrained by the decisions of the courts, the prohibitions of the order with respect to them constitute no burden or penalty on respondent. To the extent, however, that the practices may be resumed in a form which will not be reached by the decisions of the courts, the prohibitions of our order afford a measure of protection and assurance to the public which could otherwise be obtained only by instituting a new proceeding when warranted by future developments, with its consequent delays and costs.

The charges in Count II of the complaint are substantially the same as in Count I insofar as they relate to the tying and exclusive dealing provisions of respondent's contracts, except that they allege violation of Section 3 of the Clayton Act, rather than Section 5 of the Federal Trade Commission Act. Substantially the same considerations which show the violations under Count I also show violations under Count II and the findings and order have covered both counts.

The majority decision on the foregoing points is sub-

stantially in accord with the recommendations of the Trial Examiner.

Count III of the complaint charges price discrimination in violation of Section 2(a) of the Clayton Act. The Trial Examiner concluded that the respondent sells its controls to certain oil burner and furnace manufacturers at lower prices than to others, but that such price differentials do not tend to lessen competition or create a monopoly, that certain of the price differentials are justified by cost differences, and that others resulted from prices which were made for the purpose of meeting the lower prices of 1338 competitors. He recommended that the charges of Count III be dismissed without prejudice. The majority of the Commission is in disagreement with the conclusions of fact and law and with the recommendations of the Trial Examiner with respect to this count.

Respondent's price schedules to oil burner and furnace manufacturers have been based upon annual quantity purchases and have varied to some extent from year to year both in the price differentials and the quantity brackets upon which they were based. The method of pricing during the period covered by the record in this case, however, has remained essentially the same. Because respondent's cost study was based on its price schedule for 1941 and because that is the most recent year covered by the evidence, our consideration has been directed primarily to that schedule.

Respondent's price differentials to manufacturers were based upon annual quantity purchases graduated according to brackets numbered, respectively, 1, 2, 3, 3A, 4, 4A and 5, each bracket progressively being based on a larger quantity and reflecting a lower price. The Commission has found that the quantity price differentials represented by bracket 1 through 3A make only due allowance for differences in cost within the meaning of the Act, but that the price differentials based on brackets 4, 4A and 5 have not been justified by cost differences. In reaching this decision, the Commission has recognized certain practical difficulties in the case and has given effect to certain general considerations.

Cost studies of the sort presented in this matter ordinarily do not afford precise accuracy but must necessarily embrace a number of conjectural factors and allocations. There is inherent in them a reasonable margin of allowable

error. Where they are made in good faith and in accordance with sound accounting principles, they should be given a very great weight. Respondent had an extensive cost study made by an independent firm of accountants and auditors which disclosed cost justification for the price differentials resulting only from brackets 1 through 3A. It apparently was made with considerable care and great particularity of detail. Although basic questions may properly be raised with respect to the soundness of certain of the procedures and allocations upon which the cost differentials were determined, respondent's effort represents a fair and objective study of the problem which was probably done as well as it could be done under the circumstances. Respondent's burden under the Act is very great and it should have a liberal measure of consideration when it becomes apparent that it has made sincere and extensive efforts to discharge that burden. We have accordingly accepted the results of the cost study as fairly reflecting respondent's cost differentials within a reasonable margin of error.

1339 It has been urged that there is necessarily a failure of cost justification where the quantities purchased by two competing customers at applicable price differentials are nearly the same, with one being just below and the other being at or slightly above the minimum quantity for a particular bracket. This argument may be persuasive in a case where such a situation is actually shown and where there is some indication that it is a matter of competitive importance. But there has been no such showing in this case. Any annual quantity system of pricing is vulnerable to this argument and it may be controlling where it has practical aspects. Where it is purely theoretical, however, it does not constitute a satisfactory basis for disallowing the whole effort at cost justification.

The record discloses instances in which respondent granted bracket 1 through 3A prices to certain customers who did not purchase the quantities required under its schedule for such prices. These instances are designated "off-scale sales". Where annual purchases of a customer are less than the minimum quantity required for the price granted, the cost study shows no justification for the resulting price differential.

Such situations result primarily from respondent's practice of entering into annual contracts with its customers at the beginning of a year based on past experience. If a

customer fails to purchase the quantity provided in the contract, and upon which the price is based, the contract price is not increased, and sales to such customer are at off-scale prices. If, on the other hand, the customer purchases more than the contract quantity and qualifies during the year for a lower price under the next bracket, the lower price is given to him in full by means of retroactive discounts or otherwise. Respondent defends this practice as a business necessity, stating that it is impossible to determine at the beginning of the year the unusual factors which may adversely affect the quantity of a customer's purchases, and that it would be prohibitively difficult to require a customer during the year to adjust the price upward.

From a practical standpoint this is no doubt a valid and sufficient reason to respondent. But the respondent has voluntarily chosen its method of selling and pricing. If that method, as it does here, involves practical difficulties which make it hard to comply with the require-
1340 ments of the law, such difficulties constitute a calculated risk. It is respondent's responsibility, in spite of these practical difficulties, to comply with the law. Otherwise, a seller could set up a schedule of annual quantity prices, justify the differentials, and then sell freely to favored customers at off-scale prices so long as the customers agreed in advance to buy the quantities required for the prices made to them. The law could not be effectively applied on such a basis.

Respondent also gave off-scale prices to certain oil burner manufacturers who sold oil burners without controls to furnace manufacturers who, in turn, bought controls directly from the respondent. The quantity of controls bought from respondent by the furnace manufacturer in such instances was credited to the oil burner manufacturer in addition to the controls purchased by the latter. The aggregate quantity so computed was used to determine the bracket price granted to the oil burner manufacturer on his own purchases, resulting in some instances, in his receiving a lower price than he would otherwise have received under respondent's schedule. Such instances are characterized as "dual" transactions. Prices determined on this basis result in price differentials which are not justified by respondent's cost study.

The price differentials resulting from respondent's price brackets 4, 4A and 5 were not justified by cost differences,

but were defended on the basis of meeting in good faith the lower prices of competitors.

Respondent argues in effect that the accounts paying the higher prices are manufacturers who purchase in small volume and that the competition for their business is not as severe as it is for the business of manufacturers who purchase in larger volume. It was urged that all of the manufacturers of automatic controls go after the business of the larger accounts, resulting in the keenest competition for that business throughout the period covered by this case. Respondent argues, therefore, that it had to reduce its prices to customers in the three lowest price brackets in order to keep its share of their business. The record indicates generally that competitors of respondent were offering lower prices to comparable accounts and no instance is shown in which respondent actually undercut competitors' prices.

1341 Respondent's three lowest price brackets do not represent prices made in particular instances to meet competitors' prices, but reflect progressive reductions in a comprehensive price schedule based on increased quantity purchases. It is significant that more than 55 percent of respondent's total volume of controls sold to oil burner manufacturers were at prices in the three lowest brackets. Such prices were probably established for the purpose of obtaining the business of the larger oil burner and furnace manufacturers, and it is apparent that they were largely effective in accomplishing that result. But they represented no sharp departure from respondent's general pricing policy. All of respondent's prices were established with knowledge of the price levels of its competitors, and were undoubtedly influenced by those price levels. As shown in the findings, respondent has developed a large customer demand for, and public acceptance of its controls, and has been able consistently to sell them at prices higher than those charged by its competitors.

The mere fact that competitors' prices are lower than respondent's discriminatory prices does not constitute a showing that such discriminatory prices were made in good faith to meet the equally low or lower prices of competitors. When price differentials of an established schedule reach a point where they cannot be justified by cost differences, it is unsound and inconsistent to urge that they then become prices which have been made in good faith to meet equally low or lower prices of competitors simply

because they may not be lower than competitors' prices. To accept this proposition would mean that any seller of a commodity which generally sells at a premium price may freely discriminate among its customers so long as it does not undercut the prices of competitors. Such an interpretation would make the Act largely unworkable and would, to a substantial extent, defeat its objectives. Respondent has not met the good faith requirement of Section 2(b) of the Act, either with respect to its three lowest price brackets or with respect to its "off-scale" prices in the higher price brackets. Its defense on this basis has been rejected by the Commission.

Respondent argues that its discriminatory prices have not resulted in injury to competition within the meaning of the Act. This point is covered in the findings in considerable detail.

1342 Respondent urges that the businesses of its competitors in the types of automatic temperature controls involved in this matter have grown, and that its own relative position in the industry decreased from approximately 73 percent in 1937 to about 60 percent in 1941, and that, therefore, the practices with which it is charged have not substantially lessened competition or tended to create a monopoly. But the law does not permit respondent to resort to unfair or discriminatory practices in order to maintain its competitive position in the industry. If its use of such practices substantially interferes with or impedes the progress or growth of competitors, there has been a substantial injury to or lessening of competition within the meaning of the law. That respondent's discriminatory practices and prices have had such an effect on competition is fully established by the record.

The competitive effects of respondent's discriminatory prices on other manufacturers of controls are persuasively indicated by its own arguments that its discriminatory prices were made for the purpose of meeting competition. These arguments show that respondent's discriminatory prices were made to retain the business of certain customers or to secure the business of others and that they were largely successful in doing so. To the extent that business is held by or diverted to respondent from its competitors by its discriminatory prices and unfair practices, competition has been adversely affected within the meaning of the law. That this has been done to a substantial extent is clear from the record.

Annual quantity prices tend to encourage customers to concentrate their purchases with a single source of supply rather than to distribute their business among competitors. When an oil burner manufacturer sees that his total control requirements, if concentrated with respondent, will entitle him to a bracket 4 price, for example, but if divided among other sources of supply he may receive only a bracket 2 or a bracket 3 price, the competitive tendency of the discriminatory bracket 4 price is apparent. The very nature of quantity price differentials is to divert business to the seller granting such differentials, and, insofar as they cannot be justified by cost differences or otherwise defended, any substantial injury to competition due to them falls within the ban of the Act.

Respondent also argues that there has been no adverse effect on competition among its customers as a result of its discriminatory prices. It contends that the prices 1343 of oil burners vary as much as $60.00 per burner among the various manufacturers, and that frequently the highest prices are charged by oil burner manufacturers who paid respondent's lowest prices for controls.

The record shows that automatic controls are the most important single item of cost of any of the components involved in the manufacture of oil burners, estimates in the record indicating that they may represent as much as 40 percent of the material cost of manufacturing an oil burner. In addition to controls, oil burner manufacturers purchase motors, pumps, fans, transformers, etc. Respondent asserts that on each such item the burner manufacturer gets a discount if he buys in volume and does not get it if he does not buy in volume. It is argued, therefore, that the differences in the prices of controls alone and their proper place in the competitive picture cannot be traced with certainty through the oil burner manufacturer to determine their effect on competition among such manufacturers.

Accept, for the purposes of the argument, respondent's statement that oil burner manufacturers who buy in volume receive discounts on motors, pumps, fans and transformers as well as controls. The cost of producing oil burners by large quantity manufacturers would thereby be made substantially less than the cost of producing oil burners by smaller manufacturers who buy in smaller quantities. The larger manufacturers would receive aggregate cost advantages of substantial competitive importance. Such advan-

tages may be reflected in the competition of selling oil burners, either in lower prices, more extensive advertising, better service to customers, more effective selling methods, or improved quality, or in a combination of these potent competitive factors. Each seller who may have contributed to the aggregate price or cost advantages obtained by the favored burner manufacturers is, in part, responsible for the aggregate competitive result. The fact that the whole competitive effect cannot be traced to respondent alone does not relieve respondent of its share of responsibility—a share which appears to have been real and substantial.

It is also argued that other controls are available to oil burner manufacturers at lower prices, and, therefore, that respondent's discriminatory prices do not injure competition among them. The record discloses that there is a substantial demand for respondent's controls and that in order to be competitive, manufacturers of furnaces and oil burners must be able to supply them. Dealers 1344 frequently request manufacturers to supply respondent's controls with the burners purchased by such dealers. In such situations the manufacturers must buy respondent's controls at respondent's prices, but must still compete with other manufacturers for the dealer's business. Where competitive manufacturers receive discriminatory prices from the respondent, competition between the manufacturers for the dealer's business may be very substantially affected.

References have been made in this opinion to the discriminations and competitive effects resulting from lower prices being granted to some buyers than to others. Such references could just as well have been to the discriminations and competitive effects resulting from higher prices being charged some buyers than others. There should be no confusion concerning the purpose of the Commisison's order on this phase of the case. It is not the intent of the order, nor is its effect to prevent or restrain respondent from reducing prices to the trade or to consumers. This Commission has no authority or desire to intrude in the field of price control either by enhancement, curtailment or stabilization, and its effort here is not directed to that end. There is no showing that respondent has endeavored to reduce prices to the trade or to consumers, and there is nothing in our order which would prevent its doing so. The order directs respondent to cease and desist from discriminating in prices, and it may eliminate the discrimina-

tions by reducing its high prices as well as by increasing its low prices. But the law requires that the discriminations be eliminated. We think that this requirement is sound and that it yields results of great benefit to the trade and to consumers, but regardless of our choice of economic philosophies, it is our obligation to enforce the law.

Here we have discussed some of the general considerations which guided the Commission in reaching its decision. The findings as to the facts cover the several points involved with considerable particularity and they are fully supported by the record. On the findings and the supporting evidence, the Commission has reached its conclusions and issued its order to cease and desist.

1345 UNITED STATES OF AMERICA.

Before Federal Trade Commission.

* * (Caption—4920) * *

OPINION OF COMMISSIONER LOWELL B. MASON DISSENTING IN PART AND CONCURRING IN PART.

It is only fair to assume that the answer to a question of business procedure, whether it is the decision of a court or the official ruling of a Government agency, should be recognized as some kind of a guide for businessmen. At least, following a court's ruling should never be used against a citizen as the basis for a cease and desist order.

If Government is going to switch the rules on a businessman in the middle of a play, we should at least give him a chance to start running the other way before slapping penalties on him. Yet that is what I believe the order in this case seeks to do here, as the following facts disclose:

In 1942 this respondent was operating under a patent system which in a private litigation had been approved by the Federal Circuit Court of Appeals (Seventh Circuit). The next year the Federal Trade Commission charged this method of operation was illegal.

1346 In 1944 the Supreme Court reversed the Circuit Court of Appeals and decided that the respondent's course of action was improper.

Of course, when the rules of commerce are switched on a

businessman by a superior court reversing a lower court, if he persists in following the inferior court, then that is something else.

But in this case, when the Supreme Court reversed the Circuit Court of Appeals, the respondent immediately reformed its practices to comply with the latest judicial ruling. What more could anyone do?

The Commission seeks to justify an order to cease and desist on the grounds that the Supreme Court decision entered in a private suit, only protects the plaintiff in that case and not other competitors. I see no foundation for us to assume that the respondent will violate the decree of the Supreme Court either against the litigants named or by repeating the acts complained of against any other person.

It is difficult, in view of the Jeddo-Highland decision recently entered by the Commission (Docket 4468), to reject the Commission's reasoning in the Jeddo case when deciding this case, unless there is evidence in the record which makes us doubt this respondent's good faith or even its good judgment.

The case at bar goes much further than the Jeddo case,
the dismissal of which was based on the economic im-
1347 practicality of Jeddo attempting a repetition of the
unlawfu acts charged. Here the Circuit Court of Appeals approved the acts in question, but when the Court of Last Resort reversed the rule of conduct that should govern, the respondent was immediately obedient to its terms. It is Quixotic to imagine the respondent laying itself open to further legal burdens by resuming the practices abandoned four years past. I see no profit in shooting a tiger stuffed and mounted so long ago.

So much for that part of the controversy dealing with Section 5 of the Federal Trade Commission Act.

As for the portion dealing with Section 3 of the Clayton Act, I am in accord with the majority opinion, findings and order.

As to that portion of the controversy dealing with Section 2 of the Clayton Act, I desire to direct my dissent to the findings of fact, order and opinion relating to the price differentials resulting from respondent's price brackets 4, 4A and 5. These were not justified by cost differences but were defended on the basis of meeting the lower prices of competitors.

Here there seems to be but little variance between the majority and myself as to the facts of the case, my dis-

sent being based on the conclusions derived therefrom. In order to clarify these, let me catalog those things about which I believe there to be no controversy.

First, Minneapolis-Honeywell was a combination of two of the oldest heat control manufacturers in the business. Its antecedents date back to 1885. As pioneers in
1348 this business, vigorously pressing its engineering and research work for the creation of new devices and redesigning and improving its existing devices, it early established a dominant position in the heat control industry. Its price structure was higher than those of its competitors and there was a greater public acceptance for its products. These higher prices were good targets for entrepreneurs entering the field to shoot at. As these newcomers acquired the skill, the "know-how" and good will which had heretofore been largely the sole possession of Minneapolis-Honeywell, the respondent gradually lost its relatively high market position in the heat control field to its competition.

Between 1937 and 1941, Minneapolis-Honeywell suffered a decline of 20 per cent in the total heat control business obtained. This, it seems to me, ought to warn anyone who wanted to stay in business that it should bring its prices in line with its competition.

In this case, the respondent, having lost this ratio of business, made up its corporate mind to hang on to what business it had left and in good faith and what appears to be only ordinary common sense, brought its price down closer to the level of its competitors.

And it is here that I again part with the majority views.
It is their contention, as I see it, that the trial exam-
1349 iner was wrong when he "concluded that the price discriminations given by the respondent have not tended to substantially lessen, injure, prevent or destroy competition between respondent's customers."

I am of the opinion that on this point the findings of the trial examiner are correct. He held:

> "It is shown from the evidence that respondent's selling of its automatic temperature controls, of like grade and quality, to certain of its oil burner manufacturer-customers at lower prices than respondent sells its automatic temperature controls of like grade and quality to others of its oil burner manufacturer-customers, has not tended to substantially lessen, injure, prevent or destroy competition between respond-

ent's customers, or create a monopoly in the line of commerce in which respondent and its competitors are engaged."

The trial examiner also found:

"Competitors' prices have always and consistently remained under the prices of respondent, and oil burner manufacturers were always able, if they desired, to purchase controls from respondent's competitors at prices lower than respondent's prices."

The Commission majority contends that in some cases Minneapolis-Honeywell did not lower its price to meet competitors but lowered its price to get the assemblers of heating units who used Minneapolis-Honeywell controls to sell the finished product cheaper to the consumer. What an unhappy bit of evidence to justify a cease and desist order against any businessman. The respondent got caught endeavoring to reduce prices to consumers! That old cliche about how wicked industrialists are always reducing
1350 prices to consumers in order to put some competitor out of business has too long been overworked. If reducing prices is wrong, I wish more businessmen were guilty of it. The Commission here condemns a respondent for doing what the Commission is supposed to accomplish itself—the protection of the consumer.

The contention that Section 2 (b) of the Clayton Act does not concern itself with pricing systems does not mean that the pricing systems of respondent's competitors cannot be considered to prove that at all times the prices of competitors were less than the respondent's. Even though the pricing system of competitors may not be used to justify the defense of the proviso in Section 2 (b), there is nothing in the Staley case to prevent its being used to show that the price discrimination has not tended to substantially lessen, injure, prevent or destroy competition.

Referring to the trial examiner's conclusions that "the price discriminations given by the respondent have
1351 not tended to substantially lessen, injure, prevent or destroy competition between respondent's customers," the Commission states: "This conclusion is not supported by a greater weight of the evidence in this record."

My dissent is here directed to the point that a respondent charged with violating the law in a Federal Trade Commission complaint does not have to prove its innocence. The

burden of proof has not been removed from the Government's shoulders, nor can the Government brush this duty aside by merely making a general findings of fact that they (oil burner manufacturers) "had lost business to certain competitors, including Quiet-Heet, who enjoyed lower control prices from respondent, although the exact volume of such lost business could not be calculated." To my mind, this is not sufficient to show injury to competition.

In fact, the greater weight of the testimony, taking into consideration that respondent's competitors had gained instead of lost business during the period under scrutiny, whilst the respondent receded from its dominant position in the market, would indicate that competition had been very much improved in the heat control industry.

On the record I believe it to be impossible for the Commission to make a specific finding that the effect of the discrimination was to substantially lessen competition or tend to create a monopoly or to injure, destroy or prevent competition. A general finding is insufficient for this purpose.

1352 The prosecuting function in Government is often beset with the cry that "competition is being injured" whenever someone reduces prices.

We must not confuse "injury to competition" with the normal effect resulting from the clash between two businessmen, both endeavoring to obtain the patronage of the consumer by making a better product for less. As I said in my Standard Oil dissent, "We mouth the phrase 'injury to competition' so often that we confuse it with 'injury to a competitor.' When you meet your competitor's lower price so as to keep a customer he sought to take away from you, he feels he has been injured. Of course he has, but that does not mean that competition has been injured. On the contrary, it may have been improved."

If Minneapolis-Honeywell had known that the Federal Trade Commission was going to sue it back in 1943, Minneapolis-Honeywell would still have been faced with two dilemmas. Either it had to cut its price, meet its competition, but get involved in a Government suit—or not cut its price, not meet its competition and today have no suit—nor business, either.

Minneapolis-Honeywell took the former course. Now it finds itself tied up with an order which in no way affects the conduct of its competitors, but which will certainly pre-

vent it from ever approaching a competitor's price if doing so will keep business away from the competitor.

1353 The majority decision in this case, I believe, indicates that such acts have the tendency and capacity to injure competition. Carried to its ultimate end, the order imposed on Minneapolis-Honeywell can very well mean that the Commission itself, by a strict enforcement of this strained interpretation of the law, can remove Minneapolis-Honeywell as a competitive factor in this field of industry.

To this can be added the ironic touch that the testimony in this case indicates the competitors of Minneapolis-Honeywell are following the same practices which the Commission here condemns. Only they have no suits pending against them. If suits are filed and orders entered against them in accord with the instant case, we will have arrived at the millenium when no one will be allowed to take any business away from anyone else, and free competition will be in the museum of quaint and outmoded ideas.

The Standard Oil decision (Docket 4389) and this instant matter are but a series of technical, obscure and esoteric cease and desist orders, each of which attacks only a small segment of free enterprise, but they are slowly etching away our economic liberties in the name of saving them.

My prognosis is no idle fancy for, while the Congress has given businessmen the right to meet competitors' prices, the decision of this agency takes it away from

1354 this particular respondent. That we do it piecemeal can be no comfort to anyone for who can tell where our next order will strike?

In the instant case, the Commission has repeated the error I complained against in my dissent in the Standard Oil case, and I am encouraged to reiterate the objection by quoting the decision of Mr. Justice Briggs recently delivered in Morton Salt *vs.* Federal Trade Commission. The general sweeping language of the order to cease and desist exceeds the jurisdiction of the Commission.

> "The gist of this order is to require the petitioner to conduct its business generally at its peril, leaving the Commission or any person or litigant claiming injury to harass petitioner by proceedings under the Act for a mistake in interpretation or application of the order. In a similar case in disposing of a sweeping

and general order of the National Labor Relations Board, the Supreme Court said:

> 'But the mere fact that a court has found that a defendant has committed an act in violation of a statute does not justify an injunction broadly to obey the statute and thus subject the defendant to contempt proceedings if he shall a any time in the future commit some new violation unlike and unrelated to that with which he was originally charged. * * *
>
> 'We hold only that the National Labor Relations Act does not give the Board an authority, which courts cannot rightly exercise, to enjoin violations of all the provisions of the statute merely because the violation of one has been found.' "

But here the order is even less specific than the stat-
1355 ute, for the statute does give a citizen the right to meet the competitors' price, something which the order of this Commission takes away.

I am against it.

Lowell B. Mason,
Commissioner.

1356 IN THE

UNITED STATES CIRCUIT COURT OF APPEALS

For the Seventh Circuit

9584

Minneapolis-Honeywell Regulator Company,
Petitioner,

against

Federal Trade Commission,
Respondent.

PETITION TO REVIEW AND SET ASIDE ORDER OF THE FEDERAL TRADE COMMISSION.

(Filed Mar. 11, 1948. Kenneth J. Carrick, Clerk.)

Cravath, Swaine & Moore,
15 Broad Street,
New York 5, N. Y.

Bair & Freeman,
135 South La Salle Street,

1357 IN THE

UNITED STATES CIRCUIT COURT OF APPEALS.

* * (Caption—9584) * *

PETITION TO REVIEW AND SET ASIDE ORDER OF THE FEDERAL TRADE COMMISSION.

To the Honorable Judges of the United States Circuit Court of Appeals for the Seventh Circuit:

Now comes your petitioner, Minneapolis-Honeywell Regulator Company, a Delaware corporation (hereinafter called the petitioner), by its attorneys, and presents its petition to review and set aside the Order of the Federal Trade Commission (hereinafter referred to as the Commission), made and entered on the 14th day of January, 1948, and served on your petitioner on January 21, 1948, and in support thereof respectfully shows as follows:

1358 Statement of the Nature of the Proceedings As to Which Review Is Sought.

A. The Complaint.

First: The Order of the Commission herein which your petitioner seeks to have reviewed and set aside arises out of a complaint issued by the Commission on February 23, 1943 (hereinafter called the complaint). The complaint, which contains three Counts, sought a cease and desist order against the continuance of certain alleged practices of the petitioner on the ground that such practices prevented competition in the sale of automatic temperature controls for domestic heating plants, unreasonably restrained interstate commerce in such controls, tended to create a monopoly in interstate commerce in the interstate sale and distribution of such controls, and constituted unfair methods of competition, in violation of Section 5 of the Federal Trade Commission Act (15 U. S. C. § 45), Section 3 of the Clayton Act (15 U. S. C. § 14), and Section 2 of the Clayton Act, as amended by the Robinson-Patman Act (15 U. S. C. § 13).

Second: The alleged practices of petitioner charged under Count I of the complaint to be violative of Section 5

of the Federal Trade Commission Act include petitioner's (a) requiring manufacturers of oil burners for domestic heating to purchase at least 90% as many of one type of automatic temperature control and 100% as many of another type of such control from petitioner as they purchase of still another type of such control, and (b) inducing others, by threatening infringement suits, to accept licenses to use certain inventions covered by patents owned or controlled by petitioner in combination with certain un-
1359 patented articles under agreements not to sell such articles upon terms more favorable than those fixed by petitioner for its own products.

Third: The principal charge under Count II of the complaint is that petitioner's alleged practice of selling certain of its controls on condition that the purchasers thereof shall not deal in or use similar controls made by competitors of petitioner is violative of Section 3 of the Clayton Act.

Fourth: The charges in Count III of the complaint alleging violation of Section 2 of the Clayton Act, as amended by the Robinson-Patman Act, are based upon alleged practices of petitioner of selling its controls to some of its customers at prices different from those charged others of its customers, which such different prices are alleged to discriminate unfairly in favor of some of such customers.

B. The Answer.

Fifth: In its answer, while admitting some of the allegations of fact contained in the complaint, petitioner denies any violation on its part of Section 5 of the Federal Trade Commission Act or of Section 3 of the Clayton Act or of Section 2 of the Clayton Act, as amended by the Robinson-Patman Act.

C. Introduction of Evidence and Final Hearing.

Sixth: At numerous hearings before a Trial Examiner appointed by the Commission, which were conducted during the period from August 10, 1943 to October 4, 1945, evidence to support the charges of the complaint was presented on behalf of the Commission, and evidence in defense against such charges was presented on behalf of petitioner.

Thereafter, on February 21, 1946, the Trial Examiner
1360 filed his Report, and subsequently exceptions thereto were filed by petitioner, and by counsel for the Commission. The cause came on for hearing before the Commission on September 10, 1946, on briefs and oral argument.

D. The Order of Which Review is Sought.

Seventh: On January 14, 1948, the Commission issued its Findings as to the Facts and Conclusion and its Order to Cease and Desist entered thereon, and filed its accompanying opinion; and Commissioner Lowell B. Mason filed an opinion in which he dissented in part from the Commission's Opinion, Findings and Order and concurred in part therewith. On January 21, 1948, the Commission served copies of such Findings and Conclusion, Order and Opinions upon petitioner by registered mail. A copy thereof is annexed hereto as Exhibit A and made a part hereof.

Facts and Statutes Upon Which Venue Is Based.

A. The Statutes.

Eighth: The statutes under which this Court has jurisdiction to grant the relief prayed for in this petition are Section 128 of the Judicial Code (28 U. S. C. § 225), Section 5 of the Federal Trade Commission Act (15 U. S. C. § 45) and Section 11 of the Clayton Act (15 U. S. C. § 21). 28 U. S. C., Section 225, provides in paragraph (e):

> "The circuit courts of appeal are further empowered to enforce, set aside, or modify orders of the Federal Trade Commission, as provided in section 45 of Title 15; and * * * as provided in section 21 of Title 15. * * *"

1361 15 U. S. C., Section 45, provides in paragraph (c) in part as follows:

> "(c) Any person, partnership, or corporation required by an order of the Commission to cease and desist from using any method of competition or act or practice may obtain a review of such order in the circuit court of appeals of the United States, within any circuit where the method of competition or the act or practice in question was used or where such person, partnership, or corporation resides or carries

on business, by filing in the court, within sixty days from the date of the service of such order, a written petition praying that the order of the Commission be set aside. A copy of such petition shall be forthwith served upon the Commission, and thereupon the Commission forthwith shall certify and file in the court a transcript of the entire record in the proceeding, including all the evidence taken and the report and order of the Commission. Upon such filing of the petition and transcript the court shall have jurisdiction of the proceeding and of the question determined therein, and shall have power to make and enter upon the pleadings, evidence, and proceedings set forth in such transcript a decree affirming, modifying, or setting aside the order of the Commission * * *."

15 U. S. C., Section 21, provides in part as follows:

"Authority to enforce compliance with sections 13, 14, 18, and 19 of this title by the persons respectively subject thereto [except common carriers and banks] is hereby vested: * * * in the Federal Trade Commission * * *

* * * * *

1362 "* * * the commission or board may apply to the circuit court of appeals of the United States, within any circuit where the violation complained of was or is being committed or where such person resides or carries on business for the enforcement of its order, and shall certify and file with its application a transcript of the entire record in the proceeding, including all the testimony taken and the report and order of the commission or board. Upon such filing of the application and transcript the court shall cause notice thereof to be served upon such person and thereupon shall have jurisdiction of the proceeding and of the question determined therein, and shall have power to make and enter upon the pleadings, testimony, and proceedings set forth in such transcript a decree affirming, modifying, or setting aside the order of the commission or board. * * *

"Any party required by such order of the commission or board to cease and desist from a violation charged may obtain a review of such order in said circuit court of appeals by filing in the court a written

petition praying that the order of the commission or board be set aside. A copy of such petition shall be forthwith served upon the commission or board, and thereupon the commission or board forthwith shall certify and file in the court a transcript of the record as hereinbefore provided. Upon the filing of the transcript the court shall have the same jurisdiction to affirm, set aside, or modify the order of the commission or board as in the case of an application by the commission or board for the enforcement of its order * * *."

B. The Facts.

Ninth: The petitioner regularly carries on business in this Circuit within the meaning of Section 5 of the 1363 Federal Trade Commission Act and of Section 11 of the Clayton Act in that petitioner maintains one of its manufacturing plants in the City of Wabash, State of Indiana, maintains another such plant and a sales office in the City of Chicago, State of Illinois, is regularly engaged in the manufacture and sale of its products in this Circuit, and otherwise carries on business in this Circuit within the meaning of Section 5 of the Federal Trade Commission Act and of Section 11 of the Clayton Act. Moreover, petitioner has been required by the aforesaid Order of the Commission to cease and desist from continuing certain acts and practices in the sale of its products in this Circuit.

Prayer For Relief.

Wherefore, your petitioner prays:

1. That a copy of this petition be served forthwith by the Clerk of this Court upon the Federal Trade Commission pursuant to the provisions of Section 5 (c) of the Federal Trade Commission Act (15 U. S. C. § 45(c)) and Section 11 of the Clayton Act (15 U. S. C. § 21);

2. That this Court review said Order of the Commission together with its Findings as to the Facts and Conclusion, and set aside and vacate said Findings, Conclusion and Order;

3. That enforcement of the Commission's Order in this cause be stayed pending the review thereof by this Court; and

1364 4. That this Court grant such other and further relief as this Court may deem proper.

1392 In the United States Circuit Court of Appeals.

* * (Caption—9584) * *

STATEMENT OF POINTS UPON WHICH THE PETITIONER INTENDS TO RELY.

To the Honorable the Judges of the United States Court of Appeals for the Seventh Circuit:

Now Comes the petitioner above-named, having duly filed in this Court on the 11th day of March, 1948, its petition to review and set aside an Order to Cease and Desist (hereinafter called the Order) of the Federal Trade Commission (hereinafter called the Commission) made on the 14th day of January, 1948, and pursuant to the Order of this Court duly made on the 15th day of March, 1948, makes and files this its statement of points in which it sets out each error which it asserts and intends to urge in support of said petition.

1393 I.

1. The Commission exceeded its powers in ordering, in subparagraphs 2 and 3 of Paragraph I of the Order, that the respondent (the petitioner herein) cease and desist from

"2. Selling or making any contract for the sale of automatic temperature controls on the condition, agree-

ment, or understanding that the purchaser thereof shall purchase 90 percent as many thermostats as primary controls.

"3. Entering into, continuing, or carrying out any agreement or understanding which requires a purchaser to buy any number of * * * thermostats with the purchase of respondent's primary controls; * * *"

because:

(a) As established by substantial evidence in the record herein, the provision in respondent's contracts with respect to the purchase of respondent's thermostats with respondent's primary controls is to insure proper sequence of operation of each control installation and thus to avoid unsatisfactory, inefficient and often dangerous results which arise from mixing controls of more than one manufacturer on the same installation.

(b) The respondent's acts and practices with respect to the sale of its thermostats and primary controls were not improper and did not constitute unfair methods of competition in commerce within the intent and meaning of Section 5 of the Federal Trade Commission Act.

1394 (c) Said subparagraphs 2 and 3 of Paragraph I of the Order are for those reasons arbitrary and without basis in law.

2. The Commission exceeded its powers in ordering, in subparagraphs 4 and 5 of Paragraph I of the Order, that the respondent cease and desist licensing or otherwise authorizing the use of the furnace controls systems covered by the Cross Patent and the Freeman Patent on the conditions, agreements or understandings set forth in said subparagraphs 4 and 5, because long prior to the making of the Order the respondent had ceased such acts and practices immediately following the decisions of the United States Supreme Court in *Mercoid Corporation* v. *Mid-Continent Investing Co.*, 320 U. S. 661 (1944), and *Mercoid Corporation* v. *Minneapolis-Honeywell Regulator Company*, 320 U. S. 680 (1944), whereupon the charges of the Commission based on such acts and practices became moot and no longer constituted a proper subject for the entry of an order by the Commission.

3. The Commission exceeded its powers in ordering, in subparagraph 6 of Paragraph I of the Order, that the respondent cease and desist from

"Using any patent covering a system of furnace controls to require the purchase from respondent of any unpatented

control used in said system or requiring the maintenance of prices established by the respondent for any such unpatented control."

1395 because there is no substantial evidence in the record herein that any patent other than the Cross and Freeman Patents referred to in subparagraphs 4 and 5 of Paragraph I of the Order has been so used by the respondent. Said subparagraph 6 of Paragraph I of the Order is therefore arbitrary and without basis in law.

4. The Commission exceeded its powers in ordering, in Paragraph II of the Order, that the respondent cease and desist from

"Selling or making any contract for the sale of primary controls on the condition, agreement, or understanding that the purchaser thereof shall not use with such primary controls any * * * thermostats other than those acquired from respondent or from some source authorized by respondent."

for the reason set forth in Paragraph 1(a) above, and for the further reason that the acts and practices sought to be prohibited by said Paragraph II did not constitute violations of Section 3 of the Clayton Act. Said Paragraph II of the Order is therefore arbitrary and without basis in law.

5. The Commission exceeded its powers in ordering, in Paragraph III of the Order, that the respondent cease and desist, in the sale of automatic temperature controls or other furnace controls, from discriminating, directly or indirectly, in the price of such products of like grade and quality as among oil burner manufacturers purchasing said controls in the respects set out in said Paragraph III because:

1396 (a) There is no substantial evidence in the record herein

(i) that the respondent sold such controls to some oil burner manufacturers at prices materially different from the prices charged other competing oil burner manufacturers except where those prices either were such as only made due allowance for differences in costs resulting from the different quantities in which respondent's controls were sold and delivered, or were made in good faith to meet competition; or

(ii) that, as to price differentials not justified by differences in costs, the effect may have been substantially to lessen competition among either control manufacturers or oil burner manufacturers;

(b) The respondent's acts and practices in such regard did not constitute price discrimination in violation of Section 2(a) of the Clayton Act; and

(c) Said Paragraph III of the Order is for those reasons arbitrary and without basis in law.

II.

The Commission erred in its Findings as to the Facts in the following respects:

1. The Commission erred in the first subparagraph of Paragraph Four of the Findings in finding that some
1397 manufacturers of domestic oil burners use an extra limit control, referred to as a "fan control," and that many manufacturers use several primary controls as zone controls for the heating of large spaces.

2. The Commission erred in the second subparagraph of Paragraph Four of the Findings in finding that the respondent owns and controls many of the existing patents relating to primary controls and that there are many thermostats being manufactured and sold by competitors of the respondent which could be, and are, satisfactorily and safely used interchangeably with thermostats of the respondent.

3. The Commission erred in Paragraph Eight of its Findings in finding that competitors of the respondent have, as a result of the provisions of the respondent's contracts referred to in said Paragraph, been prevented from selling thermostats and limit controls in substantial quantities to customers purchasing primary controls from the respondent.

4. The Commission erred in Paragraph Nine of its Findings in finding that the use by the respondent of the acts and practices described in its Findings has substantially injured competition in the sale of automatic temperature controls, has unduly and unreasonably hindered, obstructed, restrained and lessened competition in the manufacture and sale of such controls, and has a tendency to deprive
1398 purchasers and the general public of the benefit of free and active competition in the manufacture and sale of such controls.

5. The Commission erred in the first subparagraph in Paragraph Ten of the Findings in finding that the contracts made by the respondent with various oil burner manufac-

turers which required that such manufacturers purchase at least 90 percent as many room thermostats and 100 percent as many limit controls as primary controls constituted, in effect, contracts for the sale of goods on the condition, and with the agreement and understanding, that such oil burner manufacturers should not use or deal in automatic temperature controls of competitors of the respondent.

6. The Commission erred in the second subparagraph of Paragraph Ten of the Findings in finding that such contract provisions confined the sale of thermostats by competitors of the respondent to respondent's contract customers to quantities not exceeding one-tenth of the quantity of primary controls which such customers purchased from respondent.

7. The Commission erred in the third subparagraph of Paragraph Ten of the Findings in finding that by reason of the dominant position held by the respondent in the sale and distribution of automatic temperature controls and the number of contracts negotiated by the respondent, the
1399 effects of such contracts were substantially to lessen competition and tend to create a monopoly in the respondent in such controls.

8. The Commission erred in Paragraph Fourteen of the Findings in finding that the acts and practices of the respondent therein described have a tendency and capacity to restrain, restrict, and lessen competition in the manufacture and sale of controls in heating systems employing the Cross or Freeman combination of controls, because such acts and practices of the respondent were discontinued long prior to the making of that finding by the Commission, as set forth in paragraph I(2) hereof.

9. The Commission erred in the first and second subparagraphs of Paragraph Sixteen of the Findings in finding that the respondent, since June, 1936, in connection with the sale and distribution of its automatic temperature controls, has discriminated in price between different purchasers buying such controls of like grade and quality, if by that Finding it was intended that it should be understood that respondent has discriminated in price in violation of Section 2 of the Clayton Act, as amended.

10. The Commission erred in the penultimate paragraph of Paragraph Sixteen of the Findings in finding that respondent discriminated in price in favor of customers
1400 buying in large quantities as against those customers buying in smaller quantities, if by that Finding it was

intended that it should be understood that respondent discriminated in price in violation of Section 2 of the Clayton Act, as amended.

11. The Commission further erred in the penultimate subparagraph of Paragraph Sixteen of the Findings in finding that changes in the price of controls to oil burner manufacturers necessarily affected sales and profits and that in some instances customers of the respondent lost business to certain of their competitors who enjoyed lower control prices from the respondent.

12. The Commission erred in the first subparagraph of Paragraph Eighteen of the Findings in finding that the price differences allowed by the respondent in the sale of its automatic temperature controls, based upon quantities as set out in respondent's various bracket prices, constituted discriminations in price between purchasers of commodities of like grade and quality.

13. The Commission erred in the third subparagraph of Paragraph Eighteen of the Findings in finding that oil burner manufacturers who received the benefit of respondent's lower prices have a substantial advantage in selling oil burners equipped with respondent's controls in competition with other oil burner manufacturers purchasing
1401 and using such controls who are obliged to pay respondent's higher prices and that oil burner manufacturers who pay respondent's discount or higher bracket price must, in order to sell their oil burners equipped with respondent's automatic temperature controls in competition with customers of the respondent who receive the benefit of respondent's lower prices, either sell at competitive prices and, in so doing, reduce their possible profits or attempt to sell at higher prices than those charged by such other customers of the respondent with the resultant inability to secure business and a reduction in the volume of their sales.

14. The Commission erred in the last subparagraph of Paragraph Eighteen of the Findings in finding that as a result of the respondent's method of selling, customers paying a higher price are discriminated against with respect to customers paying a lower price while customers paying a lower price are given the benefit of discrimination against customers paying the higher price.

15. The Commission erred in Paragraph Nineteen of the Findings in finding that the respondent's various bracket

prices, particularly in brackets 4 to 6, have tended to, and do, divert trade to the respondent from its competitors and have had a substantial injurious effect upon competition in the sale and distribution of automatic temperature controls.

1402 16. The Commission erred in the first subparagraph of Paragraph Twenty of the Findings in finding that the price differentials allowed by the respondent to its customers on so-called "off-scale sales" constituted a discrimination in price and that as to such off-scale sales no justification has been submitted.

17. The Commission erred in the second subparagraph of Paragraph Twenty of the Findings in finding that in doing what is therein set forth the respondent discriminated in price, if by that finding it was intended that it should be understood that respondent discriminated in price in violation of Section 2 of the Clayton Act, as amended.

18. The Commission erred in the first subparagraph of Paragraph Twenty-One of the Findings in finding that in connection with what is therein referred to as a "dual transaction" the respondent engaged in discriminations in price, if by that finding it was intended that it should be understood that respondent engaged in discriminations in price in violation of Section 2 of the Clayton Act, as amended.

19. The Commission erred in the second subparagraph of Paragraph Twenty-One of the Findings in finding that the practice of the respondent therein referred to constituted a discrimination in price, if by that finding it was intended that it should be understood that such practice of respondent constituted a discrimination in price in violation of Section 2 of the Clayton Act, as amended.

1403 20. The Commission erred in the first subparagraph of Paragraph Twenty-Two of the Findings in finding that the defense or contention of meeting competitive prices cannot be considered as justifying respondent's practice of off-scale selling.

21. The Commission erred in the second subparagraph of Paragraph Twenty-Two of the Findings in finding that the conclusion by the Trial Examiner with respect to 22 of the respondent's oil-burner customers in bracket 4, 4-A and 5 cannot be accepted.

22. The Commission erred in the third subparagraph of Paragraph Twenty-Two of the Findings in finding that in the Williams Oil-O-Matic transaction the meeting of the lower price of a competitor was not involved and also in certain of the statements supporting that finding.

23. The Commission erred in the fourth subparagraph of Paragraph Twenty-Two of the Findings, if by any statement or statements in such subparagraph it was intended that it should be understood that any act of the respondent in connection with the Cleveland Steel Products Company transaction was improper or unlawful.

24. The Commission erred in the fifth subparagraph of Paragraph Twenty-Two of the Findings in finding that the Delco Appliance Division of General Motors transac-
1404 tion did not involve meeting the price of a competitor.

25. The Commission erred in the sixth subparagraph of Paragraph Twenty-Two of the Findings in finding that respondent's price to Gilbert & Barker Manufacturing Company was based entirely on potential output and was not made to meet the price of Penn Switch or any other competitor.

26. The Commission erred in the seventh subparagraph of Paragraph Twenty-Two of the Findings in finding that the respondent failed to prove that any customer whose quantity purchases placed him in brackets 4, 4-A or 5 received a lower price, off-scale or otherwise, to meet an equally low price of a competitor and that at the time the respondent submitted its contracts to such customers it had no knowledge as to what the following-year price of its competitors would be.

27. The Commission erred in the eighth subparagraph of Paragraph Twenty-Two of the Findings in finding that a showing of meeting an equally low price of a competitor in the transactions referred to therein would not constitute a justification either for respondent's practice of allowing off-scale prices or for respondent's prices in brackets 4, 4-A and 5 and that the interpretation of the Clayton Act made by the Trial Examiner is contrary to the express provisions of the Act and the decisions of the Supreme Court construing said Act.

28. The Commission erred in the last subparagraph of Paragraph Twenty-Two of the Findings in finding

1405 that the Trial Examiner erroneously concluded that the price differences of the respondent have not tended to substantially lessen, injure, prevent or destroy competition between the respondent's customers and that such conclusion is not supported by the greater weight of the evidence in this proceeding and, further, that changes in the price of controls to oil burner manufacturers necessarily affected sales and profits.

III.

The Commission erred in its Conclusion in the following respects:

1. The Commission erred in the first paragraph of its Conclusion in holding that the acts and practices of the respondent in incorporating "various provisions" in its contracts have substantially injured competition in the sale in commerce of automatic temperature controls; have unduly and unreasonably hindered, obstructed, restrained and lessened competition in the manufacture and sale in commerce of respondent's automatic temperature controls; and constitute unfair methods of competition in commerce within the intent and meaning of Section 5 of the Federal Trade Commission Act.

2. The Commission erred in the second paragraph of its Conclusion in holding that the acts and practices of the respondent therein described in connection with the Cross and Freeman Patents have a tendency and capacity to restrain, restrict, and lessen competition in the manufacture
1406 and sale of controls and heating systems employing such Patents and constitute unfair methods of competition under the Federal Trade Commission Act, because such acts and practices of the respondent had ceased long prior to the making of the Commission's Findings and Conclusion in this proceeding, as set forth in paragraph I(2) hereof.

3. The Commission erred in the third paragraph of its Conclusion in holding that the acts and practices of the respondent of entering into contracts with the provisions therein described constituted a violation of the provisions of Section 3 of the Clayton Act.

4. The Commission erred in the fourth paragraph of its Conclusion in holding that the differences in prices charged

by the respondent (characterized by the Commission as "discriminations in prices") constitute violations of Section 2(a) of the Clayton Act as amended by the Robinson-Patman Act.

MOTION FOR AN EXTENSION OF TIME FOR FILING PETITIONER'S STATEMENT OF POINTS AND DESIGNATION OF PORTIONS OF THE TRANSCRIPT TO BE INCLUDED IN THE PRINTED RECORD, FOR STAY OF ENFORCEMENT OF ORDER AND FOR OTHER RELIEF.

To the Honorable Judges of the United States Circuit Court of Appeals for the Seventh Circuit:

Now comes the above-named petitioner, by its attorneys, and respectfully moves this Honorable Court for an order granting relief as follows:

1. That the time of petitioner within which to file its statement of points herein and within which to serve and file a designation or stipulation of the portions of the transcript to be contained in the printed record in this Court be extended until 60 days after the date upon which

the Federal Trade Commission shall file in this Court a complete transcript of the record before the Commission;

2. That petitioner, in assigning error in its statement of points with respect to the admission or rejection of
1409 evidence, may make references to the pages of the transcript in lieu of quoting in full the evidence in respect of the admission or rejection of which error shall be so assigned;

3. That enforcement of the Commission's Order in this cause be stayed pending the review thereof by this Court.

In support of this motion, there is attached hereto the affidavit of Roswell L. Gilpatric, Esq.

New York, N. Y.,

1410 IN THE UNITED STATES CIRCUIT COURT OF APPEALS.

* * (Caption—9584) * *

AFFIDAVIT OF ROSWELL L. GILPATRIC.

State of New York,
County of New York. } ss.

Roswell L. Gilpatric, being duly sworn, deposes and says:

1. I am an attorney and counsel-at-law, duly admitted to practice in all the Courts of the State of New York and am a member of the firm of Cravath, Swaine & Moore, attorneys for the above-named petitioner, which is petitioning this Court to review and set aside the Order of the Federal Trade Commission heretofore made in this proceeding.

2. This affidavit is submitted in support of a motion on behalf of petitioner (a) for an extension of time within which to file its statement of points and to serve upon respondent and file with the Court its designation of
1411 the portions of the transcript of the record in such proceeding which are to be contained in the printed record in this Court, (b) for stay of enforcement of said Order, and (c) for other relief incident thereto specifically requested in the foregoing motion.

3. The motion in support of which this affidavit is made accompanies a petition to be filed in this Court to review and set aside said Order of the Federal Trade Commission (hereinafter called the Commission). Said Order directs that petitioner cease and desist from engaging in certain alleged acts and practices in violation of Section 5 of the Federal Trade Commission Act and Sections 2 and 3 of the Clayton Act, as amended by the Robinson-Patman Act.

4. The Findings as to the Facts and Conclusion upon which said Order of the Commission was made are extensive, consisting of 20 single-spaced typewritten pages of elite type. The record before the Commission upon which said Findings as to the Facts and Conclusion are based is voluminous. Hearings before the Trial Examiner appointed by the Commission began on August 10, 1943, and were concluded on October 4, 1945. The typewritten transcript of the oral testimony consists of more than 2,800 pages, and approximately 400 documentary exhibits were received in evidence. Many single exhibits consist of a number of pages, with the result that the exhibits so received in evidence taken together comprise a large number of pages.

5. Said Findings as to the Facts, Conclusion and Order of the Commission were dated and filed on January 14, 1948, and were served on petitioner on January 21, 1948.

6. The pertinent portions of the Rules of this Court
1412 and Statutes relating to the filing of a statement of points are the following:

"* * * The party seeking review shall file a petition and a statement of points * * * within the time prescribed by statute for the filing of such petition. * * *" (Subdivision 1 of Rule 34 of this Court)

"Any person, partnership, or corporation required by an order of the Commission to cease and desist from using any method of competition or act or practice may obtain a review of such order in the circuit court of appeals of the

United States * * * by filing in the court, within sixty days from the date of the service of such order, a written petition praying that the order of the Commission be set aside. * * *" (Subdivision (c) of Section 5 of the Federal Trade Commission Act) (See also Section 11 of the Clayton Act)

"* * * [The statement of points] shall set out separately and particularly each error asserted and intended to be urged. No appeal shall be considered, unless such a statement of points shall have been so filed." (Subdivision 1 of Rule 9 of this Court)

"When the error urged goes to the admission or to the rejection of evidence, the statement of points shall quote the full evidence so admitted or rejected and the objections and rulings thereon, unless the quotation is extremely long or unless the court shall order that page references in lieu of quotations be made." (Subdivision 2 of Rule 9 of this Court)

"The time for taking any action under this rule (except where the time is fixed by statute) may be enlarged by a judge of this court, upon verified petition or motion supported by affidavit." (Subdivision 8 of Rule 34 of this Court)

7. The preparation of a statement of points as required by the above-mentioned Rules of this Court to accompany said petition for review requires an extensive examination and study of the record in said proceeding. The voluminous record of testimony and exhibits must be examined in the light of the Findings as to the Facts, Conclusions and
1413 Order of the Commission. To do that will require a review of all the objections made and exceptions taken in the course of the proceeding before the Trial Examiner on behalf of petitioner, and of the question whether and to what extent said Findings as to the Facts are sustained by evidence. Various errors will have to be asserted in order to raise and preserve the questions of fact and law arising out of the charges made in the complaint of the Commission in said proceeding and out of said Findings as to the Facts.

8. In order that extremely long quotations may not be required in asserting error in the admission or exclusion of evidence, it would be useful if this Court by order, as provided in Subdivision 2 of Rule 9 of the Rules of this Court, as quoted above, should permit that page references in lieu of quotations be made.

9. Designation or stipulation as to the portions of the transcript of the record before the Commission which are to be contained in the printed record is required by Subdivision 5 of Rule 34 of the Rules of this Court. Said Subdivision 5, by reference to the provisions of Rule 75 of the Federal Rules of Civil Procedure, requires that all matter not essential to the decision of the questions presented shall be omitted from the printed record. Selection of the portions of the transcript to be designated or stipulated will depend, therefore, upon the points presented by petitioner in its statement of points. After the selection thereof it will be necessary to indicate the testimony designated or stipulated by appropriate reference to the certified transcript from which the record is to be printed. While petitioner has a copy of the typewritten transcript of the
1414 testimony taken before the Trial Examiner, petitioner does not have a copy of such transcript which has been conformed to show the numerous changes therein that by stipulation have been agreed upon between counsel for the Commission and counsel for petitioner. Moreover, petitioner does not have copies of or reasonable access to a number of the exhibits that were introduced in evidence, and copies of other exhibits which petitioner does have are illegible. For the foregoing reasons petitioner will be unable, within the time within which petitioner is permitted by Section 5 of the Federal Trade Commission Act to file its petition for a review of said Order of the Commission, to prepare a statement of points, and will be unable, within the time specified in the Rules of this Court, to prepare its designation of the portions of the transcript to be contained in the printed record as is required by said Rules. In addition, an extension of the time specified in such Rules for designating the portions of the transcript to be contained in the printed record will provide an opportunity to determine whether it may be possible to stipulate with counsel for the Commission as to portions of the transcript to be contained in the printed record.

Wherefore, this Court is respectfully requested to enter an order granting the motion of petitioner (a) for an extension of time within which to file its statement of points and within which to serve and file its designation of the portions of the transcript to be contained in the printed record in this Court until 60 days after the date upon which the Commission shall file in this Court a complete transcript of the record before the Commission in the above-men-

1415 tioned proceeding, (b) for stay of enforcement of the Order of the Commission pending the review thereof by this Court, and (c) for other relief incident thereto specifically requested in the foregoing motion.

S/ Roswell L. Gilpatric.

Sworn to before me this 10th day of March, 1948.

1416 IN THE UNITED STATES CIRCUIT COURT OF APPEALS.

* * (Caption—9584) * *

March 15, 1948.

Before:

Honorable William M. Sparks, Circuit Judge.
Honorable Otto Kerner, Circuit Judge.

ORDER.

On motion of counsel for petitioner, it is

Ordered that the time of petitioner within which to file its statement of points herein and within which to serve and file a designation or stipulation of the portions of the transcript to be contained in the printed record in this Court is hereby extended until 60 days after the date upon which the Federal Trade Commission shall file in this Court a complete transcript of the record before the Commission; and it is

Further Ordered that petitioner, in assigning error 1417 in its statement of points with respect to the admission or rejection of evidence, may make reference to the pages of the transcript in lieu of quoting in full the evidence in respect of the admission or rejection of which error shall be so assigned; and it is

Further Ordered that enforcement of the Commission's Order in this cause is hereby stayed pending the review thereof by this Court.

1418 IN THE UNITED STATES CIRCUIT COURT OF APPEALS.

(Caption—9584)

STIPULATION WITH RESPECT TO THE PORTIONS OF THE FILED TRANSCRIPT TO BE CONTAINED IN THE PRINTED RECORD.

It Is Hereby Stipulated by the respective counsel for the parties hereto, subject to the approval of the Court, that in the printing of the printed record in this case the following portions of the transcript shall be included subject to the omissions indicated. The purpose of this Stipulation is merely to reduce the size of the printed record and all documents and omitted material remain in the case for reference thereto by the parties and by the Court in the presentation and determination of this cause.

1. Complaint of Federal Trade Commission dated February 23, 1943.

2. Answer of Minneapolis-Honeywell Regulator Company filed April 17, 1943.

2a. Order of the Federal Trade Commission appointing W. W. Sheppard as Trial Examiner.

3. Official report of proceedings before the Trial
1419 Examiner of the Federal Trade Commission (Docket No. 4920), pages 1 through 2815, inclusive, corrected in accordance with directions of Trial Examiner W. W. Sheppard.

4. All exhibits introduced in evidence before the Trial Examiner by the Federal Trade Commission except Commission's Exhibits Nos. 11, 12, 37-53, 55-65, 88-90, 92-102D, 110, D, E, 120-123, 153-195, 204C-D, 208-209.

5. All exhibits introduced in evidence before the Trial Examiner by respondent, Minneapolis-Honeywell Regulator Company, except Respondent's Exhibits Nos. 1-7, 12-22, 24-42, 44-69, 72, 80-101, 103-111, 116, 118-125, 126B-P, 127-132, 133B-F, 134-142, 145-146, 148, 150-151, 156, 158, 160-162, 169-170, 174-179C, 183, and 186.

6. Trial Examiner's Report dated February 21, 1946.

7. Respondent's Exceptions to Trial Examiner's Report dated April 5, 1946.

8. Exceptions of Counsel for the Commission to Trial Examiner's Report dated April 9, 1946.

9. Findings as to the Facts and Conclusion of the Federal Trade Commission dated January 14, 1948.

10. Order to Cease and Desist of the Federal Trade Commission dated January 14, 1948.

11. Opinion of the Commission.

12. Opinion of Commissioner Lowell B. Mason Dissenting in Part and Concurring in Part.

13. Petition, dated March 12, 1948, to Review and Set Aside Order of the Federal Trade Commission filed on behalf of Minneapolis-Honeywell Regulator Company, omitting Exhibit A thereto, consisting of a copy of the Findings as to the Facts and Conclusion of the Commission, a
1420 copy of the Order to Cease and Desist of the Commission, a copy of the Opinion of the Commission and a copy of the opinion of Commissioner Lowell B. Mason.

14. Motion, dated March 10, 1948, for extension of time for filing statement of points and the designation of portions of the transcript to be included in the printed record, etc., and the order made thereon March 15, 1948.

15. Statement of Points filed June 10, 1948, on behalf of Minneapolis-Honeywell Regulator Company.

16. Stipulation with respect to portions of the filed transcript to be contained in the printed record dated June 9, 1948.

June 9, 1948.

It Is So Ordered:
William S. Sparks,
United States Circuit Judge.

June 10, 1948.

Endorsed: Filed June 9, 1948. Kenneth J. Carrick, Clerk.

At a regular term of the United States Court of Appeals for the Seventh Circuit, held in the City of Chicago and begun on the third day of October, in the year of our Lord one thousand nine hundred and fifty and of our Independence the one hundred seventy-fifth:

No. 9584

MINNEAPOLIS-HONEYWELL REGULATOR COMPANY, PETITIONER

vs.

FEDERAL TRADE COMMISSION, RESPONDENT

Petition for Review of an Order of the Federal Trade Commission

And afterward, to-wit, on the fourteenth day of May, 1951, the following further proceedings were had and entered of record, towit:

UNITED STATES COURT OF APPEALS FOR THE SEVENTH CIRCUIT

Chicago 10, Illinois

Monday, May 14, 1951

Before HON. OTTO KERNER, *Circuit Judge;* HON. PHILIP J. FINNEGAN, *Circuit Judge;* HON. WALTER C. LINDLEY, *Circuit Judge*

No. 9584

MINNEAPOLIS HONEYWELL REGULATOR COMPANY, PETITIONER

vs.

FEDERAL TRADE COMMISSION, RESPONDENT

Petition for Review of an Order of the Federal Trade Commission

Now this day come the parties by their counsel, and this cause comes on to be heard on the transcript of record and on the briefs of counsel and on oral argument by Mr. Will Freeman and Mr. Roswell L. Gilpatric, counsel for the Petitioner, and by Mr. James W. Cassedy, counsel for the Respondent, and the Court takes this cause under advisement.

And afterward, to-wit, on the fifth day of July, 1951, there was filed in the office of the Clerk of this Court the opinion of the Court, which said opinion is in the words and figures following, to-wit:

IN THE UNITED STATES COURT OF APPEALS FOR THE SEVENTH CIRCUIT

October Term, 1950, April Session, 1951

No. 9584

MINNEAPOLIS HONEYWELL REGULATOR COMPANY, PETITIONER

v.

FEDERAL TRADE COMMISSION, RESPONDENT

Petition for Review of an Order of the Federal Trade Commission

July 5, 1951

Before KERNER, FINNEGAN, and LINDLEY, *Circuit Judges*

KERNER, *Circuit Judge:*

This is a proceeding to review Part III of an order of the Federal Trade Commission entered on Count III of a complaint filed by the Commission on February 23, 1943, charging in three counts violation by petitioner of §5 of the Federal Trade Commission Act, §3 of the Clayton Act, and §2 of the Clayton Act as amended by the Robinson-Patman Act. We shall refer to petitioner as M-H. Since M-H does not challenge Parts I and II of the order based on the first two counts of the complaint we shall make no further reference to them.

Following hearings before a trial examiner extending from August 12, 1943 to February 14, 1946, that officer rendered his report recommending dismissal of the charges contained in Count III on the ground that it did not appear that M-H had violated §2 of the Clayton Act as amended. The Commission rendered findings of fact and conclusions of law contrary to the report of the examiner and based its cease and desist order thereon. One member dissented.

The alleged violations of §2(a) of the Clayton Act as amended by the Robinson-Patman Act (15 U.S.C. §13(a) and (b)) relate to M-H's practices in connection with the sale of automatic temperature controls to oil burner manufacturers for use in oil burners of the gun or pressure type and the rotary type, both for domestic heating plants. With respect to this the complaint charged price discriminations arising out of M-H's quantity discount pricing system, the effect of which "has been or may be substantially to lessen competition in the line of commerce in which respondent [M-H] is engaged and to injure, destroy and prevent competition between the respondent and its competitors, and to injure, destroy and prevent competition between the customers of said respondent * * *."

Part III of the order here under review provides:

> "It Is Further Ordered that respondent * * * directly or through any corporate or other device in the sale of automatic temperature controls or other furnace controls in commerce * * * cease and desist from discriminating, directly or indirectly, in the price of such products of like grade and quality as among oil-burner manufacturers purchasing said automatic temperature controls and other furnace controls—
>
> "1. By selling such controls to some oil-burner manufacturers at prices materially different from the prices charged other oil-burner manufacturers who in fact compete in the sale and distribution of such furnace controls, when the differences in price are not justified by differences in the cost of manufacture, sale, or delivery resulting from differing methods or quantities in which such products are sold or delivered."

For a proper understanding of the case it is necessary to look to the history of M-H as related to the industry in which it became a dominant factor in its early days. M-H is the successor of two corporations, the Minneapolis Heat Regulator Company which began making heat regulating devices in 1885, and the Honeywell Heating Specialties Company, established in 1906. The two were consolidated in 1927. About 80% of its business is devoted to the manufacture of automatic temperature controls. Its principal competitors during the period here involved were the Mercoid Corporation which had made automatic controls for domestic oil burners since 1922, the Penn Electric Switch Company which started to manufacture and sell such controls in 1932, and the Perfex Corporation which began to sell one of the controls in 1936 and a complete line in 1937.

The process of manufacturing oil burners is one of fabrication in the sense that the manufacturer assembles and puts together the various parts including controls, motors, pumps, fans and transformers, which parts are generally purchased from different sources. Three controls are usually used in each burner, and these three are customarily dealt in as sets, with prices quoted for the sets rather than the individual units.

The examiner found that M-H "has always * * * been a leader in the field * * * and in the development * * * of new and better controls, and * * * throughout the years has spent extensive sums of money in engineering and development work, not only creative engineering of new devices, but in the constant redesigning and improving of its products, and in the lowering of costs." It has also advertised its products very extensively and has maintained 39 branch and district offices equipped with a complete line of its products as well as service personnel trained by M-H to service

those products. The examiner also found that as a result of its advertising and the reputation of its controls for performance and efficiency in operation, there had been developed a large customer demand for and public acceptance of its controls which had for a number of years sold at higher prices than controls of other makes. This public demand enabled dealers to obtain higher prices for burners equipped with M-H controls than with those of its competitors, and there was evidence that there were some dealers who would not purchase burners without M-H controls.

The pricing system which the Commission found was a violation of the Act was a standard quantity discount system. M-H published list prices with discounts or net prices regularly allowed to its various customers according to the trade channels in which they were engaged. These were classified as oil-burner manufacturers who ordinarily used them in the fabrication of their burners, and wholesalers or jobbers and dealers who ordinarily handle them for repair, replacement or auxiliary equipment. Most of its business was with manufacturers who had to purchase at least 50 sets annually in order to qualify as such. M-H usually made contracts with such manufacturers at the beginning of the year, providing for quantity or bracket prices based upon either the number of controls purchased the previous year or, in some cases, the average for two years, or the estimated quantity the manufacturer expected to use during the contract year. If the manufacturer failed to purchase sufficient sets to entitle him to the bracket price allowed, M-H did not require additional payment. However, if he purchased a greater number he was allowed the larger quantity bracket price for the entire year with a credit or refund for the difference in price already paid. The brackets varied somewhat from year to year as to number of sets and prices. The bracket setup for 1947 is shown in Table I.[1]

The Commission found that this system had the capacity and tendency to induce the purchase of M-H controls by various manufacturers and tended to and did divert trade to M-H from its competitors and had had a substantial injurious effect on competition in the sale and distribution of controls. With respect to the effect on customer competition it found that by this system M-H discrim-

---

[1]

TABLE I

Bracket	Annual Volume (Sets)	Net Price Scale
1	50— 349	$17.35
2	350— 999	16.45
3	1,000— 2,499	15.90
3A	2,500— 4,999	15.35
4	5,000— 7,499	14.90
4A	7,500— 9,999	14.25
5	10,000—up	13.75

inated in price in favor of customers buying in larger quantities as against those buying in smaller quantities; that changes in the price of controls to oil burner manufacturers resulted in many instances in corresponding changes in the price of completed oil burners and necessarily affected sales and profits; and that in some instances customers of M-H lost business to certain of their competitors who enjoyed lower control prices from M-H. Since it further found that the discriminatory differentials were justified by cost differentials only as to the prices in the first four brackets which were applicable to less than 45% of its manufacturer business, leaving over 55% of the business in the three lowest cost price brackets not subject to that defense, and that M-H had not established that any customer in those three brackets had received a lower price to meet an equally low price of a competitor, it concluded that the discriminations constituted violations of the Act. In reaching this conclusion it stated that the examiner was in error in his conclusion that the price discriminations given by M-H had not tended to substantially lessen, injure, prevent or destroy competition.

Under the rule of *Universal Camera Co.* v. *National Labor Relations Board*, 340 U. S. 474, 496, it is the duty of this court to examine the record as a whole, including the report of the examiner, in order to determine whether the evidence supporting the Commission's order is substantial. As the Court there observed, "* * * evidence supporting a conclusion may be less substantial when an impartial, experienced examiner who has observed the witnesses and lived with the case has drawn conclusions different from the Board's than when he has reached the same conclusion. The findings of the examiner are to be considered along with the consistency and inherent probability of testimony." And we think the evidence supporting the conclusion may become even less substantial when it fails to persuade an experienced member of the Commission who dissents from its findings and conclusions.

With this general test of substantiality in mind we turn to a study of the evidence as it relates to the issue whether M-H discriminations in fact did or might tend to injure or prevent competition as between itself and its competitors or as between its customers. We deem this the primary issue here involved. Unless its discriminations do or may tend to injure competition there is no need for M-H to justify them. From our examination of the record as a whole we are convinced that the findings of the examiner were supported by very substantial evidence, considerable of which the Commission rejected because, it stated, it found it immaterial or uncorroborated.

Among the various undisputed facts as to the effect of M-H's practices on competitor competition, as summarized by M-H, are

(a) that the prices charged for controls by M-H's competitors were generally lower than those of M-H and that there is no evidence of any undercutting of its competitors' prices by M-H;

(b) that throughout the complaint period there existed the keenest kind of price competition among control manufacturers;

(c) that the total business of M-H's competitors increased, and the three new concerns which entered the industry after 1932 have enjoyed a steady growth in sales volume;

(d) that M-H's share of the available control business was reduced from 73% in 1937-1938 to only 60% in 1941;

(e) that in 1941 M-H lost to its competitors 53% of the control business of 31 customers who previously had standardized on M-H's controls; and

(f) that in the same year, 126 of M-H's other oil burner manufacturer-customers also purchased competitive controls.

The foregoing facts fully establish the examiner's finding that competitor competition was not injured, a finding concurred in by the dissenting member of the Commission, and they outweigh the facts relied upon by the Commission in reaching the opposite conclusion. And while the findings of an examiner are not "as unassailable as a master's" (*Universal Camera Co.* v. *National Labor Relations Board*, 340 U. S. 474, 492), where it appears from the record that they are supported by a preponderance of the evidence, the action of the Commission in rejecting them is arbitrary. *Folds* v. *Federal Trade Commission*, 187 F. 2d 658, 661. M-H was entitled to meet the competition built up in its field, and even if it did succeed in retaining or diverting some business which might otherwise have gone to some of its competitors, where those competitors were able to enter its field and build thriving businesses in spite of M-H's commanding position and alleged wrongful practices, we think it cannot be said that the effect of those practices was substantially to injure competition. And we construe the Act to require substantial, not trivial or sporadic, interference with competition to establish violation of its mandate. Even though we assume that the burden of proving absence of injury to competition falls on the accused (see *Samuel H. Moss* v. *Federal Trade Commission*, 148 F. 2d 378; *Federal Trade Commission* v. *Standard Brands, Inc.*, decided by the

Second Circuit March 30, 1951, modified June 4, 1951), we think M-H has met that burden with respect to its competitor competition.

With respect to the question of customer competition a somewhat different problem is presented. The Commission based its conclusion that M-H's practices injured that competition on the general finding that because the price of the control represented the largest single item of cost among the various parts of the finished burner, changes in the price of controls to manufacturers resulted in corresponding changes in the price of completed burners and necessarily affected sales and profits. It further found generally that "oil-burner manufacturers testified that the question of price was important in the purchase of automatic temperature controls and that they had lost business to certain competitors, including Quiet-Heet, who enjoyed lower control prices from respondent, although the exact volume of such lost business could not be calculated."

The absence of causal connection between the price of controls and the price of the finished products generally is demonstrated by the stipulation entered into prior to the hearing:

> "Some manufacturers paying higher prices for respondent's automatic temperature controls were able to, and often did, sell their oil burners complete with controls at prices below those which other similar manufacturers paying lower prices for respondent's * * * controls sold their oil burners.
>
> "Some manufacturers paying lower prices for respondent's * * * controls were able to, and often did, sell their oil burners complete with controls at prices below those which other similar manufacturers paying higher prices for respondent's * * * controls sold their oil burners."

Even though some manufacturers did testify that "the question of price was important * * * and that they had lost business to certain competitors who enjoyed lower control prices * * *" we think it is equally significant that other manufacturers who paid the higher prices testified that they did not lose business as a result of paying such higher control prices, and that they considered other factors of far greater importance in determining the price of the completed burner. They referred to such matters as manufacturing methods, overhead, distribution costs, service, advertising, as having an important bearing on comparative prices in addition to the costs of the component parts.

In further proof of its contention that the price of controls was not the vital factor in arriving at burner prices and in fact had very little relation to it, M-H submitted a table derived from the findings of a nation-wide survey showing the range of prices charged by its

customers in each price bracket for the year 1941.[2] From this survey, it will be noted that the highest price charged for burners, $114.50, was by a customer having the advantage of the lowest price bracket for M-H controls, and that a customer in the next-to-highest price bracket sold its burner for the lowest price, $45. Many variations can be made from these facts. All seem to add up to the one fact that there is little, if any, relationship between the prices of the controls and the prices of the burners into which the controls are built, hence that the evidence does not support the Commission's finding that "changes in the price of * * * controls resulted in corresponding changes in the price of completed burners."

Reference was made in the general finding quoted above to Quiet Heet as one of the manufacturers enjoying lower control prices to which other manufacturers lost an undetermined volume of business. There is no question on this record but that Quiet Heet, entering the field in 1936, very soon became the largest producer in the industry, and by 1941 was able to sell its burners at the lowest price. The Commission attributed this to the fact that it bought its controls from M-H for the lowest price. We think this is to ignore the vast discrepancy between the range of prices for controls and that for the finished burners. The fact was, as established by the evidence, that Quiet Heet entered the field with entirely different theories of production and distribution from those of its already established competitors. Its proprietor testified that he "started out to merchandise it on a volume basis, effecting certain economies, making a few shortcuts here and there and trimming down my overhead and operating costs to the minimum." Among those economies were the elimination of all field service which was one of the heavy items of expense of the higher price manufacturers, reduction of advertising costs to a minimum by its own use of printed postcards to the trade and by charging dealers for all advertising matter furnished to them, and adoption of cheaper packaging methods and materials. It was this type of economies that enabled Quiet Heet to sell its burner in 1941 for $68.50 less than its highest price competitor who paid the

---

[2]

TABLE II

Prices Charged Oil Burner Manufacturers by M-H for Controls	Range of Prices Charged Wholesalers by Oil Burner Manufacturers for Burners	
	Low	High
Bracket 1	$17.35	$50.00	$111.00
Bracket 2	16.45	45.00	96.20
Bracket 3	15.90	47.50	102.00
Bracket 3A	15.35	52.50	89.00
Bracket 4	14.90	61.70	100.00
Bracket 4A	14.25	55.00	101.25
Bracket 5	13.75	45.00	114.50

same price for the control, and for $66 less than its next highest price competitor who paid only $3.60 more for its controls, as shown in Table II, footnote 2.

Part of the fallacy of the Commission's position lies in its analysis of the competitive situation between the various manufacturers. This is reflected in its order where it refers to manufacturers "who in fact compete in the sale and distribution of such furnace controls," as if the controls themselves were the article of merchandise they dealt in instead of the burners of which the controls were only one part. It may be true that if the manufacturers were generally selling controls as such, a differential of two or three dollars in the price they paid for them would have a substantial effect on the price obtained. Under such circumstances a finding that a competitive advantage in purchase price paid would necessarily give rise to a competitive advantage in sale price would perhaps be justified. But where the controls were used in the manufacture of burners, the cost of which was determined by many other factors—cost of other materials and parts, service, advertising, to mention only a few—it cannot be said that discriminatory price differentials substantially injure competition or that there is any reasonable probability or even possibility that they will do so. Cf. *Corn Products Refining Co.* v. *Federal Trade Commission*, 324 U. S. 726, 738, 742; *Federal Trade Commission* v. *Morton Salt Co.*, 334 U. S. 37, 46. And a mere possibility of such injury is insufficient to sustain a charge of violation of the Act. *Corn Products Refining Co.* v. *Federal Trade Commission*, 324 U. S. 726, 742.

We are convinced that here "the inferences on which the * * * findings were based were so overborne by evidence calling for contrary inferences that the findings * * * could not, on the consideration of the whole record, be deemed to be supported by 'substantial' evidence." (*National Labor Relations Board* v. *Pittsburgh Steamship Co.*, 340 U. S. 498, 502.)

Since we have concluded that the Commission was in error in finding that the effect of M-H's practices was to substantially lessen or prevent competition between either it and its competitors or its customers, we do not reach the question whether M-H justified those practices by an adequate showing that its differentials in the lowest price brackets which it did not contend were justified by cost differentials were made in good faith to meet an equally low price of a competitor.

Part III of the order must be reversed and Count III of the complaint upon which it is based, dismissed. It is so ordered.

And on the same day, to-wit, on the fifth day of July, 1951, the following further proceedings were had and entered of record, to-wit:

UNITED STATES COURT OF APPEALS FOR THE SEVENTH CIRCUIT

Chicago 10, Illinois

Thursday, July 5, 1951

Before Hon. Otto Kerner, *Circuit Judge;* Hon. Philip J. Finnegan, *Circuit Judge;* Hon. Walter C. Lindley, *Circuit Judge*

No. 9584

Minneapolis-Honeywell Regulator Company, petitioner

vs.

Federal Trade Commission, respondent

Petition for Review of an Order of the Federal Trade Commission

This cause came on to be heard on the transcript of the record from the Federal Trade Commission and was argued by counsel.

On consideration whereof, it is ordered and adjudged by this Court that Part III of the decision of the Federal Trade Commission entered in this cause on January 14, 1948, be, and the same is hereby, Reversed, and Count III of the complaint upon which it is based be, and the same is hereby Dismissed.

And afterward, to-wit, on the eighteenth day of September, 1951, the following further proceedings were had and entered of record, to-wit:

Filed September 18, 1951. Kenneth J. Carrick, Clerk.

IN THE UNITED STATES COURT OF APPEALS FOR THE SEVENTH CIRCUIT

No. 9584

Minneapolis-Honeywell Regulator Company, a Corporation, petitioner

v.

Federal Trade Commission, respondent

Final Decree

Minneapolis-Honeywell Regulator Company, a corporation, petitioner herein having filed in this Court on March 11, 1948 its petition to review and set aside an order to cease and desist issued

against it on January 14, 1948 by the Federal Trade Commission, respondent herein, in a proceeding before said respondent entitled "In the Matter of Minneapolis-Honeywell Regulator Company, a corporation, Docket 4920"; and a copy of said petition having been served upon respondent; and the respondent having thereafter certified and filed herein as required by the Federal Trade Commission and Clayton Acts, a transcript of the entire record in said proceeding; and the respondent having filed herein a cross-petition against the petitioner Minneapolis-Honeywell Regulator Company praying that petitioner's petition to review be dismissed and that the Court make and enter herein a decree affirming and enforcing respondent's said order to cease and desist; and the matter having been heard by this Court on briefs and oral argument; and the Court having thereafter fully considered the matter; and it appearing to the Court that petitioner does not challenge Parts I and II of the order to cease and desist and that said parts of the order should be affirmed and enforced; and it further appearing to the Court that Part III of the order to cease and desist should be reversed and Count III of the complaint upon which it is based should be dismissed;

NOW, THEREFORE, IT IS HEREBY ORDERED, ADJUDGED AND DECREED:

(a) That Part III of the order to cease and desist issued by the Federal Trade Commission against Minneapolis-Honeywell Regulator Company, a corporation, on the 14th day of January, 1948, in a proceeding before the Federal Trade Commission entitled "In the Matter of Minneapolis-Honeywell Regulator Company, a corporation, D. 4920" be and the same is hereby reversed and Count III of the complaint upon which it is based be and the same is hereby dismissed;

(b) That Parts I and II of the order to cease and desist issued by the Federal Trade Commission against Minneapolis-Honeywell Regulator Company, a corporation, on the 14th day of January, 1948, in a proceeding before the Federal Trade Commission entitled "In the Matter of Minneapolis-Honeywell Regulator Company, a corporation, Docket 4920" be and the same hereby are affirmed;

(c) That Minneapolis-Honeywell Regulator Company, a corporation, and its officers, agents, representatives and employees, directly or through any corporate or other device in connection with the offering for sale, sale, and distribution of automatic temperature controls and other furnace controls in commerce as "commerce" is defined in the Federal Trade Commission Act, do forthwith cease and desist from—

1. Selling or making any contract for the sale of automatic temperature controls on the condition, agreement, or under-

standing that the purchaser shall purchase as many limit controls as primary controls.

2. Selling or making any contract for the sale of automatic temperature controls on the condition, agreement, or understanding that the purchaser thereof shall purchase 90 percent as many thermostats as primary controls.

3. Entering into, continuing, or carrying out any agreement or understanding which requires a purchaser to buy any number of limit controls or thermostats with the purchase of respondent's primary controls; provided, however, that nothing herein contained shall prohibit the respondent from selling its automatic temperature controls in sets at a specified price per set.

4. Licensing or otherwise authorizing the use of the furnace control system covered by the Cross Patent on the condition, agreement, or understanding that only automatic stoker switches manufactured or sold by the respondent shall be used in such combination.

5. Licensing or otherwise authorizing the use of the furnace control system covered by the Freeman Patent on the condition, agreement, or understanding that the combination furnace control or any other control used in such system be sold at the price established by the respondent.

6. Using any patent covering a system of furnace controls to require the purchase from respondent of any unpatented control used in said system or requiring the maintenance of prices established by the respondent for any such unpatented control;

(d) That Minneapolis-Honeywell Regulator Company, a corporation, and its officers, agents, representatives and employees, directly or through any corporate or other device in connection with the sale, or the making of any contract for the sale of automatic temperature controls or other furnace controls in commerce, as "commerce" is defined in that Act of Congress entitled "An Act to Supplement Existing Laws against unlawful restraints and monopolies, and for other purposes", approved October 15, 1914 (Clayton Act), do forthwith cease and desist from—

1. Selling or making any contract for the sale of primary controls on the condition, agreement, or understanding that the purchaser thereof shall not use with such primary controls any limit controls or thermostats other than those acquired from respondent or from some source authorized by respondent.

And It Is Hereby Further Ordered, Adjudged and Decreed that within 90 days after the entry of this decree the petitioner, Minneapolis-Honeywell Regulator Company, a corporation, shall file with the Federal Trade Commission a report in writing setting

forth in detail the manner and form in which it has complied with this decree.

Without prejudice to the right of the United States, as provided in Section 5(1) of the Federal Trade Commission Act to prosecute suits, to recover civil penalties for violations of Part I of the aforesaid order to cease and desist hereby affirmed and enforced, and without prejudice to the right of the Federal Trade Commission to institute and maintain contempt proceedings for violation of this decree, this Court retains jurisdiction of this cause to enter such further orders herein from time to time as may become necessary effectively to enforce compliance in every respect with this decree and to prevent evasion thereof.

By the Court.

UNITED STATES COURT OF APPEALS FOR THE SEVENTH CIRCUIT

Chicago 16, Illinois

I, Kenneth J. Carrick, Clerk of the United States Court of Appeals for the Seventh Circuit, do hereby certify that the foregoing printed and typewritten pages contain a true copy of the order taking the cause under advisement, the opinion of the Court, the Judgment of the Court, and the final decree, in: Cause No. 9584, Minneapolis-Honeywell Regulator Company, Petitioner, vs. Federal Trade Commission, Respondent, as the same remains upon the files and records of the United States Court of Appeals for the Seventh Circuit.

In testimony whereof I hereunto subscribe my name and affix the seal of said United States Court of Appeals for the Seventh Circuit, at the City of Chicago, this twenty-seventh day of November A. D. 1951.

[SEAL.]

(S.) KENNETH J. CARRICK,
Clerk of the United States Court of Appeals for the Seventh Circuit.

FEDERAL TRADE COMMISSION, PETITIONER

v.

MINNEAPOLIS-HONEYWELL REGULATOR COMPANY

PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SEVENTH CIRCUIT

The Solicitor General prays that a writ of certiorari issue to review the judgment of the Court of Appeals for the Seventh Circuit entered in the above-entitled cause on September 18, 1951.

OPINION BELOW

The opinion of the court of appeals (R. 2308-2315) is reported at 191 F. 2d 786.

JURISDICTION

The final decree of the court of appeals was entered on September 18, 1951 (R. 2316-2319). The jurisdiction of this Court is invoked under Title 28 of the United States Code, § 1254(1).

QUESTIONS PRESENTED

1. Whether, in a proceeding under Section 2(a) of the Clayton Act involving injury to competition among a seller's customers resulting from the seller's discriminatory pricing practices, a finding of such injury to competition is adequately supported by evidence showing that substantial price differentials have been given to customers competing with each other, or whether it is also necessary to prove that particular customers have in fact been adversely affected by the discriminatory prices.

2. Whether under *Universal Camera Corp.* v. *National Labor Relations Board*, 340 U. S. 474, a reviewing court is justified in setting aside findings of fact by an administrative agency because of the reviewing court's conclusion that contrary findings recommended by the trial examiner have substantial evidentiary support which outweighs the facts relied on by the Commission.

STATUTE INVOLVED

Section 2 of the Clayton Act, 38 Stat. 730, as amended by the Robinson-Patman Act, 49 Stat. 1526, 15 U.S.C. § 13, provides in part:

> (a) That it shall be unlawful for any person engaged in commerce, in the course of such commerce, either directly or indirectly, to discriminate in price between different purchasers of commodities of like grade and quality, where either or any of the purchases involved in such discrimination are in commerce, where

such commodities are sold for use, consumption, or resale within the United States * * * and where the effect of such discrimination may be substantially to lessen competition or tend to create a monopoly in any line of commerce, or to injure, destroy, or prevent competition with any person who either grants or knowingly receives the benefit of such discrimination, or with customers of either of them: *Provided*, That nothing herein contained shall prevent differentials which make only due allowance for differences in the cost of manufacture, sale, or delivery resulting from the differing methods or quantities in which such commodities are to such purchasers sold or delivered: * * *

(b) Upon proof being made, at any hearing on a complaint under this section, that there has been discrimination in price or services or facilities furnished, the burden of rebutting the prima-facie case thus made by showing justification shall be upon the person charged with a violation of this section, and unless justification shall be affirmatively shown, the Commission is authorized to issue an order terminating the discrimination: *Provided, however*, That nothing herein contained shall prevent a seller rebutting the prima-facie case thus made by showing that his lower price or the furnishing of services or facilities to any purchaser or purchasers was made in good faith to meet an equally low price of a competitor, or the services or facilities furnished by a competitor.

STATEMENT

This petition seeks review of the portion of a judgment of the Court of Appeals for the Seventh Circuit which reversed a part of an order of the Federal Trade Commission directing respondent to cease and desist from violating Section 2(a) of the Clayton Act, as amended by the Robinson-Patman Act (15 U.S.C. § 13). The Commission's order, issued January 14, 1948, after extended hearings, comprised three parts. Part III, the portion presently involved, dealt with price discriminations resulting from respondent's quantity discount pricing system.[1]

The facts relating to respondent's business, as found by the Commission and accepted by the court below (R. 2309-2311), are as follows:

Respondent is one of the country's principal manufacturers of automatic temperature controls (R. 2241). These controls, constituting an important item in oil burners, are sold by respondent to manufacturers of such burners, and to wholesalers, contractors and dealers in burners and automatic temperature controls (*ibid.*). The controls generally are sold in sets of three (R. 2242), and a set constitutes the principal cost item of the burner—

---

[1] Parts I and II, dealt, respectively, with unfair methods of competition in violation of Section 5 of the Federal Trade Commission Act, and exclusive dealing contracts in violation of Section 3 of the Clayton Act. Although respondent's petition to review attacked all three parts of the order (R. 2284-98), respondent abandoned its challenge to parts I and II during the proceedings in the court below (R. 2308). The court of appeals affirmed and enforced Parts I and II (R. 2317-2318).

often as high as 40% of the total cost (R. 2252). From 1939 to 1941, respondent sold approximately 60% of all automatic controls sold in the United States (R. 2241). As a result of substantial advertising expenditures, respondent has developed a large public demand for its controls, and burners equipped with them frequently have been sold for $2.50 to $5.00 more than the same burners equipped with controls made by respondent's competitors (R. 2242).

During the period 1937 to 1941 respondent followed a standard quantity discount pricing system (R. 2250-52). Discounts from published list prices were given to all purchasers of 50 or more sets of controls annually (2250). The net prices decreased as the quantities purchased increased. During 1941 respondent had seven different quantity price brackets. Prices varied from $17.35 per set in the lowest volume bracket (50-349 sets) to $13.75 per set for the largest purchasers (10,000-up) (R. 2252).

At the beginning of each year respondent generally entered into annual contracts covering customer requirements (R. 2243, 2253). The specified quantity, upon which the price was determined, was based upon the customer's past requirements (R. 2253). If a customer failed to purchase the specified quantity, the price was not increased to the higher level which would have been required to comply with the standard discount scale (*Ibid.*). On the other hand, if total purchases exceeded the

contract figure so as to bring the purchaser into a lower price range, he received such lower price, by retroactive discounts or otherwise (*ibid.*) This system was known as "off-scale" pricing (R. 2254).

On the basis of the foregoing facts, the Commission found, contrary to the conclusion of the trial examiner (R. 2202), that the price differentials substantially injured competition between respondent and its competitors, and among its customers, (R. 2256, 2260). It further found, on the basis of a cost accounting study made by respondent, that the differentials were justified by cost differentials only in the four highest price brackets, covering less than 45% of respondent's total sales (R. 2254), and that the differentials in the three lowest price brackets, as well as the "off-scale" prices, were justified neither by cost differentials nor were made in good faith to meet an equally low price of a competitor (R. 2257-60). The Commission accordingly directed respondent to cease and desist from—

> selling such controls to some oil-burner manufacturers at prices materially different from the prices charged other oil-burner manufacturers who in fact compete in the sale and distribution of such furnace controls, when the differences in prices are not justified by differences in the cost of manufacture, sale, or delivery resulting from differing methods or

quantities in which such products are sold or delivered [R. 2264].

On respondent's petition to review the Commission's order, the court of appeals held that the Commission's findings that respondent's practices had substantially lessened or prevented competition between it and its competitors, or among its customers, were not supported by substantial evidence. (R. 2315.) The court accordingly did not reach the question whether the discriminations had been made in good faith to meet an equally low price of a competitor.

The court, in rejecting the Commission's findings as to injury to *customer* competition, relied upon evidence that in many instances there appeared to be no direct correlation between the size of the discount on the controls and the price at which burners were sold by the purchasers of the controls, and that one manufacturer, although in the highest price bracket, had been able to undersell all competitors because of production economies (R. 2313-2315). The court also pointed to the fact that the cost of controls was only one element in the over-all cost of the burners (R. 2315). In overturning the Commission's findings as to injury to *competitor* competition, the court relied on evidence that the business of respondent's competitors had increased during the period involved (R. 2312). The court stated that such facts "fully establish the examiner's finding

that competitor competition was not injured", and concluded that when the examiner's findings "are supported by a preponderance of the evidence, the action of the Commission in rejecting them is arbitrary" (*ibid.*).

SPECIFICATION OF ERRORS TO BE URGED

The court of appeals erred—

(1) In holding that proof of injury to customer competition required a showing of causal relationship between the seller's discriminatory prices and its customers' prices, and in failing to hold that a finding of injury to customer competition was adequately supported by evidence that substantial price discriminations were given by the seller among customers who were competing with each other.

(2) In holding that the Commission acted arbitrarily in rejecting the trial examiner's recommended findings, and that an Examiner's findings which the reviewing court believes to be supported by the preponderance of the evidence are binding upon the Commission.

(3) In holding that the Commission erred in finding that the effect of respondent's quantity discount pricing system was substantially to lessen or to prevent competition between respondent and its competitors, or among its customers.

(4) In substituting its judgment for that of the Commission as to the effects upon competition of respondent's quantity discount pricing system.

(5) In reversing part III of the Commission's order and dismissing Count III of the Commission's complaint.

REASONS FOR GRANTING THE WRIT

1. The rationale of the decision by the court below on injury to *customer* competition was its determination that no actual injury to such competition had been shown. In reaching this conclusion the court applied an unduly restrictive standard of injury to competition—actual injury rather than a reasonable possibility thereof—directly contrary to the interpretation which this Court placed upon Section 2(a) in *Federal Trade Commission* v. *Morton Salt Co.*, 334 U. S. 37.[2]

In the *Morton Salt* case, the Court had before it a standard quantity discount system similar to that of respondent. The Commission had held that such a system violated Section 2(a) of the Act in that it injured competition among customers. The company contended, *inter alia*, that the findings failed to show that the discriminatory discounts had in fact injured competition, and that the evidence was insufficient to support the findings.

In rejecting the first contention, this Court pointed out that, although there were specific findings that injury to competition had resulted from the discounts, "the statute does not require the

[2] The test applied also is narrower than the "reasonable probability" test approved in the dissenting opinion of Mr. Justice Jackson (334 U. S. at 56).

Commission to find that injury has actually resulted" (p. 46). The Court said (pp. 46-47):

> The statute requires no more than that the effect of the prohibited price discriminations "may be substantially to lessen competition * * * or to injure, destroy, or prevent competition." After a careful consideration of this provision of the Robinson-Patman Act, we have said that "the statute does not require that the discriminations must in fact have harmed competition, but only that there is a reasonable possibility that they 'may' have such an effect." *Corn Products Co.* v. *Federal Trade Comm'n*, 324 U.S. 726, 742. Here the Commission found *what would appear to be obvious, that the competitive opportunities of certain merchants were injured when they had to pay respondent substantially more for their goods than their competitors had to pay.* [Italics added]

In holding that the findings were supported by the evidence, the Court first noted the testimony of many witnesses "that they had suffered actual financial losses on account of respondent's discriminatory prices." It went beyond this, however, and pointed out that such evidence was unnecessary. The Court stated (pp. 50-51):

> It would greatly handicap effective enforcement of the Act to require testimony to show that which we believe to be self-evident, namely, that there is a "reasonable possibility" that competition may be adversely affected

> by a practice under which manufacturers and producers sell their goods to some customers substantially cheaper than they sell like goods to the competitors of these customers. This showing in itself is sufficient to justify our conclusion that the Commission's findings of injury to competition were adequately supported by evidence.

Thus, under *Morton Salt* all that is needed to support a finding of injury to customer competition under Section 2(a) is a showing that discriminatory prices have been given to customers competing with each other, and that such discriminations were substantial. As *Morton Salt* makes clear, such discriminations perforce injure competition. This rule reflects the Congressional determination that it was an "evil" that a large buyer could secure a "competitive advantage" over a smaller buyer "solely because of the large buyer's quantity purchasing ability. The Robinson-Patman Act was passed to deprive a large buyer of such advantages except to the extent that a lower price could be justified by reason of a seller's diminished costs due to quantity manufacture, delivery or sale, or by reason of the seller's good faith effort to meet a competitor's equally low price." 334 U.S. 37, 43.

Although in the present case the Commission found that there had been substantial price discriminations among customers competing with each other (R. 2255)—a finding that under *Morton Salt*

is sufficient to establish a violation of Section 2(a)— the court below ignored the *Morton Salt* rule and substituted a requirement of "causal connection" between the price discriminations and the customers' selling prices. (R. 2313). By this the court obviously meant that there must be direct proof that the discount affected the price of the customers' products. The court below thus reviewed the Commission's order on the very basis rejected in *Morton Salt*, namely, whether the evidence showed that particular customers had in fact been adversely affected by the discriminatory prices.

The evidence that the court relied on—the apparent lack of causal connection between the size of the discount on the controls and the selling price of the burners—was considered by the Commission but not deemed persuasive. The Commission found that competitors paying the higher prices "must either sell at competitive prices and, in so doing, reduce their possible profits by the amounts of discriminations against them or attempt to sell at higher prices than those which the favored customers of respondent charge for oil burners equipped with respondent's automatic temperature controls, with the result of inability to secure business and a reduction in the volume of their sales" (R. 2255). Furthermore, the court below conceded that "some manufacturers did testify that 'the question of price was important * * *

and that they had lost business to certain competitors who enjoyed lower control prices * * *" but thought this testimony outweighed by the evidence of other manufacturers (R. 233). It is apparent from this discussion that the court was substituting its own appraisal of the evidence for that of the Commission.

The court of appeals did not attempt to distinguish the *Morton Salt* situation factually. It merely concluded that here there was no more than a mere possibility of injury to competition. However, in the *Morton Salt* case this Court in effect held as a matter of law that sale to two competitors at substantially different prices of itself permits the Commission to infer the existence of a reasonable possibility of injury to competition.

The decision of the court below treats as a problem requiring weighing of evidence the same kind of a situation in which this Court in *Morton Salt* admonished the Commission for taking evidence. As the Court stated in *Morton Salt* (334 U.S. at 50):

> The Commission here went much further in receiving evidence than the statute requires. It heard testimony from many witnesses in various parts of the country to show that they had suffered actual financial losses on account of respondent's discriminatory prices * * * The evidence covers about two thousand pages, largely devoted to this single issue—injury to competition.

The Commission hearings in this case (held before the decision in *Morton Salt*) ran intermittently from August 10, 1943, to October 4, 1945, took place in Chicago, Illinois, New York City, and "other cities throughout the country" (R. 2171), and cover more than 1600 pages in the printed record (R. 29-1640). It was precisely a hearing of this magnitude that the rule of *Morton Salt* was intended to obviate. The administrative process would be unduly burdened if the Commission were required to develop a comparable factual record in every Section 2(a) case showing that discriminatory prices had in fact resulted in variations among customers' selling prices. Cf. 334 U.S. at 50.

The fact, adverted to by the court below, that controls are only one element that goes into a burner—albeit the major one—and that burner manufacturers also may obtain discounts from manufacturers of other component parts, affords no basis for distinguishing *Morton Salt*. Competition still is injured. As the Commission stated in its opinion (R. 2275): "Each seller who may have contributed to the aggregate price or cost advantages obtained by the favored burner manufacturers is, in part, responsible for the aggregate competitive result. The fact that the whole competitive effect cannot be traced to respondent alone does not relieve respondent of its share of responsibility * * *." Respondent cannot find exculpation for its injury to competition in similar

injuries that may have been inflicted by other manufacturers. A similar argument was rejected in *Morton Salt* (pp. 48-49).[3]

If the decision below—clearly in conflict with *Morton Salt*—is allowed to stand unreversed, the law in this field will be left in a state of confusion, and the Commission will (at least in the substantial number of cases where review in the Seventh Circuit is a possibility)[4] have to return to the practice of receiving evidence of effects upon competition in an area where this Court has held that such effects may be presumed.

2. Insofar as injury to competition with *competitors* of respondent is concerned, the decision of the court below involves a misapplication of the doctrine of *Universal Camera Corp.* v. *National Labor Relations Board*, 340 U.S. 474. In the *Universal Camera* case this Court merely held that in

---

[3] "* * * reference is made to the fact that salt is a small item in most wholesale and retail businesses and in consumers' budgets. For several reasons we cannot accept this contention.

"There are many articles in a grocery store that, considered separately, are comparatively small parts of a merchant's stock. Congress intended to protect a merchant from competitive injury attributable to discriminatory prices on any or all goods sold in interstate commerce, whether the particular goods constituted a major or minor portion of his stock. Since a grocery store consists of many comparatively small articles, there is no possible way effectively to protect a grocer from discriminatory prices except by applying the prohibitions of the Act to each individual article in the store."

[4] Under Section 11 of the Clayton Act, review of Commission orders may be had in any circuit in which the violation was committed or where the violator resides or carries on business. Many cases would thus be subject to review in the Seventh Circuit, and the Commission would have no way of ascertaining in advance of the hearing where a petition to review might be filed.

deciding whether an agency's findings were supported by substantial evidence, the Administrative Procedure Act requires appellate courts to look at the whole record, not just at those portions sustaining the agency action, and that the "whole record" includes the trial examiner's report. However, nothing in that case intimates that the reviewing court is to substitute the examiner's decision for that of the agency whenever it finds that the examiner's recommended findings are themselves supported by substantial or even (in the court's opinion) a preponderance of the evidence. On the contrary, this Court in *Universal Camera* specifically rejected the "notion" that the Board "has power to reverse an examiner's findings only when they are 'clearly erroneous'" (340 U.S. at 492).

Yet the court below appears to have given just such primacy to the examiner's conclusions in reviewing the substantiality of the evidence. The court stated that from its examination of the record as a whole it was "convinced that the findings of the examiner were supported by very substantial evidence" (R. 2311). After summarizing "various undisputed facts" relating to competitor competition, the court said (R. 2312):

> The foregoing facts fully establish the examiner's finding that competitor competition was not injured * * * and they outweigh the facts relied upon by the Commission in reaching the opposite conclusion. And while the findings of an examiner are not "as unassail-

able as a master's " (*Universal Camera Corp.* v. *National Labor Relations Board*, 340 U.S. 474, 492), where it appears from the record that they are supported by a preponderance of the evidence, the action of the Commission in rejecting them is arbitrary.

Thus not only did the court below erroneously substitute its judgment for that of the Commission—a practice specifically condemned in the *Universal Camera* case (see 340 U.S. at 488)—but it accorded a significance to the examiner's report that would stifle a regulatory agency's exercise of its own independent judgment on the basis of the entire record before it and its expertise in the field. This criticism is particularly pertinent where, as here, the evidence did not require the Commission to resolve conflicting testimony as to factual matters, in which situation the examiner's opportunity to appraise the credibility of witnesses entitles his recommendations to special weight. The Commission's decisional process in this case involved the drawing of inferences from uncontradicted evidence.[5]

---

[5] In Section 2(a) proceedings "The weight to be attributed to the facts proven or stipulated, and the inferences to be drawn from them, are for the Commission to determine, not the courts." *Corn Products Refining Co.* v. *Federal Trade Commission*, 324 U. S. 726, 739; cf. *Federal Trade Commission* v. *Staley Manufacturing Co.*, 324 U. S. 746, 760.

The conclusion of the court below that competitor competition was not injured was based primarily on evidence that the business of respondent's competitors had increased during the period in question. There was evidence in the record, however, of losses in business by specific competitors of re-

We submit that the court below has misinterpreted the principles of the *Universal Camera* case both in respect to the weight to be given the examiner's report and the extent to which the court may substitute its judgment for that of the administrative agency when it disagrees with the latter's analysis of the facts. Both of these questions have obvious importance to all administrative agencies and reviewing courts.

CONCLUSION

The decision below is in conflict with one decision of this Court and misapplies another, and involves important questions of federal law. It is respectfully submitted that the petition for certiorari should be granted.

PHILIP B. PERLMAN,
Solicitor General.

DECEMBER 1951.

---

spondent to respondent (e.g., R. 160-1, 839-40). Furthermore, as the Commission pointed out, the tendency of respondent's quantity discount system would be to cause customers to concentrate their purchases in respondent to obtain the lower prices, and thus take business away from respondents competitors (R. 2274).

OCTOBER TERM, 1951

FEDERAL TRADE COMMISSION, *Petitioner,* v. MINNEAPOLIS-HONEYWELL REGULATOR COMPANY, *Respondent.*	No. 479

ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SEVENTH CIRCUIT

BRIEF FOR RESPONDENT IN OPPOSITION

OPINIONS BELOW

The majority and dissenting opinions of the Federal Trade Commission (R. 2265-2282) are reported at 44 F. T. C. 390. The opinion of the Court of Appeals for the Seventh Circuit (R. 2308-2315) is reported at 191 F. 2d 786.

JURISDICTION

The judgment of the Court of Appeals (R. 2316) was entered on July 5, 1951, and not on September 18, 1951, as claimed by petitioner. The petition was filed on December

14, 1951, more than 90 days after the entry of judgment; the time for applying for the writ was not extended, and, even if it had been extended for the maximum period permitted by statute, the time would have expired on December 2, 1951. Therefore, as is hereinafter set forth, the petition is untimely, and this Court does not have jurisdiction to entertain it. 28 U. S. C. § 2101(c).

QUESTIONS PRESENTED

(1) Whether this Court has jurisdiction to entertain the petition; and

(2) Whether either of the grounds urged by the petition (pp. 2, 9, 15) constitutes a special or important reason why this Court should grant the petition.

STATUTES INVOLVED

Jurisdiction

28 U. S. C. § 1254, is in part as follows:

> "Cases in the courts of appeals may be reviewed by the Supreme Court by the following methods:
>
> "(1) By writ of certiorari granted upon the petition of any party to any civil or criminal case, before or after rendition of judgment or decree."

28 U. S. C. § 2101(c), is as follows:

> "(c) Any other appeal or any writ of certiorari intended to bring any judgment or decree in a civil action, suit or proceeding before the Supreme Court for review shall be taken or applied for within ninety days after the entry of such judgment or decree. A

justice of the Supreme Court, for good cause shown, may extend the time for applying for a writ of certiorari for a period not exceeding sixty days."*

Price Discrimination

The applicable portion of Section 2 of the Clayton Act is as follows (15 U. S. C. § 13):

> "(a) It shall be unlawful for any person engaged in commerce, in the course of such commerce, either directly or indirectly, to discriminate in price between different purchasers of commodities of like grade and quality, where either or any of the purchases involved in such discrimination are in commerce, where such commodities are sold for use, consumption, or resale within the United States . . . and where the effect of such discrimination may be substantially to lessen competition or tend to create a monopoly in any line of commerce, or to injure, destroy, or prevent competition with any person who either grants or knowingly receives the benefit of such discrimination, or with customers of either of them . . ."

STATEMENT

The Facts

Respondent (M-H), a pioneer in the heating controls industry, is, and for a number of years has been, one of the

*An application for an extension of the time for filing a petition for a writ of certiorari cannot be granted unless presented to a Justice of this Court prior to the expiration of the statutory period. *Cresswell* v. *Tillinghast*, 286 U. S. 560 (1932); *Finn* v. *Railroad Commission*, 286 U. S. 559 (1932); Robertson & Kirkham, Jurisdiction of the Supreme Court of the United States § 415 (1951 ed., Wolfson and Kurland.

principal manufacturers of automatic temperature control for oil burners which are used in domestic heating plants.

The Commission found that as a result of the demand for, and public acceptance of, M-H's controls, M-H had at all times sold its controls at prices higher than those charged by its competitors (FF 5, R. 2242).

M-H's most important customers for its oil burner controls are manufacturers of oil burners (R. 39). In 1941 there were approximately 300 oil burner manufacturers. The large majority of oil burner manufacturers are not engaged in fabricating the burners they sell, but rather in assembling the various parts thereof, including motors, pumps, transformers, controls, fans and blower wheels, the several parts usually being purchased by the oil burner manufacturers from different sources (R. 2182, 2309). Thus, oil burner manufacturers ordinarily furnish controls to their customers as parts of complete oil burners (R. 1108-09).

M-H has charged varying prices to oil burner manufacturers for controls and that fact was used as the basis for the principal charge made by the Commission in this proceeding.

M-H's competitors are the 15 other control manufacturers in the United States, chief among them being Mercoid Corp., Penn Electric Switch Co. and Perfex Corp. (R. 48-49; FF 6, R. 2242). Each of the principal control manufacturers solicited business from, and entered into contracts with, most of the oil burner manufacturers including *all* the larger accounts (R. 59-60, 749, 801-02). Since no important oil burner manufacturer used exclusively the controls of a single control manufacturer, competition was "ever present" (R. 1528), and, as the Commission

found, M-H was engaged in active and substantial competition with its competitors (FF 2, R. 2241). During the period in question, although M-H was the largest manufacturer of controls for oil burners, the total business of M-H's competitors increased (R. 222, 231-32, 418-21, 798, 826), while M-H's share of the available business was reduced (R. 876-77). Illustrative of the competitive situation that existed are the facts that in 1941 M-H lost to its competitors 53% of the control business of 31 customers who previously had for the most part used M-H's controls; and in the same year, 126 of M-H's other customers also purchased competitive controls (R. 961-64).

Prior Proceedings

This proceeding was instituted by the service on M-H of the Commission's complaint (R. 2) dated February 23, 1943, containing three counts. Count I charged M-H with violation of Section 5 of the Federal Trade Commission Act; Count II, realleging matters set forth in Count I, charged violation of Section 3 of the Clayton Act; and Count III charged violation of Section 2(a) of the Clayton Act, as amended by the Robinson-Patman Act. In Count III it was alleged that M-H had sold its controls to some of its oil burner manufacturer-customers at prices different from those charged others of such customers with resulting unlawful discriminations in price.

Hearings were conducted before a Trial Examiner from August, 1943, to October, 1945. On February 21, 1946, the Trial Examiner filed his Report (R. 2166-2203), wherein he recommended that an order be issued requiring M-H to cease and desist from the acts and practices charged

under Counts I and II, and that the charges set forth in Count III be dismissed (R. 2203). The latter recommendation was based upon the Trial Examiner's findings that

> (1) the differences in M-H's prices did not tend substantially to injure competition either among M-H and its competitors or among M-H's customers;
>
> (2) some of M-H's prices were justified by differences in its costs; and
>
> (3) M-H's other prices were made in good faith to meet the competition of its competitors.

On January 14, 1948, the Commission rendered its decision and issued its order to cease and desist. The Commission followed the recommendations of the Trial Examiner as to Counts I and II of the complaint,* but the majority declined to follow the Trial Examiner's recommendation as to Count III, except that it agreed that some of M-H's varying prices were justified by differences in M-H's costs. Com. Mason, dissenting, agreed with the Trial Examiner that Count III should be dismissed (R. 2276-82).

---

*Com. Mason concurred (R. 2277) as to the disposition of Count II which, as noted above, merely alleged that certain practices, set forth in Count I as violative of the Federal Trade Commission Act, were also violative of Section 3 of the Clayton Act. As to the other practices alleged to be unlawful in Count I, Com. Mason dissented (R. 2276-77) on the ground that M-H had discontinued those practices immediately upon the reversal by this Court of two decisions of the Court of Appeals for the Seventh Circuit which had approved such practices. See *Mercoid Corp.* v. *Mid-Continent Investment Co., et al.*, 320 U. S. 661 (1944) and *Mercoid Corp.* v. *Minneapolis-Honeywell Regulator Co.*, 320 U. S. 680 (1944). Com. Mason, in his dissent as to Count I, said (R. 2277): "I see no profit in shooting a tiger stuffed and mounted so long ago."

The conclusion of the majority of the Commission that M-H's varying prices injured competition was predicated upon its paradoxical theory that M-H, by lowering its prices to meet competition, had by that very act injured competition.

The Commission's formal finding on that point, namely, that M-H's varying prices had diverted trade to M-H from its competitors and, therefore, had had a "substantial injurious effect upon competition" (FF 19, R. 2256), is amplified by the following statement in the opinion of the Commission (R. 2273):

> "The competitive effects of respondent's [M-H's] discriminatory prices on other manufacturers of controls are persuasively indicated by its own arguments that its discriminatory prices were made for the purpose of meeting competition. These arguments show that respondent's [M-H's] discriminatory prices were made to retain the business of certain customers or to secure the business of others and that they were largely successful in doing so. To the extent that business is held by or diverted to respondent [M-H] from its competitors by its discriminatory prices and unfair practices [*i.e., we suppose by lowering its prices in good faith to meet competition*], competition has been adversely affected within the meaning of the law . . ."

The Commission majority's paradoxical theory has since been specifically rejected by this Court in *Standard Oil Co.* v. *Federal Trade Commission,* 340 U. S. 231, 250 (1951).

The Commission's order (R. 2262-65) is in four parts. Parts I and II enjoin M-H from engaging in the acts and practices charged in Counts I and II of the complaint; and

Part IV is merely the customary direction as to the compliance report. Part III (R. 2264), which was entered pursuant to Count III of the complaint, directs that M-H

> ". . . forthwith cease and desist from discriminating, directly or indirectly, in the price of such products of like grade and quality as among oil-burner manufacturers purchasing said automatic temperature controls and other furnace controls——
>
> "1. By selling such controls to some oil-burner manufacturers at prices materially different from the prices charged other oil-burner manufacturers who in fact compete in the sale and distribution of such furnace controls, when the differences in price are not justified by differences in the cost of manufacture, sale, or delivery resulting from differing methods or quantities in which such products are sold or delivered."

On March 11, 1948, M-H filed with the Court of Appeals for the Seventh Circuit its petition to review and set aside the order of the Commission (R. 2283), and, subsequently, the Commission filed a cross-petition for affirmance and enforcement. M-H, however, did not press its petition as to Parts I and II of the order, and, before the Court of Appeals, announced that it did not challenge those Parts of the order. Neither M-H nor the Commission briefed or argued before the Court of Appeals any question arising out of Part I or Part II.

On July 5, 1951, the Court of Appeals handed down its opinion (R. 2308) unanimously reversing Part III of the order and dismissing Count III of the complaint, holding that, on the entire record, the Commission acted arbitrarily when it rejected the findings of the Trial Examiner that

M-H's pricing practices did not tend to injure competition. That being the basis for its decision, the court did not even reach the question whether M-H's varying prices were justified, as M-H strongly contended, on the ground that the lower of those prices were made in good faith to meet the equally low prices of its competitors. *Cf. Standard Oil Co. v. Federal Trade Commission, supra,* 340 U. S. 231 (1951). The court, in its opinion, did not refer to Parts I and II of the order except as follows (R. 2308):

> "... Since M-H does not challenge Parts I and II of the order based on the first two counts of the complaint we shall make no further reference to them."

The judgment of the court (R. 2316), reversing Part III of the order and dismissing Count III of the complaint in accordance with its opinion, was entered on July 5, 1951, the day that the opinion was filed. A certified copy of said judgment, in lieu of mandate, was issued to the Commission on August 6, 1951.

The Commission did not ask for rehearing, but about August 21, 1951, submitted to the court a proposed "Final Decree" and a typewritten memorandum which recognized that judgment as to Part III of the order had already been entered, but which argued that the court should affirm and enforce Parts I and II as requested in the Commission's cross-petition. The proposed "Final Decree" contained, in addition to provisions affirming and enforcing Parts I and II, a provision, identical in substance and practically identical in wording to the judgment of July 5, reversing Part III of the order and dismissing Count III of the complaint. On September 18, 1951, the court entered the decree proposed by the Commission (R. 2316-19). On December

14, 1951, the Solicitor General filed the petition for writ of certiorari to review the judgment in respect of Part III of the order.

ARGUMENT

POINT I

THE COURT DOES NOT HAVE JURISDICTION TO ENTERTAIN THE PETITION.

That a petition for a writ of certiorari must be filed within 90 days after entry of judgment (unless the time be extended by a Justice of this Court for a period not to exceed 60 days more) is not open to question, 28 U. S. C. § 2101(c). If a petition is untimely, the Court does not have jurisdiction to entertain it. *Hope Basket Company, et al.* v. *Product Advancement Corporation, et al.*, 72 Sup. Ct. 44 (1951); *Department of Banking* v. *Pink*, 317 U. S. 264 (1942); Robertson & Kirkham, Jurisdiction of the Supreme Court of the United States § 409 (1951 ed., Wolfson and Kurland).

If the judgment of the Court of Appeals which was entered July 5, 1951, was the judgment of that court with respect to Part III of the Commission's order, the petition now before this Court, which was filed more than 150 days after July 5, 1951, is untimely and must be denied.

The July 5 judgment is as follows (R. 2316):

> "This cause came on to be heard on the transcript of the record from the Federal Trade Commission and was argued by counsel.
>
> "On consideration whereof, it is ordered and adjudged by this Court that Part III of the decision

> of the Federal Trade Commission entered in this cause on January 14, 1948, be, and the same is hereby, Reversed, and Count III of the complaint upon which it is based be, and the same is hereby Dismissed."

From the language of the judgment there appears to be no basis for contending that it was interlocutory, or that the court intended to give the case any further consideration. It would seem, from the face of the judgment, that the court intended thereby to make final disposition of the case. What appears from the face of the judgment is confirmed by the record, including the opinion of the court below.

Accordingly, there is not any basis for disputing that the judgment of July 5 was the judgment of the court as to Part III of the order. Petitioner, however, seeks to review the decree of September 18, 1951, which affirmed and enforced Parts I and II of the Commission's order, and also reiterated the judgment of July 5 as to Part III. The Commission, in its memorandum dated August 21, 1951 in support of that decree, recognized that the court had already entered judgment as to Part III of the order and did not seek any alteration of that judgment. Thus, the memorandum commenced as follows:

> *"On July 5, 1951 the Court entered its opinion and judgment reversing Part III of the decision of the Federal Trade Commission dated January 14, 1948 and dismissing Count III of the complaint upon which it is based.* No disposition has been made of the Cross-Petition filed by the Commission for affirmance and enforcement of the entire decision. The Commission takes the position that its Cross-Petition should be in part sustained, *i.e.*, to the extent that the Court should make and enter herein a decree affirm-

> ing Parts I and II of the Commission's order to cease and desist and commanding Minneapolis-Honeywell Regulator Company to obey the same and comply therewith . . ." [Emphasis supplied]

A timely petition for rehearing, of course, tolls the running of the time within which to apply for a writ of certiorari, *Department of Banking* v. *Pink*, 317 U. S. 264, 266 (1942). The Commission, however, never made any such petition. The typewritten memorandum of August 21, which the Commission filed in support of the decree more than 15 days after the entry of the judgment of July 5, was not, and did not purport to be, a petition for rehearing. In the first place, as noted above, it did not seek any alteration of the judgment of July 5. Furthermore, it did not comply with the requirements of Rule 22 of the Court of Appeals either as to time of filing or as to form:

> "*Rehearing.*—Printed petition for rehearing may be filed within 15 days after entry of judgment. Three copies of such petition shall be served forthwith by the clerk of this court upon the opposing party, who within 10 days from such service may file a printed answer, three copies of which shall be served on the opposing party, and the petition shall be determined without oral argument unless otherwise ordered. Thirty copies of such petition and answer shall be filed with the clerk of this court."

The proceedings in this case subsequent to the entry of the judgment of July 5 did not affect in any way the court's disposition of Part III of the order, but were solely concerned with Parts I and II of the order. Parts I and II ordered M-H to cease and desist from practices found by

the Commission to be violative of Section 5 of the Federal Trade Commission Act and Section 3 of the Clayton Act and are, therefore, wholly separate from, and have no relation to, Part III of the order which dealt with practices found by the Commission to be violative of Section 2 of the Clayton Act. Moreover, in the memorandum of August 21, which the Commission filed, it did not present a substantive question with respect to Parts I and II of the order, but only the narrow and technical question whether the Court of Appeals, which had not adjudicated any issue arising therefrom, should nevertheless affirm and enforce Parts I and II without regard to the fact that M-H, by announcing its decision not to press its petition as to those Parts of the order, had already placed itself under the duty to comply therewith. That question was not even remotely related to Part III of the order.

The decree of September 18 did nothing more as to Part III of the order than to restate the court's judgment of July 5. Its only function was to dispose of Parts I and II of the order as to which the Court of Appeals had made no adjudication; but over which, according to the Commission's theory, that court had obtained jurisdiction.

The only issues presented to and decided by the Court of Appeals in its opinion of July 5 arose from Part III of the order. The judgment of July 5, final on its face, made complete and unambiguous disposition of Part III, and was in complete accord with the opinion of the court. The court was never asked by the Commission to alter that judgment, and there is no indication that the court ever considered altering it. The fact is that the court did not alter it.

It is submitted that the judgment of July 5, 1951, was the judgment of the Court of Appeals as to Part III of the order, that the petition for a writ of certiorari filed December 14, 1951, is untimely, and that, accordingly, the petition should be denied.

POINT II

PETITIONER HAS NOT SHOWN ANY REASON WHY THE PETITION SHOULD BE GRANTED.

In stating the questions to be considered by this Court, in specifying the errors to be urged, and in advancing reasons why, in its opinion, a writ of certiorari should be granted, petitioner has urged only two points which are:

(1) that the decision of the court below is in conflict with the decision of this Court in *Federal Trade Commission* v. *Morton Salt Co.*, 334 U. S. 37; and

(2) that the court below misapplied the decision of this Court in *Universal Camera Corp.* v. *NLRB*, 340 U. S. 474.

Neither of those points has merit.

A. The Decision of the Court Below Is Not in Conflict with the *Morton Salt* Case.

As this Court recognized in *Corn Products Refining Co. et al.* v. *Federal Trade Commission*, 324 U. S. 726, 738 (1945), Section 2(a) of the Clayton Act does not prohibit all discriminations in price, but only those discriminations whose effect

> "may be substantially to lessen competition or tend to create a monopoly in any line of commerce, or to injure, destroy, or prevent competition with any person who either grants or knowingly receives the benefit of such discrimination, or with customers of either of them . . ."

Petitioner contends, however, that this Court has eliminated the above-quoted language from the statute by holding in the *Morton Salt* case that a showing that a seller has sold a commodity of like grade and quality to two or more customers at substantially different prices gives rise to a *conclusive presumption* that such price differentials may have the defined effect on competition (Pet., pp. 11-15).

Such an interpretation of the *Morton Salt* decision would render nugatory that part of Section 2(a) of the Act quoted above and make discriminations in price unlawful, without regard to their effect on competition. Such an interpretation would be contrary to everything that this Court, or any other court, has ever said on the subject.

Such was not the holding of this Court in the *Morton Salt* case. The Court said (334 U. S. at p. 47) that ". . . the Commission is authorized by the Act to bar discriminatory prices upon the 'reasonable possibility' that different prices for like goods to competing purchasers may have the defined effect on competition" (citing the "injury to competition" language of Section 2(a) of the Act). The Court not only pointed out that the Commission in the *Morton Salt* case had made adequate findings that there was a reasonable possibility of injury to competition (pp. 45-7), but also determined that the evidence in that case supported such findings (pp. 47-51)—specifically, the showing that the seller's differentials in the price of salt

between purchasers who competed in the resale of such salt were "sufficient in amount to influence their resale prices" (p. 47).

This Court did not hold that price differences alone give rise to a conclusive presumption of injury to competition, or that all price discriminations are unlawful discriminations. The Court's opinion and its approving reference (p. 45, n. 13) to *Samuel H. Moss, Inc.* v. *Federal Trade Commission*, 148 F. 2d 378, 379 (2d Cir. 1945), *cert. denied*, 326 U. S. 734 (1945), make that clear.

This Court did hold that it was sufficient to make out a *prima facie* case for the Commission to prove that a seller has charged one purchaser a higher price for like goods than he had charged one or more of the purchaser's competitors; from which it follows that unless the seller sustains the burden of proof which is thereby placed upon him, the Commission could properly conclude that the price discrimination was unlawful.

In the *Morton Salt* case the seller did *not* sustain its burden of proof with respect to injury to competition.

In the instant case, the situation is entirely different. The court below recognized that the burden of proof was on M-H to show that M-H's prices had not tended to injure competition, either among M-H and its competitors or among M-H's customers, and it found, upon examination of the whole record, that M-H had sustained that burden. Thus, with respect to the question whether competitor competition had been injured the court said (R. 2312-13):

> ". . . Even though we assume that the burden of proving absence of injury to competition falls on the accused (see *Samuel H. Moss* v. *Federal Trade Commission*, 148 F. 2d 378; *Federal Trade Commission* v. *Standard Brands, Inc.*, decided by the Second

> Circuit March 30, 1951, modified June 4, 1951), we think M-H has met that burden with respect to its competitor competition."

Similarly, with respect to the question whether customer competition had been injured the court said (R. 2315):

> "We are convinced that here 'the inferences on which the . . . findings were based were so overborne by evidence calling for contrary inferences that the findings . . . could not, on the consideration of the whole record, be deemed to be supported by "substantial" evidence.' (*National Labor Relations Board* v. *Pittsburgh Steamship Co.*, 340 U. S. 498, 502.)"

Furthermore, contrary to petitioner's contention (Pet., p. 9), the court below did not apply "an unduly restrictive standard of injury to competition—actual injury rather than a reasonable possibility thereof— . . ." The court stated that:

> ". . . it cannot be said that [M-H's] discriminatory price differentials substantially injure competition or that there is any reasonable probability or even possibility that they will do so. Cf. *Corn Products Refining Co.* v. *Federal Trade Commission*, 324 U. S. 726, 738, 742; *Federal Trade Commission* v. *Morton Salt Co.*, 334 U. S. 37, 46. And a mere possibility of such injury is insufficient to sustain a charge of violation of the Act. *Corn Products Refining Co.* v. *Federal Trade Commission*, 324 U. S. 726, 742."

Manifestly, there is not any conflict between the decision of this Court in the *Morton Salt* case and the decision of the court below in the instant case.

B. The Court Below Did Not Misapply the Decision of This Court in the *Universal Camera* Case.

In *Universal Camera Corp.* v. *NLRB,* 340 U. S. 474 (1951), this Court held that the Court of Appeals for the Second Circuit had erred in deeming itself bound by the NLRB's rejection of its Trial Examiner's findings, and remanded the case to that court for reconsideration of the record, with instructions that it should "accord the findings of the trial examiner the relevance that they reasonably command in answering the comprehensive question whether the evidence supporting the Board's order is substantial." (340 U. S. at p. 497). Elsewhere in its opinion, the Court indicated that reviewing courts should give a trial examiner's report "such probative force as it intrinsically commands" (p. 495) and recognized "that evidence supporting a conclusion may be less substantial when an impartial, experienced examiner who has observed the witnesses and lived with the case, has drawn conclusions different from the Board's than when he has reached the same conclusion" (p. 496).

In the instant case, as in the *Universal Camera* case, the administrative tribunal, with one member dissenting, rejected the findings of its Trial Examiner.

The court below in the instant case, in reviewing the decision of the Commission, was guided by the principles laid down by this Court in the *Universal Camera* case. The court below noted that under the rule of that case, it was its duty to examine the record as a whole, including the rejected report of the Trial Examiner, in order to determine whether the evidence supporting the Commission's order was substantial. The court also indicated that the dissent of an experienced member of the Commission from the Commis-

sion's findings and conclusions was in itself a reason to scrutinize carefully the evidence relied upon to support such findings and conclusions (R. 2311). The court recognized, however, that the findings of the Trial Examiner must be considered along with " 'the consistency and inherent probability of testimony' " (R. 2311), and that such findings are not " 'as unassailable as a master's' " (R. 2312). Clearly, as shown by its opinion, the court carefully followed the principles laid down by this Court, and was keenly aware that those principles were intended to be applied with caution.

Thus guided, the court below came to the conclusion, from its examination of the record as a whole, that the Commission had acted arbitrarily in rejecting the trial examiner's findings to the effect that M-H's pricing practices had not tended substantially to lessen competition. The court did not hold that the Commission was arbitrary merely because it reversed the Trial Examiner, but because on the whole record, the Trial Examiner was right, and the Commission's findings were not supported by substantial evidence (R. 2312, 2315).

The court below did not misapply, but rather faithfully followed, the decision of this Court in the *Universal Camera* case. The assertions by petitioner that the court gave more weight to the Trial Examiner's report than it ought to have given, and that the court merely substituted its judgment for that of the Commission, are unjustified. The court below did no more than perform its *statutory duty* to set aside such action, findings and conclusions of the Commission as it found to be unsupported by substantial evidence, arbitrary, capricious, an abuse of discretion or otherwise not in accordance with law. Administrative Procedure Act § 10(e), 5 U. S. C. § 1009(e).

Accordingly, there is not any occasion for this Court to exercise its power to review the decision of the court below. A writ of certiorari will be granted only for special and important reasons (Rules of the Supreme Court of the United States, Rule 38(5)); and this Court has clearly indicated that in the light of that Rule, it will "leave undisturbed, by denying certiorari, decisions of Courts of Appeals involving solely a fair assessment of a record on the issue of unsubstantiality", *NLRB* v. *Pittsburgh Steamship Co.*, 340 U. S. 498, 502 (1951). As the Court said in *Radio Corporation of America et al.* v. *United States et al.*, 341 U. S. 412, 415 (1951):

> "... in considering the question of sufficiency of evidence to support an administrative order this Court must and does rely largely on a first reviewing court's conclusion. *Universal Camera Corp.* v. *Labor Board*, 340 U. S. 474."

In the *Universal Camera* case, after stating that a Court of Appeals must set aside the findings of an administrative agency when, upon its review of the record in its entirety, such findings are found to be not supported by substantial evidence, the Court said (340 U. S. at pp. 490-91):

> "... Our power [*i.e.*, the power of the Supreme Court] to review the correctness of application of the present standard ought seldom to be called into action. Whether on the record as a whole there is substantial evidence to support agency findings is a question which Congress has placed in the keeping of the Courts of Appeals. This Court will intervene only in what ought to be the rare instance when the standard appears to have been misapprehended or grossly misapplied."

CONCLUSION

The petition for a writ of certiorari should be denied.

Respectfully submitted,

ALBERT R. CONNELLY,
Counsel for Respondent,
15 Broad Street,
New York, N. Y.

No. 479

FEDERAL TRADE COMMISSION, PETITIONER

v.

MINNEAPOLIS-HONEYWELL REGULATOR COMPANY

ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SEVENTH CIRCUIT

REPLY TO RESPONDENT'S BRIEF IN OPPOSITION

In point I of its brief in opposition, respondent contends that the petition was not filed in time and that this Court therefore has no jurisdiction to entertain the petition.[1] The basis for the contention is that the judgment of the court of appeals sought to be reviewed was entered on July 5, 1951, and not, as stated in the petition for certiorari, on September 18, 1951. We submit, to the contrary, that the court of appeals made its judgment of September 18, 1951, its final judgment in the proceeding pending before it, and

[1] The Government considers that the other two points in the brief in opposition are adequately presented in its petition and require no further comment.

that the entry of this judgment fixed the time within which the petition for certiorari might be filed.

The substantive prohibitions of the Commission's order are set forth in three paragraphs or parts, designated I, II, and III (R. 2263–2264). Respondent's petition to review challenged the entire order (R. 2284, 2288), and the Commission, by cross petition, sought enforcement of the entire order.[2] During the court proceedings respondent abandoned its challenge to Parts I and II of the order, but such abandonment did not eliminate the issue before the court as to the judgment to be entered with respect to Parts I and II.

The opinion which the court rendered on July 5, 1951, discussed only Part III of the Commission's order (R. 2308–2315). The court stated that, since respondent was not challenging Parts I and II, it would "make no further reference to them" (R. 2308). On the day on which the opinion was filed the court entered an order which reversed Part III of the "decision" of the Commission, but was silent as to Parts I and II of the order (R. 2316). The court therefore left undetermined what judgment should be entered with re-

[2] While the cross-petition was not incorporated in the printed record filed with this Court, the final decree entered by the court below on September 18, 1951, recites that the Commission had filed a cross-petition praying for enforcement of its order against respondent (R. 2317).

spect to this portion of the order. This issue was before the court not only because of the cross petition filed by the Commission, but also because the court had the duty to affirm, modify, or set aside the order brought before it for review.[3] Parts I and II of the Commission's order were not affirmed, modified or set aside by the judgment entered on July 5, 1951, and this judgment was therefore not dispositive of the review proceeding.

The Commission, being of the opinion that the court's order of July 5, 1951, was not final, filed with the court a memorandum dated August 21, 1951, requesting entry of a judgment affirming and enforcing Parts I and II of its order,[4] Fol-

[3] Part I of the Commission's order was grounded on Section 5 of the Federal Trade Commission Act, Part II on Section 3 of the Clayton Act, and Part III on Section 2 of the Clayton Act (R. 2284–5). Section 5 (c) of the former Act (15 U. S. C. 45 (c)) and Section 11 of the latter Act (15 U. S. C. 21), the statutory basis for the review proceeding (R. 2286), made it the duty of the court, on review, to enter a judgment "affirming, modifying, or setting aside" the order of the Commission.

Section 5 (c) of the Trade Commission Act requires the court to enter a decree "enforcing" the order under review "to the extent that such order is affirmed." And in review proceedings under Section 11 of the Clayton Act, the general practice has been to enforce orders of the Commission to the extent that they are affirmed. See petition for certiorari in *Federal Trade Commission* v. *Ruberoid Co.*, No. 448, this Term, certiorari granted January 28, 1952.

[4] The memorandum is entitled "Statement of the Position of the Federal Trade Commission Relative to Settlement of a Final Decree Herein." A copy of this memorandum, which is not a part of the record, has been filed with the Clerk.

lowing the filing of an opposing memorandum by respondent and a reply to this memorandum by the Commission, the Court on September 18, 1951, entered a judgment which it captioned "Final Decree" (R. 2316). The judgment recites the prior proceedings in the case, including the cross petition filed by the Commission (R. 2316–2317). It recites that it appears to the court that Parts I and II of the Commission's order should be "affirmed and enforced" and that Part III should be "reversed" (R. 2317). The judgment then provides: "Now, Therefore, It Is Hereby Ordered, Adjudged And Decreed" that Part III of the order "be and the same is hereby reversed" and that Parts I and II "be and the same hereby are affirmed" (*ibid.*).[5]

1. A court has plenary power while the term is in existence to modify or vacate its judgment. *Zimmern* v. *United States*, 298 U. S. 167, 169–170. In the instant case, if the judgment entered on September 18 had vacated the judgment of July 5, the September 13 judgment would plainly govern on time for filing petition for certiorari. We submit that it is clear that the court below intended that its later judgment of September 18 should supersede its earlier, incomplete judgment.

[5] In addition, the judgment incorporates the prohibitions of Parts I and II of the Commission's order, and decrees that respondent file with the Commission within 90 days a written report setting forth its compliance with the judgment (R. 2317–2319).

If this had not been the case the later judgment would merely have affirmed and enforced Parts I and II of the Commission's order, and recited the reversal of Part III by the judgment entered in July. Instead, the later judgment not only affirmed and enforced Parts I and II, but also specifically reversed Part III. The court manifested its intention to make the September 18 judgment the court's final judgment as to Part III, both by providing therein for reversal of Part III and by denominating this judgment "Final Decree." Where the date of entry of final judgment is in doubt, the court's intention as to the act constituting its final judgment in the cause is controlling. *United States* v. *Hark*, 320 U. S. 531, 535. Here, as in the *Hark* case, it is not to be assumed that the court entered a formal order intended to be merely "an empty form" (*ibid.*). The court's reversal of Part III by the judgment entered on September 18, 1951, obviously was an empty form if the court intended its July 5 order to stand as its judgment as to Part III. See *Union Guardian Trust Co.* v. *Jastromb*, 47 F. 2d 689 (C. A. 6), quoted at pages 8–9, *infra*.

2. The fact that the court entertained and acted upon the application made by the Commission (dated August 21, 1951) for entry of a judgment dispositive of the proceeding is in itself sufficient to make the September 18 judgment the court's final judgment as to all parts of the Commission's

order. It is well settled that "where a petition for rehearing, a motion for a new trial, or a motion to vacate, amend, or modify a judgment is seasonably made and entertained, the time for appeal does not begin to run until the disposition of the motion." *Leishman* v. *Associated Electric Co.*, 318 U. S. 203, 205; *United States* v. *Crescent Amusement Co.*, 323 U. S. 173, 177. While such motion or petition does not have this effect if it is "addressed to mere matters of form" and does not raise "questions of substance" (*Leishman* case, p. 205), it is clear that the Commission's application raised a question of substance, since it asked that the court enter judgment with respect to Parts I and II of the Commission's order.

In this case, the Commission's application was not filed within the 15 days allowed for petitions for rehearing. But it did induce the court to revise the judgment in matters of substance. An untimely petition for rehearing or to amend a judgment, if entertained or considered on its merits, has the same effect as a timely petition. *Bowman* v. *Loperena*, 311 U. S. 262, 266, and cases cited; cf. *Pfister* v. *Northern Illinois Finance Corp.*, 317 U. S. 144, 150. In these circumstances, "the judgment of the court as originally entered does not become final" until the action of the court on such petition, "and the time for appeal runs from the date thereof." *Bowman* v. *Loperena*, *supra*. In the *Bowman* case and each

of the three cases it cites the untimely petition for rehearing, although considered by the lower court, was denied. The problem presented in those cases was therefore more difficult than that raised here, in which the application to change the judgment was successful. It follows *a fortiori* in the latter situation that the entry of a different judgment extends the time to appeal.

Indeed, the general rule in this country (subject to an exception for clerical or formal errors) is "that where a judgment, order, or decree is amended or modified the time within which an appeal from such determination may be taken begins to run from the date of the amendment or modification." Annotation, 80 Law Ed. 1121, and cases cited. Federal cases include *United States* v. *Gomez*, 1 Wall. 690, 700; *Memphis* v. *Brown*, 94 U. S. 715, 718; *Union Guardian Trust Co.* v. *Jastromb*, 47 F. 2d 689, 690 (C. A. 6); cf. *Zimmern* v. *United States*, 298 U. S. 167.

3. Respondent's principal contention is based on the facts that the judgment of September 18 did not alter the provisions of the earlier order of July 5 insofar as Part III of the Commission's order was concerned, and that the Commission's petition in this case relates only to Part III. But if a new judgment is entered, the time for appeal is extended with respect to all its provisions, and not merely those which have been changed, or with respect to which the petition

for rehearing is filed. If the question were open, wise judicial policy would dictate such a result, in view of the undesirability of piecemeal and separate appeals in what is essentially a single case. But the question is not open, although there seems to have been so little doubt about it that the answer has been assumed without explanation. Thus, in *United States* v. *Crescent Amusement Co.*, 323 U. S. 173, 177, the *plaintiff's* time to appeal was held to be extended by the *defendant's* motion to amend the findings—although the amendments to the findings did not relate to the portion of the judgment from which the plaintiff was appealing.[6] It has also been held that the entry of a new judgment supersedes the old even though there is no change of substance. In *Memphis* v. *Brown*, 94 U. S. 715, 718, the Court said:

> the form of the entry of May 20 is equivalent to setting aside the judgment of March 2, and entering it anew as of that date. This the court had the right to do during the term, and for the very purpose of giving it effect for a *supersedeas*.

See also *Union Guardian Trust Co.* v. *Jastromb*, 47 F. 2d 689 (C. A. 6), in which the court said (p. 690):

[6] Similarly, in *Johnson* v. *Eisentrager*, 339 U. S. 763, the Government's petition for certiorari was filed within 90 days of the denial of *respondent's* petition for rehearing below, not within 90 days of the original order.

> The order of March 18 did not expressly vacate the order of March 7, but we think it should be considered as having that effect. It covered exactly the same subject-matter, and there could have been no object in entering it, unless it was intended to supersede the earlier order.

Clearly where the new order was the same as the old, the appeal must have been from provisions which were repeated without change, as in the instant case.

State cases applying the general rule and holding or implying that a modification of a judgment extends the time to appeal from all portions of the judgment include *Hewey* v. *Andrews*, 82 Or. 448, 159 P. 1149; *Billson* v. *Lardner*, 67 Minn. 35, 69 N. W. 477; *Luck* v. *Hopkins*, 92 Tex. 426, 49 S. W. 360.

4. Respondent argues that the Commission did not file a petition for rehearing or request any change in the judgment as to Part III. The title of the document filed is, of course, immaterial. In any event, the critical fact is that the court actually entered a new and different[7] judgment, not what the Commission requested or the name of the paper in which the request was made. The nature of the application is irrelevant when the judgment is changed—although it may be ma-

[7] Many of the authorities cited above indicate that even if the judgment had not been different the result would be the same so long as a new judgment was entered.

terial when such an application is denied. A new judgment would be the basis for appeal if the court acts on its own motion (*Zimmern* v. *United States*, 298 U. S. 167), and the result must be the same irrespective of a formal or informal request by a party.

For the reasons stated, it is respectfully submitted that the petition for certiorari was filed within the statutory 90-day period and that the Court has jurisdiction to entertain the petition.

PHILIP B. PERLMAN,
Solicitor General.

FEDERAL TRADE COMMISSION, *Petitioner*

v.

MINNEAPOLIS-HONEYWELL REGULATOR COMPANY

On Writ of Certiorari to the United States Court of Appeals for the Seventh Circuit

---

BRIEF FOR THE FEDERAL TRADE COMMISSION

OPINION BELOW

The opinion of the court of appeals (R. 2308) is reported at 191 F. 2d 786.

JURISDICTION

The "Final Decree" of the court of appeals was entered on September 18, 1951 (R. 2316-2319). Respondent's contention that an earlier order

entered on July 5, 1951, was the judgment of the court of appeals is considered in Point I, *infra*, pp. 34-47. The petition for a writ of certiorari was filed on December 14, 1951, and was granted on March 3, 1952. The jurisdiction of this Court is conferred by 28 U.S.C. 1254(1).

QUESTIONS PRESENTED

1. Whether the petition for the writ of certiorari was filed in time.[1]

2. Whether there is sufficient evidence to support the Federal Trade Commission's finding that the three low-priced brackets of respondent's quantity discount system, which were unjustified by differences in costs, were, or tended to be, injurious to customer and competitor competition.

3. Whether a reviewing court is justified in setting aside findings of fact by an administrative agency because of the reviewing court's conclusion that contrary findings recommended by the trial examiner are supported by substantial evidence or by a preponderance of the evidence.

4. Whether a quantity discount system, the prices of which are fixed in part as a result of consideration of competitive prices but not to meet the low price of any individual competitor, is

[1] This question was raised by respondent in its brief in opposition (p. 2). In its order granting the writ, the Court requested counsel to discuss the question in briefs and on oral argument.

justified as made "in good faith to meet an equally low price of a competitor," within the meaning of the Robinson-Patman Act.

STATUTES INVOLVED

Section 2 of the Clayton Act, 38 Stat. 730, as amended by the Robinson-Patman Act, 49 Stat. 1526, 15 U.S.C. 13, provides in part:

> (a) That it shall be unlawful for any person engaged in commerce, in the course of such commerce, either directly or indirectly, to discriminate in price between different purchasers of commodities of like grade and quality, where either or any of the purchases involved in such discrimination are in commerce, where such commodities are sold for use, consumption, or resale within the United States * * * and where the effect of such discrimination may be substantially to lessen competition or tend to create a monopoly in any line of commerce, or to injure, destroy, or prevent competition with any person who either grants or knowingly receives the benefit of such discrimination, or with customers of either of them: *Provided,* That nothing herein contained shall prevent differentials which make only due allowance for differences in the cost of manufacture, sale, or delivery resulting from the differing methods or

quantities in which such commodities are to such purchasers sold or delivered: * * *

(b) Upon proof being made, at any hearing on a complaint under this section, that there has been discrimination in price or services or facilities furnished, the burden of rebutting the prima-facie case thus made by showing justification shall be upon the person charged with a violation of this section, and unless justification shall be affirmatively shown, the Commission is authorized to issue an order terminating the discrimination: *Provided, however,* That nothing herein contained shall prevent a seller rebutting the prima-facie case thus made by showing that his lower price or the furnishing of services or facilities to any purchaser or purchasers was made in good faith to meet an equally low price of a competitor, or the services or facilities furnished by a competitor.

28 U.S.C., Supp. V, 2101(c) provides as follows:

Any other appeal or any writ of certiorari intended to bring any judgment or decree in a civil action, suit or proceeding before the Supreme Court for review shall be taken or applied for within ninety days after the entry of such judgment or decree. * * *

STATEMENT

The Nature of the Case

This proceeding was instituted by a complaint issued by the Federal Trade Commission on February 23 1943, charging respondent with violations of Section 2(a) and 3 of the Clayton Act, and Section 5 of the Federal Trade Commission Act (R. 2-12). Respondent is one of the country's principal manufacturers of automatic temperature controls used in oil burners (R. 2241). Count I alleged that, in violation of Section 5 of the Federal Trade Commission Act, respondent entered into written contracts with its customers whereunder the latter agreed to purchase all or a majority of their control requirements from respondent, and that respondent sold combustion stoker switches to its customers under so-called exclusive license agreements whereby the customers were required to purchase other devices manufactured by respondent. Count II alleged that in violation of Section 3 of the Clayton Act respondent has sold its automatic temperature controls on the condition that the purchaser should not deal in or use the controls of competitors. Count III of the complaint—the part at issue in this case—alleged that respondent's quantity discount pricing system resulted in price discriminations whose effect "has been or may be substantially to lessen competition in the line of commerce in which respondent is engaged and to injure, destroy and

prevent competition" between respondent and its competitors, and among respondent's customers, in violation of Section 2(a) of the Clayton Act, as amended by the Robinson-Patman Act (15 U.S.C. 13) (R. 10).

Respondent filed an answer admitting the existence of the quantity discount system, but denying that its effect was to lessen, injure, destroy or prevent competition (R. 22-26). Respondent further alleged that the price differentials reflected differences in costs of manufacture, sale and delivery (R. 25), and that in almost all cases the prices charged by it to oil burner manufacturers were greater than the prices at which they purchased controls from respondent's competitors (*ibid.*).

Following extensive administrative proceeding—protracted hearings before a trial examiner (R. 29-1640),[2] recommended findings by the examiner (R. 2166-2203), exceptions thereto (R. 2204-2239), briefs, and oral argument before the Commission (R. 2240)—the Commission on January 14, 1948, issued its findings, opinion and order in the case (R. 2239-2276). With respect to Count III, the Commission found, contrary to the examiner's conclusion, that the price differentials substantially injured competition between re-

[2] Prior to the convening of the hearings, a number of facts were stipulated between the Commission and respondent (Comm. Ex. 1, R. 1643-1669).

spondent and its competitors, and among its customers (R. 2256, 2260). It further found that the differentials were justified by cost differences only in the four highest of respondent's seven price brackets (R. 2254), and that the differentials in the three lowest price brackets had not been made in good faith to meet an equally low price of a competitor (R. 2257-60).[3] The Commission accordingly ordered respondent to cease and desist, *inter alia*, from giving discriminatory prices not justified by cost differentials (R. 2264).[4]

---

[3] Respondent conceded that its cost study did not establish that the price differentials in the three lowest price brackets were justified by cost differences (R. 1261, 1332, 1389). It contended, however, that the differentials in those brackets were the result of meeting competition (R. 2257).

In rejecting respondent's claim that the three lowest price brackets were justified to meet competition, the Commission pointed out that these brackets did not "represent prices made in particular instances to meet competitors' prices, but reflect progressive reductions in a comprehensive price schedule based on increased quantity purchases" (R. 2272). On the question of whether the off-scale prices had been made to meet competition, the Commission noted that this justification was presented as to only 22 of the 76 off-scale accounts (R. 2257-8); that not all the 22 accounts were in the three lowest brackets (R. 2258); and that the prices given to several of the 22 accounts did not involve meeting a competitor's price at all (R. 2258-9). The Commission further found that even if respondent had met a competitor's lower price in the 22 accounts, that fact would not justify respondent's general practice of allowing off-scale prices (R. 2259).

[4] Commissioner Mason, dissenting in part, was of the view that respondent's discriminatory pricing practices had not tended to substantially lessen, injure, prevent or destroy competition (R. 2276-2282).

The cease and desist order also covered violations charged in Counts I and II (R. 2263-2264). Respondent petitioned to review and set aside all three counts of the Commission's order (R. 2283), and the Commission filed a cross-petition to enforce the order (R. 2317). The Court of Appeals affirmed the parts of the order based on Counts I and II; prior to the argument in the Court of Appeals respondent had abandoned its challenge to these parts of the order (R. 2317). The court set aside that portion of the order based upon Count III (R. 2316-18). (Further details as to the precise nature of the court's order, relevant only in relation to the timeliness of the Commission's petition for certiorari, appear in Point I, *infra*, pp. 34-37.) The court held that the Commission's findings that respondent's discriminatory pricing practices had injured or tended to injure competition among respondent's customers, or between it and its competitors, were not supported by substantial evidence (R. 2315). It did not find it necessary to pass upon the other question raised by respondent, whether the discriminatory prices were made in good faith to meet the prices of competitors (R. 2315).

The Conduct of Respondent's Business and the Operation of Its Quantity Discount Pricing System.

The underlying facts relating to the conduct of respondent's business and the operation of its quantity discount pricing system—as found by

the Commission and accepted by the court below—are not in dispute.

Respondent is the country's principal manufacturer of automatic temperature controls (R. 2241). These controls, which constitute an important item in oil burners, are sold by respondent to manufacturers of such burners, and to wholesalers, contractors and dealers in burners and automatic temperature controls (*ibid.*). "The large majority of oil burner manufacturers" do not actually fabricate the burner, but merely purchase the component parts and assemble the burner therefrom (R. 2182, 580, 594-596, 725-6, 1000). The controls generally, although not necessarily, are sold in sets of three[5] (R. 2242), and a set of controls represents the principal cost item among the various parts used in making the burner (R. 2252), costing almost twice as much as

---

[5] The three controls ordinarily used in connection with domestic oil burners are a room thermostat, a primary control, and a limit control (R. 2242). The thermostat, which is placed in the area to be heated, starts the burner when the temperature in that area falls below the fixed point (R. 426, 1646). The primary control starts and stops the oil burner's operating cycle (R. 426-427, 1646). The limit control cuts off the burner whenever the temperature or pressure rises above the safety level (R. 427, 1646).

Although some controls made by different manufacturers can be and have been combined to form a set (R. 429, 596-8, 1141), the "usual trade practice" is for an oil burner manufacturer to purchase the three controls in a set from a single manufacturer (R. 228). Servicing of the burner is thereby simplified (*ibid.*). Moreover, certain controls made by different manufacturers cannot be "mixed" (R. 1066).

any other part (R. 1000). The cost of the controls may constitute as much as 40% of the total material cost and sometimes is as much as "one-third the selling price" of the completed burner (R. 634, 940-944, 1000, 2252).[6]

Respondent, since its organization in 1927,[7] has manufactured and sold "the greater part" of the automatic temperature controls used in the United States (R. 2241). It was stipulated that in 1939, 1940 and 1941 it sold approximately 60% of all such controls sold in this country to oil burner manufacturers and dealers (R. 1645).[8] As a result of substantial advertising expenditures—aggregating approximately $4,000,000 during the years 1927 to 1941 (R. 2242)—respondent has developed a large customer demand for and public

---

[6] In 1941 the lowest price for respondent's controls, bracket 5, $13.75 (R. 1659), was slightly more than one-third the lowest price for burners, $40 (R. 507, 684) and 27.5% of the moderately low price of $50 (R. 505, 2141). The price in bracket 1, $17.35 (R. 1659) was over one-third of $50, and 24.8% of $70, a reasonably high priced burner. The percentage would, of course, be less for the higher priced burners. The exact percentage—whether 20, 25, 30 or 35—is, of course, unimportant. The significant fact is that the controls represented a substantial portion of the selling price of the complete burner.

[7] Respondent was formed by the combination of the Minneapolis Heat Regulator Company, which had been making heat regulator devices since 1885, and the Honeywell Heating Specialties Company, which had been organized in 1906 (R. 2309).

[8] In 1937-38 respondent had 73% of the controls business (R. 2312).

acceptance of its controls (R. 2242, 866, 995, 1046, 1108). Most oil burner manufacturers were accordingly impelled to supply burners with respondent's controls, either as standard or optional equipment (R. 364, 429, 441, 473, 628, 648, 664, 685-686, 715, 728, 974-975, 995, 1045-1046, 1108, 1136-1137, 1141).[9] In consequence, respondent has been able to sell its controls at higher prices than its competitors; in many instances oil burners equipped with respondent's controls have been sold for $2.50 to $5.00 more than the same burners equipped with controls made by its competitors (R. 2242).[10] The temperature control business is

---

[9] For example:

> A. In our particular field as we catered chiefly to builders, that you will understand it, we had to supply Minneapolis-Honeywell controls. They would not have anything else. [R. 628.]
>
> • • • •
>
> Q. I mean did every example of higher priced burners carry always Minneapolis-Honeywell controls?
>
> A. Most of the burners carried Minneapolis. [R. 715.]

One manufacturer who preferred Mercoid controls also had to sell burners with Minneapolis-Honeywell controls, since "Some dealers would not take burners without Minneapolis-Honeywell controls" (R. 728). It was stipulated that between 1936 and 1941 "more than 50% of all the manufacturers of oil burners within the United States" "entered into annual contracts" with respondent (R. 1645). There was testimony that some companies purchased from respondent without entering into annual contracts (R. 926-927, 2253).

[10] In some instances, the higher price of respondent's controls was passed on by the manufacturer to his dealers (R.

keenly competitive (R. 394-396, 749, 801-802).[11]

During the period 1937 through 1941 the prices charged by respondent to oil burner manufacturers were based upon a standard quantity discount pricing system (R. 2250-2252). Under this system, the prices paid by purchasers of 50 or more sets of controls annually varied according to the number of sets purchased.[12] The net prices decreased as the quantity purchased increased. During 1941 respondent had the following price brackets (R. 2252):

Bracket No.	No. of Sets	Net Price Per Set	Discount from Highest Price
1	50-349	$17.35	....
2	350-999	16.45	5.19%
3	1000-2499	15.90	8.36
3A	2500-4999	15.35	11.33
4	5000-7499	14.90	14.12
4A	7500-9999	14.25	17.87
5	10000-up	13.75	23.05

364-365, 1150-1151). Other manufacturers absorbed the higher cost of respondent's controls, thereby cutting down on their profit margin (R. 936, 942, 975).

[11] Respondent's principal competitors during the period involved in this case were the Penn-Electric Switch Company, the Mercoid Corporation, and the Perfex Corporation (R. 2242, 2309). Mercoid entered the controls business in 1922, Penn-Electric in 1932, and Perfex in 1936 (R. 2309). The prices charged by these three companies for controls were generally lower than those charged by respondent (R. 76-77, 2312).

[12] Purchasers of less than 50 sets annually were not recognized by respondent as oil burner manufacturers, and they did not receive the benefit of the discount bracket prices (R. 2250). In 1941, they paid $20.25 per set of controls as against the bracket prices of $17.35 to $13.75 (R. 2253).

Approximately 55% of respondent's total control sales in 1941 were to customers in the three lowest price brackets (brackets 4, 4A, 5) (R. 1630-1631), for which the Commission found the differentials not to be justified by differences in costs (R. 2255). However, in that year only twenty-two of respondent's 150-200 oil burner manufacturer customers (R. 1132) were in those brackets. Ten received bracket 4 prices (R. 1431), one had a 4A price (R. 1433), and eleven were given the lowest (5) price (*ibid.*).

Respondent's practice has been to execute annual contracts covering customer purchases for the following year (R. 1496, 2243). These contracts, generally executed in December or January (*ibid.*), placed the customer in a price bracket based upon respondent's estimate of the customer's prospective purchases. A particular customer's bracket was determined by its purchases during the preceding year, the average of the purchases of two or more preceding years, or the customer's estimate of its probable purchases (R. 2253). Although respondent endeavored to execute contracts with its customers, bracket prices based upon anticipated purchases were given to some customers who did not sign a contract (R. 926-927, 2253).

If a customer's total purchases exceeded the contract figure so as to bring the purchaser into a

lower price bracket, he was given the benefit of such lower price by retroactive discounts or credits (R. 927-8, 1497, 2253). However, if a customer failed to purchase the specified quantity, the price was not increased to the higher level which compliance with the quantity bracket scale would have required (*ibid.*). A number of customers were thus placed in brackets lower than their volume of purchases entitled them. These were known as "off scale sales" (R. 2254).[13] In 1941, 76 out of respondent's 150-200 customers (R. 1132) were "off-scale" accounts (R. 1496, 2256).[14] At least four of these "off scale" accounts resulted from a practice of respondent's known as "dual transactions" (R. 1550, 2257). That was an arrangement whereby an oil burner manufacturer who sold burners without controls to a furnace manufacturer was given credit, in determining his price bracket, for controls purchased by such furnace

---

[13] Some of these "off-scale" sales were made to meet a competitive situatio. where it appeared unlikely that the buyer would be able to purchase the quantity called for by the bracket price it was given. For example, respondent gave the May Oil Burner Corporation its lowest price in 1941—bracket 5 calling for 30,000 units at $13.75 a set of three units—because it "knew that any of our competition * * * would give them their lowest bracket" (R. 1620). May's actual purchase of 14,000 units, however, would have entitled it only to a 3-A bracket price of $15.35 (*ibid.*; R. 2252).

[14] A cost study made by respondent showed that approximately 43% of its total manufacturing costs in 1941 was applicable to off-scale customers (R. 1423, 2254).

manufacturer directly from respondent (R. 929-931, 2257).[15]

Injury to Customer Competition.

The Commission's finding of injury to *customer* competition was grounded upon findings that the question of price was important to oil burner manufacturers in the purchase of controls (R. 2260); that a set of controls represents the largest single item of cost among the various parts of a finished oil burner (R. 2252); that oil burner manufacturers who received the lower prices had a "substantial advantage" over their competitors paying the higher prices (R. 2255); and that the latter "must either sell at competitive prices and, in so doing, reduce their possible profits by the amounts of discriminations against them or attempt to sell at higher prices than those which the favored customers of respondent charge for oil burners equipped with respondent's automatic temperature controls, with the result of inability to secure business and a reduction in the volume of their sales" (*ibid.*).

---

[15] An example of such a dual transaction was the Automatic Burner Corporation account. In 1940 that company was given a 4A contract calling for 22,500 instruments (7,500 sets). Its actual purchases during that year were only 15,739. However, one of its customers purchased directly from respondent 15,129 units for use with ABC burners. Automatic Burner was thus given credit for 30,868 instruments. This resulted in the company's receiving a retroactive credit, and a 1941 bracket 5 contract. In 1941, Automatic Burner's direct purchases of 19,851 units were again combined with the customer's purchases of 21,315 units to give Automatic Burner a credit of 41,166 instruments (R. 1543-1544).

The record as a whole shows that these findings are supported by substantial evidence.

There was keen competition among oil burner manufacturers during the period 1937 to 1941 (R. 658-9, 713, 992, 1071, 1179). Manufacturers generally fell into two categories: those selling a more expensive burner, and those marketing a cheaper product (R. 452-3, 992, 1135-6, 1152). In 1941, the selling price to dealers of the higher priced burners generally was in the $60 to $75 range (R. 453, 459, 1086, 1113), although a number of manufacturers sold at substantially higher prices which went as high as $114.50 (Resp. Ex. 171, R. 2141; cf. R. 997, 1003). The low priced burner usually fell into the $40 to $50 range (Resp. Ex. 171, R. 2141; R. 453, 505, 507, 684, 1071). The manufacturers of the higher priced burners emphasized quality and service (R. 997, 1044-5, 1153-4). Although a number of firms continued to sell a comparatively expensive burner during the period 1937 to 1941,[16] many others were forced to meet competitive prices to stay in business (R. 459-460, 535, 537, 579, 659).

---

[16] Some of these manufacturers testified that, because of their emphasis on quality and service, they could continue to sell a higher priced burner despite competition, and that accordingly their sales of burners were not injured by the fact that other manufacturers were paying lower prices for controls (R. 997, 999, 1086, 1087, 1141, 1142, 1151). One of these firms, however, admittedly lost a customer to Quiet-Heet, which received lower control prices "because of the price" (R. 1155).

Two of the principal manufacturers in the low priced class were the Aldrich Company and the Quiet-Heet Manufacturing Corporation (R. 455). Both of these companies began business in the mid 1930's, and enjoyed a rapid growth. Aldrich was organized in 1935 (R. 1057). In its first year of operation it manufactured 250 burners; by 1941 its output had increased to 20,000 (R. 1059). During the same period, Aldrich went from respondent's highest price bracket (1) in 1936 to its lowest price bracket (5) in 1941 (R. 1070). Its first burner was sold to dealers for $82.50, and the price was steadily reduced until in 1941 it reached $47.50 for large quantities (R. 1071-1072, 1080).

Quiet-Heet was organized in 1936 (R. 495). In 1937 it manufactured 7500 burners; by 1941 the number had increased to 25,000 (R. 496). From the outset, Quiet-Heet emphasized its low price. Operating on a volume basis, it cut manufacturing and distribution costs by eliminating service, sales on credit, a large sales force, and extensive advertising (R. 569-572). In 1936, when it put its first burner on the market at $70 to dealers (R. 504), it was in respondent's highest price bracket (R. 554). Quiet-Heet steadily reduced the price of its burner, and by 1941 it reached a low of $40 to $50 (R. 505, 507, 684). At the same time, the prices paid by Quiet-Heet for respondent's controls dropped sharply. In 1937 and 1938 Quiet-Heet was in respondent's next-to-lowest bracket; thereafter it re-

ceived respondent's lowest prices (Resp. Ex. 185-E, R. 2164; R. 1007-1008, 2251). Quiet-Heet's advertising material emphasized that its burner included respondent's controls (Comm. Exs. 124-125, R. 1871, 1873).

The competition of these low priced manufacturers beginning around 1936 quickly drove the market price of the cheaper burners down (R. 588, 713-714); during the first six months of such competition the price went down "at least $25.00" (R. 579). A number of burner manufacturers lost business to Quiet-Heet (R. 630-631, 639, 658-659, 990, 1126, 1155). One manufacturer, in fact, was unable to meet competition at the prices he was paying respondent for controls (R. 681), so he purchased from Quiet-Heet complete burners which were equipped with respondent's controls, removed the controls, and used them on its own burners (R. 683, 690, 693).

Respondent introduced a tabulation of the results of a survey of oil burner prices in 1941 (Resp. Ex. 171, R. 2133). This survey revealed wide variations in the prices at which burners were sold to dealers in different areas, and showed that in some instances the highest prices were charged by oil burner manufacturers who paid respondent's lowest prices, and *vice versa*. The tabulation, however, merely showed the high and low prices, and did not endeavor to determine the average or median price (See n. 38, p. 64, *infra*).

Although this survey indicated that in some instances there appeared to be no direct correlation between the prices paid for the controls and the selling prices of the burners, it also showed that in 11 of the 15 areas surveyed the lowest dealer price was given by manufacturers in respondent's lowest price bracket (Resp. Ex. 171, R. 2141); see also n. 38, p. 64, *infra*. Moreover, there was direct evidence in the record linking changes in prices charged by respondent for controls to changes in the price of the complete burner.

Thus in 1936 Williams Oil-O-Matic Corporation charged $2.50 more for burners equipped with respondent's controls than for those with Penn-Electric or Mercoid (R. 965, 1035, 1037). In 1937, after respondent had increased the price charged Williams (R. 123-124, 965), the latter in turn increased the extra charge for burners with respondent's controls from $2.50 to $7.50 (*ibid.*, R. 1036). In 1938 Williams received respondent's lowest price of $16.25 (R. 123, 124, 2251)—$5.05 less than it had paid the previous year (Resp. Ex. 185-E, R. 2165; R. 2251). It then reduced the additional charge back to $2.50 (R. 965, 1036). During the period when the $7.50 differential was in effect, many of Williams' dealers, despite their preference for respondent's controls, selected burners with one of the cheaper makes (R. 1046). When Williams reduced the differential to $2.50 the following year, and ultimately eliminated it, a

"greater number" of dealers again selected burners with respondent's controls (R. 1047).

The Penn Boiler and Burner Company, unable to meet competition at the prices it paid respondent for controls (R. 681), purchased from Quiet-Heet complete burners equipped with respondent's controls, removed the controls, and used them on its own burners (R. 683, 690, 693). By so doing the company was able to sell burners equipped with respondent's controls for only $4 more than burners equipped with other controls (R. 685). If the company had purchased directly from respondent and paid the higher prices, it would have had to charge $6 more (*ibid.*).[17]

In its opinion the Commission rejected respondent's argument, based upon the tabulation of high and low prices, that an absence of injury to customer competition was shown by the wide variations in price among oil burners, and by the fact that the highest prices are sometimes charged by oil burner manufacturers who paid respondent's lowest prices for controls (R. 2274). The Commission further stated that the fact that manufacturers may also have received discounts on other component parts of oil burners, and that the whole competitive effect could not be traced solely to respondent, did not relieve respondent of its "real

[17] Some manufacturers had to sell burners to their dealers without controls because the dealers were able to purchase controls directly in the open market for less than the manufacturer could sell them with the burner (R. 527, 540, 578-9).

and substantial" share of responsibility (R. 2275). For, as the Commission pointed out, "Each seller who may have contributed to the aggregate price or cost advantages obtained by the favored burner manufacturers is, in part, responsible for the aggregate competitive result" (*ibid.*). The Commission also rejected respondent's argument that competition was not injured because other controls were available at lower prices. It stated that there was a substantial demand for respondent's controls, and that furnace and oil burner manufacturers had to be able to supply them "in order to be competitive" (*ibid.*).

Injury to Competitor Competition.

The Commission's finding of injury to competition among respondent's *competitors* rested on the finding that the price discriminations had induced oil burner manufacturers to purchase respondent's controls and had thus diverted trade to respondent from its competitors (R. 2256). In its accompanying opinion the Commission noted that respondent's pricing practices encouraged customers to concentrate their purchases in a single source of supply rather than distributing their business among competitors, and concluded that the "very nature" of quantity discounts perforce diverted business to the seller granting such differentials (R. 2274). The Commission rejected the argument relied on by the court below (*infra*, p. 25), that the growth of business among respondent's

competitors and respondent's own relative decline in the industry—from approximately 73% in 1937 to about 60% in 1939-1941—showed that competition had not been injured (R. 2273). The Commission pointed out that "* * * the law does not permit respondent to resort to unfair or discriminatory practices in order to maintain its competitive position in the industry" (R. 2273), and that competition was adversely affected under the Act whether the discriminatory practices resulted in the retention of old business or the securing of new customers (*ibid.*).

The record shows that price was an important consideration to many burner manufacturers in determining from whom they purchased their controls (e.g., R. 374, 593, 786)[18] and that some manufacturers gave respondent's competitors less business in order that they might be granted a larger discount on respondent's controls. Thus, Mercoid was unable to sell the Automatic Burner Corporation because it would "cost money" for the latter if it had failed to purchase a sufficient quantity of respondent's controls to obtain a retroactive credit (R. 150-151, 984). Mercoid similarly lost most of the Cleveland Steel Products Corporation's business to respondent in 1938 and 1939 (R. 153-154);

[18] One manufacturer, for example, testified that "price would be quite an important factor" in determining whether it would purchase controls from Perfex or from respondent (R. 374).

in the latter year Cleveland Steel informed respondent that because Cleveland's 1940 prices would be equal to the lowest in the industry, Cleveland was anticipating giving respondent all of its business (Gov. Ex. 107-B, R. 1854-1855).

Penn Electric Switch Company, another competitor of respondent, similarly lost a considerable volume of the business of customers given the advantages of respondent's lower discounts. Penn Switch's percentage of the business of the Williams Oil-O-Matic Corporation dropped from 77.28% in 1938 to 42.58% in 1941 (Resp. Ex. 126-A, R. 2037-38). During the same period, when respondent gave Williams Oil-O-Matic its lowest price, although not justified by volume (R. 965-968), respondent's percentage increased from 13.16% to 43.24% (Resp. Ex. 126-A; R. 2037-38). Micro-Westco, which respondent had lost to Penn Switch in 1938 (R. 970) following an increase in price (R. 969), was regained by respondent in 1940 after giving it the lowest price (R. 970).

There was also evidence, relied on by the trial examiner (R. 2193-2194) and the court of appeals (R. 2312), that in 1941 respondent lost to competitors varying proportions of the control business of 31 accounts that previously had standardized on respondent's controls and given respondent a "preponderance of their business" (R. 961-964). The percentage of business thus lost ranged from 5% to 95% for particular customers

(*ibid.*). The 31 accounts gave respondent's competitors 53% of their business in 1941 (R. 964). This evidence shows that some customers were induced to purchase from respondent's competitors, presumably because of their lower prices. There were compensating gains to respondent, however, as the evidence summarized (*supra*, pp. 22-23) demonstrates. Respondent not only retained its 60% share of the national market (R. 1645),[19] but increased its sales of controls to burner manufacturers 25% between 1939 and 1941 and 13.6% between 1940 and 1941 (R. 877).

The Decision of the Court of Appeals[20]

In rejecting the Commission's findings of injury to *customer* competition, the court of appeals relied primarily on its conclusion that there was an "absence of causal connection" between the prices which particular manufacturers paid for controls and the prices at which they sold the finished burners (R. 2313, 2314). The court further held that since the controls constituted only one factor that went to determine the cost of burners, the "discriminatory price differentials" could not be said substantially to injure competition or create "any reasonable probability or even possibility" thereof (R. 2315).

---

[19] It was stipulated that the percentage was approximately 60% during 1939, 1940 *and* 1941 (R. 1645).

[20] The facts relating to the date of the court's judgment are set forth in the Argument in the discussion of the timeliness of the filing of the petition (*infra*, pp. 34-47).

On the question of injury to *competitor* competition, the court held that since respondent's competitors "were able to enter its field and build thriving businesses in spite of M-H's commanding position and alleged wrongful practices," the effect of such practices could not be said "substantially to injure competition" (R. 2312). Prior to discussing the evidence on this aspect of the case, the court stated that from its examination of the "record as a whole" it was "convinced that the findings of the examiner were supported by very substantial evidence" (R. 2311). After summarizing certain "undisputed facts" as to the effect of respondent's practices on competitor competition,[21] the court held that such facts "fully establish the examiner's finding that competitor competition was not injured," and "outweigh the facts relied upon by the

[21] The facts referred to by the court were: that respondent's competitors generally charged lower prices for controls than respondent, and that there was no evidence that respondent had undercut its competitors; that during the period covered by the complaint there existed the "keenest kind of price competition" among control manufacturers; that the total business of respondent's competitors increased, and that the sales volume of the three new concerns which entered the industry after 1932 grew steadily; that respondent's share of the control business decreased from 73% in 1937-1938 to 60% in 1941; that in 1941 respondent lost to competitors 53% of the control business of 31 customers who previously had standardized on respondent's controls; and that in the same year 126 other customers of respondent also purchased controls from competitors (R. 2312).

Commission in reaching the opposite conclusion" (R. 2312). The court concluded that (*ibid.*)

> while the findings of an examiner are not "as unassailable as a master's" (*Universal Camera Co.* v. *National Labor Relations Board*, 340 U.S. 474, 492), where it appears from the record that they are supported by a preponderance of the evidence, the action of the Commission in rejecting them is arbitrary.

In view of its conclusion that respondent's pricing practices did not injure competition, the court did not reach the question whether the discounts in the three lowest price brackets, and the off-scale sales, had been made in good faith to meet an equally low price of a competitor (R. 2315).

SPECIFICATION OF ERRORS TO BE URGED

The court of appeals erred—

(1) In holding that the Commission erred in finding that the effect of respondent's quantity discount pricing system was substantially to lessen or to prevent competition between respondent and its competitors, or among its customers.

(2) In substituting its judgment for that of the Commission as to the effects upon competition of respondent's quantity discount pricing system.

(3) In holding that proof of injury to customer competition required a showing of causal relation-

ship between the seller's discriminatory prices and its customers' prices, and in failing to hold that a finding of injury to customer competition was adequately supported by evidence that substantial price discriminations were given by the seller among customers who were competing with each other.

(4) In holding that the Commission acted arbitrarily in rejecting the trial examiner's recommended findings, and that an examiner's findings which the reviewing court believes to be supported by the preponderance of the evidence are binding upon the Commission.

(5) In reversing Part III of the Commission's order and dismissing Count III of the Commission's complaint.

SUMMARY OF ARGUMENT

I

The petition for a writ of certiorari, filed within 90 days after the court of appeals entered its "Final Decree" on September 18, 1951, was timely. The court's earlier order of July 5, 1951, which related only to Part III of the Federal Trade Commission's cease and desist order and was silent concerning Parts I and II, was not the court's final order in the case. The entire controversy was not finally determined until the court entered the September judgment which dealt with Parts I, II and III.

Both the all-inclusive provisions of the September judgment and its title show that the court obviously intended it to supersede the earlier incomplete judgment. Since the court below had undoubted power to vacate the original judgment and enter a new one, its intention as to which order is its final judgment is controlling. *Rubber Company* v. *Goodyear*, 6 Wall. 153; *United States* v. *Hark*, 320 U.S. 531. The fact that the September judgment did not change the provisions relating to Part III in the July judgment is immaterial, since the entry of a new judgment supersedes the old even if there is no change of substance. *Rubber Company* v. *Goodyear*, *supra*; *Memphis* v. *Brown*, 94 U. S. 715. It is the established rule in this country that an amended judgment extends the time to appeal. Moreover, even an untimely petition to amend in matters of substance, if "considered on its merits," tolls the time for appeal from the entire judgment (not merely from the portion sought to be changed) until the court acts on it. *Bowman* v. *Loperena*, 311 U.S. 262, 266. The Commission's application in this case induced the court to revise the judgment in important respects, and thereby extended the time for appeal. To treat the July judgment as the final one with respect to Part III of the Commission's order would contravene the policy against separate and piecemeal appeals in a single controversy.

II

A. Section 2(a) of the Clayton Act prohibits a seller from discriminating in price between competing purchasers where the effect of such discrimination "may be substantially" to lessen or injure competition with its customers or among its competitors. The Act does not require a showing that the price discriminations actually have injured competition; it is enough that there be a reasonable possibility or reasonable probability of such injury. *Corn Products Refining Co.* v. *Federal Trade Commission*, 324 U.S. 726; *Federal Trade Commission* v. *Morton Salt Co.*, 334 U.S. 37. The evidence in this case clearly meets the standard of either reasonable possibility or reasonable probability. The court below erred because it weighed the evidence to determine whether actual injury to competition had been shown.

B. It is undisputed (1) that respondent charges some oil burner manufacturers substantially lower prices for its automatic temperature controls than it does other manufacturers, and that such discriminations are not justified by cost differentials; (2) that the controls are the most expensive part of an oil burner, often constituting as much as one-third of the total cost; (3) that the oil burner manufacturers who receive the unjustified discounts are in competition with manufacturers who do not; (4) that respondent

sells 60% of the automatic temperature controls sold in the United States; and (5) that the demand for respondent's product makes it necessary for most oil burner manufacturers to stock respondent's controls, at least as optional equipment. This showing "in itself is sufficient" to support the Commission's "obvious" inference of injury to customer competition. *Federal Trade Commission* v. *Morton Salt Co., supra.* Respondent has not shown that its particular industry is so unique that the substantial differentials given to competing customers do not create a reasonable possibility or probability of injury to competition. Respondent's dominant position in the controls industry demonstrates that its price discriminations are even more likely to injure competition than in an industry—such as the salt business in *Morton Salt*—where no single producer controls the major share of the market.

Respondent's discriminatory discounts on the controls were as substantial, even in relation to the price of finished oil burners, as the discounts condemned by this Court in the *Morton Salt* and *Corn Products* cases. The facts that controls constituted only one of the parts used in constructing an oil burner (although the most expensive part) and that many other things affect burner prices do not negate the Commission's finding of injury to competition. Respondent's contrary argument would lead to the conclusion that a manufacturer

of an assembled product could receive unjustified discounts on all of the parts used, and thereby gain a large competitive advantage, since no one of the discounts could be proved substantially to affect competition in the completed product. A similar argument was rejected in the *Morton Salt* case, 334 U.S., at 49.

Nor does the fact that some high price burner manufacturers paid less for controls and *vice versa* prove that the discounts did not give the recipients, who fought very hard for them, a competitive advantage. It shows only that particular manufacturers may have had compensating advantages because of other factors and methods of operation. It still remains true that manufacturers paying more for controls would have been in a better competitive position if they had paid less; they would have been able either to reduce prices or to use their greater net revenues for other purposes. Similarly, the testimony of some oil burner manufacturers that they were not injured by the discrimination because of compensating advantages in their particular cases did not prove that others were not hurt, or that in general those who received greater discounts were not given a competitive advantage—as other oil burner manufacturers testified was the case. Thus, none of the facts upon which respondent relies is sufficient to preclude the Commission from reasonably drawing the obvious inference of probable or possible injury to competition.

C. The evidence clearly supported the Commission's finding of injury to competitor competition. Public demand for respondent's controls compelled most burner manufacturers to have such controls available for their burners. Since under respondent's pricing system the price of controls dropped as the volume purchased increased, the inevitable tendency of the system would be to encourage burner manufacturers to concentrate their purchases in respondent as their single source of supply. The record shows that respondent's discriminatory discounts not only created a reasonable possibility of injury to competition, but resulted in actual injury. In concluding that competitor competition had not been injured, the court of appeals singled out portions of the evidence and disregarded other evidence relied on by the Commission. In so doing, it improperly substituted its judgment for that of the Commission as to the weight of the evidence.

The court below, apparently misunderstanding *Universal Camera Corp.* v. *National Labor Relations Board*, 340 U.S. 474, gave undue weight to the findings of the trial examiner that respondent's discriminatory discounts did not injure competition. Nothing in the *Universal Camera* case or the Administrative Procedure Act suggests that a reviewing court is to substitute the examiner's decision for that of the agency whenever it concludes that the examiner's recommended find-

ings are supported by substantial evidence or by a preponderance of the evidence. For this would mean that the court would be weighing the evidence *de novo* whenever an agency reversed its examiner. Such weighing of the evidence and the drawing of inferences therefrom are for the Commission, not the courts. The Commission's decisional process here did not require the resolution of testimonial conflicts, where the examiner's opportunity to appraise the credibility of witnesses entitles his recommendations to substantial significance, but the drawing of economic inferences as to the effect of uncontradicted facts on competition. The examiner is in no better position than the Commission to determine such matters; indeed Congress has entrusted such decisions to the Commission rather than to examiners because of its belief that the Commission would have superior expertness in the field.

III

The justification allowed by Section 2 (b) of the Clayton Act for discriminations made in good faith to meet an equally low price of a competitor permits only price discriminations made to deal with "individual competitive situations," and not to entire "pricing systems" or "a general system of competition." *Federal Trade Commission* v. *Staley Manufacturing Co.*, 324 U.S. 746. The discounts under respondent's quantity discount

system, which has been in use since 1927, were fixed in relation to the general competitive picture, and not to meet individual competitive situations. As a matter of law, they cannot satisfy the requirements of Section 2(b).

ARGUMENT

I

The Petition for a Writ of Certiorari Was Filed in Time.

The "Final Decree" of the court of appeals—so captioned by the court—was entered on September 18, 1951 (R. 2316). The petition for a writ of certiorari was filed on December 14, 1951. It is undisputed that the petition was filed within 90 days of the entry of the "Final Decree" as required by 28 U.S.C., Supp. V, 2101(c).

Respondent contends however, that the judgment of the court of appeals was not the "Final Decree" of September 18, 1951, but an earlier order entered on July 5, 1951; that the petition was untimely because filed more than 90 days after entry of the latter order; and that accordingly this Court has no jurisdiction to entertain the petition (brief in opp. 1-2, 10-12). Consideration of this contention requires review of the proceedings before the court of appeals.

The Commission's cease and desist order contained three prohibitory parts (R. 2262-2264). Part I related to violation of Section 5 of the Federal Trade Commission Act; Parts II and III

dealt with violation of Sections 3 and 2(a), respectively, of the Clayton Act. Respondent's petition to review challenged the entire order (R. 2284-2298), and the Commission filed a cross-petition to affirm and enforce the entire order (R. 2317).[22] During the court proceedings, however, respondent abandoned its challenge to Parts I and II of the order (R. 2308).

On July 5, 1951, the court handed down an opinion which reversed Part III of the order (R. 2308). On the same day the court entered an order (R. 2316) which

> ordered and adjudged * * * that Part III of the decision of the Federal Trade Commission entered in this cause on January 14, 1948, be, and the same is hereby, Reversed, and Count III of the complaint upon which it is based be, and the same is hereby Dismissed.

The court's opinion discussed only Part III of the Commission's order (R. 2308-2315). The court stated that, since respondent was not challenging Parts I and II, it would "make no further reference to them" (R. 2308), and the court's order of

---

[22] Although the cross-petition is not included in the printed record filed with this court, the final decree entered by the court below on September 18, 1951, recites that the Commission has filed a cross-petition praying for enforcement of the order (R. 2317). A copy of the cross-petition will be filed with the Clerk of this Court.

July 5, 1951, was similarly silent as to these Parts (R. 2316). The court thus entered no judgment with respect to those portions of the order.

Despite respondent's failure to continue its challenge to Parts I and II of the order the court was required to enter judgment with respect to their validity, not only because of the cross-petition filed by the Commission, but also because the court had the statutory duty to affirm, modify or set aside the order brought before it for review.[23] Even if respondent's abandonment of its challenge to Parts I and II were to be viewed as a *pro tanto* withdrawal of its petition to review, the entry of judgment with respect to those parts would still be necessary because of the Commission's cross-petition. Since Parts I and II of the Commission's order were not affirmed, modified or set aside by the judgment entered on July 5, 1951, this judgment was not dispositive of the review proceedings.

The Commission, being of the opinion that the court's order of July 5, 1951, had not fully disposed of the case, filed with the court a memorandum dated August 21, 1951, requesting entry of a

---

[23] Section 5(c) of the Federal Trade Commission Act (15 U.S.C. 45(c)) (under which Act Part I of the order was entered) and Section 11 of the Clayton Act (15 U.S.C. 21) both require the reviewing court to enter a judgment "affirming, modifying, or setting aside" the order of the Commission. In addition, Section 5(c) of the Trade Commission Act requires the court to enter a decree "enforcing" the order under review "to the extent that such order is affirmed."

judgment affirming and enforcing Parts I and II of its order.[24] Following the filing of an opposing memorandum by respondent and a reply thereto by the Commission, the court on September 18, 1951, entered a judgment which it captioned "Final Decree" (R. 2316). That judgment recites the prior proceedings in the case, including the cross-petition filed by the Commission (R. 2316-2317). It recites that it appears to the court that Parts I and II of the Commission's order should be "affirmed and enforced" and that Part III should be "reversed" (R. 2317). The judgment then provides: "Now, Therefore, It Is Hereby Ordered, Adjudged and Decreed" that Part III of the order "be and the same is hereby reversed" and Count III of the complaint upon which it is based "be and the same is hereby dismissed," and that Parts I and II "be and the same hereby are affirmed" (*ibid.*). In addition, the judgment incorporates the prohibitions of Parts I and II of the Commission's order, and directs that respondent file with the Commission within 90 days a written report setting forth its compliance with the judgment. (R. 2317-2319).

1. We submit that the foregoing facts conclusively show that the court below intended that its later judgment of September 18 should supersede

[24] The memorandum is entitled "Statement of the Position of the Federal Trade Commission Relative to Settlement of a Final Decree Herein." A copy of this memorandum, which is not a part of the record, has been filed with the Clerk.

its earlier, incomplete judgment of July 5. Otherwise the later judgment merely would have affirmed and enforced Parts I and II of the Commission's order. Instead, the September judgment not only affirmed and enforced Parts I and II, but also specifically reversed Part III. The court further manifested its intention to make the September judgment its final judgment covering the entire cause, including Part III, by denominating this judgment its "Final Decree."

The July judgment had been but a partial and incomplete disposition of the controversy. It left undetermined the judgment, if any, which was to be entered with respect to Parts I and II, a matter not settled until the court below entered its September judgment. Then—and not until then—did the court finally adjudicate the entire controversy before it.

If there is doubt as to which of two acts (or orders) of a court constitutes its final judgment, the court's intention on the matter is controlling. *Rubber Company* v. *Goodyear*, 6 Wall. 153, 155-156; *United States* v. *Hark*, 320 U.S. 531, 535; *Monarch Brewing Co.* v. *George J. Meyer Mfg. Co.*, 130 F. 2d 582 (C.A. 9). Here, as in the *Hark* case, it cannot be assumed that the court intended its final decree of September 18 which reversed Part III to be merely "an empty form" (320 U.S. at 535). Yet it would be just that if the court intended its July judgment to stand as its final judgment as

to Part III. See *Union Guardian Trust Co.* v. *Jastromb*, 47 F. 2d 689 (C.A. 6). Clearly, the court must have intended to make its September judgment its final order dispositive of the entire cause before it, including Part III.

A court has plenary power to modify or vacate its judgment at any time during the term in which the judgment was rendered. *Zimmern* v. *United States*, 298 U.S. 167, 169-170. Thus the court below could have specifically vacated the July judgment in its September order.[25] Had it done so, the September judgment plainly would govern the time for filing a petition for certiorari. *Hill* v. *Hawes*, 320 U.S. 520. No different result should follow because the court did not formally vacate the earlier judgment, where it obviously intended that the second judgment was to supersede the first. *Rubber Company* v. *Goodyear*, 6 Wall. 153; *Memphis* v. *Brown*, 94 U.S. 715, 718. In the *Goodyear* case an order had been entered on the court's minute book on November 28. On December 5 the court entered another order, captioned "final decree," which was "for the most part in the very language of the (earlier) order" and which made no changes of substance in that order. This Court held that an appeal taken from the December order

[25] The court below has one term annually, which commences on the first Tuesday in October. Rule 2, Rules of the United States Court of Appeals for the Seventh Circuit (effective August 1, 1950).

was timely because the latter order was the final order in the cause. The Court stated (pp. 155-156):

> We do not question that the first entry had all the essential elements of a final decree, and if it had been followed by no other action of the court, might very properly have been treated as such. But we must be governed by the obvious intent of the Circuit Court apparent on the face of the proceedings. We must hold, therefore, the decree of the 5th of December to be the final decree.

Moreover, the practical effect of the September judgment in the case at bar was to vacate the July judgment, and it must be viewed as so doing. Cf. *Union Guardian Trust Co.* v. *Jastromb*, 47 F. 2d 689, 690 (C.A. 6), where the court stated:

> The order of March 18 did not expressly vacate the order of March 7, but we think it should be considered as having that effect. It covered exactly the same subject-matter, and there could have been no object in entering it, unless it was intended to supersede the earlier order.

Respondent contends that the court below intended the July judgment to "make final disposition of the case" (Br. in opp. p. 11). This may have been true in July, when the court presumably was unaware that the judgment was incomplete.

But in September it intended the new judgment to supersede the old one, as the language and title of the September judgment demonstrate. The intention at the time the second judgment was entered necessarily controls, for that determines whether the court meant to vacate and supersede the earlier one. Respondent's argument would have been equally applicable to each of the cases cited in the preceding paragraphs.

It is immaterial that the September judgment, in reversing Part III, did not substantially change the provisions relating to Part III contained in the earlier judgment. The entry of a new judgment supersedes the old even though there is no change of substance. *Rubber Company* v. *Goodyear, supra; Memphis* v. *Brown*, 94 U. S. 715; *Union Guardian Trust Co.* v. *Jastromb, supra.* In *Memphis* v. *Brown*, this Court stated (p. 718):

> the form of the entry of May 20 is equivalent to setting aside the judgment of March 2, and entering it anew as of that date. This the court had the right to do during the term, and for the very purpose of giving it effect for a *supersedeas*.[26]

---

[26] In the *Union Trust* case the first order was entered on the court's journal on March 7, the same day on which the court filed its opinion. On March 18 the judge signed another order which "after some recitals, was in substantially the same language as the order of March 7" (47 F. 2d 689). The court held that the March 18 order superseded the earlier one, and that an appeal taken within 30 days of the second order was timely. See *supra*, p. 40.

The same result would seem to follow *a fortiori* where the new judgment is substantially different, as it is here, even though a part of it is taken without change from the earlier decree. Where only a part of the judgment is altered, the conclusion that the new judgment stands in place of the old is reinforced by the policy against piecemeal appeals in a single lawsuit, discussed at pp. 46-47, *infra*.

It is the general rule in this country (subject to an exception for clerical or formal errors) "that where a judgment, order, or decree is amended or modified the time within which an appeal from such determination may be taken begins to run from the date of the amendment or modification." Annotation, 80 Law Ed. 1121, and cases cited. Federal cases applying the general rule include *Memphis* v. *Brown, supra; Zimmern* v. *United States, supra; Fultz* v. *Laird*, 24 F. 2d 172 (C. A. 6); *Union Guardian Trust Co*, v. *Jastromb, supra*. State cases include *Hewey* v. *Andrews*, 82 Ore. 448, 159 P. 1149; *Billson* v. *Lardner*, 67 Minn. 35, 69 N.W. 477; *Luck* v. *Hopkins*, 92 Tex. 426, 49 S.W. 360.

In the instant case the July judgment disposed of only one part of the cause before the court. The entry of the September judgment effected a substantial modification of the earlier, incomplete judgment by broadening it to cover the other two parts of the Commission's order. The cases have held that less substantial modifications of judg-

ments brought into play the general rule that modification of a judgment extends the time to appeal. In *Fultz* v. *Laird, supra,* the original judgment had provided for cancellation of an option and the award of damages; the amended judgment eliminated the damage award. In the *Jastromb* case the amended order was "a more detailed order containing certain recitals."

2. The preceding argument shows that when a court actually changes its judgment, the time to appeal or petition begins to run anew irrespective of whether a petition for rehearing has been filed.

It is also established that the timely filing of a motion to amend or modify a judgment that raises "questions of substance" as distinguished from "mere matters of form" tolls the period for taking an appeal until the court acts on the motion (*Leishman* v. *Associated Electric Co.*, 318 U. S. 203, 205; *United States* v. *Crescent Amusement Co.*, 323 U. S. 173, 177), and that even an untimely petition to amend a judgment, if "entertained or * * * considered on its merits", similarly extends the time for appeal (*Bowman* v. *Loperena*, 311 U. S. 262, 266; cf. *Pfister* v. *Northern Illinois Finance Corp.*, 317 U. S. 144, 149).

In this case, the Commission's application was not filed within the 15 days allowed for petitions for rehearing. But it did induce the court to revise the judgment in matters of substance, and thus was obviously "entertained" and "consid-

ered on its merits". In these circumstances, "the judgment of the court as originally entered does not become final" until the action of the court on such petition, "and the time for appeal runs from the date thereof." *Bowman* v. *Loperena, supra.* In the *Bowman* case and each of the three cases it cites[27] the untimely petition for rehearing, although considered by the lower court, was denied. The problem presented in those cases was therefore more difficult than that raised here, in which the application to change the judgment was successful. It follows *a fortiori* in the latter situation that the entry of a different judgment extends the time to appeal.

Respondent may contend that the memorandum filed by the Commission requesting the change in the judgment was not in form a petition for rehearing. But the substance of the document, not its form or its title, and the manner in which the court treated it determine its legal effect. Respondent also argues that the Commission's memorandum did not request any change with respect to Part III of the judgment, and therefore cannot have the effect of a petition for rehearing on that point. But the critical fact is not what the Commission requested or the name of the paper in which the request was made, but that the docu-

---

[27] *Voorhees* v. *John T. Noye Mfg. Co.*, 151 U. S. 135, 137; *Gypsy Oil Co.* v. *Escoe*, 275 U. S. 498, 499; *Wayne United Gas Co.* v. *Owens-Illinois Glass Co.*, 300 U. S. 131, 137, 138.

ment filed by the Commission induced the court to enter a new and different judgment. The nature of the application is irrelevant when the judgment is changed—although it may be material when such an application is denied. A new judgment would be the basis for an appeal if the court acts on its own motion (*Zimmern* v. *United States*, 298 U. S. 167), and the result must be the same irrespective of a formal or informal request by a party.

Furthermore, the cases indicate that a petition for rehearing or its equivalent (such as a motion for new findings) extends the time to appeal with respect to all parts of a judgment, not merely the portion which the petition or motion seeks to have modified. Thus, in *United States* v. *Crescent Amusement Co.*, 323 U. S. 173, 177, the *plaintiff's* time to appeal was held to be extended by the *defendant's* motion to amend the findings—although the amendments to the findings did not relate to the portion of the judgment from which the plaintiff was appealing. Similarly, in *Johnson* v. *Eisentrager*, 339 U. S. 763, the Government's petition for certiorari was filed within 90 days of the denial of *respondent's* petition for rehearing below, not within 90 days of the original order. In *Reconstruction Finance Corporation* v. *Mouat*, 184 F. 2d 44, 48 (C.A. 9), the *defendant's* appeal pending disposition of *plaintiff's* motion for additional findings was dismissed as premature. In these cases the appellant or petitioner was not challenging the portion of the judgment or findings which

his opponent was seeking to have changed—and yet the time to appeal ran from the order disposing of the opponent's application. This shows that the time to appeal from an entire judgment was tolled by a motion addressed to part of it.

3. The obvious purpose of the rule that an amendment to a judgment or a petition to amend or modify a judgment tolls the time to appeal is to prevent separate and piecemeal appeals in a single controversy. Respondent's contention, however, could lead to just such segmentized litigation. For example, respondent itself might have sought review of the order enforcing Part II, in the absence of any showing of a prior violation of the order. Cf. *Federal Trade Commission* v. *Ruberoid Company*, 343 U. S. 470. Or, if the court had declined enforcement, the Commission might have sought review of that ruling. *Ibid.* In either situation, the rule contended for by respondent would require the filing of separate petitions governed by different time limitations to review issues arising out of a single order of the Commission—issues that had been considered and disposed of by the court below in a single proceeding. Such a result would flout the well settle judicial policy of avoiding the "inconvenience and costs of piecemeal review"[28] by combining "in one review all stages of the proceeding that effectively may be reviewed

[28] *Dickinson* v. *Petroleum Conversion Corp.*, 338 U. S. 507, 511.

and corrected if and when final judgment results." *Cohen* v. *Beneficial Industrial Loan Corp.*, 337 U. S. 541, 546.

The purpose of statutes which limit the period for appeals is to set a definite time beyond which prospective appellees may know, if no appeal has been filed, that the litigation is over. *Matton Steamboat Co.* v. *Murphy*, 319 U. S. 412, 415. In the instant case the litigation was not completed by the July judgment, and respondent was put on notice soon thereafter by the Commission's memorandum that further action was required by the court to terminate the case. Within 90 days after the July judgment the court entered its new judgment superseding the earlier one. Respondent was thus fully aware that the period for filing a certiorari petition had been accordingly extended.

We submit that the court below clearly intended to make its judgment of September 18, 1951, its final judgment in the proceedings before it; that the entry of that judgment fixed the time within which the petition for certiorari might be filed; and that the present petition, filed within 90 days of the entry of that judgment, was filed in time.

II

The Commission's Findings of Injury to Competition Were Fully Supported by the Evidence.

A. Introductory Analysis and Governing Principles

The industry involved in this case—the manufacture of automatic temperature controls for oil

burners—is, as respondents insist, a highly competitive one. Those who manufacture such controls, and the oil burner manufacturers who purchase them, seek to secure as much business as they can and to buy at the best prices they can, just like other businessmen. The unjustified discounts allowable under respondents' bracket system were plainly substantial, running in 1941 from 14 to 23% under respondents' highest manufacturers' price and 3 to 12% under the lowest justified bracket (R. 1659). The efforts of the oil burner manufacturers to obtain the lowest prices possible in buying controls (see *infra*, pp. 73-74) would lead most reasonable persons—as it has led the Federal Trade Commission—to conclude that there must be a material advantage in obtaining such lower prices, and a corresponding handicap to manufacturers who are forced to pay more than their competitors.

The one unusual feature in the controls industry is that one control manufacturer—the respondent, Minneapolis-Honeywell—for many years has been the dominant concern. In 1939, 1940 and 1941 it sold 60 per cent of the automatic temperature controls sold in the United States to oil burner manufacturers and dealers (R. 2241, 1645). This proportion had been reduced from 73 per cent, not by reason of any decline in respondent's sales (R. 877), which in fact increased 25 per cent in those years (R. 876-877), but because of a great increase

in the late 1930's in the demand for oil burners and the controls constituting their most expensive part (R. 2631). Moreover, the record shows that, because of public acceptance and demand generated by respondent's advertising and servicing policies, the majority of burner manufacturers found it necessary to use respondent's controls, at least as optional equipment, even at somewhat higher prices (R. 364, 429, 441, 473, 628, 648, 664, 685-686, 715, 728, 974-975, 995, 1045-1046, 1108, 1136-1137, 1141). Thus as a practical matter oil burner manufacturers cannot fully meet the demands of their customers by purchasing from respondent's competitors.[29]

The obvious consequence is that, even more than in other industries, the oil burner manufacturers forced to pay respondent substantially higher prices than their competitors would suffer a competitive disadvantage, for they could not entirely avoid purchasing respondent's controls. And the same factors which impel most oil burner manu-

[29] Although respondent's cash prices were higher, purchasers from respondent were receiving, in addition to the physical controls, the advantages of respondent's servicing system and the consumer demand built up by respondent's advertising and other means of promoting good will (R. 858-861, 866, 995, 1046, 1108, 2242). Although the record does not disclose the comparative value of the facilities furnished by respondent's competitors, it certainly suggests that they did not match respondent in this respect. Vice President Sweatt of respondent testified that "So far as I know, the national advertising of any other control company has been very small." (R. 851).

facturers to buy M-H controls also make the quantity discount system more injurious to respondent's direct competitors than in other industries. For the customers' incentive to obtain respondent's controls at a lower price—not justified by cost differentials—by buying a greater quantity inevitably leads to smaller purchases from other control manufacturers.

These injurious consequences to competition, in the language of this Court in *Federal Trade Commission* v. *Morton Salt Co.*, 334 U. S. 37, 46-47, "would appear to be obvious." Certainly a reasonable Commission could reasonably infer them from the undisputed facts in this case.

In reviewing the evidence in the succeeding pages (*infra*, pp. 63-83) we will show that even if the standard were "actual injury," it could not be said that the Commission's determination was erroneous, and that the evidence relied upon by respondent, in the light of the record as a whole, cannot be said to require a finding that competition was not injured by respondent's discriminatory price system.

But the Government's burden is not that heavy. For Section 2(a) of the Clayton Act prohibits a seller from discriminating in price between different purchasers of commodities of like grade and quality where the effect of such discrimination

> *may be* substantially to lessen competition or tend to create a monopoly in any line of com-

> merce, or to injure, destroy, or prevent competition with any person who either grants or knowingly receives the benefit of such discrimination, or with customers of either of them * * *. [Italics supplied]

And this Court has repeatedly held that "§ 2(a) does not require a finding that the discriminations in price *have in fact* had an adverse effect on competition."[30] *Corn Products Refining Co.* v. *Federal Trade Commission*, 324 U. S. 726, 738, 742; *Morton Salt* case, 334 U. S. at 46; *Standard Fashion Co.* v. *Magrane-Houston Co.*, 258 U. S. 346, 356-357. "The statute is designed to reach such discriminations 'in their incipiency,' before the harm to competition is effected. It is enough that they 'may' have the prescribed effect." *Corn Products* case, 324 U. S. at 738.

The proper test of injury to competition has been phrased in several ways. In the *Corn Products* case, on page 738, the Court stated, following the *Standard Fashion* case, "the use of the word 'may' was not to prohibit discriminations having 'the mere possibility' of those consequences, but to reach those which would *probably* have the defined effect on competition." Later in the *Corn Products* opinion (p. 742) the Court declared, "As we have said, the statute does not require that the discriminations must in fact

---

[30] All italics supplied unless otherwise noted.

have harmed competition, but only that there is a *reasonable possibility* that they 'may' have such an effect." The latter passage was repeated in the *Morton Salt* case (p. 46), although with the qualification that it "is to be read also in the light of" the statement on page 738 of *Corn Products* (334 U. S. at 46n). The dissent in *Morton Salt* (pp. 55-58) preferred the first formulation in *Corn Products* to the second.

The statutory phrase is "may be substantially" to lessen or injure competition. The various expressions used to define this concept have all properly held that although it excluded the remote effect on competition described as a "mere possibility," it did not require a certain or proved effect. The Commission had not thought that there was any material distinction between describing the intermediate effect which was sufficient to make a price discrimination unlawful as "reasonably probable" or "reasonably possible."[31] Indeed, the Commission recently has stated that it has been construing the Act as requiring a "reasonable probability" of injury to competition.[32]

---

[31] The Brief for the Federal Trade Commission in the *Morton Salt* case stated: "This means that there must be a *probable or reasonably possible;* not a mere remote, effect on competition—but not a certain or proved effect" (p. 37). (Italics supplied.)

[32] A letter dated August 14, 1950, from the Chairman of the Commission in response to inquiries from the Chairman of the Senate Committee on Interstate and Foreign Commerce, printed in "Study of Federal Trade Commission Views on

Certainly for purposes of this case it will not matter whether the test is "reasonable probability" or "reasonable possibility." For whichever standard be applied, the proof before the Commission clearly satisfied it. Under any standard short of *actual* injury to competition[33] this case is a simple one, as we shall show.

The court below erred we believe, because it weighed the evidence in relation to proof of actual

---

Freight Absorption", 81st Cong. 2nd. Sess., Confidential Print, page 8, contained the following question and answer:

> QUESTION 9: Does the Commission regard the words "may be" in section 2 of the Clayton Act, referring to the prohibited effect upon competition, as meaning that there is "reasonable possibility" or as meaning that there is "reasonable probability" of the specified effect? Explain answer.
>
> ANSWER: The meaning applied by the Commission to the words "may be" in section 2 of the Clayton Act has been that of "reasonable probability." The Commission is of the opinion that this construction, which has been many times sustained by the courts, permits the protection of competition from destruction or serious crippling by authorizing the institution of proceedings against price discrimination while injury to competition is in the incipient stage. If the Commission were obliged to wait until price discrimination has destroyed or severely crippled competition before a proceeding could be brought, the act would afford little protection. The Commission has not advocated, and does not now advocate, a different construction of the words "may be."

[33] We do not mean to imply that there was not sufficient evidence of actual injury here. See pp. 71-74, 77-79, infra. But the evidence as to this was in conflict, and a closer question would be presented.

injury. Although when stating its conclusion, the court did recite the test approved by this Court, its analysis of the evidence indicates that the court was not applying the rule of reasonable probability or possibility of injury to competition but was overturning the Commission's findings because, in its opinion, actual injury had not been proved. Thus the Court pointed out certain facts establishing that "competition *was* not injured"[34] (R. 2312); "we think it cannot be said that the effect of those practices was substantially to injure competition. And we construe the Act to require substantial, not trivial or sporadic, interference with competition to establish violation of its mandate." (*id.*). With respect to customer competition the court below stated, "Even though some manufacturers did testify that 'the question of price was important * * * and that *they had lost* business to certain competitors who enjoyed lower control prices * * *' we think it is equally significant that other manufacturers who paid the higher prices *testified that they did not lose* business as a result of paying such higher control prices, and that they considered other factors of far greater importance in determining the price of the completed burner." (R. 2313). The court gave great weight to a survey that showed that some customers paying low prices for controls charged high prices for burners and *vice versa*, and concluded that this disproved

[34] Italics herein are supplied.

any relationship between control prices and burner pricing (R. 2313-2314). Again the stress was on actual effect, not upon potential or probable or reasonably possible effect.

In the *Morton Salt* case the Court sustained the Commission's finding of actual injury to competition. The Court held, however, that such a finding was unnecessary, and significantly stated (p. 50):

> The Commission here went much further in receiving evidence than the statute requires. It heard testimony from many witnesses in various parts of the country to show that they had suffered actual financial losses on account of respondent's discriminatory prices. Experts were offered to prove the tendency of injury from such prices. The evidence covers about two thousand pages, largely devoted to this single issue—injury to competition. It would greatly handicap effective enforcement of the Act to require testimony to show that which we believe to be self-evident, namely, that there is a "reasonable possibility" that competition may be adversely affected by a practice under which manufacturers and producers sell their goods to some customers substantially cheaper than they sell like goods to the competitors of these customers. This showing in itself is sufficient to justify our conclusion that the Commission's findings of injury to competition were adequately supported by evidence.

This case was tried and decided by the Commission prior to this Court's decision in *Morton Salt*, so that the Commission was unable to take advantage of the Court's suggestion that 2,000 pages of record were unnecessary to prove the obvious.

We submit and will show in the following pages that what was obvious in *Morton Salt* is also obvious here.

B. The Evidence Amply Supports the Commission's Finding That the Discriminatory Prices Will Tend to Injure Customer Competition

It is undisputed (1) that respondent charges some oil burner manufacturers substantially lower prices for its controls than it does other such manufacturers, and that the discriminations held unlawful are not justified by differences in costs, (2) that the controls are the most expensive parts of an oil burner, and (3) that oil burner manufacturers who received the unjustified discounts are in competition with manufacturers who do not.

In the paragraph just quoted, p. 55, *supra*, from the *Morton Salt* case, the Court stated that such a showing "in itself is sufficient" to support the Commission's inference of injury to competition.[35]

---

[35] Respondent has conceded that proof of discrimination and competition makes out a *prima facie* case for the Commission. Br., in opp. p. 6. To the extent that this overlooks the requirement of substantiality, it goes somewhat further than the *Morton Salt* rule as stated by the Court and as interpreted by the Commission. But where a discount is substantial on its face, as in both the *Salt* case and this case, or where some

The Court had previously stated that it "would appear to be obvious that the competitive opportunities of certain merchants were injured when they had to pay respondent substantially more for their goods than their competitors had to pay"[36] (334 U. S. at 46-47). The language quoted is equally applicable to the undisputed facts of the instant case.[37]

---

other significant circumstance (such as the proportion which the controls bear to the cost of the completed oil burner) demonstrates substantiality, the Commission will have proved enough to support the "obvious" inference. This will not only make out a *prima facie* case, in the absence of testimony to the contrary, but will be enough to support an inference of substantial effect upon competition unless a respondent clearly proves that the industry is atypical. Although this was not spelled out fully in *Morton Salt*, we deem it to be the correct interpretation of that decision.

[36] The dissent also thought the "inference of adverse effect on competition" warrantable except for the one discount applicable only to 1/10 of 1% of the Salt Company's business. 334 U. S. at 60.

[37] The findings of the Commission with respect to customer competition were substantially identical with those in the *Morton Salt* case, as appears from the following comparison:

Morton Salt Findings, Transcript, No. 464, 1947 Term (R. 2088).	*Minneapolis-Honeywell* Findings (R. 2255).
The Commission further finds that customers of the respondent who receive the benefit of the various discriminatory prices, discounts, rebates, and allowances granted by the respondent have a substantial advantage in selling respondent's salt in competition with other customers of	The Commission further finds that oil-burner manufacturers who received the benefit of the various discriminatory prices, discounts, or rebates granted by the respondent have a substantial advantage in selling oil burners equipped with respondent's controls in competition

We do not doubt that a respondent before the Commission is free to try to prove that a particular industry is so unique that competition is not likely to be injured by reason of the fact that one competitor may pay less than another for the materials or parts which both use. But the burden is heavy on one seeking to establish a deviation suf-

---

the respondent who do not receive the benefit of such discriminatory prices, discounts, rebates, and allowances or who are obliged to pay respondent's full price for said salt. In order to sell respondent's table salt in competition with customers of the respondent who receive the benefit of respondent's discrimination in price, wholesalers who pay respondent's full price or who are denied the discounts or rebates allowed such favored customers must either sell at competitive prices and in so doing reduce their possible profits by the amount of the discriminations against them, or attempt to sell at higher prices than those which the favored customers of respondent charge for the same product, with the result of inability to secure business and a reduction in the volume of their sales.

with other oil-burner manufacturers purchasing and using respondent's controls who do not receive the benefit of such discriminatory prices, discounts, or rebates and who are obliged to pay respondent's higher cost bracket price. In order to sell their oil burners equipped with respondent's automatic temperature controls in competition with customers of the respondent who receive the benefit of respondent's discriminations in price, oil-burner manufacturers who pay respondent's discount or higher bracket price or who are denied discounts or rebates allowed to such favored customers must either sell at competitive prices and, in so doing, reduce their possible profits by the amounts of discriminations against them or attempt to sell at higher prices than those which the favored customers of respondent charge for oil burners equipped with respondent's automatic temperature controls, with the result of inability to secure business and a reduction in the volume of their sales.

ficient to prevent the Commission from reasonably drawing the inferences which, in the light of general knowledge, this Court has stated to be "obvious." This is not because of any rule of law but because the effort must be to prove that in the particular industry the usual economic forces are not operative. Nothing has been shown in relation to respondent's industry to prevent the drawing of the usual inferences. On the contrary, respondent's dominant position demonstrates that its price discrimination is more likely to harm competition than in other industries where no one producer controls the major share of the market.

No two industries, of course, are exactly alike in their competitive structure, and that is clearly true of the salt and temperature control industries. None of the differences upon which respondent relies, however, would lead reasonable men to believe that price discriminations were less likely to affect customer competition in one than in the other. In order to show that there is no basis for distinguishing this case from *Morton Salt* it seems advisable to take up the differences between the cases *seriatim*.

(1) First, however, there is one important differentiating factor upon which respondent does *not* rely. Although both the salt and the control industries are competitive, the former is not dominated by a single concern like respondent which conducts 60% of the business. Morton Salt Com-

pany was one of the larger producers and distributors of salt in the United States. Transcript in No. 464, 1947 Term, R. 7. But there was no suggestion that its position and power in the salt industry were comparable to respondent's in relation to automatic controls. Price discrimination on the part of a dominant manufacturer, larger than all others combined, whose product is practically a must for oil burner manufacturers, is much *more* likely to injure competition than the discrimination involved in the *Salt* case.

(2) The court below held that since controls constitute only one "of many factors" that determine the cost of burners, discriminatory differentials in the price of controls could not be said to injure competition, that a difference in the price of the controls would be too small to affect competition in the sale of oil burners. In this connection the undisputed facts that the manufacture of an oil burner is largely an assembling operation (R. 580-81, 594-6, 677, 725-6, 942, 1000) and that the controls are the most expensive items, constituting often as much as a third of the total cost (p. 10, *supra*), are highly relevant.

(a) The first answer is a statistical one. Respondent's discounts on the controls were as substantial, even in relation to the prices for finished oil burners, as the discounts in the *Salt* case. In *Morton Salt*, one of the discounts which this Court unanimously condemned was ten cents

per case off of the $1.50 price for purchasers of over 5,000 cases in a single year. This discount amounts to 6 2/3%. Respondent's discount in 1941 in the brackets found to be unlawful (4, 4A and 5) ranged from 14 to 23% under the price in bracket 1. See p. 12, *supra*. In dollars and cents, price bracket 1 ($17.35) was $3.60 higher than price bracket 5 ($13.75), and bracket 2 ($16.45) was $2.70 higher. The record shows that in 1941 the price of oil burners ranged from $40 (R. 507, 684) up, that the minimum price to jobbers in many communities ran from $45 to $50 (R. 2141). The $3.60 difference between the price of controls for oil burner manufacturers in respondent's brackets 1 and 5 constituted 9% of the total price of the oil burner sold at $40, 8% of the price of those sold at $45, 7.2% of those at $50, and 6% of those at $60. For the $2.70 difference between brackets 2 and 5 the corresponding percentages for the completed oil burners were 6¾% at $40, 6% at $45, 5.4% at $50 and 4.5% at $60. These figures show that the percentage of the discounts on the controls to the price of the assembled oil burner roughly approximates the 6 2/3% discount on the salt in the *Morton Salt* case. The Commission certainly was not required to conclude that the discounts were so insubstantial that they would affect competition less in this case than in *Morton Salt*.

(b) A more fundamental answer also has its analogue in the *Morton Salt* case. As we have

seen, the oil burner is customarily assembled from a number of parts of which the most important are controls, motors, pumps, transformers and housing (R. 580, 594-6, 677, 725-6, 941, 1000). The prices of these together constitute the principal elements of the cost of producing the burner, the control being the most expensive part, about 40% of the total cost of parts (R. 940-944, 1000, 2252). If respondent's argument were sound, each part manufacturer could give substantial discriminatory discounts, and a manufacturer of oil burners would have a big advantage over his smaller competitors. Yet no one of the discounts could be said substantially to affect competition because that granted on each part would only be a small proportion of the price of the completed burner. The Commission properly rejected this contention, which would have the effect of taking a large number of manufacturers of assembled products out of the statute. As the Commission stated in its opinion (R. 2275): "Each seller who may have contributed to the aggregate price or cost advantages obtained by the favored burner manufacturers is, in part, responsible for the aggregate competitive result. The fact that the whole competitive effect cannot be traced to respondent alone does not relieve respondent of its share of responsibility * * *." Nor can respondent find exculpation for its injury to competition because similar injuries may have been inflicted by other suppliers who also gave discriminatory discounts.

A similar argument was rejected in *Morton Salt*. There the salt company argued that salt is a small item in most wholesale and retail grocery businesses, constituting less than ½ of 1% of the gross, and that a slight difference in the price of salt would not substantially affect competition in the grocery business. The Court stated, however (p. 49):

> There are many articles in a grocery store that, considered separately, are comparatively small parts of a merchant's stock. Congress intended to protect a merchant from competitive injury attributable to discriminatory prices on any or all goods sold in interstate commerce, whether the particular goods constituted a major or minor portion of his stock. Since a grocery store consists of many comparatively small articles, there is no possible way effectively to protect a grocer from discriminatory prices except by applying the prohibitions of the Act to each individual article in the store.

(3) The court below and respondent have relied heavily on evidence showing that oil burner prices have not varied in direct relation to the prices of controls. This was stipulated by the Commission at the commencement of the proceeding, when it agreed that *some* burner manufacturers paying higher control prices to respondent sold burners

for less than manufacturers paying lower prices, and *vice versa* (R. 1661). A statistical survey introduced by respondent, which concluded that "a chaotic price condition existed throughout the industry in 1941 * * * and that there was no definite pattern of either wholesaler or dealer oil burner prices" (R. 2135) proved the same thing—that *some* burner manufacturers paying low prices for controls sold oil burners at high prices, and that some manufacturers not receiving controls at the lowest price level were in the low-priced oil burner field. (R. Ex. 171, 1278, 2137-2141).[38]

The industry is divided between low and high priced burner manufacturers. Some of the former, including Quiet Heet, provide no servicing or credit facilities at all, and economize on advertising and selling expenses, *inter alia* (R. 569-572). The fact that some high priced burner manufacturers are among those who pay less for controls and *vice versa* does not prove that the manufacturers who pay less do not have a competitive

[38] Since the exhibit gives only the high and low price for manufacturers in each area studied, a single manufacturer charging an excessively high or unusually low price could cause the table to give an exaggerated impression. The Commission has not questioned the conclusion that no precise mathematical relationship between control and burner prices has been proved. Even respondent's exhibit, however, reveals that in general the lowest priced burners were in respondent's Bracket 5, which pay the least for controls. The median, which seems to be the fairest method of averaging low burner prices in the areas covered by the survey, was $49 and $50 for Bracket 5 burners. The lowest median for any other bracket was $59.75 for Bracket 3. (R. 2137-2140.)

advantage. It shows merely that prices are affected by so many factors that the effect of no single one, such as the price of a part, can be segregated.

It is true that some manufacturers paying higher prices for controls may have absorbed the additional costs and thus reduced their profit margin; and others may have been able, because of manufacturing and distribution economies, to meet the prices of some of the competitors who paid less for controls (*supra*, p. 16). But this does not negate the Commission's finding of injury to competition. For, had these same manufacturers received the benefit of lower control prices, they could have sold their burners at an even cheaper price. This, in turn, would have led either to a larger volume of sales, or to a greater profit if the volume remained constant. And, if they did not reduce their burner price, they would have made a larger profit on each unit sold.[39] Furthermore, if

---

[39] The House Committee Report (H. Rep. No. 2287, 74th Cong., 2d Sess.) shows that Congress assumed that price discriminations would generally involve an element of loss, and that these might appear in a reduction of profits. The Report (p. 8) stated in this connection:

> Discriminations in excess of sound economic differences between the customers concerned, in the treatment accorded them, involve generally an element of loss whether only of the necessary minimum of profits or of actual costs, that must be recouped from the business of customers not granted them.

See to the same effect the statement of Senator Logan, explaining the proposed legislation to Congress. 80 Cong. Rec. 3113.

[Continued]

the beneficiaries of the lower controls prices did not pass the difference on to customers, they could strengthen their own competitive position by reinvesting the savings in their business or providing more service.

Competitors are equally injured whether they absorb higher costs and thus operate on a smaller margin of profit, or maintain their profit margin but reduce their volume by passing the higher costs on to customers. See notes 10, 39, pp. 11-12, 65, *supra*. Since controls constituted the largest cost item in a burner, the substantial discounts enjoyed by manufacturers in the lowest price brackets obviously gave them a substantial economic advantage over their less favored competitors.

The record shows that some high priced burner manufacturers believed that the price differential on controls was an important factor in their capacity to compete with the low priced manufacturers (*e.g.*, R. 535, 539). Certainly the insistence by most burner manufacturers upon the lowest possible prices for controls implied that they felt low prices were advantageous and high prices a handicap in the competitive struggle. And the record contains examples of the direct relationship be-

---

Moreover, the knowledge that the favored manufacturer was enjoying lower control prices would tend to restrain competitors from reducing their prices, since the differentials would give the favored manufacturer a distinct advantage in any retaliatory price competition it might inaugurate.

tween the prices charged particular customers for controls and the prices charged for oil burners. *E.g.*, Williams Oil-O-Matic, Statement, pp.19-20, *supra*. The fact that particular oil burner manufacturers may have compensating advantages because of other factors and other methods of operation does not, of course, mean that they do not suffer a disadvantage because they pay more than their competitors for controls.

The fundamental weakness in respondent's contention, however, is that it applies the wrong test. Even on the assumption that respondent has proved that oil burner prices do not bear a direct relationship to the discounts on the controls, the Commission's order must be upheld. For the evidence need only be strong enough to show a reasonable probability or possibility that competition might be harmed, not that it has been. See *Corn Products* and *Morton Salt* cases, discussed *supra*, pp. 51-52. Indeed, in the *Morton Salt* case the Court admonished the Commission not to waste time proving the actual effect upon competition.

In the *Corn Products* case a similar contention as to the absence of proof of actual effect was made with respect to the special allowance of 50 and 75 cents per ton granted certain purchasers of gluten feed and meal.[40] The parties stipulated, and the Commission found, that the allowances in question were "'sufficient' if and when reflected in whole or in substantial part in resale prices, to

[40] See Transcript, No. 680, 1944 Term (R. 186-191).

attract business to the favored purchasers away from their competitors, 'or to force [their] competitors to resell ... at a substantially reduced profit, or to refrain from reselling.'" (324 U.S. at 742). It was argued, however, that "*there is no evidence that they ever were so reflected*"[41] in the resale prices at any time during the entire period of years during which the contracts were in effect," "that this conclusively negatives the possibility of a finding that the reasonably probable effect of the contracts and the allowances or discounts thereunder, was a substantial lessening of competition * * *", and that "had such recipients cut their prices, it might, perhaps, have been a proper subject of inference * * *" (Br. for Resp., pp. 70-71). In rejecting this contention, the Court said:

> This argument loses sight of the statutory command. As we have said, the statute does not require that the discriminations must in fact have harmed competition, but only that there is a reasonable possibility that they 'may' have such an effect. We think that it was permissible for the Commission to infer that these discriminatory allowances were a substantial threat to competition. [324 U. S. at 742.]

---

[41] Italics in original.

Respondent cannot distinguish the gluten feed situation on the ground that the discount there was more substantial since the resale of a single product and not of a part was involved. The record in the *Corn Products* case (No. 680, 1944 Term, R. 391-4) shows that the prices per ton for gluten feed and meal ranged from $15 to $43. The fifty and sixty-five cent discounts, therefore, would range from 3-1/3 to 1.16 per cent and from 4½ to 1.3 per cent of the total. As we have seen, the discounts on the controls in the instant case constituted a substantially greater percentage of the price of the completed oil burner. See pp. 60-61 *supra*.

4. Respondent also relies upon the testimony of certain burner manufacturers who stated that they were not injured by the fact that others paid less for M-H controls. The court below noted that some manufacturers so testified, and that others testified to the contrary (R. 2313, quoted at p. 54, *supra*). Of the six manufacturers who testified that their burner sales were not injured because other manufacturers were paying less than they were for respondent's controls (R. 938, 951-3, 999, 1087, 1142, 1151, 1174) five produced a higher priced burner (R. 946, 997, 1086, 1141, 1152). Four of these explained his somewhat unusual statement on the ground that he had compensating advantages, such as superior quality and servicing (R. 1003, 1087, 1142, 1152-1153), which meant, of

course, that he was selling a burner plus services or had other compensating elements which tended to reduce the injury. The fifth, because of operating economies and low distribution and selling costs, was able to achieve savings "which put us on practically even footing with any of our competitors" (R. 953). The sixth, in the low priced field, testified that he was not harmed by the differential because he was already operating at capacity (R. 1174). These explanations, while undoubtedly truthfully reflecting the witnesses' opinions, do not prove that they would not have been in an even better position *vis a vis* their competitors if the latter were not paying less for controls. And even assuming the accuracy of the witnesses' analyses of the effects upon their particular businesses, the statements are far from proving that other burner manufacturers were not harmed by respondent's price discrimination, or that competition was not injured.[42]

---

[42] The House Committee Report (H. Rep. No. 2287, 74th Cong., 2d Sess., p. 8) stated with reference to the competition clause of the Robinson-Patman Act:

> This provision accomplishes a substantial broadening of a similar clause now contained in section 2 of the Clayton Act. The existing law has in practice been too restrictive in requiring a showing of general injury to competitive conditions in the line of commerce concerned, whereas the more immediately important concern is in injury to the competitor victimized by the discrimination. Only through such injury in fact can the larger, general injury result. [Continued]

The fact that other witnesses expressed contrary opinions in itself goes a long way to refute any notion that the testimony just described portrayed the typical or generally prevalent situation. Thus, Gillis of Malleable Iron Fitting Company, a high priced manufacturer, testified that the lower prices enjoyed by its competitors made it "more difficult" for it to compete with them "because our prices were higher" (R. 535). Malleable had to lower its prices "as far as we were able" to meet that competition (*ibid.*). He stated further that respondent's price policy gave some manufacturers "a decided disadvantage in trying to compete with some of the cheaper ones because of the larger volume" (R. 539).

Rodler of Oil Equipment Corporation testified that (R. 578-579) "a lot of sales * * * could be made without controls. * * * The major cause as far as I know is that we had to ask too much for the controls that we sold with the burner and that they liked our burner better, but could buy the controls in the market cheaper than we could sell them to them." He subsequently stated that though a $2.65 difference in the price of controls "would not have made the difference necessary"

The Senate Report (S. Rep. No. 1502, 74th Cong., 2d Sess., p. 4) uses substantially identical language, and adds to the last sentence quoted the significant phrase "and to catch the weed in the seed will keep it from coming to flower."

to met Quiet-Heet's competition "it would have made part of the difference but not enough" (R. 582), and again "if you put $2.70 plus a few other items down the line you would have the collective difference" (R. 593). The comparison with Quiet-Heet was with the lowest price competitor, $2.70 might have made a difference in competing with higher price buyers who still were in respondent's low priced brackets.

Herr of Herco, though unable to determine "the effect in dollars and cents", stated that the lower control prices paid by Quiet-Heet "made a big difference" on the business of Herco Oil Burner Corporation in the New York area, and resulted in Herco's failure to secure "some business" (R. 673-674, 676).

Stauffer of Penn Boiler and Burner Manufacturing Company testified that they had a "ten-year fight" with respondent over the fact that they were paying more for controls than some of the competitors (R. 687; Comm. Exs. 205, 206-A, R. 1987-1989). The higher prices it paid respondent for controls precluded it from offering burners with respondent's controls at the same price as those with Mercoid controls, as its competitors were doing (R. 681). In order to compete, Penn Boiler purchased complete burners equipped with respondent's controls from Quiet-Heet, removed

the controls, and used them on its own burners (R. 682-3, 685-6, 690).[43]

There was other, more general, testimony as to the importance of price. An M-H memorandum itself revealed the importance of $1 in the price of controls (Comm. Ex. 35-B, R. 1804):

> Brannon said their lowest price on their burner was $53.50 and that they sold a lot of them at $55.00 and on these jobs he said there was not enough margin to take care of $1.00 difference in controls. On the other hand, he said where they were getting $60.00 or $65.00 for a burner, the $1.00 difference was not too serious * * *.

Shields of Nokol testified that although he did not worry about what Quiet-Heet was doing, they "naturally" got some business from him because "a lot of peope buy on price only" (R. 1126). Many companies, including Quiet-Heet when in the lowest bracket (R. 504), kept insisting that they should be given a better price, obviously because such a price would be advantageous to them

---

[43] Stauffer wrote respondent in 1940 (R. 1988-1989):

> In checking over the prices quoted some dealers who handle our boilers and competitive burners, we find that they can buy oil burner controls cheaper than we can with the results that on this basis it would be practically hopeless for us to sell them controls. In fact comparing our dealers' prices with your prices to us, we could still purchase controls cheaper from our own dealers than from you.

(R. 316-318, 320, 351, 622, 676, 786, 969, 1005, 1537, 1539, 1544, 1547-1548; Comm. Ex. 24-A, R. 1785-1786, Comm. Ex. 34, R. 1801-1802; Comm. Ex. 75-B, R. 1829). Indeed respondent itself objected when burner manufacturers charged $5 more for burners with M-H controls (R. 433-4, 965, 1046-7) —presumably because this would reduce the sales of such burners.

This testimony supports the Commission's finding that the discriminatory prices charged by respondent actually injured competition. The fact that some competitors testified that they were not hurt does not prove the contrary; they did not testify that others were not hurt, or even that a substantial portion of the industry was not. Certainly when the record as a whole is considered, it cannot be said that it does not support the Commission's finding that the discriminatory prices have tended "to substantially lessen [and] injure * * * competition between respondent's customers" (R. 2260). The record thus amply satisfies the test of reasonable probability or possibility, which is all that the statute requires the Commission to meet. On the record as a whole it is clear that respondent has not proved that the controls industry was sufficiently different from the salt or other competitive businesses to preclude the Commission from drawing what this Court has termed to be the "obvious" inference from respondent's discriminatory pricing system.

C. The Court Below Improperly Set Aside the Commission's Findings of Injury to Competitor Competition

1. *There was sufficient evidence to support the Commission's finding of injury to competitor competition.*

Section 2(a) of the Clayton Act prohibits price discriminations which may injure competition between the seller and its competitors, as well as among its customers. A finding of injury at either competitive level is sufficient to support a cease and desist order prohibiting the discriminatory pricing practices. The Commission's order in the instant case was based upon findings of injury to competitor competition, as well as to competition among respondent's customers.

As previously noted (*supra*, pp. 50-53), violation of Section 2(a) does not require a showing that the discriminatory prices actually have injured competition. It is sufficient that there be a reasonable probability that they may have done so. The evidence before the Commission clearly established that there was more than such a probability of injury to competitor competition in this case.

As has been pointed out (*supra*, pp. 10-11, 49), public demand for respondent's controls compelled most burner manufacturers to have such controls available as either regular or optional equipment on their burners (R. 364, 429, 441, 473, 628, 648, 664, 685-686, 715, 728, 974-5, 995, 1045-1046, 1108, 1136-1137, 1141, 1152). Since under

respondent's pricing system the price of controls dropped as the volume purchased increased, the inevitable tendency of respondent's system would be to encourage burner manufacturers, most of whom found it necessary to buy some controls from respondent, to concentrate their purchases in respondent as the single source of supply. As the Commission stated in its opinion (R. 2274):

> When an oil burner manufacturer sees that his total control requirements, if concentrated with respondent, will entitle him to a bracket 4 price, for example, but if divided among other sources of supply he may receive only a bracket 2 or a bracket 3 price, the competitive tendency of the discriminatory bracket 4 price is apparent. The very nature of quantity price differentials is to divert business to the seller granting such differentials * * *.

In fact, one burner manufacturer apparently bought more controls from respondent than it needed in its own business and sold the excess on the open market, in order to obtain respondent's lowest prices on its own control requirements (Comm. Ex. 133, R. 1882, R. 579, *supra*, p. 20).[44]

---

[44] This practice also injured other burner manufacturers who were compelled to sell their own burners without controls and thus lose their usual profit on the controls (*supra*, n. 17, p. 20; R. 583).

Clearly, the Commission's finding that the price discriminations had the "capacity and tendency" to induce the purchase of respondent's controls and had tended to divert trade to respondent from its competitors (R. 2256) represented a "reasonable inference" from the facts before it. *Corn Products Refining Co.* v. *Federal Trade Commission*, 324 U.S. 726, 742; *Federal Trade Commission* v. *Raladam Co.*, 316 U.S. 149, 152.

Moreover, the record shows not only that respondent's practices created a reasonable possibility of injury to competitor competition, but that they had caused actual injury. The Commission findings to that effect (R. 2256)—although not necessary to support its order—have ample evidentiary support. Respondent's competitors lost a substantial volume of business to it (*supra*, pp. 22-24). One competitor, for example, lost a particular sale because it would have "cost money" for the purchaser if he had failed to purchase a sufficient quantity of respondent's controls to obtain a retroactive discount; "it would cost us money if we divided our business", he testified (R. 150-151, 984). In another case an oil burner manufacturer wrote respondent that if it was given a lower price "we will go 100 percent with you, and eliminate the other two makes of controls that we have been selling" (Comm. Ex. 75-B, R. 1829).

Respondent itself was well aware that purchasers would often have to cease buying from competitors if they were to secure respondent's lowest prices. Thus, a letter from the vice president of respondent to the Timken Company stated (Comm. Ex. 68, R. 1816):

> Frankly, in view of your recent decision to divide your control requirements with another manufacturer the writer wonders, even in view of your increased sales, if your requirements from us will reach the total of 40,000 units on which your present price is based.

Another letter, from respondent's sales manager, said (Comm. Ex. 34, R. 1802):

> Of course, price has been the stumbling block, and John and I agreed that we would be willing to go to a Bracket V basis if Anchor Post would assure us of the business. * * * If Anchor is going to adopt a policy of splitting their business, I don't think we are going to be able to get very far with them.

Respondent wrote Cleveland Steel Products Company (Comm. E. 74-A, R. 1825): "If you could standardize on our constant ignition controls it would go a long way toward obtaining the lower prices". In another year the same company wrote respondent that it had been paying a higher price (Comm. Ex. 107-B, R. 1854-1855):

> because of your assurance that our prices beginning with 1940 will be the equal of the lowest prices quoted in the Oil Burner Industry and, in return for this, we anticipate giving you our business 100% and doing all within our power to greatly increase our volume of business with you as a whole.

Certainly, a pricing system which would induce customers to seek a discount unjustified by costs by giving 100 percent of their business to a company which already was in possession of 60 percent of the national market, instead of dividing their business with other manufacturers, would tend substantially to injure competition, as the Commission found.

The court of appeals, however, held that the evidence did not sustain the Commission's finding of actual or potential injury to competitor competition. We believe the court reached this conclusion in part because it was applying the erroneous test of actual, not probable or possible, injury to competition, a matter discussed at pp. 50-55, *supra*. Apart from this the court seems plainly to have improperly substituted its judgment as to the weight of the evidence for that of the Commission—and in doing so has demonstrated its lack of familiarity with the economic problems committed by Congress to the administrative body. The evidence summarized above

(pp. 75-79, *supra*) shows that the Commission's judgment as to the effect of discriminatory prices upon respondent's competitors was an entirely reasonable one.

The court below gave great weight to the facts that there was keen competition among control manufacturers, that respondent's prices were higher than its competitors', that competitors of respondent enjoyed a substantial growth during this period, that respondent's relative share of the market declined from 73 per cent in 1937-1938 to 60 per cent in 1939-1941, and that in 1941 respondent lost some of the business of some of its customers to its competitors (R. 2312). These and similar facts, the court stated, "fully establish" the examiner's finding that competitor competition had not been injured, and "outweigh the facts relied upon by the Commission in reaching the opposite conclusion" (*ibid.*). The court recognized that respondent "did succeed in retaining or diverting some business which might otherwise have gone to some of its competitors," but concluded that in view of the competitors' growth despite respondent's commanding position and "alleged wrongful practices," such practices cannot be said "substantially to injure competition" (*ibid.*).

The facts thus singled out by the court below, however, were but part of the record before the Commission when it made its decision. The

reaching of that decision required an evaluation of the effect of respondent's discriminatory practices upon competition in the light of all the data before the Commission. The record showed that respondent for many years had been, and during this period continued to be, the major producer in the industry. The fact that other firms have grown substantially, or that new ones entered the field, does not negative the deleterious effects of respondent's discriminatory prices on competition. Had respondent not interfered with normal competitive processes through its discriminatory pricing system, its competitors presumably would have grown even faster, and respondent's share of the market would have declined even further. The court's reference to respondent's loss of some sales to competitors and to the decline in its percentage of the market should not be taken as meaning that it was losing business. To the contrary, between 1939 and 1941 its sales increased over 25 per cent, from 159,000 primary controls to 201,000 (R. 877).[45] As the Commission pointed out, after considering all of these facts, "* * * the law does not permit respondent to resort to unfair or discriminatory practices in order to maintain its competitive posi-

[45] A temporary drop in 1938 had come about because "the bottom dropped out from the oil burner business in the last quarter of 1937," and "many of our customers at the start of 1938 found themselves quite heavily loaded with inventory" (R. 876).

tion in the industry" (R. 2273). Competition may be adversely affected whether the discriminatory practice result in the retention of customers that competitors otherwise would acquire, or in the diversion of customers from such competitors. *American Can Co.* v. *Ladoga Canning Co.*, 44 F. 2d 763, 767 (C.A. 7), certiorari denied, 282 U.S. 899. The natural effect of competition would be the shifting of a certain volume of business among competitors; what the Act condemns is the artificially-induced diversion of trade resulting from the discriminatory prices given by respondent.[46]

The fact that respondent's prices are higher than its competitors' does not prove that competitors were not injured by the price discrimination. On the contrary, this would seem to establish respondent's dominance in the industry, for without

---

[46] In support of its conclusion that respondent's pricing system resulted in injury to competitor competition, the Commission also referred to respondent's own argument that the discriminatory prices were made to meet competition (R. 2273). This contention, the Commission stated, showed that respondent's discriminatory prices were made to retain or secure the business of certain customers, and that they were "largely successful" in doing so (*ibid.*). However, the effect of such price discriminations on competition is in no way related to whether they meet the statutory defense of good faith attempts to meet a competitor's lower price (see *infra*, pp. 89-94). The two questions are separate and distinct, and evidence which is insufficient to satisfy the statutory defense nevertheless may be extremely significant in determining the effect of the discriminatory practices upon competition.

such dominance respondent could not retain 60 per cent of the business and charge higher prices. In any event, the purchasers apparently regarded respondent's controls as worth the extra cost in view of their reputation and the services which accompanied them (R. 851-860). The purchasers were thus in their own view receiving more than the bare product.

The court of appeals gave undue weight to the facts relied on by respondent and not enough to those which supported the Commission. But in this field the function of evaluating the evidence and drawing the appropriate inferences therefrom has been primarily entrusted to the Commission as an expert body with a staff versed in the analysis of the economic matters we have discussed. A court is not warranted in overturning Commission inferences which are entirely reasonable—in this case, we submit, more so than those of the court—in the light of the record as a whole. As this Court stated in *Federal Trade Commission* v. *Algoma Lumber Co.*, 291 U.S. 67, 73:

> * * * what the court did was to make its own appraisal of the testimony, picking and choosing for itself among uncertainties and conflicting inferences. Statute and decision * * * forbid that exercise of power.

2. *The court of appeals gave undue weight to the findings of the trial examiner.*

The court below also seems to have misunderstood this Court's decision in *Universal Camera Corp.* v. *National Labor Relations Board*, 340 U.S. 474, with respect to the significance to be accorded a trial examiner's report when the agency does not follow the examiner's recommendations. In the *Universal Camera* case, this Court held no more in this connection than that in deciding whether an agency's findings are supported by substantial evidence, the Administrative Procedure Act (60 Stat. 237, 5 U.S.C. 1001 *et seq.*) requires reviewing courts to look at the whole record, not just at those portions sustaining the agency action, that the "whole record" includes the trial examiner's report, and that the examiner's report should be given "such probative force as it intrinsically commands" (p. 495). The Court further pointed out that "the significance of his report, of course, depends largely on the importance of credibility in the particular case" (p. 496).

Questions of credibility were of as great importance in the *Universal Camera* case as they are unimportant here.[47] The significant differences

[47] We do not regard the fact that some oil burner manufacturers testified that the greater discounts on controls allowed competitors did not affect their business while others testified to the contrary as raising an issue of credibility. See pp. 69-

between the Commission and the examiner here were not as to credibility or in findings as to specific facts, but in conclusions or inferences, mainly of an economic nature.[48] The examiner is in no better position to decide such issues than the Commission; the fact that he heard the testimony rather than read it does not give him an advantage in analyzing economic effects. The determination of such matters has been entrusted by Congress to the Commission, presumably because the Commission's judgment was thought to be more expert than an examiner's.

This Court did not suggest in *Universal Camera* that the reviewing court is to substitute the examiner's decision for that of the agency whenever it concludes that the examiner's recommended findings are themselves supported by substantial or even (in the reviewing court's opinion) a preponderance of the evidence. On the contrary,

---

73, *supra*. Each was testifying to the effect upon his particular business as he saw it. The Commission could credit all this testimony, and conclude, as it did, that a substantial portion of the industry was harmed by respondent's pricing system. This is the only issue as to which there can possibly be said to be a conflict of testimony.

[48] For example, the examiner found that it was the cutting of oil burner prices by Quiet-Heet, not the price paid for controls, which caused some competitors to lose business (R. 2194). But obviously Quiet-Heet's price advantage on controls was one factor, which, *pro tanto*, permitted it to sell burners for less than its competitors. The Commission's difference with the examiner was with respect to the economic analysis, not the underlying facts.

this Court in *Universal Camera* specifically rejected the "notion" that the agency "has power to reverse an examiner's findings only when they are 'clearly erroneous,'" a "notion" that the Court held would be "wholly inconsistent" with the "responsibility for decision" placed upon the agency by the statute which it administers (340 U.S. at 492).[49]

Yet the court below appears to have given primacy to the examiner's conclusions in reviewing the substantiality of the evidence relating to competitor competition. Prior to discussing such evidence, the court stated that from its examination of the "record as a whole" it was "convinced that the findings of the examiner were supported by very substantial evidence" (R. 2311). After summarizing "various undisputed facts" relating to competitor competition—but omitting the facts relied on by the Commission (see pp. 80-83, *supra*)—the court said (R. 2312):

> The foregoing facts fully establish the examiner's finding that competitor competition was not injured * * * and they outweigh the facts relied upon by the Commission

---

[49] Section 11 of the Clayton Act provides that:

> If upon such hearing the commission * * * shall be of the opinion that any of the provisions [2, 3, 7 and 8] have been or are being violated, it * * * shall issue * * * an order requiring such person to cease and desist from such violations * * *.

> in reaching the opposite conclusion. And while the findings of an examiner are not "as unassailable as a master's" (*Universal Camera Co.* v. *National Labor Relations Board*, 340 U.S. 474, 492), where it appears from the record that they are supported *by a preponderance of the evidence*, the action of the Commission in rejecting them is arbitrary. [Italics supplied.]

The question before the reviewing court was whether the Commission's findings were supported by substantial evidence on the record as a whole, not whether the court agreed with the examiner rather than with the Commission. The Commission, of course, must decide the case in accordance with the preponderance of the evidence, as it sees it. But the fact that it may disagree with the trial examiner in applying this standard does not mean that the reviewing court may reverse because it agrees with the examiner. For the court would then be completely substituting its judgment for that of the Commission as to the weight of the evidence, determining preponderance for itself whenever the examiner was reversed, not weighing for substantiality on the record as a whole. Nothing in the Administrative Procedure Act or the *Universal Camera* case declares or implies that the scope of review was to be so greatly broadened whenever an agency disagreed with its examiner.

It is axiomatic that in Section 2 (a) proceedings, "The weight to be attributed to the facts proven or stipulated, and the inferences to be drawn from them, are for the Commission to determine, not the courts." *Corn Products Refining Co.* v. *Federal Trade Commission,* 324 U.S. 726, 739; *Federal Trade Commission* v. *Staley Manufacturing Co.,* 324 U.S. 746, 760. The *Universal Camera* case did not change this standard. The effect of particular pricing practices upon competitive conditions in a complex industry would appear to be a matter particularly within the Commission's expert competence. See *Bruce's Juices* v. *American Can Co.,* 330 U.S. 743, 746. The weight given to the examiner's report by the court below, however, would in effect vitiate the agency's exercise of its own independent judgment on the matter, a judgment based on the entire record before it and its special knowledge in the field. If the agency's function were limited to reviewing the examiner's recommendations to determine whether they were supported by substantial evidence, the public in large measure would be deprived of the benefits of the administrative expertise which is the very *raison d'etre* of the agency's existence. We submit that neither the Administrative Procedure Act nor the *Universal Camera* decision intended thus to subvert the agency's normal independent adjudicatory functions into a mere appellate review of the examiner's conclusions.

This criticism is particularly pertinent where, as here, the evidence did not require the Commission to resolve conflicting testimony as to disputed factual matters. Where there is such conflict, the examiner's opportunity to appraise the credibility of witnesses will entitle his recommendation to substantial significance. Cf. *Universal Camera Corp.* v. *National Labor Relations Board*, 340 U.S., at 496. In the instant case, however, the Commission's decisional process involved the drawing of inferences from uncontradicted facts as to their effect on competition.

For the reasons stated, this Court is not called upon to decide whether it agrees with the examiner or with the Commission as to the preponderance of the evidence—although we believe that the Commission's findings were the more reasonable. The arguments advanced in the preceding pages in support of the reasonableness of the Commission's decision demonstrate that it had sufficient basis for overruling its examiner.

III

Respondent's Discriminatory Prices Were Not Made in Good Faith to Meet an Equally Low Price of a Competitor.

The court of appeals did not pass upon the question whether respondent had justified its quantity discounts in the three lowest price brackets by an adequate showing that such differentials were made in good faith to meet an equally low price

of a competitor. We recognize that ordinarily this Court will not consider such a question in advance of a decision thereon by the lower court. However, the Court recently has indicated that where the only remaining issues in a case involve questions of law "not calling for examination or appraisal of evidence," it will decide them itself rather than remanding the cause to the court of appeals for further proceedings. *Kiefer-Stewart Co.* v. *Seagram & Sons,* 340 U.S. 211, 214; *Cardillo* v. *Liberty Mutual Insurance Co.,* 330 U.S. 469, 473-474. Since we believe that this question raises a matter of law that can be resolved without "examination or appraisal of evidence," and is one whose resolution in our favor will be dispositive of the issue with respect to meeting competition, we urge the Court to consider and decide the question together with the other issues in the case in order that this already prolonged litigation may come to an end.

The Commission, in rejecting respondent's defense that the three lowest price brackets constituted good faith attempts to meet the lower price of a competitor, pointed out that these brackets did not "represent prices made in particular instances to meet competitors' prices, but reflect progressive reductions in a comprehensive price schedule based on increased quantity purchases" (R. 2272). We submit that the decision in *Federal Trade Commission* v. *Staley Manufacturing Co.,*

324 U.S. 746, makes it abundantly clear that the defense of meeting competition cannot serve to justify a discount system whereunder the discriminatory discounts are given to all customers who purchase a given volume without regard to their individual competitive situations.

In the *Staley* case, the Commission, in holding that respondent's basing point delivered price system resulted in illegal price discriminations in violation of Section 2(a) of the Clayton Act, had rejected respondent's contention that the price discriminations had been made in good faith to meet a competitor's equally low price. In sustaining this conclusion by the Commission, the Court pointed out that Section 2(b)

> does not concern itself with pricing systems or even with all the seller's discriminatory prices to buyers. It speaks only of the seller's "lower" price and of that only to the extent that it is made "in good faith to meet an equally low price of a competitor." The Act thus places emphasis on individual competitive situations, rather than upon a general system of competition [p. 753]

The Court further noted that the statutory test in Section 2(b)

> presupposes that the person charged with violating the Act would, by his normal, non-discriminatory pricing methods, have reached

> a price so high that he could reduce it in order to meet the competitor's equally low price. * * * Respondents have never attempted to establish their own non-discriminatory price system, and then reduced their price when necessary to meet competition. Instead they have slavishly followed in the first instance a pricing system which, in their case, resulted in systematic discriminations * * * [pp. 754-755]

Although the Court in *Staley* was dealing with a basing point pricing system, its reasoning and language are equally applicable to the quantity discount pricing system followed by respondent. Respondent's system of fixing bracket prices solely on the basis of quantities purchased, without regard to whether particular customers falling within those brackets were in fact receiving more favorable treatment from a competitor, has been in use since respondent was organized in 1927, and was employed by one of its predecessor companies at least as far back as 1924 (R. 1017-1018). Thus the system was in operation at a time when two of respondent's three principal competitors had not yet entered the controls business (*supra*, n. 11, p. 12). Just as in the *Staley* case, respondent has "never attempted to establish their own non-discriminatory price system, and then reduced their price when necessary to meet competition." (324 U.S. 754-755). On the contrary, respondent has from the very beginning "slavishly followed

* * * a pricing system [here its own] which * * * resulted in systematic discriminations" (*ibid.*).

It is true that respondent's sales manager testified that in establishing its annual price schedules, the prices of competitors were "a vital factor" (R. 1020-1021, 1567, 1774). The following colloquy shows, however, that respondent was only taking into account the general competitive picture, not meeting a particular price or price schedule (R. 1021):

> Q. Hasn't it been your experience that your competitors would wait and see what you were going to do in the way of brackets and prices before they get out their brackets and prices?
>
> A. Oftentimes that would happen.
>
> Q. Well, didn't that usually happen?
>
> A. I couldn't say as to that. I know that we always endeavored to have our prices set up very early in the year or late the previous year because the manufacturers were all getting out their price sheets and their literature and it was quite a convenience for them if we could have our price data in their hands early, and when our prices were figured and our quantities were set, we issued our prices.
>
> Now, competition may have followed or they may have been in ahead of us, I don't know.

In this connection the examiner found.[50] (R. 2193):

> Respondent's bracket prices (Paragraph 4) for any given contract year were set up according to information respondent had at the time in reference to the general business situation, trends in the market, information as to prices of competitors gathered by respondent from its salesmen, and in other ways, and the general competitive situation existing at the time.

Competitive prices were thus only one of a number of factors considered by respondent in establishing its price schedules.

Obviously, all pricing systems are adopted and operated in the light of the general price policies of competitors. But Section 2(b) does not permit "a seller to use a sales system which constantly results in his getting more money for like goods from some customers than he does from others." *Federal Trade Commission* v. *Cement Institute*, 333 U.S. 683, 725. Section 2(b) relates solely to price discriminations made to deal with particular competitive situations, and not to entire pricing systems.

We accordingly submit that the three lowest price brackets in respondent's quantity discount

---

[50] No exception was taken to this finding.

[51] Similarly, respondent's granting of off-scale prices cannot be justified as good faith attempts to meet a competitor's

system cannot, as a matter of law, be justified as good faith attempts to meet an equally low price of a competitor.[51]

CONCLUSION

For the foregoing reasons, the judgment of the court of appeals should be reversed, and the cause remanded with instructions to affirm Part III of the Commission's order.

Respectfully submitted,

ROBERT L. STERN,
Acting Solicitor General.

NEWELL A. CLAPP,
Acting Assistant Attorney General.

DANIEL M. FRIEDMAN,
Special Assistant to the Attorney General.

W. T. KELLEY,
General Counsel,

ROBERT B. DAWKINS,
Assistant General Counsel,
Federal Trade Commission.

SEPTEMBER 1952

---

lower prices. As the Commission pointed out, respondent's evidence connecting the off-scale prices to particular customers' competitive situations dealt with only 22 of the 76 off-scale accounts, and was not conclusive as to several of them (R. 2257-2259). The Commission further found that even if respondent had met a competitor's lower price in all of the 22 accounts, that fact would not justify respondent's general practice of allowing off-scale prices (R. 2259).

Summary of Argument 12

Argument

1. The Unanimous Reversal By The Court Below Of Part III Of The Commission's Order Should Be Affirmed 14

1. The court below correctly applied the decision of this Court in the *Universal Camera* case 15

2. The court below correctly applied the test of probable injury to competition 18

3. The court below correctly held that the Commission's findings that M-H's varying prices tended substantially to lessen competition among oil burner manufacturers were contrary to the evidence 21

PAGE

(a) There is no relationship between prices for M-H's controls and prices for oil burners equipped with such controls . . 27

(b) No oil burner manufacturer lost business to a competitor because of M-H's varying prices for controls 31

(c) The question whether M-H's price differentials tend substantially to injure competition among oil burner manufacturers does not involve consideration of the independent pricing policies of sellers of other oil burner equipment 42

4. The court below correctly held that the Commission 's finding that M-H's varying prices tended substantially to lessen competition among control manufacturers was contrary to the evidence 44

II. The Question Whether The Lower Of M-H's Varying Prices Were Made In Good Faith To Meet Competition Is Not Now Before This Court For Consideration 51

FEDERAL TRADE COMMISSION, *Petitioner*, v. MINNEAPOLIS-HONEYWELL REGULATOR COMPANY, *Respondent*.	No. 11

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SEVENTH CIRCUIT

BRIEF FOR RESPONDENT ON THE MERITS*

OPINIONS BELOW

The Trial Examiner's recommendations and conclusions of law appear in the Record at page 2203. The majority and dissenting opinions of the Federal Trade Commission (R. 2265-82) are reported at 44 F. T. C. 390. The opinion of the Court of Appeals for the Seventh Circuit (R. 2308-15) is reported at 191 F. 2d 786.

*Respondent has filed a separate brief on jurisdiction.

STATUTES INVOLVED

The applicable portion of Section 2 of the Clayton Act, as amended by the Robinson-Patman Act, is as follows (15 U. S. C § 13):

"(a) It shall be unlawful for any person engaged in commerce, in the course of such commerce, either directly or indirectly, to discriminate in price between different purchasers of commodities of like grade and quality, where either or any of the purchases involved in such discrimination are in commerce, where such commodities are sold for use, consumption, or resale within the United States . . . and where the effect of such discrimination may be substantially to lessen competition or tend to create a monopoly in any line of commerce, or to injure, destroy, or prevent competition with any person who either grants or knowingly receives the benefit of such discrimination, or with customers of either of them: *Provided*, That nothing contained in sections 12, 13, 14-21, and 22-27 of this title shall prevent differentials which make only due allowance for differences in the cost of manufacture, sale, or delivery resulting from the differing methods or quantities in which such commodities are to such purchasers sold or delivered: . . .

"(b) Upon proof being made, at any hearing on a complaint under this section, that there has been discrimination in price or services or facilities furnished, the burden of rebutting the prima-facie case thus made by showing justification shall be upon the person charged with a violation of this section, and unless justification shall be affirmatively shown, the the Commission is authorized to issue an order terminating the discrimination: *Provided, however*, That nothing contained in sections 12, 13, 14-21, and 22-27 of this title shall prevent a seller rebut-

ting the prima-facie case thus made by showing that his lower price or the furnishing of services or facilities to any purchaser or purchasers was made in good faith to meet an equally low price of a competitor, or the services or facilities furnished by a competitor."

The applicable portion of Section 10 of the Administrative Procedure Act, is as follows (5 U. S. C. § 1009):

"(e) So far as necessary to decision and where presented the reviewing court shall decide all relevant questions of law, interpret constitutional and statutory provisions, and determine the meaning or applicability of the terms of any agency action. It shall . . . hold unlawful and set aside agency action, findings, and conclusions found to be (1) arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law; . . . (5) unsupported by substantial evidence in any case subject to the requirements of sections 1006 and 1007 of this title or otherwise reviewed on the record of an agency hearing provided by statute; . . . In making the foregoing determinations the court shall review the whole record or such portions thereof as may be cited by any party, and due account shall be taken of the rule of prejudicial error."

QUESTION PRESENTED

Whether the court below erred in reversing that portion of the Commission's order (Part III) which was entered under Section 2(a) of the Clayton Act when, upon its review of the record as a whole, the court concluded that the findings upon which it was based were not supported by substantial evidence.

STATEMENT

The Proceedings Below

The proceeding before the Commission was instituted by the issuance of the Commission's complaint (R. 2-11) against respondent (M-H), dated February 23, 1943. Count III of the complaint charged violation of Section 2(a) of the Clayton Act, as amended by the Robinson-Patman Act.* It alleged that M-H, a manufacturer of automatic temperature controls, had sold its controls to some of its oil burner manufacturer customers at prices different from those charged others of such customers, with resulting unlawful discrimination in price.

Hearings were conducted before a Trial Examiner from August, 1943, to October, 1945. On February 21, 1946, the Trial Examiner filed his Report (R. 2166-2203), wherein he recommended that the charges set forth in Count III be dismissed (R. 2203). The latter recommendation was based upon the Trial Examiner's findings that

> (1) the differentials in M-H's prices did not tend to injure competition either among M-H and its competitors or among M-H's customers; and
>
> (2) in any event, the differentials in M-H's prices were justified, some because of differences in costs and the balance because made in good faith to meet the competition of other control manufacturers.

The majority of the Commission agreed that some of M-H's varying prices were justified by differences in M-H's

*Counts I and II of the complaint, and Parts I and II of the Commission's order entered thereon, are not involved in this proceeding.

costs, but declined to follow the Trial Examiner's recommendation that Count III should be dismissed. Commissioner Mason, dissenting, agreed with the Trial Examiner that Count III should be dismissed (R. 2276-82). The Commission's order to cease and desist was issued January 14, 1948 (R. 2262-65).

Part III of that order (R. 2264), which was entered pursuant to Count III of the complaint, directs that M-H

> ". . . forthwith cease and desist from discriminating, directly or indirectly, in the price of such products of like grade and quality as among oil-burner manufacturers purchasing said automatic temperature controls and other furnace controls—
>
> "1. By selling such controls to some oil-burner manufacturers at prices materially different from the prices charged other oil-burner manufacturers who in fact compete in the sale and distribution of such furnace controls, when the differences in price are not justified by differences in the cost of manufacture, sale, or delivery resulting from differing methods or quantities in which such products are sold or delivered."

On March 11, 1948, M-H filed with the Court of Appeals for the Seventh Circuit its petition to review and set aside the order of the Commission (R. 2283-98).

On July 5, 1951, the Court of Appeals handed down its opinion (R. 2308-15) unanimously reversing Part III of the order and dismissing Count III of the complaint, holding that, on the entire record, the Commission acted arbitrarily when it rejected the findings of the Trial Examiner that M-H's pricing practices did not tend to injure competition. That being the basis for its decision, the court did not reach

the further question—and did not decide—whether M-H's varying prices were justified, as M-H also strongly contended, on the ground that the lower of those prices were made in good faith to meet the equally low prices of its competitors (R. 2315).

Judgment in accordance with the court's opinion was entered on July 5, 1951 (R. 2316).* It was therein ordered and adjudged that Part III of the order be reversed and that Count III of the complaint be dismissed.

M-H's Business

M-H is, and for a number of years has been, one of the principal manufacturers of automatic temperature controls for oil burners of the gun and rotary types which are used in domestic heating plants (Com. Ex. 1, R. 1644).

Such controls consist in the main of three kinds (Com. Ex. 1, R. 1646):

(1) a thermostat, which is a control device placed in the room or space to be heated;

(2) a primary control, which is a device controlling the cycle of operation of the oil burner so as to start it and stop it when heat is needed or no longer needed (as governed by the thermostat), and to prevent a hazardous condition from occurring when there is a failure of combustion; and

(3) a limit control, which is a control device placed on the heating plant to prevent the temperature or pressure in the heating plant from exceeding a safe level.

---

*That judgment was subsequently reiterated on September 18, 1951, as an incident to the court's disposition of the Commission's request for affirmance and enforcement of Parts I and II of its order. See our separate brief on jurisdiction.

An oil burner is ordinarily equipped with one set of controls, consisting of a thermostat, a primary control and a limit control. It is customary in the industry for such controls to be sold in sets (FF 4, 6, R. 2241-43).

It has been the policy of M-H to stress particularly sales to oil burner manufacturers (R. 863) who are the principal purchasers of oil burner controls (R. 39). It is only with such sales that Part III of the order is concerned (R. 2264).

M-H, a pioneer in the business of temperature control (R. 851), is well known in the industry because of its program for product development and its emphasis on service (R. 851-61). M-H's engineering and research work has resulted in the constant improvement of M-H's controls (R. 882-909) and in the steady decrease in the prices thereof, which dropped from $39.90 a set in 1929 to $13.75 in 1941, a decrease in price of 66% (R. 909-10).

M-H's Competitors

As the Commission found, M-H is engaged in "active and substantial competition" with other control manufacturers (FF 2, R. 2241). There are in the United States at least fifteen manufacturers of one or more of the three kinds of oil burner controls mentioned above, *i.e.*, thermostats, primary controls and limit controls (R. 48-51; 131-34, 227). Three such manufacturers, each of which manufactures and sells all three kinds of controls, have furnished M-H with especially keen competition in the sale of controls to oil burner manufacturers (R. 48-49; FF6, R. 2242-43), *viz.*:

Mercoid Corporation (Mercoid), which has made and sold oil burner controls since 1922 (R. 146-47);

Penn Electric Switch Company (Penn), which started to manufacture and sell oil burner controls in 1932 (R. 797); and

Perfex Corporation (Perfex), which commenced to sell limit controls in 1936 and which came out with a complete line of controls in 1937 (R. 212-13, 216).

Another important competitor of M-H is Detroit Lubricator Company (Detroit), a wholly owned subsidiary of American Radiator & Standard Sanitary Corporation, which, although manufacturing certain kinds of controls since 1933, did not offer a complete line until 1939 (R. 379, 381).

Thus, at the beginning of the 1930's, the only one of M-H's present major competitors then competing with M-H was Mercoid. During the next decade, M-H's three other principal competitors entered the industry, and, notwithstanding the competition of older companies such as M-H and Mercoid, enjoyed a steady growth in the volume of their sales. Penn claimed that by 1941 it was the second largest control manufacturer (R. 798, 825-26). Perfex had such a substantial increase in its volume of sales that by 1941 it also considered itself to be the second largest manufacturer in the industry (R. 222, 231-32). Detroit's control business also increased after 1939, when its products were redesigned to sell in competition with those of the other control manufacturers (R. 394, 413-21).

Each of the principal control manufacturers solicited business from, and entered into contracts with, most of the oil burner manufacturers, including *all* the larger accounts (M-H—R. 59-60; Perfex—R. 749; Penn—R. 801-02). Since no important oil burner manufacturer used

exclusively the controls of a single control manufacturer, competition was "ever present" (R. 1528).

The Commission found that M-H, because of the large customer demand for, and public acceptance of, its controls, was able at all times to sell its controls at prices higher than those charged by its competitors (FF 5, R. 2242). Indeed, the Commission said that "no instance is shown in which respondent [M-H] actually undercut competitors' prices" (R. 2272).

M-H's share of the available business in automatic temperature controls for burners of the pressure and rotary types was reduced from 73% in 1937-38 to 60% in 1941 (R. 876-77). By 1941, the volume of M-H's sales of automatic temperature controls for all types of oil burners constituted only about 25% of the total sales of such controls (Com. Ex. 1, R. 1645).*

During those years there existed the keenest kind of price competition among control manufacturers (R. 77, 749, 801, 1295-96, 2192-93, FF 2, R. 2241). The total business of M-H's competitors increased, and, as has been shown above, the three new concerns which had entered the control field after 1932 enjoyed a steady growth in sales volume. Indeed, in 1941 M-H lost to its competitors 53% of the control business of 31 customers who previously had used principally M-H's controls; and in the same year, 126 of M-H's

---

*Petitioner's repeated statements that it was stipulated that M-H in 1939, 1940 and 1941 sold approximately 60% of all automatic temperature controls sold in the United States (Br., pp. 10, 24, 48) are misleading. The 60% figure in the stipulation relates, not to all automatic temperature controls, but only to controls for oil burners of the pressure and rotary type for domestic heating plants (Com. Ex. 1, R. 1644). The same stipulation states that M-H in 1939, 1940 and 1941 sold approximately 25% of all automatic temperature controls for oil burners sold in the United States (Com. Ex. 1, R. 1645).

other oil burner manufacturer-customers also purchased competitive controls (R. 961-64, 2193-94).

M-H's Oil Burner Manufacturer Customers

The oil burner manufacturing industry was established in the early 1920's (R. 973, 1004, 1044, 1104). In 1941, according to M-H's records, there were upwards of 300 manufacturers in the field. Two of the largest, Quiet Heet Mfg. Co. and Aldrich Company, were not established until the middle 1930's (R. 495, 574, 1057).

The large majority of oil burner manufacturers are not engaged in fabricating the burners they sell, but rather in assembling the various parts thereof, including motors, pumps, transformers, controls, fans and blower wheels, the several parts usually being purchased by the oil burner manufacturers from different sources (R. 2182, 2309). Thus, oil burner manufacturers ordinarily furnish controls to their customers as parts of complete oil burners (R. 1108-09).

Oil burner manufacturers sell burners competitively at widely varying prices (*e.g.*, in 1941 from $45 to $114.50 (Resp. Ex. 171, R. 2141)), with selling prices determined in large part by varying costs of assembly, overhead, sales, installation and service (R. 952-53, 997, 1044-45, 1087, 1111-12, 1146-48). It is and has been the usual practice in the industry for oil burner manufacturers to arrange for their supplies of equipment, including temperature controls, by annual contracts, negotiated in connection with their planning in advance for sales promotional activities (R. 808).

M-H's Prices

The fact that M-H has charged varying prices to oil burner manufacturers for controls was the basis for the charge of unlawful price discrimination made by the Commission in Count III of the complaint in this proceeding (R. 8-11).

M-H's prices to oil burner manufacturers for the year 1941, which are typical of the prices challenged by the Commission, were as follows (Com. Ex. 1, R. 1659):

Bracket	Annual Volume (Sets)	Net Price Per Set
1	50- 349	$17.35
2	350- 999	16.45
3	1,000-2,499	15.90
3A	2,500-4,999	15.35
4	5,000-7,499	14.90
4A	7,500-9,999	14.25
5	10,000-up	13.75

The Commission agreed with its Trial Examiner that M-H's prices in the discount bracket* and in brackets 1-3A, inclusive, made only due allowance for differences in M-H's costs and consequently were not violative of Section 2(a) of the Clayton Act (FF 18, R. 2255).

On the other hand, the Commission held that M-H's prices to customers in brackets 4, 4A and 5 and its prices in certain off-bracket sales, none of which was sought to be justified on a cost basis, resulted in unlawful price dis-

*An oil burner manufacturer who purchased less than 50 sets annually was given a discount from M-H's list price to wholesalers and was classified as being in what was known as the "discount bracket" (R. 2203).

crimination (FF 19, 20, 21, R. 2256-57), thus overruling the Trial Examiner's findings

(a) that the differences in such prices did not tend to injure competition; and

(b) that such prices were made in good faith to meet the lower price competition of M-H's competitors.

The court below, having concluded that the Commission had acted arbitrarily in rejecting the Trial Examiner's findings on the "injury to competition" point and that Part III of the order should therefore be reversed, found it unnecessary to decide the issue whether M-H's challenged prices were justified under the "meeting competition" proviso of Section 2(b) of the Act (R. 2315). As the court pointed out, "Unless its discriminations do or may tend to injure competition there is no need for M-H to justify them" (R. 2311).

SUMMARY OF ARGUMENT

I

The court below, having determined that the findings upon which Part III of the Commission's order was based were contrary to law and contrary to the evidence, was under a statutory duty to set it aside (Administrative Procedure Act § 10 (e)):

1. The court below, in reaching its decision, faithfully followed and correctly applied the standard set up by this Court for the guidance of courts of appeals in reviewing the decisions of administrative agencies (*Universal Camera Corp.* v. *N.L.R.B.*, 340 U.S. 474 (1951)).

2. The court below did not hold that Section 2(a) of the Clayton Act, as amended by the Robinson-Patman Act, requires a showing that price discriminations have actually injured competition. It did hold, correctly, that the presumption of injury to competition which arises under the Act upon a showing of price differences does not preclude proof that there is *in fact* no probability of such injury to competition (*Corn Products Refining Co.* v. *Federal Trade Commission*, 324 U. S. 726 (1945); *Federal Trade Commission* v. *Morton Salt Co.*, 334 U. S. 37 (1948)); and that the evidence in this case established the fact that M-H's varying prices did not result in the probability of injury to competition.

3. The court below correctly held that the Commission's findings that M-H's varying prices tended substantially to lessen competition among oil burner manufacturers were contrary to the evidence. There is no relationship between prices for M-H controls and prices for oil burners equipped with such controls.

4. The court below correctly held that the Commission's finding that M-H's varying prices tended substantially to lessen competition among control manufacturers was contrary to the evidence. The Commission erred as a matter of law in determining that a seller, by meeting competition, injures or tends to injure competition (*Standard Oil Co.* v. *Federal Trade Commission*, 340 U. S. 231 (1951)).

II

The question whether the lower of M-H's varying prices were made in good faith to meet competition is not now

before this Court for consideration. Not only was the question not raised by the petition for a writ of certiorari (*Alice State Bank* v. *Houston Pasture Co.*, 247 U. S. 240, 242 (1918); *United States* v. *Penn Foundry & Mfg. Co.*, 337 U. S. 198, 205 (1949)), but it is a factual question (*Standard Oil Co.* v. *Federal Trade Commission*, 340 U. S. 231 (1951)) which was not reached or decided by the court below (*McGoldrick* v. *Compagnie Generale Transatlantique*, 309 U. S. 430, 434 (1940); *Aetna Casualty & Surety Co.* v. *Flowers*, 330 U. S. 464, 468 (1947)).

ARGUMENT

I

THE UNANIMOUS REVERSAL BY THE COURT BELOW OF PART III OF THE COMMISSION'S ORDER SHOULD BE AFFIRMED.

As this Court recognized in *Corn Products Refining Co.* v. *Federal Trade Commission*, 324 U. S. 726, 738 (1945), Section 2(a) of the Clayton Act does not prohibit all discriminations in price, but only those discriminations whose effect

> ". . . may be substantially to lessen competition or tend to create a monopoly in any line of commerce, or to injure, destroy, or prevent competition with any person who either grants or knowingly receives the benefit of such discrimination, or with customers of either of them . . ."

In the instant case, not only the Trial Examiner and the dissenting Commissioner, but the unanimous court below, upon its review of the record as a whole, reached the

conclusion that M-H's varying prices did not tend to lessen competition. The reversal by the court below of Part III of the Commission's order was based squarely on its conclusion that the majority of the Commission had acted arbitrarily in making unsupported findings to the contrary.

Since, as is shown hereafter, those findings of the Commission majority were based on erroneous theories of law and were clearly contrary to the evidence, it is submitted that the court below could not properly have reached any other conclusion.

In view of the court's statutory duty to set aside any action of the Commission found, upon its review of the whole record, to be unsupported by substantial evidence, or to be arbitrary or otherwise not in accordance with law, and particularly in view of the standard set up by this Court in the *Universal Camera* case for the guidance of the courts of appeals in reviewing the decisions of administrative agencies, the court below had no alternative but to reverse Part III of the Commission's order and to dismiss Count III of the complaint. Administrative Procedure Act § 10(e) (5 U. S. C. § 1009(e)); *Universal Camera Corp.* v. *N. L. R. B.*, 340 U. S. 474 (1951).

1. The court below correctly applied the decision of this Court in the *Universal Camera* case.

In *Universal Camera Corp.* v. *N. L. R. B.*, 340 U. S. 474 (1951), this Court held that the Court of Appeals for the Second Circuit had erred in deeming itself bound by the Board's rejection of its Trial Examiner's findings, and remanded the case to that court for reconsideration of the record, with instructions that it should (340 U. S. at 497):

> "accord the findings of the trial examiner the relevance that they reasonably command in answering the comprehensive question whether the evidence supporting the Board's order is substantial."

Elsewhere in its opinion in the *Universal Camera* case, this Court indicated that reviewing courts should give a trial examiner's report "such probative force as it intrinsically commands" (340 U. S. at 495) and recognized "that evidence supporting a conclusion may be less substantial when an impartial, experienced examiner who has observed the witnesses and lived with the case, has drawn conclusions different from the Board's than when he has reached the same conclusion" (340 U. S. at 496).*

In the instant case, as in the *Universal Camera* case, the administrative tribunal, with one member dissenting, rejected the findings of its Trial Examiner.

The court below in the instant case, in reviewing the decision of the Commission, was guided by the principles laid down by this Court in the *Universal Camera* case. The court below noted that, under the rule of that case, it was its duty to examine the record as a whole, including the rejected report of the Trial Examiner, in order to determine whether the evidence supporting the Commission's order was substantial (R. 2311). The court also indicated that the dissent of an experienced member of the Commission from the Commission's findings and conclusions was in itself a reason to scrutinize carefully the evidence relied upon to support the Commission's findings and conclusions

*Although petitioner suggests (Br., pp. 84-85) that questions going to the weight of the evidence and the credibility of the witnesses are unimportant in this case, the fact is that numerous conflicts in the evidence were presented for determination and were determined by the Trial Examiner, as is shown by the Commission's extensive exceptions to the Trial Examiner's Report (R. 2212-39).

(R. 2311). The court recognized, however, that the findings of the Trial Examiner must be considered along with "'the consistency and inherent probability of testimony'" (R. 2311), and that such findings are not "'as unassailable as a master's'" (R. 2312). Clearly, as shown by its opinion, the court carefully followed the principles laid down by this Court, and was aware that those principles were intended to be applied with caution.

Thus guided, the court below came to the conclusion, from its examination of the record as a whole, that the Commission had acted arbitrarily in rejecting the Trial Examiner's findings to the effect that M-H's pricing practices had not tended substantially to lessen competition. The court did not hold that the Commission was arbitrary merely because it reversed the Trial Examiner. On the contrary, it held that the Commission was arbitrary because on the whole record, the Trial Examiner was clearly right and the Commission's findings were not supported by any evidence (R. 2312, 2315).

The court below did not misapply, but rather faithfully followed, the decision of this Court in the *Universal Camera* case. The Commission's position that the court gave more weight to the Trial Examiner's report than it ought to have given, and that the court merely substituted its judgment for that of the Commission, is without foundation. The court below did no more than perform its statutory duty to set aside such action, findings and conclusions of the Commission as it found, upon its review of the whole record, to be unsupported by substantial evidence, arbitrary, capricious, an abuse of discretion or otherwise not in accordance with law. Administrative Procedure Act § 10(e), 5 U. S. C. § 1009(e).

In the *Universal Camera* case, after stating that a Court of Appeals must set aside the findings of an administrative agency when, upon its review of the record in its entirety, such findings are found not to be supported by substantial evidence, this Court said (340 U. S. at 490-91):

> ". . . Our power [*i.e.*, the power of the Supreme Court] to review the correctness of application of the present standard ought seldom to be called into action. Whether on the record as a whole there is substantial evidence to support agency findings is a question which Congress has placed in the keeping of the Courts of Appeals. This Court will intervene only in what ought to be the rare instance when the standard appears to have been misapprehended or grossly misapplied." [See also *N. L. R. B.* v. *Pittsburgh Steamship Co.*, 340 U. S. 498, 503 (1951); *Radio Corp. of America* v. *United States*, 341 U. S. 412, 415 (1951)]

The court below did not misapprehend the standard established by this Court; it correctly applied that standard.

2. The court below correctly applied the test of probable injury to competition.

Petitioner's argument that the court below erred is predicated upon a fundamental misconception as to the significance of the evidence concerning the complete absence of effect upon competition of M-H's varying prices for controls. The court below did not, as stated by petitioner (Br., pp. 29, 53, 79), apply a test of actual injury, as dis-

tinguished from the probability* of injury to competition, nor is it our contention, as suggested by petitioner (Br., pp. 29, 50-51, 67-69) that the Act requires a showing that price discriminations have actually injured competition.

This Court has specifically held in the *Corn Products* and *Morton Salt* cases that it is not necessary for the Commission to show actual injury to competition, but that a probability of such injury is sufficient. As this Court pointed out in the *Corn Products* case (324 U. S. at 738):

> ". . . The statute is designed to reach such discriminations 'in their incipiency', before the harm to competition is effected. It is enough that they 'may' have the prescribed effect."

It is, therefore, not a defense under the statute for a respondent to show that there has been no actual injury to competition; he must show that there is no probability of such injury. But neither the *Corn Products* case nor the *Morton Salt* case stands for the proposition that the existence or non-existence of probability of injury to competition must be determined in a vacuum, solely as a matter of theorizing, and without regard to proof that the practices

---

*The Commission concurs in the view that the words "may be" in the statutory phrase "may be substantially to lessen competition" etc. connote "reasonable probability" (Br., pp. 51-53). We, therefore, use the word "probability" as equivalent to the phrase "reasonable possibility" used in the *Morton Salt* case with the qualification (334 U. S. at 46) that it was to be read in the light of the statement in the *Corn Products* case that "the use of the word 'may' was not to prohibit discriminations having 'the mere possibility' of those consequences, but to reach those which would probably have the defined effect on competition" (324 U. S. at 738).

complained of do not *in fact* result in the probability of such injury*.

Nor does the *prima facie* case of injury to competition which arises under the statute upon a showing of price differences prevail over actual proof that there is *in fact* no probability of injury to competition. A respondent who charges different prices is, nevertheless, entitled to show the facts with respect to the effect, or lack of effect, on competition of such different prices. And if the evidence shows that the discrimination in price does not in fact result in the probability of inj to competition, then there is not a violation of the statute.

In reversing Part III of the Commission's order, the court below showed that it understood and applied the test established by this Court in the *Corn Products* and *Morton Salt* cases (R. 2315):

> ". . . it cannot be said that [M-H's] discriminatory price differentials substantially injure competition or that there is any reasonable probability or even possibility that they will do so. *Cf. Corn Products Refining Co.* v. *Federal Trade Commission*, 324 U. S. 726, 738, 742; *Federal Trade Commission* v. *Morton Salt Co.*, 334 U. S. 37, 46. And a mere pos-

*In the usual case it may be, as petitioner urges, that members of an administrative agency should be regarded as being better able to comprehend and answer the factual questions arising in an administrative proceeding than are members of a judicial tribunal (See, *e.g.*, Br., pp. 79, 83, 85, 88). Undue reliance on that theory, however, would not be justified in this proceeding. The Commission's Trial Examiner, having available to him what the petitioner describes as "a staff versed in the analysis of the economic matters we have discussed" (Br., p. 83), found that M-H's pricing practices had not tended substantially to lessen competition. In so far as concerns the difference of opinion between the Commissioners themselves, there is no basis in the record or in human experience for attributing to the majority any greater "expertness" than to the minority.

sibility of such injury is insufficient to sustain a charge of violation of the Act. *Corn Products Refining Co.* v. *Federal Trade Commission,* 324 U. S. 726, 742."

3. The court below correctly held that the Commission's findings that M-H's varying prices tended substantially to lessen competition among oil burner manufacturers were contrary to the evidence.

Underlying much of the petitioner's argument on the subject of injury to competition among oil burner manufacturers is the wholly false premise that a discrimination in price between different purchasers is unlawful (in the sense of having the defined effect upon competition) merely because the purchasers are engaged in competition one with the other (see, *e.g.,* Br., pp. 30, 56-59, 65-67).

If that premise were sound, then further argument on this phase of the case would be futile; for it is an undisputed fact that M-H has sold its temperature controls at different prices to different purchasers who were engaged in competition among themselves in the sale of oil burners.

By the same token, however, if the premise is false, a large part of the petitioner's carefully constructed argument collapses completely; for if the fact that purchasers are in competition with one another does not necessarily involve, as a matter of law, the probability of injury to competition, then the petitioner's charge of illegality is not established merely by pointing out the obvious fact that any price discrimination (whether lawful or unlawful) benefits the recipient of the lower price (*e.g.,* Br., pp. 31, 48, 65, 66, 70, 73, 74).

The language of the Act is wholly inconsistent with the construction placed upon it by the petitioner. If it had been

the intent of the Congress to prohibit all price discriminations among competitive purchasers (other than discriminations justified by cost savings or by the seller's competition) that intent could and would have been expressed in the Act. Instead, the Act expressly restricts its prohibition to a situation

> "where the effect of such discrimination may be substantially to lessen competition or tend to create a monopoly in any line of commerce, or to injure, destroy, or prevent competition . . ."

There could not, of course, be any injury to competition among purchasers unless such purchasers are in fact in competition with each other; but to argue, as the Commission does (Br., pp. 58-59), that the mere existence of competition among purchasers precludes a seller from lawfully charging different prices to such purchasers is to disregard the fact that price discrimination, to be unlawful under the Act, must tend to have the defined effect upon competition. The Commission's position is contrary to everything that this Court, or any other court, has said on the subject.

In the *Morton Salt* case, this Court interpreted the Act as authorizing the Commission "to bar discriminatory prices upon the 'reasonable possibility' that different prices for like goods to competing purchasers may have the defined effect on competition" (334 U. S. at 47). The Court did not there disregard the requirement that the discrimination among competing purchasers be such as may have "the defined effect on competition". On the contrary, the Court pointed out that the findings of the Commission in that case to the effect that there was a reasonable possibility of injury to competition were supported by the evidence (334 U. S. at 47-51)—specifically, the showing that the seller's differentials in the price of table salt between purchasers who

competed in the resale of such salt were "sufficient in amount to influence their resale prices" (334 U. S. at 47).*

Indeed, in the *Morton Salt* case, the Commission itself recognized, by the proviso in its cease and desist order exempting "price differences of less than five cents per case which do not tend to lessen, injure or destroy competition", that not all price discriminations between competing purchasers necessarily involve a probability of injury to competition (334 U. S. at 53).

The Commission observes (Br., p. 56, n. 35) that there is a distinction between price discriminations which are "substantial" and those which are not substantial. Manifestly, a substantial discrimination in price will more frequently be found to have the probability of having a substantial effect upon competition than an insubstantial discrimination. But the Act does not distinguish between substantial and insubstantial discriminations; it distinguishes between those which tend to have the defined effect upon competition and those which do not. In other words, the issue is the effect upon competition and not the amount of the discrimination.

If the term "substantial discrimination" is to be understood merely as a shorthand method of denoting a discrimination which tends substantially to lessen competition, we have no quarrel with it. The difficulty with petitioner's use of the term "substantial discrimination", however, is that petitioner loses sight of its true significance and fashions arguments predicated upon the wholly erroneous notion that the word "substantial" has some absolute significance in relation to the dollar or percentage amount of the price

*Such a showing was made in the *Corn Products* case by a stipulation of the parties that the allowances in question were sufficient, if and when reflected in whole or substantial part in resale prices, to affect competition among the purchasers (324 U. S. at 742).

differential in question (see, *e.g.*, Br., pp. 30, 48) which can be translated into a mathematical formula for the determination of probable effect upon competition. Thus, petitioner argues, in effect (Br., pp. 60, 61):

> (a) This Court, by holding in the *Morton Salt* case that a discrimination in price among competing purchasers of salt which amounted to as little as 10¢ per $1.50 case (6⅔%) might have the defined effect upon competition, determined that any discrimination in price amounting to 6⅔% of the sales price of the commodity is a "substantial" discrimination which establishes, as between competing purchasers, probable injury to competition; and
>
> (b) The price differentials of M-H controls in the present case in relation to selling prices of oil burners "roughly approximate the 6⅔% discount on the salt in the *Morton Salt* case"* and therefore constitute "sub-

*Although the only differentials in respondent's prices here under attack are those for which respondent was not found to have established cost justification, the petitioner's argument that such differentials are "substantial" is formulated on the basis of differentials which are not under attack. Thus in an effort to show that the ratio between the challenged differentials in the price of controls and the prices of assembled oil burners "roughly approximates the 6⅔% discount on the salt in the *Morton Salt* case", the petitioner refers to bracket differentials of M-H in 1941 of $3.60 between brackets 1 and 5, and of $2.70 between brackets 2 and 5, and then states that such differentials amounted, in relation to 1941 oil burner prices, to from 6% to 9% and from 4.5% to 6¾%, respectively (Br., pp. 60-61). In fact, the only 1941 bracket differentials here in question are the differentials between bracket 3A and lower price brackets, differentials which ranged from 45¢ to a maximum of $1.60 (Com. Ex. 1, R. 1659). With reference to 1941 oil burner prices ranging from $114.50 to $45 (Resp. Ex. 171, R. 2141), the maximum price differential in M-H controls amounted to from 1.4% to 3⅝%. In other words, on the basis of the Commission's own mathematical approach, the ratio of the maximum price differential to the lowest selling price was approximately the same as that of the 5¢ discount exempted by the Commission itself in the *Morton Salt* case to the $1.50 selling price (3⅓%).

stantial" discriminations, which justify the Commission's order without any inquiry into the probable effect of such differentials upon competition.

Quite apart from the factual inaccuracies in petitioner's analysis of the "substantiality" of M-H's price differentials, petitioner's approach to the problem is clearly fallacious. The question to be decided is not whether the challenged price differentials can properly be described as "substantial", either in dollar amount or in terms of a percentage of sales price. The question is, rather, whether such differentials—whatever their amount—involve in fact a probability of substantial injury to competition.

If the competition in question were competition in the resale of such items as grocery store staples, generally sold at uniform competitive prices, it would hardly require extensive testimony to establish the probable effect upon such competition of price differentials even smaller than those in the *Morton Salt* case. As this Court observed in the *Corn Products* case (324 U. S. at 742):

> ". . . the price discriminations here are relatively substantial in a field where differences of a fraction of a cent in the price of candy are sufficient to divert business from one manufacturer to another . . ."

Where, however, the competition in question is competition in the sale of relatively expensive products, sold at widely varying prices, the actual or potential effect on that competition of a discrimination in the price of one of the component parts of the product remains a question of fact, to be determined upon the evidence.

The conclusion of the majority of the Commission that M-H's varying prices tended substantially to lessen competition among oil burner manufacturers purports to be based upon findings which may be summarized as follows:

(1) Differences in control prices necessarily affected oil burner manufacturers' sales and profits (FF 16, R. 2252-53; FF 22, R. 2260);

(2) Some oil burner manufacturers lost business to those of their competitors who "enjoyed" lower control prices from M-H (FF 16, R. 2253; FF 22, R. 2260); and

(3) Since oil burner manufacturers who paid lower prices for M-H's controls had an advantage in selling oil burners equipped with such controls in competition with other oil burner manufacturers who paid M-H's higher prices, those who paid such higher prices (FF 18, R. 2255)

> ". . . must either sell at competitive prices and, in so doing, reduce their possible profits by the amounts of discriminations against them or attempt to sell at higher prices than those which the favored customers of respondent [M-H] charge for oil burners equipped with respondent's [M-H's] automatic temperature controls, with the result of inability to secure business and a reduction in the volume of their sales."

Those general findings, which form the "factual" basis of petitioner's argument on this phase of the case (Br., pp. 15, 31, 65, 66), are not supported by any evidence. The dissenting Commissioner pointed out the insufficiency of such findings when he said (R. 2280):

> "On the record I believe it to be impossible for the Commission to make a specific finding that the

effect of the [M-H's] discrimination was to substantially lessen competition or tend to create a monopoly or to injure, destroy or prevent competition. A general finding is insufficient for this purpose."

(a) There is no relationship between prices for M-H's controls and prices for oil burners equipped with such controls.

At the very outset of this proceeding, the Commission, recognizing that there is not any causal connection between prices for controls and prices for oil burners, stipulated as follows (Com. Ex. 1, R. 1661):

> "Some manufacturers paying higher prices for respondent's [M-H's] automatic temperature controls were able to, and often did, sell their oil burners complete with controls at prices below those which other similar manufacturers paying lower prices for respondent's [M-H's] automatic temperature controls sold their oil burners.
>
> "Some manufacturers paying lower prices for respondent's [M-H's] automatic temperature controls were able to, and often did, sell their oil burners complete with controls at prices below those which other similar manufacturers paying higher prices for respondent's [M-H's] automatic temperature controls sold their oil burners."

That the prices of oil burners did not depend upon the prices paid for controls is conclusively proved by the histories of two relatively new members of the oil burner industry, Quiet Heet Mfg. Co. and Aldrich Company. Although paying the highest prices for M-H's controls when they started in business, Quiet Heet and Aldrich were able to compete effectively with larger, well-established con-

cerns who were then getting M-H's lowest prices. At the time of the hearings before the Trial Examiner, Quiet Heet and Aldrich had become the largest oil burner manufacturers in the industry (R. 574).

Quiet Heet started selling oil burners in 1936, at which time it was paying M-H's highest price for controls. Despite that fact, it was able to sell the lowest priced burner on the market, thus underselling the so-called "old line or pioneer manufacturers" (R. 554; Resp. Ex. 185-E, R. 2164). By 1941, Quiet Heet was selling 25,000 oil burners a year and had the largest sales volume of any oil burner manufacturer in the industry (R. 496).

Aldrich Company started manufacturing oil burners in 1935 (R. 1057), and in 1936, when it first bought M-H's controls (R. 1058), paid M-H's highest price therefor (R. 1070). In 1935, Aldrich manufactured only 250 oil burners; but, by 1941, notwithstanding the competition of manufacturers who were receiving M-H's lower prices, it had increased the volume of its sales to over 20,000 oil burners annually (R. 1059). In 1941, for the first time, Aldrich received M-H's lowest price for controls (R. 1070).

Quiet Heet and Aldrich are not the only oil burner manufacturers whose experiences demonstrate the absence of relationship between control prices and oil burner prices. Several other oil burner manufacturers who, during 1941, were receiving M-H's lowest control prices (Resp. Ex. 185A-F, R. 2160-65) put out burners that were among the higher priced on the market (Automatic Burner Corp., R. 992; Petroleum Heat & Power Co., R. 1112; Williams Oil-O-Matic Heating Corp., R. 1044), while burners manufactured by concerns paying higher prices for M-H's controls

(Resp. Ex. 143, R. 2041) were selling in the lowest price field (Joseph Toker Co., R. 1135-36; Korth Oil Burner Corp., R. 1172).

The absence of relationship between control prices and burner prices is not hard to explain. Factors such as service costs, selling expenses, and other overhead items are of far greater significance in the total cost of an oil burner than is the cost of the controls with which it is equipped (R. 952-53, 997, 1044-45, 1087, 1111-12, 1146-48, 2313).

The absence of any relationship between control prices and oil burner prices is further confirmed by the results of a nation-wide survey of the prices paid by wholesalers and dealers for comparable domestic oil burners during the year 1941 (Resp. Ex. 171, R. 2133-41; R. 1266-85). That survey was made by Ross Federal Research Corporation, an independent commercial research organization which has had long experience in that type of work and whose findings have had wide acceptance (R. 1266-67). It dealt with a broad cross-section of the oil burner industry. The oil burner manufacturers, wholesalers and dealers who were interviewed in the course of the survey numbered 535 and were located in 15 different areas comprising the principal markets for domestic oil burners (R. 1268-69). The questionnaires (Resp. Ex. 172, R. 2143) and instructions (Resp. Ex. 173, R. 2144-48) used in making the survey were carefully worded so as to elicit accurate information and to insure that price comparisons were made only with respect to comparable burner units. As a further precaution, Ross requested verification of the prices reported by wholesalers and dealers from the oil burner manufacturers who supplied such wholesalers and dealers. Only price information so verified was used in formulating the

conclusions reached in the Ross Report (R. 1269-70).

The following table, which is derived from the Ross Report (Resp. Ex. 171, R. 2141), shows, for the year 1941, the range of prices charged to wholesalers for comparable oil burners by oil burner manufacturer-customers in each of M-H's price brackets:

Prices Charged Oil Burner Manufacturers by M-H for Controls		Bracket Differential Not Shown to Have Been Justified by Cost Savings	Range of Prices Charged Wholesalers by Oil Burner Manufacturers for Burners	
Bracket	Price		Low	High
1	$17.35	—	$50.00	$111.00
2	$16.45	—	45.00	96.20
3	$15.90	—	47.50	102.00
3A	$15.35	—	52.50	89.00
4	$14.90	$0.45	61.70	100.00
4A	$14.25	$1.10	55.00	101.25
5	$13.75	$1.60	45.00	114.50

The absence of any relationship between variations in M-H's control prices and oil burner prices is clearly apparent. For example, the prices charged for comparable oil burners by manufacturers who paid $17.35 to M-H for a set of controls ranged from $50 to $111, whereas the prices charged by manufacturers who paid $13.75 per set of controls ranged from $45 to $114.50. The difference in control prices paid to M-H by those two groups of customers was only $3.60, and yet the range in the prices charged by each group for oil burners amounted to over $60.

The highest price for a burner ($114.50) was charged by a manufacturer who paid M-H's *lowest* price ($13.75) for his controls. Such highest price was $69.50 more than the price charged by another manufacturer, who was paying exactly the same price for his controls, and it was also

$69.50 more than the price charged by a manufacturer who paid $2.70 *more* for his controls ($16.45).

Furthermore, it is shown that the price of the lowest priced burner sold by a manufacturer in each of four groups of customers who paid M-H $16.45, $15.90, $15.35 and $14.90, respectively, per set of controls, was $45.00, $47.50, $52.50 and $61.70, respectively. In other words, while the prices paid by such groups of manufacturers to M-H for controls *decreased* successively, the lowest prices charged by them for oil burners *increased* successively.

Thus, the Ross Report demonstrates strikingly the accuracy of the stipulation of the parties to the effect that there is not any connection between variations in M-H's control prices and the prices of oil burners.*

Taken together, the aforesaid stipulation (Com. Ex. 1, R. 1661), the overwhelming evidence from the trade itself —the oil burner manufacturers—and the Ross Report compel a conclusion directly contrary to the finding of the Commission (FF 22, R. 2260) that changes in the prices of controls result in corresponding changes in the prices of oil burners.

(b) No oil burner manufacturer lost business to a competitor because of M-H's varying prices for controls.

The Commission majority found that certain oil burner manufacturers who paid M-H higher prices for controls

*While petitioner concedes (Br., p. 19) that the Ross Report indicates "in some instances" a lack of correlation between the prices paid for controls and the selling prices of burners, it makes a point of the fact that the report "showed that in 11 of the 15 areas surveyed the lowest dealer price was given by manufacturers in respondent's lowest price bracket". Petitioner neglects to point out that also in 11 out of the 15 areas surveyed, the *highest* dealer price was charged by manufacturers in respondent's lowest price bracket.

lost business to certain of their competitors (Quiet Heet is the only one identified by name) who paid M-H lower prices for controls. That finding does not support the Commission's charge of unlawful price discrimination because the Commission, with good reason, refrained from finding any causal connection between the loss of business by such oil burner manufacturers and M-H's varying prices for controls. Thus, the Commission majority found (R. 2260):

> ". . . oil-burner manufacturers [not identified] testified that the question of price was important in the purchase of automatic temperature controls and that they had lost business to certain competitors, including Quiet-Heet, who enjoyed lower control prices from respondent [M-H], although the exact volume of such lost business could not be calculated."

While the Commission properly found that "oil burner manufacturers" [*i.e.*, some of them] lost business to Quiet Heet, *it did not find, and could not find, that they lost business because Quiet Heet paid lower control prices to M-H.* As the Trial Examiner found after an extensive review of the evidence before him (R. 2195-96), Quiet Heet's ability to take customers away from its competitors was entirely attributable to reasons that had nothing to do with the price of controls.

When, in 1936, Quiet Heet started manufacturing and selling oil burners on a small scale, it paid M-H's *highest* price for controls (R. 554). Yet within a few years, as stated above, it had become the largest oil burner manufacturer in the industry (R. 574). In 1936, the then well-established oil burner manufacturers were selling for around $95 oil burners equipped with controls for which

they paid M-H's *lowest* price (R. 556). In that year, Quiet Heet introduced on the market an oil burner, priced at $70, equipped with controls for which it paid M-H's *highest* price.

Despite its low-price policy, Quiet Heet made a profit from the time it started in business (R. 556). Samuel L. Peters, the proprietor of Quiet Heet, who was a witness for the Commission, explained how Quiet Heet, at the outset, was able to market its $70 burner at a profit, as follows (R. 556):

> "I think that was largely due to the fact that my competitors misunderstood the trend of the industry at that time, which was into volume production because the F.H.A. and a large volume building construction program had entered the picture. They still stuck to the old policy of trying to get as much as the traffic would bear out of the commodity, whereas I started out to merchandise it on a volume basis, effecting certain economies, making a few shortcuts here and there and trimming down my overhead and operating costs to the minimum."*

The "economies" and "shortcuts" effected by Quiet Heet were innovations in the oil burner industry. For example,

---

*Peters testified (R. 574) that other oil burner manufacturers (especially, Aldrich, Toker and Korth)—some of them after a period of "knocking" Quiet Heet's policies—decided to work along similar lines, the result being that they became outstandingly successful. Peters commented on the oil burner industry as follows (R. 574):

> "It appears to me by studying the manufacturers in the business that there is a clearly defined line between those who made the grade and those who did not. The ones who made the grade worked along the lines that I indicated and the others just stayed where they were or folded up, or went out of the picture."

Quiet Heet, unlike other oil burner manufacturers, did not furnish any service to its dealers. Thus, Peters testified (R. 569):

> "We made up our mind that we would sell only to the competent organizations who knew enough to maintain their own service and knew how to install our equipment, so that we could eliminate entirely the item of field service which was a very costly item that was being furnished by other manufacturers who were getting much more money for the equipment."

Other examples of Quiet Heet's economies: It did only a limited amount of advertising, relying mainly on its dealers to advertise its product (R. 568, 569-70); it effected savings in connection with the packaging of its burner (R. 571); and it initiated the policy of selling for cash only, while other oil burner manufacturers sold on consignment, on open account, and used various other "costly methods of selling" (R. 573).

When in 1936, Quiet Heet reduced the going price for oil burners more than $20 *below* the price of its competitors, it was paying *more* for its controls than those competitors were (R. 554, 556). Obviously, M-H's prices to Quiet Heet for controls had nothing to do with Quiet Heet's ability to initiate its price-reduction program.

During the complaint period (1937-41), Quiet Heet paid, on the average, approximately $1.90 ($1.60 in 1941) less per set for M-H's controls than M-H's customers who received M-H's lowest cost-justified prices (Resp. Ex. 185, R. 2164; Com. Ex. 1, R. 1659). That small price advantage over some of its competitors cannot possibly explain why Quiet Heet was able to sell its burners (containing one set of controls) at a price that was eventually *$55 below*

the lowest price that prevailed for oil burners when it started in business (R. 504-505, 507, 556-57).

Peters, who was in a position to know, attributed Quiet Heet's ability to follow successfully a low-price policy to its revolutionary methods of doing business. Although he was a witness for the Commission, *he did not even mention the price of controls in connection with explaining his ability to reduce the price of oil burners* (R. 495-520; 553-76).

As will be shown by the analysis set forth below, the very evidence relied upon by the Commission (Br., pp. 71-74) establishes that no burner manufacturer lost business either to Quiet Heet or to any other competitor, or was injured in any way, because of M-H's varying control prices.

Herco Oil Burner Corporation—F. E. Herr, President of Herco, made the unsupported statement that the fact that M-H's controls cost Herco more than they did one of its competitors (Quiet Heet) made a difference in sales of Herco's oil burners in the New York territory. He stated, however, that he had no way of determining that effect "in dollars and cents" and said (R. 674):

> ". . . I wouldn't like to make a statement on that anyhow. Some business probably we could have secured but as to what volume or anything, I personally would not know."

That is not evidence of anything. Actually, the lower price paid by Quiet Heet in 1941 for M-H's controls could not have adversely affected Herco. In that year, Herco, which then equipped its burners with Mercoid controls except where customers specified M-H controls (R. 664), paid $15.90 a set for M-H's controls* (as against $13.50

*Unless otherwise indicated, prices paid by customers to M-H for controls are taken from Resp. Ex. 185, R. 2160-65 and Com. Ex. 1, R. 1659.

a set for its Mercoid controls (R. 671; Resp. Ex. 152-C, R. 2049)). In the same year, Quiet Heet paid M-H $13.75 a set for controls, the difference in favor of Quiet Heet being $2.15 per set of controls. When it came to prices at which the two concerns sold their burners, however, there was a difference of $14, Herco's price on quantity orders being $59 (R. 675; Com. Ex. 152, R. 1941) compared to Quiet Heet's price of $45 (Com. Ex. 124, R. 1871). Thus, even if Herco had paid the same price for M-H's controls that Quiet Heet did, and had reduced the price of the Herco burner accordingly, the latter would still have been almost $12 more than Quiet Heet's.

Malleable Iron Fittings Company—Malleable objected to some oil burner manufacturers being given a "price preference" over concerns like Malleable (R. 535)

> "... so that it made it more difficult for us to compete with the other burners because our prices were higher."

Again, the facts do not bear out the charge. In the year 1941, the "price preference" operating against Malleable was at most $2.15 because in that year Malleable was paying $15.90 per set of controls whereas the lowest price for a set of M-H's controls that year was $13.75, which was the price that Quiet Heet was paying. That $2.15 difference in control prices is inconsequential when contrasted with the *$45 spread* between Malleable's lowest burner price of $95 during most of that year,* and Quiet

*Effective November 1, 1941, Malleable reduced its burner prices. Its cheapest burner was then priced at $82.00 (R. 531, Com. Ex. 148, R. 1914).

Heet's burner price of $50 (R. 505, 536; Com. Ex. 144, R. 1903).

The simple fact is that Malleable was reluctant to reduce its burner prices although its competitors did so (R. 536-37), and hence did not attempt to meet the competition of other oil burner manufacturers such as Quiet Heet (R. 539).

Oil Equipment Laboratories, Inc.—This concern was another of the "old fellows" in the industry (R. 579), which found itself adversely affected when Quiet Heet went into the oil burner business and brought about a general drop in the price of oil burners (R. 586-88). While complaining that his Company never got "an equivalent break" in control prices (R. 585), H. F. Rodler, General Manager of the Company, admitted that the difference between what his Company paid for M-H's controls and what Quiet Heet paid, namely $2.65, would not have enabled his Company to meet Quiet Heet's competition (R. 582):

> ". . . $2.65 would not have made the difference necessary. It would have made part of the difference but not enough."

Petitioner refers (Br., pp. 18, 20, 72) to the Penn Boiler and Burner Company as a manufacturer which was "unable to meet competition at the prices it paid respondent for controls (R. 681)", but the testimony referred to had nothing to do with any effect of M-H's varying prices upon competition in the sale of oil burners. It related to a situation in which the Penn Boiler and Burner Company (which had standardized on Mercoid controls) and some of its dealers found it profitable, in certain markets, to sell the

low-priced Quiet Heet burner as well as the high-priced Penn burner, and to add to their profits on occasion by switching the controls with which the respective burners were equipped (R. 682). There is not a scintilla of testimony that the Penn Boiler and Burner Company lost any burner sales because of any variation in the prices of M-H controls.

That is all there is in the record for the Commission's conclusion that competition among oil burner manufacturers was lessened because of M-H's varying prices for controls, and it doesn't amount to anything.

On the other hand, all the testimony of the oil burner manufacturers who actually said anything definite on the subject was to the effect that the sales of their oil burners were not injured by the fact that some of their competitors received somewhat better prices on controls from M-H. The following are typical examples of the unequivocal testimony of such witnesses:

> "Q. Did that fact [that some of M-H's customers who purchased controls in larger volume got somewhat better prices than your Company] hurt the sale of your oil burners?
>
> "A. No, it didn't." (Jeffrey of Acme Oil Burner Co., R. 937-38.)
>
> * * * * *
>
> "Q. Now, speaking generally of your competition, Mr. Westmont, has the fact that other oil burner corporations received better prices [from M-H] because of their volume hurt the sale of your burners, to your knowledge?
>
> "A. Not a bit." (Westmont of Wisconsin Oil Burner Co., R. 999.)
>
> * * * * *

"Q. Were you aware of the fact, Mr. Bendix, that some of the Minneapolis-Honeywell's customers who purchased controls in larger volume got a somewhat better price than Electrol received?

"A. Yes.

"Q. And did that fact hurt the sale of Electrol Burners?

"A. No." (Bendix of Electrol, Inc., R. 1142.)

* * * * *

"Q. Have you been aware of the fact, Mr. Kraber, that some of the Minneapolis-Honeywell's customers purchased controls in larger volume and got a somewhat better price than your company?

"A. Yes, sir.

"Q. Did that fact hurt the sale of your oil burners?

"A. No." (Kraber of York Oil Burner Co., R. 1151.)*

The most that the Commission's evidence with respect to competition among oil burner manufacturers can be said to show is that there was one of them, Quiet Heet, which undersold competitors and thereby brought about a general lowering of oil burner prices. Indeed, according to one of Quiet Heet's competitors, Quiet Heet in one year drove the

*Petitioner's reference to the testimony of this witness (Br., p. 16, n. 16) illustrates the constancy of its effort to fashion the facts to fit its theories. Thus, in referring to the many oil burner manufacturers who testified unequivocally that competition in oil burners was not affected by M-H's variations in price, petitioner states that one of these firms "admittedly lost a customer to Quiet Heet, which received lower control prices 'because of the price' (R. 1155)". However, reference to the record shows not only that the witness did not attribute any loss of business to the price of controls, but that he did not even identify the year in which the incident occurred, so that there is no basis whatever for petitioner's statement that Quiet Heet was then receiving lower control prices from M-H.

dealer price of oil burners down $50 (R. 579), or *well over 30 times* the challenged differential in M-H's control prices to oil burner manufacturers.

The Trial Examiner summed up all the evidence on the point in his finding that (R. 2195):

> ". . . it was the cutting of its oil burner price, and not the price paid for controls by 'Quiet Heet', that was the cause of the competitive situation referred to at that time."

It is significant that Quiet Heet is the *only* oil burner manufacturer whose competition was specifically claimed by the Commission to have hurt other oil burner manufacturers. As has been shown above, even the Commission did not find Quiet Heet's advantage over its competitors attributable to the fact that it was able, eventually, to obtain M-H's lowest price. Indeed, the growth of Quiet Heet's own oil burner business, notwithstanding the fact that it started in paying M-H's highest control price, is in itself a complete answer to the charge that M-H's varying prices had the effect of lessening competition among oil burner manufacturers.

As noted by the court below (R. 2315), petitioner's argument that oil burner competition was injured as a result of M-H's varying prices involves a failure to distinguish between competition in the sale of controls and competition in the sale of oil burners. That confusion on the part of petitioner is illustrated by the statement (Br., p. 74) that M-H objected to the sale of burners with its controls at a $5 increase in price over the same burner equipped with competitive controls "presumably because this would reduce the sale of such burners". The fact is, of course, that M-H

was interested solely in the sale of its controls, and that the imposition by the oil burner manufacturer of an unwarrantedly high extra charge for a burner equipped with M-H controls as against the same burner equipped with competitive controls might well induce the purchaser of the burner to specify the competitive controls—thereby causing a loss of business to M-H in the sale of controls to the oil burner manufacturer. The distinction between competition in the sale of controls and competition in the sale of oil burners is fundamental in this case.

Throughout the complaint period (1937-41), there was the keenest kind of competition between M-H and other control manufacturers, in the course of which not only were all control prices substantially decreased, but the original difference between M-H's prices and the lower prices of its competitors was steadily reduced (see Appendix, *infra*). That difference was obviously an important factor in competition in the sale of *controls* to oil burner manufacturers.

In so far as concerns competition in the sale of *oil burners,* however, the difference between M-H's prices and the lower prices of its competitors was wholly without effect. Oil burner manufacturers generally offered their burners for sale equipped with any make of controls desired by the purchaser, either without varying the price of the burners or, in some cases where individual manufacturers had standardized on competitive controls, with the imposition of an extra charge for burners equipped with M-H controls (R. 942, 975, 364-65, 1150-51, 2242). But the record is abundantly clear that the difference in cost to the oil burner manufacturer between M-H and competitive controls had no effect whatever on competition in the sale

of oil burners. The customer of the Williams Oil-O-Matic Corporation referred to by petitioner (Br., pp. 19, 67), for example, in purchasing the Williams Burner, specified Mercoid controls rather than pay the higher price charged by that manufacturer for burners equipped with M-H controls; but the oil burner that it purchased was the *Williams* burner, not a competitive burner.

The record shows that the proposition advanced by the Commission, *i.e.*, that a difference between the price of M-H controls to one oil burner manufacturer and the price of M-H controls to another oil burner manufacturer affected or tended to affect competitive selling between the two oil burner manufacturers, cannot be supported.

(c) The question whether M-H's price differentials tend substantially to injure competition among oil burner manufacturers does not involve consideration of the independent pricing policies of sellers of other oil burner equipment.

Petitioner's final argument on this phase of the case is that even if M-H's differentials in control prices may not by themselves substantially affect competition in the sale of oil burners, nevertheless, if the aggregate effect of price discriminations by all suppliers of oil burner parts and equipment is to create a tendency to injure competition in the sale of oil burners, then each seller who contributes to the aggregate cost advantage of the favored customer is responsible for the aggregate competitive result (Br., pp. 20-21, 30-31, 61-63).

That argument cannot withstand analysis.

In the first place, the price of oil burners is not determined merely on the basis of the aggregate cost of compo-

nent parts; costs of assembly, overhead, sales, installation and service are of far greater significance (R. 952-53, 997, 1044-45, 1087, 1111-12, 1146-48).

In the second place, the Act prohibits a discrimination in price only "where the effect of *such discrimination* may be substantially to lessen competition", etc. It does not, and could not properly, impose a test of legality based upon the effects of *other* price discriminations by *other* persons, acting independently of the seller whose discriminatory price is under attack.

In any event, the record in the present case is barren of evidence, and there are no findings, as to the effect upon competition in the oil burner industry of any discriminations in the prices of other parts or equipment. It is, therefore, a matter of speculation as to whether any such discriminations exist, and, if they do, whether they have in fact resulted in the probability of injury to competition in the sale of oil burners. If it were to be assumed that each price differential was lawful in and of itself, then it remains lawful notwithstanding the aggregate effect. Conversely, if suppliers of other parts are guilty of illegal discrimination, that illegality cannot be imputed to a seller whose independent price differential is lawful.

Petitioner's suggestion (Br., p. 63) that there is an analogy between supplying temperature controls for oil burners and supplying individual commodities for resale in a grocery store is wholly without merit. It is, of course, no answer to a charge of injury to competition in the sale of table salt to say that the purchasers affected by discriminatory salt prices are able to compete freely in the sale of other commodities. But this simply answers an argument that we have not made and do not make. There is no con-

tention in the present case that a probable injury to competition in the sale of oil burners would be saved from illegality by the fact that the ability of oil burner sellers to compete in the sale of other heating equipment was not affected. *Our point is that the practices complained of do not involve any probability of injury to competition in the sale of oil burners themselves.*

4. The court below correctly held that the Commission's finding that M-H's varying prices tended substantially to lessen competition among control manufacturers was contrary to the evidence.

At the root of the disagreement between the majority of the Commission and the Trial Examiner on the issue whether M-H's varying prices tended to injure competition lie the erroneous theories of the majority of the Commission that

> (1) a seller, by meeting competition, causes "injury" to competition; and
>
> (2) a seller's showing that the lower of his varying prices were made in good faith to meet the equally low prices of his competitors does not constitute a defense to a charge of unlawful price discrimination, but, on the contrary, in some mysterious way, affords irrebuttable proof of "injury" to competition—and hence *conclusively establishes* the Commission's charge of unlawful price discrimination.

Those theories were announced by the majority of the Commission for the first time in the *Standard Oil* case.*

*41 F. T. C. 263, 270 *et seq.* (1945); order modified, Commissioner Mason dissenting, 43 F. T. C. 56, 59 (1946); ***reversed,*** *sub nom. Standard Oil Co. v. Federal Trade Commission,* 340 U. S. 231 (1951).

Illustrative of the Commission's position in that case is the following excerpt from its findings:

> "Based on the record in this case the Commission concludes as a matter of law that it is not material whether the discriminations in price granted by the respondent to the said four dealers were made to meet equally low prices of competitors. . . . Accordingly the Commission does not attempt to find the facts regarding those matters because, even though the lower prices in question may have been made by respondent in good faith to meet the lower prices of competitors, this does not constitute a defense in the face of affirmative proof that the effect of the discrimination was to injure, destroy and prevent competition with the retail stations operated by the said named dealers and with stations operated by their retailer-customers." (*In the Matter of Standard Oil Co.*, 41 F. T. C. at 281-82)

The Commission's decision in the *Standard Oil* case in 1945, which was not reversed by this Court until January, 1951, served as a precedent, so far as the Commission was concerned, for its decision in January, 1948, in the instant case.

The Commission was clearly following its erroneous reasoning in the *Standard Oil* case when it found, in the instant case, that M-H's "price discriminations" had diverted trade to M-H from its competitors and, therefore, had had a "substantial injurious effect upon competition" in the sale and distribution of controls (FF 19, R. 2256). That finding was amplified and explained by the Commission in its opinion (R. 2273), as follows:

> "The competitive effects of respondent's [M-H's] discriminatory prices on other manufacturers of controls are persuasively indicated by its own argu-

> ments that its discriminatory prices were made for the purpose of meeting competition. These arguments show that respondent's [M-H's] discriminatory prices were made to retain the business of certain customers or to secure the business of others and that they were largely successful in doing so. To the extent that business is held by or diverted to respondent [M-H] from its competitors by its discriminatory prices and unfair practices, competition has been adversely affected within the meaning of the law . . .".

Obviously, if M-H were to be prohibited from trying to divert trade from its competitors (*i.e.,* Mercoid, Penn and Perfex), it would be prohibited from competing with them. Such a result is not only not required by the Clayton Act, but is wholly inconsistent with the attainment of the objectives of the anti-trust laws, namely, the promotion and protection of free competition.

It is apparent that in reaching the conclusion set forth above, the majority of the Commission refused to give any application whatever to the "meeting competition" proviso of Section 2(b) of the Act. On the contrary, it found that when M-H made its showing under Section 2(b), *i.e.*, that it had lowered its prices in good faith to meet competition, it thereby proved injury to competition, and hence a violation of the Act.

The Commission's paradoxical theories with respect to Section 2(b) were rejected by this Court in the *Standard Oil* case, where it was held that the natural consequences of meeting competition in good faith do not constitute the kind of "injury to" or "lessening of" competition to which Section 2 of the Clayton Act refers (340 U. S. at 249-50).

Since this Court's decision in the *Standard Oil* case, it has been clear that if a seller sustains his burden of proof under Section 2(b) of the Act by showing that the lower of his varying prices were made in good faith to meet the equally low prices of his competitors, the defense thus established to a charge of unlawful price discrimination is not to be invalidated

(a) because the seller succeeds in securing or retaining, as against his competitors, business he would otherwise have lost;

(b) because the seller's customers who receive the seller's lower prices obtain a price advantage over their competitors who are also customers of the seller; or

(c) because the seller's customers pass along such price advantage to *their* customers, thus affecting (and, according to the Commission, "injuring") competition at the resale level.

It follows that the Commission erred when it held that competition was injured when M-H, in order to meet competition, reduced some of its prices below its other prices in order "to retain the business of certain customers or to secure business of others" (R. 2273). The extent of the Commission's error is fully apparent only when viewed in the light of the Commission's own statement that ". . . . no instance is shown in which respondent actually undercut competitors' prices" (R. 2272).* Then it becomes clear that the

*The fact is, as was recognized by the dissenting Commissioner, that M-H, pressed by competition and losing substantial amounts of business, "in good faith and what appears to be only ordinary common sense, *brought its prices down closer to the level of its competitors*" (R. 2278) [Emphasis supplied.]

"substantial injurious effect upon competition" of which the Commission complains (FF 19, R. 2256) is that M-H allegedly diverted business from its competitors by selling at prices that were *always higher* than those of its competitors! The fundamental error on the part of the majority of the Commission in finding "injury to competition" under such circumstances pervaded its entire decision.

The Commission majority's finding (FF 19, R. 2256) that M-H's varying prices "have tended to, and do, divert trade to the respondent [M-H] from its competitors and have had a substantial injurious effect upon competition", in addition to being wrong as a matter of law, is not supported by the record. As recognized by the court below (R. 2312), the evidence fully establishes the contrary. Thus, it was not disputed

(a) that throughout the complaint period there existed the keenest kind of price competition among control manufacturers (R. 77, 749, 801, 1295-96, 2192-93, FF 2, R. 2241);

(b) that the total business of M-H's competitors increased, and that the three new concerns which entered the industry after 1932 enjoyed a steady growth in sales volume (Penn—R. 798, 826; Perfex—R. 222, 231-32; Detriot—R. 418-21);

(c) that M-H's proportion of sales of controls for oil burners of the pressure and rotary type was reduced from 73% in 1937-1938 to 60%* in 1941 (R. 876-77) and its proportion of total sales of controls for all oil burners constituted only 25% in 1941 (Com. Ex. 1, R. 1645);

*See footnote at p. 8, *supra*.

(d) that the prices charged for controls by M-H's competitors were generally lower than those of M-H and that there is no evidence of any undercutting of its competitors' prices by M-H (FF 5, R. 2242; R. 2203, 2272);

(e) that in 1941 M-H lost to its competitors 53% of the control business of 31 customers who previously had used principally M-H's controls (R. 964); and

(f) that in that same year, 126 of M-H's other oil burner manufacturer-customers also purchased competitive controls (R. 963).

In attempting to support the Commission's finding, counsel for the Commission ignore all of those facts and rely upon fragmentary testimony to the effect that M-H, from time to time, was able to take business away from its competitors (Br., pp. 22-23, 77-79)*. In placing reliance upon such testimony, which merely confirms that control manufacturers were engaged in active competition, it is necessary for the Commission to disregard the evidence that M-H's competitors were taking substantial amounts of business from M-H, as shown above, and the finding of the Commission (FF 5, R. 2242; 2272) that M-H *never* undercut the prices of its competitors, but *always* sold at a premium price.

As the court below said (R. 2312):

"... M-H was entitled to meet the competition built up in its field, and even if it did succeed in re-

*It is far from clear from such testimony that M-H's ability to get the business in those isolated instances had anything whatever to do with the prices of M-H's controls.

taining or diverting some business which might otherwise have gone to some of its competitors, where those competitors were able to enter its field and build thriving businesses in spite of M-H's commanding position and alleged wrongful practices, we think it cannot be said that the effect of those practices was substantially to injure competition. . . ."

That the Commission's position with respect to injury to competition among control manufacturers is wholly theoretical and divorced from reality is demonstrated by the fact that, in support of that position, petitioner is forced to place its primary reliance upon the argument that the "inevitable tendency of the system would be to encourage burner manufacturers to concentrate their purchases in respondent as their single source of supply" (Br., pp. 32, 50, 75-77). Whatever might be said for that argument if we were dealing with abstract theories, in a factual vacuum, it has no basis whatever in the facts of this case, as was determined by the Trial Examiner (R. 2193-94, 2202-03) and the Court of Appeals (R. 2312-13).

In view of the overwhelming evidence summarized above and of the absence of *any* testimony to show that the differences in M-H's prices tended to lessen competition among M-H and its competitors, the court below was amply justified in holding that the Commission's finding of injury to such competition was not supported by substantial evidence.

II

THE QUESTION WHETHER THE LOWER OF M-H'S VARYING PRICES WERE MADE IN GOOD FAITH TO MEET COMPETITION IS NOT NOW BEFORE THIS COURT FOR CONSIDERATION.

In addition to its attack upon the decision of the court below that M-H's varying prices did not tend substantially to injure competition, petitioner also urges in its brief (pp. 2, 3, 7, 33, 89-95) that this Court should now determine that the lower of M-H's varying prices were not made in good faith to meet competition—a question which the court below expressly stated it did not reach (R. 2315).

If, as we believe we have demonstrated, the decision of the court below was correct, then there is not any occasion for this Court to consider M-H's additional contention in the court below that the lower of its varying prices were made in good faith to meet competition and, accordingly, that it had established a separate and complete defense, under Section 2(b) of the Act, to the charge of unlawful price discrimination. *Standard Oil Company* v. *Federal Trade Commission*, 340 U. S. 231 (1951).

If, however, this Court were to reach a conclusion different from that of the court below on the facts with respect to the probability of injury to competition from M-H's varying prices, the separate question as to whether the lower of such varying prices were made in good faith to meet competition would not be before this Court for consideration.

In its petition for a writ of certiorari, the Commission sought review of two questions and two questions only (Petition, p. 2):

(1) whether in a proceeding involving a charge of unlawful price discrimination under Section 2(a) of the Clayton Act, a finding by the Commission of injury to competition among a seller's customers is adequately supported by evidence showing that substantial price differentials have been given to competing customers; and

(2) whether the court below properly applied the standards of *Universal Camera Corp.* v. *N. L. R. B.*, 340 U. S. 474 (1951), in holding that the Commission erred in its findings.

Rule 38, par. 2, of the Rules of this Court provides that

> ". . . Only the questions specifically brought forward by the petition for writ of certiorari will be considered. . . ."

And it has been repeatedly held that, upon a review by certiorari, this Court confines its consideration to the matter relied on in procuring the writ, except in extraordinary cases. *Alice State Bank* v. *Houston Pasture Co.*, 247 U. S. 240, 242 (1918). And see *United States* v. *Penn Foundry & Mfg. Co.*, 337 U. S. 198, 205 (1949); *Trailmobile Co.* v. *Whirls*, 331 U. S. 40, 48 (1947). Nor is "a mere reference in a petition for certiorari to a ruling, without a request for review" sufficient to justify its consideration. *Conn. Railway & Lighting Co.* v. *Palmer*, 305 U. S. 493, 496-[illegible] (1939).

Furthermore, quite apart from the fact that the Commission did not, in its petition for a writ of certiorari, raise the "meeting competition" issue, the court below did not reach and did not decide that issue; and it is well settled

that this Court will not, save in extraordinary cases, consider a question urged by a petitioner which was not passed upon in the courts below. *McGoldrick* v. *Campagnie Generale Transatlantique*, 309 U. S. 430, 434 (1940); *Aetna Casualty & Surety Company* v. *Flowers*, 330 U. S. 464, 468 (1947).

In the only two cases relied on by petitioner in support of its position that the question should be considered here [*Kiefer-Stewart Co.* v. *Joseph Seagram & Sons*, 340 U. S. 211, 214 (1951); *Cardillo* v. *Liberty Mutual Insurance Co.*, 330 U. S. 469, 473-74 (1947)], the *respondent* raised the new matter not passed upon by the court below; the new matter raised "only issues of law not calling for examination or appraisal of evidence . . ." (340 U. S. at 214); and the facts pertinent to the new issue were "not seriously disputed . . ." (330 U. S. at 474). This case is entirely different. Here, *petitioner* seeks to raise the question not decided by the court below, and numerous questions of fact are unresolved.

If it were open to us to urge in this Court the defense of meeting competiton under Section 2(b) of the Act, that defense would afford a separate and independent ground for affirmance of the judgment of the court below.* M-H's prices have been determined each year so as to meet the competitive conditions that have always existed in the control industry (R. 916-17, 1022-30). Information as to prices charged by M-H's competitors was constantly being obtained, and prices were arrived at largely on the basis of

*Contrary to petitioner's assertion (Br., pp. 7, 14, 95), M-H's evidence with respect to meeting competition related to all price differences under attack, as set forth in M-H's brief in the court below, at pages 44-54.

such information (R. 1021-22). Like its competitors, M-H has found that competitive conditions in the industry change continually and that it is, therefore, necessary to change prices to conform to such conditions (R. 916). Indeed, in every year during the complaint period (1937-41), M-H changed all of its prices (Com. Ex. 1; R. 1659).

This Court has, however, made it clear that the sufficiency of a showing of good faith meeting of competition is a factual problem to be resolved in each case. Thus in *Federal Trade Commission* v. *A. E. Staley Mfg. Co.*, 324 U. S. 746 (1945), this Court was explicit in pointing out that the change in the language of Section 2(b) effected by the Robinson-Patman Act

> ". . . was for the purpose of making the defense a matter of evidence in each case, raising a question of fact as to whether the competition justified the discrimination" (324 U. S. at 752-53).

And in *Standard Oil Co.* v. *Federal Trade Commission*, 340 U. S. 231 (1951), this Court again pointed out that the meeting-competition defenses failed in both *Corn Products Refining Co.* v. *Federal Trade Commission*, 324 U. S. 726 (1945), and in the *Staley* case because of the "insufficiency of the seller's evidence to establish its defense . . ." (340 U. S. at 243). These factual disputes—a resolution of which has consistently been held to be an indispensable ingredient in passing upon the sufficiency in law of a meeting-competition defense—have not been reviewed by the court below in the present case.

Petitioner urges (Br., pp. 7, 33, 89-95) that the *Staley* case stands for the proposition that, as a matter of law,

the defense afforded by Section 2(b) of the Act is not available as justification for a "general system of competition." In the *Staley* case, however, this Court held that the defense of good faith meeting of the lower price of a competitor was not available as a justification of the basing-point method of pricing used in that case, not because every pricing "system" involving price differentials is unlawful *per se*, but because the Court determined on the facts that the system there in question necessarily involved discriminatory prices meeting the *higher* prices of a competitor, as to which Section 2(b) of the Act did not afford any defense (324 U. S. at 754-56). As this Court said (324 U. S. at 756):

> "The Commission's conclusion seems inescapable that respondents' discriminations, such as those between purchasers in Chicago and Decatur, were established not to meet equally low Chicago prices of competitors there, but in order to establish elsewhere the artificially high prices whose discriminatory effect permeates respondents' entire pricing system . . ."

The pricing practices complained of in the instant case do not involve either the basing-point method of pricing or any other "system" open to attack on similar grounds. On the contrary, the record shows, and the Trial Examiner found (R. 2203), that in M-H's price brackets here under attack, M-H's prices have been made to meet the lower price competition of competitors.

Accordingly, the question whether M-H has sustained its separate defense that the lower of its varying prices were made in good faith to meet competition is not now before this Court for consideration.

CONCLUSION.

The judgment of the court below reversing Part III of the Commission's order and dismissing Count III of the complaint should be affirmed.

Respectfully submitted,

ALBERT R. CONNELLY,
Counsel for Respondent,
15 Broad Street,
New York 5, N. Y.

DONALD C. SWATLAND,
WILL FREEMAN,
Of Counsel.

October 8, 1952.

APPENDIX

Comparison of Prices Extended by M-H and Its Competitors to the 88 Oil Burner Manufacturers Referred to in the Commission's Case

M-H's Prices*	Range of Competitive Prices**		Lowest Competitive Price
1937			
Bracket 1—$23.85	Penn	$19.74–21.08	$17.10

Question Presented	4
Summary of Argument	4
Statement of the Facts	6
Argument:	
1. An application for a writ of certiorari is untimely if made more than 90 days after entry of the judgment sought to be reviewed	12
2. The issue here sought to be reviewed was decided by the July 5 judgment and was not affected by the September 18 decree	12
3. The September 18 decree did not start a new period within which to apply for a writ of certiorari as to the issue decided by the July 5 judgment	14
4. This Court has consistently held that the reiteration of a final judgment in connection with additional matter not affecting the finality of the original judgment does not start a new period within which to apply for certiorari	15
5. None of petitioner's arguments supports it contention that its application for a writ of certiorari was timely	20

FEDERAL TRADE COMMISSION, *Petitioner,* *v.* MINNEAPOLIS-HONEYWELL REGULATOR COMPANY, *Respondent.*	No. 11

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SEVENTH CIRCUIT

BRIEF FOR RESPONDENT ON JURISDICTION*

Judgment Below

The judgment of the Court of Appeals for the Seventh Circuit, entered in favor of respondent (M-H),* on July 5, 1951, and the opinion of the Court of Appeals (reported at 191 F. 2d 786) upon which such judgment was based, appear in the printed transcript of record, respectively, at pages 2316 and 2308-2315. The decree of the Court of Appeals entered on September 18, 1951, in favor of petitioner appears in the printed transcript of record at pages 2316-2319.

*Respondent has filed a separate brief on the merits.

Jurisdiction

In opposing the petition for a writ of certiorari herein, M-H invited the attention of the Court to the matter of the timeliness of the application for a writ. The petition having been filed on December 14, 1951, more than 90 days had elapsed since the entry, on July 5, 1951, of the judgment which, in reality, is the judgment here sought to be reviewed. Accordingly, it was argued that this Court was without jurisdiction under the Judicial Code [Title 28, United States Code, § 2101(c)] to entertain the application.

In its order of March 3, 1952 (342 U. S. 940), in which a writ of certiorari herein was granted, this Court specifically requested counsel to discuss in briefs and on oral argument the question raised as to the timeliness of the application, thereby preserving the issue of jurisdiction for its further consideration.

Statutes Involved

The issue thus raised is to be determined with reference to Sections 1254(1), 2101(c) and 452 of the Judicial Code and Rules 20, 22 and 30 of the Rules of the Court of Appeals for the Seventh Circuit. The relevant portions of those Sections and Rules are as follows:

Section 1254:

> "Cases in the courts of appeals may be reviewed by the Supreme Court by the following methods:
>
> "(1) By writ of certiorari granted upon the petition of any party to any civil or criminal case, before or after rendition of judgment or decree."

Section 2101:

"(c) Any other appeal or any writ of certiorari intended to bring any judgment or decree in a civil action, suit or proceeding before the Supreme Court for review shall be taken or applied for within ninety days after the entry of such judgment or decree. A justice of the Supreme Court, for good cause shown, may extend the time for applying for a writ of certiorari for a period not exceeding sixty days."

Section 452:

". . .

"The continued existence or expiration of a term of court in no way affects the power of the court to do any act or take any proceeding."

Rule 20:

"*Opinions of the court.*—All opinions released by the court shall, on the same day, be handed to the Clerk to be filed, and a copy thereof mailed to counsel for each party. In all cases except that of a decree enforcing the order of an administrative tribunal, judgment shall be entered on the date the opinion is filed."

Rule 22:

"*Rehearing.*—Printed petition for rehearing may be filed within 15 days after entry of judgment. Three copies of such petition shall be served forthwith by the clerk of this court upon the opposing party, who within 10 days from such service may file a printed answer, three copies of which shall be served on the opposing party, and the petition shall be determined without oral argument unless otherwise ordered. Thirty copies of such petition and answer shall be filed with the clerk of this court."

Rule 30:

> *"Decrees enforcing orders of administrative tribunals.*—When an opinion of this court is filed directing the entry of a decree enforcing the order of an administrative agency, board or commission, the agency, board or commission concerned shall within ten days serve upon the adverse party and file with the clerk of this court a proposed decree in conformity with the opinion. If the adverse party objects to the proposed decree as not being in conformity with the opinion, he shall within five days after receiving a copy of the decree proposed, serve upon the agency, board or commission concerned and file with the clerk of this court a suggested decree deemed to be in conformity with the opinion. The court will thereupon settle and enter the decree without further hearing or argument."

Question Presented

Was the time of petitioner within which to apply for a writ of certiorari extended as to the issue fully and finally determined by the judgment of July 5, 1951, merely because the Court of Appeals later entered a decree which incidentally reiterated its July 5 judgment, but which was admittedly entered for the sole purpose of formally disposing of certain totally unrelated issues not now, or even then, in controversy?

Summary of Argument

The only contested issue before the Court of Appeals related to Part III of the Federal Trade Commission order. That issue, involving allegations of unlawful price discrimi-

nation under the Robinson-Patman Act, was fully and finally decided on July 5, 1951, when the Court of Appeals handed down its opinion reversing Part III of the order and dismissing Count III of the complaint. On the same day, pursuant to Rule 20 of the Court of Appeals Rules, judgment was entered in accordance with such opinion.

The judgment so entered made complete disposition of the only issue of which review is now sought.

On September 18, 1951, a further decree was entered by the Court of Appeals at the request of the Commission. Although that decree incidentally reiterated the July 5 judgment, its only purpose, even as argued by the Commission, was to affirm and enforce Parts I and II of the Commission's order (involving alleged violations of the Federal Trade Commission Act and of the "tying clause" provisions of the Clayton Act). The Commission specifically did not seek any further action as to Part III, which it recognized as having been finally disposed of by the July 5 judgment. Since M-H two years before had expressly abandoned its contest of Parts I and II of the order, the entry of a decree thereon was at best only a formality. In any event the decree so entered did not modify, and did not purport to modify, the July 5 judgment.*

After entry of the July 5 judgment, which finally determined the only contested issue before the Court of Appeals, the Commission had 90 days within which to seek a review by this Court [Title 28, United States Code, §2101(c)], and that period was not enlarged by the subsequent decree entered solely to dispose formally of certain unrelated and

*There is no difference in substance between the July 5 judgment as originally entered and as subsequently reiterated as part of the September 18 decree.

uncontested matters presented in the same litigation. *Toledo Scale Company* v. *Computing Scale Company*, 261 U. S. 399, 418 (1923); *Department of Banking* v. *Pink*, 317 U. S. 264 (1942); see also *Dickinson* v. *Petroleum Conversion Corporation*, 338 U. S. 507 (1950). Since the petition for a writ of certiorari was not filed until December 14, 1951, this Court is without jurisdiction to consider the decision of the Court of Appeals as to Part III of the Commission's order. To continue the allowance of a writ of certiorari under such circumstances would be to nullify the clear meaning of the statute.

The application for review having been untimely, the writ should be dismissed.

Statement of the Facts

The Complaint. The proceeding before the Commission was instituted by the service upon M-H of a complaint dated February 23, 1943 (R. 2-11). Such complaint was in three counts, and it is important to note—as the Commission does in its brief (p. 5)—that the several counts against M-H are separate and distinct, each involving a different statute, different charges, different evidence and different cease and desist provisions. Thus, Count I of the complaint, charging violation of Section 5 of the Federal Trade Commission Act, alleged that M-H had misused certain patents of which it was the owner or under which it was an exclusive licensee. Various other allegations of Count I relating to certain exclusive dealing contracts entered into by M-H and its customers were restated in Count II as being violative of Section 3 of the Clayton Act. Count III, on the other hand, alleged violation of Section 2(a) of the

Clayton Act, as amended by the Robinson-Patman Act, and was concerned only with discriminations in price which the Commission alleged to be unlawful under that Act, as amended. It is perfectly evident that the charge under Count III alleging unlawful price discrimination was totally unrelated to, and had nothing whatsoever to do with, the charges under Counts I and II of the complaint.

The Decisions Below. On February 21, 1946, at the conclusion of extended hearings, the Trial Examiner filed his report recommending that a cease and desist order be issued as to Counts I and II but that the charges under Count III be dismissed (R. 2166-2203). On January 14, 1948, after the matter had been briefed and argued before the Commission, an order to cease and desist was issued with respect to all three Counts, that order being divided into Parts I, II and III to correspond with the three Counts of the complaint (R. 2262-2265). In making that order, the majority of the Commission, one commissioner dissenting, declined to follow the recommendation of the Trial Examiner that Count III be dismissed (R. 2265-2282).

Contest of Parts I and II abandoned by M-H. On March 11, 1948, M-H filed in the Court of Appeals for the Seventh Circuit its petition to review the Commission's order (R. 2283-2289). However, to the extent that it sought review of Parts I and II of the order, such petition was expressly abandoned by M-H in its brief filed in the Court of Appeals on July 18, 1949, in which M-H advised the Court that Parts I and II of the order were no longer challenged and that *its argument in support of the petition would be addressed only to Part III.* As was specifically stated in that brief (p. 1):

> "The remainder of the Order is not here challenged."

Indeed, the absence of any issue as to Parts I and II was clearly recognized by the Commision in its brief filed on December 13, 1949, in which it stated (p. 27):

> "... All of the alleged errors relating to the Commission's findings as to the facts and its order to cease and desist made under Count I and Count II of the complaint have been abandoned by petitioner, and in its brief petitioner argues only as to the alleged errors relating to the Commission's findings and order entered under Count III of the complaint."

No argument with respect to Parts I and II of the order was ever made to the Court of Appeals either by M-H or by the Commission in any later briefs or on oral argument of the cause.*

The July 5 Judgment. On July 5, 1951, the Court of Appeals rendered its opinion (R. 2308-2315). After stating that the Commission's order was in three parts, the opinion continues (R. 2308):

> "... Since M-H does not challenge Parts I and II of the order based on the first two counts of the complaint we shall make no further reference to them."

The only issue then remaining for decision related to Part III of the order, and as to that issue the Court of Appeals unanimously held that the Commission must be reversed, saying (R. 2315):

---

*The Court of Appeals, on January 21, 1950, deferred oral argument until after the decision by this Court in *Standard Oil Company* v. *Federal Trade Commission* (No. 1, October Term, 1950). After that decision had been handed down [340 U. S. 231 (1951)], the parties filed new briefs. In its substitute brief of March 15, 1951, M-H again declared (p. 1) that it did not challenge Parts I and II of the order.

> "Part III of the order must be reversed and Count III of the complaint upon which it is based, dismissed. It is so ordered."

Copies of the opinion were mailed to counsel for the parties on the day the opinion was filed.

Also on July 5, 1951, pursuant to Rule 20 of the Court of Appeals Rules, judgment was entered in accordance with the Court's opinion of that day. The complete text of such judgment is (R. 2316):

> "This cause came on to be heard on the transcript of the record from the Federal Trade Commission and was argued by counsel.
>
> "On consideration whereof, it is ordered and adjudged by this Court that Part III of the decision of the Federal Trade Commission entered in this cause on January 14, 1948, be, and the same is hereby, Reversed, and Count III of the Complaint upon which it is based be, and the same is hereby Dismissed."

On August 6, 1951, a certified copy of the judgment was sent to the Commission, in lieu of mandate, the forwarding letter stating:

> "Enclosed herewith please find a certified copy of the decree of this Court entered in this cause on July 5, 1951.
>
> "Kindly acknowledge receipt of the same and oblige.
>
> Yours truly,
>
> [/s/ W. P. McCary]
> Deputy Clerk"

The Commission replied on August 8, 1951, as follows:

> "Receipt is acknowledged of your letter of August 6, 1951, enclosing certified copy of the decree entered in the above entitled matter on July 5, 1951.
>
> Very truly yours,
>
> (Signed) D. C. Daniel
> D. C. Daniel,
> Secretary."

A certified copy of each of such letters has been filed with the Clerk of this Court.

The September 18 decree. On August 21, 1951, the Commission presented to the Court of Appeals a memorandum* in support of a proposed decree which it sought to have entered affirming and enforcing Parts I and II of its order. That memorandum, after stating at the outset (par. 1) that Part III had already been disposed of by the July 5 judgment, went on to point out:

> (a) that Parts I and II of the order were unrelated to Part III (par. 2);
>
> (b) that M-H had previously abandoned its contest of Parts I and II (par. 11); and
>
> (c) that the Commission was accordingly entitled to a decree affirming and enforcing Parts I and II (par. 14).

Although the proposed decree accompanying the memorandum contained a reiteration of the July 5 judgment as to Part III, it is perfectly evident that the only relief sought

*Petitioner states in its brief (p. 37, fn. 24) that a copy of such memorandum has been filed with the Clerk of this Court.

by the Commission in requesting entry of the September 18 decree was the affirmance and enforcement of Parts I and II. The memorandum itself makes that fact entirely clear (pp. 1, 4 and 8):

> "*On July 5, 1951, the Court entered its opinion and judgment reversing Part III of the decision* of the Federal Trade Commission dated June 14, 1948, and dismissing Count III of the complaint on which it is based. No disposition has been made of the Cross-Petition filed by the Commission for affirmance and enforcement of the entire decision. . . .
>
> ". . .
>
> "11. In its briefs filed herein the petitioner abandoned its attack upon Parts I and II of the order and challenged only the validity of Part III of the order (see page 1 of petitioner's brief dated March 15, 1951). Thus, petitioner concedes the validity of Parts I and II of the order and does not contest the prayer of the Commission's Cross-Petition and brief with respect to the affirmance and enforcement of Parts I and II of the order.
>
> ". . .
>
> "14. In conclusion, it is submitted that *the Court should make and enter herein a decree affirming and enforcing Parts I and II* of the Commission's order to cease and desist." [Emphasis supplied.]

On September 18, 1951, the Court of Appeals entered the form of decree proposed by the Commission (R. 2316-2319). On December 14, 1951, the Solicitor General filed a petition for certiorari on behalf of the Commission. However, the only issue which that petition presented to this Court for review, *i.e.*, whether Part III of the Commission's order should have been reversed, was adjudicated

with finality by the judgment of the Court of Appeals entered on July 5, 1951.

ARGUMENT

1. An application for a writ of certiorari is untimely if made more than 90 days after entry of the judgment sought to be reviewed.

This Court has time and again held that it does not have jurisdiction to entertain an untimely petition for a writ of certiorari. *Hope Basket Company* v. *Product Advancement Corporation*, 342 U. S. 833 (1951) (petition 91 days after judgment); *Department of Banking* v. *Pink*, 317 U. S. 264 (1942) (petition 124 days after judgment sought to be reviewed). The statute itself [Title 28, United States Code, § 2101(c)] requires that application be made "within ninety days after entry of such judgment or decree".

In the present case the Commission waited from July 5, 1951, to December 14, 1951, before filing its petition for a writ of certiorari—a span of 162 days. The application was, therefore, untimely.

2. The issue here sought to be reviewed was decided by the July 5 judgment and was not affected by the September 18 decree.

The regularity of the July 5 judgment and the finality of its adjudication are not open to question. The judgment was entered on the day the opinion upon which it was based was filed, all pursuant to the applicable provisions of the Court of Appeals Rules (see Rule 20, *supra* at p. 3). Copies of the opinion and judgment were sent to the Commission

and were accepted without protest of any sort. The judgment was not interlocutory in nature, as is apparent on its face, and when read in connection with the opinion pursuant to which it was entered, it compels the conclusion that the Court of Appeals intended thereby to make final disposition of the issue before it. Its purpose and effect were to bring about a complete and unambiguous disposition of Part III of the Commission's order.

The Court of Appeals was never asked by the Commission to alter the July 5 judgment. The fact is, of course, that the Court of Appeals did not alter it.

The proceedings subsequent to the entry of the July 5 judgment were concerned solely with Parts I and II of the Commission's order, the contest of which had long since been abandoned by M-H and as to which the Court of Appeals had made no adjudication. Those proceedings did not affect, nor were they calculated to affect, the finality of the judgment already entered as to Part III. Indeed, they were addressed to parts of the Commission's order which bore no relation at all to its Part III. Those proceedings, which were concerned only with affirmance and enforcement of Parts I and II, did not seek a rehearing* or any modification of the adverse judgment already entered.

It is, therefore, clear that the issue between the parties as to Part III of the Commission's order was disposed of with reviewable finality on July 5, 1951, when the judgment of that date was entered. That is the judgment which, in

*Clearly the memorandum filed by the Commission in support of the entry of a decree affirming and enforcing Parts I and II of the order could not be characterized as a petition for rehearing of the July 5 judgment, which it expressly recognized as dispositive of Part III. The memorandum by its terms limited the relief sought to matters in no way related to the judgment theretofore entered.

reality, is sought to be brought before this Court under the statute [Title 28, United States Code, § 2101(c)]. The time within which to apply for a writ of certiorari to review that judgment commenced to run on the date on which it was entered.

3. The September 18 decree did not start a new period within which to apply for a writ of certiorari as to the issue decided by the July 5 judgment.

If the Commission is correct in its position that entry of the September 18 decree started a new 90-day period within which to seek review of the July 5 judgment, the fixed period of limitation contemplated by Section 2101 (c) would become a completely indefinite period. The only prerequisites for extending the statutory period would be for counsel to develop a plausible reason why some matter—regardless of how unrelated to the real issues between the parties—should be added to what had already been decided and to have an additional decree entered covering the new matter and reiterating the original judgment.

Indeed, this process would not even be limited by the term of the Court of Appeals. Section 452 of the Judicial Code provides (Title 28, United States Code, § 452):

> "The continued existence or expiration of a term of court in no way affects the power of the court to do any act or take any proceeding."

Thus, the September 18, 1951, decree could just as well have been entered in 1952, or 1953, so far as the facts of this case are concerned. Section 452 would permit such entry. If the Commission is correct in its position that a decree like the

September 18 decree starts a new 90-day period, then the time within which to apply for a writ of certiorari as to the July 5 judgment would never come to an end.

4. This Court has consistently held that the reiteration of a final judgment in connection with additional matter not affecting the finality of the original judgment does not start a new period within which to apply for certiorari.

With the entry on July 5, 1951, of a judgment disposing of Part III of the Commission's order, the Court of Appeals disposed of the only contested issue in the litigation. The mere fact that such judgment was later reiterated in connection with the disposition of other uncontested issues involved in the action does not enlarge the time within which to seek a review thereof. *Department of Banking* v. *Pink*, 317 U. S. 264 (1942); *Toledo Scale Company* v. *Computing Scale Company*, 261 U. S. 399 (1923); see also *Dickinson* v. *Petroleum Conversion Corporation*, 338 U. S. 507 (1950).

In the *Pink* case the New York Court of Appeals had entered a judgment affirming an order of the New York Supreme Court, and the remittitur thereon had issued on the same day. Thereafter, a motion was filed in the Court of Appeals to amend the remittitur to recite that a federal question had been presented and decided. The Court of Appeals granted that motion, and the remittitur was modified accordingly. A petition for certiorari, filed within three months after the second remittitur but more than three months after the first remittitur, was held untimely. In its opinion this Court stated (317 U. S. at 266):

> "Under the three-months limitation imposed by the statute, 28 USC § 350, the petition for certiorari

> is timely only if the amendment of the remittitur extended the time within which to apply for certiorari. We are unable to conclude that it had such effect. *Unlike a motion for reargument or rehearing, it did not seek to have the Court of Appeals reconsider any question decided in the case. The final judgment already rendered was not challenged*; what was sought was merely the court's certification that a federal question had been presented to it for decision, and this could have no different effect on the finality of the judgment than a like amendment of the court's opinion." [Emphasis supplied.]

The factual parallelism between the issue here before the Court and that resolved per curiam in the *Pink* case is obvious. The application of the Commission to enter the September 18 decree did not seek reconsideration in any way of the issue resolved by the Court of Appeals in its July 5 judgment, which was the only issue contested by the parties. The September 18 decree in no way altered that judgment. It merely added provisions relating to Parts I and II of the Commission's order, which were not challenged by M-H and which had not been in controversy since M-H abandoned its petition to review those Parts two years before.

In *Toledo Scale Company* v. *Computing Scale Company*, 261 U. S. 399 (1923), an adverse judgment in a patent infringement suit had been entered against the Toledo Company and affirmed by the Court of Appeals for the Seventh Circuit [279 Fed. 648 (1921)]. A timely petition for certiorari had been denied [257 U. S. 657 (1922)]. Thereafter, the Computing Company applied to the Court of Appeals for a further decree against the Toledo Company enjoining the continuance of certain other litigation calculated

to defeat enforcement of the judgment already obtained. The Court of Appeals thereupon entered a further decree which adhered to its affirmance of the earlier judgment but which contained additional provisions designed to give the complete relief that had been sought. A second petition for certiorari, filed more than 90 days after the entry of the first decree but within 90 days after the entry of the second decree, was granted by this Court. *In deciding the case, however, this Court expressly limited its review to the additional matter added by the new decree.* In doing so, this Court made it clear that the reason for thus limiting the scope of its decision was the jurisdictional statute, not the fact that a previous petition had been denied. In its opinion, the Court said (261 U. S. at 417-18):

> "It is insisted by counsel for the petitioner that it is within our power, and it is our duty on this writ to go into the merits of the issue of the validity of the Smith patent and of the correctness of the money decree for profits. We were asked to do this by an application for writ of certiorari which we denied January 9, 1922. 257 U. S. 657. The decree then sought to be reviewed was entered in October, 1921. The application for this second writ of certiorari which we are now considering was not made until May 22, 1922, more than three months after the final decree in the circuit court of appeals for the payment of profits. Section 6 of the Act of September 6, 1916 . . . directs:
>
> > " 'That no writ of error, appeal, or writ of certiorari intended to bring up any cause for review by the Supreme Court shall be allowed or entertained unless duly applied for within three months after entry of the judgment or decree complained of.'

> *"This deprives us of jurisdiction to consider the merits of the decree of October, 1921..*
>
> "... In the case before us, the decree of October, 1921, which we declined to review in January, 1922, *was a final decree, and we are expressly denied power to review it after three months."* [Emphasis supplied.]

It is also important to note that after this Court had rendered its unanimous opinion in the *Toledo* case, a petition for rehearing was filed addressed in part to the ruling on the timeliness question. It was there argued that this Court had overlooked the fact that the October 1921 decree "was amended by the Court of Appeals and reentered at the same term of Court, on March 25, 1922."* That argument, which is identical with the one urged by petitioner in the present case, was rejected by this Court in the *Toledo* case on May 21, 1923. See Supreme Court Docket for No. 339, October Term, 1922, showing rehearing denied.

In *Dickinson* v. *Petroleum Conversion Corporation*, 338 U. S. 507 (1950), the Petroleum Corporation and certain of its stockholders, as intervenors, asserted claims against two individuals. After trial, the District Court dismissed certain claims of the Corporation, holding in effect that the intervenors as a class were entitled to enforce such claims. That judgment, from which the Petroleum Corporation took no appeal, was entered April 10, 1947, and reserved for future determination the respective rights of the individual participants in the class who were entitled to share in the recovery. Thereafter, on August 3,

*See p. 3, petition for rehearing in No. 339, October Term, 1922, received in the Office of the Clerk of the United States Supreme Court on May 8, 1923.

1948, the court, having made such determination, entered a "Final Decree", which disposed of the issues reserved in the 1947 decree and recited that, those issues having been determined by the court, "the said [1947] decree is hereby made final".* The 1948 decree did not make any adjudication of any issue involving the Corporation or otherwise change the 1947 decree as to it. On September 1, 1948, the Petroleum Corporation's receiver in bankruptcy sought to appeal from "so much of this 1948 decree as dismissed" the Corporation's claims. A motion to dismiss the appeal was denied by the Court of Appeals, but this Court on certiorari reversed, holding that the time within which the Corporation might appeal from the 1947 decree was not enlarged by the subsequent entry of the 1948 decree. This Court pointed out that the 1948 decree did not make any change, so far as concerned the Corporation, in the 1947 decree, and adjudicated only other issues which had been reserved for future determination, saying with reference to such additional issues (338 U. S. at 515-16):

> ". . . The court obviously selected with deliberation the issues it would close by the decree and those it would reserve for future decision. If it had any purpose to leave open any issue concerning Petroleum's contentions, or affecting its interests, half a line in the decree would have done so. But that half-line was not written.
>
> "We hold the decree of April 10, 1947, to have been a final one as to Petroleum and one from which it could have appealed and that its failure to appeal

*Compare the emphasis placed by petitioner on the caption "Final Decree" contained in the September 18 decree in the instant case (Br., pp. 1, 27, 34, 37, 38, 47).

therefrom forfeits its right of review. *Its attempt to review the earlier decree by appealing from the later one is ineffective, and its appeal should be dismissed.*" [Emphasis supplied.]

5. None of petitioner's arguments supports its contention that its application for a writ of certiorari was timely.

Petitioner nowhere seriously disputes the fact that the July 5 judgment settled with reviewable finality the issue as to Part III of the Commission's order; nor does it dispute the fact that a lapse of 90 days, without more, would have terminated its right to apply for a writ of certiorari to bring that judgment before this Court.

Petitioner argues (Br., pp. 46-47), however, that its time within which to apply for a review of the judgment dismissing Part III of its order should not be computed from the date of entry of that judgment because at that time it was open to the Commission to apply to the Court below for a decree affirming and enforcing Parts I and II of its order, and, therefore, that a timely application for a writ of certiorari to review the July 5 judgment would have involved the possibility of multiple review proceedings. Thus it suggests that a review might have been sought by the Commission if affirmance and enforcement of Parts I and II had been denied or by M-H if affirmance and enforcement were decreed. Such a suggestion is, of course, completely unrealistic in view of the fact that for over two years there had been no dispute at all as to the form or substance of Parts I and II of the Commission's order. But even if there had been a real possibility that either party would seek review of the decree entered with respect to Parts I and II, such possibility would not have affected the right of the

Commission to apply for review of the judgment reversing Part III; for this Court has held that successive applications for writs of certiorari to review successive judgments on unrelated issues in the same case are entirely proper. *Toledo Scale Company* v. *Computing Scale Company, supra,* 261 U. S. 399 (1923).

Furthermore, the only authority to which petitioner refers in support of its argument are certain general statements about review procedure contained in the opinions of this Court in *Dickinson* v. *Petroleum Conversion Corporation,* 338 U. S. 507 (1950), discussed *supra* at pp. 18-20, and *Cohen* v. *Beneficial Industrial Loan Corporation,* 337 U. S. 541 (1949). Each of those cases, however, is a flat holding by this Court that the reviewable finality of a judgment determining claims of right (like the July 5 judgment here) is not affected by a subsequent decree adjudicating other issues in the same case. Indeed, those cases expressly hold that the time within which to seek review of such earlier judgment is not enlarged by the entry of a subsequent decree.

Recognizing that its petition must be dismissed if it cannot show that the reviewable finality of the July 5 adjudication was affected by the subsequent proceedings, petitioner argues (Br., pp. 37-39) that the Court of Appeals intended the September 18 decree to be its "final decree," superseding the July 5 judgment as to the issue involved in Part III of the Commission's order.

As we have seen, this argument cannot mean that the Court of Appeals on July 5 did not regard its judgment then entered as a final adjudication of that issue. The fact that the Court of Appeals did not immediately enter a decree as to Parts I and II must mean either that the Court did not deem the entry of such a decree of any importance in the light of M-H's abandonment of its contest as to Parts

I and II, or that the Court desired to reserve its final disposition of the uncontested issues involved in those Parts until such time, if ever, as the Commission might decide to submit a formal decree of affirmance and enforcement. That the Court did not immediately dispose of Parts I and II did not, of course, affect the reviewable finality of its judgment entered after careful deliberation as to Part III (the only contested issue)—nor was it so intended.

As we have pointed out under Point 2 (*supra* at pp. 12-14), the instant case is one where the initial judgment of the Court below compels the conclusion that the Court intended thereby to make final disposition of the contested issue before it. The cases cited by petitioner involving mere docket entries followed by formal judgments are, therefore, quite beside the point, being cases where the earlier act of the lower court was demonstrably not intended to be its final judgment.* Nor is petitioner helped by cases in which the earlier act of the court might have been its judgment but for the entry of a second judgment covering only the same ground as the first entry and having no purpose at all unless intended to serve as the court's final judgment with respect to the matters dealt with in the earlier entry.** Such cases are wholly inapplicable to the instant case, since the avowed and only purpose of the September 18 decree was to dispose of additional matters not even considered in the July 5 judgment. We do not believe that petitioner itself takes any stock in the suggestion (Br., p. 38) that the September 18 decree would be only "an empty form" unless the Court of

---

United States v. *Hark*, 320 U. S. 531 (1944); *Hill* v. *Hawes*, 320 U. S. 520 (1944); *Monarch Brewing Co.* v. *George J. Meyer Mfg. Co.*, 130 F. 2d 582 (9th Cir. 1942).

**United States* v. *Hark*, 320 U. S. 531 (1931); *Union Guardian Trust Co.* v. *Jastromb*, 47 F. 2d 689 (6th Cir. 1931).

Appeals intended it rather than the July 5 judgment to be dispositive as to Part III of the Commission's order.

However that may be, petitioner goes on to argue (Br., pp. 39-41) that the Court of Appeals, merely because of the entry of the September 18 decree, intended that decree to be its final disposition of Part III for purposes of review, even though the Court up to that time had regarded its July 5 judgment as finally determining the issue raised by Part III. That argument is, of course, based entirely upon the assumption that the Court of Appeals intended its September 18 decree in some way to affect the finality of its July 5 judgment. But, since the Court had been careful to point out in its opinion the absence of any contest over the substance or form of Parts I and II of the Commission's order, the entry of a subsequent decree affirming and enforcing those Parts, being at best only a formality, could not possibly indicate an intention to alter the finality of a judgment entered with the admitted purpose of disposing once and for all of the only contest issue in the case, *i.e.*, the propriety of Part III of the Commission's order.

Petitioner's argument that its application for certiorari in this case is timely is manifestly not advanced by reference (Br., pp. 42, 43) to cases* holding that when the adjudication sought to be reviewed has been altered by amendment or modification of a judgment, the time within which an appeal may be taken runs from the date of the amendment or modification. There simply has not been any such amendment or modification in the instant case.

**Zimmern* v. *United States*, 298 U. S. 167 (1936); *Memphis* v. *Brown*, 94 U. S. 715 (1876); *Rubber Co.* v. *Goodyear*, 6 Wall. 153 (U. S. 1867); *Fultz* v. *Laird*, 24 F. 2d 172 (6th Cir. 1928); *Hewey* v. *Andrews*, 82 Ore. 448, 159 P. 1149 (1916); *Luck* v. *Hopkins*, 92 Tex. 426, 49 S. W. 360 (1899); *Billson* v. *Lardner*, 67 Minn. 35, 69 N. W. 477 (1896).

Equally beside the point are the numerous cases* cited by petitioner (Br., p. 45) which hold that the time to appeal is extended by a timely motion for reargument or to modify the judgment sought to be reviewed. In each of such cases the motion in question *did* seek reargument or rehearing, *did* request the Court to change its previously arrived-at legal conclusions, *did* seek the reconsideration of controverted questions contested in the case or *did* request the addition to the judgment of new matter relating to and directly affecting the finality of the original judgment. Thus in the *Leishman* case petitioner's motion requesting amended findings, when entertained by the Court, was held to have extended the time to appeal because (318 U. S. at 205):

> ". . . The motion was not addressed to mere matters of form but raised questions of substance *since it sought reconsideration of certain basic findings of fact and the alteration of the conclusions of the court. In short the necessary effect was to ask that rights already adjudicated be altered.* Consequently it deprived the judgment of that finality which is essential to appealability." [Emphasis supplied.]

Obviously such cases are no authority at all for an enlargement of time within which to seek review, since petitioner did not seek reargument or rehearing, did not challenge the correctness of the Court's earlier disposition of

---

**Johnson* v. *Eisentrager*, 339 U. S. 763 (1950); *United States* v. *Crescent Amusement Co.*, 323 U. S. 173 (1944); *Leishman* v. *Associated Electric Co.*, 318 U. S. 203 (1943); *Pfister* v. *Northern Illinois Finance Corp.*, 317 U. S. 144 (1942); *Bowman* v. *Loperena*, 311 U. S. 262 (1940); *Wayne United Gas Co.* v. *Owens-Illinois Glass Co.*, 300 U. S. 131 (1937); *Gypsy Oil Co.* v. *Escoe*, 275 U. S. 498 (1927); *Voorhees* v. *John T. Noye Mfg. Co.*, 151 U. S. 135 (1894); *Reconstruction Finance Corp.* v. *Mouat*, 184 F. 2d 44 (9th Cir. 1950).

the case and sought in the subsequent decree the disposition only of unrelated and uncontested issues.

Petitioner states (Br., p. 45) that the cases indicate that a petition for rehearing "extends the time to appeal with respect to all parts of a judgment, not merely the portion which the petition or motion seeks to have modified". While that statement may be true, it is without significance here; for there was no petition for rehearing in this case with respect to any part of the July 5 judgment. Petitioner did not at any time, either before or after the 15-day period allowed by Rule 22 of the Rules of the Court below for petitions for rehearing, seek from the Court below any alteration of the rights adjudicated by the July 5 judgment. Accordingly, petitioner's time within which to apply for certiorari to review that judgment is not affected by considerations applicable to petitions for rehearing.

Petitioner is, in the end, reduced to arguing (Br., p. 41) that the entry of a second judgment which adjudicates wholly different, unrelated issues and incidentally reiterates, without change, an earlier judgment that finally settled other issues, supersedes the earlier judgment for purposes of review. This argument of petitioner parallels the one made to this Court in the petition for rehearing in *Toledo Scale Company* v. *Computing Scale Company*, 261 U. S. 399 (1923), rehearing denied, Supreme Court Docket No. 399, October Term, 1922 (*supra* at pp. 16-18). The argument in the *Toledo* case is repeated here almost without change. Aside from the fact that this Court rejected the argument in the *Toledo* case, the authorities referred to by petitoner*

**Zimmern* v. *United States*, 298 U. S. 167 (1936); *Memphis* v. *Brown*, 94 U. S. 715 (1876); *Rubber Co.* v. *Goodyear*, 6 Wall. 153 (U. S. 1867); *Union Guardian Trust Co.* v. *Jastromb*, 47 F. 2d 689 (6th Cir. 1931).

simply do not support the proposition for which they a cited. Thus in *Memphis* v. *Brown*, 94 U. S. 715 (1876 this Court expressly pointed out that the substantial chang effected by the second judgment was the crucial fact whi accounted for treating the earlier judgment as having be superseded (94 U. S. at 717):

> "We think that the order made by the Circu Court, May 20, 1876, upon the motion to subje merchants' capital to the tax was such a final judg ment as may be brought here for reexamination b a writ of error. *The precise question decided by th order had never before been presented in the caus The city was then for the first time required, in e press terms, to subject this particular class of pro erty to the adjudged taxation.* The writ was, ther fore, properly sued out upon the judgment." [Em phasis supplied.]

Petitioner, in arguing that its petition in this case timely, overlooks certain obvious truths:

First: The Commission did not have to wait until th September 18 decree was entered to seek a review of th July 5 judgment. It would not have been hampered i any way in applying for a writ of certiorari to review th July 5 judgment if the September 18 decree had neve been entered.

Second: M-H was entitled to believe on October 4 (9 days after entry of the July 5 judgment) that the proceed ings with respect to Part III of the Commission's orde were at an end. *Matton Steamboat Co.* v. *Murphy*, 31 U. S. 412 (1943). The *Matton Steamboat Co.* case is cite by petitioner itself (Br., p. 47) for the proposition tha

the purpose of statutes limiting the period for review is to "set a definite time beyond which prospective appellees may know, if no appeal has been filed, that the litigation is over."

Third: If the September 18 decree had been intended to supersede the July 5 judgment for purposes of review, without otherwise making any change relating to the issues thereby determined and which are the only issues sought to be reviewed in this Court, the action of the Court of Appeals would have been a flagrant violation of the established rule that a judge or court may not enlarge the time for review beyond the period prescribed by statute. See *Wayne United Gas Co.* v. *Owens-Illinois Glass Co.*, 300 U. S. 131 (1937); *Credit Company* v. *Arkansas Central Railway Co.*, 128 U. S. 258 (1888).

Conclusion

The writ of certiorari should be dismissed for want of jurisdiction.

Respectfully submitted,

ALBERT R. CONNELLY,
Counsel for Respondent,
15 Broad Street,
New York 5, N. Y.

DONALD C. SWATLAND,
WILL FREEMAN,
Of Counsel.

FEDERAL TRADE COMMISSION, PETITIONER

v.

MINNEAPOLIS-HONEYWELL REGULATOR COMPANY

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SEVENTH CIRCUIT

REPLY BRIEF FOR THE FEDERAL TRADE COMMISSION ON JURISDICTION

In the Supreme Court of the United States

OCTOBER TERM, 1952

No. 11

FEDERAL TRADE COMMISSION, PETITIONER

v.

MINNEAPOLIS-HONEYWELL REGULATOR COMPANY

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE SEVENTH CIRCUIT

REPLY BRIEF FOR THE FEDERAL TRADE COMMISSION ON JURISDICTION

Respondent's Brief on Jurisdiction relies principally upon three cases decided by this Court in support of its contention that the petition for a writ of certiorari was untimely filed. The primary purpose of this memorandum is to demonstrate that none of these cases supports respondent's position. Respondent's attempt to distinguish *Memphis* v. *Brown*, 94 U. S. 715, on the basis of a mistaken conception as to those facts which are pertinent here, is also considered.

226334—52

1. *Department of Banking* v. *Pink, 317 U. S. 264.*—In this case the New York Court of Appeals had amended its remittitur to include a statement that a federal question had been decided. The petition for certiorari, in time if considered from the date of the amended remittitur, was held out of time because it was filed more than ninety days after the original remittitur. This Court stated that the incorporation in a remittitur of a statement that a federal question has been decided "could have no different effect on the finality of the judgment than a like amendment of the court's opinion." 317 U. S. at 266. Such a certification is often asked of a state court as late as after a case has been docketed and argued in this Court. *Hammerstein* v. *Superior Court,* 340 U. S. 622, 341 U. S. 491; *Dixon* v. *Duffy,* 342 U. S. 33, 343 U. S. 393. It has no bearing on the relief sought in the original complaint or bill. It has no effect upon the finality of the judgment. Thus, in the *Pink* case it in no way altered what had been adjudicated, but at most added a new recital. In the instant case, on the other hand, the judgment itself was substantially changed. The September judgment for the first time dealt with all three parts of the Commission's order. It was a new and different adjudication, not the same judgment accompanied by an additional recital or statement of reasons.

2. *Toledo Scale Co.* v. *Computing Scale Co., 261 U. S. 399.*—This was a complex patent controversy which lasted at least 15 years. An adequate explanation of the difference between that litigation and this unfortunately must reflect both its length and its complexity. In 1913 the Court of Appeals for the Seventh Circuit sustained the district court's finding that Computing Company's patents were valid and infringed by Toledo Company. 208 Fed. 410. In May, 1913, prior to the issuance of its mandate, the court of appeals denied Toledo's motion for rehearing on the grounds of newly discovered evidence that the patent had been preceded by the prior art, and ordered an accounting. In May, 1914, the district court approved the master's accounting and finally entered a monetary decree in 1919. On October 4, 1921, the court of appeals affirmed that accounting. Although it doubted that the merits of the controversy were still properly before it, it also denied Toledo's motion to reopen the case on substantially the same grounds as Toledo's 1913 motion. 279 Fed. 648, 674. The court granted a stay of its mandate to permit Toledo to petition this Court for a writ of certiorari. 261 U. S. at 401. Toledo's petition for a writ of certiorari was denied by this Court on January 9, 1922. 257 U. S. 657. That same day, January 9, 1922, Toledo filed a bill in the United States District Court for the Northern District of Ohio, seeking

to enjoin the Computing Company from enforcing the decree of the Court of Appeals for the Seventh Circuit on the grounds that that decree was obtained by fraud. The fraud allegations substantially repeated the grounds of its 1913 and 1921 motions. The Computing Company then filed in the Court of Appeals for the Seventh Circuit a petition for a rule against the Toledo Company to show cause why it should not be enjoined from maintaining its Ohio bill. The Court of Appeals for the Seventh Circuit, after a hearing on the petition for the rule, entered an order (quoted in full at 261 U. S. 402) which stated that it had that day received the order of the Court denying the Toledo Company's petition for certiorari (thereby terminating the stay of the Court of Appeals' mandate), and directed the Clerk to issue the mandate to the district court. That mandate required in part [1] that the court below:

> (1) Enter of record our affirmance of the final decree on accounting.
>
> (2) Enjoin Toledo Company from further maintaining its Ohio bill * * *. [281 Fed. 488, 500]

Toledo Company sought and was granted a writ of certiorari in this Court. 259 U. S. 579. It insisted that this Court had jurisdiction to review the original merits of the validity of the patent

[1] The remaining sections pertained to certain sureties and to expenses and attorney's fees.

and of the accounting, and not merely the issues raised by the rule to show cause, a contention which this Court properly rejected. 261 U. S. 399, 417–418.

This case offers no support for the respondent's position. The portion of the mandate of the court of appeals upon which respondent relies did no more than order the district court to "enter of record", as a routine matter, the affirmance of the final decree of accounting contained in the original judgment of October 1921—which judgment had already been brought before this Court in an unsuccessful petition for certiorari. There was thus no new judgment, but merely a direction in the district court, after expiration of the stay of mandate, to enter the original one. In effect the Toledo Company was attempting to petition for certiorari twice from the same decree, once on the way up to this Court and once on the way down from this Court. The fact that, coincidentally, the Court of Appeals for the Seventh Circuit felt it proper to enjoin the Toledo Company from further prosecuting its Ohio action is irrelevant to the question of the finality of the October, 1921, decree as it was entered.

In the instant case, the September 1951 decree of the court of appeals was a new judgment, the first to dispose of the entire case, not a mere order that a prior judgment be entered in the records. The joinder of this direction in the *Toledo* case

with an injunction enforcing the original judgment of the court of appeals—the enforcement proceeding, of course, constituting an entirely different case—does not make the cases similar.

To respondent's contention that the petition for rehearing filed with this Court in *Toledo* contained many of the same arguments as does our brief on this jurisdictional issue there are two very short answers. First, even if *Toledo's* arguments were similar to those presented in the Government's brief in this case, the facts are so different as to make them inapplicable there and clearly to call for different conclusions. Second, respondent is bold indeed to draw an inference from this Court's denial of a petition for rehearing. Such petitions are seldom granted, and, if we may presume, the reasons for their denial are at least as unknown to the Bar as the reasons for the denial of petitions for writs of certiorari.

3. *Dickinson* v. *Petroleum Corp., 338 U. S. 507.*—The question here was the finality, for the purpose of review by a court of appeals, of a district court's decree, prior to the amendment of F. R. C. P. 54 (b). Petroleum had been allowed to intervene in an action involving the proper disposition of certain shares of stock and claims for damages. It made "the same general allegations and demands for relief" as had the other claimants. 338 U. S. at 509. In 1947 the District Court entered a lengthy decree in which it

disposed of all the claims of Petroleum, but reserved for later hearing claims by other parties. Petroleum took no appeal from this decree. In 1948, the court signed a "final decree" which apportioned the recovery as among the other claimants and recited that the issues reserved in the 1947 decree "having been determined by the Court * * * the said decree is hereby made final." The 1948 judgment did not repeat the provisions entered in 1947 with respect to Petroleum or otherwise deal with the issues which concerned Petroleum. See 338 U. S. at 510, n. 1.

The *Petroleum* case thus involved completely different issues from those herein. No second decree in terms was ever entered by the District Court as to Petroleum. Rather, that court stated in 1948 that the 1947 decree then "became final"—a statement the purport of which was certainly not clear. This Court held that inasmuch as the 1947 decree had completely disposed of Petroleum's claims, it necessarily became effective, for purposes of appeal, in 1947. Here as we have shown, no judgment had been entered as to those parts of the claims brought before the court of appeals by both parties which related to Parts I and II of the Commission's order. It was only by the later decree that all of the claims presented by the parties were adjudicated.

4. *Memphis* v. *Brown, 94 U. S. 715.*—Although we are content to rest our argument upon the

cases cited in our main brief (pp. 38–47), respondent's attempted distinction of *Memphis* v. *Brown*, 94 U. S. 715 (Resp. Br. on Jur. 26) so far misses the point as to warrant correction. In that case Brown had moved in the circuit court for a peremptory writ of mandamus against the city of Memphis, directing the city to levy a tax for the satisfaction of the decree he had formerly obtained (20 Wall. 289) upon all the taxable property of the city. This writ was issued on March 30, 1875. Discovering that the tax collector had not included merchants' capital (treated separately by the laws of Tennessee) in the levy, Brown moved for a further peremptory mandamus directing the city to include merchants' capital in its levy. This motion was granted and judgment entered on March 2, 1876. During that same term, on May 20, 1876, the city moved to set aside the March 2 order. This motion was refused "and that order re-entered as the final judgment of the court in the premises." 94 U. S. at 716.

Since the March 2, 1876 and May 20, 1876 judgments were the same and since this Court allowed the writ of error to be taken from the latter on the ground that the lower court had intended it to supersede the former, the case is in point here. Respondent's reference to "the substantial changes effected by the second judgment" is based upon a quoted excerpt from this Court's opinion which

distinguished between the 1875 judgment and the further preemptory mandamus entered in 1876 (Resp. Br. on Jurisdiction, p. 26)—which "for the first time" subjected "a particular class of property to the adjudged taxation"—not upon any difference between the two 1876 judgments. Respondent's statement that the *Memphis* case does not support the Government's position thus rests entirely upon its misconception of which judgments this Court was talking about in the only portion of the opinion relied upon by the Government and pertinent here.

Respectfully submitted.

ROBERT L. STERN,
Acting Solicitor General.
